Hamburg, Germany, Feb. 11.—Sole license for the manufacture of seamless drawn tubes from Nirosta stainless steel, the patents on which are owned by the Friedrich Krupp A. G., has been purchased by the Mannesmann Tube Co. About 150 tons a month has been produced by the Mannesmann company for several months, but output is being greatly increased. Export orders for these tubes are reported numerous, principally from chemical plants, as long guarantees are given by the makers.

British Iron Ore Imports Increased in 1927

Washington, Feb. 27.—Imports of iron ore and manganiferous ore into the British Isles in 1927 totaled 5,091,101 gross tons, compared with 2,058,036 tons in 1926 and 4,289,988 tons in 1925, according to a report received by the iron and steel division, Department of Commerce. Of the imports last year, 74,020 tons was manganiferous ore. Increases in imports were general, except for a decline in shipments from India. The most conspicuous increases were in receipts from Spain and Algeria, the former registering an advance to 2,416,000 tons from 956,000 tons in 1926.

FRENCH MARKET STRONGER

Consumers Replenishing Stocks and Mills Are Well Booked for Two Months or More

Paris, France, Feb. 10.—There is apparently a steady increase of confidence on the part of consumers, who are replenishing stocks in the belief that prices may show a sustained upward trend. An improvement has been evident in foreign trade also, with frequent purchases from abroad and tonnages slightly larger than for several months. An added factor of confidence is the improved market conditions in other European countries and in Great Britain. Producers are optimistic but are endeavoring to exercise moderation in advancing prices, fearing a reaction if the market increases too rapidly.

The new comptoir for the control of semi-finished material and beams seems to be thoroughly organized and prepared to function on Feb. 15. According to reports, the quotations of this new selling syndicate will not vary much from the present market level. Its relation to producers' warehouses will be similar to its position with general iron and steel merchants. Some rebates are expected to be given to warehouses, since they must carry larger stocks than contractors and other consumers.

Pig Iron.—Despite price increases on phosphoric foundry iron, improvement in business continues. Consumers are evidently using much of the iron which they are receiving, and production is increasing, largely in basic iron, as the output of foundry iron is considered sufficient to meet present requirements. On the 33,000 tons of foundry iron made available for domestic users for March, the price has been advanced 10 fr. (40c.) per ton. The General Syndicate of Northern and Northeastern Foundrymen has informed its members that, as a result of freight rate increases, prices on No. 3 phosphoric foundry will be 498 fr. ($19.57) f.o.b. Maubeuge, to 513.65 fr. ($20.10), f.o.b. Dunkirk, while it can supply them with Cleveland No. 3 foundry at 490 fr. ($19.25) per ton, delivered in the Northern region. Hematite iron is unchanged for March. Negotiations are still being carried on for the establishment of a hematite iron comptoir, and some progress is reported. For export, pig iron prices are firmer.

Semi-Finished Material.—Sellers are showing less desire for tonnage, and demand is more active. Blooms are still quiet at £4 3s. to £4 6s. 6d. ($20.21 to $21.07) per ton, f.o.b. Antwerp. Billets are moderately active at £4 7s. 6d. to £4 11s. ($21.19 to $22.16) per ton, and limited quantities of sheet bars are available at £4 11s. 6d. to £4 12s. 6d. ($22.29 to $22.53) per ton, f.o.b. Antwerp.

Finished Material.—Most mills have sufficient orders on their books to maintain a good rate of operation for two to three months, so that there is practically no inclination to shade prices, even on exceptionally desirable business. Beams are firm at £4 11s. to £4 12s. 6d. per ton (0.97c. to 0.99c. per lb.), and bars have advanced to £5 2s. 6d. to £5 3s. 6d. per ton (1.13c. to 1.15c. per lb.), f.o.b. Antwerp. The trend of sheet prices is upward.

German Steel Scrap Prices Show Weakness

Hamburg, Germany, Feb. 11.—Prices of iron and steel scrap have declined somewhat, so that shipments from the United States and Great Britain may not prove so profitable as in the latter part of last year. In the closing months of 1927 9170 tons of scrap from the United States arrived in Germany. At present, however, consumers have almost entirely ceased purchasing, and the scrap dealers, who were formerly in a single association, have divided into two organizations, which are competing for business. As consignments are often shipped to Germany from the United States and Britain for sale at the market price on arrival, this downward movement in prices may cause some losses to sellers.

This Issue in Brief

Greatest bulwark against foreign competition is American inventive genius and capacity for organization, says Department of Commerce executive. The bogie will fade as we mobilize our resources and collective energies for the best interests of our industries.—Page 608.

Manufacturers may soon receive "educational orders" for munitions. A bill before Congress provides for authority to be given War Department to place orders with manufacturers selected as being best qualified to furnish supplies during emergency.—Page 587.

Safety code for forge hammer operators has been issued by Department of Labor. Trade associations have approved the code and recommended that it be posted in every plant operating forging and hot-metal stamping hammers.—Page 593.

Costly repairs avoided by installing a permanent hearth in blast furnace. Hearth made of heavy cast iron sections, bound together with wrought iron bands, has been in use 11 years and is still in perfect condition.—Page 594.

Reduction in the cost of producing steel is promised by the proper application of washed blast furnace gas, says engineer. This is the most important single unrealized means, he declares, adding that the present simplest and cheapest of the thoroughly tried Continental systems is wet cleaning by the disintegrator method. — Page 595.

New hardness tester employs a pyramid diamond indenter, which is pressed into the specimen under a low load. For hard metals it is said to be superior, and is applicable to finished work and to very thin sheets. Two hundred accurate tests an hour are claimed for it. —Page 602.

Early improvement in business is forecast by favorable barometers, says Dr. Haney. Trend of employment took on a more promising aspect in January; money is easy, and the P-V Line is ascending.—Page 610.

What qualities determine the usefulness of gray iron castings? A. F. A. committee proposes to answer this question by formulating a series of specific problems, and employing the solutions to help remove the difficulties confronting the gray iron industry.—Page 598.

Foresees at least four to six months of above-normal business for steel industry. Prospects are sufficiently favorable to warrant anticipation of good business at least until July, Dr. Haney indicates.—Page 611.

You will gain by concentrating your production and sales efforts on simplified lines, i. e., items in most demand, says Department of Commerce official. The "simplified" lines are more economical to make and easier to sell.—Page 608.

Cuts cost of making malleable castings by installing powdered coal equipment. Quicker heat and hotter metal are obtained. Furnace labor costs are reduced, and refractory costs are lowered slightly.—Page 600.

Though automobile output gained 68 per cent in January over December, it was still the smallest first month since 1922. The number of vehicles produced was 225,039, as against 133,547 in December. — Page 615.

Failures of steel in service may be reduced by investigation to determine the amount of iron oxide that will dissolve in iron under various conditions. Failures in a great many cases are due to non-metallic inclusions, the basis of most of which is dissolved iron oxide.—Page 596.

Heat treatment a measure of a nation's civilization, says metallurgist. At one time it was said that the amount of sulphuric acid consumed was the yardstick. Later steel scrap production was suggested as a truer criterion. Now a new measure, the tonnage of metal heat treated, may be set up.—Page 613.

Limestone produces cleaner steel, says open-hearth man. Burnt lime gives faster heat but, because of the larger boil, limestone gives cleaner metal.—Page 595.

Is "profitless prosperity" due to scientific methods of production vs. unscientific methods of selling? Industry is turning out a continually increasing volume of goods at a gradually decreasing manufacturing cost. But the selling departments of the industries apparently are blind to the fact that there is a limit to the amount of staple commodities the country can absorb, and that consumption will be stimulated little by price cutting.—Page 620.

"Tool room" precision and carefulness are employed in airplane engine manufacture. Parts are checked and tested after each operation in the making of Wright "Whirlwind" motors.—Page 590.

Don't neglect the present metals in the desire to develop new products, engineer tells metallurgists. There is a great deal to be discovered about the metals we now have, and the use made of those metals by engineers is limited to the information about them which metallurgists provide. — Page 614.

Sharp gain in pig iron output is indicated by telegraphed returns. Estimated daily production for February was 99,640 tons, a gain of 7067 tons per day, or 7.6 per cent, over January.—Page 623.

Overproduction, a Waiting Game

REPRESENTATIVES of three industries, one, (zinc) on the road to depression, another (coal) in the very slough of despond, and a third (copper), which is finding the way out, met during the Mining Engineers' convention in New York last week to discuss the problem of overproduction in industry. The resulting picture reflected many aspects of general industrial conditions throughout the United States.

"Profitless prosperity" has been blamed upon many things. Speaking in general terms we believe it is mainly due to widespread adoption of scientific methods of production, unaccompanied by any systematic improvement in the matter of distribution and selling. It results that present plants and labor forces are turning out a continually increasing volume of finished goods at a gradually decreasing manufacturing cost. However, the selling departments of the industries generally have not yet awakened to the fact that there is a limit to the amount of staple commodities which can be absorbed by the population of this country; that such a large cut in the selling price as to wipe out all profit will not stimulate consumption to any great extent, or contrariwise that the concerted maintenance of selling price on a profitable basis will not cause any material reduction in the amount purchased. Saturation is being approached in many raw materials, semi-finished manufactures and labor-saving equipment.

These general propositions, if accepted, contain within them some indications of the corrective steps to be taken. Great expansion in productive capacity must be accepted as a fact. Even further expansion is in prospect. Harrington Emerson calculates that, when all available human effort is placed at supervising machinery, the hours of labor could be cut 30 per cent; yet production would be twice as much as today. Regardless of the precision of this estimate, the long view ahead would discern increasing mechanization and shorter work days.

Shorter work days mean more time for the ultimate consumer to utilize and enjoy the various products which will be devised and which he will make. Such has been the trend of the last 20 years. The making of automobiles, highways and electrical devices (telephones, radio, home conveniences) has absorbed most of the additional productivity our population has achieved during those years. The using of these things has been general because during the same years the scale of living and the amount of leisure has increased to the extent that citizens generally can enjoy the new luxuries and conveniences.

Thus, while research in the past has largely been confined to the problem of making things more easily, and to making new things, research in the future must pay more attention to finding new uses for the old things, to finding new and useful things to make, to devising ways and means so the ordinary citizen can acquire and enjoy more of these new things. Thus, general expansion of consumptive capacity must match the general increase in productive efficiency.

Zinc reflects some of these general considerations. A small proportion of by-product metal, acquired at low cost, dominates the market. It is a sudden source of production. It has placed the industry in the position of being able to produce far more than it can sell. Without building any more smelters, the industry suddenly has all the earmarks of overexpansion. What is to be done? The highest cost producers will have to quit. The rest will have to realize that it is a waiting game until new things can be devised to absorb the available zinc. Meanwhile "live and let live." It will do nobody much good, and the whole industry much harm, to grab a lion's share of the available business by price concessions. They will not increase actual consumption enough to warrant them.

Coal never has learned these lessons. Whereas the consumption used to increase 10 per cent a year, it has dropped to 2 per cent, not because the country's demand for power has lagged, but because more power is coming from other sources—oil, gas or electricity. Meanwhile coal has become over-expanded to where it will take 50 years to catch up. As it has been plaintively expressed, to correct the situation a number of mines and miners must die for the good of the cause; that is, accept their losses and turn their efforts to other things. The quicker the better; 50 years is too long to wait. Meanwhile, the industry must learn that it can sell no coal below cost, nor ship coal until it is sold.

Copper proves these general propositions. It was greatly over-expanded in 1920, both by enlarged plant and improved metallurgical extraction. With the war demand cut off, the future seemed almost as black as the coal situation. But a general and adequate curtailment of operations enabled all but the weakest operations to survive until the consumptive demand increased. More and more electric equipment required copper. Concerted and vigorous publicity and sales promotion regained a lost market in the building industry. A general improvement in living conditions enabled the ultimate consumer to buy more brass and copper fixtures, hardware and utensils. In short, copper found the way out by its sales managers' realizing that price slashing wouldn't expand the market. On the other hand, they united in a constructive effort to find new outlets, and waited for the expanding market, which is only a matter of time.

Cold Facts About Coal

A SENATORIAL investigation of the soft coal strike in western Pennsylvania, West Virginia and Ohio is under way. Since any correction of the conditions prompting the investigation will come through public opinion, rather than senatorial pronouncements, it is highly important that the record shall run to fact rather than sentiment.

The sympathy of the public no doubt will be aroused by testimony as to the suffering of idle miners and their families; but the public will need to know the facts to decide who is responsible for the suffering. For the past thirty years, or since the mine owners in Pennsylvania, Ohio, Indiana and Illinois, known as the central competitive field, made the mistake of granting the union check-off, the union has not been obliged to solicit membership. The hope was that with the funds so collected the union would be able to organize the Southern fields and thus establish a common wage scale for all districts. A man taking employment in a union mine automatically became a union miner, since his first pay envelope was tapped for initiation and dues by the company, the money being turned over to the union. The union leaders lost sight of the man, his living and the education of his children in the sole endeavor to unionize the mines, not those who work in them. Mine owners have been equally out of touch with the individual miner, it being such a simple matter, when men were wanted, to ask the union to furnish them.

The committee will not have to prod witnesses to get testimony to the ruthlessness of operators in this latest struggle, but it is to be hoped the reasons why the union has not performed the chief of its covenanted functions—the care of the men while out on strike—will be fully developed. There are supposed to be 400,000 union miners subject to dues, fines and assessments when at work. It would help the formation of just opinion of the situation if it could be shown what the union receipts have been and how they have been disbursed. The proper handling of the money, it would appear, should have made unnecessary an appeal to the public for help. Working miners are reported to have paid an average of $40 annually in dues, assessments and fines in recent years. Thus assuming only 50 per cent employment in the period of the Jacksonville wage scale from April 1, 1924, to April 1, 1927, there is an indicated income for the union of $24,000,000. The harshness of winter evictions from coal company houses cannot be gainsaid. On the other hand there will be testimony to the ignoring of repeated orders to leave, given in seasons of pleasant weather.

There are few so sanguine as to believe the hearing will produce valuable results. Pittsburgh district coal operators are definitely through with the union, particularly the steel companies which have ceased making contracts that were subject to suspension when any disagreement arose between owners of commercial mines and the union.

Such steel companies produce coal for their own use and not for sale, and the coal mine has its definite place as a steel-making factor. Moreover, it is a matter of calculation that the cost of stocking coal in preparation for possible shortages due to strikes has added a dollar a ton to the cost of making ingots. This extra cost comes in handling charges, interest on money tied up, and the care that must be taken to prevent the piles from burning through spontaneous combustion. That is a burden which the steel industry least of all can carry, with its well known limitations of prices and profits.

Steel Tonnage Prospects

THERE has been a tendency to overrate the importance of recent changes in steel tonnage prospects, which after all have been slight. Shortly before and after the first of the year there were notions that steel demand in 1928 would be exceptionally heavy. On the other hand, the trend toward conservatism in the past few weeks has produced a batch of less favorable expectations.

Such magnifying of small things distorts the picture, the important feature of which is really the steadiness of steel demand. There have been five years of high production of steel, with a uniformity of rate never even closely approached in the past for more than three years, and then only once, from late in 1904 to late in 1907. Gaged by steel ingot production, the slightly "off" year 1924 was 16 per cent under the five-year average, and every other year was just a trifle above, except 1926, which was 7 per cent above.

The idea used to prevail rather generally that good years in steel were naturally and necessarily to be followed by poor years. That idea must be abandoned or held very far in abeyance, for if it were to be applied it should have been applied at least two years ago, and there have since been two heavy years to indicate its errancy.

It is logical and practical to assume that after a reasonable time a continuance of a given volume of steel demand furnishes increased guarantee for its continuance. As the country grows it is easier to maintain a given rate.

In specific detail there has been no important steel consuming line that promised materially more or materially less steel consumption this year than last, with the exception of the automobile industry.

Detailed reports by steel producers for the annual presentation by The Iron Age of where steel went have assigned 13 per cent of the steel to the automotive trade in 1925, 14½ per cent in 1926 and 14 per cent in 1927. Thus a change of one-third in automotive production represents less than 5 per cent of the total steel production. Recently revised reports of the Department of Commerce of fabricated structural steel lettings in the past three years show the lowest year of the three, 1926, to have been only 3 per cent below the three-year average, and the highest year, 1927, only 2.5 per cent above the average. Last year oil and gas field consumption of steel was regarded as being very much "off," but our reports indicated a very fair consumption, and the more rational view is that it was rather 1926 that was "off," in the other direction.

Prices secured by mills for their output of steel this year will be determined by the attitude of the sellers rather than by the tonnage, which is altogether unlikely to show any material decrease, or such an increase as would of itself affect prices. In the first quarter of last year production of steel ingots represented 85 per cent of capacity, while the year's average was 75 per cent. The present quarter promises no material divergence from the corresponding quarter of 1927. There is more leeway in individual finished steel lines than in ingot production, because the total finishing capacity exceeds the ingot capacity. Two or three finishing lines may run above the general average and yet be under no strain.

CORRESPONDENCE

Equipment and Competition

To the Editor: Inferences might be drawn from the advertisements and articles appearing in your columns that there would be no difficulty in meeting the existing horrible competition with modern equipment.

We have always experienced instances of price-cutting, but never to the present extent, which borders on desperation. No one is exempt from the effects. A neighboring company, which is the largest of its kind in the country, is suffering from this cut-throat practice. Some of its best lines have been copied by smaller companies of no reputation, and the price of its stock has dropped from above 90 to between 50 and 60. On an inquiry from a dealer we recently quoted 30c. a set on one of its articles, weighing 1¼ lb., which was made of gray iron, machined, japanned and polished, and found that it was being bought for 15c.

We lately figured on some screw machine parts, and the mill made us a special price on the material. The order was placed at just the cost of the stock, with no allowance for machine work or overhead, to say nothing of profit. It would require a more modern machine than has yet been created to make it possible to meet these conditions.

Guilford, Conn.

Art of Competition Calls for Study

To the Editor: Magnus W. Alexander stated a good many of the problems of present-day competition in his Detroit speech, as reported in The Iron Age of Jan. 26. He pointed the way to a solution, with perhaps no intention of indicating just how the solution is to be carried out. Holding up the "deficiteer" to scorn, with the implication that he ought to be eliminated, seems to be the thought which is uppermost in Mr. Alexander's mind.

However, the best way we know at present of beating competition is to get orders instead of having the competition get them. And there is a lot to be learned out in the highways and byways of trade about that simple art.

On a recent investigation of competitive conditions in a number of competitive organizations, the writer learned some very interesting facts. They are tabulated herewith:

1. Few competitive organizations have very definite ideas about what business they really want to get.
2. In eight organizations out of 11 there was no precise information on where such business as it was claimed was wanted could be found.
3. In seven organizations out of 11 there was no clean-cut plan of getting the business which it was claimed was wanted, in spite of the competition.
4. In only one organization out of 11 had the competitive force been built on a careful study of what the prospective customer wanted. Ten out of 11 were trying to sell what they could conveniently make rather than what the prospective customer wanted.

The investigation covered tank and boiler shops, equipment and machinery builders. It must not be inferred that the information acquired in the case of these 11 organizations is applicable to any organizations other than these particular 11 which were visited. Such conditions *might* be true in a good many industries. It is entirely too easy to generalize from a few facts.

Suppose everyone who is really in a severely competitive market were to make a study of the art of competition. It is actually one of the oldest forms of human activity. Let everyone so afflicted find out all there is to be known about how competitive struggles are won, how to conduct such a struggle, what the chances are for success, etc. It is the writer's belief that a great deal of the futile competitive effort would be eliminated, not by some outside agency, but by the very perpetrators of such activity. The general theory back of the suggestion is the same as the theory which would lead us to conclude that, if an ordinary business man of violent temper would make a study of prize fighting, he would not climb into the ring with the well known Mr. Tunney. Mr. Tunney is not only physically able to fight, *but he knows how to fight.*

Robert E. Kinkead,
Consulting Engineer.

Cleveland, Feb. 2.

Tool Steels, Small Tools and Other Supplies Exhibited at Bridgeport

A cooperative exhibit held under the auspices of the Salesmen's and Purchasing Agent's Association at the Pyramid Mosque, Bridgeport, Conn., was well attended. There were more than 80 exhibitors, and the displays included representative lines of small tools, tool and die steels, non-ferrous products, plating equipment, electrical apparatus, belting and other factory supplies. The attendance was from a comparatively wide area.

Cooperating organizations included the Manufacturers Association of Bridgeport and the Chamber of Commerce. Officers of the Salesmen's and Purchasing Agent's Association are: H. J. Behn, Hunter & Havens, president; A. H. Jones, Bryant Electric Co., vice-president; W. B. Osborne, Bussman Mfg. Co., secretary; and R. T. Phipps, Bullard Machine Tool Co., treasurer, all of Bridgeport.

Articles of Agreement for Flat Rolled Steel Association Completed

Pittsburgh, Feb. 27.—G. H. Charls, E. T. Sproull and A. N. Flora, who are to be active executives of the National Association of Flat Rolled Steel Manufacturers have completed the articles of agreement whereby the National Association of Sheet and Tin Plate Manufacturers, the Hot-Rolled Strip Steel Institute and the Cold-Rolled Strip Steel Institute become one organization, and there now remains merely the ratification of the plan by the three organizations to make the merger effective.

February Iron Output Gains Decidedly

Estimates, Collected by Wire, Make Daily Rate 7067 Tons or 7.6 Per Cent More Than January—Net Gain of One Furnace

ESTIMATES of the February pig iron production, gathered by wire on Tuesday, Feb. 28, reveal a decided increase over January. Producing companies estimated the output for the last two or three days and calculations for only two companies were made in this office. The production of coke pig iron last month was approximately 2,889,500 gross tons or 99,640 tons per day for the 29 days. This compares with an actual production of 2,869,761 tons or 92,573 tons per day in January. The February increase therefore is 7067 tons per day or 7.6 per cent.

These preliminary returns indicate that there was a net gain for the month of only one furnace—six were blown in and five were shut down—making the number operating at the end of the month 186. The gain was all in steel-making furnaces. The Steel Corporation blew in six and blew out one furnace. Two independent steel companies and two merchant stacks were shut down. Thus the net gain was three furnaces for the steel-making companies, six blown in and three blown out.

Actual data for the February output will be published in THE IRON AGE, March 8. The table gives the estimated production by districts for February and the actual output for the three preceding months.

EMPIRE OFFICERS NAMED

New Sheet Company, Formed by Merger of Six Ohio Mills Completes Organization

W. H. DAVEY

The Empire Steel Corporation, Mansfield, Ohio, completed its organization the past week and unified control of the six Ohio sheet mill plants that have been merged will become effective March 1. The companies merged include the Mansfield Sheet & Tin Plate Co., Mansfield; the Ashtabula Steel Sheet Co., Ashtabula; the Empire Steel Co., Cleveland; the Falcon Steel Co., Waddell Steel Co. and the Thomas Sheet Steel Co., Niles.

The selection of W. H. Davey, president of the Mansfield company, as president of the new company, was previously announced. Other officers have been chosen as follows: Vice-president, J. D. Waddell, president Waddell company; treasurer, W. R. Jenkins, secretary Mansfield company; secretary and director of purchases, A. I. Davey, vice-president Mansfield company; general manager, Samuel Davey, second vice-president and general manager Mansfield company. The executive committee consists of H. S. Pickands, Pickands, Mather & Co., Cleveland; W. A. Thomas, one of the owners of the Thomas Sheet Steel Co., and Mr. Waddell, Mr. Jenkins, W. H. Davey and A. I. Davey. Finances will be in charge of a special committee consisting of W. H. and Samuel Davey, C. S. Thomas, former chairman of the board of the Thomas company; A. H. Wheatley, president Empire Steel Co., and Paul Wick, vice-president Falcon company. The executive and sales headquarters will be at Mansfield. Branch sales offices will be located in Detroit, Cleveland, New York, Philadelphia and Chicago.

The Empire company will have at its Mansfield plant open-hearth capacity for about one-half of its sheet bar requirements and will purchase the remainder, about 200,000 tons a year, in the open market. The products of the six mills will include all grades of sheets except galvanized. However, it is planned to convert one of its buildings into a plant for manufacturing galvanized sheets.

W. H. Davey, president of the new company, who took a leading part in bringing about the merger, has been prominently identified with the sheet steel industry for many years. He was vice-president and general manager of the Massillon Rolling Mill Co., Massillon, for some time, and was one of the organizers in 1914 of the Central Steel Co., Massillon, the two companies later being combined. In that year he went with the National Rolling Mill Co. at Mansfield as president, and reorganized it as the Mansfield Sheet & Tin Plate Co. He continued as president and treasurer of this company. Mr. Davey gained his first experience in the steel industry in Gloucester, England, with the Hawkwell Tin Plate Works, where he became a heater. Coming to this country, he was employed by the United States Iron & Tin Plate Mfg. Co., McKeesport, Pa., now the McKeesport Tin Plate Co., and became mill superintendent of the latter company. Later he was general superintendent of the McClure Tin Plate Co., Washington, Pa., now the Washington Tin Plate Co., Before going to Massillon he was superintendent of the Carnaham Tin Plate Co., Canton. Mr. Davey has had five brothers associated with him in the operation of the Mansfield plant, two of whom are officers in the new company.

C. H. Stamm has been appointed general sales manager and manager of service of the Empire Steel Corporation. He had been in charge of service for the Mansfield Sheet & Tin Plate Co., having been connected with that company since its organization in 1915. Previously he was with the Carnahan Tin Plate

Iron and Steel Markets

Sharp Increase in Pig Iron Output

Month, However, Shows Net Gain of Only One Active Furnace—Advance in Plates, Shapes and Bars Drives in Business at Previous Price—Automobile Production Expands

A GAIN of 7.6 per cent in pig iron production in February, as indicated by estimates telegraphed to THE IRON AGE, compares with an increase of 6.4 per cent reported in the previous month. Analysis of the returns, however, shows that there was only one more furnace in blast at the close of the month than on Feb. 1, as against a gain of 16 furnaces in January.

There was an actual decline in the number of merchant furnaces and in independent steel company stacks, the Steel Corporation alone accounting for the increase. That company blew in six furnaces in February and shut down one, while the four other stacks put out were evenly divided between independent steel makers and producers of merchant iron. Although the daily rate of pig iron production for the month, at 99,640 tons, is the largest since June, 1927, it is the smallest for any February since 1922.

The blast furnace returns give fresh emphasis to the uneven character of the recent improvement in business. Increased pig iron requirements have been preponderantly for steel-making purposes, and the gain in steel works operations has been heavier in Steel Corporation than in independent plants.

Territorially, also, conflicting tendencies in the steel market are becoming more sharply defined. Activity is most pronounced in the Chicago district, where specifications still exceed shipments and production has been pushed up from 93 to 95 per cent of capacity. In Ohio, where the bulk of current tonnage is coming from the automotive industry, shipping orders are also in good volume, although total specifications for the month were slightly smaller than in January. The market situation is less favorable at points east of Cleveland, being quietest on the Eastern seaboard, where specifications against first quarter contracts continue to lag and little new business has appeared.

From the standpoint of commodities likewise a uniform market trend is lacking. The recent gain in mill operations is to a large extent attributable to bookings in the heavier rolled products. The second advance since Jan. 1 in plates, shapes and bars, announced last week by the Steel Corporation—putting prices up $1 a ton to 1.90c., Pittsburgh, and proportionately higher levels at other basing points—has been followed by most mills. The principal immediate effect of this price increase was to cause buyers to cover their forward needs, in some cases well through the second quarter, at the previous price, or 1.85c., Pittsburgh. This figure, however, represents a $2 a ton advance over the price at which consumers specified so heavily in December. Cold-rolled strip is also showing signs of strength, with mills booking sizable tonnages for second quarter at an advance of $3 a ton above prices ruling on first quarter shipments.

For other products higher prices are still largely untested. Some business in automobile body sheets has been taken for April shipment at 4.15c., but there has been little second quarter contracting. Current orders for galvanized and black sheets, notably at Cleveland and Philadelphia, have brought out concessions of $2 or more per ton. Even on sheet contracts that have been closed for next quarter the firmness of prices will not be disclosed until the time comes for specifying.

One cause for concern in sheets, as well as in wire nails and some other commodities, is the heavy commitments made at lower prices. It is pointed out that jobbers in sheets and nails who covered at low figures are now in a position to meet or even underquote current mill prices. To what extent the generous purchases that preceded price advances anticipated forward requirements is still an unanswered question. It is believed, however, that unfilled orders of leading steel companies, as of March 1, will show little increase, and possibly a decline.

Steel production, as a whole, continues to hold its recent gains, and the operations of Steel Corporation plants are unchanged at 90 per cent of capacity for the third consecutive week. The chief hope for a further expansion in demand lies with the automobile industry. Makers of cheaper motor cars, with the exception of the Ford Motor Co., are operating at a high rate. The March schedule of the Chevrolet Motor Co. calls for 127,000 units, as compared with 72,000 in November. Employment in Detroit shows a gain of 13,500 as compared with a year ago.

Structural work is enlarged by inquiries for 24,000 tons, including 8000 tons for a garage in Chicago, and awards in the week were about 22,000 tons.

The Chicago, Milwaukee, St. Paul & Pacific Railroad has inquired for 4650 freight cars, the Pacific Fruit Express has ordered 2000 refrigerator cars and the Fruit Growers Express will buy 1200 steel underframes for cars. The Union Pacific has bought 23 locomotives.

The 1928 Lake Superior iron ore season has opened with an inquiry from the Ford Motor Co. for 443,000 tons, about 10 per cent more than this company bought last year.

Buying of pig iron, principally for second quarter, continues fairly active at Cleveland, where sales were 37,000 tons, and at Chicago, where the total was 35,000 tons. In Eastern markets there is less activity, but 15,000 tons was sold in the New York district.

Exports of iron and steel products in January were 205,766 gross tons, the highest total since January, 1927. Imports declined to 58,635 tons from 64,188 tons in December.

*The average switching charge for delivery to foundries in the Chicago district is 61c. per ton.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Production and Shipments of Steel Holding Up—$1 Advance on Heavy Tonnage Products

PITTSBURGH, Feb. 28.—The production and movement of steel are holding up to the recent rate, with the automotive industry showing particular urgency in getting supplies and a high rate of activity is noted among those serving that industry. The steel requirements for building and construction and for standard-section rails also are contributing in an important way to the maintenance of an 80 per cent operation of steel-making capacity and to some extent the agricultural implement industry is helping the production of this and nearby districts. Other major consuming sources are below the average, this being particularly true of pipe for the oil industry. The situation would be rounded out with a better distribution of the production, but the essential thing is that the industry is making a satisfactory showing as to volume. Some of the extreme cheerfulness of the early weeks of the year has passed, as the trade reviews the experiences of the first two months and takes cognizance of the fact that general business is not measuring up to some expectations.

The advance on bars, plates and shapes of $1 per ton last week by the leading producer, and since adopted by others, is being watched very closely by manufacturers for its reaction among the consumers. In view of the fact that tonnage buyers were given opportunity to add to their commitments and as they were already covered to the end of this quarter, it is obvious that a good deal of second quarter tonnage will be shipped at not over 1.85c. While steel manufacturers are desirous of getting more profitable prices, they are not overlooking the possibility that too stiff an advance might bring price resistance. Something has been accomplished by last week's advance, however, seeing that manufacturers have definitely established the second quarter price at 1.85c., as against 1.80c., the ruling contract price for this quarter.

Some contracts for second quarter in sheets and strips are being written at the higher prices recently announced, but the proof of the firmness of makers will hardly be demonstrated until the time comes for specifications on these contracts. There was, as has been pointed out from time to time, so much coverage for this quarter at lower prices that the advances could not become immediately effective. Jobber competition with mills on nails and sheets has been made possible through the fact that jobbers covered at low prices and now can resell profitably at current mill quotations or less.

Primary materials still are very dull. Interest has rarely been lower in pig iron. Scrap dealers point out that their sales are smaller with the steel industry producing ingots at 80 per cent of capacity than they were when the steel output was lower. The fuel situation is as depressed as ever, because even the production formerly rated as light is more than ample for requirements.

Pig Iron.—Business still drags and there is nothing to encourage ideas of early improvement because of the fact that important melters quite generally have stocks or protection against their requirements for the next month or two, and some for an even longer period.

Shipments are steady and in good volume and, since consumers are not stocking to any great extent, the natural conclusion is that the melt is increasing. Steel foundries in the district are having a better operation than they had over the latter part of last year, but are not so busy that they could not take on more business. Gray iron foundries still are operating at a rather low rate, but the sanitary ware and radiator companies appear to be doing well. Current sales of all grades run largely to single carloads at unchanged prices. The Westinghouse Electric & Mfg. Co. inquiry is still open; there is an impression that the business will be awarded upon a reciprocity basis.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$17.00
Bessemer	17.50
Gray forge	16.75
No. 2 foundry	17.25
No. 3 foundry	16.75
Malleable	$17.25 to 17.50
Low phosphorus, copper free	27.00

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—Sustained operations of steel works is responsible for a steady flow of specifications for the commonly-used ferroalloys. New business amounts to little, since so few consumers failed to contract for supplies. Prices are unchanged.

Semi-Finished Steel.—There is a good movement of billets, slabs and sheet bars, but no activity in the market apart from the specifications of non-integrated makers of sheets, tin plate and strips. Makers of wire rods are all quoting $44, base Pittsburgh or Cleveland, but sales at that price are few and small.

Bars, Plates and Shapes.—The advance of $1 a ton announced last week by the Carnegie Steel Co., putting these products to 1.90c., base Pittsburgh, since has been adopted by other producers, but in most cases it seems to have been preceded by a good deal of covering of buyers through the second quarter at the old price and not much business has been written at the higher figure. The makers of these products are desirous of getting prices to a profitable basis, but at the same time are aiming to create a minimum of price resistance. An interesting feature of the latest announcement by the Carnegie Steel Co. is the reference to the fact that for small lots there is an extra of $2 a ton. The last previous announcement, Jan. 19, last, contained no reference to small-lot prices. A good deal of plate business is in sight in river barges, but structural steel fabricators are not figuring on as much business as they could handle. Activity in cold-finished steel bars is reflected in the specifications for hot-rolled bars.

Rails and Track Supplies.—Business still is slow in track accessories, railroads apparently waiting on weather sufficiently open for rail-laying before ordering spikes, tie plates, etc. The local maker of standard-section rails is well supplied with business and is producing actively against its orders. Light-section rails are slow.

Wire Products.—Suggestions that the second-quarter price for nails would be $2.85, base per keg, Pittsburgh, and that on plain wire $2.70, base, per 100 lb., or $4 per ton advance over present prices are not taken seriously by manufacturers or jobbers. Manufacturers are somewhat concerned over the situation in nails, which are not moving into consumption in nearly as heavy volume as they are going from the mills, and it is a question whether further advances could be sustained in view of the large stocks and the protection given to jobbers. There is also the consideration that jobbers can sell profitably at lower than today's mill prices, plus the new card of extras, while retailers seem to be in no hurry to stock against later demands. The flow of orders for wire products, chiefly specifications against contracts, is steady and is sustaining a mill operation of between 65 and 75 per cent of capacity.

Tubular Goods.—Pipe mills still are getting more business in standard-weight or buttwelded pipe than in lapwelded goods, and shipments of former so far this year are running some 4 or 5 per cent smaller than in the same period last year. Production of oil is running lighter, but stocks above ground still are too bulky for the market to strengthen sufficiently to encourage drilling operations. California still is the most active field in drilling. Pipe line projects are numerous and involve large tonnage, but only a few have reached the mills for bids. Fair demand is noted for locomotive boiler tubes, and mechanical tubing is doing well. Prices of all kinds of tubular goods still are a little irregular.

Sheets.—Buyers still are specifying freely against old orders for sheets and there is a fair amount of contracting for second quarter tonnages, more particularly, however, on the part of automobile builders, who are preparing for an active second quarter in production and do not want to be caught short. Resistance to paying 4.15c., base, for body sheets, which compares with 4c. on first quarter tonnages, appears to be subsiding, and local mills do not find buyers unwilling to go along with the higher prices. Business continues better in the Central West than here or in the East.

Tin Plate.—Specifications against contracts are good and quotas for April shipment, which have been coming in since Feb. 15, are well up to expectations. New business is small. The Texas Co.'s inquiry for 100,000 boxes of oil can sizes and the Japanese inquiry for 60,000 boxes have not been closed, but the former is expected to go to the two companies which have had that company's business in recent years.

Hot-Rolled Flats.—Some second quarter business has been written at the higher prices announced earlier in the month and all makers appear to be holding to these prices. Meanwhile, buyers are specifying well against contracts for this quarter carrying lower prices and makers have obligations sufficient to provide a fairly high operation of mills.

Cold-Rolled Strips.—Makers are shipping freely on old and lower-priced obligations and meanwhile are writing a goodly amount of second quarter business at an advance of $3 a ton. Apparently they have encountered no serious resistance from buyers.

20-lb. coating I.C.	15.30	40-lb. coating I.C.	19.85

Alloy Steel Bars

(F.o.b. Pittsburgh, Chicago or Ohio Mill)

S. A. E. Series Numbers		*Base Per* 100 *Lb.*
2100*	(½% Nickel, 0.10% to 0.20% Carbon)	$2.90 to $3.00
2300	(3½% Nickel)	4.00 to 4.10
2500	(5% Nickel)	5.00 to 5.25
3100	(Nickel Chromium)	3.00 to 3.10
3200	(Nickel Chromium)	4.75 to 5.00
3300	(Nickel Chromium)	6.75 to 7.00
3400	(Nickel Chromium)	6.00 to 6.25
5100	(Chromium Steel)	3.00 to 3.10
5200*	(Chromium Steel)	7.00 to 7.50
6100	(Chrom. Vanadium bars)	4.00 to 4.15
6100	(Chrom. Vanad. spring steel)	3.50 to 3.75
9250	(Silicon Manganese spring steel)	3.00 to 3.15
	Carbon Vanadium (0.45% to 0.55% Carbon, 0.15% Vanad.)	4.10 to 4.20
	Nickel Chrom Vanadium (0.60 Nickel, 0.50 Chrom., 0.15 Vanad.)	4.05 to 4.20
	Chromium Molybdenum bars (0.80—1.10 Chrom., 0.25—0.40 Molyb.)	4.00 to 4.25
	Chromium Molybdenum bars (0.50—0.70 Chrom., 0.15—0.25 Molyb.)	3.05 to 3.10
	Chromium Molybdenum spring steel (1 — 1.25 Chrom., 0.30 — 0.50 Molybdenum)	4.50 to 4.75

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

---

*Not S. A. E. specification, but numbered by manufacturers to conform to S. A. E. system.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, 9/16 in. and larger	$2.70 to $2.80
Spikes, ½ in. and smaller	2.70 to 2.80
Spikes, boat and barge	2.90 to 3.00
Tie plates, steel	2.25
Angle, bars	2.75
Track bolts, to steam railroads	3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count,	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Steel			*Iron*		
Inches	Black	Galv.	Inches	Black	Galv.
⅛	45	19½	¼ to ⅜	+11	+39
¼ to ⅜	51	25½	½	22	2
½	56	42½	¾	28	11
¾	60	48½	1 to 1½	30	13
1 to 3	62	50½			

Lap Weld

2	55	43½	2	23	7
2½ to 6	59	47½	2½	26	11
7 and 8	56	43½	3 to 6	28	13
9 and 10	54	41½	7 to 12	26	11
11 and 12	53	40½			

Butt Weld, extra strong, plain ends

⅛	41	24½	¼ to ⅜	+19	+54
¼ to ⅜	47	30½	½	21	17
½	53	42½	¾	28	12
¾	58	47½	1 to 1½	30	14
1 to 1½	60	49½			
2 to 3	61	50½			

Lap Weld, extra strong, plain ends

2	53	42½	2	23	9
2½ to 4	57	46½	2½ to 4	29	15
4½ to 6	56	45½	4½ to 6	28	14
7 to 8	52	39½	7 to 8	21	15
9 and 10	45	32½	9 to 12	16	2
11 and 12	44	31½			

On carloads the above discounts on steel pipe are increased on black by one point, with supplementary discount of 5 and 2½%, and on galvanized by 1½ points, with supplementary discount of 5 and 2½%. On iron pipe, both black and galvanized, the above discounts are increased to jobbers by one point with supplementary discounts of 5 and 2½%.

Note.—Chicago district mills have a base two points less than the above discounts. Chicago delivered base is 2½ points less. Freight is figured from Pittsburgh, Lorain, Ohio, and Chicago district mills, the billing being from the point producing the lowest price to destination.

Boiler Tubes

Base Discounts, f.o.b. Pittsburgh

Lap Welded Steel		*Charcoal Iron*	
2 to 2¼ in.	27	1½ in.	+18
2½ to 2¾ in.	37	1¾ to 1⅞ in.	+ 8
3 in.	40	2 to 2¼ in.	— 2
3¼ to 3¾ in.	42½	2½ to 3 in.	— 7
4 to 13 in.	46	3¼ to 4½ in.	— 9

Beyond the above discounts, 7 fives extra are given on lap welded steel tubes and 2 tens to 2 tens and 1 five on charcoal iron tubes.

Standard Commercial Seamless Boiler Tubes

Cold Drawn

1 in.	60	3 in.	45
1¼ to 1½ in.	52	3¼ to 3½ in.	47
1¾ in.	36	4 in.	50
2 to 2¼ in.	31	4½, 5 and 6 in.	45
2½ to 2¾	39		

Hot Rolled

2 and 2¼ in.	37	3¼ and 3½ in.	53
2½ and 2¾ in.	45	4 in.	56
3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

Old Material.—There is almost no consumer interest in scrap. Dealers, not being pressed for deliveries, are not giving the market much support by purchases against short sales. Heavy melting steel still is quoted at from $14.50 to $15, but it is so hard to find buyers at the higher figure that dealers have weakened to $14.75 for delivery at one point in the district. The situation in the steel works grades is very puzzling to dealers, who find consumers no more interested in supplies with steel production at 80 per cent of capacity than they were when operations were much lower. Heavy breakable cast is not overly strong at current quotations, as one important user has held up shipments. Steel foundries have paid $17.25 for railroad specialties. The March Baltimore & Ohio list is small, containing only 9870 gross tons, or little more than half of the previous list.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:		
Heavy melting steel	$14.50 to	$15.00
Scrap rails		14.50
Compressed sheet steel	14.00 to	14.25
Bundled sheets, sides and ends	13.00 to	13.25
Cast iron carwheels	14.50 to	15.00
Sheet bar crops, ordinary	15.00 to	15.50
Heavy breakable cast	13.50 to	14.00
No. 2 railroad wrought	15.00 to	15.50
Heavy steel axle turnings	13.00 to	13.50
Machine shop turnings		11.00
Acid Open-Hearth Furnace Grades:		
Railroad knuckles and couplers	16.75 to	17.25
Railroad coil and leaf springs	16.75 to	17.25
Rolled steel wheels	16.75 to	17.25
Low phosphorus billet and bloom ends	18.50 to	19.00
Low phosphorus, mill plate	17.50 to	18.00
Low phosphorus, light grade	16.50 to	17.00
Low phosphorus sheet bar crops	17.50 to	18.00
Heavy steel axle turnings	13.00 to	13.50
Electric Furnace Grades:		
Low phosphorus punchings	16.50 to	17.00
Heavy steel axle turnings	13.00 to	13.50
Blast Furnace Grades:		
Short shoveling steel turnings		11.00
Short mixed borings and turnings		11.00
Cast iron borings		11.00
No. 2 busheling	10.00 to	10.25
Rolling Mill Grades:		
Steel car axles	18.00 to	19.00
No. 1 railroad wrought	11.00 to	11.50
Sheet bar crops	17.00 to	17.50
Cupola Grades:		
No. 1 cast	14.50 to	15.00
Rails 3 ft. and under	15.00 to	15.25
Malleable Grades:		
Railroad	14.50 to	15.00
Industrial	14.00 to	14.50
Agricultural	13.50 to	14.00

Cold-finished Steel Bars and Shafting.—Makers as yet have taken no action in connection with second quarter prices. Buyers are not showing interest in supplies that far ahead and there is probably some delay to see how well the latest advance in hot-rolled bars is maintained. Specifications on contracts for this quarter are coming in freely and in a good many cases there is much urgency about shipments. Most of the shipments carry 2.20c. base Pittsburgh, but on new business all makers are quoting $2 a ton more.

Alloy Steel Bars.—In view of the fact that hot-rolled bars have become established at an advance of $2 a ton over the prices of late last year and that in the meantime there has been no change in alloy bars, some makers of the latter are considering making an effort to get higher prices on second quarter business.

Bolts, Nuts and Rivets.—Business in bolts and nuts is not showing the expansion that was expected by this time. Not much railroad car business has been taken by Pittsburgh district builders and car work is one of the chief dependencies of local producers. Jobbers are taking small lots steadily. Rivet business still leaves something to be desired. Makers generally are asking more money for small rivets and the common quotation now is 70 and 10 per cent off list.

Coke and Coal.—Spot furnace coke has weakened again in the past week and, while there is still a quotation of $2.75 net at ovens, buyers do not have to shop much to find supplies at 10c. to 15c. a ton less. Indeed, most of the recent business has been at $2.60 to $2.70. Spot foundry coke holds at the recent range of prices, with supplies quite ample. The coal market shows neither life nor strength.

Warehouse Prices f.o.b. Pittsburgh

	Base per Lb
Plates	3.00c.
Structural shapes	3.00c.
Soft steel bars and small shapes	2.90c.

Wire, galvanized soft, base per 100 lb.	3.00 to 3.10
Common wire nails, per keg	3.00
Cement coated nails, per keg	3.05

Two Shop Meetings Planned

Announcement has been made of two meetings devoted to machine shop practice topics—one at Chicago, March 14, and the other at Newark, N. J., March 28.

The Chicago meeting, under the auspices of the Chicago section of the American Society of Mechanical Engineers, will be held at the Morrison Hotel. Papers include: "Development of Fully-Inclosed Gear Drives for Industrial Speed Reduction," by J. A. Marland, engineer W. A. Jones Foundry & Machine Co., Chicago; "Special Machinery for Mass Production," by H. L. Blood, chief of machine design division, Western Electric Co., Chicago; "Production of Pressed Steel Frames by Automatic Machinery," by John P. Kelly, sales manager A. O. Smith Corporation, Milwaukee; and "Stopping Production Leaks Through a Simplified Production Control," by K. R. Wood, works manager Bell & Howell Co., Chicago. "The Relation of Chromium Plating to Industries and the Truth About Its Value and Application" is the title of a paper to be presented by Dr. J. Becker, chief research chemist Vacuum Can Co., Chicago.

The Newark, N. J., meeting, sponsored by the machine shop practice division of the A. S. M E., will be devoted to the design and building of jigs and fixtures. It will be held at the Y. M. C. A. building, 107 Halsey Street, and will be preceded by a dinner. F. P. Hutchinson, chief of tool design Western Electric Co., Kearny, N. J., and Harry Pound, assistant chief tool designer International Motor Co., Plainfield, N. J., will be speakers. W. F. Dixon, works manager Singer Mfg. Co., Elizabethport, N. J., will preside.

American Rolling Mill Co. Earnings Off

The American Rolling Mill Co., Middletown, Ohio, and its subsidiaries, exclusive of the Columbia Steel Co. and the Norton Iron Works, Inc., for the year ending Dec. 31, 1927, had net income after all charges of $3,748,654. This compares with net income of $4,065,050 in 1926. Total surplus as of Dec. 31, 1927, was $12,789,160, comparing with $12,432,390 at the close of 1926.

George M. Verity, president, in his annual report, declared that the volume of business during the first half of 1927 was satisfactory, but in the last half there was a distinct falling off. This is emphasized by the fact that the net earnings for the first six months were $3,001,209, as compared with $2,329,038 for the same months of 1926.

Semi-Finished Steel, Raw Materials, Bolts and Rivets

Mill Prices of Semi-Finished Steel

F.o.b. Pittsburgh or Youngstown

Billets and Blooms

	Per Gross Ton
Rerolling, 4-in. and over	$33.00
Rerolling, under 4-in. to and including 1¾ in.	$33.50 to 34.00
Forging, ordinary	38.00 to 39.00
Forging, guaranteed	43.00 to 44.00

Sheet Bars

	Per Gross Ton
Open-hearth or Bessemer	$34.00

Slabs

	Per Gross Ton
8 in. x 2 in. and larger	$33.00
Smaller than 8 in. x 2 in.	34.00

Skelp

	Per Lb.
Grooved	1.85c. to 1.90c.
Sheared	1.85c. to 1.90c.
Universal	1.85c. to 1.90c.

Wire Rods

	Per Gross Ton
*Common soft, base	$44.00
Screw stock	$5.00 per ton over base

Milled studs	70 and 5

Chicago

Western Mills Advance Plates, Shapes and Bars to 2c., Mill

CHICAGO, Feb. 28.—Events of the week in the Chicago steel market center mainly around the price situation. Plates, shapes and soft steel bars have been advanced $1 a ton to 2c., Chicago. Acceptance by the trade of the new quotations is still somewhat in doubt, especially on plates and shapes, while on bars new sales appear to have established the advance. Many consumers are still specifying against 1.90c. steel and, not having had occasion to take advantage of the 1.95c. price, are raising objection to the more recent 2c. quotation. Producers are apparently firm in their intention to hold current purchases and second quarter business at the new levels.

A general average of ingot production strikes only a shade under 95 per cent of capacity, an advance of two points in the week, and specifications still continue to exceed output. If rails and track accessories are included, new buying is on a par with shipments; however, taking into account only the heavy tonnage finished steel products, new purchases show a decline from a week ago. There are no direct indications that consumptive demand has dropped off to any marked degree. Second quarter contracts are few.

Pig Iron.—Purchases in the week for second quarter and prompt delivery are in excess of 35,000 tons, and fresh inquiry indicates that the buying of iron for future delivery will be well sustained. A user north of Chicago has taken 5000 tons and two buyers, one in Wisconsin and one in Michigan, have placed orders for 2500 tons each. Prices for Northern foundry iron are steady at $18.50, local furnaces. Some unsteadiness is apparent in the charcoal iron market. Sales of Southern iron are small. Several spot inquiries for silvery are noted and carload sales made during the week indicate that the present price schedule is being maintained. Gains in shipments are most noteworthy in the case of malleable foundries.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.50
N'th'n No. 1 fdy., sil. 2.25 to 2.75	19.00
Malleable, not over 2.25 sil.	18.50
High phosphorus	18.50
Lake Superior charcoal, averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	20.18
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—Specifications for ferrosilicon are heavy. A consumer has made inquiry for 100 tons for early delivery, but to date has refused to accept the spot quotation of $87.50, delivered. Several orders have been placed for spiegeleisen. Fifty tons or less brings $32, Hazard, Pa., but a purchase of 100 tons of the 19 to 21 per cent grade was taken at less than $31.

Prices delivered Chicago: 80 per cent ferromanganese, $107.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $38.76 to $39.76.

Plates.—Producers in the Chicago district have followed the leading interest in advancing plate prices to 2c. for lots of 100 tons or more and to 2.10c. for smaller tonnages. These prices are effective on all current business and they mark the opening of books for the second quarter. Plate mill backlogs are steady as incoming business balances shipments. Deliveries range from four to six weeks. The Pacific Fruit Express has placed orders for 2000 refrigerator cars, half to be built by the Pacific Car & Foundry Co. and half by the Pullman Car & Mfg. Corporation. This business will require close to 20,000 tons of steel, of which 10,000 tons will be furnished by Chicago mills. Over 50,000 tons of plates, shapes and bars will be needed for the 4650 cars now being inquired for by the Chicago, Milwaukee, St. Paul & Pacific. The Roxana Petroleum Corporation has bought 1500 tons of plates for four 80,000 bbl. oil storage tanks. Fresh inquiry from oil producers totals close to 7000 tons of tankage material. The plate market in this district is in a healthy condition, though it may be several weeks before a real test of the new prices will come.

Mill prices on plates per lb.: 1.95c., base Chicago.

Structural Material.—This market remains active. The American Bridge Co. has taken 6000 tons and the Milwaukee Bridge Co. 1400 tons for the Sixteenth Street viaduct, Milwaukee. A local fabricator has taken 600 tons for an apartment building. The Central States Bridge Co. is low bidder on 3000 tons for a department store at Indianapolis. New projects total over 8000 tons, including 3500 tons for the Austin, Ill., high school and 1500 tons for an industrial building at Ottawa, Ill. Fabricators look for the early award of the 4000 tons required for the Steuben Club, Chicago. All local producers have announced the opening of second quarter books on structural material at prices that range from 2c. to 2.10c., the latter applying on orders for less than 100 tons. These prices take effect immediately but in the four or five days in which they have been quoted sales have not been large and it is generally admitted that further tests are needed to establish the market at the new levels.

Mill prices on plain material per lb.: 1.95c. to 2.10c., base, Chicago.

Bars.—A feature of this market is the unusual demand for soft steel bars by automobile plants and manufacturers of accessories. The Chevrolet schedule for March is said to be 127,000 cars. Farm machinery manufacturers are heavily engaged, especially in tillage equipment. Road machinery builders are rounding out an active winter season and give promise of sustained activities as they enter their heavy selling period. New prices for soft steel bars, 2c. to 2.10c., Chicago, appear to be established. Deliveries are steady at four to six weeks. Prices for alloy steel bars are firm and it is reported that advances are being considered by producers. Local alloy bar mills are engaged at close to capacity. Specifications exceed shipments and deliveries are being extended. Iron bars have been advanced to 2c., Chicago, not because of the favorable position of producers but rather to bring prices for this commodity in line with the new quotation on soft steel bars. Bar iron order books are light and current shipments are small. Rail steel bar rollers have opened books at 1.85c., Chicago Heights mills, for second quarter delivery. Meanwhile orders will be accepted for delivery up to March 31 at 1.80c. Order books in hard steel bars are the best in several months and specifications are running ahead of shipments. Both rail steel bar mills are operating double turn.

Mill prices per lb.: Soft steel bars, 1.95c. to 2.10c., base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.80c. to 1.85c., base, Chicago Heights mill.

Cast Iron Pipe.—Detroit has closed for 2000 tons of 24-in. pipe at prices that were within a few cents of $30, Birmingham. James B. Clow & Sons took 600 tons, the National Cast Iron Pipe Co. 400 tons, and the American Cast Iron Pipe Co. 1000 tons. The only new inquiry of note this week comes from Rockford, Ill., where prices are being asked on 500 tons of 6-in. to 24-in. pipe and 35 tons of fittings. C. J. Ryan has been awarded a general contract by Elmhurst, Ill. Although pipe business now before the trade is not large, it is generally understood that a number of municipalities are shaping their requirements and that as spring opens this market will show satisfactory activity. Deliveries average 30 days and prices are steady at $29.50 to $30, Birmingham, for 6-in. and larger diameters.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $37.70 to $38.20; 4-in., $41.70 to $42.20; Class A and gas pipe, $4 extra.

Rails and Track Supplies.—Six Western railroads have placed orders for a total of 35,000 tons of standard-section rails. Although local mills look forward to additional orders for rails, the amount cannot be large for the reason that the major buying movement for delivery in the spring and early summer is practically completed. Rails purchased in the buying movement now closing are reported at close to 2,000,000 tons for the entire country. This is about equal to the tonnage placed during the corresponding period a year ago. Several railroads have ordered a total of 15,000 tons of track accessories and definite inquiry is before the trade for an additional 15,000 tons. Output of accessories is proportionate to rail production, which now stands at 90 per cent of mill capacity. The light rail market is dull.

Wire Products.—Little change is noted in this market. Irregularities in quotations still occur here and there, but they are not of sufficient importance to disturb the general price structure. Wire mill operations are variously estimated at between 72 and 75 per cent of capacity. Specifications and new orders are heavier than shipments and deliveries of some wire products are lengthening. Orders from jobbers in the South are particularly good. The trade in the Northwest is marking time, but producers are hopeful that business in that territory will improve with the end of winter weather. Demand from the manufacturing trade is steady. Current requirements for fencing by the railroads are not large.

Sheets.—Local hot mills are heavily engaged and, with specifications running well ahead of shipments, deliveries have been extended to four to six weeks. A fair volume of second quarter business has been added to producers' books. Current prices are firm at 3.90c., Chicago, for galvanized, 2.35c. for blue annealed sheets 40 in. and wider and 2.25c. for narrower, and 3.05c. for black sheets. A few orders have been received this week from the Northwest, a territory that has been very dull since early last fall. Car builders are ordering out roofing sheets and a good tonnage is being taken for oil tank roofs. Distribution of sheets by warehouses is small.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 3.05c.; No. 24 galvanized, 3.90c.; No. 10 blue annealed, 2.25c. to 2.35c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Bolts, Nuts and Rivets.—Specifications have shown further improvement, especially from the railroads and manufacturers of railroad equipment. Local sellers are expecting the contracting period for second quarter to open in the next week or 10 days. Prices on practically all of these commodities are strong, this being true especially of stove bolts.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per Lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Reinforcing Bars.—New projects continue to come out faster than awards are made, and while estimators are kept busy shop operations are at less than 50 per cent of capacity. The State hard road program is shaping rapidly and several general contracts have been placed. It is reported that only a small tonnage of reinforcing steel will be required for the Chicago Daily News Building. Quotations on billet steel reinforcing bars out of Chicago warehouses range from 2.35c. to 2.75c. On the ordinary run of business in rail steel bars 1.80c. is asked and on bridge and culvert work 1.95c., Chicago Heights mills, is quoted. Recent awards and new projects are shown on page 641.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.35c. to 2.75c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb.	$3.20
Common wire nails, base per keg	3.00
Cement coated nails, base per keg	2.90

Coke.—Shipments of by-product foundry coke so far in February are in excess of the total for January. As this commodity is not stocked by users but is ordered out as required, it gives an accurate reflection of foundry melt. Prices are firm at $9, f.o.b. local ovens, and $9.50, delivered in the Chicago switching district.

Old Material.—A consumer has taken 10,000 tons of heavy melting steel at $13 a gross ton, delivered. Dealers, who are having some difficulty in covering old orders, are paying $12.50 to $13, depending on the grade sought and the destination. Malleable and cast grades are accumulating and they are not only difficult to sell but hold-up orders are of common occurrence. Low phosphorus grades are coming out faster than consumption demands and cast iron borings are still slow. Prices for the latter grade are sagging. Included among railroad lists are 7800 tons by the St. Paul, and 5000 tons each by the Burlington, Illinois Central and the Missouri Pacific.

Prices delivered consumers' yards, Chicago:

Per Gross Ton

Basic Open-Hearth Grades:	
Heavy melting steel	$12.75 to $13.25
Shoveling steel	12.75 to 13.25
Frogs, switches and guards, cut apart, and miscellaneous rails	14.25 to 14.75
Hydraulic compressed sheets	11.25 to 11.75
Drop forge flashings	9.75 to 10.25
Forged, cast and rolled steel carwheels	15.25 to 15.75
Railroad tires, charging box size	16.50 to 17.00
Railroad leaf springs, cut apart	16.50 to 17.00
Acid Open-Hearth Grades:	
Steel couplers and knuckles	14.50 to 15.00
Coil springs	16.50 to 17.00
Electric Furnace Grades:	
Axle turnings	13.00 to 13.50
Low phosphorus punchings	14.25 to 14.75
Low phosphorus plate, 12 in. and under	13.50 to 14.00
Blast Furnace Grades:	
Axle turnings	10.75 to 11.25
Cast iron borings	10.00 to 10.50
Short shoveling turnings	10.00 to 10.50
Machine shop turnings	7.50 to 8.00
Rolling Mill Grades:	
Iron rails	13.50 to 14.00
Rerolling rails	15.00 to 15.50
Cupola Grades:	
Steel rails less than 3 ft.	15.50 to 16.00
Angle bars, steel	14.25 to 14.75
Cast iron carwheels	14.00 to 14.50
Malleable Grades:	
Railroad	13.00 to 13.50
Agricultural	12.50 to 13.00
Miscellaneous:	
*Relaying rails, 56 to 60 lb.	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00

Per Net Ton

Rolling Mill Grades:	
Iron angle and splice bars	14.00 to 14.50
Iron arch bars and transoms	18.75 to 19.25
Iron car axles	21.50 to 22.00
Steel car axles	16.00 to 16.50
No. 1 railroad wrought	11.00 to 11.50
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	9.25 to 9.75
No. 2 busheling	4.25 to 4.75
Locomotive tires, smooth	12.50 to 13.00
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.50 to 15.00
No. 1 railroad cast	13.00 to 13.50
No. 1 agricultural cast	13.00 to 13.50
Stove plate	11.25 to 11.75
Grate bars	11.50 to 12.00
Brake shoes	11.50 to 12.00

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Puddlers' Wage Rate Unchanged

Puddlers in Mid-Western mills operating under the sliding scale wage agreement of the Amalgamated Association of Iron, Steel & Tin Workers, will receive for March and April $11.05 per ton for boiling iron, unchanged from the rate paid in January and February. Finishing hands will be paid the same rates as the first two months. At the bi-monthly examination of sales sheets last week, the average selling price of bar iron shipped the 60 days ending Feb. 20 was disclosed as $1.85 per 100 lb., or unchanged from the average of two previous months.

Cleveland

Steel Bookings for February Decline—Ford Inquires for 443,000 Tons of Ore

CLEVELAND, Feb. 28.—Independent mills have followed the Carnegie Steel Co. in advancing steel bars, plates and shapes $1 a ton to 1.90c., Pittsburgh, and Cleveland bar mills have made a similar advance on steel bars to 1.90c., Cleveland. A few contracts have been taken at the new price. While steel specifications continue in good volume, February bookings will fall slightly below those of January.

Orders for steel bars, plates and shapes are now nearly all against 1.80c. contracts, as buyers generally covered before the advance to 1.85c. Several of the Michigan automobile and parts makers are inquiring for steel bars, sheets and strip steel for deliveries into or through the second quarter. Some business is reported to have come from that source in sheets and strip steel at the new prices. The Ford Motor Co., which expects to get on a daily production schedule of 1250 cars in March, has inquiries out for steel in various forms for early requirements.

Business in the structural field is coming out in satisfactory volume, but in spite of the recent improvement competition is unusually keen and some of the prices that have been named recently for fabricated work are said to be the lowest in several years. An inquiry is pending for 1500 tons of sheet steel piling for the Union Terminals project for work awarded to the Bates & Rogers Construction Co. The Wheeling & Lake Erie Railroad is inquiring for 12,000 tie plates.

Some business in auto body sheets has been taken for April shipment at the regular 4.15c. price, but little business has so far been done in second quarter contracts. Black and blue annealed sheets continue to move well in specifications against contracts, but there is not much tonnage in current orders. The demand for galvanized sheets continues slow and these show no tendency to strengthen. Concessions of $2 or more a ton from 3.75c., Pittsburgh, appear rather common.

Pig Iron.—The market continued active during the week with sales aggregating 37,000 tons by Cleveland interests, compared with 53,000 tons during the previous week. Of the total, approximately 10,000 tons was for shipment to the Eastern territory. The remaining activity was largely centered in Michigan, although there was some buying in Cleveland and other parts of the northern Ohio territory. Sales generally were for second quarter. Inquiry is less active. The market has a fairly firm tone and one Lake furnace producer, which recently advanced its price on foundry and malleable iron to $17.50 has been able to take some business on that basis, though $17 is the more common quotations and that is still being shaded to $16.75 for shipment to some competitive points. In Michigan the market is holding at $18. February shipments will be about the same as in January, being heavy to the automotive industry and fair to other consumers.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fdy., sil. 1.75 to 2.25	22.00
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic, Valley furnace	17.00
Standard low phos., Valley furnace	$26.50 to 27.00

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.60c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb.	$2.90
No. 9 galvanized wire, per 100 lb.	3.35
Common wire nails, base per keg	2.90

*Net base, including boxing and cutting to length.

Fluorspar.—The gravel fluorspar market has a firmer tone and a leading producer has advanced this grade 50c. a ton to $15, at which it sold 3000 tons to a Pittsburgh district consumer. Another sale of 1000 tons was made to a Cleveland mill.

Iron Ore.—An inquiry for 443,000 tons of iron ore has been sent out by the Ford Motor Co., which is 10 per cent more than this company purchased last year. Its inquiry includes 286,000 tons of basic ore, 66,000 tons each of manganiferous and high phosphorus and 25,000 tons of silicious ore. The Ford company is the largest open market ore buyer and several times the season's prices have been established by this company's purchases. It may be several weeks before ore firms submit bids to the Ford company. Other consumers are showing little interest in the market and producers have not given prices serious consideration. Indications point to the reestablishment of the 1927 prices, which also prevailed during the two previous years.

Strip Steel.—Not much new business in hot-rolled strip is coming out, but specifications against low-priced contracts are holding up well. While mills are quoting the recently named higher prices, there has been no real test of these prices on round-lot business. Cold-rolled strip is moving in good volume and mills are running close to capacity. Sizable lots are reported to have been taken in the Detroit territory for the second quarter at the new price.

Reinforcing Bars.—Two local awards aggregating 1050 tons were made during the week. Small-lot inquiry is fair. Rail steel bars are unchanged at 1.75c., mill.

Coke.—The price of by-product foundry coke for March is announced at $8, Painesville, or $9.01, delivered Cleveland, the same as prevailed this month.

Semi-Finished Steel.—Specifications which recently fell off somewhat have increased as consumers are sending in orders for their March requirements and the leading local producer is now operating 10 of 14 open-hearth furnaces. As practically all consumers are under contract, there is very little new business. Quotations are unchanged at $33, Cleveland, for sheet bars, billets and slabs.

Bolts, Nuts and Rivets.—The demand for bolts and nuts, while fair, has not increased. February orders are larger than January, but not up to February, last year. Automobile companies are specifying quite freely. Rivets are moving slowly. Prices on these products are firm.

Old Material.—The market continues dull, as there is no new consumer demand and mills are still restricting shipments. Consequently dealers are buying little scrap to fill outstanding orders. Production is in excess of the demand, especially of blast furnace scrap. This is due in part to the fact that some of the blast furnaces that were using considerable scrap a few months ago are now using very little. Short shoveling turnings are a drug on the market. Blast furnace scrap has declined 25c. a ton and is now rather freely offered at $10. This is the second reduction in two weeks.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$13.75 to $14.00
No. 2 heavy melting steel	13.25 to 13.50
Compressed sheet steel	12.75 to 13.00
Light bundled sheet stampings	11.50 to 11.75
Drop forge flashings	12.50 to 13.00
Machine shop turnings	9.00 to 9.25
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	13.50 to 14.00
No. 1 busheling	11.00 to 11.25
Pipes and flues	9.00 to 9.50
Steel axle turnings	12.50 to 13.00
Acid Open-Hearth Grades	
Low phosphorus forging crops	16.50 to 17.00
Low phosphorus, billet, bloom and slab crops	17.00 to 17.50
Low phosphorus sheet bar crops	16.50 to 17.00
Low phosphorus plate scrap	16.00 to 16.50
Blast Furnace Grades	
Cast iron borings	10.00 to 10.25
Mixed borings and short turnings	10.00 to 10.25

Miscellaneous	
Railroad malleable	15.00 to 15.50
Rails for rolling	16.25 to 16.50

Philadelphia

Plates, Shapes and Bars Advanced $1—Outstanding Quotations Not Withdrawn

PHILADELPHIA, Feb. 28.—Mills have generally followed the recent advance of $1 per ton on plates, shapes and bars, but outstanding quotations at the former prices have not been withdrawn, and one producer of shapes in eastern Pennsylvania is still quoting on the old basis. Specifications against first quarter contracts still lag and but little new business has appeared. February tonnage has been light, but as many consumers evidently overestimated their requirements in January and have been using up this slight excess during the past month, sellers believe that March will see specifications coming in more freely. Meanwhile, another $1 a ton increase in prices on the heavy tonnage products seems to be expected by sellers about the beginning of the second quarter.

Pig Iron.—Current purchasing is principally of foundry grades in small lots and on this business $20 per ton, base furnace, is quite firm. Some inquiry for second quarter delivery has appeared, but as yet there is not a great deal of interest in such contracts, as there will undoubtedly be some tonnage carried over from this quarter. A recent sale of about 100 tons of No. 2X Indian foundry iron is reported to have been made at about 50c. per ton below the eastern Pennsylvania market. The Eastern Foundry Co., Boyertown, Pa., is about to close on 300 to 500 tons of foundry iron. The inquiry of the American Radiator Co. for 2000 tons of foundry iron for Gloucester, N. J., has not been closed. No sales of basic are reported and only occasional carload lots of low phosphorus have been closed lately.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.	$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.	21.26
East. Pa. No. 1X	21.76
Basic (delivered eastern Pa.)	$19.50 to 20.00
Gray forge	19.75 to 20.25
Malleable	21.00 to 21.50
Standard low phos. (f.o.b. New York State furnace)	23.00 to 24.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to 24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to 25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to 25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Bars.—Transactions are largely in specifications against first quarter contracts. Although consumers are slow in taking shipments, they are in most cases promising full specifications against contracts before the end of the quarter and with the new price level of 1.90c. per lb., Pittsburgh, not much tonnage on current contracts is expected to carry over.

Shapes.—Mills are prepared to quote the new price level of 2.05c. per lb., Bethlehem, on new business, but this price is untested. Not all eastern Pennsylvania mills have advanced to the new level, so that the market is quotable today at 2.12c. to 2.18c. per lb., delivered Philadelphia. Specifications are coming in rather slowly and some carry-over of shipments against present contracts into the next quarter seems probable, unless considerable activity develops in the coming month. Not much fabricated business is being awarded, but some sizable projects are in prospect.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.50c.
Plates, $\frac{3}{16}$-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.40c.
Round-edge iron	3.50c.
Round-edge steel, iron finished, 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.50c.
Steel bands, No. 12 gage to $\frac{3}{16}$-in., inclusive	3.25c.
Spring steel	5.00c.
Black sheets (No. 24)	4.25c.
Galvanized sheets (No. 24)	5.10c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
$\frac{3}{16}$-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

Plates.—Eastern Pennsylvania mills have adopted the new price of 2.05c. per lb., Coatesville, or 2.15c. per lb., delivered Philadelphia, but outstanding quotations of 2c. per lb., Coatesville, have not been withdrawn. Consumers are slow in specifying against contracts. Mills seem confident that the second quarter will begin with another $1 per ton increase in prices. The Cruse-Kemper Co., Philadelphia, which was awarded a contract for a 3,000,000-cu. ft. gas holder by the United Gas Improvement Co., has placed about 1600 tons of plates with an eastern Pennsylvania mill.

Sheets.—There is a moderate volume of activity in blue annealed and galvanized sheets and prices continue to show more firmness. Blue annealed sheets continue at 2.10c. per lb., Pittsburgh, with 10c. per 100 lb. extra for wider than 40 in. Black sheets are quoted at 2.75c. to 2.90c. per lb., and galvanized at 3.65c. to 3.75c. per lb., Pittsburgh.

Warehouse Business.—Although February was a short month, its total business compared favorably with January. There is a moderate demand for small lots of structural material from stock and galvanized sheets are fairly active. Business in other products continues light.

Imports.—In the week ended Feb. 25 imports of pig iron at Philadelphia were larger than for several weeks. A total of 1650 tons of pig iron arrived, of which 1559 tons was Indian and 51 tons Dutch iron. Thirteen tons of tungsten ore was received from the United Kingdom. Steel imports consisted of 86 tons of structural shapes and 67 tons of bars from France.

Old Material.—No sizable purchases of scrap are reported to have been made in the past week and prices are substantially unchanged. An eastern Pennsylvania steel company which has been offering $12.50 per ton, delivered, for stove plate and less than $11 per ton for machine shop turnings, has been unable to purchase at these prices, but has not yet paid more. Most grades are rather inactive except for shipments on old contracts, but prices show no downward tendency.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to $14.00
Scrap T rails	13.00 to 13.50
No. 2 heavy melting steel	11.00 to 11.50
No. 1 railroad wrought	15.00 to 15.50
Bundled sheets (for steel works)	10.50 to 11.00
Machine shop turnings (for steel works)	11.00
Heavy axle turnings (or equivalent)	12.00 to 12.50
Cast boring (for steel works and rolling mill)	11.00
Heavy breakable cast (for steel works)	15.50 to 16.00
Railroad grate bars	13.00
Stove plate (for steel works)	13.00
No. 1 low phos., heavy, 0.04 per cent and under	18.00 to 18.50
Couplers and knuckles	16.00 to 16.50
Rolled steel wheels	15.50 to 16.00
No. 1 blast furnace scrap	10.50 to 11.00
Machine shop turnings (for rolling mill)	11.00
Wrought iron and soft steel pipes and tubes (new specifications)	12.50 to 13.00
Shafting	17.50 to 18.00
Steel axles	19.00 to 20.00
No. 1 forge fire	11.00 to 12.00
Steel rails for rolling	15.00 to 15.50
Cast iron carwheels	15.50 to 16.50
No. 1 cast	16.00 to 16.50
Cast borings (for chemical plant)	14.50 to 15.00

Wheeling Steel Corporation Licensed to Use Continuous Sheet Process

Announcement has been made by the American Rolling Mill Co. that the Wheeling Steel Corporation has been granted a license for the full use of all patents owned or controlled by the former covering the continuous rolling of sheets. This is the second company which has availed itself of the license rights, the Weirton Steel Co. having been the first.

New York

Steel Price Advance Not Yet General—Pig Iron Active

NEW YORK, Feb. 28.—Pig iron buying continues in good volume, as evidenced by sales during the week of about 15,000 tons in this district, besides a number of large tonnages placed in New England. The American Tube & Stamping Co. division of the Stanley Works, Bridgeport, Conn., is reported to have closed for 10,000 tons of basic iron, and the Washburn Wire Co., Phillipsdale, R. I., for 5000 tons. The National Radiator Corporation, Johnstown, Pa., which was in the market for 5000 tons of foundry iron, has bought both for its Johnstown and its Trenton, N. J., plants, having placed 1000 tons for the latter. The A. P. Smith Mfg. Co., East Orange, N. J., has closed for 600 tons of foundry for delivery from April through July. The Crane Co., Bridgeport, Conn., has not yet bought against its inquiry for 1500 tons of foundry and malleable. Several other sizable inquiries are still open, and the amount of business pending exceeds 10,000 tons. The approach of the opening of navigation has made competition keener, particularly in territory where Buffalo and eastern Pennsylvania irons are competitive. A round tonnage of Buffalo foundry iron was recently sold in eastern Pennsylvania at $20.89 per ton, delivered. The combination water and rail rate from Buffalo is reported to have been $4.39, made up of $2.50 for barge shipment to Jersey City, N. J., 25c. for handling to freight cars and a railroad freight rate of $1.64 to destination. As low as $19.25, delivered, is understood to have been done on water shipments from outside furnaces to Delaware River points. This competition is making it difficult for eastern Pennsylvania producers to establish their recent advance to $20, base furnace. Prices on Buffalo foundry iron for shipment to this district have generally subsided to $16.50, base furnace.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$21.41 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Ferroalloys.—The only new business in ferromanganese and spiegeleisen is the sale now and then of a few carloads for early delivery. Specifications on contract for both ferroalloys, as well as for ferrosilicon or ferrochromium, are reported as quite satisfactory.

Finished Steel.—Not all mills have followed the advance of $1 a ton on plates, shapes and bars announced last week by the Carnegie Steel Co. Some are watching developments, but it seems certain that the advance will become general before the end of this week. Meanwhile, mills are giving preferred customers an opportunity to protect themselves for second quarter on the basis of the former prices. The new level will make New York delivered prices as follows: Steel bars, 2.24c.; shapes, 2.19½c.; plates, 2.22½c. Some of the Eastern plate mills have named 2.05c., Coatesville, although the Bethlehem Steel Co. at this writing has made no announcement of an upward revision of its base prices. In volume of new business the local steel trade is quiet, but specifications against contracts are coming along in a fair way. Some contract customers have not specified in full, which gives ground for the assumption that they were covered on their maximum requirements, which in numerous instances have not been consumed. Except for the coverage on plates, shapes and bars at the prices in effect prior to the Carnegie advance, consumers have taken little interest in second quarter contracts. Sheet buyers are holding off, probably because the market in the East has not taken on the strength reported from the Middle West. Railroad business is disappointedly small both as to railroad companies' own repair and maintenance work and freight car buying.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.17½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Cast Iron Pipe.—Quotations on bell and spigot pipe continue to show variation. Birmingham foundries are quoting from $28 to $29 per ton, base Birmingham, but Northern makers are considerably below this level, although on a higher basis f.o.b. their plants because of lower freight rates. Only a small tonnage is pending. Recent purchases have included slightly less than 1000 tons of water pipe by Newark, N. J., from the Warren Foundry & Pipe Co. and about 500 tons of centrifugal pipe by Hartford, Conn., from the National Cast Iron Pipe Co. At the opening of bids Feb. 27, by New York City on about 2000 tons of water pipe, R. D. Wood & Co. were low with the following delivered prices: On 410 tons of 20-in., $36.75; on 510 tons of 12-in. and 890 tons of 8-in., $35.75; on 210 tons of 6-in., $36.75, and on seven tons of 4-in., $39.75 per ton. On 265½ tons of fittings, the Stewart Steel Products Co., New York, was low on 155 tons, Terminal Supply Co., New York, on 60 tons, R. D. Wood & Co. on 37 tons, United States Cast Iron Pipe & Foundry Co. on 11 tons and the Warren Foundry & Pipe Co. on 2½ tons.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.25 to $38.25; 4-in. and 5-in., $42.25 to $43.25; 3-in., $52.25 to $53.25; Class A and gas pipe, $4 to $5 extra.

Warehouse Business.—Purchasing from stock is beginning to increase. With structural and plate fabricating shops slightly more active on spring projects, continued improvement is expected. Although February was a short month, its total business was larger than that of January. Black and galvanized sheets are less active than a few weeks ago, but prices continue firm.

Reinforcing Bars.—The Jones & Laughlin Steel Corporation will furnish 1000 tons of bars for a warehouse in Manhattan. A number of fair size jobs have been let, but the market could hardly be called active. Some distributers have already advanced the mill price $1 a ton to 2c. per lb., Pittsburgh, and others expect to follow this increase before the end of the week. New York and Youngstown warehouse prices are unchanged.

Coke.—Standard foundry coke continues at $4 to $4.50 per ton, Connellsville. Delivered prices are: To northern New Jersey, $8.03 to $8.53; to New York or Brooklyn, $8.79 to $9.29; to Newark or Jersey City, $7.91 to $8.41. By-product coke continues at $9 to $9.40 per net ton, delivered Newark or Jersey City, from a local producer and $9.21 to $9.41 per net ton, delivered from a West Virginia operation.

Old Material.—Buying prices of all grades are unchanged with the exception of yard grade of heavy melting steel, which is being generally purchased at $11 per ton, delivered to consumers at Phoenixville, Harrisburg and Pottsville, Pa. Shipments of specification pipe to a Lebanon, Pa., consumer are being delayed, but brokers are still offering $12.50 per ton delivered. No. 1 heavy melting steel is moving to Bethlehem, Steelton, Coatesville and Conshohocken, Pa., and Claymont, Del., at $13.50 per ton, delivered.

No. 1 heavy melting steel	$10.00 to $10.85
Heavy melting steel (yard)	7.25 to 7.50
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	8.75 to 9.00
Locomotive grate bars	8.75 to 9.00
Machine shop turnings	6.75 to 7.50
Short shoveling turnings	7.00 to 7.50
Cast borings (blast furnace or steel works)	6.75 to 7.50
Mixed borings and turnings	7.00 to 7.50
Steel car axles	16.00 to 16.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. diam., not under 2 ft. long)	8.75
Forge fire	6.75 to 7.00
No. 1 railroad wrought	10.50 to 11.00
No. 1 yard wrought, long	9.00 to 9.50
Rails for rolling	10.50 to 11.00
Cast iron carwheels	11.25 to 11.75
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00 to 10.50
Cast borings (chemical)	11.00 to 11.50

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.75 to $14.25
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.75 to 12.25
No. 2 cast (radiators, cast boilers, etc.)	11.25 to 11.75

Birmingham

Southern Mills Follow Advance of $1 on Plates, Shapes and Bars

BIRMINGHAM, Feb. 28.—The pig iron market continues rather quiet. Second quarter inquiries are trickling in, but the movement has not developed to any size. A few sales are reported, but mostly small-lot tonnage. Shipments continue on the same level as the past few weeks and are close to production. Quotations on foundry iron continue on a $16 base. Seventeen furnaces are in blast, nine being on foundry, seven on basic and one on recarburizing iron. Operations have not changed in several weeks.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil.	$16.00
No. 1 foundry, 2.25 to 2.75 sil.	16.50
Basic	15.00

Finished Steel.—Another advance of $1 per ton on plates, bars and structural shapes has been made in line with increases in other markets. It is the third since mid-November. Tonnage is coming in regularly and the market has a firm tone and favorable outlook. Open-hearth operations have not changed within the past several weeks. The Tennessee Coal, Iron & Railroad Co. is operating 13 and 14 of its 19 open-hearths and the Gulf States Steel Co. has four of its six in operation.

Cast Iron Pipe.—Small-tonnage pressure pipe business is coming in at a fair rate. The market appears stronger and a good volume of tonnage is in prospect. Prices are slightly stronger and base quotations are now $29 to $30. Plant operations are about the same as in the past month.

Coke.—A few inquiries have been received for second quarter, but interest is still slight. Only a small tonnage has been booked to date. Shipments on old contracts are going forward at an even rate. Quotations for spot, March and second quarter coke are all at $5.

Old Material.—Some of the standard items are moving a little better, but the market as a whole is not active. Prices are unchanged.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.50 to $10.00
Scrap steel rails	11.00 to 11.50
Short shoveling turnings	8.00 to 8.50
Cast iron borings	8.00 to 8.50
Stove plate	13.00 to 14.00
Steel axles	19.00 to 20.00
Iron axles	20.00 to 21.00
No. 1 railroad wrought	10.00 to 10.50
Rails for rolling	13.00
No. 1 cast	15.00
Tramcar wheels	12.50 to 13.50
Cast iron carwheels	12.00 to 13.00
Cast iron borings, chemical	13.50 to 14.00

Canada

Steel and Pig Iron Business Continues to Gain—Scrap Quiet

TORONTO, ONT., Feb. 28.—New business continues in such volume that the iron and steel industry of Canada is in a much better position with regard to unfilled orders and orders in prospect than it has been for several years. Buyers are extending the scope of their purchases and many lines of steel are featured in recent orders and contracts.

Production of pig iron in Canada in January amounted to 65,006 gross tons, marking a slight increase over the 63,197 tons reported for December, 1927. Production in January, 1927, amounted to 51,717 tons and in January, 1926, to 56,644 tons. Production of steel ingots and castings in January amounted to 84,295 tons, which was 15 per cent below the 96,248 tons produced in December, but 44 per cent greater than the 58,551 tons of January, 1927.

Pig Iron.—With the betterment that features many lines of the iron and steel industry of this country, pig iron sales tend to expand. While the greater part of current demand is for spot delivery, tonnages involved in orders are larger than those recently placed, and local blast furnace representatives are much more optimistic in their statements regarding both current and future business. Inquiries are appearing for second quarter iron, and a few melters have covered for that

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.34c.
Soft steel bars and small shapes	3.24c.

Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Old Material.—Business in scrap has not improved as rapidly or to as great an extent as in other iron and steel lines, but dealers report more interest on the part of buyers. Export demand continues to grow, but a larger volume of old material is entering Canada from the United States than is going over the international boundary from this country. Prices are gaining in strength but are unchanged.

Dealers' buying prices:

Per Gross Ton	Toronto	Montreal
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00

St. Louis

Steel Demand Continues in Good Volume—Pig Iron Quieter

ST. LOUIS, Feb. 28.—Buying of pig iron was light during the week, a natural result of recent heavy buying by melters. The Granite City maker sold about 2500 tons, including 1000 tons to a car builder in the district and 500 tons to a glass factory for use in making molds. The leading Southern maker sold about 300 tons and Chicago interests sold about 400 tons. The malleable foundries are especially busy. Some of the stove plants are well engaged, while with others business is only fair. The pig iron market is firm.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25 f.o.b. Granite City, Ill	$19.50 to $20.00
Northern No. 2 fdy., delivered St. Louis	20.66
Southern No. 2 fdy., delivered	20.42
Northern malleable, delivered	20.66
Northern basic, delivered	20.66

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.
	Per Cent Off List

Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

Coke.—Continued cold weather is helping dealers to reduce their piles of domestic coke. The demand for industrial grades is fairly good. Prices are unchanged.

Finished Iron and Steel.—New business and specifications against contracts are reaching the Granite City steel mill in ample volume to warrant the operation of the plate, sheet and tin plate mills to full capacity. Prices are reported to be firm. Jobbers report a slight improvement in business in the Oklahoma oil fields, with the volume from other sections only fair. Texas jobbers, it is learned, are complaining of dull business, although they expect an improvement within the next 60 days. Business is slow with the fabricators of structural steel.

Old Material.—Steel grades in the list of old materials are steady and unchanged. Foundry grades, however, are weak and lower from 25c. to $1 a ton because of heavy shipments and a lack of interest among consumers, who seem to be well supplied. Railroad lists include: Union Pacific, 13,529 tons; Chicago, Burlington & Quincy, 5044 tons; Big Four, 700 tons and 14 carloads; Chicago, Milwaukee & St. Paul, 141 carloads; Mobile & Ohio, 35 carloads; Pullman Co., St. Louis, 21 carloads; Nickel Plate, 21 carloads; Standard Oil Co., (Woodriver) 4 carloads scrap and 11,500 pounds of metals.

Prices per gross ton f.o.b. dealers' yards and delivered St. Louis district consumers' works:

Heavy melting steel	$11.75 to $12.25
No. 1 locomotive tires	12.75 to 13.25
Heavy shoveling steel	11.75 to 12.25
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	14.00 to 14.50
Railroad springs	14.50 to 14.75
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.75 to 12.25
No. 1 busheling	9.75 to 10.25
Cast iron borings	9.00 to 9.50
Iron rails	13.00 to 13.50
Rails for rolling	14.25 to 14.75
Machine shop turnings	7.50 to 8.00
Steel car axles	19.50 to 20.00
Iron car axles	24.00 to 24.50
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft	15.75 to 16.25
Steel angle bars	12.50 to 13.00
Cast iron carwheels	14.00 to 14.50
No. 1 machinery cast	14.00 to 14.50
Railroad malleable	11.00 to 11.50
No. 1 railroad cast	13.50 to 14.00
Stove plate	13.00 to 13.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Detroit

Automobile Production Increases—Steel Business Reflects Improvement

DETROIT, Feb. 28.—Industrial production volume continues upward and steel bookings reflect the increase. The automobile industry continues to lead in progress, as typified for instance by the manner in which Chevrolet production schedule for January had to be stepped up on six different occasions from Nov. 17, when 72,058 units were planned, until the latter part of January, when better than 91,000 units were ordered. This company's projected schedule for March is 127,000 units, which, if realized, will be the peak month in the company's history.

A third assembly line has just been put into commission by the new Pontiac plant of the General Motors Corporation, which will increase its capacity 50 per cent. Willys-Overland's projected March schedule is announced as 40,000 units, with 80,000 cars of all types to be turned out during the first quarter. February production for Graham-Paige will amount to 37,000 units, which is an increase of about 76 per cent over last month.

Ford production is still increasing, as evidenced by consistent building up of the payroll, the weekly increase being about 700 employees. Ford has suspended the manufacture of Fordson tractors temporarily, but will continue the manufacture of parts to service the 600,000 tractors now in use. A considerable number of tractors had been completed during the interval when production was suspended on the passenger cars.

Employment generally in Detroit is still increasing at about 2000 a week. As compared with this same period a year ago, employment now shows an increase of about 13,500.

Steel prices remain firm. Structural bookings have shown a slight increase in the last 10 days, mostly in small-lot bookings.

The market on old material in this district has registered further declines during the past week, in most cases 50c. per ton. One of the main weakening factors is the announcement by one of the largest users of blast furnace material that it is discontinuing the use of scrap.

Dealers' buying prices per gross ton, f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.25 to $11.75
Borings and short turnings	7.75 to 8.25
Long turnings	7.00 to 7.50
No. 1 machinery cast	14.50 to 15.50
Automobile cast	19.00 to 20.50
Hydraulic compressed sheets	10.25 to 10.75
Stove plate	11.50 to 12.50
No. 1 busheling	9.00 to 9.50
Sheet clippings	7.00 to 7.50
Flashings	9.50 to 10.00

San Francisco

Business in Structural Steel and Cast Iron Pipe Fairly Active

SAN FRANCISCO, Feb. 25 (*By Air Mail*).—Business during the past week was interrupted to some extent by the Iron and Steel Conference at Del Monte on Feb. 17 and 18 and the Washington's Birthday holiday. However, a fair volume of tonnage was reported placed, structural shapes being the most active. General conditions on the Pacific Coast are considered good for this season and a large amount of work which will require round specifications of steel is in sight.

Pig Iron.—Some improvement is reported in the rate of foundry operations, but as most melters have sufficient stocks on hand to carry them over the next six weeks, buying of iron continues limited. No change in prices is noted.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Shapes.—The largest structural award of the week called for 280 tons for a hotel in San Francisco. Awards exceeded 1000 tons, the majority of them being confined to lots around 150 tons. Inquiries include 480 tons for an addition to the Heinz plant in Berkeley. An award is expected next week on 4000 tons for underframes for 2000 refrigerator cars for the Pacific Fruit Express. Pending business calls for over 17,000 tons. Prices remain firm at 2.35c., c.i.f. Coast ports.

Plates.—Some fair-sized lots are up for figure. The only sizable award this week involved 170 tons of universal plates for the Western Pacific at San Francisco, placed with unnamed Eastern producers. The Standard Oil Co., San Francisco, rejected all bids on its inquiry for an oil tanker requiring 3500 tons of plates and 1500 tons of shapes. New specifications are to be prepared. Bids were returned unopened on the 2000 ton penstock at Seattle and new specifications are also to be prepared. Pending business exceeds 4000 tons. Prices are firm at 2.30c., c.i.f.

Bars.—Reinforcing steel bar awards totaled more than 1700 tons. The largest involved 700 tons for an apartment in Los Angeles. Los Angeles will open bids March 12 for the construction of Drainage District No. 23, involving 5000 tons of bars.

Cast Iron Pipe.—Some improvement is noted in the demand for cast iron pipe and awards were more numerous. The largest letting was to the American Cast Iron Pipe Co. by Los Angeles and called for 1055 tons of 8-in. class 350 pipe. The Pacific States Cast Iron Pipe Co. took 909 tons of 6-in. class 350 for the same city. The Miracle Construction Co., San Diego, secured 156 tons of 4 to 8-in. class B pipe for the improvement of Pacific Street, Oceanside, Cal. Bids were opened this week on 137 tons of 4 to 10-in. class 150 for Modesto, Cal. James Young, Oakland, Cal., took 145 tons of 4 and 6-in. class B for the State Fair Grounds at Sacramento. The United States Cast Iron Pipe & Foundry Co. was low bidder on 128 tons of 48-in. class A for the north outfall sewer at Los Angeles. Bids have been opened on 3095 tons of 4 to 12-in. class B for Southgate, Cal., and on 222 tons of 4 to 8-in. class B for Armona, Cal. Santa Barbara, Cal., will open bids March 1 for 663 tons of 6 to 12-in. classes B and C pipe. Tacoma, Wash., opened bids Feb. 27 for 188 tons of 20-in class C. Bids were returned unopened on 426 tons of 4 to 12-in. for the improvement of Saturn Avenue, Huntington Park, Cal. Bids were opened on 15[illegible] tons of 18-in. class C for San Diego.

Coke.—Demand reflects the quiet condition in the pig iron market. Sales and inquiries were limited to small lots.

Buffalo

Pig Iron Inquiry Fairly Active—Steel Mill Operation High

BUFFALO, Feb. 28.—Pig iron inquiry this week includes 2000 tons of foundry iron for Port Chester, N. Y., and 1500 tons of foundry for the Crane Co., Bridgeport, Conn. The Kensington-Davis foundry of Buffalo has purchased 2000 tons of foundry iron. An inquiry from New England is for 1000 tons of foundry. Considerable iron remains to be bought for the second quarter. The price situation appears to be growing firmer, and there is talk of higher quotations. No. 2 plain remains at $17, furnace, in the district and at $16.50, furnace, for shipment to points outside the immediate Buffalo territory.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2X foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	$17.00 to 17.50
Basic	16.50 to 17.00
Lake Superior charcoal	27.28

Finished Iron and Steel.—Mill operation continues high, though one of the largest interests has temporarily cut its open-hearth activity from 21 to 18 furnaces to make repairs. The Bethlehem price on bars, shapes and plates may be advanced to 2c., Lackawanna. Sheet business, particularly automobile body sheet, is continuing in volume with this quotation firm at 4.15c., Pittsburgh. A 700-ton reinforcing bar job for a Marcy, N. Y., hospital has been let to a local producer. Seven more Erie County bridges will require 100 tons of reinforcing bars and a new building for the Trico Products

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, 3/16-in. and over	3.15c.
Small angles, under 3/16-in	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finished flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire, base per 100 lb.	3.90

Co., requiring 200 tons, is up for bids. Bolt and nut business is fair, with operation of mills unchanged.

Old Material.—No new sales are reported, but one of the largest consumers is expected to enter the market within a few days, though this concern is said to have a stockpile of about 65,000 tons. New York Central, Erie, Pennsylvania and Michigan Central railroad lists are due to close this week. Machine shop turnings and cast iron borings are off slightly.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$14.75 to $15.25
No. 2 heavy melting steel	13.00 to 13.50
Scrap rails	13.75 to 14.25
Hydraulic compressed sheets	13.25 to 13.75
Hand bundled sheets	9.00 to 9.50
Drop forge flashings	12.00 to 12.50
No. 1 busheling	13.25 to 13.75
Heavy steel axle turnings	12.75 to 13.25
Machine shop turnings	8.50 to 9.00
Acid Open-Hearth Grades	
Railroad knuckles and couplers	16.00 to 16.50
Railroad coil and leaf springs	15.50 to 16.00
Rolled steel wheels	15.75 to 16.25
Low phosphorus billet and bloom ends	17.00 to 17.50
Electric Furnace Grades	
Heavy steel axle turnings	12.75 to 13.25
Short shoveling steel turnings	11.00 to 11.50
Blast Furnace Grades	
Short shoveling steel turnings	10.75 to 11.00
Short mixed borings and turnings	10.50 to 11.00
Cast iron borings	10.00 to 10.50
No. 2 busheling	9.00 to 9.50
Rolling Mill Grades	
Steel car axles	17.00 to 17.50
Iron axles	22.00 to 23.00
No. 1 railroad wrought	12.50 to 13.00
Cupola Grades	
No. 1 machinery cast	14.50 to 15.00
Stove plate	13.00 to 13.25
Locomotive grate bars	11.50 to 12.00
Steel rails, 3 ft. and under	17.00 to 17.25
Cast iron carwheels	13.00 to 13.50
Malleable Grades	
Railroad	15.50
Agricultural	15.50
Industrial	15.50

Boston

Pig Iron Slightly Firmer in Price—Scrap Prices Tend Downward

BOSTON, Feb. 28.—Pig iron sales in the past week approximated 4500 tons made up of small tonnages. While the general price situation is firmer, any advance is checked by one Buffalo furnace, which continues to accept business at 50c. to $1 a ton under the $17 base established by other Buffalo stacks. Open inquiries, which probably will be closed this week, include 800 tons of No. 2 plain and 1000 tons of No. 2X for a Providence, R. I., foundry; 1000 tons of No. 2X and 500 tons of No. 1X wanted by a Connecticut plant; and 2000 tons required by a Port Chester, N. Y., foundry, a total of 5300 tons. It is reported that much of the iron placed in New England so far this year was bought in advance of actual needs, and that on the present basis of melt large consumers have sufficient iron to last through the second quarter. February will be the largest month in sales for the Mystic Iron Works since it began operations.

Warehouse Prices, f.o.b. Boston

	Base per Lb.
Plates	3.365c.
Structural shapes—	
Angles and beams	3.365c.
Tees	3.365c.

Hot-pressed nuts	50 and 5
Cold-punched nuts	50 and 5
Stove bolts	70 and 10

---

*Including quantity differentials.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$21.41 to $21.91
Buffalo, sil. 2.25 to 2.75	21.41 to 22.41
East. Penn., sil. 1.75 to 2.25	23.15 to 23.65
East. Penn., sil. 2.25 to 2.75	23.65 to 24.15
Virginia, sil. 1.75 to 2.25	25.71
Virginia, sil. 2.25 to 2.75	26.21
Alabama, sil. 1.75 to 2.25	22.91 to 24.77
Alabama, sil. 2.25 to 2.75	23.41 to 25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Importations.—Receipts of foreign pig iron at this port during the first half of February were 696 tons of Indian and 290 tons of Dutch, a total of 986 tons, compared with 1282 tons in the first half of January and 12,350 tons in the first half of February, 1927. Imports of ore were 5893 tons from Algiers and 4365 tons from Tunis, a total of 10,258 tons.

Shapes and Plates.—There is little prospective fabricating work in New England. Seven bridges for Vermont will be figured during the next week, but the tonnage of steel involved is small. Most of the current jobs call for less than 100 tons each. Shapes and plates are now 1.90c. to 2.05c., base, depending on point of shipment, or 2.26½c. to 2.41½c., per 100 lb., base, delivered New England.

Cold-Rolled Strip.—Business in cold-rolled strip steel is not as active as it was a month ago, but is fairly good. The Worcester, Mass., mill is quoting 3.30c. per lb., base, on lots of 1 to 3 tons, and 3.05c. on larger lots.

Coke.—The New England Coal & Coke Co. and the Providence Gas Co. announce that the price of by-product foundry coke on March 1 will remain at $11.50 a ton, delivered within a $3.10 freight rate zone. The movement of foundry coke from ovens is greater than it was a month ago, but only slightly so. Competition between by-product ovens and gas companies for domestic coke business continues keen, and prices on large tonnages are elastic.

Old Material.—Prices on old material tend downward. Actual reductions are noted on steel turnings, mixed borings and turnings, pipe and chemical borings, while inside prices are paid more often than outside prices on all material except heavy melting steel. Efforts to buy No. 1 heavy melting steel at less than $9 a ton on cars, shipping point, have been unsuccessful, and $9 to $9.10 is the usual range. Indications are that 5000 tons of steel scrap for Poland, mentioned last week, will be shipped March 1. It will include automobile steel and cost $9 a ton delivered at dock. Shipments of textile and No. 1 machinery cast to eastern Pennsylvania continue on a fairly large scale, but New England consumers took comparatively little the past week. The Boston & Maine Railroad closed bids Feb. 25 on 65 cars of miscellaneous material and the Boston Elevated Railroad has closed bids on 1500 tons of rails.

Buying prices per gross ton f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$9.00 to $9.10
Scrap T rails	8.75 to 9.00
Scrap girder rails	7.50 to 8.00
No. 1 railroad wrought	10.00 to 10.50
No. 1 yard wrought	8.50 to 9.00
Machine shop turnings	5.75 to 6.25
Cast iron borings (steel works and rolling mill)	6.00 to 6.25
Bundled skeleton, long	6.00 to 6.50
Forge flashings	6.50 to 7.00
Blast furnace borings and turnings	5.75 to 6.25
Forge scrap	6.00 to 6.50
Shafting	13.00 to 13.50
Steel car axles	15.50 to 16.00
Wrought pipe (1 in. in diameter, over 2 ft. long)	7.75 to 8.25
Rails for rolling	10.00 to 10.50
Cast iron borings, chemical	9.50 to 10.00

Prices per gross ton delivered consumers' yards:

Textile cast	$14.00 to $14.50
No. 1 machinery cast	14.50 to 15.00
No. 2 machinery cast	12.50 to 13.00
Stove plate	10.50 to 11.00
Railroad malleable	13.50 to 14.00

Cincinnati

Pig Iron Demand Increasing—Sheet Mills Operating at High Rate

CINCINNATI, Feb. 28.—Increasing demand from consumers for foundry iron for current needs is lending strength to the market in this district, despite the fact that buying for second quarter has been practically at a standstill. Sales of 300 tons of Southern iron to a Louisville, Ky., melter and of a like amount of silvery iron to a Michigan consumer were the largest transactions of the week, while an inquiry from the State Reformatory at Pendleton, Ind., for 200 tons of foundry iron is the only pending business calling for more than a single carload. Prices have not been altered. Southern Ohio foundry iron remains at $19, base Ironton, and Tennessee and Alabama iron at $16, base Birmingham. Sellers in northern Ohio are quoting from $16.50 to $17, base Cleveland. On March 1 the American Rolling Mill Co. will blow out one of its furnaces at Columbus. This will leave in operation in southern Ohio three steel plant furnaces producing basic iron, one each at Columbus, Ashland and Portsmouth, and two silvery furnaces at Jackson.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25....		$20.89
So. Ohio malleable..............	$20.14 to	20.89
Alabama fdy., sil. 1.75 to 2.25...		19.69
Alabama fdy., sil. 2.25 to 2.75...		20.19
Tennessee fdy., sil. 1.75 to 2.25..		19.69
Southern Ohio silvery, 8 per cent		26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Finished Material.—Announcement by producers of bars, shapes and plates that prices have been advanced $1 a ton to a basis of 1.90c., Pittsburgh, has been followed by active solicitation of second quarter business at that figure. Some mills, however, are making contracts through the first half of the year with large buyers at 1.85c., and others have joined in this practice under pressure exerted by old customers. Sellers admit that consumers are likely to take full advantage of their present lower-priced contracts by specifying all of the tonnage called for. Aside from 1700 tons of structural steel which the Central States Bridge Co., Indianapolis, will supply for a new building of the L. S. Ayres Co., that city, lettings have been of minor importance. However, indications are that much new work will come out in the next 30 days. Meanwhile, most fabricating shops in this district are operating on curtailed schedules. In the sheet market, specifications have been of substantial proportions and buyers are paying the present scale of prices for material to be delivered in the second quarter. No deviation from the scale of 2.10c., base Pittsburgh, for blue annealed, 2.90c. for black, 3.75c. for galvanized and 4.15c. for automobile body stock, has been noted. Demand for electrical sheets is the best in many weeks.

Reinforcing Bars.—Prices continue to show an upward trend, and makers of new billet bars are now asking from 1.90c. to 2c., base Pittsburgh, an increase of from $1 to $2 a ton. Rail steel stock is being sold at 1.80c., base mill, although concessions of $1 a ton are being made on large tonnages.

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes....	3.40c.
Bars, soft steel or iron..........	3.30c.
New billet reinforcing bars.....	3.15c.
Rail steel reinforcing bars.......	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)..........	4.05c.
Galvanized sheets (No. 24).....	4.90c.
Blue annealed sheets (No. 10)...	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire, per 100 lb...........	$3.00
Common wire nails, base per keg.........	2.95
Cement coated nails, base 100 lb. keg.....	2.95
Chain, per 100 lb..........................	7.55
	Net per 100 Ft.
Lap-welded steel boiler tubes, 2-in.......	$18.00
4-in.	38.00
Seamless steel boiler tubes, 2-in..........	19.00
4-in.	39.00

Coke.—During March by-product foundry coke will remain unchanged at $7.50 per net ton, f.o.b. ovens, or $9.52 delivered here. The schedule for domestic grades also will be continued on the present basis, egg size selling at $5.50, ovens, walnut at $5 and No. 2 nut at $4.50. In Michigan the present price structure will not be disturbed, quotations at Detroit ovens holding over for another 30 days on both foundry and domestic by-product coke.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.52 to $9.64; Wise County coke, $7.59 to $8.09; New River coke, $10.09 to $10.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—The market for steel mill grades of material has been rather listless in view of the better situation from a production standpoint at nearby mills. On the other hand, foundry items are slightly stronger, but prices are unchanged.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel............	$11.50 to $12.00
Scrap rails for melting.........	12.25 to 12.75
Loose sheet clippings..........	9.00 to 9.50
Bundled sheets	9.50 to 10.00
Cast iron borings..............	8.50 to 9.00
Machine shop turnings.........	8.00 to 8.50
No. 1 busheling................	10.50 to 11.00
No. 2 busheling................	7.50 to 8.00
Rails for rolling................	13.00 to 13.50
No. 1 locomotive tires..........	13.50 to 14.00
No. 1 railroad wrought.........	11.00 to 11.50
Short rails	16.50 to 17.00
Cast iron carwheels............	12.75 to 13.25
No. 1 machinery cast...........	16.00 to 17.00
No. 1 railroad cast.............	13.50 to 14.00
Burnt cast	8.00 to 8.50
Stove plate	9.00 to 9.50
Brake shoes	10.00 to 10.75
Railroad malleable	12.75 to 13.25
Agricultural malleable	12.25 to 12.75

Pacific Northwest

Prices Higher on Several Steel Products Outlook Encouraging

SEATTLE, Feb. 25 (*By Air Mail*).—Local sales agents for Eastern steel mills and jobbers report they are figuring on a large amount of new work and seem much encouraged by the outlook. Prices are firmer than for some time, and 2.30c., Seattle, on plates is said to be minimum, while reinforcing bars have gone up $2 per ton, and are now reported firm at 2.20c., Seattle, for large lots, and up to 3c. for small lots. Local building permits for February will exceed $4,000,000, a record for any month.

Pig Iron.—Sales of small lots of foundry iron, some from Utah and some Indian iron, represent all that is doing in the local market. Utah basic and No. 2 foundry are quoted at $24 to $25 per gross ton, delivered Seattle.

Shapes.—Awards in the past two weeks have been small, the largest job having been about 1200 tons for the Stimson Building in Seattle, taken by the Wallace Bridge & Structural Steel Co. The Northern Pacific Railroad is inquiring for 550 tons for two bridges. Plain material is firm at 2.35c., Seattle.

Plates.—Bids are to open on Feb. 27 on 1000 tons for a water line at Tacoma, Wash. Another pipe line involving about 1000 tons will be in the market shortly. Plates are firm at 2.30c., Seattle.

Cold-Finished Steel Bars.—Local sales representatives of Eastern mills and jobbers have advanced prices $2 per ton, and now quote at 2.90c. to 3c., base, Seattle.

Sheets.—Prices on all grades of sheets have been advanced in the local market from $2 to $3 per ton, and the market is firm at the higher prices.

Wire Products.—Prices on wire and wire nails have been advanced about $3 per ton, but demand is quiet. Wire nails are now quoted at $3 to $3.10 per 100-lb. keg, delivered Seattle.

Old Material.—Sales are only for very small lots, the leading local consumer being filled up on its scrap needs for some months. Heavy melting scrap is $10.50 to $11 per gross ton; country scrap, $8 per net ton; cast iron scrap, $13 per net ton, and borings about $5 per gross ton, delivered Seattle.

NON-FERROUS METAL MARKETS

The Week's Prices

Cents per Pound for Early Delivery

	Feb. 28	Feb. 27	Feb. 25	Feb. 24	Feb. 23	Feb. 21

Zinc, St. Louis	5.45	5.45	5.42½	5.42½	5.42½	5.45

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, Feb. 28.—Unusual inactivity is reported by sellers in all markets. Prices have declined in several. Copper is nominally unchanged and tin is a little higher. Both lead and zinc have fallen to new low levels for some years.

Copper.—"Near stagnation" is a fair description of the market. Very little inquiry for domestic or foreign consumption is reported. What little buying has been done has been satisfied at 14c., delivered in the Connecticut Valley, which is a concession by one or two sellers from the quotation of 14.12½c., maintained firmly by all large producers. There has been no change in the quotation of Copper Exporters, Inc., which still stands at 14.50c., c.i.f. usual European ports. An encouraging feature is the fact that prices hold firm in the face of weakness in other metals. Lake copper is very quiet at 14.20c., delivered.

Tin.—In spite of a holiday in the middle of the week, sales for the week ended Saturday, Feb. 25, were fairly good at about 900 tons. Dealers did most of the buying, but it is believed consumers still have considerable metal to purchase for April-May. Buying has not been aggressive and the market for the most part has been heavy and sluggish. Yesterday in a quiet market less than 100 tons changed hands and today there has been very little business. Spot Straits tin was quoted today at 51.75c. New York, and prices in London were slightly higher than a week ago, with spot standard quoted at £231 5s., future standard at £233 17s. 6d., and spot Straits at £235 5s. per ton. The Singapore price today was £238 2s. 6d. Arrivals thus far this month have been 4520 tons, with 7995 tons reported afloat.

Lead.—Two changes in the quotation of the leading interest have been made in the last week—from 6.35c. to 6.25c. on Feb. 21 and then to 6.15c. yesterday, Monday, Feb. 27. Quotations in the West are nominal at 5.90c. St. Louis. Buying is only moderate with the bulk for early shipment. Inquiry is a little better in some quarters.

Zinc.—Prime Western zinc sold the past week as low as 5.40c. St. Louis, or 5.75c., New York, which is the lowest since July 1, 1922. This was for spot delivery. The market today, after sagging during the week as low at 5.42½c., St. Louis, for early delivery, is quoted at 5.45c., St. Louis, or 5.80c., New York. The slight firmness is due probably to the knowledge that production has definitely declined. A satisfactory quantity of metal is moving to consumers and sales are moderate. February metal in weak hands has been pretty well absorbed. Ore is still $35, Joplin, with production last week about 12,500 tons and sales about 9200 tons. Stocks are close to 54,000 tons.

Nickel.—Ingot nickel in wholesale lots is quoted at 35c., with shot nickel at 36c., and electrolytic nickel at 37c. per lb.

Antimony.—Weakness in other metals, particularly lead, has affected this market and Chinese metal for spot delivery is quoted lower at 10.25c. and futures at 10.50c., New York, duty paid.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb. delivered.

Non-Ferrous Metals at Chicago

CHICAGO, Feb. 28.—Prices are weak following unloading of resale materials. Sales in old metals are unusually small and many prices are lower.

Prices, per lb., in carload lots: Lake copper, 14.25c.; tin, 53.50c.; lead, 6.05c.; zinc, 5.55c.; in less-than-carload lots, antimony, 12.50c. On old metals we quote copper wire, crucible shapes and copper clips, 10.50c.;

Metals from New York Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	53.50c. to 54.50c.
Tin, bar	55.50c. to 56.50c.
Copper, Lake	15.25c.
Copper, electrolytic	15.00c.
Copper, casting	14.25c.
Zinc, slab	6.75c. to 7.25c.
Lead, American pig	7.25c. to 7.75c.
Lead, bar	9.25c. to 10.25c.
Antimony, Asiatic	12.75c. to 13.25c.
Aluminum No. 1 ingot for remelting (guaranteed over 99 per cent pure)	27.00c. to 28.00c.
Aluminum ingots, No. 12 alloy	26.00c. to 27.00c.
Babbitt metal, commercial grade	30.00c. to 40.00c.
Solder, ½ and ½	34.50c. to 35.50c.

Metals from Cleveland Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	58.00c.
Tin, bar	60.00c.
Copper, Lake	15.25c.

REINFORCING STEEL

Awards of 7200 Tons—1500 to 2000 Tons Pending for Illinois Road Work

THE week's awards amounted to 7200 tons, the largest of which was 1000 tons for a warehouse in New York. Inquiries totaled 3150 tons, 1500 to 2000 tons of which will be required for road work in Illinois. Awards follow:

CRANSTON, R. I., 450 tons, sewage disposal, to Barker Steel Co.

CAMBRIDGE, MASS., 250 tons, apartment building, to Concrete Steel Co.

BOSTON, 100 tons, stores on Newbury Street, to Barker Steel Co.

NEW YORK, 1000 tons, Green building; from Turner Construction Co., general contractor, to Jones & Laughlin Steel Corporation.

NEW YORK, 100 tons, building for American Women's Realty Co., to Fireproof Products Co.

BROOKLYN, 150 tons, warehouse for United Grocers Co., to Igoe Brothers.

FAR ROCKAWAY, N. Y., 100 tons, additional work on bathing pavilion, to Igoe Brothers.

NEWARK, 150 tons, Hoffman Beverage warehouse, to Faitoute Iron & Steel Co.

CLEVELAND, 125 tons, pathological laboratory for Western Reserve University, to Bourne-Fuller Co.

CLEVELAND, 450 tons, sales building for Cleveland Packard Co., to Bourne-Fuller Co.

CLEVELAND, 600 tons, factory extension for Richman Brothers Co., to Bourne-Fuller Co.

STATE OF ILLINOIS, 720 tons of rail steel bars for road work; 500 tons to Truscon Steel Co., and 220 tons to Inland Steel Co.

CHICAGO, 750 tons, building for Commonwealth Edison Co., to an unnamed bidder.

CHICAGO, 100 tons, Sherman shops, to American System of Reinforcing.

CHICAGO, 150 tons, apartment building at 1320 Astor Place, to American System of Reinforcing.

CHICAGO, 170 tons of rail steel bars, two apartment buildings, to Olney J. Dean & Co.

ST. LOUIS, 150 tons, office building for Lindell Trust Co., to Missouri Rolling Mills Corporation.

CEDAR RAPIDS, IOWA, 650 tons, addition to plant of Quaker Oats Co., to Laclede Steel Co.

LOS ANGELES, 700 tons, apartment building, Argyle and Franklin Streets, to unnamed interest.

OAKLAND, CAL., 275 tons, warehouse, Ninth and Castro Streets, to Badt-Falk Co.

SEATTLE, 100 tons, market building on Broadway, to Pacific Coast Steel Co.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

BOSTON, 150 tons for North Station.

CHICAGO, 350 tons, Steuben Club.

OAK PARK, ILL., 650 tons for Nicholas stores.

SPRINGFIELD, ILL., 1500 to 2000 tons, road work for Illinois Highway Commission; bids opened Feb. 28.

Stockholders of the Stanley Works, New Britain, Conn., have authorized the sale of the company's plant at Bridgewater Junction, Mass. There is no prospective purchaser, the authorization being a formality. The principal part of the Massachusetts plant's business was moved to Bridgeport, Conn., about a year ago.

Old Metals, Per Lb., New York

The buying prices represent what large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their use.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.00c.	13.50c.
Copper, heavy and wire	11.75c.	12.875c.
Copper, light and bottoms	10.00c.	11.25c.
Brass, heavy	7.00c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.625c.
No. 1 yellow brass turnings	7.75c.	9.00c.
No. 1 red brass or composition turnings	8.75c.	9.75c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.50c.	4.00c.
Sheet aluminum	12.50c.	14.50c.
Cast aluminum	12.50c.	14.50c.

RAILROAD EQUIPMENT

St. Paul Road Inquires for 4650 Freight Cars—2000 Refrigerator Cars Ordered

OUTSTANDING in the developments of the week is the inquiry for 4650 freight cars by the Chicago, Milwaukee, St. Paul & Pacific. The Pacific Fruit Express has purchased 2000 refrigerator cars and the Fruit Growers Express will buy 1200 underframes. The only locomotive order of size is that of the Union Pacific for 23. Details of the week's business follow:

Illinois Central will buy 10 motor and 10 trailer cars.

Chicago, Milwaukee, St. Paul & Pacific will accept bids on March 8 for 4650 freight and 10 baggage cars. Freight cars will be of the following types: 2500 50-ton box, 1000 70-ton hopper, 650 40-ton stock, 300 automobile and 200 ore cars.

Fruit Growers Express has made inquiry for 1200 underframes.

Pacific Fruit Express has placed orders for 2000 refrigerator cars, 1000 with Pullman Car & Mfg. Corporation and 1000 with Pacific Car & Foundry Co.

Booth & Flinn, Pittsburgh, have purchased 30 to 32 garbage cars for use in Detroit from Bethlehem Steel Co.

Union Pacific has ordered 23 4-12-2 type locomotives and 15 additional tenders from American Locomotive Co.

Standard Oil Co. of New Jersey is inquiring for 10 tank cars for export.

Wheeling Steel Corporation has ordered 16 air dump cars from Koppel Industrial Car & Equipment Co.

Paulista Railway of Brazil is inquiring for seven sleeping cars.

New York, Chicago & St. Louis has ordered one private car from Pullman Car & Mfg. Corporation.

South Manchurian Railway is inquiring for 20 air dump cars of 45 cu. yd. capacity.

Conley Tank Car Co. has ordered 50 40-ton tank cars from American Car & Foundry Co.

St. Louis-San Francisco will buy 250 underframes.

North American Car Corporation is in the market for 200 poultry cars.

St. Louis Coal & Coke Corporation Announces Changes

ST. LOUIS, Feb. 28.—The general sales offices of the St. Louis Gas & Coke Corporation have been removed from 208 South LaSalle Street, Chicago, to 1502 Telephone Building, St. Louis, it was announced here today by M. D. Curran, president, who also made public the resignation of Walter H. Underwood as general sales manager and the appointment of J. C. Gore as the latter's successor. Mr. Underwood has been general sales manager of the present company and its predecessors since 1921, having been previously with Domhoff & Joyce, Cincinnati. Mr. Gore was with the latter company for 12 years before joining the St. Louis concern as general sales agent at Chicago in 1922. For five years he has been assistant sales manager, first at Chicago and since July 1, 1927, at St. Louis.

FABRICATED STRUCTURAL STEEL

Chicago Garage Will Take 8000 Tons—Awards and Inquiries in Low Volume

AWARDS of slightly more than 21,800 tons, although somewhat above last week's total, were considerably less than the weekly average of the last two months. Inquiries totaling 25,400 tons were a little over half of last week's figure and included 8000 tons for a garage at Chicago. Awards follow:

Worcester, Mass., 250 tons, Nurses' Home, to unnamed fabricator.

Weymouth, Mass., 123 tons, town office building to Palmer Steel Co.

Boston, 270 tons, Columbus Avenue bridge for Boston & Albany Railroad, to Boston Bridge Works, Inc.

New York, 2300 tons, loft building at 228-36 East Forty-fifth Street, to McClintic-Marshall Co.

New York, 1600 tons, loft building at Thirty-fifth Street and Eighth Avenue, to Harris Structural Steel Co.

New York, 800 tons in the following awards as reported to the Structural Steel Board of Trade: National City Bank at 85 Main Street, Flushing, and alteration and addition for Best & Co., to Hay Foundry & Iron Works; apartment building at 69-73 East Seventy-seventh Street, to George A. Just Co.

Lakeville, N. Y., 400 tons, school, to an unnamed local fabricator.

Jersey City, 300 tons, tanks for Standard Oil Co. of New Jersey, to an unnamed fabricator.

Philadelphia, 3000 tons, Integrity Trust Co. building, to McClintic-Marshall Co.

Camden, N. J., 200 tons, Camden Rail & Harbor warehouse, to Bethlehem fabricators.

Camden, 600 tons, bank building, to American Bridge Co.

Chesapeake & Ohio Railway, 150 tons, bridges, to American Bridge Co.

Pennsylvania Railroad, 125 tons, bridge, to McClintic-Marshall Co.

Belle, W. Va., 700 tons, plant building for E. I. duPont de Nemours & Co., to McClintic-Marshall Co.

Pittsburgh, 115 tons, gates for Lock No. 6, Allegheny River, to Independent Bridge Co., Pittsburgh.

Rittman, Ohio, 400 tons, factory building for Ohio Box Board Co., to Forest City Structural Steel Co.

Cleveland, 125 tons, sales building for Cleveland Packard Co., to T. H. Brooks Co.

Cleveland, 2100 tons, extension to open-hearth plant of Otis Steel Co., to Wellman-Seaver-Morgan Co.

Cleveland, 720 tons, Whitehouse grade crossing elimination work, awarded by Ohio Highway Commission to McClintic-Marshall Co.

Cleveland, 135 tons, conveyor house for Kelly Island Lime & Transport Co. at Marblehead, Ohio, to Reliance Structural Steel Co.

Cleveland, 200 tons, new plant for Steel Improvement & Forge Co., to Truscon Steel Co.

Indianapolis, 1700 tons, building for L. S. Ayres Co., to Central States Bridge Co., Indianapolis.

Milwaukee, 7400 tons, Sixteenth Street viaduct; previously reported taken by Julius C. Theilacker, who has placed 6000 tons with American Bridge Co. and 1400 tons with Milwaukee Bridge Co.

Chicago, 600 tons, apartment building at 1320 Astor Street, to Midcity Foundry Corporation, local.

Joliet, Ill., 110 tons, building for Gerlach-Barklow Co., to American Bridge Co.

Amarillo, Tex., 1800 tons, office building for Santa Fe railroad, to an unnamed bidder.

Flint, Mich., 700 tons, building for Chevrolet Motor Co., to Mahon Structural Steel Co.

St. Louis, 200 tons; 100 tons for pumping station in connection with City Sanitarium, and 100 tons for gymnasium for metropolitan police, to Mississippi Valley Structural Steel Co.

San Francisco, 170 tons, apartment building at Laguna and Sacramento Streets, to McClintic-Marshall Co. Central Works.

San Francisco, 100 tons, apartment building at Lombard and Polk Streets, to McClintic-Marshall Co. Central Works.

San Francisco, 280 tons, hotel at Eddy and Jones Streets, to Judson-Pacific Co.

San Francisco, 115 tons, theater at Chestnut and Steiner Streets, to Pacific Structural Iron Works.

San Francisco, 125 tons, Native Daughters of Golden West hall, to McClintic-Marshall Co. Central Works.

Berkeley, Cal., 500 tons, factory building for H. J. Heinz Co., to Austin Co.

Daly City, Cal., 127 tons, theater, to Dyer Brothers.

San Diego, 700 tons, power house for Byllesby Engineering & Management Corporation, to McClintic-Marshall Co.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

New York, 500 tons, building for New York Geneological Society.

State of New Jersey, 200 tons, highway bridge over Passaic River.

East Liberty, Pa., 1200 tons, theater.

Covington Township, Pa., 167 tons, County bridge over Tioga River, bids opened Feb. 29.

Kingston, Pa., 500 tons, Wyoming Seminary building, previous bids rejected and new bids asked.

Kingston, 715 tons, armory for Sixty-ninth Field Artillery; Chase Construction Co., Allentown, low bidder for general contract.

Philadelphia, 600 tons, Terminal Title & Trust Co. building, Sixty-ninth and Market Streets, bids opened Feb. 29.

Tioga, Pa., 160 tons, highway bridge.

Hampton Roads, Va., 500 hangars for United States Air Service.

Washington, 500 tons of plates for Mare Island and Puget Sound Navy Yards, schedule 8499; bids Feb. 28.

Chicago, 4000 tons, office building on Michigan Avenue, owner's name not given.

Columbus, Ohio, 100 tons, chemistry building at Ohio State University.

Clinton, Iowa, 300 tons, plant building for United Gas Improvement Co.

Chicago, 8000 tons, garage; Graven & Meager, architects.

Shawano, Wis., 700 tons, highway bridge.

Ottawa, Ill., 1500 tons, building for National Plate Glass Co.

Austin, Ill., 3500 tons, high school.

Springfield, Ill., 1124 tons, superstructure for 11 highway bridges for Illinois Highway Commission; bids opened Feb. 28.

San Francisco, 5000 tons shapes and plates for Deisel oil tanker, for Standard Oil Co.; bids rejected and new specifications being prepared.

Oakland, Cal., 100 tons, hangar No. 37; bids soon.

Los Angeles, 110 tons, science building, University of Southern California; general contract to Scofield-Twiats Co.

Seattle, Wash., 2000 tons for penstock; bids returned unopened and new specifications will be prepared.

Tacoma, Wash., 900 tons, pipe line; bids Feb. 27.

Empire Officers Named

(Concluded from page 623)

Co., Canton, the Massillon Rolling Mill Co. and the Zanesville, Ohio, plant of the American Rolling Mill Co.

F. W. Beach, who has been general sales manager of the Mansfield company, has been appointed Western sales manager of the Empire corporation, with headquarters in Chicago. He was formerly located in that city and has a wide acquaintance in the Chicago territory.

F. F. Huber, Cleveland district sales manager of the Mansfield company, will be promoted to an executive position in the home sales office.

Harold Davey, Detroit district sales manager, will have two assistants, Lawrence Cross, who has been in the sales department of the Empire Steel Co., Cleveland, and Edward Duncan, formerly with the Eastern Rolling Mill Co.

William L. Hoffman, formerly with the Brier Hill Steel Co., who has been Philadelphia district sales manager of the Mansfield company for three years, will remain in the Philadelphia territory as district sales manager of the new company.

Glenn D. East, manager of sales of the Empire Steel Co., Cleveland, and several other men who have been connected with the sales departments of the affiliated companies, will also be given places in the new organization.

Class I railroads on Feb. 8 had 369,469 surplus freight cars in good repair and immediately available for service, according to the Car Service Division, American Railway Association. This was a decrease of 34,323 cars compared with the previous week.

PERSONAL

Dr. Richard Moldenke sailed Saturday, Feb. 25, on the Arabic for Europe. He will visit Germany and other countries on business and will present an exchange paper for the American Foundrymen's Association before the International Foundry Congress, to be held in Barcelona, Spain, April 10 to 14. The congress is confined this year to the foundry associations of Europe.

—

C. Naas, with the Packard Motor Car Co., Detroit, for about 20 years, has joined the Sterling Grinding Wheel Co., Tiffin, Ohio, and has been assigned to the Detroit district in a sales capacity.

—

C. H. Kathe, purchasing agent and traffic manager of the Hill Clutch Machine & Foundry Co., Cleveland, has resigned. He has been associated with the company 19 years, 16 years in the above-mentioned capacity.

—

Lorimer Dunlevy has resigned as sales manager of the Climax Engineering Co., Clinton, Iowa, and on March 15 becomes general sales manager of the O. E. Szekely Co., Holland, Mich., maker of commercial airplane engines and other products.

—

Albert M. Ross, who has been supervisor of production and inventory in the plants of Remington-Rand, Inc., has been made assistant manager of the Remington Typewriter Works, Ilion, N. Y. He succeeds Frank Lewis, who has been transferred to the cabinet and printing division of the Rand-Kardex plant at Tonawanda, N. Y.

—

J. C. Bradley, chief metallurgist American Brass Co., New York, will speak on "Manufacture of and Properties of Brass and Nickel Silver," before the Providence Engineering Society at the society rooms in Providence, Thursday evening, March 1.

—

W. F. Glaser has been appointed Cleveland district sales manager for the Louis Allis Co., Milwaukee, manufacturer of electric motors. The Cleveland office, a new one, is at 409 Union Building, 1836 Euclid Avenue.

—

David L. Sacks has been elected president and treasurer of Louis Sacks, Inc., 357 Wilson Avenue, Newark, N. J., and its affiliated companies, the Louis Sacks Iron Foundry and the Newark Malleable Iron Works. Other officers are David MacIntosh, first vice-president; James O. MacIntosh, second vice-president; Otto H. Mayer, secretary, and Louis E. Adams, assistant treasurer.

—

Marcus Peck has been appointed assistant to the president of the United States Chain & Forging Co., Pittsburgh, and will be in charge of sales. He has been associated with the Standard Oil Co. of California and assumes the duties of Frank L. Campbell, who recently resigned as general sales manager.

—

John Howe Hall, metallurgical engineer Taylor-Wharton Iron & Steel Co., High Bridge, N. J., will speak on "Manganese Steel" before the Cincinnati Chapter of the American Society for Steel Treating, Thursday evening, March 1. Slides and a reel of motion pictures will illustrate the lecture.

—

W. L. Niekamp, since 1913 president Beck & Corbitt Iron Co., St. Louis jobber, resigned on Feb. 21 and has been succeeded temporarily by Henry Luedinghaus, who has been a director of the company for 15 years. Mr. Luedinghaus also is president of the St. Louis Malleable Casting Co. and the Luedinghaus-Espenscheid Wagon Co., manufacturer of farm wagons and motor trucks. Louis H. Josties, private secretary to Mr. Luedinghaus, has been made vice-president and general manager of the Beck & Corbitt company, succeeding George Niekamp, a brother of the former president.

R. C. Bastress, formerly with the Fort Wayne Iron Store Co., Fort Wayne, Ind., has joined the sales organization of the Black & Decker Mfg. Co., Towson, Md., assigned to Indiana and southern Michigan. L. W. Beuhausen, recently with Slocum & Kilburn, New Bedford, Mass., will handle Black & Decker products in western Massachusetts. G. N. McCarthy will represent the company in the Buffalo territory, taking the place of H. B. Austin, who has been transferred to the Chicago district.

—

E. O. Johnstone, district sales manager at San Francisco for the American Chain Co., Inc., has been appointed Pacific Coast distributer of Ford chain hoists, manufactured by the Ford Chain & Block Mfg. Co., Philadelphia.

—

George R. Bennett has resigned as vice-president and general manager of the Edgar Allen Steel Co., Inc., New York, and will be succeeded on March 1 by V. A. Greene.

—

W. E. Mueller has been elected first vice-president of the Mueller Co., Decatur, Ill., succeeding the late Philip Mueller. Robert E. Mueller, chief engineer of the company, has been elected to the board of directors. Phillip Cruikshank has also been elected a director, taking the place of his father, Frank Cruikshank, who will spend several months of this year in foreign travel.

—

A. F. Hanly has been appointed manager of Western sales for A. Milne & Co., steel merchants and importers, and will have headquarters at 580 Market Street, San Francisco.

—

George H. Atwood has been elected president-treasurer of the Twin City Forge & Foundry Co., Stillwater, Minn. Other officers are J. L. Record, vice-president, and E. A. Merrill, secretary.

—

W. A. Burns, for many years representative at Portland, Ore., for the Atlas Diesel Engine Co., Oakland, Cal., has been transferred to the company's home office.

—

George L. Edwards has been made superintendent of the Brazil Machine & Foundry Co., Brazil, Ind.

James A. Farrell, president of the United States Steel Corporation, and Myron C. Taylor, chairman of the corporation's finance committee, recently made their first inspection of the steel plants in the Chicago area since the death of Judge Gary. The inspection was under the direction of Eugene J. Buffington, president Illinois Steel Co., and G. G. Thorp, vice-president.

—

E. A. Lerner has been made president of the Kensington Steel Co., Chicago, manufacturer of manganese steel castings. He has been associated with the Kensington company for 10 years.

—

Joseph Page, for several years associated with the New England Coal & Coke Co., Boston, has been made New England representative of Waldo, Egbert & Maltby, Inc., Buffalo.

—

N. T. Jones, vice-president Superior Screw & Bolt Mfg. Co., Cleveland, has been elected president of that company, succeeding B. G. Tremaine, Jr., who has become chairman of the board. Mr. Jones is one of the pioneers in the bolt business in Cleveland, with which he has been affiliated for 30 years, and was one of the founders of the Superior company. H. D. Simpkins, secretary, has been made vice-president and has been succeeded as secretary by C. L. Wedow, who will continue his former duties as director of sales. R. H. Flues, Detroit sales representative, has been made a vice-president.

—

W. H. Wills, metallurgist Atlas Steel Corporation, Dunkirk, N. Y., was the speaker at the monthly meeting of the Indianapolis chapter of the American Society for Steel Treating on Feb. 13, his subject being the "Nature and Uses of the Principal Types of Tool Steels."

J. M. Manley, secretary Cincinnati branch of the National Metal Trades Association, and E. F. DuBrul, general manager National Machine Tool Builders Association, were the principal speakers at a meeting of the Cincinnati chapter of the National Association of Cost Accountants on Feb. 23. Mr. Manley talked on the "Accountants' Interest in Legislation," while Mr. DuBrul discussed "Unintentional Falsification of Accounts."

Robert Dodd and Thomas Arnold, representatives of a Montreal banking syndicate, have been elected directors of the Algoma Steel Corporation, Sault Ste. Marie, Ont. They have also been elected to the board of the Lake Superior Corporation, of which the Algoma company is a subsidiary, and in which their banking syndicate has recently acquired large stock holdings.

D. S. Robinson, president Western Foundry & Furnace Co., Tacoma, Wash., has been elected president of the Northwest Furnace Builders' Association. Other officers are W. H. Carston, Majestic Furnace & Mfg. Co., Seattle, vice-president, and Floyd Oles, Manufacturers' Association of Washington, secretary-treasurer.

J. T. Whitehead, president Whitehead & Kales Co., Detroit, and Clyde MacCornack, general manager and chief engineer for the Phoenix Bridge Co., Phoenixville, Pa., have been elected to the board of directors of the American Institute of Steel Construction. Their terms will expire in the fall of 1928.

J. A. Lodwick, formerly general manager industrial department of the American Arch Co., Inc., has been appointed assistant to the president of the Kennedy-Van Saun Mfg. & Engineering Corporation, 2 Park Avenue, New York.

D. A. Currie, vice-president and general manager Erie Foundry Co., Erie, Pa., has acquired the entire stock holdings of the A. N. Bates estate and thereby has become the dominant interest in the company. Mr. Currie has been identified with the company for almost 22 years, starting as a timekeeper in 1906, advancing to secretary in 1914 and becoming vice-president and general manager in 1923. The company makes forge shop equipment and sheet mill machinery.

C. A. Collins, president Hanna Furnace Co., Buffalo, and vice-president of the M. A. Hanna Co., Cleveland, sailed recently on a Mediterranean cruise.

Curtis M. Yohe, for several years in charge of purchases for the Pittsburgh & Lake Erie Railroad, has been appointed assistant to the president of the New York Central Lines, with headquarters in Pittsburgh. Mr. Yohe's appointment means that the Pittsburgh district will now have direct representation of the New York Central Lines.

James E. Wallis, Jr., who formerly represented the Sullivan Machinery Co., Chicago, in Japan and later in Russia, has been made trade commissioner, at Berlin, Germany, for the Department of Commerce.

Charles G. Burton, general manager of the National Sanitary Co., Salem, Ohio, has been elected president of that company, succeeding J. E. Finefrock, who has been made vice-president. Mr. Burton will continue as general manager.

The annual meeting of the American Refractories Institute will be held May 16 and 17 at White Sulphur Springs, W. Va.

OBITUARY

A. L. HERKENHOFF

Anthony L. Herkenhoff, general manager Minster Machine Co., Minster, Ohio, and for 30 years prominent in the machinery industry, died suddenly on Feb. 21 at Sidney, Ohio, while on a business mission. He was born at Minster in 1872 and attended the Minster public schools and later the St. Mary's Institute, Dayton, Ohio, now the Dayton University. After being employed by the Atlas Engine Co., Indianapolis, for a period of years, he was instrumental in the organization of the Minster Machine Co. in 1898, serving as its general manager from that time until his death. In 1916 he helped to organize the St. Marys Foundry Co., St. Marys, Ohio, and had served as vice-president and manager since its inception. In 1918 the Streine Tool & Mfg. Co., New Bremen, Ohio, was similarly organized, and he served as the president of that company since its organization.

William Crouse, vice-president Crouse & Pope Foundry Corporation, Auburn, N. Y., died at his home in that city on Feb. 25. He was born at Union Springs, N. Y., and was associated for a time with D. W. Osborne & Co., later the Auburn Works, International Harvester Co. He organized the Crouse & Pope corporation in 1919, with plant and offices at Weedsport, N. Y. The business was continued there until 1923, when the plant was destroyed by fire. The company was reorganized and plant built at Auburn.

Samuel N. Craig, president of the Treadwell Construction Co. and the Midland Barge Co., Midland, Pa., was killed in an airplane accident at Aurora, Neb., Feb. 26. He was on his way to Los Angeles, and missing a train connection, he chartered the airplane to avoid loss of time. He was 42 years of age and was identified with the Riter-Conley Co. before organizing his own companies.

O. M. Stow, treasurer of the Union Malleable Iron Co., Moline, Ill., before it was taken over by Deere & Co., and later treasurer of the Sechler Implement & Carriage Co., died Feb. 16 in Cleveland, where he had lived for the last 10 years.

Simon H. Stupakoff, president Stupakoff Laboratories, Inc., Pittsburgh, died at his home in that city Feb. 18. He was born in Germany 73 years ago, and was well known in the iron and steel industry as a maker of precision instruments, notably for heat and electrical recording.

James B. Baker, president and general manager of the Safety Grinding Wheel & Machine Co., Springfield, Ohio, died suddenly on Feb. 26. He was 75 years of age.

Henry Phelps Howland, blast furnace superintendent for the Wisconsin Steel Co., South Chicago, Ill., died Feb. 23.

Herbert L. Hart, manager of the bolt and rivet department of the Inland Steel Co., Chicago, died Feb. 27. He was born in Chicago in 1866, and became affiliated with the Inland company in 1910.

Export Tonnage Highest for a Year

Imports of Iron and Steel Fall Off 9 Per Cent—Rails, Pipe, Tin Plate and Sheets Were Largest Finished Items Exported

WASHINGTON, Feb. 25.—Aggregating 205,766 gross tons, exports of iron and steel products from the United States in January were the highest for any month since January, 1927, when they totaled 215,235 tons. At the same time imports in January, amounting to 58,635 tons, were the lowest since last September's total of 58,464 tons. Exports in January exceeded by 37,338 those of December, 1927, while imports in January were 5553 tons less than those of December. For the seven months ended with January exports totaled 1,255,134 tons, a decrease of 106,393 tons from those for the corresponding period one year ago. Imports for the seven months ended with January, 1928, amounting to 425,170 tons, were 152,315 tons less than those for the corresponding period last year.

Gains made in exports in January when compared with December were reflected in a number of products, including scrap, ingots and semi-finished steel, steel bars, galvanized sheets, black steel sheets, hoops and bands, tin plate, steel rails, steel tubes and pipe and cast iron pipe. Losses were made in a number of items also, including plates, black iron sheets, structural material and iron castings. For the seven months ended with January, as against the corresponding period of one year ago, gains were made in scrap, increasing to 163,626 tons from 46,167 tons; pig iron, plain wire, barbed wire and woven wire fencing, wire nails, cast iron pipe, iron castings and forgings. Losses were made in a wide range of other products, such as semi-finished material, steel bars, galvanized sheets, black steel and black iron sheets, tin plate, structural steel, steel rails, steel pipe and tubes and car wheels and axles.

Decreases in imports in January when compared with February were made in pig iron, ferromanganese, structural shapes, steel bars, cast iron pipe and a number of other items, with no notable gains. By far the heaviest decline during the seven months ended with January, when compared with the corresponding period one year ago, was made in incoming shipments of pig iron, amounting to 83,376 tons and 136,768 tons respectively. The largest gain made was in imports of structural shapes, totaling 97,592 tons, against 84,641 tons.

Canada took 11,535 tons of the 29,376 tons of scrap exported in January, while Japan took 16,933 tons. Of the 8093 tons of steel bars exported during the month, Canada took 4703 tons and the United Kingdom 1310 tons. Canada was the destination of 7933 tons of the 8947 tons of plates exported. Japan led as the destination for black steel sheets, taking 10,844 tons of the 17,552 tons exported, while Canada took 3759 tons. Japan also was the principal consumer of tin plate exports in January, taking 8908 tons of the 19,668 tons exported;

Exports of Iron and Steel from the United States

United States Imports of Iron and Steel Products During January, 1928

(In Gross Tons)

Belgium	15,322	Canada	4,997
Czechoslovakia	125	Panama	381
France	6,022	Mexico	29
Germany	10,211	Jamaica	628
Netherlands	1,720	British India	5,634
Norway	1,209	Hong Kong	2
Poland and Danzig	2,539	Japan	27
Sweden	1,228		
United Kingdom	8,561	Total	58,635

Canada took 2226 tons; Argentina, 1684 tons, and China, 1536 tons. Neither Canada nor Japan took any American rails in January. China was the greatest purchaser of this product, taking 8833 tons of the 23,174 tons exported. Brazil took 4213 tons; Guatemala, 2088 tons; Chile, 1477 tons; Argentina, 1356 tons.

Of the 11,127 tons of pig iron imported in January, British India supplied 5634 tons; the United Kingdom, 3750 tons, and the Netherlands, 1446 tons. Only 40 tons were received from Germany. The United Kingdom was the source of 2487 tons of the 5184 tons of ferromanganese imported during the month. Canada supplied 1459 tons and Norway 1204 tons. Belgium was the source of 5200 tons of the 7876 tons of steel bars imported in January; Germany, 1067 tons, and France, 1050 tons. Of the 11,080 tons of shapes imported during the month, 6758 tons came from Belgium; 2498 tons from Germany and 1567 tons from France. France also supplied 2443 tons of the 2498 tons of cast iron pipe imported during January.

Indiana and Michigan Wire Fence Manufacturers to Merge

Plans are being formulated for a merger of the Dwiggins Wire Fence Co., Anderson, Ind., and the Crawfordsville Wire & Nail Co., Crawfordsville, Ind., with the Adrian Fence Co., Adrian, Mich. The consolidated company will be known as the Mid-States Steel & Wire Co., with headquarters at Crawfordsville. Stockholders of the two Indiana companies have already approved the merger. J. E. Vandeventer, former secretary and treasurer of the Dwiggins company, will be chairman of the new company, and John Sommer, president of the Crawfordsville company, will be president. Consolidation will be effected through an exchange of stock, according to Floyd A. Deahl & Associates, Cleveland, who are handling the merger.

American Rolling Mill Co. Operating Sheet Mills Full

CINCINNATI, Feb. 28.—The American Rolling Mill Co. is operating all of its sheet mills at its various plants at 100 per cent of capacity and orders in hand are sufficient to carry through March. A number of contracts for second quarter have been made. Releases of tonnages on current contracts by automobile manufacturers have attained a substantial volume, while demand from other sources, notably from distributers, has been heavy. The company has just put into operation at its East Side works at Middletown, Ohio, a third long terne pot.

Carnegie Steel Co. Abandons Plan to Scrap Isabella Furnaces

The Carnegie Steel Co. has abandoned plans to dispose of the site of the Isabella furnaces, Etna, Pa., just outside the city limits of Pittsburgh on the Allegheny River, and the company soon will start the construction of a conveying system that will make it possible to serve these furnaces with river-shipped coke. These furnaces are located well back from the river and coke could be brought to them only by railroad, making the delivered cost high whether the coke came from the Connellsville district or by water from the Carnegie byproduct coke plant at Clairton, Pa. Because coke could be brought to the Lucy furnaces, located in Pittsburgh on the Allegheny River, they have been operated and the Isabella furnaces, which are larger and more modern and also are outside the high taxes of the city of Pittsburgh, have been idle. A short time ago it was thought likely the Isabella furnaces would be dismantled and the site sold to the Baltimore & Ohio Railroad for extension of its freight terminal facilities. The Lucy and Isabella furnaces are used principally in the production of ferromanganese.

Standard Steel Car Co. Acquires Illinois Car & Mfg. Co.

The Standard Steel Car Co., Hammond, Ind., has taken over the Illinois Car & Mfg. Co., with plants at Hammond and Richmond, Ind., and Chicago Heights, Ill. Patrick H. Joyce, president of the Illinois company, will become one of the vice-presidents of the Standard Steel Car Co.

Suspend Proposed Rate Increases on Waster Plates and Sheets

WASHINGTON, Feb. 28.—The Interstate Commerce Commission has suspended until Oct. 1 tariffs which propose to increase the rates on waster plates or sheets, in carloads, between points in Central Freight Association territory. Illustrative of the schedules is the proposal to increase the rate from Middletown, Ohio, to Detroit from $3.65 to $5.94 per 100 lb.

Foundry Equipment Orders

Net orders for foundry equipment received by 18 members of the Foundry Equipment Manufacturers' Association in January amounted to 128.5 per cent of the average monthly shipments during 1922, 1923 and 1924. Shipments during the month were 116.4 per cent, and unfilled orders at the end of the month, 120.6 per cent. The three-month average of gross orders is given as 110.7 per cent.

Machinery Markets and News of the Works

FEBRUARY BUSINESS OFF

Machine Tool Orders in the Month Fall Below Those of January

Orders for the First Two Months, However, Ran Ahead of Bookings in Same Period Last Year

MACHINE tool sales in February did not equal those of January, some estimates being that the average decline in orders was about 10 to 15 per cent. Sales for the first two months of this year, however, exceeded those for the corresponding period in 1927. Demand for high-production tools kept up fairly well during the last month and some companies which specialize in that field report that their February sales did not suffer as compared with January, but most lines of standard tools were affected.

The large volume of outstanding quotations on recent inquiries gives promise of a fairly substantial business in March, but the situation is difficult to appraise because of the unevenness of industrial operations. Business in the Detroit automobile manufacturing district is not up to expectations.

The Apex Electric Mfg. Co., Cleveland, is inquiring for a number of tools for the manufacture of washing machines. The Ashtabula Bow Socket Co., Ashtabula, Ohio, has bought a few tools. The T. L. Smith Co., Milwaukee, is in the market for about $40,000 worth of shop equipment.

Several Western railroads are preparing to enter the market for their 1928 tool requirements. No action has been taken by the Atchison, Topeka & Santa Fe and the Delaware, Lackawanna & Western on pending lists.

New York

NEW YORK, Feb. 28.

THERE is a fair volume of machine tool purchasing and inquiries from industrial users continue to accumulate. The General Electric Co. has been making purchases of tools for its refrigerator and motor departments and still has a list of about 10 tools to close. The Wright Aeronautical Corporation has made further purchases and still has several machines to buy. Additional inquiries have been issued by the New York Central Railroad, but while this purchaser has a sizable total of machine tools under inquiry, it has not closed any business for some time. No action has been taken as yet by the Delaware, Lackawanna & Western Railroad, which has a list of 30 tools under consideration.

Included in recent industrial purchases of machine tools were two Pratt & Whitney jig boring machines by an electric manufacturer, duplex hand centering machine by a gear maker in the Middle West, Pratt & Whitney No. 3 die sinker by a socket manufacturing company, 20 x 72-in. lathe by a Michigan company, 6-in. vertical shaper by an electric company in New Jersey, 12-in. vertical shaper by a tube company in Pennsylvania, Brown & Sharpe No. 2 G. automatic screw machine by a California company, Espen-Lucas No. 285 semi-automatic billet sawing machine by a Connecticut company.

Purchases of used tools have included an 18-in. Gleason bevel gear testing machine by a Connecticut machinery manufacturer, Wilson electric welding machine and Bement No. 2 horizontal cotter drill by a Pittsburgh company.

Bids are being asked by Knickerbocker Ice Co., 41 East Forty-second Street, New York, for a one-story addition to ice-manufacturing plant, 155 x 160 ft., at Flushing, L. I., to cost more than $70,000 with equipment. C. Leslie Weir is company architect, address noted.

American Zinc, Lead & Smelting Co., 331 Madison Avenue, New York, has plans for additions to plant at East St. Louis, Ill., to cost close to $500,000 with equipment. Lockwood, Greene & Co., 1 Pershing Square, New York, and Wilson Building, Charlotte, N. C., are architects and engineers.

Wood Newspaper Machinery Corporation, 501 Fifth Avenue, New York, manufacturer of printing presses, etc., with plant at Plainfield, N. J., has arranged for a stock issue of $717,500, portion of proceeds to be used for expansion in production, particularly for a new printing press unit.

Signal Corps Procurement District, Governors Island, N. Y., will receive bids until March 8, for motor alternators in lots of 25 to 200, circular 111; also for quantity of electrical instruments, circular 112; until March 13 for outpost wire in lots of 1200 to 2100 millimeters, circular 109.

Eleto Co., 153 East Twenty-fourth Street, New York, subsidiary of Lord & Taylor and James McCreery & Co., 5 West Thirty-fourth Street, department stores, operating for storage and distribution of both interests, has awarded general contract to White Construction Co., 95 Madison Avenue, for a ten-story, basement and sub-basement plant, including cold storage plant of 150,000 cu. ft. capacity; automobile service and repair department and garage on third floor, and divisions for manufacture of furniture. Distributing and sorting departments, first and second floor, will be equipped with belt conveyors, chutes and other mechanical handling equipment. Entire project will cost $2,500,000 with equipment.

Chupurdy Auto Coach Works, Inc., 444 West Forty-fifth Street, New York, manufacturer of automobile bodies, with repair division, has leased entire building 50 x 100 ft., at 213-15 West Sixty-fourth Street, for a new plant and will remove to new location. Additional equipment will be installed.

Department of Public Works, Division of Highways, Albany, N. Y., has plans for two two-story additions to repair and equipment maintenance shop at Poughkeepsie, N. Y., to cost approximately $75,000 with equipment. A. W. Brandt is commissioner.

Roberts-Boice Paper Co., Poughkeepsie, N. Y., will rebuild portion of the storage and distributing plant recently destroyed by fire, with loss estimated at $150,000 including equipment.

Bureau of Supplies and Accounts, Navy Department, Washington, is asking bids until March 6 for 42 galvanized steel towers for Brooklyn Navy Yard, schedule 8528; also for 5 motor generators, control panels and spares, schedule 8525, and for spare parts for turbo-generator sets, schedule 8585.

Bayonne Steel Ceiling Co., 223 West Nineteenth Street, New York, will soon take bids on revised plans for a two-story plant at Long Island City, to cost about $75,000 with equipment. William Higginson, 101 Park Avenue, is architect and engineer.

New Rochelle Water Co., 514 Main Street, New Rochelle, N. Y., will take bids for a two-story equipment repair, service and distributing building, with automobile service and garage, 45 x 120 ft., to cost more than $80,000 with equipment. H. B. Peare, 11 North Avenue, is architect.

H. J. Nurick, 44 Court Street, Brooklyn, architect, has plans for a new automobile service, repair and garage building, 75 x 235 ft., to cost close to $100,000 with equipment.

Board of Education, Rensselaer, N. Y., is considering installation of manual training equipment in its two-story junior high and grade school, to cost about $200,000. C. H. Gardinier, 75 State Street, Albany, N. Y., is architect.

Borough Council, Spring Lake, N. J., is considering installation of a municipal electric light and power plant, and will soon secure estimates of cost.

Rubberstone Corporation, 1 Madison Avenue, New York, manufacturer of flooring, etc., has acquired property, 100 x 300 ft., at Hillside, N. J., improved with a one-story factory, for a new plant.

Consolidated Safety Pin Co., 46 Farrand Street, Bloomfield, N. J., will proceed with superstructure for a three-story addition, 34 x 75 ft., for which general contract has been let to John B. Roberts, 949 Broadway, New York, to cost upward of $70,000 with equipment.

Transogram Co., 148 Thirty-ninth Street, Brooklyn, manufacturer of toys, games, etc., has plans for a one-story plant, 90 x 400 ft. at Haskell, N. J., to cost about $50,000 with equipment, and will remove to new location. Additional machinery will be installed. Oscar Goldschlag, Inc., 1482 Broadway, New York, is architect and engineer.

Ovens, power equipment and other machinery will be installed in the three-story plant to be erected by Forester Bakery, Inc., Bergenfield, N. J., to cost $100,000 with equipment. McCormick Co., 41 Park Row, New York, is architect and engineer.

Armstrong Cork Co., Codwise Avenue, New Brunswick, N. J., has awarded general contract to George B. Rule, Inc., 71 John Street, for rebuilding of portion of local finishing mill and distributing building, recently destroyed by fire, to be one story, 115 x 175 ft., to cost more than $60,000 with equipment. Henry Boettcher, Lancaster, Pa., is architect. Company headquarters are at last noted place.

Colony Paper Box & Novelty Co., Jersey City, N. J., has leased with option to purchase the three-story factory at Guttenberg, N. J., including one-story factory adjoining, for a new plant for manufacture of paper boxes, corrugated containers, etc.

Board of Education, City Hall, Newark, will install a manuel training department in an addition to West Side high school to cost $200,000, for which superstructure will be placed under way at once.

Airport Construction Corporation, 21 East Fortieth Street, New York, has been organized to construct airports, airplane hangars, mooring towers and kindred structures. Clarence D. Chamberlin, transAtlantic flyer, will be associated with company in consulting capacity.

Excelsior Plimptruck Co., Stamford, Conn., has been organized to manufacture trucks formerly made by Plimpton Lift Truck Corporation. Operations have not yet begun.

Central Metering Corporation, Grand Central Terminal, New York, has been organized to engage in sub-metering, and will be in market for new and used meters.

Hamilton-Diuguid, Inc., 1111-13 Bedford Avenue, Brooklyn, has been organized to succeed H. A. Diuguid Co. and will do motor rebuilding and general machine work.

Standard Sales & Mfg. Corporation, 103 Park Avenue, New York, has been organized to manufacture steel mail boxes for apartment and office buildings. It will also make stamped steel milk bottle receivers, fire place dampers, ashpit dumps, clean out doors and medicine cabinets. Products are at present being manufactured under contract, but company expects to have its own plant equipped in May and will then be in market for raw materials.

Leeds, Tozzer & Co., 75 West Street, New York, has been appointed special representative for Eastern railroads for Universal Crane Co., Cleveland. Recent statement in these columns that the New York company would represent Universal organization on all products is incorrect, as remainder of trade will continue to be handled by company's other office in New York.

St. Louis

St. Louis, Feb. 27.

PLANS are being considered by Pagne Mfg. Co., Twenty-ninth Street and Southwest Boulevard, Kansas City, Mo., manufacturer of tin cans and other containers, for a one-story factory to cost about $35,000 with equipment.

Gill & Jackson, Buder Building, St. Louis, architects, have asked bids on a six-story automobile service, repair and garage building, 102 x 145 ft., to cost $350,000 with equipment.

Oklahoma Natural Gas Corporation, Oklahoma City, Okla., is disposing of a preferred stock issue to total $7,500,000, portion of fund to be used for expansion, including pipe line construction. Company recently sold a bond issue of $14,000,000 for similar work.

C. L. Monnot, Magnolia Building, Oklahoma City, Okla., architect, has superstructure in progress for a two-story automobile service, repair and garage building, 140 x 160 ft., to cost close to $100,000 with equipment.

City Council, Trenton, Mo., has engaged Burns & McDonnell Engineering Co., Interstate Building, Kansas City, Mo., engineer, to prepare plans for a municipal electric light and power plant, to cost in excess of $60,000 with equipment.

Oklahoma Gas & Electric Co., Oklahoma City, Okla., is said to have plans for four new power houses at Healdton, Lexington, Meeker and near Wynnewood, Okla., to cost upward of $200,000 with equipment. Stations will be used in connection with pipe line project of Shell Pipe Line Co., now in progress.

Joslyn Mfg. & Supply Co., North Kansas City, Mo., manufacturer of tubes, knobs and other equipment, has filed plans for a one-story factory, 55 x 165 ft., to cost $35,000. It will replace plant recently destroyed by fire. Headquarters are at 133 West Washington Street, Chicago.

City Council, Hannibal, Mo., is planning extensions and improvements in municipal electric light and power plant, to cost approximately $150,000 with equipment. Arnold Engineering Co., 565 West Washington Street, Chicago, is engineer.

Board of Education, Kearney, Neb., has plans for a one-story addition to manual training school, to cost about $40,000 with equipment. H. M. McClure, Kearney, is architect.

Western Ice & Cold Storage Co., Shawnee, Okla., operating Shawnee Ice Co., is planning extensions and improvements in ice-manufacturing and cold storage plant to double present capacity, to cost upward of $50,000.

L. J. Kent Boiler & Sheet Iron Works, 700 East Brower Street, Springfield, Mo., is planning installation of a milling machine, shaper and other tools in connection with a one-story addition to cost approximately $40,000.

Roxanna Petroleum Co., Mayo Building, Tulsa, Okla., has plans for a new gasoline refinery near Marshall, Okla., with initial capacity of about 60,000 gal. per day, to cost close to $100,000 with equipment.

R. H. Sanneman, Lee Building, Kansas City, Mo., architect, will soon begin superstructure for a one-story automobile service, repair and garage building, 170 x 240 ft., to cost approximately $150,000 with equipment.

East Arkansas Compress Co., Forrest City, Ark., A. G. Davidson, head, is contemplating a one-story cotton compressing plant, to cost about $85,000 with equipment.

Cutter Machine Co., 3723 Commonwealth Avenue, St. Louis, has taken over manufacture of grinding and polishing machinery formerly conducted by St. Louis Machine Tool Co., latter company having ceased manufacturing activities.

Union Pacific Railroad Co., Omaha, Neb., is reported planning a rock quarry for development of limestone property near Granite Canyon, Wyo., to cost about $150,000 with machinery.

Cleveland

Cleveland, Feb. 27.

MACHINE tool sales continue rather moderate although a little improvement was reported the past week. Orders are coming from scattered sources and consist mostly of single machines. The Apex Electric Mfg. Co., of Cleveland, is planning expansion of its manufacturing facilities for making washing machines and is inquiring for a number of tools, including drilling machines. The Ashtabula Bow Socket Co., Ashtabula, Ohio, purchased several tools the past week; Steel & Tubes, Inc., Cleveland, bought a 96-in. shear for its Elyria plant and the Central Alloy Steel Corporation, Massillon, purchased a vertical shaper for its Berger plant. Makers of turret lathes report a gain in single tool orders.

Plans are being considered by Massillon Steel Casting Co., Massillon, Ohio, for a one-story foundry to cost close to $35,000 with equipment.

Police Fire Alarm Mfg. Co., Akron, Ohio, care of Philip E. Hart, 418 Merriman Road, recently formed by Mr. Hart and associates, is arranging for early contruction of a one-story plant, to cost about $25,000 with equipment.

General Tire & Rubber Co., Akron, has acquired property at Kansas City, Mo., and plans construction of new three-story factory branch and distributing plant to cost approximately $175,000 with equipment.

Board of Education, Fairview Village, Ohio, plans installation of manual training equipment in a two-story senior and junior high eschool to cost $230,000, for which bids will be taken at once on general contract. Fulton & Taylor, 8120 Euclid Avenue, Cleveland, are architects.

National Milling Co., Front Street, Toledo, Ohio, has awarded general contract to Gettins-Kopitke Co., Wabash Avenue and Fifteenth Street, for a new flour mill unit, with packing and distributing facilities, to cost approximately $500,000 with machinery.

Mullins Body Co., Salem, Ohio, manufacturer of automobile bodies, is considering a one-story addition, 50 x 290 ft., to cost about $75,000 with machinery.

Oil Products Co., East Toledo, Ohio, is planning to rebuild portion of plant destroyed by fire Feb. 13, with loss more than $50,000 including equipment.

City Council, Akron, has approved a bond issue of $900,000 for purchase of 600 acres of land in southeastern part of city and establishment of municipal airport, with hangars, shops and other structures. Negotiations are in progress with Goodyear Tire & Rubber Co., for construction of its plant for production of Goodyear-Zeppelin dirigibles on portion of tract. Latter project is estimated to cost upward of $1,500,000.

New England

BOSTON, Feb. 27.

FEBRUARY closes with mixed reports from machine tool dealers. Those who did little business in January report a marked increase in this month's sales, while a majority of dealers just about broke even in both months. The net result represents a fair gain for the trade, as a whole, in February. Machine tool builders generally will do better than in January, but business is quite spotty. Some Connecticut tool manufacturers are getting good export as well as domestic business. Local machinery trade again fell off the past week, particularly in the used tool field. The most important sales included two thread millers to a Rhode Island shop, a 20 ft. x 48-in. lathe to a Worcester plant, three tool room lathes to as many Boston plants, a used pipe machine to a greater Boston shop, a used steam hammer to a Rhode Island firm, and a 14-in. used lathe and milling machine to a Vermont company.

The city of Boston has not yet awarded the tools required for a continuation school. Bids closed Feb. 23 for miscellaneous wood-working tools for another Boston school, and will close March 1 on miscellaneous millwright equipment for still another school. Bids close tomorrow on lathes and grinding machines for the Government at Newport, R. I.

Small tools continue in fair demand, but February sales will fall short of those in January.

Stanley S. Porter, 462 Main Street, Melrose, Mass., has started work on a one-story automobile repair shop. Plans are private.

New England Metal Culvert Co., Palmer, Mass., has purchased 19,238 ft. of land with railroad siding, and has let contract for a plant at 10 Alger Street, Boston. It will be ready to operate May 1.

J. Trainor, architect, has plans in progress for a two-story, 40 x 280 ft. molding compounds plant unit for General Electric Co., Pittsfield, Mass. C. C. Chesney is general manager.

Walworth Co., Boston, pipe fittings, etc., has leased space in Statler office building, Park Square district.

Donlan Foundry Co. has taken over plant and business of G. E. Hoglund Foundry Co., Gardner, Mass.

Northern Connecticut Light & Power Co., Thompsonville, Conn., has engaged J. G. White Engineering Corporation, 43 Exchange Place, New York, engineer, to prepare plans for a hydroelectric generating plant on Connecticut River, near Windsor Locks. It will have initial capacity of 50,000 hp., and will cost more than $1,500,000 with transmission lines.

Chickering & Sons, 791 Tremont Street, Boston, manufacturers of pianos, piano mechanisms, etc., are arranging for early removal of their local factory to a new plant now in course of construction at Roxbury Crossing, to cost more than $100,000.

E. Ingraham Co., North Main Street, Bristol, manufacturer of clocks, clock movements, etc., has awarded general contract to Charles Smith & Sons, Derby, Conn., for a one-story addition to its press department, 25 x 160 ft., to cost about $40,000.

New England Water, Light & Power Co., Providence, R. I., is being organized by Arthur B. Lisle, Providence, formerly vice-president and general manager Narragansett Electric Lighting Co., and associates, with capital of $4,000,000, to take over and operate electric light and power companies in New England, to include power plant development and transmission line construction.

Jewell Belting Co., Hartford, Conn., manufacturer of mechanical belting, has arranged for sale of its local plant and machinery and will discontinue operations here.

Robert Gair Co., Montville, Conn., manufacturer of corrugated boxes and containers, has plans for a power house to cost about $45,000 with equipment. Headquarters are at 420 Lexington Avenue, New York.

Locke-Stevens Corporation, 94 Warrenton Street, Boston, manufacturer of plumbing equipment and supplies, has filed plans for extensions and improvements to cost close to $20,000.

New England Public Service Co., Augusta, Me., operating Central Maine Power Co., Public Service Co. of New Hampshire and other light and power utilities, is disposing of a preferred stock issue of $2,425,000, a portion of proceeds to be used for expansion, including acquisition of additional properties, and extensions in generating and transmission line facilities. Walter S. Wyman is president.

Arrow Knitting Needle Co., Manchester, N. H., is carrying out an expansion program, including installation of additional equipment.

Gulf States

BIRMINGHAM, Feb. 27.

PLANS are being completed by Central Power & Light Co., San Antonio, Tex., for an addition to its power house at Victoria, Tex., including installation of 6000 kw. turbo-generator and auxiliary equipment. An extension will also be built to local ice-manufacturing plant, with machinery to increase capacity to 120 tons per day.

Chamber of Commerce, Slattery Building, Shreveport, La., H. F. Porter, secretary, has plans for a one-story machine shop in connection with a hangar to be built at Steere aviation field.

Birmingham Electric Co., Birmingham, is disposing of a bond issue of $9,200,000, a portion of proceeds to be used for extensions and improvements, including transmission line construction.

Hidalgo Utilities Co., Hidalgo, Tex., is planning a new one-story ice-manufacturing plant, to cost approximately $50,000 with equipment.

Mason Foundry Co., Laurel, Miss., has approved plans for a one-story machine shop and foundry addition, to cost close to $40,000 with equipment.

St. Louis & Southwestern Railway Co., Tyler, Tex., is said to be planning extensions and improvements in car and locomotive shops, to cost $95,000 with equipment. W. S. Hanley is chief engineer.

In connection with an appropriation of about $4,500,000 for line extensions and improvements in 1928, Missouri-Kansas-Texas Railroad Co., Dallas, Tex., will expend $227,393 for new shop machinery and tools for repair works in Texas area.

E-Z Opener Bag Co., Decatur, Ill., has plans for a new paper mill and bag manufacturing plant at Tuscaloosa Ala., including power house, machine shop and other units, entire project to cost more than $4,000,000 with machinery.

Dry-Kold Products Co., Dallas, Tex., is planning early construction of a one-story plant for production of dry ice, a special compressed carbonic gas, to cost $40,000 with equipment.

Texas Utilities Co., Mineral Wells, Tex., operated by Community Power & Light Co., is planning construction of one-story ice-manufacturing plant, to cost close to $80,000 with machinery.

Moody-Seagreaves Corporation, Esperson Building, Houston, Tex., operating pipe lines for oil transmission, is said to be planning a new line for natural gas from Richland Parish field to a point near St. Louis, to cost more than $12,000,000 with compressor stations, etc.

Atchison, Topeka & Santa Fe Railway Co., Amarillo, Tex., has asked bids for a one-story machine repair shop, 200 x 500 ft., at its local works, to cost in excess of $100,000 with equipment. M. C. Blanchard is chief engineer of Western lines.

Phillips Petroleum Co., Bartlesville, Okla., is reported planning construction of carbon black plants in Carson and Hutchinson Counties, Tex., to include machine shops, pipe lines, tramway system and other mechanical equipment, to cost about $175,000 each.

Alabama Power Co., Birmingham, is said to be arranging for early construction of a steel water tower at Florence, Ala., 150,000 gal. capacity, to cost about $40,000.

Tropical Furniture Co., Miami, Fla., has been formed by officials of General Industrial Corporation, Miami, to take over and operate factory of Roman Mfg. Co., N. W. Seventh and Thirteenth Streets, manufacturer of furniture. Purchasing company will remodel plant and install additional machinery. C. W. Heller is president of General Industrial organization.

Cotton Concentration Co., Twelfth and A Streets, Galveston, Tex., is contemplating an addition to its plant on Broadway for cotton compressing, to cost about $75,000 with machinery.

Eternit, Inc., Fifteenth and Locust Streets, Philadelphia, manufacturer of asbestos shingles, etc., has leased property at Houston, Tex., for a new factory branch and distributing plant, to cost more than $50,000.

Western Public Service Co., Alvin, Tex., is planning early purchase of an electrically-operated pumping unit, 500 gal. per min., in connection with extensions and betterments in waterworks. A quantity of cast iron pipe will be purchased. Carlton Ely is local superintendent.

City Council, Monroe, La., is asking bids until March 14 for two 4200-gal. per min., one 3100-gal. per min. and one 10,000-gal. per min. centrifugal pumping units, with accessories, for municipal waterworks, including eight-panel switchboard, motors for pumps and auxiliary equipment. Burns & McDonnell Engineering Co., Interstate Building, Kansas City, Mo., is engineer.

Southern Ice & Utilities Co., Santa Fe Building, Dallas, Tex., has plans for a one-story ice-manufacturing plant at Big Spring, Tex., for initial capacity of 100 tons per day.

Philadelphia

PHILADELPHIA, Feb. 27.

FOLLOWING recent purchase of shipyard of William Cramp & Sons Ship & Engine Building Co., Philadelphia, by Francis J. McDonald, head of Philadelphia Ship Repair Co., a new organization, Kensington Shipyard & Dry Dock Co., has been formed to take over and operate plant. Plans are under way for expansion and improvements to cost about $500,000. Mr. McDonald is president of new company; Francis J. McDonald, Jr., secretary, and John E. Worthington, treasurer.

Nice Ball Bearing Co., Thirtieth Street and Nicetown Avenue, Philadelphia, will soon take bids for an addition, to cost more than $40,000 with equipment.

Norton Co., Worcester, Mass., has awarded general contract to Harry McGill, Jr., Philadelphia, for a two-story and basement factory branch and distributing plant, 57 x 100 ft., at Philadelphia, to cost about $50,000. Ballinger Co., Twelfth and Chestnut Streets, is architect and engineer.

Charles Kahn, Morris Building, Philadelphia, has acquired property, 119 x 151 ft., at Fifty-seventh and Walnut Streets, and plans construction of a multi-story automobile service, repair and garage building, to cost in excess of $100,000 with equipment.

Pennsylvania Railroad Co., Philadelphia, plans expansion in its car and locomotive repair shops at Todd's Cut, Wilmington, Del., to provide for work on district lines heretofore carried out at West Philadelphia shops, centralizing operations at Wilmington; a new main shop unit is proposed, reported to cost more than $75,000 with equipment. Plans have been completed for an electrical repair shop at Todd's Cut plant, in connection with electrification of Philadelphia-Wilmington lines, now under way.

E. I. duPont deNemours & Co., duPont Building, Wilmington, Del., is arranging for immediate erection of a new plant at Gibbstown, N. J., for production of ammonia under a new process, to cost more than $400,000 with equipment.

Board of Education, Camden, N. J., plans installation of manual training equipment in a high school to be erected at East Camden, to cost in excess of $400,000 with equipment.

Board of Trustees, Drexel Institute, Thirty-second and Chestnut Streets, Philadelphia, will soon take bids on general contract for a new mechanical engineering building, 192 x 470 ft., to cost in excess of $500,000. Simon & Simon, 249 South Juniper Street, are architects.

duPont Powder Co., duPont Building, Wilmington, Del., is arranging an expansion and improvement program at its Barksdale, Wis., plant for increased production of nitric acid, to cost $400,000 with equipment.

Milton Canning Co., Milton, Del., will rebuild portion of plant destroyed by fire Feb. 18, with loss reported in excess of $200,000, including machinery.

Ovens, power equipment, conveying and other machinery will be installed in one and two-story plant to be erected by Heimbach Baking Co., Allentown, Pa., to cost $225,000. Jacoby & Evertt, Commonwealth Building, are architects.

Fire, Feb. 23, destroyed a portion of building at Second and Erie Streets, Camden, N. J., occupied by Philadelphia Metal Stamping Co., Allied Metal Stamping Co., William McIntosh Metal Stamping Co., and James A. MacMillan Chemical Co., with total loss, divided among companies noted, estimated at $200,000.

South Chester Tube Works, Inc., Front and Thurlow Streets, Chester, Pa., manufacturer of steel tubing, pipes, etc., is planning a one-story addition, to cost in excess of $45,000 with equipment.

Board of Freeholders, Camden, N. J., has work in progress on a new County vocational school, to cost $950,000 with equipment.

Bethlehem Steel Co., Bethlehem, Pa., has authorized an expansion and improvement program at its limestone quarries at Naginey, Pa., including installation of electrically-operated crushing machinery, breakers, screens, cranes, cars and other equipment. Entire project will cost about $200,000.

Shirley B. Watts, Harrisburg, Pa., has acquired automobile service, repair and garage building on Herr Street and plans enlargements with installation of additional equipment to cost approximately $100,000. Mr. Watts was formerly local manager for Bell Telephone Co. and will operate garage property as a new enterprise.

National Metal Edge Box Co., Callowhill at Thirteenth Street, Philadelphia, manufacturer of paper box machinery, paper box corner stays and kindred products, has moved into a new and larger factory and expanded scope of consulting engineering department.

South Atlantic States

BALTIMORE, Feb. 27.

PERMISSION has been asked by Suburban Light & Power Co., Munsey Building, Baltimore, for installation of transmission lines, power stations, etc., in St. Mary's, Calvert, Charles and Prince George Counties; also authority to issue preferred stock in amount of $775,000, to be used in part for project. Company was organized recently by George W. Woolford, president of Eastern Shore Trust Co., and associates, who will be president. Ezra B. Whitman, 18 East Lexington Street, will be engineer in charge of construction.

Rogers Air Lines, Inc., Baltimore, care of Gerald A. Lee, 16 West Saratoga Street, has negotiations under way for site at proposed municipal airport for new plant to manufacture commercial airplanes, including seaplanes. Initial works are reported to cost close to $40,000, and will be used largely for assembling.

Chief of Engineers, Washington, is asking bids until March 27 for one 200-kw. Diesel engine-generating set, complete with auxiliaries, and one station switchboard complete, with spare parts, circular 15.

American Tobacco Co., Reidsville, N. C., is reported planning construction of new plant, including department for redrying and conditioning, and steam power plant, to cost close to $800,000 with equipment. Headquarters are at 111 Fifth Avenue, New York.

National Public Service Corporation, operating Eastern Shore Public Service Co., Salisbury, Md., and other utilities, affiliated with Middle West Utilities Co., 72 West Adams Street, Chicago, is disposing of bond issue of $20,000,000, a portion of proceeds to be used for extensions and improvements, including transmission line construction. Harry Reid is president.

Industrial Fibre Co., West Ninety-eighth Street and Walford Avenue, Cleveland, is said to have engaged J. E. Sirrine & Co., Greenville, S. C., architects and engineers, to prepare plans for a rayon mill, with power plant, machine shop and other mechanical buildings, on site in that vicinity, to cost $750,000 with machinery.

Blue Ridge Talc Co., Henry, Va., is rebuilding portion of its plant recently destroyed by fire, with new one-story unit, 45 x 107 ft. Installation will include pulverizing equipment, blenders, elevators, hoppers, bins, scales, etc., to cost about $65,000.

Bureau of Supplies and Accounts, Navy Department, Washington, is asking bids until March 13 for electric portable drills and grinders for Eastern and Western yards, schedule 8549; until March 6 for centrifugal pumping unit, capacity 400 gal. per min., for Mare Island yard, schedule 8567; until March 13 for band saws and spare parts, Eastern and Western yards, schedule 8552; until March 6 for three motor-generator sets and spare parts for Washington yard, schedule 8511.

Hooker-Bassett Furniture Co., Martinsville, Va., is considering new plant unit to double present capacity. Arrangements are being made for sale of stock totaling $300,000, considerable portion of fund to be used for expansion.

Board of Education, Charlotte, N. C., is considering installation of manual training equipment in addition to Alexander Graham Junior High School, to cost $150,000, for which plans will soon be drawn.

The Crane Market

THERE is a moderate volume of inquiry, but prospective purchasers are slow to close business. In addition to a number of inquiries for overhead cranes that have been pending for several weeks, Fox Brothers International Corporation, New York, is asking for bids on two lists of cranes for export. These include a 25-ton, 55-ft. span, 5-ton, 25-ft. span and two 3-ton, 25-ft. span, 40 and 50-ft. lift, overhead cranes for the Turkish Government and a list of eight cranes for the Colombian Government, a 25-ton, 20-ton, 15-ton and 10-ton, 65-ft. spans, a 3-ton, 15-ft. span, 8-ton, 35-ft. span and two 2-ton, 18-ft. span overhead cranes. Thomas E. Murray, consulting engineer, 55 Duane Street, New York, is inquiring for a 100-ton overhead crane for the New York Edison Co. In the field of locomotive cranes, the Frederick Snare Corporation, New York, which has a large breakwater contract at Lima, Peru, is reported taking bids on a 25-ton locomotive crane.

Among recent purchases are:

Phoenix Utility Co., 71 Broadway, New York, 150-ton power plant crane from Cleveland Crane & Engineering Co.

Standard Oil Co. of New Jersey, 20-ton, 50-ft. span hand power crane from Box Crane & Hoist Corporation.

Giddings & Lewis Machine Tool Co., Fond du Lac, Wis., two used 10-ton, 34-ft. span, 3-motor Niles overhead cranes from Niles Crane Corporation.

New York Central Railroad, New York, used 25-ton locomotive crane from the Conowingo project, through unnamed seller.

F. L. Smidth & Co., New York, a 10-ton, 74-ft. span bucket crane for Monolith-Portland Cement Co., Los Angeles, Cal., from Western builder.

George J. Atwell Co., 1 Park Avenue, New York, 7½-ton truck crane from Browning Crane Co.

Carnegie Steel Co., Pittsburgh, 25-ton, 70-ft. 6-in. span overhead crane with 10-ton auxiliary for its Duquesne works from Alliance Machine Co.

Stone & Webster, Inc., 49 Federal Street, Boston, engineer, will be in charge of installation of steam-operated electric power plant of Potomac Electric Power Co., Washington, at Bennings. Project will cost close to $2,000,000 instead of smaller amount recently noted.

Bureau of Yards and Docks, Navy Department, Washington, is asking bids until March 21, for a hangar and mechanical shop, 203 x 228 ft., at Hampton Roads, Va., specification 5568.

Automotive Corporation of America, Inc., North Fallsway, Baltimore, V. P. Williams, vice-president, has concluded arrangements for purchase of plant and business of George W. Davis Motor Car Co., Richmond, Ind., and will continue production of automobiles with special devices and equipment. Company proposes to use either this plant or to build a factory for special automobile manufacture.

Globe Iron & Metal Co., 1620 Gough Street, Baltimore, has been incorporated by sons of its late president, Moses Schein, and will continue to deal in ferrous and nonferrous old materials.

Pittsburgh

PITTSBURGH, Feb. 27.

MACHINE tool business is making a favorable showing in comparison with this time last year, losses reported by some dealers being offset by gains in others. Sales of more than single tools are unusual. There is some disappointment that purchases against the quarterly list of the Westinghouse Electric & Mfg. Co. have been fewer than expected.

Bids will be asked by United States Engineer, Keenan Building, Pittsburgh, for a power plant at Lock 6, Alleghany River, Kelly Station, near Clinton, Pa.

Pittsburgh Plate Glass Co., Frick Building, Pittsburgh, has approved plans for extensions and improvements at its sheet glass mill at Ford City, Pa., to cost upward of $400,000, including installation of continuous grinding and polishing system and other equipment. Company is said to be contemplating construction of a new Pacific Coast plant, vicinity of Richmond, Cal., to cost close to $5,000,000 with machinery.

Hubbard & Co., Granite Building, Pittsburgh, manufacturers of heavy hardware, have plans for a one-story addition, 150 x 225 ft., to be used primarily for assembling. A portion will be reserved for storage and distributing service. It will cost more than $100,000 with equipment.

Evans-Wallower Lead Co., Charleston, W. Va., has been formed with a capital of $1,250,000 and 500,000 shares of common stock, no par value, to take over and consolidate Evans Lead Co., Charleston, and Golden Rod Mining & Smelting Co., operating lead properties at Joplin, Mo. New company has plans for expansion. Edgar Z. Wallower, heretofore president of Golden Rod company, will head new organization; Ray M. Evans will be first vice-president.

Carson Battery & Brake Co., 1331 Third Avenue, Huntington, W. Va., has awarded general contract to R. Mankin & Co., Huntington, for a one-story works, 50 x 160 ft., to replace a structure recently destroyed by fire.

Following recent purchase of plant and business of United States Three-Way Dump & Hoist Co., Pittsburgh, manufacturer of motor truck bodies and hoists, etc., by Commercial Shearing & Stamping Co., Youngstown, Ohio, last noted company has arranged for concentration of production at Youngstown plant, where expansion will be carried out, including division body and hoist manufacture.

Fokker Aircraft Corporation of America, Glendale, W. Va., will proceed with superstructure for a local plant for assembling and other service, to cost in excess of $100,000 with equipment. Contract for building has been let to R. R. Kitchen Co., Wheeling W. Va.

Chicago

CHICAGO, Feb. 27.

SALES of machine tools this month are well ahead of the corresponding period in 1927, but not quite so large as in January of this year. Both inquiry and orders are widely scattered and usually specify one or two tools. Bids against the Santa Fe list are being submitted, but the trade looks for no action for at least four weeks. A double dry grinder has been added to its list. The T. L. Smith Co., Milwaukee, is in the market for $40,000 worth of tools. Several Western railroads are preparing lists and three junior high schools are under construction in Chicago. Deere & Co., Moline, Ill., have closed for a number of used machines, and a can company in Chicago has purchased a 24-in. shaper.

Roth Brothers & Co., 1400 West Adams Street, Chicago, manufacturers of electrical machines, have purchased property in Cicero, Ill., for erection of factory buildings.

Plans are being considered by Ahlberg Bearing Co., 321 East Twenty-ninth Street, Chicago, manufacturer of ball bearings, for a one-story addition, to cost close to $40,000 with equipment.

Board of Education, Park Ridge, Ill., plans installation of manual training equipment in a new three-story high school to cost $475,000, for which bids will be asked on general contract early in April. Zack & McCaughey, 222 West Adams Street, Chicago, are architects.

Reflector & Hardware Specialty Mfg. Co., 2235 South Western Avenue, Chicago, will begin foundations for new two-story and basement plant, 92 x 135 ft., to cost $70,000, for which general contract has been let to Christopher Rasmussen, 77 West Washington Street.

City Council, Detroit Lakes, Minn., is asking bids until March 5 for a complete steam engine generating unit for municipal electric power plant, with alternate proposals on units of 500 kva. and 625 kva., respectively; also for a one-ton electrically operated ash hoist. L. P. Wolff, St. Paul, Minn., is consulting engineer.

Northern States Power Co., 15 South Fifth Street, Minneapolis, Minn., is negotiating for purchase of municipal light and power plant at Lakefield, Minn., and proposes extensions and improvements, with transmission line construction, to cost about $100,000.

Rath Packing Co., Waterloo, Iowa, has authorized plans for a steam power house at its plant to cost $30,000. Henschien & McLaren, 1637 Prairie Avenue, Chicago, are architects.

Chicago Motor Ramp, Inc., 38 South Dearborn Street, Chicago, has awarded general contract to B. W. Construction Co., 720 Cass Street, for a ten-story automobile service, repair and garage building, to cost about $750,000 with equipment. George C. Nimmons, 122 South Michigan Avenue, is architect.

Atchison, Topeka & Santa Fe Railway Co., 80 East Jackson Boulevard, Chicago, is reported planning a new steel frame coaling station at Streator, Ill., to cost about $70,000 with equipment.

City Council, Audubon, Iowa, is planning installation of a water purification plant for municipal water system, to cost about $40,000. Bonds will be voted March 28.

Otter Tail Power Co., Fergus Falls, Minn., will make extensions and improvements in steam-operated electric power plant at Langdon, N. D., including installation of new equipment.

Minerallas Electric Co., 1045 Washington Boulevard, Chicago, manufacturer of electrical equipment, has filed plans for a new two-story plant, 75 x 115 ft., to cost approximately $40,000 with equipment.

L. H. Marston, 432 Lincoln Highway, DeKalb, Ill., architect and engineer, has plans for a new one-story factory for manufacture of metal doors, sash, etc., company name temporarily withheld, to cost more than $100,000 with equipment.

Allied Industrial Products Co., 120 North May Street, Chicago, manufacturer of grinding wheels, buffing equipment, etc., will soon take bids on general contract for a new three-story and basement plant, 40 x 105 ft., to cost $80,000 with equipment. Meyer & Cook, 820 Tower Court, are architects.

Cudahy Packing Co., Newport, Minn., meat packer, has plans for a five-story and basement cold storage and refrigerating plant, 114 x 132 ft., to cost in excess of $100,000 with equipment.

Excelsior Stove & Mfg. Co., Quincy, Ill., has begun construction on its six-story warehouse, 70 x 170 ft. A foundry, 110 x 235 ft., will be erected adjacent to the new unit and a cupola room, 70 x 150 ft. Buildings will replace portion of plant destroyed by fire several months ago.

Traction Truc-tor Co., Des Moines, Iowa, has been organized to manufacture gas-electric four-wheel-drive Tructors, designed for buses, trucks or tractors and embodying features of portable universal power plant. Company is preparing for production and will purchase electric generators and motors, steering gears, springs, radiators and other accessories. General construction and assembly will be carried on in plant of Baker Machinery Co., Des Moines.

Goetz Brass Co., 630 North Franklin Street, Chicago, manufacturer of bath, shower and lavatory fixtures and special brass products, has changed its corporate name to H. E. Robertson Co.

Detroit

DETROIT, Feb. 27.

EXTENSIONS and improvements in power house are being planned by Board of Trustees, University of Michigan, Ann Arbor, to cost $100,000 with equipment. An appropriation is being arranged.

Frost Gear & Forge Co., Horton Street, Jackson, Mich., has awarded general contract to H. K. Ferguson Co., Cleveland, for a two-story addition 50 x 100 ft., to cost about $60,000 with equipment.

St. Joseph Steel Castings Co., St. Joseph, Mich., recently organized with capital of $200,000, contemplates operation of a local plant. New company is headed by James P. McKeon, formerly assistant general manager of West Michigan Steel Foundry Co., Muskegon, Mich., and A. R. Walker, formerly president of Walker Candy Co., of same place.

Plant and business of Sauzedde Corporation, Mount Clemens, Mich., manufacturer of airplane wheels, brakes, etc., has been acquired by new interests and present company will be dissolved. A new corporation will be chartered under New Jersey laws to take over property and arrangements are being made for early removal to Bound Brook, N. J., where additional equipment will be provided.

Michigan Public Service Co., Ludington, Mich., plans extensions and improvements in local power station and system, to cost about $75,000 with new equipment. Work will start in spring.

Superior Seal & Stamp Co., 151 East Jefferson Avenue, Detroit, manufacturer of steel seals, dies, etc., is having plans drawn for a one and two-story factory, 70 x 155 ft., to cost $70,000 with equipment. Smith, Hinchman & Grylls, Marquette Building, are architects and engineers.

Mahon Structural Steel Co., 8650 Mount Elliott Avenue, Detroit, has work under way on an addition totalling 100,000 sq. ft. floor space, for storage and distributing service. It will be provided with five craneways and other material-handling and conveying equipment, with total cost close to $125,000.

Houghton Electric Co., Houghton, Mich., plans extensions and improvements in local power house and system with installation of additional equipment. Transmission lines will be extended to L'Anse and vicinity.

Packard Motor Car Co., 1580 East Grand Boulevard, Detroit, has awarded general contract to Everett Winters Co., Detroit, for a one-story addition, 145 x 420 ft., for metal stampings, to cost in excess of $100,000 with machinery. Albert Kahn, Inc., Marquette Building, is architect and engineer.

Winchell-Tuebner Co., Jackson, Mich., is planning construction of works for manufacture of brick at Battle Creek, Mich., including steam power house, machine shop and other buildings, and will remove headquarters to new location. It will cost more than $75,000.

Indiana

INDIANAPOLIS, Feb. 27.

PLANS are being arranged by Indian Refining Co., Lawrenceville, Ill., for a two-story oil storage and distributing plant at Fort Wayne, Ind., to cost about $60,000 with equipment. Bids will be asked late in March. Similar plant will be built at Terre Haute, Ind., to cost a like amount, for which it is expected to ask bids late in May.

Earl Little, 5 Eastern Avenue, Indianapolis, has awarded general contract to Lloyd Thompson, Indianapolis, for a one-story machine shop, 55 x 150 ft., to cost close to $20,000 with equipment.

V. M. Nussbaum & Co., Fort Wayne, Ind., are planning to purchase a 300-kw. and 200-kw. engine-generator set, each 3-phase, 60-cycle, 340-volts, with accessories.

Graham-Paige Co., West Warren Street and Detroit Terminal Railroad, Detroit, manufacturer of automobiles, has acquired former plant of Karges Wagon Co., Evansville, Ind., occupying two city blocks, and will remodel for manufacture of automobile bodies.

Metal Door & Trim Co., Laporte, Ind., is arranging to rebuild portion of plant destroyed by fire Feb. 20, with loss of $110,000 including equipment.

Pierce Governor Co., Anderson, Ind., manufacturer of speel control equipment, has increased recent financing with sale of a block of 30,000 shares of common stock, to total $540,000, a portion of fund to be used for expansion.

Mid-States Steel & Wire Co., Crawfordsville, Ind., is being organized with capital of $3,100,000 to take over and consolidate Crawfordsville Wire & Nail Co.; Dwiggins Wire Fence Co., Anderson, Ind., and Adrian Wire Fence Co., Adrian, Mich. Consolidated company will have assets of $2,000,000 in plants and equipment. J. E. Vandeventer will be chairman of board of new company, and John Sommer, president. Headquarters will be maintained at Crawfordsville.

Lanahan & Dunphy, Vincennes, Ind., have plans for a one-story automobile service, repair and garage building, to cost about $100,000 with equipment.

Board of Education, Mount Vernon, Ind., is considering installation of manual training equipment in a new two-story and basement high school, to cost $175,000, for which bids will be received on general contract March 29. N. S. Spencer & Son, 180 North Michigan Avenue, Chicago, are architects.

S. G. Taylor Chain Co., Hammond, Ind., has awarded contract to Chicago Industrial Construction Co., for a two-story addition.

Buffalo

BUFFALO, Feb. 27.

ARRANGEMENTS are being concluded for a merger of Brockway Motor Truck Corporation, Cortland, N. Y., and Indiana Truck Co., Marion, Ind., under first noted name. New organization will have combined assets totaling $9,000,000. Both plants will be continued for manufacture of motor trucks and parts, as well as 38 direct factory branches. Consolidated company plans expansion betterments, to include facilities for larger output and operations in foreign countries. Capital stock will be increased from $1,500,000 to $3,000,000, and common stock from 150,000 to 500,000 shares, no par value. George A. Brockway is president.

Board of Education, Watertown, N. Y., is considering installation of manual training equipment in a two-story junior high school to cost in excess of $250,000. Lansing & Green, Sherman Trust Building, are architects.

Rochester Gas & Electric Corporation, Rochester, N. Y., is disposing of bond issue of $6,000,000, a portion of proceeds to be used for expansion and improvements, including transmission line construction.

Evan E. Jones, 31 North Ryan Street, Buffalo, and Clarence D. Fulton, 20 Hubbell Avenue, have organized Jones-Fulton Corporation, to establish and operate a local plant for manufacture of metal products. It is purposed to begin operations soon.

General Drop Forge Co., 1728 Elmwood Avenue, Buffalo, has taken bids on general contract for a one-story addition, to be used largely as a machine shop and to cost close to $100,000 with machinery. Ernest McGeorge, 3030 Euclid Avenue, Cleveland, is architect and engineer.

Curtiss Aeroplane & Motor Co., 74 Kail Street, Buffalo, is arranging for increase in capital from 218,000 to 300,000 shares of stock, a portion of fund to be used for expansion. An associated company, recently formed by Glenn Curtiss and others, is completing plans for erection of a new plant in vicinity of St. Louis, for manufacture of commercial airplanes and parts.

Board of Education, Liverpool, N. Y., plans installation of manual training equipment in a two-story junior and senior high school to cost about $300,000, for which bids will soon be asked on general contract. Prof. Earl Hollenbeck, Joseph Slocum College, Syracuse, N. Y., is architect.

Vacuum Oil Co., Rochester, N. Y., with branch oil refinery at Olean, N. Y., is arranging increase in capital from $70,000,000 to $175,000,000, portion of fund to be used for expansion in production, including operations in foreign countries, particularly England, where storage and distributing plants are planned. George P. Whaley is president.

Hart & Crouse Co., Utica, N. Y., has been made national distributer of Zephyr washed air system for warm air furnaces, and a part of new device will be manufactured at its Utica plant. Change will require a doubling of Hart & Crouse furnace casting production.

Lincoln Aluminum Health Co., Rochester, N. Y., will establish a plant at Port Leyden, N. Y. An existing building has been obtained and machinery will be installed immediately.

Liberty Dining Car Corporation, Buffalo, has been organized to manufacture lunch wagons. It has taken over plant of Buffalo Truck Corporation at Clarence, N. Y., which is already equipped for manufacturing.

Principal business offices of Coplan Steel Corporation will be moved from Oswegatchie, St. Lawrence County, N. Y., to New York City.

Cincinnati

CINCINNATI, Feb. 27.

WITH the majority of machine tool companies February has failed to come up to expectations, sales having been below those in either December or January. There is a small number of builders, however, who report that fresh bookings this month have exceeded those in January, so that the average decline in orders in the local market should not be more than 10 to 15 per cent. Despite the recession in the past 30 days, business in the first two months of 1928 has been from 15 to 20 per cent better than in the same period of 1927. The amount of outstanding quotations is large and a liberal percentage should close before the end of the first quarter. Buying has been well apportioned among consuming industries.

Purchases in the Detroit district have slumped sharply, although one or two companies making special high production tools report considerable pending business in the automobile field. An increase in the price of at least one type of machine which was not affected by the recent upward revision is anticipated in the near future. The Los Angeles Gas & Electric Corporation, Los Angeles, has bought a 36-in. x 28-ft. heavy-duty engine lathe.

Covington Industrial Club, Covington, Ky., is interested in a project for establishment and operation of a foundry in a building at Fifteenth Street and line of Louisville & Nashville Railroad. A group of interests formerly identified with Gates Foundry Co., Cincinnati, headed by C. W. Gates, W. H. Haven and J. C. Clifton, all of Cincinnati, are organizing New Insurance Foundry Co., to carry out project. Structure will be remodeled and equipment installed at early date.

Gray-Elliott Furniture Mfg. Co., Greenfield, Ohio, is planning to rebuild portion of three-story plant destroyed by fire Feb. 13, with loss reported at more than $70,000 including equipment.

Tietig & Lee, Merchants Building, Cincinnati, architects, have plans for an eight-story automobile service, repair and garage building, to cost $850,000 with equipment.

Air Corps, Material Division, Wright Field, Dayton, Ohio, will receive bids March 7 for saw blades, drills, drill grinding gages, saw frames and other tools, circular 243; also for bushings, pipe couplings, nipples, tees, etc., circular 250; until March 5 for 50 propeller disks, and 10 propeller club assemblies, circular 241.

United States Foil Co., Thirtieth Street and Grand Avenue, Louisville, will soon take bids for a three-story plant unit, 112 x 200 ft., and one-story warehouse and distributing plant on adjoining site, 100 x 200 ft., to cost $400,000 with equipment. Ossian P. Ward, Lincoln Bank Building, is architect.

General Aeronautical Corporation, 3336 Trimble Avenue, Cincinnati, has asked bids on general contract for a one-story airplane manufacturing plant in the Luken airport district, to cost about $50,000 with equipment. C. G. Dietz is head.

Ferro Concrete Construction Co., Cincinnati, has secured contract for a multi-story automobile service, repair and garage building to cost $200,000 with equipment.

Henry Vogt Machine Co., Tenth and Ormsby Streets, Louisville, manufacturer of ice-making and refrigerating machinery, has awarded general contract to H. A. Doll, Louisville, for a two-story addition, 80 x 240 ft., to be equipped as a steel fitting shop, to cost $75,000 with machinery. D. X. Murphy & Brothers, Louisville Trust Building, are architects.

Sterling Plumbing Supply Co., Inc., Louisville, has been organized to engage in wholesale jobbing of plumbers' and steam fitters' supplies. It will not do any manufacturing.

Pacific Coast

SAN FRANCISCO, Feb. 23.

AN appropriation of $22,500,000 is being arranged by Pacific Gas & Electric Co., 445 Sutter Street, San Francisco, for expansion and improvements, to include construction of two hydroelectric generating plants on Mokolumne River in Jackson and Amador Counties, with steel tower transmission line to a point near San Francisco; and new 50,000-h.p. capacity steam-operated electric power plant at Oakland.

Club Aluminum Co., 1250 Fullerton Avenue, Chicago, manufacturer of aluminum cooking utensils, is reported planning purchase of site in vicinity of San Francisco for a Pacific Coast branch plant. Branch offices are at 981 Mission Street, San Francisco.

Brunswick-Balke-Collender Co., 845 South Los Angeles Street, Los Angeles, manufacturer of talking machines, billiard tables, etc., will erect one-story plant, 177 x 320 ft., in Union Pacific industrial tract, to cost about $100,000 with equipment. An 80-hp. boiler plant will be installed. Bids will soon be asked on general contract. John P. Krempel and Walter E. Erkes, Bank of Italy Building, are architects. Headquarters are at 623 South Wabash Avenue, Chicago.

Union High School District, Redwood City, Cal., has authorized plans for an addition to local high school, including a vocational training department. Bond issue of $250,000 has been approved.

A. M. Gilstrap, 3002 Logan Street, Oakland, Cal., and associates are planning construction of a fruit canning plant at Yuba City, Cal., including cold storage and refrigerating plant. Entire project is reported to cost in excess of $350,000 with machinery.

Arizona Wax Paper Co., Benson, Ariz., Charles Goetz, head, is considering erection of two-story mill, 45 x 100 ft., at Salinas, Cal., to cost close to $50,000 with equipment.

Federated Metals Corporation, 163 East Water Street, Portland, has awarded general contract to Reiners & Jolivette, Railway Exchange Building, for a one-story plant, 50 x 100 ft., to cost $55,000 with equipment.

Columbia Valley Lumber Co., foot of Cornwall Avenue, Bellingham, Wash., is considering erection of new mill with electrically-operated machinery, to cost about $90,000.

American Laundry Machinery Co., Norwood Station, Cincinnati, has acquired property on Elliott Avenue, Seattle, and contemplates erection of a factory branch and distributing plant.

E. C. Anthony, 2111 Webster Street, Oakland, Cal., has completed plans for a three-story and basement automobile service, repair and garage building, to cost about $150,000 with equipment.

Sacramento Pulp & Paper Co., 3245 Tenth Street, Sacramento, Cal., has plans for a new pulp and paper mill near Sacramento, using grape vine cuttings as raw pulp material, to cost upward of $400,000 with machinery. C. A. Kieren, Portland, is engineer.

San Joaquin Light & Power Corporation, Fresno, Cal., is arranging an expansion and improvement program to cost about $9,100,000, of which more than $1,500,000 will be used for construction of steel tower transmission lines. Other work will include generating plant additions, substations, etc.

Pure Iron Culvert Mfg. Co., Portland, Ore., branch of American Rolling Mill Co., will build factory at Gladstone Avenue, to cost $50,000. It is scheduled for completion within 60 days.

Federated Metals Corporation, 163 East Water Street, Portland, Ore., branch of Great Western Smelting & Refining Co., will erect new building at Fifteenth and Irving Streets, costing about $50,000.

Portland Wire & Iron Works, Portland, Ore., has moved from Second and Columbia Streets, to new building at 944 East Seventeenth Street.

John A. Lambie, formerly of West Coast Pipe & Steel Co., Los Angeles, has organized Superior Culvert & Flume Co. and has purchased property on Union Street, Oakland, for erection of a factory.

Bellco Machine Co., Portland, Ore., has been formed to succeed former Bell Ice Machine & Mfg. Co., East Thirty-fifth and Alder Streets. A general machine shop will be operated and expansion is planned. Baby Bliss concrete brick machines will also be manufactured.

Foreign

A COMPANY at San Salvador, Salvador, has secured a concession from Ministry of Finance for construction and operation of a local plant for production of industrial alcohol and will soon begin work. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference San Salvador No. 265099; also at American Consulate, San Salvador, LeRoy F. Beers, vice-consul.

Russian Timber Trust, Petrograd, Russia, is planning an expansion and improvement program in 1928 to cost $5,150,000, including completion of new saw and lumber mills at Mezensk, Dubrovsk, Volininsk, and Ustludjsk, and veneer mills at Vitebsk and Povoldsjk, with erection of similar plants at other location. A considerable portion of fund will be used for machinery. Information at American-Russian Chamber of Commerce, 143 West Fifty-seventh Street, New York.

Imperial Chemicals, Ltd., associated with Synthetic Ammonia & Nitrates, Ltd., London, England, will carry out an expansion and betterment program at its plant on Tees River, to cost close to $5,000,000. Contract for extension to pulverized fuel division has been let to International Combustion, Ltd., London.

Government of Palestine, Jerusalem, has arranged fund of close to $6,000,000 for public works construction and improvement. Of this amount, about $4,800,000 will be used for harbor and dock construction at Haifa, approximately $500,000 for port improvements at Jaffa, both projects to include installation of material-handling and conveying machinery, loading equipment, etc.; about $175,000 for expansion and improvements in railroad mechanical and maintenance shops, with additional tools and equipment; and close to $750,000 for construction and equipment of Government offices, etc. American Consulate, Jerusalem, Oscar S. Heizer, consul, has information regarding projects.

Pirelli, Ltd., Rome, Italy, manufacturer of automobile tires and other rubber goods, is contemplating construction of a new plant at Eastleigh, Hampshire, England, to cost in excess of $250,000 with machinery. It is proposed to have unit ready for service early next fall.

Canada

TORONTO, Feb. 27.

MACHINE tool sales show steady improvement. The automotive industry is responsible for the greater part of the current demand, some good-sized lists from this source having been closed and others are being figured on. There is also an active demand for equipment from northern Ontario mining fields, and some large orders have been placed for shipment to the Flin Flon district of northern Ontario. It is expected that for the next six months at least demand for mining machinery and power development equipment will be strong.

Although no lists are out from the railroads, there is a steady flow of orders for one to a half-dozen tools. Leading iron and steel mills are planning extensions which will involve the purchase of several million dollars worth of equipment this year.

Gordon Collins, Hamilton, Ont., has concluded arrangements to take over a building at Bronte, Ont., to operate under name of Bronte Chaplet & Mfg. Company, Ltd. Products will include tin chaplets, stamping goods, etc.

Knight Mfg. & Lumber Co., Ltd., Meaford, Ont., is asking for prices on woodworking and lumber machinery.

W. G. Lee, Markdale, Ont., is asking for a lath machine and other woodworking equipment.

Alexander J. Grant, engineer in charge of Welland Ship Canal, states that a 600-ft. drydock will be built at Port Weller, Ont. Tenders for construction will be awarded immediately and it is expected that work will start early in spring.

Dominion Envelope & Carton Co., Toronto, has taken out permit for erection of a paper mill and engine room to cost $195,000.

Quebec Power Co., Quebec, has plans for a new power house on Queen Street, which will be fed by branch transmission line from terminal at Limoilou, and installation of 3500 ft. of new line at a cost of $400,000. Company also proposes to build a new power plant in Lower Town, St. Malo and Limoilou. Construction of Quebec plant will start in March.

Town Council, Leamington, Ont., plans installation of two centrifugal waterworks pumps with 115-ft. head each, to be driven by independent motors.

Beatty Brothers, Fergus, Ont., manufacturers of electric washing machines, hydrants, machinery, etc., have let contract to G. H. Thomas & Sons, 45 Dickson Street, Galt, Ont., for a one-story plant in four sections, 192 x 192 ft., 96 x 96 ft., 96 x 72 ft., and 48 x 76 ft. Construction will start in about two weeks.

T. C. Ephgrave, 310 London Street, Peterborough, Ont., has contract for erection of a three-story $15,000 addition, 30 x 34 ft., to plant of Peterborough Lock Mfg. Co., Ltd., 198 Simcoe Street, and rebuilding of portion recently destroyed by fire.

Western Canada

It is reported from Winnipeg, Man., that Callinan Flin Flon Mines, Ltd., will spend $1,000,000 this year on erection of buildings and installation of machinery. William Forbes will be in charge.

Canadian Pacific Railway, head office Montreal, plans construction of locomotive and freight car shops at Winnipeg. It will also remodel power plant at Brandon, Man.

British Columbia Electric Railway Co., Vancouver, B. C., contemplates erection of addition to power plant on Jordan River near Victoria, B. C.

NEW TRADE PUBLICATIONS

Dry Quenching of Coke.—Dry Quenching Equipment Corporation, 200 Madison Avenue, New York. Catalog DQ-2 of 30 pages describes in detail, with many illustrations, the quenching of coke by the dry process in accordance with the Sulzer system. This is the method which was described in some detail in THE IRON AGE of Feb. 10, 1927, at page 425. Most of the plants in operation are in Europe. The one mentioned above and somewhat featured in the catalog is at Rochester, N. Y. Recovery of the heat in the coke and a number of collateral advantages are pointed out as following the use of this system.

Small-Sized Temperature Recorder. — Bristol Co., Waterbury, Conn. Four-page folder describing Model 144 recording thermometer, with 4-in. chart giving record for three days. It is entirely self-contained in a neat clock-like case and is suitable for greenhouses, residences, refrigerators and cold rooms.

X-Rays: A New Tool in the Foundry

Examination Before Machining Reveals Hidden Defects and Reduces Foundry Costs—Two Cases Cited

ONE of the greatest problems of the foundryman is the reduction of costs by the elimination of faulty castings. A great deal of progress has undoubtedly been made along this line in the past, especially in the case of the larger foundries which have found it feasible to conduct extensive research.

The employment of trained scientists and metallurgists, however, is not always practicable for the smaller organizations and, even by the best metallurgical practice, it has not been possible generally to prove the existence of a great many defects in castings until the specimen has been actually worked up.

Quite early in the history of X-rays, their use was indicated as a possible help in examining objects other than the human body but, until recent years, such work was not applicable to metallurgy on a very large scale, because of the fact that the production of X-ray equipment was not along lines most adaptable for such study. In recent years, though, because of the production of equipment capable of delivering X-rays of considerable penetration at a reasonable cost, there has been a more detailed study of their possibilities in industrial work.

During the war this method was utilized to some extent in the examination of munitions and equipment.

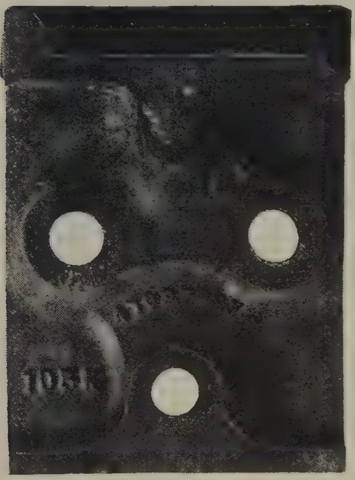

Fig. 1 (Above)—A Steel Casting Picked at Random for X-Ray Examination

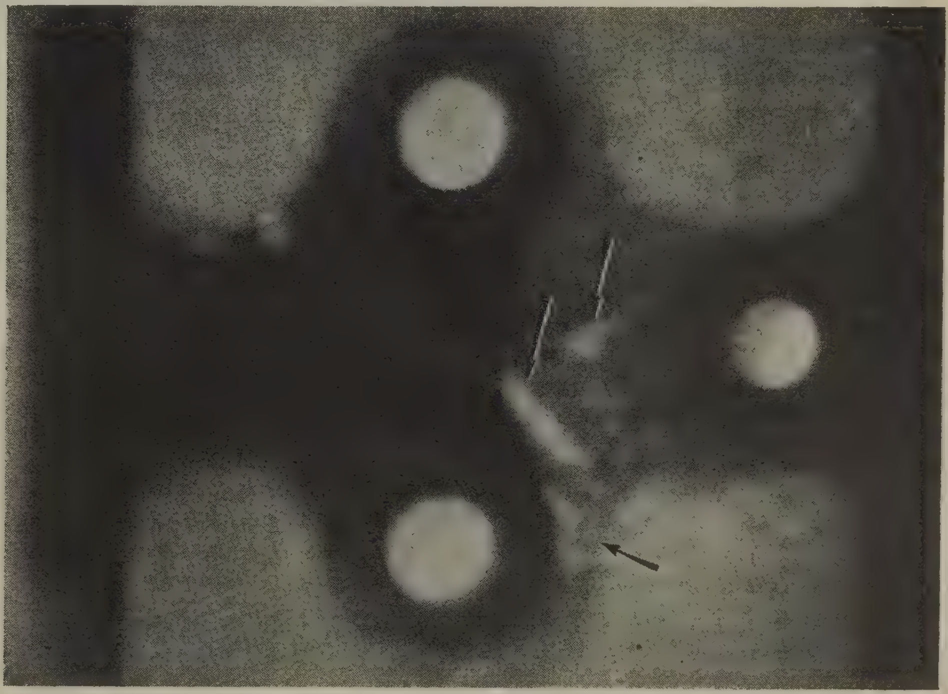

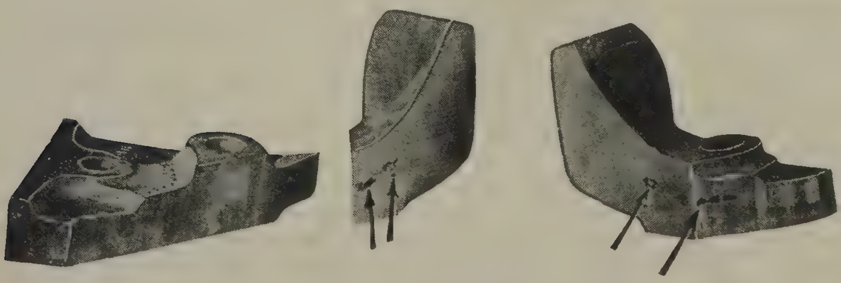

Fig. 2 (Above)—Reproduction of X-Ray Picture of Casting. Fig. 3 (left)—Defects located and revealed by X-rays

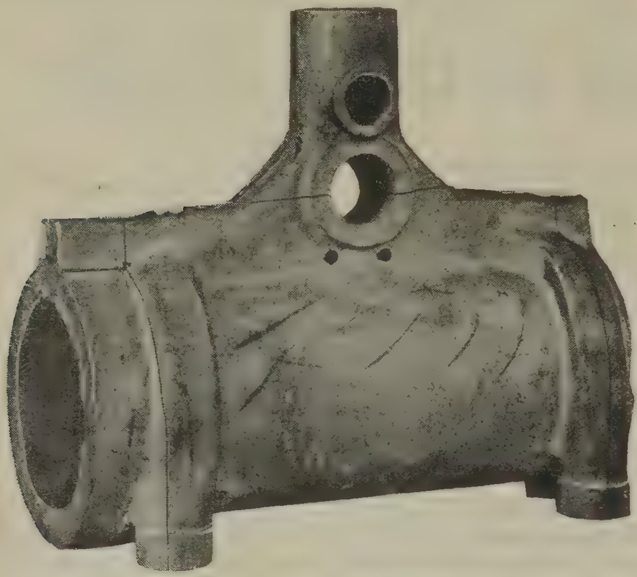
Since the war this work has progressed in several places and has resulted not only in the raying of relatively thick castings, but has demonstrated that there is a wide use for X-rays produced by relatively low-power equipment.

It will probably be possible, with quite simple equipment, to save a great deal of expense in the average foundry through the detection of faulty castings before they are delivered and worked up.

In the medical world the interpretation of X-ray shadows in the human anatomy has reached an exact stage and it seems likely that, in the course of a few years, an analogous situation will exist in the case of X-rays in industry, with the added advantage that in this work the subject can be cut up and examined at will to confirm diagnosis.



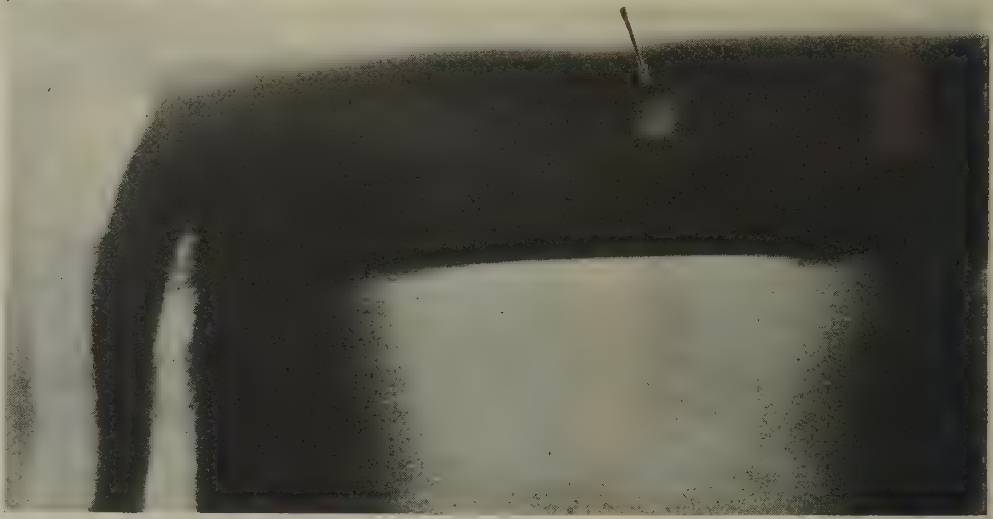


Fig. 4 (Above)—An Aluminum Casting and a Portion, Fig. 5 (Right) of the X-Ray Picture Showing Location of a Defect

Defects Which Are Uncovered

With gray iron or steel castings it is now possible to X-ray through a thickness of 3½ in., and, when it is considered that there are a vast number of castings in which the over-all thickness of actual material does not reach this figure, the wide application is appreciated. Such flaws as blow-holes, cracks, bubbles and foreign material are relatively easy to detect in one or two exposures on a modern X-ray film.

In the case of aluminum alloy castings, of which more and more are being used, X-ray equipment of low cost can be utilized to great advantage. To date there have been several laboratories equipped to do this work on a consulting basis, notably the United States Government arsenal at Watertown, Mass.

Some Actual Results

A few illustrations will show concretely just how this method works out.

Fig. 1 represents a casting picked at random from a run made under usual conditions.

The X-ray "picture" is shown in Fig. 2. It will be noticed that there is a light area running diagonally across the shadow. This indicates the presence of a flaw.

Fig. 3 indicates the same casting shown in Fig. 1, after it has been sawed in order to reveal the flaw indicated by the X-rays.

In Fig. 4 is shown a complicated aluminum casting which must be subjected to high pressure in actual use. Any flaws in such a casting would possibly endanger life and cause a serious loss of product. It is, therefore, necessary that these be produced as nearly flawless as possible.

This casting, when X-rayed, showed flaws such as are reproduced in Fig. 5. On sawing the casting, as indicated by the X-ray findings, these flaws were found and changes in casting technique recommended.

Examining the First Run of Castings

From these few examples it will be appreciated that here is available a new tool in industry. Its utility lies not entirely in its routine use for testing, but in its application for studying representative samples of first runs of a given type of casting. It is to be regretted that there is of necessity some loss in detail in reproducing the original negatives.

Through studying the findings and improving technique, it should be possible to have resulting castings practically free from flaws.

When it is considered that in many cases, particularly with fairly elaborate castings, a great deal of machine work may be put on them before the defect shows, it will be seen that, if such work can be saved, the primary cost of the examination will be negligible.

A foundry giving such service will be preeminently ahead of its competitors, and the user of the casting will be correspondingly better satisfied. The tests of the castings were made by the X-ray department of The Eastman Kodak Co., Rochester, N. Y.

The Standard Alloy Co., Cleveland, recently organized, has established a plant at 1679 Collamer Road and will make nickel-chrome alloy for use in heat-treating furnaces, carburizing boxes and other castings requiring the heat-resisting metal. The officers are F. R. Williams, president; F. F. Jackson, vice-president; Emerson Williams, treasurer; H. M. Smith, vice-president in charge of sales, and J. H. Williams, secretary.

Members of the Worcester section American Society of Mechanical Engineers will inspect the plant of Graton & Knight Mfg. Co., Worcester, Mass., on Thursday afternoon, March 8. A technical program will follow the plant visit.

Recovery of Non-Ferrous Scrap

Methods of Cleaning and Smelting Waste Metals, Skimmings and Slags from Copper, Brass, Bronze and Aluminum Foundries Discussed by Metallurgists

A NUMBER of papers on secondary metals constituted one of the features of the Institute of Metals' program, when it met Feb. 22 with the Mining Engineers. To illustrate the little-appreciated importance of this industry, J. P. Dunlop, statistician United States Bureau of Mines, Washington, presented data on "Non-Ferrous Secondary Metals Recovered in the United States."

Collection and Segregation of Material

FRAGMENTARY statistics were first collected in 1907 when a partial return on copper, lead, zinc and tin showed a recovery of 77,658 tons of metal valued at $17,196,436. The scope of the inquiry was broadened, and in 1917 (a year of high prices) nearly 300 million dollars worth of metal was recovered, more than the combined value of gold and silver production! Evidently figures on scrap recoveries are no less essential in appraising the metal market than are data on primary metal consumption. Details are included in the table.

The proportion of secondary metals to the metals produced from domestic ores varies considerably from year to year:

	1915 Per Cent	1921 Per Cent	1926 Per Cent
Copper	28	86	55
Lead	15	25	41
Zinc	19	39	23
Aluminum	27	33	60

High returns in copper after the World War were due to large imports of scrap from Europe. Lead has been increasing recently because of more general use of lead storage batteries. The figures for zinc do not include the dross, ashes and skimmings converted annually into zinc oxide and chloride, and containing 25,000 to 30,000 tons of metal.

Most of the tin recovered as metal is from drosses; solder, babbitt and bronze accounts for the tin as alloys. About 1142 net tons of metallic tin and 2047 tons of tin in chemical compounds were recovered in 1926 in the detinning plants of the country, treating scrap tin plate and clippings. Some 30,000 tons of ingot tin are used in making tin plate. Nearly all of it is wasted, as it costs more to collect old tin cans than the impure steel scrap and tin recovered are worth.

Sampling and Evaluating Copper-Bearing Metal

It is obvious that one of the most difficult problems connected with the marketing of valuable wastes is to determine the average metal content in a mixed lot. T. A. Wright, of Lucius Pitkin, Inc., New York, discussed this matter. He said that even when copper castings are carefully selected, they will be found to assay from 88 to 99 per cent copper. Metallic scrap, bundled or in large pieces, can only be sampled by hand picking a representative portion, satisfactory to both buyer and seller. Fine materials like borings, powders and ashes may be better sampled during unloading, either with automatic quartering cones or by reserving every tenth shovelful. Mr. Wright also gave approved methods of drying the sample and burning off oil and grease. During this operation, lead and low melting portions accumulate and can be rejected. Iron is usually removed by a magnet. Before cutting down a sample of fine material, it is frequently ground in a muller, after which the fines may be rejected. Copper-bearing materials thus prepared are then usually melted in a gas-fired crucible furnace, and the resulting slab drilled for chemical analysis.

Tin, Terne and Zinc Skimmings

Sampling methods on the above vary almost as much as assaying methods, depending upon the kind of material. Tin and terne drosses are often in the form of thick, wet sludge. After the sample is dried, it is ground and the relative amount of fines and metallic scales remaining on a 40-mesh screen determined. Proportionate amounts are mixed with flux and melted; settlements are made on the amount of metal resulting from this fusion. From 4 to 15 per cent tin may be lost in the slag, which is ignored, but it is claimed that this is approximately the loss to the smelter.

Zinc drosses are usually sold on "sample," which is often a grab sample. Settlement is made on the total zinc as determined by chemical analysis; sometimes penalties are exacted for chlorine contained.

Salvage in a Manufacturing Plant

H. F. Seifert, assistant superintendent Westinghouse Electric & Mfg. Co., East Pittsburgh, emphasized in a brief paper entitled "Classification and Preparation of Non-Ferrous Scrap Metals and Alloys," that these operations are not difficult, in fact, a very simple task when in the hands of the right man. He listed 96 different kinds of alloy scrap produced in his plant. Each machine is supplied with tote pans for the scrap produced, which is duly tagged, collected promptly, weighed, appraised and placed in suitable bin storage. The various manufacturing departments have an interest in the matter because they receive sizable credits for the material recovered. A large salvage department will find it profitable to operate a washery to remove oil and grease from metals, magnetic devices to separate tramp iron, an alligator shear to trim off soldered ends, etc., and a baling machine. Using such tools the grade of the scrap can be raised more than enough to pay for the operations.

Contamination of Metal Scrap

If sellers of scrap are to receive the most for their material, extra care must be taken to avoid contamination, in the opinion of Carl O. Thieme, chief chemist Michigan Smelting & Refining Co., Detroit. He noted five principal sources of contamination:

1. New and unusual alloys (such as hardened aluminum, lead and copper) will introduce unlooked for elements into the recovered metal.
2. Productive methods causing mixed metals. Soldered copper radiators or cable ends, bronze welded copper and electroplated articles are instances.
3. Carelessness in handling scrap from various machines and departments will cause trouble, and is inexcusable.
4. Ignorance on the part of laborers is subject to correction.
5. Unsuitable methods of refining will fail to remove undesirable elements.

Consequently, contamination can only be controlled by care at the point of origin of the scrap, skill in assembling it for smelting and proper knowledge and equipment in furnace practice. While it is well known that aluminum must be absent in metal for pressure valves, and sulphur must be very low in nickel-silver castings for the plumbing trade, the speaker voiced the opinion that users of secondary metals were uselessly penalizing themselves by demanding very low percentages of certain elements in ingots, when several times as much would cause no harm for ordinary uses. As an instance, most specifications require lead to be below 0.35 per cent in tin-base babbitt, but makers of high-grade automobiles are now accepting lead up to 1.5 per cent, which analysis can be had for a considerably lower figure.

Production of Ingot Brass and Bronze

COMPOSITION brass ingot manufacturers apparently are able to meet standard specifications easily. Walter F. Graham, Ohio Brass Co., Mansfield, Ohio, gave the following averages for his receipts during 1926, a total of 63 carloads:

	Alloy A		Alloy B	
	Specification *Per Cent*	Average Delivery *Per Cent*	Specification *Per Cent*	Average Delivery *Per Cent*
Copper	79 to 81	79	83 to 85	84.5
Tin	2.5 to 4	3.4	2.5 to 4	3.7
Lead	6.5 to 7.5	7.4	2.5 to 3.5	3.6
Zinc	9.5 to 10.5	9.9	9.5 to 10.5	8.0
Iron	0.25 max.	0.14	0.25 max.	0.08
Antimony	0.25 max	0.12	0.25 max.	0.10

In order to reduce the amount of non-metallics in secondary ingots, and to reduce the number of leaky castings made therefrom, it is necessary for the smelters to standardize their practices. At present furnaces ranging from 1 to 50 tons in capacity are in use. Some Bessemerize the impurities; others attempt to flux them. Wide variations in quality of output are consequently inevitable.

Don C. Blackmar, superintendent Great Western Smelting & Refining Branch of Federated Metals Corporation, Detroit, defended the secondary smelter, saying that he was paying more for the scrap and selling higher grade ingot than ever before, and consequently could not run anything but an efficient and economical business. Copper ingots are made following practice in the Lake Superior copper smelters. Brass and bronze ingots are made in reverberatory furnaces up to 30-ton capacity. Charges are properly fluxed; other impurities are removed by stirring with green poles or metallic deoxidizers. Metal is held in the furnace until a laboratory analysis shows correct analysis. Mr. Blackmar said that most foundrymen are able to make better castings from ingots prepared in this way than from alloy melts made by them from virgin metals.

Should a Bronze Foundry Attempt to Smelt Furnace Skimmings?

Methods used by most bronze foundries to recover metal from slag produced in open-flame furnaces were discussed by E. R. Darby, chairman of the meeting (metallurgist Bostwick Lyon Bronze Co., Chicago). It is usual to find them crushing the skimmings, when a large percentage of the entrapped metal can be recovered by water concentration on a table or jig. However, tin, the most expensive raw material bought, experiences the highest loss because it oxidizes easiest, and goes into the slag, where it is wasted in the tailings, diluted in the foundry sands or lost in sweepings.

He recommended that every bronze founder investigate this problem carefully. It can be done by accumulating dross, skimmings, slag and other wastes for one week. Weigh and sample the accumulation carefully and figure the pounds of valuable metal contained. Then concentrate this amount in the usual way, weighing, sampling and analyzing the various products so a metallurgical balance sheet can show how much of the metal is actually recovered.

In one plant melting 50,000 to 80,000 lb. of bronze a day where such a scheme was tried, it was found that the wastes amounted to 16,500 lb. in a week, three times as much as was supposed. From this pile 682 lb. of metal was recovered by concentration, analyzing 6.2 per cent tin. The tailings, however, contained 400 lb. of copper, 105 lb. tin and 40 lb. lead. A small blast furnace was installed at this place. In one year it smelted 140,000 lb. of slag and recovered 41,300 lb. of metal. If the slag had merely been concentrated, the recovery would only have amounted to 21,300 lb., thus showing that the new method practically doubled the savings.

Before such a small smelting plant is installed in a foundry, a very careful investigation of the costs of operation should be made, in the opinion of E. E. Thum, associate editor THE IRON AGE, New York. Intermittent and small-scale operations are seldom economical, and require a skilled personnel and accumulated experience not often contained in the foundry staff. Consequently, it will nearly always prove better to collect the drosses and sell them to smelting companies than to treat them in special furnaces on the spot. If the returns from the sale do not warrant the cost of collection, it will usually be best to throw them away altogether. This is especially true where there is more than one smelter within shipping range, so quotations can be compared.

Remelting Secondary Aluminum

A LENGTHY paper on this subject was presented by T. D. Stay, D. B. Hobbs and H. O. Burrows, Aluminum Co. of America, Cleveland. In it they defined secondary metal as that which has lost its original identity as to source. Most of it reaches the consumer in the form of "remelt ingot" or "remelt No. 12 ingot," and its principal difference from primary ingot is the less accurate control of composition, and the probability that it contains some dross and oxide.

Classification of Aluminum Scrap

The authors define the sources of the scrap as follows:

Clip and Sheet; from utensil makers and automobile body works.

Foil; sheet 0.0002 to 0.0005 in. thick, clean or coated.

Cable; "clean" if uncorroded; "dirty" otherwise.

Castings; pure or alloyed. Little of this comes from foundries, because they remelt their own scrap. Classified as (1) "clean," castings never in use; (2) "dirty," reclaimed from machinery; and (3) "dirty scrap, cleaned."

Borings, turnings and sawings; machine shops convert 10 to 12 per cent of rough weight of castings into fine particles. Its value depends upon its cleanliness.

Skimmings; from melting pots, varies widely in metal content.

Grindings and buffings.

Sludge; residue from refining operations, usually worthless.

SECONDARY METALS RECOVERED (NET TONS)

	1917	1921	1924	1926
Copper (including that in alloys other than brass)..	159,400	113,350	196,500	281,700
Scrap brass remelted..........	320,000	148,500	274,000	283,000
Lead as metal..........	45,100	46,370	90,400	125,000
Lead in alloys..........	48,400	57,410	114,100	152,300
Zinc as metal..........	31,400	33,833	58,886	64,570
Zinc in alloys other than brass..........	4,800	5.840	10,500	13,430
Tin as metal..........	6,000	5,400	7,700	9,750
Tin in alloys and chemical compounds..........	13,400	11,500	23,600	23,650
Antimony as metal..........	6	29	90	2,910
Antimony in alloys..........	4,955	4,691	9,314	13,320
Aluminum as metal..........	6,660	3,650	10,350	20,500
Aluminum in alloys..........	9,440	5,250	16,650	23,700
Nickel as metal..........	60	86	114	485
Nickel in non-ferrous alloys and salts..........	800	859	2,126	2,565
Total quantity	650,421	436,768	814,330	1,016,880
Total value	$295,854,900	$89,140,500	$200,578,600	$274,540,900

Dross; aluminum oxide and metal from a fluxing operation.

Prices that dealers are willing to pay for such scrap in comparatively small quantities vary with market conditions. In general, No. 12 remelt ingot will sell at about 4c. per lb. below 99 per cent virgin ingot. Clip will bring 7½c. below virgin ingot, clean scrap castings 10c. below, and borings 15c. below virgin ingot.

Remelting Secondary Aluminum

In order to get a good recovery of metal it is necessary to remember that all aluminum is coated with a layer of oxide, heavier on old material than on new, and in order that the melted metal may coalesce, this oxide skin must be removed or broken through, and prevented from reforming. Solid metal added to the melt should therefore be pushed down through the scum, so it will not be trapped and prevented from coalescing. This is especially necessary when handling borings; this finely divided metal can be partially separated from the honeycomb-like oxide by stirring or puddling, but this is more properly the function of the flux.

Fluxes are of three varieties: (a) those like common salt which are merely a covering to exclude air; (b) those like alkali double fluorides which actually dissolve the oxide; and (c) those like zinc chloride which evaporate readily and are useful mostly for mechanical effects.

Cleanliness is the principal requirement for secondary aluminum. Briquetting not only reduces the cost of handling borings some 40 per cent, but also improves the recovery by 6 per cent. If they have been cut with a water soluble, alkaline base compound, they should be washed and dried within a few days in order to prevent disintegration of the metal. When melting, start with a pot one-third full of remelted ingot. Add the borings slowly, and stir in with an iron bar (either by hand or by a mechanical puddler), continuing until the pot is nearly full. Then add a generous portion of mixed zinc chloride and cryolite, stir and settle. Skim and pig out two-thirds of the metal and repeat the operations.

Recovery of Metal from Skimmings

Skimmings should be ground, screened and freed from iron. Then add it slowly to a pot one-third full of molten ingot metal, stirring it in until the whole mass is pasty. The pot will then be about half full. Then add a little flux and fill the pot with skimmings without stirring. After some time has passed and the whole mass is thoroughly heated, resume stirring with a hook-shaped flat bar, driving the hook to the bottom, turning the hot skim over the cooler top crust and breaking up all lumps. The charge now consists of a puddle of molten metal with oxide and dirt on top, and looks like red-hot sand containing beads of metal. Now sprinkle on a mixture of 85 per cent cryolite and 15 per cent zinc chloride, and stir it in. This causes the dross to glow, apparently becoming white hot and having a tendency to ball up. Keep stirring, breaking up these balls until the whole mass cools to a bright orange color, when the scum becomes powdery and can easily be removed with a perforated skimmer, rapping each skimmerful on the edge of the pot to shake out droplets of metal. If an inclined, corrugated plate can be placed on a vibrating mechanism and the dross spread along its top edge, a little more metal can usually be shaken out.

Disk Rolling With Special Reference to Steel Differential Cases

A NEW method of steel working is found in the production of parts such as the new type steel differential case used by a leading manufacturer of automobiles. The machine for radially rolling this section was designed and built by the Aetna-Standard Engineering Co., Youngstown, Ohio. As designer of tube-making equipment, the company found a relationship between rolling radially and the diagonal rolling common to all piercing machines.

Machines rolling radially consist of two separately motor-driven disks, the axes of which are placed angularly. One roll is fixed and carries the work piece. The roll opposite is pushed on to the work by a motor-driven screw arrangement, and is withdrawn by compression springs.

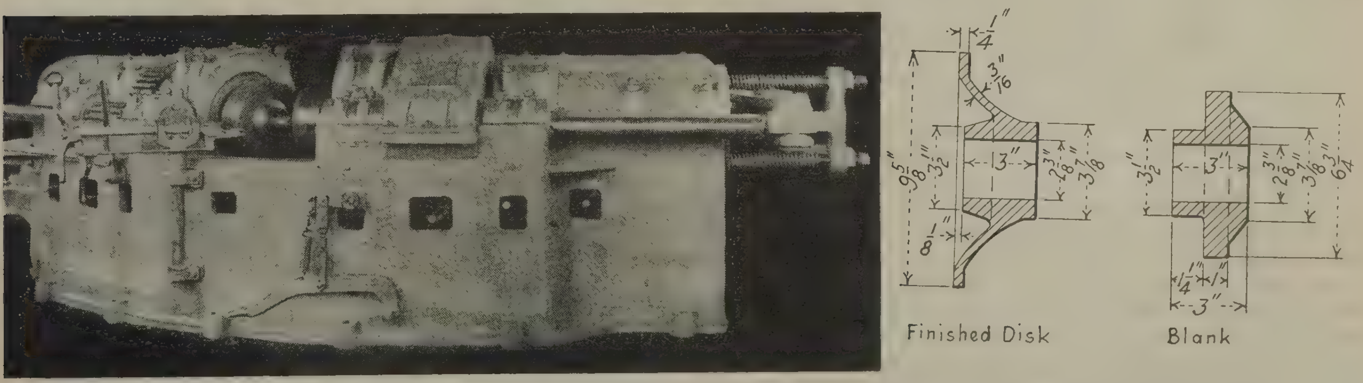
Blanks used are forgings made on an upsetting machine. Each blank has the hubs formed to suit the finished disk and the hole pierced for the proper diameter bore. The rolling machine has a production of about 10 disks a minute. The blanks are heated before rolling.

The blank is put on a hinged holder and is then placed on the centering pin of the fixed disk. A foot treadle on the front of the machine operates the screw clutch at the back and controls the forward movement of the disk. As the disk comes forward, rolling contact is made with the blank on the full radial length of the skirt. By compression the thickness is reduced and the diameter enlarged until the proper dimension is secured.

The centering pin on the fixed disk serves as a knock-out. Upon withdrawal of the movable roll, the finished disk is ejected and the restriking and trimming operations follow in a press without reheating.

Rolls are designed to give the proper speed relation to prevent distortion on the work piece as it is radially displaced. Each disk is driven by a motor of 150 hp., direct connected to the pinion shaft. Disk and pinion shaft bearings are mounted in roller bearings, excepting the thrust bearing on the disk shaft, which is of the conventional collar type.

Provision for lubricating has been made so that forced or gravity circulation is possible, which gives the best operating condition where anti-friction bearings are used. All parts subjected to stress are steel and where under severe strain are made from alloy steel heat-treated. The bed is a semi-steel casting made in one piece, so that maximum rigidity is built into the machine as a unit.



Disk Rolling Machine Equipped With Motor-Driven Disks, Placed at an Angle With Regard to Each Other and Driven Separately. At right is an example of the work done, showing how the arbor diameter and depth are maintained, while the rim is spun out to a much greater diameter and thinner section

New Competition More Constructive

Trend Is Away from That Which Has Brought Low Profits, Says Magnus W. Alexander at Cincinnati Conference on Industry's Problems—More Efficient Distribution May Relieve Economic Pressure

ECONOMIC problems affecting American industry were discussed exhaustively at a round-table conference at the Hotel Gibson, Cincinnati, March 1 and 2, in connection with the annual meeting of the Cincinnati branch of the National Metal Trades Association. The conference was conducted by the National Industrial Conference Board, Inc., under the leadership of Magnus W. Alexander, president of the board.

At an afternoon session on Thursday, March 1, the movement and relationship of wages and prices were studied, while public expenditures and taxation also were topics. In the evening the Cincinnati branch held its annual dinner meeting at which the agricultural problem and ways and means of remedying the present condition of so-called "profitless prosperity" were considered. The conference was concluded on Friday morning, March 2, with a discussion of industrial relations activities.

"Profitless Prosperity" Due to Sharp Competition

Sharp competition, not lack of business, is at the bottom of what has been called "profitless prosperity," declared Magnus W. Alexander, chairman of the board, in an address on "The Paradox of Profitless Prosperity." Competition is making itself felt to such a degree that in recent years about two in every five manufacturing corporations have either made no profits or have incurred a deficit. During the six-year period, 1920-1925, for every $100 earned by successful concerns, $32 was lost by unsuccessful companies.

The course of business failures and of new incorporations in the United States is worthy of note in this connection, explained Mr. Alexander. It is to be expected that the time during which the number of business failures is increasing will be the time during which business will be more difficult to conduct and in which there will be less incentive to launch new business enterprises. Since the end of 1925 the competitive struggle has been increasing and at present the insolvency record is near the high level reached following the depression of 1921.

Pointing to a double paradox in the present business situation, Mr. Alexander said that there is today great national prosperity with great business activity, but a competitive struggle which has resulted in precarious profit margins. Moreover, the very method which has contributed so much to our national income, namely, efficient mass production, is the factor which is accentuating the competitive struggle.

Trend Now Toward Constructive Competition

One of the encouraging signs, according to Mr. Alexander, is the trend toward constructive rather than destructive competition. It would be both unethical and unwise today to do things which a generation ago would have been considered justifiable as measures of self-defense in business. These objectionable practices have been eliminated as much through voluntary cooperation of industry as through legal compulsion, and in this respect trade associations have exerted a powerful and wholesome influence.

While it so happens that intensified mechanization and the better utilization and coordination of labor with other factors in production have been the principal needs, and indeed only a beginning has been made in that direction, further progress along that line may not prove sufficient to meet the new problems. Instead, it may be that the development of more efficient methods in the process of distribution will do much to relieve that economic pressure which increased competition is exerting. Mr. Alexander emphasized the fact that "much of what has been gained by achieving low unit cost of production is lost by the high cost of distribution."

The present plight of the farmer was outlined by Charles Nagel, St. Louis, Secretary of Commerce and Labor in the cabinet of President Taft. Mr. Nagel said that it was impossible for one legislative act to cure all of the agricultural ills and that it would take the combined cooperation of the Federal, State and local governments to aid in farmer relief.

Wages Have Reached Equilibrium

Wages in the United States probably have reached a point of equilibrium and cannot be expected to rise much higher without tending to increase the volume of unemployment, stated Virgil Jordan, chief economist of the National Industrial Conference Board, in discussing at the Thursday afternoon session "Wages and Prices—Their Movement and Relationship." The only factor that would disturb the wage situation would be an upward trend in commodity prices. Mr. Jordan pointed out that the high wage level in the United States is primarily due to three factors: the restriction of immigration, which has tended to eliminate a large labor reserve; higher standards of living among wage earners, which has tended to restrict the rapid increase of population; and the enormous volume of savings, combined with an abundance of technical knowledge and business talent, which has created an intense competition among investors and enterprises, as well as producers of raw material, from all of which the wage earners in certain manufacturing industries have benefited.

The level of wages, declared Mr. Jordan, depends upon the relative abundance of labor, on the one hand, and of capital, technical skill, business ability and raw materials, on the other. Immigration restriction and new standards of living have brought about a relative scarcity of labor in comparison with capital, technical knowledge, business ability and raw materials. The result has been that the average hourly earnings of industrial wage earners are about 133 per cent higher than before the war; the average yield of high-grade industrial securities is today at, or somewhat below, the pre-war level; men of technical training have difficulty in selling their knowledge at much above pre-war salary levels, and the competition among the vast majority of small business concerns is ruinously intense, while the producers of raw material, from the farmers to the coal operators, are either losing money or making little more for their investment and labor than before the war.

This process has gone so far that the expansion of mechanical equipment and the use of labor saving devices have gradually displaced labor in many of the important industries. Though a portion of this labor may have found work in some of the newer subsidiary occupations, it is likely that the labor reserve has slowly tended to grow since the end of the war, despite the enormous expansion in production and trade. Certainly employment in manufacturing industries has not only failed to keep pace with the growth of production, but has actually declined.

Problem of Future Is to Expand Consumer Purchasing Power

Mr. Jordan expressed the opinion that the main problem of future prosperity in the United States is that of expanding the domestic consumer purchasing power concurrently with the growth of production capacity. Employers have appreciated this problem, but have felt that high wages would solve it. High wages, according to Mr. Jordan, are not in themselves a guarantee of permanent prosperity, because it is not wage levels themselves that determine consumer purchasing power, but rather the relation of wages to prices and to employment. Wages may remain stable or even decline, while the purchasing power of the wage earning public is increased by falling prices or expanding employment. Prices can be reduced and employment increased only if there is sufficient incentive for saving and business enterprise, in the form of good returns on investments and of fair business profits.

"In the period since 1925," said Mr. Jordan, "falling prices of manufactured products, combined with rising prices of raw materials and high wages, have tended to put a damper upon business enterprise, to penalize the investor and to make prosperity exceedingly uneven and not widely diffused. Labor has become a fixed charge upon American industry, while profits and interest, as well as return to the producer of raw materials, have become a contingent charge—that is, they have had to take what they could get, which in some industries has been very little.

"The expansion of business in the future will depend upon whether we can find some way of increasing consumer purchasing power in greater proportion than we increase wages or volume of production. The use of banking credit for installment selling has done this in recent years, but the effect cannot be maintained without increasing the dose. The automobile industry has been a most important factor in expanding the purchasing power of consumers and it may continue to be so for some time to come. But, above all, this country needs some new incentive to business enterprise, such as the automobile industry originally afforded and such as will lead to the creation of new industries as large and as important as the automobile industry. Anything that will increase the agricultural purchasing power will make for business expansion in certain lines, although it may tend to cut business profits in others using agricultural raw materials, if wage levels remain high. Apart from such factors, the most important influence for business expansion would be the use of our enormous credit resources for the building of public works and the increasing of highway and transportation facilities, all of which add to the general consumer purchasing power, but do not augment, either directly or immediately, the volume of consumer goods in the market."

Tax Burden Due Frequently to Waste and Extravagance

American taxpayers today are bearing the heaviest peace-time burden of taxes this country has ever known, despite the considerable reductions effected by the Federal Government, stated W. J. Shultz, financial economist of the board, in an address on "Public Expenditures and Taxation." Expansion of the functions of State and local governments, waste and extravagance and lack of centralized control and organization on the part of local governments were cited as the chief causes of the increasing tax burden.

Mr. Shultz brought out the fact that a large portion of current expenditures is being financed by borrowing, most of which has been done by cities and urban communities. Of the total amount of money borrowed by State and local governments from 1923 to 1926 inclusive, the States were responsible for 15 per cent, the counties for 16 per cent, the school districts 13 per cent and the municipalities 56 per cent. The purposes of these borrowings in the order named were municipal improvements, roads, streets, bridges, schools and other miscellaneous purposes. The result of the excessive use of the borrowing power possessed by local and State governments will be a higher tax rate in the future.

"The crying need of State and local governments at present is a good healthy injection of the methods of practical business procedure that have brought American industry to its high grade of precision and workmanship," said Mr. Shultz. "The remedy for this situation is twofold. In the first place, reorganization of State and local governments with a view to greater efficiency of operation is essential. In the second place, there is a need for a centralized supervision and even control of finances of the local governments, which are the worst offenders. State and local taxes absorbed about one-fifth of the net income of Ohio corporations during the period from 1922 to 1924."

Industrial Relations Activities Getting Away from Paternalism

The tendency in the evolution of industrial relations is away from welfare work and paternalism and toward self help and intelligent cooperation, declared J. A. Morford, chief of the field research staff of the board, in discussing "Industrial Relations Activities and Experience in American Industry." Mr. Morford said that plans for industrial relations are designed to take the place of the personal contact and the intimate relationship between employer and employee which modern industrial organization has made impracticable. The rapid expansion of many industrial establishments during the war brought with it a hasty increase in industrial relations activities, many of which later did not stand the test of normal conditions. The fact that many plans had to be abandoned, however, is no criterion of the desirability or the efficacy of industrial relations programs in general. Among the activities which have proved successful in operation in recent years are supplemental bonuses, employee stock purchasing and other thrift plans, group insurance, industrial pensions, with a tendency toward contributory plans, foreman training of foremen, councils of workmen, job analyses, scientific hiring and discharging of workmen, health and accident analyses, medical care and reduction in turnover.

Cincinnati Branch Reelects E. A. Muller President

E. A. Muller, president and general manager King Machine Tool Co., was reelected president of the Cincinnati branch of the Metal Trades Association at the annual business meeting late Thursday afternoon. Other officers selected for the coming year are: Charles Fox, Ahrens-Fox Fire Engine Co., vice-president; George Seyler, Lunkenheimer Co., secretary; H. L. Feldbush, Worthington Pump & Machinery Corporation, treasurer; George Schiele, Cincinnati Milling Machine Co., Richard LeBlond, R. K. LeBlond Machine Tool Co., and August Marx, G. A. Gray Co., members of the executive committee. J. M. Manley, manager of the Cincinnati branch, made a brief report of the association's activities. Homer D. Sayre, national commissioner, was a guest at the meeting.

At a foremen's gathering immediately following the business session, 18 men were presented with certificates showing that they had completed the prescribed course in conference leadership training. The presentation was made by E. L. Heusch, supervisor of trades and industries of the Ohio State Department of Education at Columbus.

Structure of "Crystallized" Locomotive Forgings

In a talk delivered before the Montreal mid-winter meeting of the American Society for Steel Treating, F. H. Williams, Canadian National Railways, showed a series of microsections taken from axles, side rods and other locomotive forgings which had failed in service. He said that failures could sometimes be attributed to sharp fillets or other erroneous machine work or to the unauthorized use of welding.

However, most of the fractures, by far, were associated with a coarse-grained microstructure, coarse ferrite mesh, or ferrite bandings along stringers of inclusions. A broken surface which showed partly detailed or creeping fracture, and the rest a granular break, was spoken of by shop men as a "crystallized piece with a flaw." This company is now securing forgings which must meet the requirements of small-sized grain when polished, etched and viewed at 50 diameters.

The annual meeting of the American Refractories Institute will be held at White Sulphur Springs, W. Va., May 8 and 9, instead of May 16 and 17, as originally announced.

Steel Practice Determines Quality

Howe Memorial Lecturer Emphasizes View That Those Elements Making Inferior Steel Are Not Reported in Conventional Chemical Analysis

IN presenting an account of how a given element or impurity may affect the properties of steel in various ways depending upon its origin, Henry D. Hibbard, the Howe Memorial Lecturer for 1928, made a strong plea that the furnace practice be considered as a vital factor when investigating the effects of alloying elements and gases in simple steels.

Limitations of Chemical Analysis

Speaking on the topic, "Significance of the Simple Steel Analysis," he pointed out that the usual chemistry does not tell the whole story because it is incomplete, because it tells nothing of how the elements enter the constitution of the metal, because it tells nothing of the scavenging elements which have been lost, and because it gives no information about the portion of the ingot from which the sample is obtained, nor of the casting temperature. In the lecturer's opinion these are a few of the vital considerations affecting quality; a good steel is different from a better steel, largely by reason of differences in furnace working and subsequent treatment; a bad steel is bad most often because of chemical or physical elements wholly undetermined in the conventional analysis. He emphasized the view that "iron is iron" no matter what its origin; but in view of the infinite variety of circumstances which may occur between the ore pile and the finished bar, no two pieces of steel are exactly alike, nor is it possible to make perfect steel.

Carbon, of course, is the most powerful alloy in iron; the mutual interactions increasing strength either by simple alloying or after heat treatment are unique in metallurgy. Taking the tensile strength of commercial iron as 45,000 lb. per sq. in., the effect of alloying 0.9 per cent carbon is to add 105,000 lb., making the ultimate strength 150,000 lb. per sq. in. Heat treatment will add another 150,000 lb., and cold drawing 200,000 lb. more, making the strongest carbon steel, heat treated and cold worked, capable of carrying the extraordinary load of 500,000 lb. per sq. in. before rupture.

Other elements have a definite influence on the amount and distribution of solid non-metallic impurities and the properties of steel. As shown in the accompanying table, each of them is worthy of close attention, and no two of them are identical. (The discussion is limited to simple steels whose maximum analysis is as follows: Carbon 1.5 per cent, manganese 1.0 per cent, silicon 0.6 per cent, sulphur 0.15 per cent, phosphorus, 0.12.

All Insolubles Are Harmful to Steel

When classified in another way, it is found that all ingredients which are insoluble in the solid metal iron (either gases or solid non-metallic inclusions) are a detriment to quality. Of the soluble elements, the above mentioned are useful; that minute part of the oxygen and nitrogen which remains in true solution in the iron is harmful; sulphur and phosphorus in solution are usually harmful; arsenic in solution is neutral; and the effect of hydrogen in solution is not known.

Manganese Important at End

Proceeding from these general summations, the lecturer passed to a more particular examination of the effect of each of the soluble elements, and how these effects depend upon the presence of others, the time of addition, and the furnace practice. The important effects of manganese occur before and during casting of the ingot. In molten steel it eliminates and intercepts iron oxides, and after the reaction goes as oxide to the slag, if the slag is of the proper nature. In the acid process, emulsified silicon oxide is present in the bath to flux the manganese oxide; in basic steel the silicon must be added with the manganese. Residual manganese (that is, remaining from the raw materials charged) is essential for the best steel. "Killed steel" may have almost any amount of manganese, but it cannot be too high when a good boil is necessary. Manganese has pronounced effects on the working of the steel after it reaches the ingot. A high manganese safely allows a higher heat before forging or rolling. On the other hand, big carbon steel forgings must have lower manganese for commercial heat treatments, especially as carbon is increased.

Influence of the Elements

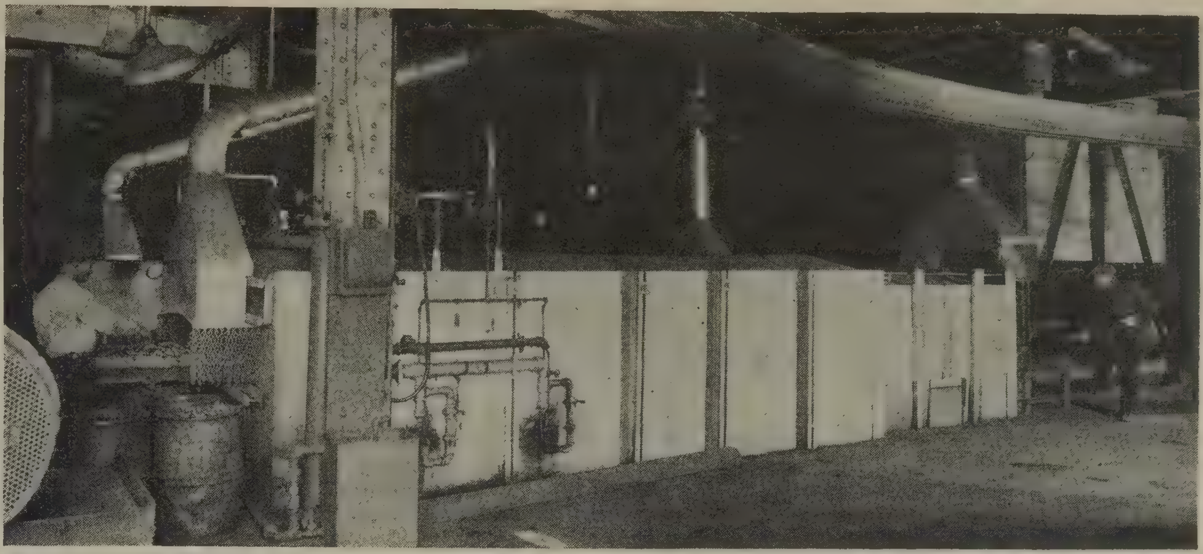
	Oxides	Silicates	Sulphides	Gases	Segregation	Mechanical Properties
Carbon	Neutral	Neutral	Neutral	Neutral	Neutral	Positive
Manganese ...	Positive	Positive	Positive	Neutral	Neutral	Moderate
Silicon	Positive	Positive	Neutral	Positive	Positive	Moderate
Aluminum	Positive	Neutral	Neutral	Positive	Positive	Neutral
Titanium	Positive	Positive	Neutral	Positive	Positive	Neutral
Vanadium	Positive	Positive	Neutral	Positive	Positive	Moderate

Silicon Is Medicine for Steel

Silicon is added to molten steel as a curative. It is residual in acid steels. As an element in solid solution in iron, its action is beneficial. As an oxide entrapped in the metal it is highly damaging, even if as low as 0.01 per cent in a low carbon steel; consequently much of the finishing stage is planned to remove its last traces. Residual silicon has considerable effect on the acid steel making process; for instance, when melting for high carbon steel so much pig is used that the bath contains 0.3 to 0.4 silicon and it lies dead in the furnace. In other melts, silicon must be added to the metal not only to deoxidize it, but also to "kill" it (which is not the same). For the latter, 0.2 to 0.6 per cent is necessary; sometimes it is added in the ladle, because the action is rapid.

In the basic process all silicon is eliminated during the early stages of the melt before the carbon drops, consequently any silicon in the metal as tapped must have been added near the end of the heat. Its functions when so added are several. It checks further elimination of carbon, when the bath has reached the proper analysis. Since this action is almost instantaneous, this is a great manufacturing convenience. Or it may be added to deoxidize unfinished steel. An addition of 0.15 per cent is necessary for this action, which only takes a few seconds. Another curative action, when added to the furnace, is to form an acid oxide to flux out the basic oxides of manganese and iron which may be in solution in the metal. This is a slower process—at best it requires several minutes for any considerable washing of the metal and hours would be required to clean out the resulting silicates completely. Lastly, silicon is added in the ladle to prevent the formation of gas holes in the solidified ingot.

Interactions between carbon, silicon and oxygen are complex and vary with the temperature. As noted by the lecturer, at 700 deg. C. silicon begins to rob carbon monoxide of its oxygen with the formation of silica and free carbon. At 1550 deg. C. silicon prevents the liberation of carbon monoxide from molten steel, thus killing the metal. At 1600 deg. C. carbon will reduce silicon from the slag and the acid hearth. At 1650 deg. it will prevent the oxidation of silicon in the Bessemer converter, and at 1900 deg. C. it reduces silicon from its oxides and from silicates in the blast furnace.



Some of the Smaller Gray Iron Castings, Made Both in Permanent and Sand Molds, Are Heat Treated to Soften the Metal, Increasing Its Machineability

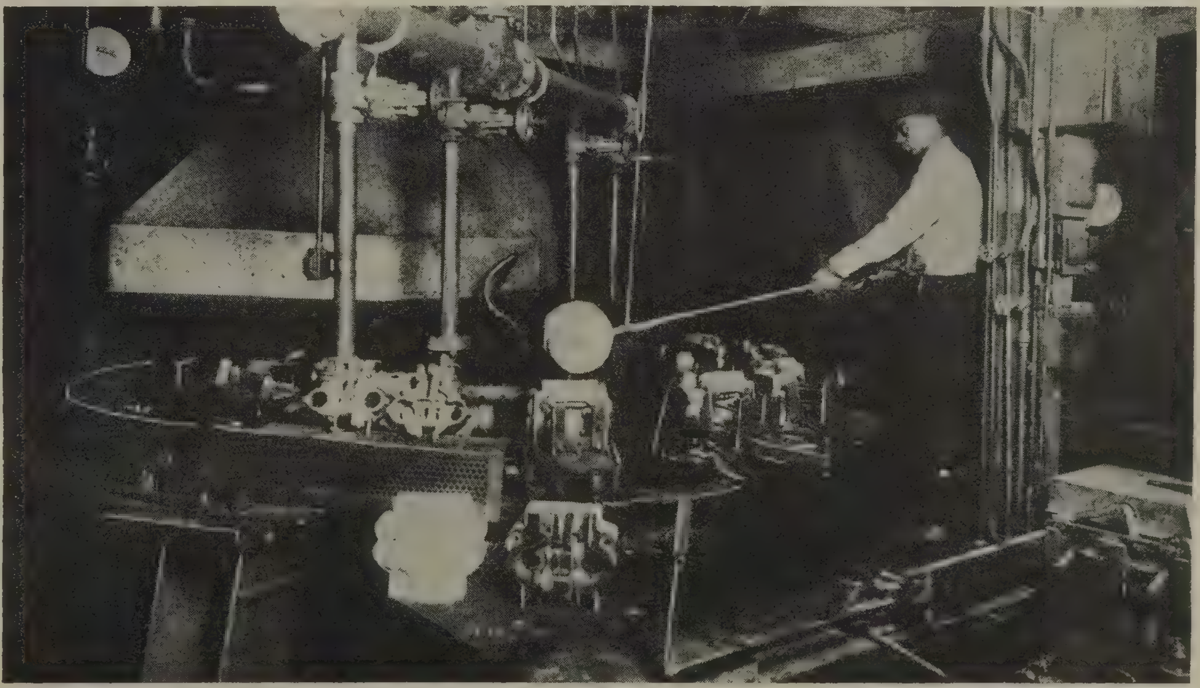
Gray Iron Castings Heat Treated

Smaller Parts, Some Sand Cast and Others Made in Permanent Molds, Passed Through Continuous Furnaces at Ford Plant

GRAY iron castings used by the Ford Motor Co., Fordson, Mich., for several of the smaller parts of its motor cars are heat treated in continuous furnaces before machining to eliminate hard spots, produce a fine grain structure, make the metal softer and easier to machine and consequently to speed up production in machine work on the castings. Some of the light castings, particularly carbureter castings, require small drill holes. After this annealing operation, drilling is done more rapidly and there is less breakage of drills.

The permanent mold process is used in making some of the small castings that are heat treated and others are made in sand molds. Castings made in permanent molds that are heat treated before machining include generator heads, timing gear housings and certain valves for automobiles, tractor pistons, timing gear blanks for tractors and various miscellaneous parts for plant equipment, such as conveyor wheels.

The permanent mold castings are poured on circular revolving platforms in iron molds. When shaken



Various Small Castings That Are Heat Treated Are Made in Permanent Iron Molds Which Are Poured on a Circular Revolving Platform from the molds and still red hot they are dumped on plate-type carriers 10 in. wide and 34 in. long and are moved through a furnace with a rocker arm-type of pusher. The furnace is 25 ft. long. The castings are usually kept in the furnace 80 min. The heating temperature is found to be more satisfactory at 1650 deg. Fahr., although castings have been heat treated at 1500 deg. by keeping them in the furnace a longer time and they are sometimes given a longer soaking time at around 1650 deg. to produce a softer metal. At times the furnace temperature is increased to 1700 to 1750 deg. to shorten the operation and increase the furnace output. In case cold castings are charged into the furnace the heating operation takes approximately 2 hr.

The usual Brinell hardness of the castings after heat treating is 187, but there is a hardness range of from 177 to 207 depending on the type of castings. Some that require particularly soft metal for machining have a hardness of 177, while pistons have a higher Brinell hardness.

Three duplicate furnaces are used for heat treating the permanent-mold castings. These have a capacity of 30 tons in an 8-hr. day, handling the output of eight permanent-mold molding machines. The furnaces are gas-fired with four burners on each side and are equipped with automatic heat regulators and recording charts.

From the discharge end of the furnace the castings are dumped into an adjoining elevator and taken to a cleaning room on the second floor. When they have reached that floor, they have cooled sufficiently to go into tumbling mills for removal of fins and scale. They are tumbled from 20 to 30 min., which, it is stated, is only one-fourth of the time required for tumbling similar castings made in sand molds.

Sand castings that are heat treated before machining include bushings and several of the small parts for carburetors. These castings, on leaving the furnace, go to tumbling mills and then to the machine shop. Two furnaces are provided for heat treating these castings, these being practically identical with those used for heat treating permanent-mold castings. The sand castings are left in the furnace from 2 to 3 hr. After heat treatment, they have a range in Brinell hardness of 143 to 207.

URGES BETTER COST-KEEPING

Effect of Incorrect Prorating of Overhead Pointed Out to Connecticut Manufacturers

UNDESIRABLE consequences following the use of two formerly accepted methods of prorating overhead expense were pointed out by J. M. Carney, industrial engineer, Hartford, Conn., in an address on "Ignorance of Costs Is a Menace to Industry," at a recent joint meeting of the Connecticut Manufacturers Association and the Hartford chapter of the National Association of Cost Accountants.

"Only about 25 years ago there were two generally accepted methods of prorating overhead expenses in cost accounting," said Mr. Carney. "The first of these was to add the cost of known or productive labor and material together, and then add 33 1/3 per cent or 50 per cent to cover all else or overhead. The other was to add to the known or producing labor 100 or 125 per cent, then add the material and call the total a cost upon which selling prices were based.

"Many concerns operating on these systems were successful and were greatly expanded. They succeeded in spite of the system rather than because of it, but those were the days when you could add 50 to 100 per cent for profit to the supposed cost and if you showed a net of 20 per cent real profit at the end of the year, all was well."

Mr. Carney pointed out that every manufacturing concern is really several concerns in one, that overhead expense is created by a definite operation or process and is a part of the cost of that process controlled by the time taken to produce, and that material, generally speaking, does not control overhead.

"By way of illustration, it was stated that in the manufacture of pins a mechanic and helper might operate a battery of 10 to 15 machines which might be used in manufacturing both steel and brass pins. Assuming that the known labor is 1c. per lb. and that steel wire costs 2c. per lb. and brass wire 17c. per lb., the labor and material or prime cost of steel pins would be 3c. per lb. and of the brass pins 18c. per lb. By the old method of adding 33 1/3 per cent to prime cost, the overhead added would equal 1c. per lb. on the steel pins and 6c. per lb. on the brass pins, whereas the actual overhead in pin making consisted of depreciation of machinery, repairs and replacements, power, heat, light, supervision, supplies, etc.

"As a matter of fact these elements of overhead are less when producing brass pins than when producing steel pins but by the 33 1/3 per cent method, six times as much is added to brass pins as to steel pins," he said.

He told of a metal novelty concern which, in addition to its standard cataloged lines, also did a large amount of jobbing in metal stamping and screw machine parts. Its old method of applying overhead was to add 125 per cent to the productive labor of all departments. A year came when the profits dropped to a large extent on an unusually large volume of sales. Analysis proved that while the profits on the standard lines exceeded $80,000, the net for the year was less than $20,000 due to losses in the jobbing departments. Naturally the stamping and screw machine departments cannot be operated on a 125 per cent basis.

"Everyone knows," said Mr. Carney, "that a man operating a battery of expensive automatic machines creates an overhead in depreciation, repairs, power, etc., that does not apply to a bench hand; yet when the same percentage is added to *all* labor, false costs are bound to result."

Former Methods Still Followed

Fearing that the illustration presented might be accepted as of old methods, not followed now, Mr. Carney told of visits to 44 manufacturers, only 12 of which had cost systems worthy of the name; and the lack of proper cost data prevailed in large as well as small concerns.

As an illustration of the need of better cost-keeping methods in Connecticut, as well as in many other industrial centers, Mr. Carney cited the following case: A Connecticut manufacturer required a large quantity of a brass part made on Brown & Sharpe screw machines. Bids per 100 pieces were received from six Connecticut parts makers as follows: *A*, $2.20; *B*, $2.47; *C*, $2.84; *D*, $3.60; *E*, $3.78; and *F*, $4.32.

The actual cost of material on the above was $1.94 per 100. *B* filled the order at $2.47 per 100, as *A* had made a clerical error using net material weight, making no allowance for scrap. A visit to all of the above resulted in the knowledge that only two had cost systems and the correct cost was $3.60 per 100, including all overhead.

A comparatively simple stamping wanted in large quantities was sent to 19 concerns in and out of the State. The quotations varied from $3.50 to $9.66 per 100. Bids on gray iron castings varied from 3.8c. to 7.6c. per lb.; malleable iron castings from 5.9c. to 12.8c. per lb.; and brass castings from 17.4c. to 32c. per lb. Quotations on an advertising booklet ranged from $5,270 to $12,230.

Continuous Enameling of Gas Stove Parts

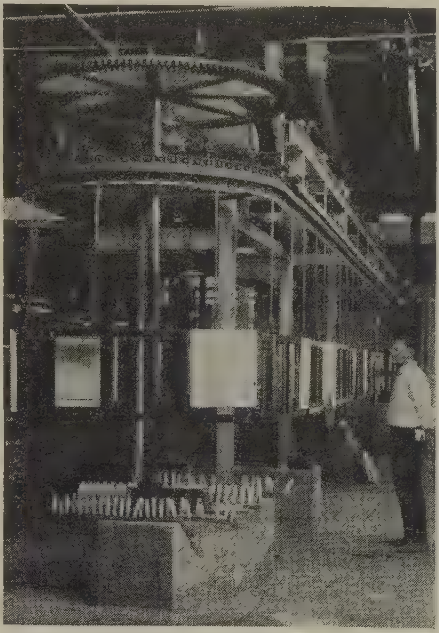
A CONTINUOUS furnace for fusing porcelain enamel on gas stove parts is a feature of the St. Louis plant of the Quickmeal Stove Co., a subsidiary of the American Stove Co. The new unit is a combination of a furnace and a traveling conveyor. Both the ground and finish coats are burned on to the steel and the drying operation is included, thereby doing away with the necessity for a separate drying oven.

Parts to be enameled are suspended from the conveyor, which is of the continuous chain type and is in the form of a closed loop. At both ends of the conveyor the chain engages large horizontal sprockets, one being driven by a motor and the other being an idler. Between the sprockets the chain is suspended from a steel framework. The conveyor is 119 ft. long.

On the driving end the conveyor extends 39½ ft. beyond the furnace; at the idler end it projects 19½ ft. beyond. The furnace itself, which is built of brick, is 60 ft. in length. Dipping tanks and spraying booths are arranged along the exposed portions of the conveyor, so that work, as soon as it is covered, is hung on hooks suspended from the chain. The work enters the furnace through small openings provided for that purpose. The furnace is divided into five zones along its longitudinal axis. The heating zone in the middle occupies 10 ft., while the preheating and drying zones are located at the ends and take up the remainder of the space, or 50 ft.

The drying and preheating zones are in a common chamber. The hot ware emerging from the heating chamber runs parallel with, but counterwise to, the cold work which has just entered the furnace. There is, therefore, a rapid transfer of heat from the hot work to the cold ware, reducing the fuel consumption necessary to bring work up to temperature in the heating zone.

A semi-muffle divides the heating zone into two longitudinal chambers, which are kept at separate temperatures for different classes of work. Each chamber is equipped with automatic pyrometer control. Ordinarily the temperature in one is set at the proper degree for the ground coat and in the other for burning on the finish coat. Heat is supplied by 16 gas burners located in the heating zone, half on either side. These are manifolded and supplied with inspirators which automatically proportion the gas-air mixture for efficient combustion and proper furnace atmosphere. With the use of the inspirators, which are of the venturi-tube type, an oxidizing, neutral or reducing atmosphere can be maintained in the furnace automatically.

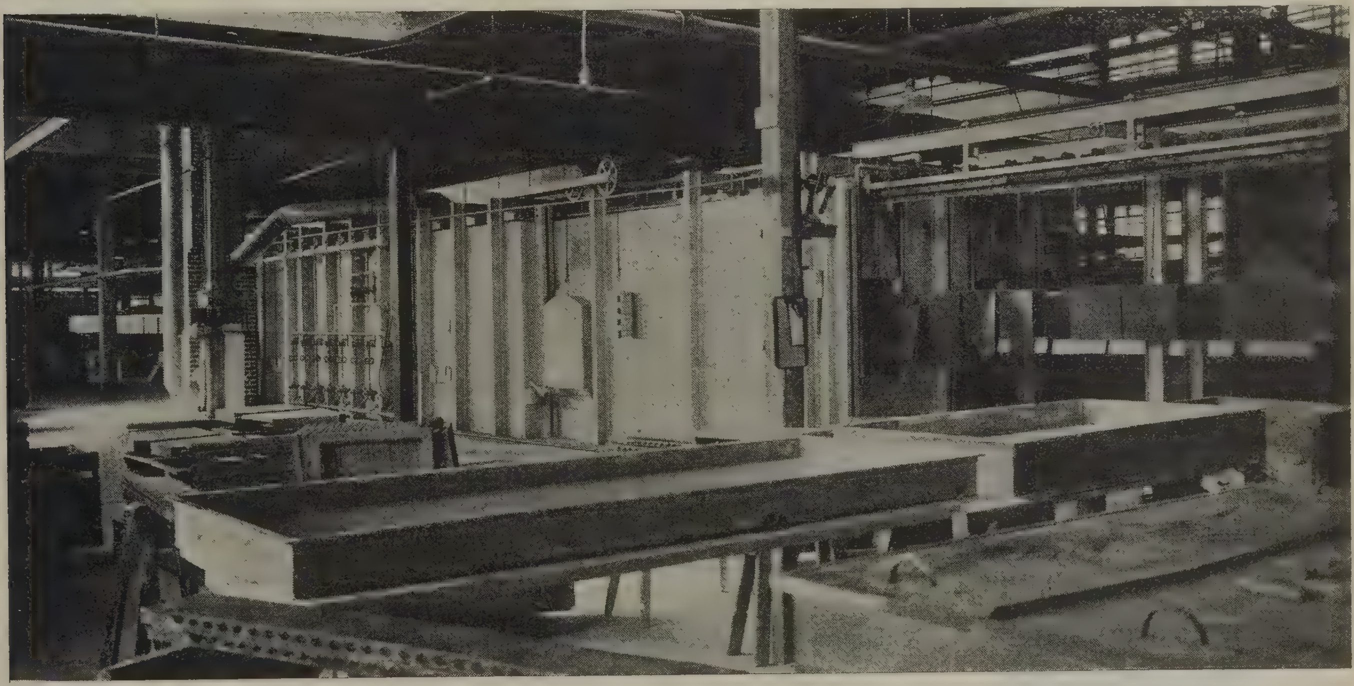


Driving End of the Chain Conveyor, Showing Large Horizontal Sprocket Operated by Motor

The ware is heated gradually as it travels the 35 ft. from the time it enters the furnace until it leaves the heating chamber. This takes 7 min., as the conveyor, driven through speed reduction gears, travels at a rate of only 5 ft. per minute. If time is allowed for the steel base to heat up close to the same temperature as the enamel, the latter will mature regardless of the gage of the ware.

One side of the conveyor is continuously loaded with ground coat, while the other side burns white or finish coats. The work with the fused ground coat is removed from the conveyor as it leaves the furnace, is dipped for the white coat and is then sent back through the other side of the furnace. One heating chamber is therefore kept at a temperature about 100 deg. Fahr. higher than the other, the ground coat requiring the more intense heat.

The furnace was installed by the Surface Combustion Co., Toledo, Ohio.



Continuous Enameling Furnace Equipped with Continuous Conveyor. Work is dipped in the tanks (shown in the foreground) for the ground coat and is hung on the conveyor and carried into the furnace where the enamel is burned on. Issuing from the other end of the furnace, the work is given a finish coat and is returned to the furnace for the final fusing operation

Metallic Flow During Rolling

Institute of Metals Lecturer Believes Formation of Twins Is as Essential to Flow in Many Metals During Working as Is Crystalline Slip

SLIP between fragments of the original crystals has been held to be the principal action during the plastic flow of metal upon rolling or forging. Much microscopic and experimental work has been published to support this conception, and the most lucid explanation of the hardening phenomena yet proposed is founded upon various factors which interfere with this process of slip, and therefore resist the plastic flow and harden the metal.

In the Institute of Metals Lecture, delivered in New York on Washington's Birthday, Prof. C. H. Mathewson of Yale University argued the proposition that the formation of twins in the original crystals is often the earliest effect of overstrain, and that subsequent severe deformation is a combination of the two processes, viz., development of crystalline twins, and of slip along crystal planes. Much of the argument is of a highly specialized nature, and to follow it requires a working knowledge of theoretical crystallography; however, the theory was developed primarily by reference to the action of large crystals of zinc, upon which the results of twinning are fairly clear, and which have been studied closely and described at length by the lecturer and his associates at Sheffield Scientific School.

Twinning Is an Action Requiring Small Atomic Displacements

Twinned crystals are most commonly illustrated by the microstructure of brass, wherein large crystals of solid solution are crossed by parallel bands of material which etches uniformly at a different tone from the adjacent metal. Studies of the crystal lattices usually show that relatively small movements of the constituent atoms in space are all that is necessary to produce a new crystalline system, which, for instance, may be merely the mirror reflection of the original—a "left-hand crystal," so to speak. Dr. Mathewson illustrated the action on a slab of zinc, split from a single crystal, and consisting essentially of a series of right prisms with hexagonal cross-sections, as shown at the left of Fig. 1. If this block is completely rearranged by twinning along one set of diagonal planes (known to crystallographers as the 1, 0, —1, 2 planes) the block will be found to have its thickness reduced 6.75 per cent, with corresponding increases in breadth and length, but the elementary hexagonal prisms are now on their side, as shown at the right of the figure. That such an action requires comparatively small atomic movements is indicated in Fig. 2, where the paths of the two rows of atoms to the right of the (1, 0, —1, 2) diagonal plane are indicated.

In his laboratory, Professor Mathewson has studied single zinc crystals after various degrees of reduction by rolling. The above indicated action actually occurs on slight compression. After a 7 per cent reduction of thickness by rolling, it is possible to identify the type of twinning of much of the metal. This is done by measuring the angles between the traces of twinning planes at their intersections with the surfaces of the block, by examination of the surface with polarized light (when all material of a given twinning system will flash out simultaneously) and by X-ray analysis. He finds that not only does the original metal form twins on a wholesale scale, but these twins again twin, thus forming "twins of the second and third generation." As the process continues it becomes impossible to distinguish the production of twin lamellæ from slip bands, because the intersections of a full complement of twins through only three generations would permit no angle greater than 5 deg. to separate adjacent traces of principal crystalline planes on the original cleavage surface.

Recrystallization Starts at Twin Boundaries

The lecturer then considered the meager evidence about similar actions in other metals. He favors the view that Neumann bands in iron are twins formed during work, and cited similarities between recrystallization phenomena in cold-worked iron and in zinc. A similar intimate connection between twinning and recrystallization is observed in pure beta brass. Diagrams like Fig. 2 show that the atomic spacing at the ends of twinning planes and at their intersections are different than in the body of the crystal; this is an indication that a state of high internal strain exists at such places, and they are probably the germinating centers for recrystallization. Fig. 3 also shows that an internal twin band, even if tapered in cross-section, will introduce strains varying from zero to very large amounts along the boundaries. Thus, intersecting sets of narrow bands of variable etching characteristics,

C. H. Mathewson

Institute of Metals Lecturer for 1914

PROFESSOR MATHEWSON received degrees from both Yale and Göttingen Universities, and has been engaged continually in research and educational activities. He has been a member of the faculty of Yale since 1907 and professor of metallurgy since 1919. He is recognized as an authority on theoretical metallurgy, and the metallography of zinc, copper and brass. His address is Hammond Laboratory, Sheffield Scientific School, Yale University, New Haven, Conn.

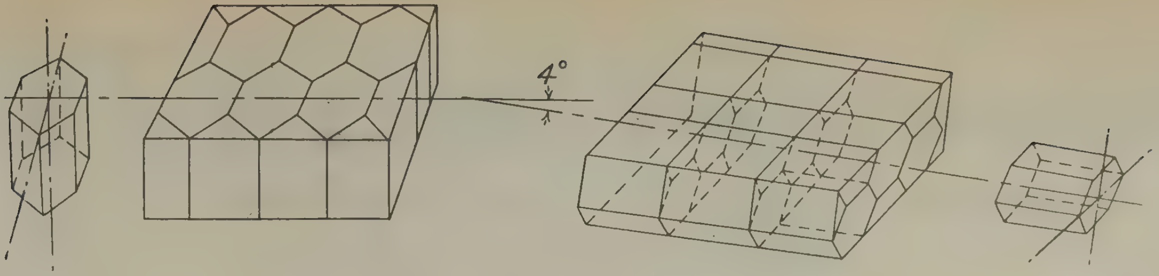


Fig. 1—By Complete Twinning a Slab Split from a Zinc Crystal Changes Its Entire Organization with Slight Change in Outer Shape

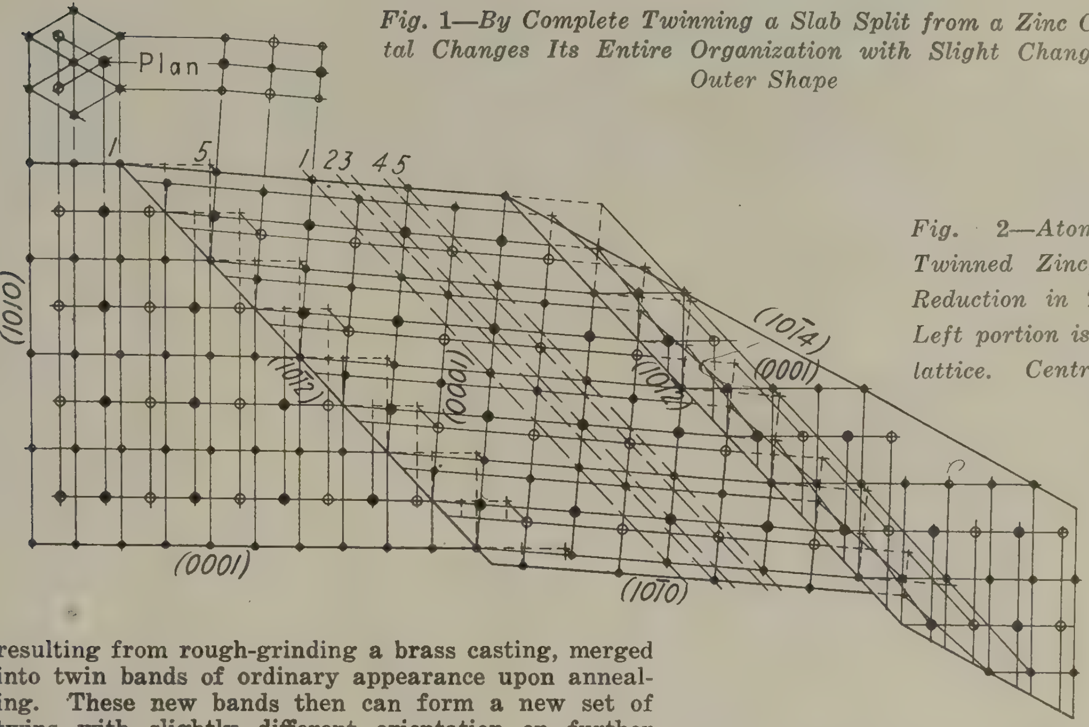

Fig. 2—Atomic Locations in Twinned Zinc, with Progressive Reduction in Thickness of Piece. Left portion is original crystalline lattice. Central portion is twin along (1, 0, −1, 2) *plane. Right portion is conjectured return to original orientation*

resulting from rough-grinding a brass casting, merged into twin bands of ordinary appearance upon annealing. These new bands then can form a new set of twins with slightly different orientation on further work. In such considerations Professor Mathewson explains the fact that a cast material rolled to gage and finished with one anneal would be less uniform and more directional in its properties than the same material annealed several times during the process, although both might look very similar under the microscope.

Combination of Twinning and Slip During Working of Metals

It is admitted that simple twinning unaccompanied by slip does not provide for any considerable change in the dimensions of the crystal. Twinning plus slip is necessary to account for the great plasticity observed during rolling. At present there is a difference of opinion as to what happens during severe cold work. One school holds that the movable surfaces of slip are forced into line with the direction of stress by rotation, or by fragmentation without any great change in orientation. The other opinion is that severe lattice distortion is produced by a combination of slip and bending. Mathewson and Phillips have pointed out that the observed conditions could be satisfied by twinning across slip planes. The mechanism in its early stages is illustrated in Fig. 4, where the specimen is a single crystal of zinc bounded top and bottom by basal surfaces. When the end is pinched between the rolls it may be twinned from top to bottom, as shown in 4a. Irregularities in the process will prevent the ideal development of twinning and slip shown at 4b; complicated invasion and interpenetration of twin bands will more likely occur as in 4c. Fig. 4d shows a reduction less than the amount produced by complete primary twinning; here the rolled material ideally consists of alternate lamellae of the original crystal and its twin.

Making Low-Grade Ores of Use

Present and Future of Beneficiation—Getting Rid of Water—Synchronous Operation of Train of Elements

BY EDWARD J. TOURNIER*

CONTINUOUS sintering of ferrous materials, as described at page 191 of THE IRON AGE for Jan. 19 and page 466 of the Feb. 16 issue, is carried to its logical conclusion in this article. Sintering in general, whether on the continuous or the intermittent principle, may be looked to as the medium for rendering available enormous tonnages of low-grade or wet materials now virtually unusable.

Crushed ore, which is minus ⅜-in. product, is delivered by an inclined belt conveyor to a shuttle belt located over a series of eight sintering plant bins. A standard-gage track is provided over two of the end bins for receiving flue-dust, sintering fuel, sinter fines and other material.

Each of the eight bins is fitted at the bottom with a revolving table feeder. (See Fig. 1, page 192, Jan. 19 issue.) Each table is equipped with a worm gear, driven by a worm fitted with a jaw clutch. The worms are all mounted on a common line shaft, but are capable of being placed in or out of service individually, by means of clutches. In this way the amount and kind of material drawn from the bins may be varied at will by the operator. Each feeder requires about 3 hp. for operation.

The feeders discharge to a 30-in. belt parallel to the longitudinal center line of the feeders. The material, as delivered from the several bins on to the belt, forms a continuous stratified layer which is maintained in a uniform proportionate mixture as discharged from the belt. Material which has been properly mixed on the collecting belt is delivered to the boot of a belt and bucket elevator, which in turn discharges to a short belt conveyor. The latter delivers to a pug-mill driven by a 20-hp. motor. The sintering mixture, after being properly moistened and uniformly mixed in the pub-mill, passes through a spout to the grates of the sintering machine.

To distribute the material uniformly on the grates, which is essential for correct sintering, the spout is arranged to swing across the top of the pallets. The chute is actuated by means of a wire rope passing over sheaves and receiving its power from a crank on the end of the sintering machine drive shaft. In this manner the motion of the swinging spout is a function of the machine speed. Any change in the latter is transferred to the spout and a corresponding alteration in the feed to the grates is effected.

Primary ignition is performed with illuminating gas, but provision is made for the use of blast furnace gas when the furnace is in blast. The piping is so arranged that illuminating gas may be turned on during short periods when the supply of blast furnace gas is interrupted. A standard ignition furnace of the American Ore Reclamation Co. design is used. This furnace performs equally well on any gas or oil fuel and produces a uniformly controllable ignition of the required intensity.

Combustion gases, after passing through the sintering charge, are drawn into the nine wind boxes of the sintering machine. They pass thence to a cast iron dust-settling chamber or collector located below the machine floor and parallel to the sintering machine. The gases are drawn from the settling chamber through a 60-in. diameter flue, by a 100-in. center-plate

Flow Sheet of Plant Sintering Iron-Bearing Ores. This is the E. & G. Brooke Iron Co., Birdsboro, Pa.

---

*Mechanical engineer, 110 Clinton Avenue, Clifton, N. J.

END of a Pallet, with Fully Sintered Charge. Note the homogeneous nature of the sinter and the absence of fines

fan especially designed for this work. (See page 469, Feb. 16 issue.) This fan, of the double-inlet type, has a capacity of 60,000 cu. ft. of free air a minute at a pressure of 20-in. water gage. The American Blower Co., Detroit, built this apparatus.

Owing to the heavy loads placed on the fan, its shaft bearings are of the double-sleeve water-cooled type, spherical and self-alining. The fan is direct-connected to a 350-hp. adjustable-speed induction motor. Exhaust gases are discharged to a brick stack 7½ ft, in diameter and 160 ft. high.

Synchronizing Drives and Controls

An essential requirement is the automatic control of the volume of material fed, in proportion to the requirements of the sintering machine. No less important is the control of the proportions of the sintering mixture. The controls must be synchronized and be capable of adjustment either individually or simultaneously.

The vital instruments for the accomplishment of these functions are generally Reeves variable-speed controllers, connected in series by a drive belt. The first controller, which for the purpose of description is termed *A*, is connected by a belt to a 30-hp. constant-speed motor. The variable-speed shaft of controller *A* drives the sintering machine countershaft and also drives the constant-speed shaft of second controller *B*. A drive is taken from *B* through its variable-speed shaft, to the sintering mixture feeders and the collecting belt system with its feeders.

It will be evident, from this disposition of the apparatus, that any change in the sintering machine by adjustment of controller *A* produces a corresponding change of speed of the feeders. In addition, if it is desired to change the volume of material delivered by the feeders to meet differences in sintering machine requirements, this is accomplished independently of the machine speed by adjustment of controller *B*. After such adjustment, the speed of the feeders will continue to be automatically controlled by any changes in the sintering machine speed, by adjustment on controller *A*. The proportion of the various materials fed, from any or all of the eight bins, is regulated manually by means of independent gates in each feeder.

The controls governing the functions described, as well as those for moistening, ignition, depth of charge, etc., are all arranged accessibly on the operating floor. Thus one attendant has instant direction of all operations and observations from a single point.

Performance and Capacity

The E. & G. Brooke plant at Birdsboro, Pa., has for its primary function the beneficiation of French Creek ore, which, in its raw state, as before stated, is practically valueless as a blast furnace material. At present high-carbon flue dust is being used as a source of sintering fuel, thereby reclaiming the iron values of the flue dust simultaneously with desulphurizing and beneficiating the ore. This material, owing to its comparative coarseness, requires no hearth layer, and, as it requires only about 3½ per cent of its weight of sintering fuel, it imposes no severe service on the grates. A typical analysis of the French Creek ore and the sintered product is as follows:

French Creek Ore	Raw, Per Cent	Sintered, Per Cent
Fe	52.70	54.80
SiO_2	11.50	12.90
Al_2O_3	2.10	2.50
CaO	1.70	2.30
S	2.60	0.10
P	0.04	0.05
Mn	0.15	0.21

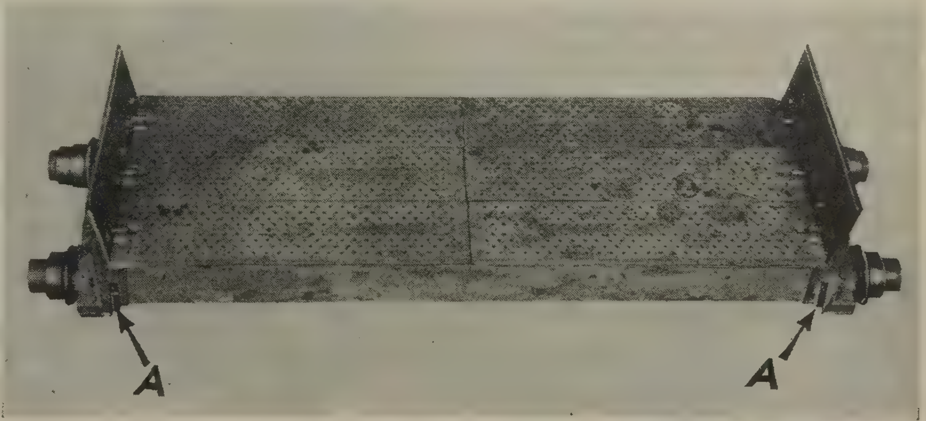
The plant and auxiliary equipment are laid out for two sintering machines, 42 in. x 57 ft. 4 in. Only one of these, however, has been installed. It has a capacity of 500 tons of sinter in 24 hr., and is operated by a 30-hp. motor. At the middle speed of the Reeves controller, the rate of pallet travel is 68 in. a min.

As the sintering plant necessitates 24 hr. a day operation, two labor shifts are employed, nine men being in the day shift and eight men at night. The capacity is equivalent to 29.4 tons of sinter for each man-day.

Future Trend of Sintering

High-grade and cheaply minable iron ores are rapidly diminishing. The decreasing average iron content of the ores being shipped each year indicates that the future ore supply from the Lake Superior district will require increasing expenditures in the production of ores.

Great tonnages of low-grade ores are available, but all require additional cost in some form of beneficiation to render them economical blast furnace material. The high-grade concentrated ores permit the use of limited quantities of low-grade ore by admixture therewith. However, the advantages of ores carrying mini-



TOP of Pallet and Grates, Showing Also the Air Seal Construction. The rectangular bars "A" rest on a track bar at either side of the sintering machine and prevent air leaks. The same air seals are noticeable at top of page mum slag-producing constituents is self-evident as related to economy of smelting, and high-grade concentrates will develop preference.

Millions of tons of iron ore in the Lake Superior regions are unmerchantable, due to their mosture contents. Elimination of water content would render this class of ores as good as, or better than, a large percentage of ore as shipped. A class of ore known generically as "paint rock" occurs in working mines, the shipping ore from which bears the burden of expense of its initial development. Mining paint rock could therefore be done without development cost.

The beneficiation of this class of ore, as well as other ores of highly hygroscopic nature, will require only sintering to render them not only equal to the average shipping ore, but of greatly superior physical state and perfectly dry, thus eliminating heavy wasted expense of freight on water content.

Flue-dust production varies with the class of ores used in the furnace. Based on an average of 5 per cent of ore burden, a 500-ton furnace would produce about 50 tons of dust, which in turn would make about 42 tons of sinter. This, however, would constitute only about 4½ per cent of the ore burden, thus necessitating drawing on the stock pile. Ultimately the stock pile will be used up, and the sintering plant will either have to go on part time, or other materials will have to be found, to utilize it.

Since most of the large flue-dust stock piles in the United States have disappeared, and the limited use of pyrites cinder renders this material a practically negligible quantity in the problem of selecting sintering materials, the natural direction of sintering is toward beneficiation of low-grade ores and of concentrates.

Our iron and steel industry has reached the point where rigid economy in pig iron production, and the preservation of the ore supply, are essential to its perpetuation. The use of sinter made from ores and concentrates otherwise useless in the blast furnace, however, points the way to the fullest utilization of potential sources of supplies for an indefinite time.

Steel Ties for American Railroads

A Form Shown Which Has Distinct Advantages—Answers to Many Objections

BY JOHN H. JONES[*]

ONE type of steel tie which I have seen manufactured always appealed to me as being the most suitable for use in this country. The design, roughly, is as shown in the diagram. The peculiarity of its form embodies some useful features, which may, in some degree, answer the points raised in previous articles,[†], which were as follows:

1. First and ultimate cost.
2. Problems of installation as compared with wooden ties.
3. Tendency to side creeping.
4. Difficulty of maintaining gage.
5. Failure due to corrosion.
6. Rolling or shifting position under sudden braking of fast rolling trains.
7. Tendency of the bolts to loosen under wave strain.
8. Satisfactory method of insulation for signal systems.

1. The cost of manufacturing these ties should be reasonable, as the section of the plate as rolled is of an easy rolling design, as shown in Fig. 1. The plant necessary for forming the tie and rail clips or holes, as desired, should be capable of making about 2000 tons of ties a week. Two 8-hr. shifts a day, a total of 11 shifts a week, would be used, with about 20 unskilled workmen per shift, or a total of 40 men. From this an approximate cost of manufacture can be derived which should not exceed, in my opinion, say $8 a ton after the rolling, which would include the cost of the necessary power for working the plant. Undoubtedly a reduction could be made on this by working three 8-hr. shifts a day.

The two forms of rail fastenings, (1) key and distant piece, and (2) bolt and clip, I am informed, can be manufactured at low cost. I have seen as many as 12 of these ties made in 1 min.

2. The difficulty of installation should be no greater than that of installing wooden ties, as the steel tie is no deeper and can be slid under the rail and packed up or bedded like the wooden tie.

3. The tendency to side creeping should be minimized by the down bend at each end of the steel tie (Fig. 3) which dig themselves into the ground.

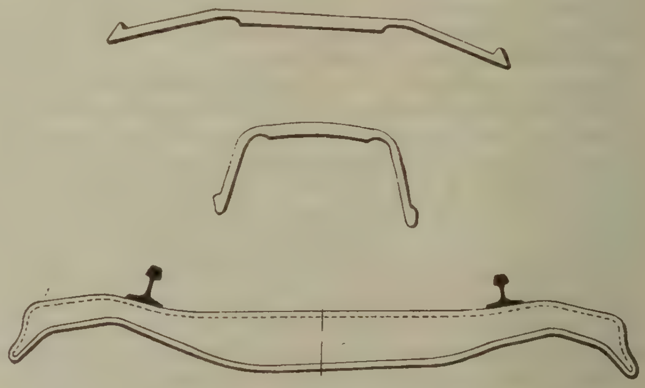
4. The difficulty of maintaining gage is not experienced where these ties are in general use, as both forms of rail fastenings have been in use for many years.

5. Failure due to corrosion is taken care of by dipping the tie, while still hot, into a bath of tar or creosote. The skin of protecting material thus formed remains on the tie for many years.

6. The hollow form of these ties and the manner in which they bed into the ground give them a great resistance to any shifting due to the action of moving trains.

7. The tendency for the bolts to loosen should be no greater than the tendency for the splice-bar bolts to loosen. However, should the bolts have a tendency to do so (which I doubt, seeing that strong split-spring washers are usually placed under the nuts), then the key and distant piece type of fastening could be used. This, I think, is the most favored fastening for steel ties.

8. A method of insulation for signal systems I know little about. It is possible that the hard tar coating might give some insulation effect, but this I cannot say.



Suggested Form of Steel Tie. Fig. 1 (top) is the section as rolled and before forming. Fig. 2 (center) is the formed section at mid-length. Fig. 3 (bottom) is a side view of the completed tie

In steel ties the rail seats must have the correct and necessary tilt or angle, and the fastenings should be designed so as to allow the necessary adjustments for gage widening on curves.

The favorable features referred to in Fig. 3 are (1) the ends bent down to resist side movement; (2) the middle part of the tie is well dished, giving it depth for strength; (3) the parts which come under the rail flange are left rather flat, to insure a wide bearing surface on the ground. Small steel ties could be used to advantage in mines, plantations and light railroads of all kinds, as the tie could be made of a light straight length of channel section. There are many useful and quickly applied rail fastenings for this type of tie.

---

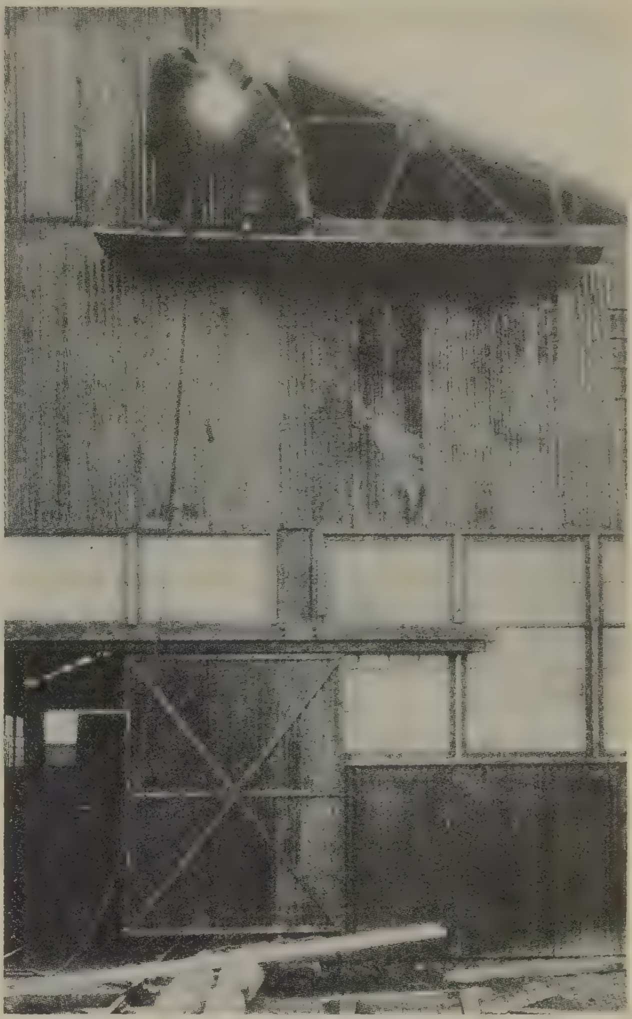
Steel Building With Corrugated Sheets Welded On

CORRUGATED copper-bearing steel sheets were used for siding and roof of the new plant of the Alliance Tank Co., Cleveland. The roof is of 22-gage sheets and the siding of the same material but of 24-gage. Electric welding was utilized in fastening the corrugated steel sheet to the structural members. All the interior fittings, such as brackets, bracing, line-shafts, hangers, etc., were electric welded.

The company specializes in gasoline, oil storage and pressure tanks, vats, oil pits for filling stations, paint kettles and varnish tanks, distributed under the trade name of "Thoro-weld" tanks. The work is done by means of the Lincoln Electric Co. welding process.



Corrugated Steel Sheets Fastened by Welding to Structural Members

Improves Portable Arc Welder

ELIMINATION of live connections from the front of the control board is a major new feature of the type S welding machines of the Wilson Welder & Metals Co., Inc., Hoboken, N. J. The main switch is inclosed and mounted on the back of the board and only a dial and pointer appear on the front. The reactor is underslung and is so placed that it is protected from injury.

A rotary switch is incorporated to give close regulation for both repair and production welding operations. It is stated that short or long arc; high open circuit voltage for long arc; and low open circuit voltage for short arc, are available as required. The close control provided is claimed to adapt the machine for overhead welding. Several sizes of the machine, equipped with motor generator set, gasoline engine or for belt drive, are available.

Oxy-Acetylene Cutting Machine Has Many Automatic Features

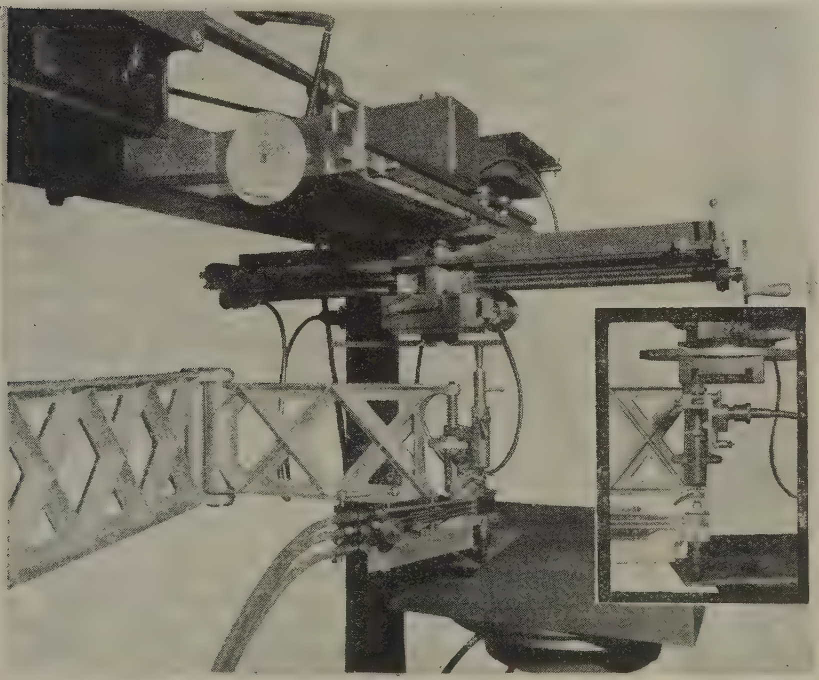
AN automatic machine for oxy-acetylene cutting containing many refinements is now being imported by the Hubar-Jones Corporation, 13 Astor Place, New York. Known as the "Godfrey Oxygen Jet Cutting Machine," it is said to have been in successful use in English and Continental railroad and shipbuilding shops for some years.

The traversing screw and cross-slide shown prominently in the view is set at any angle to the main frame, and is hung from a carriage driven as desired by a screw along the top girder of the guillotine frame. All movements are power driven at closely controlled speeds by means of flexible shafts, and are equipped with automatic stops and indexes so any shape bounded by straight lines can be cut and duplicated with certainty.

The weight of the cutting blowpipe and its attachments is carried by a pantograph arm hinged to the rear pillar of the main frame, not shown in the view. A short mast in line with the blowpipe axis connects with the driving mechanism above. In the illustration it is connected with a radius bar and a rotating mechanism attached to the cross-slide. By means of a flexible shaft, any circle up to 3 ft. in diameter can be cut. Larger circles up to 15 ft. can be cut by holding the torch stationary in proper position, and rotating the table carrying the plate. Ingenious automatic trips and stops enable the machine to cut more intricate shapes bounded by straight lines and circles, without special templates.

Templates are necessary for irregular curves such as gear teeth. These are affixed upside down to a plate which replaces the radius bar. The blowpipe is driven around the desired contour at a uniform speed by a wheel and pin engaging snugly in the template slot, as shown in the inset.

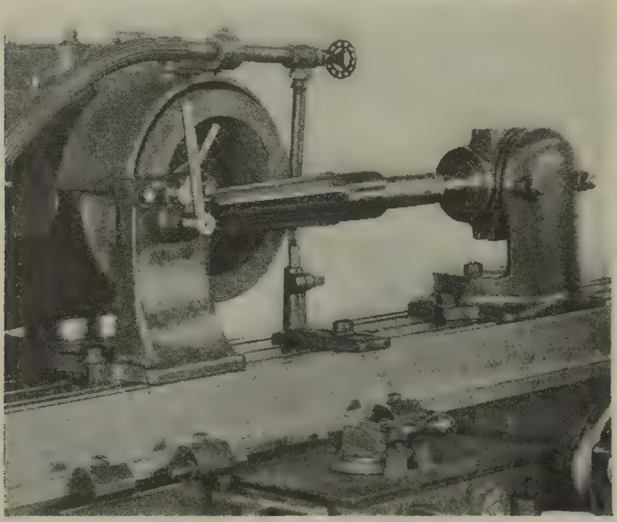
The blowpipe may be set at various angles for a beveled edge. It has graduated wheels on the gas valves for accurate resetting and a master lever which cuts off all gases simultaneously. Mixing of the preheating gases is done in spiral passages in the blowpipe head, and the preheating flame issues from an annular orifice entirely surrounding the cutting jet. An unusually thin kerf or slot is cut, and the cut surfaces are quite smooth, due to the uniform rate at which the cutting flame is driven and the stability of the machine generally.



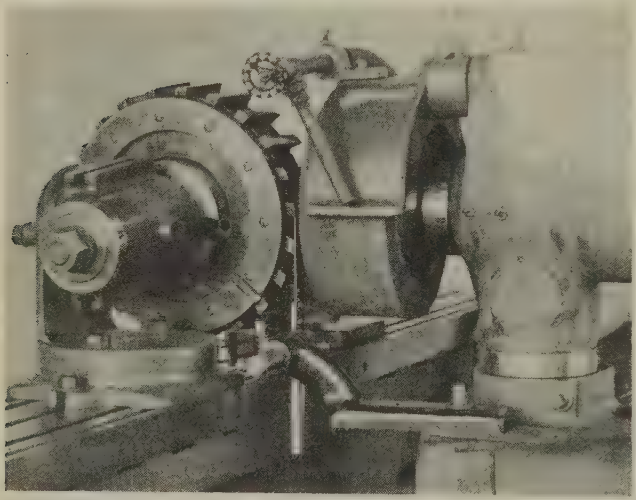
Godfrey Cutting Machine Set for Cutting Circles. Inset: Special drive for irregular outlines

Cutter and Reamer Holder for the Thompson Universal Grinder

An improved cutter and reamer holder with tailstock has been brought out by the Thompson Grinder Co., Springfield, Ohio, and will be included with the universal equipment for the company's 12 x 36-in. standard universal grinding machine. The cutter holder has capacity for milling cutters up to 12 in. in diameter, straight or spiral teeth. It can be swiveled through a vertical plane as well as through a horizontal plane, and is used with a cup wheel so that straight angle clearance may be obtained on the cutter teeth. The tailstock, used when reamers are to be ground on centers, has capacity for reamers from ½ in. to 12 in. in diameter, 36 in. long. It is designed to permit free passage of the cup wheel without interference on the smallest reamers. It has a sliding quick-action movement to the center and quick-acting clamp for locking-in position. The headstock is fitted with the new standard taper hole adopted by the milling machine group of the National Machine Tool Builders' Association, and can be bushed down to any size taper or straight hole with collets that fit the various sizes of reamer or arbor shanks.



The Cutter and Reamer Holder and Tailstock Used in Sharpening a Reamer Is Shown Above. The grinding of a milling cutter is shown below



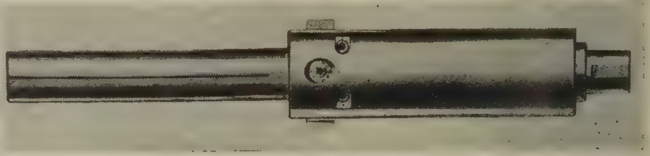
Approximately $75,000,000 has been invested by private interests in commercial river steamers, boats, barges and terminals on the Ohio River, states a report prepared by engineers attached to the office of the United States division engineer, Col. Charles W. Kutz, at Cincinnati. Of this amount, approximately $40,000,000 is invested in river craft and the remainder in terminals. The report shows that there has been a remarkable growth in river craft in the past 10 years, particularly in the number of steel barges and Diesel-type tow boats.

Expansion Boring Bars of Simplified Design

Simplicity of design and ease of adjustment are features of expansion boring bars recently placed on the market by the Larkin Packer Co., St. Louis. These bars are offered as production tools designed to maintain accuracy of bore and to compensate for wear on cutters by means of micrometer adjustment. There are only four main parts—an adjusting screw, with 0.001-in. graduations; a wedge threaded on the adjusting screw which serves to expand cutters; a thrust collar for piloting the adjusting screw; and a removable bushing for retaining expansion units in the body.

The method of expanding the cutters is said to provide accuracy and rigid construction. Wedge action, with bearing above and below center on angles of cutters, forces the cutters uniformly outward as the micrometer screw is turned. The hardened wedge, which is prevented from rotating by keyways, is threaded on the adjusting screw and travels forward or backward as the screw is turned. This adjusting screw rotates but does not travel. Thrust at the bottom is taken by a hardened and ground thrust collar, which serves as a centering unit for the conical point of adjusting screw, and also to support the adjusting screw on dead center. The wedge is arranged to support the thrust of the cutters and eliminate side play under strain.

The entire expansion unit is accurately fitted in place from the front of the bar and retained with a removable bushing, which provides access to the adjusting parts for purpose of replacement without damaging the bar. It is stated that by the arrangement adopted, the torsional strength of the bar body has been materially increased, as only a portion of the body is drilled and reamed to accommodate adjusting parts instead of drilling entirely through the bar and plugging.



Piloted Turret Lathe Boring Bar. The pilot is hardened and ground and has oil grooves. Micrometer cutter expansion is provided

A feature emphasized is the method of locking the cutters in place. A hardened and ground eccentric locking screw, with threads at both ends serving as pilots, employs a positive cam movement for clamping each cutter in its slip-fitted slot. The cutters are immovable until the locking screw is released. To facilitate removal of the cutters, the head of the locking screw has an indicator mark set at zero, located on point where the cam pressure on the cutter is released. Each cutter is held independently, and right- and left-hand threads throw the locking movement inwardly against the wedge.

The body of the boring bar is of forged chrome-nickel steel and is heat treated. Cutters are of high-speed steel, and are heat treated and tested to assure uniformity of hardness. When worn undersize, beyond range of expansion in one bar, the cutters can be used in smaller diameter bars of same slot dimensions.

Ten stock styles and 16 stock sizes of the tool for various boring operations, are available. Bars for boring car wheels, locomotive driving boxes, driving rods, rod brasses, rocker boxes and brasses, etc., can also be furnished, as well as bars for special requirements.

Production of electric power by public utility plants in the United States in January is reported by the Geological Survey at 7197 millions of kwhr. This is a slight reduction from the record-breaking total of December, at 7218, but is otherwise the largest month's output ever recorded. It compares with 6874 in November and with smaller totals in all preceding months.

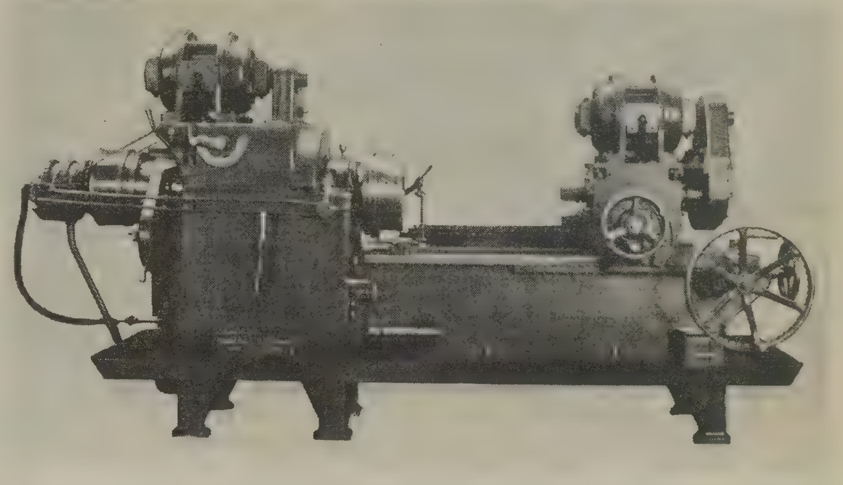
Thread Miller With Roller Bearing Milling Head and Other Improvements

Increased rigidity and flexibility in changing from one job to another were basic considerations in developing the thread miller here illustrated, which has been placed on the market by the Smalley-General Co., Bay City, Mich. This machine, designated as the No. 20, is offered as an improvement over the company's No. 23, previously marketed, and it is stated that, although designed for production purposes, the machine can be used to advantage on small runs of work.

Outside or inside, right or left-hand threads can be milled, and when equipped with a taper attachment the machine will mill straight or tapered threads up to 4-in. taper per foot. The range of external threading is ⅛ to 8 in. in diameter and of internal threading, ½ to 12 in. in diameter. Pitches range from 30 per in. up. It is claimed that form milling can also be done to advantage in many cases.

An outstanding improvement is the use of a roller bearing milling head, the spindle, and the pinion shaft which drives it, being mounted in Timken tapered roller bearings. The milling spindle is equipped with a No. 13 B&S taper and is driven by helical gears which run in oil. The milling head is arranged so that a turning tool can be attached conveniently and surfaces adjacent to the thread can be turned true with it. Rigid construction of the milling head is said to eliminate chatter and thus to add to the life of the hob. The main spindle has a 6⅝-in. hole and is flanged at the front end to facilitate quick changing of chucks. Several types of chuck may be used, depending upon the work to be done and the quantity of pieces to be milled. The chuck shown is a 5-in. three-jaw unit operated by an air cylinder, and with this equipment long work, 5 in. in diameter, can be put through the spindle. The main spindle is mounted in bearings cast integral with the bed. Two series of speeds are provided for the main spindle, one for turning and one for milling.

Either motor or belt drive may be employed. The motor-driven machine has eight speeds on the main spindle and six on the milling spindle, when four-speed motors are used. The belt-driven machine has a three-step cone on the main spindle, and a pulley on the pinion shaft of the milling head. Separate countershafts are provided for each spindle. Although the machine is primarily of the chucking type, it can be furnished with a tailstock and live center to permit work on centers. When a long overhung arbor is required an overarm can be used to support its outer end. A relieving attachment, for use in relieving taps and dies, can be furnished so that taps can be milled and relieved at the same time after fluting.



Mounting of the Spindle and Pinion Shaft in Tapered Roller Bearings Is an Improved Feature

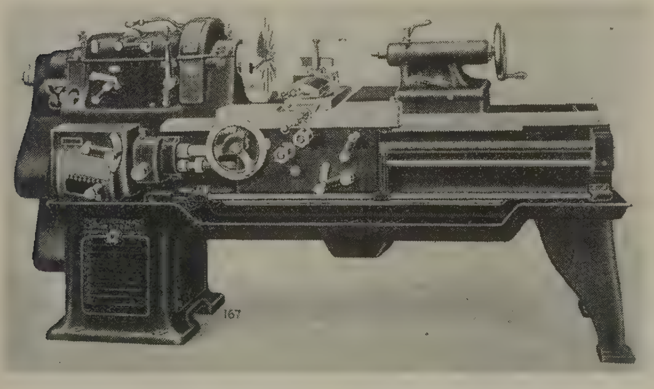
The feed mechanism, which is patented, is designed so that the wear is distributed over the entire length of the thread of the lead screw, instead of coming at one place. It is said to be unnecessary to wait for a split nut to pick up the thread. The feed lever can be thrown in at any time and by means of this device a thread can be started at any point on the circumference of the work. A reversible coolant pump is provided for supplying cutting fluid to the hob, and piping is arranged so that the fluid may be directed either from the inside or the outside of the work.

Geared-Head Lathes With Driving Motor in the Cabinet Leg

Geared-head lathes with the driving motor in the cabinet leg, under the head, have been brought out by the Cincinnati Lathe & Tool Co., Oakley, Cincinnati. Three sizes of the machine, 16, 18 and 20 in., can be furnished. A variety of types and sizes of a.c. or d.c. motor can be accommodated in the cabinet leg and the drive from the motor may be either by silent chain or belt.

The company's patented quick-change gear box, providing a wide range of threads and feeds, is incorporated in the new machine. Twelve spindle speeds are obtainable by shifting one or more of the three levers at the front of the lathe. All gears and shafts in the head are of chrome-manganese steel, heat treated and ground. A locking plunger is provided to facilitate removal of chucks and faceplates without strain on the shafts or the gear teeth. The clutch employed, of compression disk type, is said to transmit the full horsepower rating of the motor.

An index plate is prominently located on the front of the head to indicate the lever positions for each spindle speed. The lathes are supplied with or without oil pans, and with various lengths of bed.



A Plate in the Cabinet Leg May Be Adjusted to Accommodate Motors of Various Sizes and Types

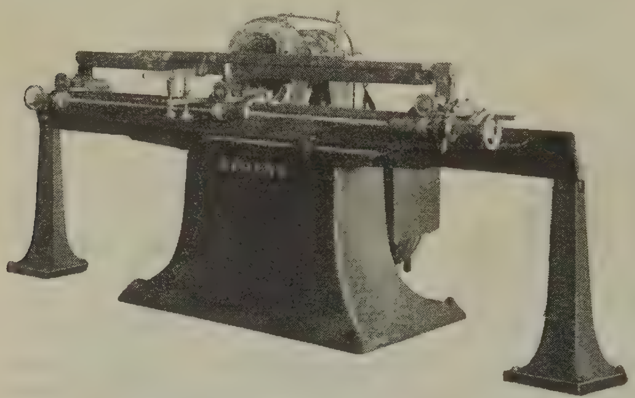
Lincoln Company Remodels Welding School

Lincoln Electric Co., Cleveland, has recently moved its welding school into larger and more convenient quarters. It now contains 10 curtained booths, each with welding table and all necessary accessories, and an individual arc welding machine. Students are accepted for an intensive course lasting one month; tuition is free. The school is under the general direction of A. F. Davis, vice-president; class work and individual coaching is given by special instructors. It is the aim to give men in this time a sound working knowledge of the fundamentals of arc welding, and fit them to engage competently in the trade.

Automatic Sectional-Wheel Knife Grinders

Sectional wheel automatic knife grinders, designated as the type R, have been added to the line of Samuel C. Rogers & Co., 191 Dutton Avenue, Buffalo. Eight different sizes, to accommodate shear and other blades from 76 in. to 146 in., in length, are available.

The machine is equipped with a 14-in. sectional grinding wheel mounted in a chuck having simple adjustment for holding and replacing segments. Rapid grinding with this type of grinding wheel is attributed to the spaces between the grinding sections, which form channels for carrying away the abrasive particles and the stock ground off the knife. The spaces also allow free entrance of the coolant to the point of grinding.

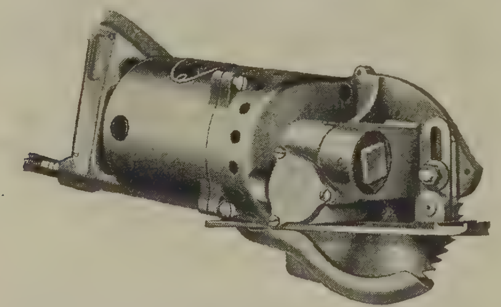


Sectional Type Grinding Wheels Are Used. The machine is available in eight sizes for shear blades up to 146 in. in length

Equipment on all sizes includes an improved water attachment; spring cross feed; heavy yoke bottom supports to eliminate vibration and double ratchet feeding with automatic stops. The machines may be equipped with direct motor drive which includes a standard 5-hp. 60-cycle motor, starter, extended shaft, brackets, etc. They may also be equipped for belt drive with tight and loose pulleys. The smallest machine, the 76-in. grinder, requires floor space of 4 x 9 ft., net, and 4 x 14 ft. 2 in. when in operation. The shipping weight is 2450 lb. The largest machine, the 144-in. grinder, requires floor space of 4 x 26 ft. when in operation; the shipping weight is 3900 lb.

Light-Weight Electric Hand Saw for Maintenance Work

Light weight and balance are features of a new electric hand saw, designated as the Junior model J, which has been added to the line of Skilsaw, Inc., 3814 Ravenswood Avenue, Chicago. The machine weighs 11 lb. It is designed for ripping and cross cutting dressed lumber up to 2 in., and is adapted for maintenance and repair work as well as for use in shipping rooms.



The Body of the Machine Is of Aluminum and Gears and Shafts Are of Chrome-Nickel Steel. The weight is 11 lb.

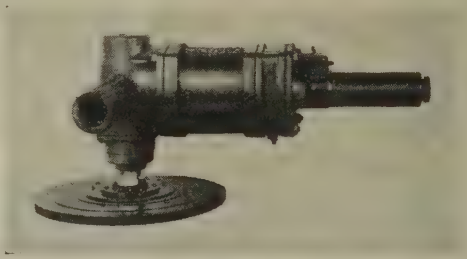
A ½-hp. special motor for direct current or alternating current, single-phase, 60-cycle or less, is employed. The speed of the motor is 1200 r.p.m., and the speed of the saw is 2500 r.p.m. The body of the machine is of aluminum and shafts and gears are of chrome-nickel steel. Ball bearings are used throughout. A kerf guide and safety guard are provided. The base is adjustable for various depths of cut. Standard equipment includes a combination 6-in. rip and cut-off saw blade; an adjustable rip fence attachment; 15 ft. of rubber-covered cord with connector; and a steel carrying case.

New Line of Rotary Air Grinders and Sanders

The Independent Pneumatic Tool Co., 600 West Jackson Boulevard, Chicago, has placed on the market a new line of Thor rotary air grinders and sanders, two models of which are here illustrated. Features include the motor, which is light in weight and carries four balanced bakelite blades, the latter being unaffected by oil, water or heat. It is mounted on a shaft suspended in ball bearings. The spindle is also suspended and held in alinement by large ball bearings.

The governor, which is fully inclosed and is adjustable, serves to keep the free-speed air consumption low, until the wheel is applied to the work, when it automatically throttles to the speed and air required for the job. An automatic oiler is provided and the unit carries sufficient light oil to lubricate all moving parts for eight hours. A baffle plate muffler is incorporated in the box-like lug on the spindle support.

One of the machines illustrated is the No. 271 R sander, which has a right-angle housing and carries flexible disks 9 in. in diameter and smaller. The length overall is 14 in. and the speed is 4000 r.p.m. Another machine is the No. 271 grinder, which weighs only 15½ lb. and is 21¼ in. long overall. It has a straight handle throttle, and the speed is 4000 r.p.m. It carries a 6-in. emery wheel having a face of 1½ in. A No. 272 grinder, illustrated herewith, is also available. This unit weighs 17¼ lb., measures 19¾ in. overall and is equipped with a grip handle throttle. It carries an 8-in. emery wheel having a 1½-in, face. The speed is 3200 r.p.m.



The Sander With Flexible Disk Is Above and the Air Grinder With Grip-Handle Throttle Is Shown Below

Employment in Cleveland during February showed a 2.6 per cent gain over January, according to the monthly statement of the labor relations committee of the Cleveland Chamber of Commerce, which is based on reports obtained from 100 large manufacturers. There was a gain of 6.6 per cent in January and February over the first two months last year. There was a gain of 4.5 per cent in the steel industry in February and a gain of 5.3 per cent in the automotive industry.

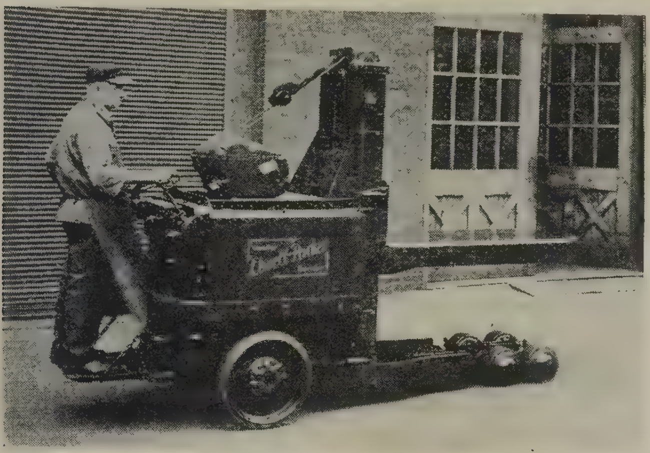
The fourteenth annual convention of the American Association of Engineers will be held in El Paso, Tex., on June 4, 5 and 6 at the Hotel Hussman. L. M. Lawson, First National Bank, El Paso, is chairman of the local committee.

Five-Ton Lift Truck With Platform Height of Over 11 In.

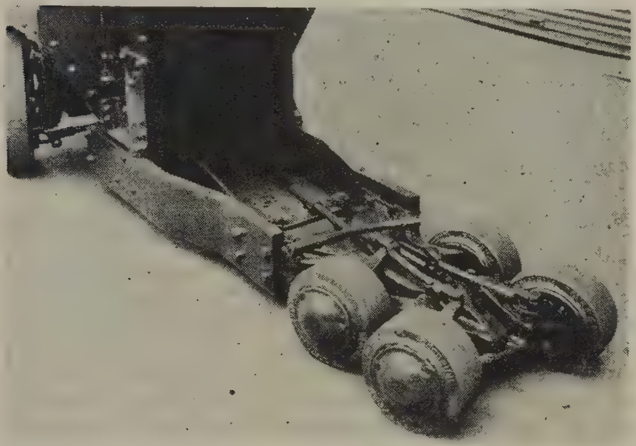
With capacity of 5 tons, a tier lift truck for handling material on skids, and having a platform height of only 11 in. when lowered (58 in. when elevated), has been brought out by the Elwell-Parker Electric Co., Cleveland. This company has been making a lift truck with the same minimum platform height, but it was of only 2 to 3-ton capacity.

Problems in the design of the truck were to provide a trail axle, wheels and their steering mechanism sufficiently low in height to permit a low platform, to steer all wheels simultaneously and on concentric circles, and at the same time have sufficient tire and bearing capacity to carry the load. The trail or front axle has four steerable wheels with tires 10 in. in diameter and 5 in. wide. The two driving wheels are 22 in. x 4½ in.

All six wheels are steered by a hand wheel through a miter and worm gearing. A feature of the truck is the general use of anti-friction bearings. The gear-reduction mechanism and motors have ball bearings, and there are ball bearings at the bottom of the steering column. The drive wheels have double radial and thrust ball bearings, and the trail wheels, tapered ball bearings.



Exceptionally Low Platform for a 5-Ton Lift Truck Features This Unit. Its steering capacity is unusual, inasmuch as all four of the small wheels under the platform are steerable in unison, as shown below

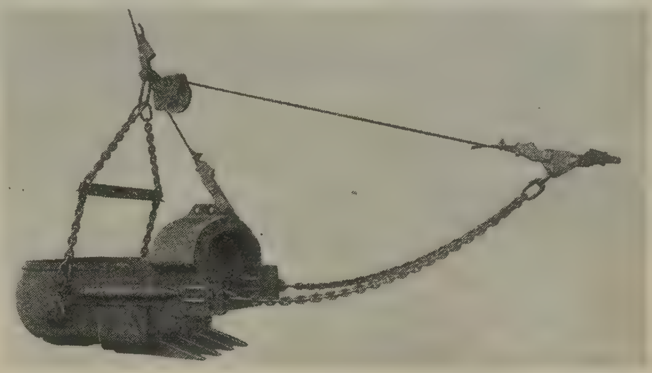


Separate motors for the drive and lift are located within the frame housing. The platform is 26½ in. wide and 60 in. long. The truck will turn in intersecting 78-in. aisles. It has a speed of 300 to 400 ft. a minute and a lifting speed of 6 ft. to 9 ft. a minute.

Employment figures of the National Metal Trades Association show a decline in January from a year ago of nearly 3 per cent, based on returns from 35 centers covering the area north of the Ohio and east of the Mississippi River. The total this year was 581,717, against 598,653 a year ago. There has been a recent improvement, however, for the January total is larger than that of any of the four preceding months. December was the lowest recent figure, at 541,232.

New Type of Dragline Bucket for Heavy Duty

Dragline buckets in four sizes from ½ to 1¼ cu. yd. are now being made by the Harnischfeger Corporation, Milwaukee. These buckets are designed to withstand severe service. The bottom and sides are shaped from a single piece of heavy tank steel, and all seams are electrically welded. Welded construction provides a smooth inside surface, and prevents sticky soil or weeds from clinging to the bucket. The bucket teeth, heavy steel forgings, are securely bolted through the cutting lip and bottom of the bucket.

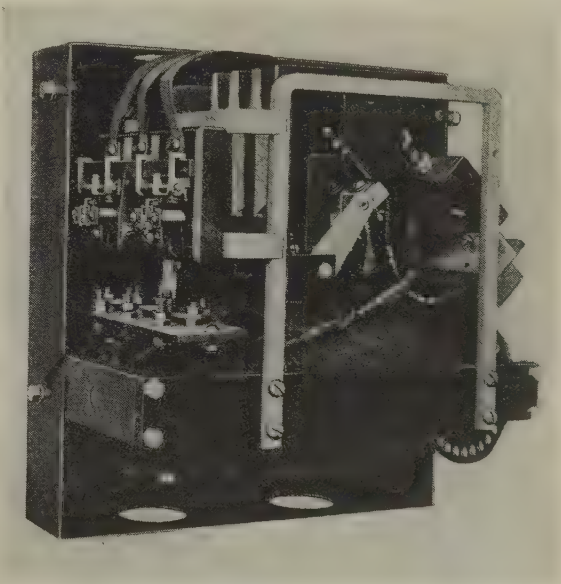


Designed for Rigidity in Heavy Service

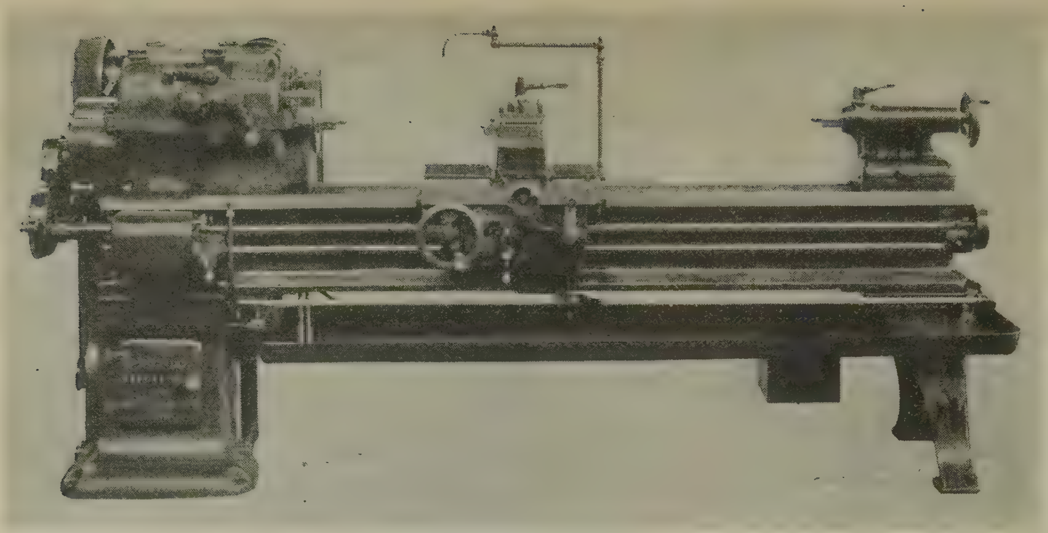
It is a difficult problem to prevent the sides of a dragline bucket from drawing together at the front end. However, the large box-section hood and heavy Z-bar supports here used promise to eliminate much of the trouble. The drag chain clevis is provided with lugs which pull against shoulders in the hitch plate, thereby transmitting the pulling stresses directly from the bucket to the chain, instead of through the connecting pin. The pin merely acts as a guide and is not subject to bending strains. This type of hitch plate is said to make it easy to adjust the cutting angle of the bucket.

Adjustable Automatic Induction Starter

An automatic induction starter with two adjustable features is being made by the Lincoln Electric Co., Cleveland. One of the adjustments is in the starting current and starting torque, and is made by changing the position of the rotor in the regulator. This rotor is index mounted and the starting torque and starting current of the motor are increased by going to the higher numbers of the scale and decreased by going to the lower.

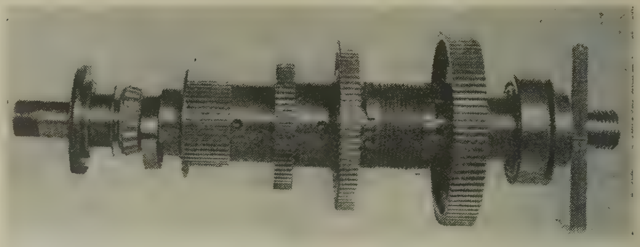


The other adjustment is in the current at which the throw-over takes place. The throw-over in this new starter is controlled by retarding solenoid, which is operated by the motor current. The pull of this solenoid can be adjusted by a simple lock rod arrangement carried on its plunger.



Tapered Roller Bearings, Arranged as Shown Below, May Be Provided for the Spindle. In place of the rapid change-gear device, the machine has an instantaneous feed box

Production Lathes with Tapered Roller Bearing Spindles

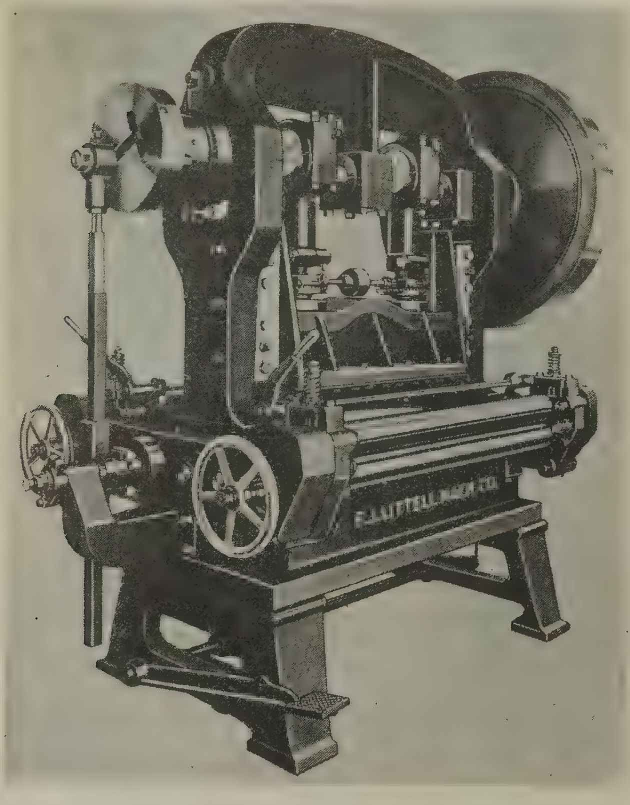


Ball-bearing geared-head production lathes equipped with Timken tapered roller bearings on the spindle have been brought out by the Springfield Machine Tool Co., Springfield, Ohio. This spindle mounting, shown in the separate illustration, is available for all sizes of lathes. Precision type roller bearings are employed and thrust is taken up on the front bearing, which has ample adjustment to keep the spindle free from slack at all times. This type of construction is recommended for production work because it tends to eliminate vibration and chatter and, in case of accident, the bearings can be replaced promptly from stock.

Although arranged for production work, the machine illustrated has the company's standard headstock with ball bearings and drop-forged, heat-treated gears which run in oil. In place of the rapid change-gear device, an instantaneous feed box, which gives six changes of feed for each setting of the change-gears, is used. There is an automatic stop on the feed rod. A power rapid traverse screw, operated entirely from the front, is used in place of the lead-screw. A taper attachment, oil pump and piping are mounted on the rear of the machine. The turret toolpost on the lathe illustrated can be interchanged with a compound or other type of tool-rest.

New Roll Feed for Use on Punch Presses

A punch press feed recently brought out by the F. J. Littell Machine Co., 4125 Ravenswood Avenue, Chicago, for use on double-crank presses, is said to be capable of cutting over 1,000,000 blanks a day. The device is of double rack and pinion type and is designed to take any material, including rubber, up to 1 in. in thickness. In a test of the feed using rubber it is said that 37 blanks per stroke were cut at a speed of 80 r.p.m.



Punch Press Feed of Double Rack and Pinion Type for Material Up to 1 In. in Thickness

The feed is equipped with double rolls and with a roller drive handwheel which does not revolve when the feed is in operation, but which can be used to feed the stock forward. The feed has a hand lifter and also an automatic lifter.

New Limit Switch for Control Circuits

A new design of limit switch has been made by the General Electric Co., furnishing a simple, reliable means for controlling the limits of travel on such applications as motor-operated window or door-opening apparatus, valves, etc., where magnetic control is used.

The switch is provided with two normally-closed contacts, one for each extreme of travel. These contacts are operated by two cams, mounted on opposite faces of a molded gear. The two cams are adjustable with respect to each other and, as a further refinement, each contact has a micrometer screw which makes possible very close adjustment of the opening point for each contact, after the general position of the cams has been set. The molded gear, with the two cams, is driven by means of a worm gear. The entire mechanism is inclosed in a cast iron box with sheet-steel covers on front and back.

Milton Mfg. Co. Discharged from Receivership

The Milton Mfg. Co., Milton, Pa., manufacturer of bolts, nuts, rivets and iron and steel bars, has been discharged from the receivership under which it has been operating for some time. The receivers were W. W. Wilson and Charles Steele. Following their discharge, George S. Shimer, former president and a director of the company, resigned. Within the next week or 10 days the stockholders will meet and elect officers and a board of directors.

REPAIR CORRODED BRIDGES

Notable Structures in Pittsburgh and Rochester Reinforced by Welding on New Metal to Replace Losses

GEORGE J. GREEN, Pittsburgh Welding Corporation, Pittsburgh, who was the speaker at the monthly meeting of the Pittsburgh section, American Welding Society, at the William Penn Hotel, Pittsburgh, Wednesday evening, Feb. 29, not only outlined some interesting arc welding repair work on bridges, but described a new method that was worked out while some work was done on bridges of the Pittsburgh & Lake Erie Railroad.

One of the most interesting pieces of work along this line was rebuilding badly corroded members of a bridge over the Allegheny River, a 240-ft. through truss, pin-connected span, built 31 years ago.

Parts of the floor system, kept constantly moist by the proximity of timber, were greatly reduced in section. Columns were compression members built of Z-bars and web plate and, directly above and below the pin bearing plates, were perforated and reduced in section over 60 per cent.

Strips of steel, 1 in. by ½ in., extending from the bottom of the column to a point well beyond the corroded portion, were welded on after the surface of the original metal had been thoroughly cleaned by use of the acetylene torch, scrapers and wire brushes. Bars were welded into position vertically, and tied together at close intervals with crossbars of the same section. After each joint was completed, the strength of the weld was tested by a number of blows with an 8-lb. maul. Laboratory results showed practically no deterioration of the physical properties of the original metal when welded by the metallic arc process.

This bridge was further strengthened by having narrow cover plates welded to the top chord. The new plates fitted between the line of existing rivets and were secured to the chord by a continuous weld, thus eliminating the necessity of cutting out rivets or drilling holes in a structure already highly stressed.

Other work of similar nature mentioned by Mr. Green was done in Rochester, N. Y., on the steel arch known as Driving Park Avenue bridge. One of the main diagonals, a built-up section consisting of web plates, flange angles and lattice bars, was found badly corroded. The lost section was replaced by inserting a half-inch reinforcing plate about 40 ft. long between the flange angles and using the arc process to attach it to the original metal.

Slack diagonal eye bars and tie rods have been tightened for the Pittsburgh & Lake Erie Railroad. A device consisting of turnbuckles welded to wing plates, perfected by the Pittsburgh Welding Corporation, were assembled, taken to the bridge and welded to the bar to be tightened. The bar was then cut between the two wing plates and drawn taut by drawing up the turnbuckles.

Much welding was done on the new Mount Washington Roadway bridge, Pittsburgh. The concrete arches are reinforced with steel trusses, consisting of flanges and web members, the splices of which were completely welded. The steel skeleton was built upon false work and concrete poured in the forms built around this steel reinforcing, leaving keys open at all the splices to allow welding to be carried on. Portable welding outfits were installed upon the parts of the arch already poured and remained in one location while all the splices were welded. There were 16 keys in the 208-ft. main arch, each containing splices between angles, 6 x 4 x ⅝ in., butted together, and reinforced by welding splice plates over these angles.

Wage Scales for Sheet Workers Unchanged; Steel Average 3c.

The bi-monthly examination of the sales records of independent sheet steel manufacturers held in Youngstown March 2, by Elias Jenkins, representing the Western Sheet Steel Manufacturers Association, and Michael F. Tighe, representing the Amalgamated Association of Iron, Steel and Tin Workers, disclosed 3c. per lb. as the average sales price of Nos. 26, 27 and 28 gage black sheets in the 60 days ended Feb. 29. This is the same average as in the previous 60 days and accordingly wage scales for the next two months remain unchanged at an advance of 25½ per cent over base.

Payrolls in Metal-Working Plants Decline

Payrolls in 195 iron and steel plants were reduced from December to January by 1.3 per cent, whereas the number of men on the payroll was increased 0.4 per cent, according to figures of the United States Bureau of Labor Statistics. Using identical plants, the number of employees went from 245,260 in December to 246,137 in January, whereas the weekly payroll declined from $7,309,256 to $7,211,681.

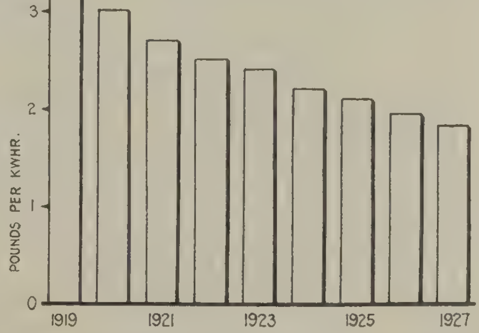
Foundry and machine shop plants to the number of 942 reported a slight decline in employees, from 218,126 to 217,610. The decline in amount of payroll was 2.9 per cent, from $6,405,569 to $6,221,243. Similar conditions in 148 machine tool plants showed a reduction of employees from 27,016 to 26,967, accompanied by a decline of 1.8 per cent in total payroll, from $845,612 to $830,477.

Prizes of $1,000 and $500 are being offered for the best essays on an economic subject, by Alvan T. Simonds, president Simonds Saw & Steel Co., Fitchburg, Mass. The contest is open to everyone and essays are to be from 3500 to 5000 words in length.

Continued Improvement in Utilization of Fuel

Coal consumption by public utility plants in the United States in 1927 is estimated by the Geological Survey at 1.83 lb. per kwhr. This estimate takes account of the coal equivalent of other fuels. The figure is the lowest ever recorded, and displaces the previous low record of 1.95 lb. in 1926. As recently as 1919 the figure was 3.2 lb. The 1927 unit consumption was only 57 per cent of that for 1919.

If the 1927 output of power had required the unit consumption of 1919, the fuel requirements would have been almost 80 per cent greater than they were in 1927. In place of 45,709,000 net tons of coal (including coal equivalent of other fuels), the consumption would have been approximately 80,000,000 tons, or some 34,000,000 tons more than actually was consumed.



Reduction in Fuel Cost of Developing Power, as Shown Graphically Above, Saved 34,000,000 *Tons of Coal Last Year*

Progress from year to year has been steady. Not a year of the eight subsequent to 1919 but showed a drop in unit consumption from all of the preceding years. This reduction is indicated graphically in the diagram.

This Issue in Brief

Sharp competition and not lack of business is responsible for "profitless prosperity," says National Industrial Conference Board president. During six-year period, 1920-1925, $32 was lost by unsuccessful companies for every $100 earned by profitable concerns.—Page 660.

Westinghouse plant produces 96 different kinds of alloy scrap. Machines are supplied with tote pans for accumulating scrap, which is then tagged, collected, weighed, appraised and placed in suitable storage bins.—Page 657.

Elimination of water content would make millions of tons of now unmerchantable iron ore in Lake Superior region worth mining. Beneficiation of these and many other types of ores would require only sintering to make them equal in value to average shipping ores.—Page 670.

Usual chemical analysis is often unsatisfactory in determining effects of alloying elements and gases in steels. Howe Memorial Lecturer says that such chemistry tells nothing of how elements enter constitution of metal or of scavenging elements which have been lost, and gives no information about portion of ingot from which sample is obtained or of casting temperature.—Page 662.

Conservation of fuel plays important part in creating unemployment in mining industry. Displacement of low-efficiency engines by large units of public utility plants has brought about annual saving of about 34,000,000 tons of fuel.—Page 680.

Encourages research to develop metals and methods for air craft construction. Materials and practices later used in many other ways are often developed in this way and are utilized to an extent in excess of anything that might be immediately expected of aeronautics.—Page 709.

Wages have probably reached point of equilibrium, says economist. Further rise would tend to increase unemployment, and only factor which might disturb present wage situation would be an upward trend in commodity prices.—Page 660.

Heat treat gray iron castings at Ford plant. Annealing before machining helps to eliminate hard spots, produces a fine grain structure and makes metal softer and easier to machine. Drilling may also be done more rapidly after annealing operation and there is less breakage of drills.—Page 663.

Manganese has important effects on working of steel after it reaches ingot. A high manganese safely allows a greater heat before forging or rolling, while large carbon steel forgings must have lower manganese for commercial heat treatment, especially as carbon is increased.—Page 662.

Formation of twins in original crystals is often earliest effect of overstrain in plastic flow of metal in rolling or forging operations, says Yale professor. Subsequent severe deformation is combination of development of crystalline twins and of slip along crystal planes.—Page 666.

Gray iron or steel castings may now be X-rayed through a thickness of 3½ in. Blow-holes, cracks, bubbles, foreign materials and other flaws are easily detected in one or two exposures.—Page 656.

Steel furniture orders in January, totaling $3,250,000, were largest on record. Orders for steel shelving also set new high, amounting to $768,000.—Page 714.

State and local taxes absorbed about one-fifth of Ohio corporations' profits during period from 1922 to 1924. Expansion of functions of State and local governments, waste and extravagance and lack of centralized control are cited as chief cost of increasing tax burdens.—Page 661.

February pig iron output was lowest for that month since 1922. However, actual production figures show daily rate of 100,004 tons, an increase of nearly 8 per cent over January, with a net gain of two active furnaces.—Page 684.

Continuous furnace for fusing porcelain enamel on gas stove parts combines features of furnace and traveling conveyor. Both ground and finish coats are burned on to steel and drying operation is included, thus eliminating need for separate drying oven.—Page 665.

Automatic control of volume of material fed, in proportion to requirements of machine is essential in sintering operations. Control of proportions of sintering mixture is also important.—Page 669.

Fuel Efficiency Displaces Miners

CONSERVATION of fuel by its more efficient use creates no small share of the country's coal mining problem. It was estimated some years ago that we had 200,000 more miners than were required to mine the coal we then were consuming. More recently an expert estimate placed the excess at 300,000 miners.

Returns of fuel consumption by public utility plants give a total of about 39,000,000 net tons of coal and coal equivalent in other fuels for 1919. For 1927 the estimate is a little under 46,000,000 tons. Between these years, however, the output of electric energy had more than doubled, and the unit consumption for each kilowatt-hour had been reduced from 3.2 pounds to 1.83 pounds. Without the improvement in utilization of this fuel—that is, if the 1927 consumption had been at the same unit rate as in 1919—there would have been required in 1927 about 80,000,000 tons of fuel to produce the electric energy sent out. This means a saving of about 34,000,000 tons, or nearly 80 per cent of what was actually burned.

With the greater motorization of manufacturing plants, which has been going on at an accelerating pace since the Armistice, there has come about a gradual and in many cases rapid displacement of low-efficiency engines by the high-efficiency, large units of public utility generating plants. This is shown strikingly in the doubling of the output of public utility plants, whereas normal growth, aside from this displacement, would have been much slower. It is fair to assume also that the continued improvement in fuel utilization in the large plants has been paralleled in some measure in local plants. It might be too much to assume that there has been a *proportionate* increase in efficiency, but that there has been some, and probably a good deal, seems scarcely open to question.

If we put a miner's ouput at 800 tons of coal a year, the saving of 34,000,000 tons represents the work of over 42,000 miners. This is one-seventh of the high figure given above for excess of miners and more than one-fifth of the earlier estimate. Thus fuel economies have done more than is commonly reckoned in adding to the soft coal industry's unemployment problem, in which the coal-cutting machine and the large development of water-pawer have long been regarded as leading factors apart from those created by the workers themselves.

Rapid Advances in Non-Ferrous Metals

ON reflection, it appears that many more important metallurgical advances have taken place in recent years in non-ferrous metals and alloys than in iron and steel. Not that the steel industry has been stagnant. A better understanding of the essential physical and chemical processes involved has undoubtedly produced more and better mill products at a constantly decreasing cost. An army of men are constantly at work improving and controlling production processes. But it is chiefly refinements in detail and perfection of the mechanical equipment that have come in the last fifteen years.

Contrast this with fundamental changes in nonferrous metallurgy, such as the virtual disappearance of the copper blast furnace, supplanted by the reverberatory for handling fine flotation concentrates—themselves unknown at the turn of the century. Within the last three or four years differential flotation has been able to separate worthless mixed sulphides into marketable ores of lead, copper and zinc. Recently discovered electrolytic zinc is bidding for the market against metal made from bonanza deposits with cheap natural gas fuel.

And we have many new metals ready for use; most notable are hardened aluminum, lead, and now copper. Pure silicon metal has brought an entirely new technique in making aluminum castings—in fact, aluminum has changed from a rarity to a common metal. Many other metals, also, have come out of the electric furnace, and their alloys, with remarkable electric and magnetic properties, have provided practicable heating elements for household devices and industrial ovens and permitted rapid strides in telephony and radio communication.

Others have unique properties as cutting tools or in corrosion-resisting articles. A knowledge of tungsten and its properties has revolutionized electric lighting. Advances in theoretical metallurgy, in the knowledge of crystalline structure in metal, constitutional diagrams, grain growth, the effect of cold work, and the mechanism of fracture have also drawn heavily on data accumulated for metals other than iron.

But rather than extend this list, turn again to iron and steel. Prominent publicity has been given to the growth of alloy steels, but high-speed tool steel dates from the last century. Nickel steel armor plate was made in America nearly forty years ago. Chromium steels were described in detail almost that early. The recent advances, therefore, have not been so much the development of new alloys as the adaptation of the old, and the extension of heat-treatment practices, and even this progress has been largely from the efforts of machinery makers, rather than of the steel producers.

Of course some new and important alloys have been commercialized. Prominent among these are open-hearth iron, silicon irons, molybdenum steel and stainless steels; furthermore, centrifugal casting has made strides, particularly in pipe. We have other things which have received much study, and may be on the verge of more epoch-making applications. Synthetic wrought iron and direct iron or steel come to mind, and fusion welding (a metallurgical operation) has had as yet only a small chance to exert the profound influence it will eventually have on fabrication processes.

Stated broadly, it therefore appears that in the last fifteen to twenty years the steel industry has been busy in perfecting its processes. Expansion in steel has been in an increasing number of applications rather than in a more diverse line of alloys.

On the other hand, some branches of the nonferrous industry have revolutionized their smelting methods; many new metals have become commercial in fairly pure condition; and a great number of highly important alloys have been developed.

A New Tool for the Foundryman

X-RAYS may become as useful in examining metals as they are in the medical field. For several years their value has been largely theoretical, so far as metals are concerned. Some excellent work has been done in crystal analysis to establish the nature of the structure of metals and the changes which result from heat treatment.

Undoubtedly the detection of flaws in castings by X-ray penetration on a large and economical scale would be of great service to the foundryman. It would forestall the production of many defective castings and cut down losses in machining. Pioneer work in this field was done some years ago at the Watertown Arsenal which revealed some of the possibilities. The leading article in this issue of THE IRON AGE gives renewed assurance of what may be expected. Penetration of greater thicknesses of metal are now possible and cheaper but effective apparatus is available. Further progress in these two particulars is confidently expected. There seems little doubt that the foundryman of the future will have at hand a tool with which he can so regulate his molding practice that the percentage of defective castings, whether ferrous or non-ferrous, can be cut down materially. Non-destructive examination of metals, either with X-rays or by magnetic analysis, bids fair to play an important role in reducing costs and improving the product.

Shading of Steel Extras

YEARS ago a paper was presented to the steel trade decrying the practice more or less prevalent of shading extras and urging that these be maintained rigidly—let the shading, if any, be in the base price. But things have changed. Today a fruitful source of steel market irregularities is the apparent shading of base prices, the extras being technically maintained. Study of individual cases shows plainly that in essence it was the extra which the seller shaded, the quotation being in the form of a cut price base. The seller would not accept an order for material carrying no extras, at the base price named. He quoted with the full understanding that the order if placed would be for material carrying a known and large extra.

For the successful conduct of any line of merchandising reasonably stable prices are essential. The practice of shading the base price when a large extra is involved gives the appearance of an instability which does not really exist. There may be a hundred thousand tons a month made of the general class of material quoted on a given base pricing system and only a thousand tons of the particular product carrying the individual extra. Irregularity in a thousand-ton market is made to appear as irregularity in a hundred-thousand-ton market.

The practice has changed because the times have changed. Under the old régime the steel trade was committed strongly by habit to a system of uniform base prices, with "blanket" contracts made sometimes long in advance and subject to specification from time to time. Often the securing of the specification was like making a fresh sale, which would be accomplished by cutting the extra on the particular lot of material, the contract with its base price remaining intact. Nowadays individual sales are common, and to secure a doubtful prestige or through force of habit or as a result of maneuvers of the buyer the mill quotes a base price at a cut, leaving the extra intact.

To correct such situations the list of extras might be revised to a form in which each extra involves only its proportion of total profit. But there are difficulties in the way. Such a revision as suggested would naturally involve reductions, and reductions occur too often as it is to make the idea of a voluntary reduction attractive.

The adoption of a rigid practice of quoting net prices only in the particular case when a concession is contemplated would be helpful. By no means would this cover the whole matter, for sellers often do so quote and the would-be buyer disingenuously deducts the card extra and claims or infers he has been quoted a cut base price to apply on any specification he cares to make up.

Long ago there was a particularly strained situation of this sort in the strip market. The way out developed to date has been for the strip market to split itself into width brackets, of which there are now four, and net prices do not graduate smoothly but by jumps. According to the formal quotations, a difference of one-sixteenth inch in width may make a difference of $2 a ton in the price, which obviously is inconvenient. Yet there seems little hope among producers that a new card could be devised which would admit of a single base price being employed. At any rate the pricing is in the open under the present practice.

Tonnage in a Mature Industry

OFTEN the question is asked "What do you think this year's steel tonnage will be?" The form of the question is natural and proper, but the spirit of the question usually is, how will this year compare in tonnage with last year or year before? Those who expect an answer along that line do not realize what fine distinctions recent years in steel have made, for it is a fact that if this year were to show 47,000,000 tons of steel ingots produced it would make a new record, passing 1927, whereas if it were to show 43,000,000 tons it would take seventh place in the list of years. These two apparent extremes, however, are only 2,000,000 tons or 4.5 per cent away from 45,000,000 tons.

Five per cent is not much leeway for such a forecast, and there is an illustration of how closely distinctions are now made in steel. It is the natural result of steel having reached a maturity. A general principle is involved. In its adolescence an industry grows rapidly, while afterward it grows much less rapidly. An easily applied test is the length of time an industry takes to double its tonnage. Using pig iron as the general measure of the iron and steel industry, about 970,000,000 tons have been made in the United States up to the beginning of this year. Through the year 1912 about 475,000,000 tons had been made, so that it has required nearly fifteen years to make as much more. On Jan. 1, 1911, 51 per cent of all the pig iron made to that date had been made in the preceding decade. Lake Superior iron ore production to date has been about 1,347,000,000 tons, and half of that production has occurred in the past fourteen years, whereas previously production had frequently doubled in much less than a decade.

The steel industry shows the same principle in its details. Nails are a very old commodity. To date about 750,000,000 kegs of cut and wire nails have been produced. Half as large a tonnage had been made up to about the middle of 1910, so that between seventeen and eighteen years have been required for the aggregate to double. Tin plate and strips, on the other hand, are new commodities. Of the total tin plate made, one half has been made in the last nine years, and in strips the time is shorter still.

Outside the steel industry a great divergence is seen between coal, an old industry, and cement, a new industry. It has required the past sixteen and one half years for as much coal to be produced as in all the previous time, while during that period the great bulk of the total cement has been made. The automobile industry presents a divergence in another respect, for its period of adolescence has been short, and it should be recognized as having already matured. There is no chance of the automobile production of last year and this altogether equaling the combined production of the two preceding years.

When an industry matures, then, as steel has done, its growth is not to be considered by its pace during adolescence. It has become well poised and will show relatively little variation.

Guessing on the Far Future

HENRY FORD in an interview in the March *Forum* makes some remarks about what may occur in the long range future in the world, and indeed out of the world, for he refers to trips to other planets. Samuel Rea, retired president of the Pennsylvania Railroad, in a recent address before the Engineers' Club of Philadelphia, made some definite predictions as to the alinement 50 years hence of rail, water, highway and air transport.

It would be helpful to our current thinking if we had more of this sort of thing. We are disposed to confine our thoughts of the future to what we consider definite predictions, which usually are scarcely more than extrapolation. We observe the course of affairs and then project the graph into the future, giving it such curvature as the record to date suggests. Anything outside of that we consider guessing. But enlightened guessing gives a broader viewpoint and a safer one, for it tends to relieve us of our unknown restrictions.

The euthenists and eugenists are in controversy over the Lamarckian theory that acquired traits are inherited. According to the euthenists better living conditions will result in race improvement, while the eugenists hold that modern conditions are bound to produce race deterioration.

Research in pure science is growing rapidly, seeking new information without predetermined objective, on the principle that discoveries of almost any sort are likely to prove helpful in one way or another. It is urged that this research furnishes the most practical promise of solving the problem of how all of us can be kept gainfully employed when improvements are tending year by year to release workers, since the old commodities and forms of service require fewer workers per unit of accomplishment.

Along still another line, it is regrettable that only a conspicuous lack of visible progress is to be mentioned. At the beginning of this century the prediction was made that while the nineteenth century had been one of astonishing progress in material things, the twentieth century would be marked by men learning how really to think, so that a whole new practice in using the human brain would be set up. More than a fourth of the century has passed and we see no general progress in this respect. Rather it is urged that for the most part people think less than ever. James Harvey Robinson's admirable work "The Mind in the Making" was read or usefully applied only by those who least needed it, and his plea for "the humanizing of knowledge" has not brought results among the people.

The very difficulties in the way of looking into the future except by mechanically carrying forward for a few years the trends currently visible should be a great spur to enlightened guessing. It is easy to observe that even our present methods, had they been applied in the past, would have failed largely or wholly to project affairs into the condition in which we now find them.

"Where there is no vision the people perish."

For Higher Canadian Steel Duty

THE Canadian steel industry last year produced slightly more than 900,000 tons of steel ingots and imported from the United States 832,984 tons of finished steel. The fact that Canada buys from us an amount of steel about equal to that which is made in its own plants has frequently stirred the critics of our neighbor Government to attacks on the tariff policy which makes possible such large importations, particularly in view of Canada's unfavorable trade balance with the United States. The subject was recently introduced at length by the member of the House of Commons from Algoma, the district in which the plant of the Algoma Steel Corporation is located.

Canada's steel industry, said the member from Algoma, has for some years "had its back to the wall fighting for its very existence against the mass production of the United States and the production of the mills of Europe, where the standard of living is very much lower than it is in Canada."

The present duty on steel products imported by Canada is a specific duty. An ad valorem duty will probably be urged as a measure of greater protection. But it is in the matter of freight rates that Canadian steel plants suffer their principal disadvantage in competition with mills of the United States. The freight rate on steel bars and structural sections from Buffalo to Chatham, Ont., for example, is 26½c. per 100 lb., as compared with 41½c. per 100 lb. on the same material from Sault Ste. Marie, Ont. Thus, the tariff protection which the Canadian steel industry enjoys on structural shapes—15c. per 100 lb. on sections weighing 35 lb. per yard and over—is wiped out by this freight rate disadvantage.

St. Catharines, Ont., is one of the principal pig iron consuming centers in Canada. It draws much of its pig iron from Buffalo on a freight rate of $2.30 per ton as against a rate of $4.90 per ton from Sault Ste. Marie. The present duty on pig iron is $2.80 per ton.

These facts are among the arguments that have been set forth in the House of Commons in support of a higher tariff on pig iron and steel. Moreover, the money value of Canada's iron and steel imports rose from $134,684,441 in 1925 to $229,429,485 in 1927, a gain of nearly $100,000,000, which serves to explain the efforts that may be put forth to change Canada's tariff to an ad valorem basis.

Specific recommendation has been made that the present schedule providing a drawback of 99 per cent on flat spring steel, steel billets and steel axle bars, when used in the manufacture of springs and axles other than for railroad and tramway vehicles, be amended to exclude automobile manufacturers as well as railroads from this provision. It is further recommended that a tariff be placed on alloy steel bars, not now covered by any specific item in Canada's tariff schedule; also that the tariff on structural sections be amended to include large sizes which were not made in Canada when the tariff was drafted.

Back of the agitation across the border for greater tariff protection is the desire of the owners of Canadian mills to enlarge their facilities. The Algoma Steel Corporation, it is stated, is prepared to expend $10,000,000 for new plant, which will include the installation of a mill to roll structural sections larger than any now made in Canada. The recent acquisition of the British Empire Steel Corporation by strong Canadian banking interests has given rise to reports of contemplated plant expansion, which presumably depends somewhat on the success of the move to amend the tariff.

Steel for Normal Building Needs

CONSTRUCTION in the United States in 1928 will probably amount to more than $7,400,000,000, according to a recent forecast by *Building Age and National Builder*. In analyzing this figure the survey points out that it coincides roughly with a typical building year and adds that since 1924 the industry has not been engaged in making up for war-time shortages. In other words, nearly seven and one-half billion dollars is being spent yearly to take care of the needs of the average annual increase in population.

This increase, according to the Census Bureau, amounts to 2,250,000 persons, requiring more than 500,000 new homes yearly. The *Building Age* survey points out that 86 per cent of our population lives in single-family dwellings, 8.6 per cent in two-family houses and 5.4 per cent in multi-family buildings or apartments. By establishing conservative cost figures for each of these types of dwellings it is estimated that residential construction requires an annual expenditure of about $3,200,000,000. But dwellings represent in value less than 68 per cent of all classes of buildings, making the amount of all new construction necessary to provide for natural population increase over $4,700,000,000. One-third of all construction, the survey states, goes into replacements, alterations and repairs to existing structures. This is how we run up an annual building bill of $7,400,000,000.

Such an enormous outlay for new construction naturally opens up a large and diversified market for steel products. That the industry is taking advantage of this market is evidenced by THE IRON AGE distribution figures for 1927 which showed that more than 7,000,000 tons of steel, or 22 per cent of the country's total finished product, went into building. This was the largest aggregate taken by any steel-consuming industry.

In 1926 new construction required 6,800,000 tons or 19½ per cent of the year's steel output, and in 1925, 5,600,000 tons or 17½ per cent. Thus during the last three years, or since the construction industry has been building for normal population requirements rather than making up shortages, a steadily increasing amount of steel has been taken; and each year this tonnage has represented a larger percentage of the total production of finished steel.

Sharp Gain in February Iron Output

Actual Data Show Daily Rate Increased 7431 Tons or About 8 Per Cent Over January—Net Gain of Two Furnaces

COMPILATION of the actual data for the pig iron output in February shows the total to have been 2,900,126 gross tons or 100,004 tons per day. This is 364 tons per day higher than the estimated output of 99,640 tons per day published last week. Thus the actual gain in February over January was 7431 tons per day, or nearly 8 per cent. This compares with a gain in January over December of 5613 tons per day, or 6.4 per cent.

Total February pig iron output of 2,900,126 tons or 100,004 tons per day for the 29 days, compares with 2,869,761 tons or 92,573 tons per day for the 31 days in January. The February production last year was 105,024 tons per day. This year's February output is the smallest February since 1922.

Net Gain of Two Furnaces

Gain in active furnaces was only two. Eight furnaces were blown in and six were shut down. This compares with a net gain of 16 in January. Of the eight furnaces blown in last month, six were Steel Corporation stacks and two were merchant. Only one Steel Corporation furnace was blown out, making the net gain for that company five. There were four merchant stacks and one independent steel company stack shut down.

Capacity Active on March 1

On March 1 there were 187 furnaces active as compared with 185 on Feb. 1. The estimated daily operating rate of the 187 furnaces on March 1 was 100,060 tons; the 185 furnaces on Feb. 1 had an estimated operating rate of 99,640 tons per day.

Manganese Alloy Output

Production of ferromanganese in February was 19,320 tons; this compares with 22,298 tons made in January. Two companies made spiegeleisen last month but it is not possible to make public the actual data.

Possibly Active Furnaces Reduced

The Carnegie Steel Co. has dismantled its No. 1 Newcastle furnace in the Shenango Valley, thereby reducing the number of possibly active blast furnaces in the United States from 350 to 349.

Furnaces Blown In and Out.

Furnaces blown in during February include one Edgar Thomson furnace of the Carnegie Steel Co. in the

Pittsburgh district; one Newcastle furnace of the Carnegie Steel Co. and one Shenango furnace in the Shenango Valley; one Mingo furnace of the Carnegie Steel Co. in the Wheeling district; one South Chicago furnace of the Illinois Steel Co. and one Gary furnace in the Chicago district; one Bessemer furnace of the Tennessee Coal, Iron & Railroad Company in Alabama, and the Rockdale furnace in Tennessee.

Furnaces shut down during February were one Carrie furnace of the Carnegie Steel Co. in the Pittsburgh district; one Shenango furnace and the Stewart furnace in the Shenango Valley; one River furnace in northern Ohio; the Belfont furnace in southern Ohio, and one City furnace of the Sloss-Sheffield Steel & Iron Co. in Alabama.

Blast Furnace at Cleveland Makes 283,899 Tons of Iron in Year

A blast furnace output of 283,899 tons was made by the A furnace of the Central furnaces of the American Steel & Wire Co., Cleveland, during 1927, which established a production record for a Steel Corporation furnace and is believed to have set a tonnage record never before attained by any blast furnace. This stack is also making a remarkable production record on one lining. It has been in operation with its present lining since March 17, 1924, and has produced in that time 875,000 tons of pig iron. During the nearly four-year period it was banked twice. It is expected to produce 1,000,000 tons of pig iron before it will have to go out of blast for relining. Its best record for one day, 1003 tons, was made July 22, 1926.

Commercial Standard for Chain Link Fence Adopted by Industry

A general conference on chain link fence and chain link fabric held in Cleveland, Jan. 10, adopted a commercial standard for this commodity, according to an announcement of the assistant director in charge of commercial standards group, Bureau of Standards, Washington.

Prior to the adoption of this commercial standard, which includes simplification of sizes and dimensions, the fence was produced in the following heights: 3½, 4, 4½, 5, 5½, 6, 6½, 7, 7½, 8, 9, 10, 11 and 12 ft. The standard heights are now: 5, 6, 7, 8, 9 and 10 ft. Gages 6, 7, 8, 9, 9½, 10, 11, 12 and 14 were formerly used, but have now been reduced to 6, 9 and 11.

Meshes formerly in 1½, 1¾, 2, 2¼, 2½ in. sizes are simplified to 1¾ and 2 in. The approximate percentages of reduction in heights, gages and meshes are as follows: Heights, 57 per cent; gages, 66 per cent; meshes, 60 per cent.

The conference appointed the following members on the standing committee to serve as a liaison between the Department of Commerce and industry: J. H. Kinney, Cyclone Fence Co., Waukegan, Ill.; W. T. Kyle, Page Steel & Wire Co., Bridgeport, Conn., and H. G. Thomson, Anchor Post Fence Co., Baltimore, to represent manufacturers; T. C. Potts, Horace T. Potts Co., Philadelphia; W. J. Thwing, Security Fence Co., Summerville, Mass., and A. R. Dinn, P. H. Dinn & Co., Boston, to represent the distributers; and National Electric Light Association, American Railway Association and Bureau of Yards and Docks, Navy Department, to represent the organized consumers.

This recommendation became effective Jan. 15, subject to annual revision by a similar conference or the standing committee.

Iron and Steel Markets

Steel Output Maintained

Automobile Makers Take More Steel—High Rail Production Assured Until June 1—Second Quarter Contracting in Plates, Shapes and Bars at 1.85c.

STEEL production is being well maintained, with Steel Corporation plants operating at 90 per cent of capacity and independents averaging about 80 per cent. While mill operations, as a whole, have ceased to expand and ingot output for this month is not expected to duplicate the record production of March, 1927, there are increasing indications that the present rate of operations may carry well through April, in contrast with the decline in that month a year ago.

The unfilled tonnage statement of the Steel Corporation, as of March 1, will probably show little change, owing to heavy shipments in February. So far this month, also, shipments continue to balance bookings for most mills, leaving backlogs undiminished. There are, of course, some exceptions both with respect to districts and commodities. At Chicago, where the week's specifications are the fourth largest in the past two years, shipping orders exceed ingot production, which is at a 95 per cent rate. In the Philadelphia district, where specifying has been lagging, more tonnage is being released for rolling than in February. At Pittsburgh some recession in specifications for heavier rolled products is reported, and it is inferred that buyers have accumulated enough stock so that further releases against low-priced contracts can be timed to carry shipments over into April.

Among individual rolled products, sheets have shown a marked gain in specifications. February tonnage releases received by the leading sheet maker were equal to 90 per cent of capacity, and for the first week in March actually exceeded full theoretical capacity. Both the automotive industry and farm implement makers are pressing for deliveries of sheets, as well as bars. Youngstown district mills are finding it necessary to operate extra turns to satisfy the increasing requirements of automobile builders, which in virtually no cases represent anticipated needs. In fact, many motor car plants are depending on daily deliveries to maintain their production schedules.

Steel prices show little change, following recent advances. The increase of $1 a ton to 1.90c., Pittsburgh, on plates, shapes and bars is not yet fully established, since some mills allowed their customers to cover for both early and second quarter needs at the previous price of 1.85c. In other products, outside of rails and tin plate, there has been little contracting for second quarter. Automobile companies, in many cases, are limiting forward purchases to their April requirements.

Makers of wire products and wire rods have opened books for second quarter at unchanged prices. Leading producers of large rivets have announced an advance of $3 a ton, effective at once. Steel tie plates, on the other hand, have generally declined $2 a ton to $43, mill.

Rail mill backlogs, which are fully 300,000 tons larger than a year ago, will help to sustain ingot output in the second quarter. Chicago rail mills have enough tonnage booked to insure a high rate of operations until June 1. A Western road has placed 13,000 tons with Chicago producers. Railroad equipment buying for the week totals 700 cars, of which 400 were for the Soo Line and 300 for Wilson & Co., Chicago meat packers.

Structural awards amount to 45,000 tons, while more than 40,000 tons was added to work under negotiation. Principal contracts were 5200 tons for a loft building in New York, 5000 tons for a building in Pittsburgh and 4500 tons for a club building in Chicago. Inquiries include 4800 tons for Mississippi River barges, 4000 tons for a department store at Oakland, Cal., and 5000 tons for subway work in New York, while 10,000 tons for subway work, on which bids recently went in, will be awarded within a few days.

Storage tanks ordered by three Texas oil producers call for a total of 12,000 tons of plates. Demand for oil country pipe, however, is slow, and while heavier orders for pipe for building work are looked for with the approach of spring, it is doubtful whether the expansion will be as great as usual. Distribution of pipe to a larger extent than in recent years is on consignee accounts, which have been well rounded out by mills since the first of the year.

Pig iron is fairly active at Chicago and Cleveland and in the New York district, but elsewhere is dull, being almost at the point of stagnation at Pittsburgh and in the Valleys. Prices are unchanged, but concessions on Buffalo iron are appearing more frequently at competitive points, while the adherence of eastern Pennsylvania furnaces to a $20 base resulted in the placing of 2000 tons of foundry grades by a Gloucester, N. J., melter with two outside furnaces and an importer at slightly lower prices.

Cast iron pipe prices again have weakened, notably in the Chicago district, where municipal business has brought out a bid of $26.70, Birmingham, on 8 and 12-in. sizes, while in the East the low prices of Northern foundries are discouraging Southern competition.

Scrap is weak in nearly all large consuming and producing districts. The heavy production of scrap by automobile companies has been reflected in lower prices at Middle West consuming centers.

Both of THE IRON AGE composite prices remain unchanged for the fourth consecutive week, that for pig iron at $17.75 a ton and that for finished steel at 2.364c. a lb. Steel is close to its level of one year ago, but pig iron is down $1.21 a ton.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Some Slackening in Steel Demand But Volume is Not Appreciably Affected

PITTSBURGH, March 6.—The showing of the steel market over the first two months of the year compares favorably in business, production and shipments with the same period last year. In shipments, this year has been somewhat better than 1927, since it was not until about the middle of February last year that the movement began to show real volume, while this year shipments began to mount very promptly in January and continued at a high rate through February. Some slackening in the past week has not appreciably reduced the volume of the outward movement from the mills. This month is starting a little more quietly than either January or February and generally the trade is not looking for March to equal in business that month last year, which was the record month of all time in production and shipments. On the other hand, it is not expected that April will show quite the sharp recession that April, last year, did, and it is rather generally expected that for the first four months of the year there will be little variation from the business of that period last year.

In a number of finished steel products, specifications still are pouring in very freely, sheets being a notable example, but in others shipping instructions are for definitely smaller tonnages than was the case recently. The price question enters into these cases. In plates, bars, shapes, strips and wire products, consumers are covered for this quarter at prices well under those now asked and, having taken shipments fairly liberally so far this year, there are some instances where stocks are sufficient to permit of conservation of low-priced tonnage for specification between now and the end of the month for April shipment. It perhaps is no exaggeration to say that it will probably be May before many of the steel manufacturers begin to derive full benefit of the higher prices that have been announced since the opening of the year. The second quarter promises to be highly interesting for the steel trade.

No change is noted in the rate of steel works' operations and in the rolling mills schedules, the alinement is much as it has been recently, with pipe mill operations making the poorest showing, since jobbers serving the building and construction industry have not yet made much of a reduction in their stocks and the oil industry is yet to evince much interest in drill and drive pipe and casing. The automobile industry still stands out as the heaviest user of steel, although its takings as a whole still are under what they were expected to be by this time because of the failure of a maker of low-priced cars to get up production as rapidly as was expected. Agricultural implement manufacturers are busy and buying a lot of steel. Except for rail tonnage, railroad business in this district is disappointing and other districts appear to be doing better in structural work than this.

Inactivity still rules in the pig iron market and prices appear to be maintained largely by reason of an absence of selling pressure. The scrap market is a small-lot affair with only moderate interest on the part of consumers. The depression in the coal industry continues. There are some hopes that the opening of Lake navigation will create a market for Pittsburgh district coal, but also fears that the starting up of mines to supply such a demand would bring labor troubles. Moreover, Southern mines are not going to surrender the business without a struggle.

Pig Iron.—Except for a sale of 500 tons of foundry iron to the Westinghouse Electric & Mfg. Co. for delivery over the remainder of this quarter to its Trafford, Pa., works, it has been an uneventful week in this market. There is some doubt as to the price paid for this lot, but it is generally believed to have been at the regular price of $17.25, Valley furnace, for No. 2 grade. Small lots of malleable iron have been moving at that price and carload lots of Bessemer have been sold in the week at $17.50. On the former, however, $17.25 appears to be all that the market will yield and there is no longer much basis for a higher quotation.

W. P. Snyder & Co. report February average prices of basic and Bessemer iron from Valley furnaces as $17 and $17.50, unchanged from the month before.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$17.00
Bessemer	17.50
Gray forge	16.75
No. 2 foundry	17.25
No. 3 foundry	16.75
Malleable	17.25
Low phosphorus, copper free	27.00

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—Good movement is noted of the commonly-used ferroalloys on contracts, but new business amounts to little. There is no change in prices.

Semi-Finished Steel.—Makers of billets, slabs and sheet bars are talking about higher prices on second quarter tonnages, but on such business as has been done in the past week, which included one fair-sized lot of small billets, recent prices have ruled. Youngstown mills feel the Cleveland mill competition on sheet bars and seem disposed to wait for some signs of strength in that market before taking a stand on prices. All local producers of wire rods are quoting $44, base, Pittsburgh or Cleveland, on spot or second quarter tonnages, but only a few spot demands are developing and consumers are not yet interested in second quarter requirements.

Bars, Plates and Shapes.—The first week of the new month has not been marked by quite as much activity in specifications as there had been over much of the first two months of the year. In some quarters there is a belief that consumers have become fairly well supplied as a result of heavy deliveries over the past six or eight weeks, and now are in a position to reduce their specifications. Contract buyers have until the end of the month to send in specifications on orders carrying a price of 1.80c., base Pittsburgh, and are believed to be holding back some tonnage for April shipment. Bar specifications are still good, though slightly less in volume than they have been. Steel for 41 barges to be built for the Mississippi River Commission, amounting to 4800 tons of plates and small shapes, will be rolled here. Steel for the Fort Lee bridge, New York City, is being fabricated. The larger fabricating shops are well supplied with business, but the smaller ones appear to need orders. As yet, 1.90c., base, is more of a small than a large-lot price.

Rails and Track Supplies.—Local makers now are quoting tie plates at $43 per net ton, a cut of $2 a ton. Recent prices are holding on the other track accessories, but business is not very active. Standard-section rails are moving well on 1928 contracts. Not much activity is noted in light-section rails.

Wire Products.—Makers quite generally have opened books for second quarter business at unchanged prices, or $2.65 per keg, base Pittsburgh, for nails and $2.50 per 100 lb., base, for plain wire. A little business for that period has been written at these levels, which represent an advance of $2 a ton over the contract prices for this quarter. Makers report very steady specifying against contracts and enough business to sustain mill operations of 65 to 70 per cent of capacity.

Tubular Goods.—The pipe market still is dull. While an increase in orders for pipe for building and construction is expected with the approach of spring, it is doubtful if the expansion will be as great as usual, for the reason that distribution, now more than in recent years, is on consignee accounts, and since the first of the year such accounts have been rounded out and built up by the mills. This leaves only the replacement of pipe sold to supply new mill orders. Oil country pipe still is slow of sale, and the several large gas pipe lines that have been mentioned in recent weeks are not much nearer the mills than they were when first broached. Only a fair demand is noted for boiler tubes, but mechanical tubing is going well. Prices continue irregular.

Sheets.—February tonnage releases received by the leading producer were equal to approximately 90 per cent of its productive capacity, and for the first week of March they have actually exceeded full theoretical capacity, with the result that on some finishes, notably blue annealed sheets, it cannot promise much earlier than April delivery on new orders. Several of its plants engaged on automobile body sheets are fully obligated against this month's production. Independent companies also are faring well, and some of them producing full-finished sheets are working their mills as many as 18 turns a week to keep up with the demands of the motor car builders. There are occasional deviations from 2.90c., base Pittsburgh, on black sheets and some irregularity still is noted in galvanized sheets, but the market is firm on blue annealed sheets and is holding well on electrical sheets. Agricultural implement manufacturers are very insistent for supplies, even more so than the motor car builders, although a much larger tonnage is going to the latter.

Tin Plate.—Specifications on contracts are still fairly heavy and mill operations hold up to 80 per cent of capacity, with enough business in sight to sustain that rate until April quotas are fully specified. It is

2100*	(½% Nickel, 0.10% to 0.20% Carbon)	$2.90 to $3.00
2300	(3½% Nickel)	4.00 to 4.10
2500	(5% Nickel)	5.00 to 5.25
3100	(Nickel Chromium)	3.00 to 3.10
3200	(Nickel Chromium)	4.75 to 5.00
3300	(Nickel Chromium)	6.75 to 7.00
3400	(Nickel Chromium)	6.00 to 6.25
5100	(Chromium Steel)	3.00 to 3.10
5200*	(Chromium Steel)	7.00 to 7.50
6100	(Chrom. Vanadium bars)	4.00 to 4.15
6100	(Chrom. Vanad. spring steel)	3.50 to 3.75
9250	(Silicon Manganese spring steel)	3.00 to 3.15
Carbon Vanadium (0.45% to 0.55% Carbon, 0.15% Vanad.)		4.10 to 4.20
Nickel Chrom Vanadium (0.60 Nickel, 0.50 Chrom., 0.15 Vanad.)		4.05 to 4.20
Chromium Molybdenum bars (0.80—1.10 Chrom., 0.25—0.40 Molyb.)		4.00 to 4.25
Chromium Molybdenum bars (0.50—0.70 Chrom., 0.15—0.25 Molyb.)		3.05 to 3.10
Chromium Molybdenum spring steel (1 — 1.25 Chrom., 0.30 — 0.50 Molybdenum)		4.50 to 4.75

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

---

*Not S. A. E. specification, but numbered by manufacturers to conform to S. A. E. system.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, 9/16 in. and larger	$2.70 to $2.80
Spikes, ½ in. and smaller	2.70 to 2.80
Spikes, boat and barge	2.90 to 3.00
Tie plates, steel	2.15
Angle, bars	2.75
Track bolts, to steam railroads	3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count,	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

understood that the Texas Co. inquiries for re-export oil can sizes of tin plate have been divided between a Pittsburgh district and a Chicago district mill. The Nippon Oil Co. business is reported here to have been placed abroad. No other new business of account recently has come out.

Cold-Finished Steel Bars and Shafting.—Buyers are not yet showing much interest in second quarter tonnages, but in a few instances where there has been a desire for coverage for that period, makers have named 2.30c., base Pittsburgh. It appears that while a higher price may later be announced, contract buyers will likely be given an opportunity to cover at 2.30c. for the next quarter. Specifications against first quarter contracts are good, but hardly as large as they were recently, buyers evidently conserving some of their tonnage carrying 2.20c. for specification late this month for April shipment.

Hot-Rolled Flats.—There is some evidence that, as a result of heavy shipments over the past two months, buyers have built stocks up sufficiently to get along with somewhat lighter new shipments. Business still is good, but not quite as good as it was during the last half of February. Some makers who did not get filled up and who now can make very prompt shipments have done better in the past few weeks than they did previously. Advanced prices announced for second quarter are adhered to and a fair amount of contracting is reported.

Cold-Rolled Strips.—A slight recession in new specifications does not mean that the market is quiet in point of production or shipments, but rather that consumers have fairly good stocks and are trying to prolong low-priced tonnage as long as possible.

Bolts, Nuts and Rivets.—Leading makers of rivets have announced an advance of $3 a ton on large rivets, effective immediately, and also applying on second quarter contracts. The new prices are $2.90 per 100 lb., base Pittsburgh or Cleveland, and $3, base Chicago or Birmingham. A few buyers who failed to contract for this quarter have been obliged to pay the advance, but the bulk of the movement still is at the first quarter contract prices, specifications having been somewhat stimulated by the advance. Bolt and nut business in February ran from 15 to 20 per cent above that for January, but the gain loses some of its significance in view of the fact that January business was not much in excess of 50 per cent of productive capacity.

Coke and Coal.—Spot offerings of furnace coke are ample and prices remain at the recent low levels. There are few blast furnaces using Connellsville coke that are not covered for the second quarter, and there is less than the usual amount of open market inquiry for that period. Producers are naming $3 per net ton at ovens as their idea on contract supplies for the period, but it is doubtful if any business now on producers' books carries more than $2.75. Spot foundry coke takes a full range of from $3.75 to $5.10 in open-top cars, but most of the current business is at prices ranging from $3.75 to $4.25. The coal market is still very dull and shows no strength as the supply is still too great for wants. A Youngstown district steel company is reported to have contracted for 1,000,000 tons of lump gas coal for delivery over the year beginning April 1 at $2 per net ton at mines. This plainly indicates the need of business by operators, since that price can hardly be profitable even on today's wage scales.

Warehouse Prices, f.o.b. Pittsburgh

	Base per Lb.
Plates	3.00c.
Structural shapes	3.00c.
Soft steel bars and small shapes	2.90c.
Reinforcing steel bars	2.75c.
Cold-finished and screw stock—	
Rounds and hexagons	3.60c.
Squares and flats	4.10c.
Bands	3.60c.

Blue annealed sheets (No. 10 gage), 25 or more sheets	3.10c.
Galvanized corrugated sheets (No. 28 gage), per square	$4.39
Spikes, large	3.30c. to 3.40c.
Small	3.80c. to 5.25c.
Boat	3.80c.
Track bolts, all sizes, per 100 count,	62½ per cent off list
Machine bolts, per 100 count	62½ per cent off list
Carriage bolts, per 100 count	62½ per cent off list
Nuts, all styles, per 100 count,	62½ per cent off list
Large rivets, base per 100 lb.	$3.50
Wire, black soft annealed, base per 100 lb.	$3.00 to 3.10
Wire, galvanized soft, base per 100 lb.	3.00 to 3.10
Common wire nails, per keg	3.00
Cement coated nails, per keg	3.05

Old Material.—The market still is very quiet so far as consumer interest goes. Heavy melting steel cannot be had freely at $14.50, but dealers are able to pick up small lots at that price and are not offering more than $14.25 for delivery at one point in the district. Fairly large quantities are available at $14.75 and dealers still are going up to $15 to cover against sales to consumers with rather exacting specifications. As much as $14.50 has been paid for compressed sheets, and on the present basis in Detroit they cannot be landed here under $14.75. In Youngstown the market is $14.50 and that district has a freight advantage over Pittsburgh on shipments from the West of about 60c. per ton. Machine shop turnings are weaker with sales at $10.50 to $11, the more recent sales being noted at the lower figure. Supplies are liberal as Youngstown is not taking much at present. Heavy breakable cast scrap is easier. The March list of the Norfolk & Western Railroad contains 8744 gross tons.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
Heavy melting steel	$14.50 to $15.00
Scrap rails	14.50
Compressed sheet steel	14.00 to 14.50
Bundled sheets, sides and ends	13.00 to 13.50
Cast iron carwheels	14.50 to 15.00
Sheet bar crops, ordinary	15.00 to 15.50
Heavy breakable cast	13.00 to 13.50
No. 2 railroad wrought	15.00 to 15.50
Heavy steel axle turnings	13.00 to 13.50
Machine shop turnings	10.50 to 11.00
Acid Open-Hearth Furnace Grades:	
Railroad knuckles and couplers	16.75 to 17.25
Railroad coil and leaf springs	16.75 to 17.25
Rolled steel wheels	16.75 to 17.25
Low phosphorus billet and bloom ends	18.50 to 19.00
Low phosphorus, mill plate	17.50 to 18.00
Low phosphorus, light grade	16.50 to 17.00
Low phosphorus sheet bar crops	17.50 to 18.00
Heavy steel axle turnings	13.00 to 13.50
Electric Furnace Grades:	
Low phosphorus punchings	16.50 to 17.00
Heavy steel axle turnings	13.00 to 13.50
Blast Furnace Grades:	
Short shoveling steel turnings	11.00
Short mixed borings and turnings	11.00
Cast iron borings	11.00
No. 2 busheling	10.00 to 10.25
Rolling Mill Grades:	
Steel car axles	18.00 to 19.00
No. 1 railroad wrought	11.00 to 11.50
Sheet bar crops	17.00 to 17.50
Cupola Grades:	
No. 1 cast	14.50 to 15.00
Rails 3 ft. and under	15.00 to 15.25
Malleable Grades:	
Railroad	14.50 to 15.00
Industrial	14.00 to 14.50
Agricultural	13.50 to 14.00

Production of bitumiuous coal in February is estimated by the United States Bureau of Mines at 41,290,000 net tons, or an average of 1,658,000 tons each working day. This is lower than in January, when production was 44,208,000 tons, or 1,747,000 tons a day.

Coal production of the United States in 1927 is estimated by the Bureau of Mines at 600,456,000 net tons, a drop of 9 per cent from the 657,804,437 tons of 1926. Of the total, 519,804,000 tons was bituminous and 80,652,000 tons anthracite.

Semi-Finished Steel, Raw Materials, Bolts and Rivets

Mill Prices of Semi-Finished Steel

Upset set screws	80, 10 and 10
Milled studs	70 and 5

Chicago

Steel Ordering Continues at High Rate —Ingot Output 95 Per Cent

CHICAGO, March 6.—Recent advances in prices have served to drive in specifications, the total of which was the fourth largest of any week in the past two years. New sales, checked momentarily by the announcement of higher quotations, now show marked improvement, making the week one of the best in many months. Ingot output is holding steady at 95 per cent of capacity and at that rate is lagging behind both new business and shipping orders.

Farm implement manufacturers exert a steady pressure for steel deliveries and automobile production schedules picture a gradually expanding activity in that industry. Railroad equipment orders are not heavy but fresh inquiry is in sight from the Rock Island. It is reported that the board of directors of that railroad will meet this week and that consideration will be given to the purchase of 2000 freight cars. Structural awards continue in good volume and shops are entering the spring period with order books of good size. A 4500-ton and a 3000-ton order in Chicago and one for 2500 tons from Ottawa, Ill., head the list. The Agricultural Mart, a project that has shown no life for many months, now gives promise of being revived and the first unit may require 16,000 tons.

Of special interest is the fact that a Western railroad has ordered 13,000 tons of rails in addition to the tonnage placed last fall for spring delivery. Competition from producers south of Chicago has resulted in shading of $1 to $1.50 a net ton on steel tie plates.

Pig Iron.—Second quarter contracting is progressing steadily and sales are close in volume to the last week in February. Most of the larger buyers have covered and individual purchases now are smaller than in the first part of the move to cover for the next three months. While there is no general inclination to buy for the third quarter, some inquiry for that period is before the trade and several lots have been purchased. Northern foundry iron is steady at $18.50 a gross ton and full differentials are being obtained. Sale of 1000 tons of Southern iron is reported.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.50
N'th'n No. 1 fdy., sil. 2.25 to 2.75	19.00
Malleable, not over 2.25 sil.	18.50
High phosphorus	18.50
Lake Superior charcoal, averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	21.18
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—In new sales this market is quiet but contract buyers are taking large shipments. A carload of 19 to 21 per cent spiegeleisen brought $32, Hazard, Pa. Quotations for ferromanganese are unchanged at $100, seaboard.

Prices delivered Chicago: 80 per cent ferromanganese, $107.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $38.76 to $39.76.

Plates.—Three oil producers in Texas have ordered a total of 12,000 tons of plates for storage tank construction. These orders practically wipe out inquiry that was before the trade, but there is evidence that additional tonnages are soon to come into the market. Railroad equipment is moderately active with orders for 700 cars. Wilson & Co. have placed 300 refrigerator cars with the Bettendorf Co. and the Soo Line has contracted for 400 box cars. Specifications from car shops are substantial in size and are so arranged that mills with good-sized order books are still meeting delivery demands in a satisfactory manner. Quotations on spot and future business are steady at 2c., Chicago, for 100 tons or more and at 2.10c. for smaller lots.

Mill prices on plates per lb.: 1.95c., base Chicago.

Shapes.—Structural awards in this district total 6000 tons in the week and fresh inquiry is for not less than 7000 tons. The Steuben Club Building, Chicago, which calls for 4500 tons, has been taken by the Gage Structural Steel Co., and the Union Carbide & Carbon Building, 3000 tons, by the American Bridge Co. Notable among fresh projects are 3000 tons for two buildings at Minneapolis, 1000 tons for the county's portion of the safety building at Milwaukee and a sizable tonnage for two steel frame high school buildings in Chicago. Although lettings in the last month have been large, shop operations are not well balanced and competition holds fabricated steel prices low regardless of the tonnage involved. Mill quotations on structural material are steady at 2c. to 2.10c., Chicago, depending on the tonnage. Most of the current shipments are being made against contracts placed at lower prices.

Mill prices on plain material per lb.: 1.95c. to 2.10c., base, Chicago.

Bars.—Specifications for soft steel bars are unusually heavy. The automobile trade is the largest user, with farm implement manufacturers a good second. It is now reported that the Chevrolet Motor Co. has revised its schedule for March and will produce 135,000 cars or 8000 more than were called for in the previous schedule. The iron bar market is quiet and without feature. Local alloy bar mills are heavily engaged and specifications are in excess of output. Increased service demanded by buyers of tractors is causing a rapidly expanding call for alloy steel bars for use in that class of machinery. Business in hard steel bars continues brisk and order books are well balanced and of good size for bars to be delivered over the next six weeks or two months. Second quarter contracting at 1.85c., Chicago Heights mills, is proceeding slowly. Specifications are about equal to shipments.

Mill prices per lb.: Soft steel bars, 1.95c. to 2.10c., base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.80c. to 1.85c., base, Chicago Heights mill.

Wire Products.—Demand for these commodities is shifting both as to commodity and classes of users. Rural sections are taking smaller tonnages of nails and there is a slight decline in orders from jobbers in the North Central States. Business in the South is steady, while both orders and specifications from the manufacturing trade are heavier. The net result is that shipments are about equal to mill output, which stands at 75 per cent of capacity.

Sheets.—Chicago district mills are heavily engaged and deliveries range from four to six weeks, depending on the grade desired. Reports of price advances are still heard but in the meantime producers are busily engaged taking in tonnages for delivery during the second quarter at prices that are unchanged. Demand is widespread and comes from practically all classes of users. Barrel manufacturers have speeded production and farm implement makers continue to issue heavy specifications.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 3.05c.; No. 24 galvanized, 3.90c.; No. 10 blue annealed, 2.25c. to 2.35c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Reinforcing Bars.—Return of moderate weather has added life to this market and during the week over 2000 tons of billet steel reinforcing bars and 700 tons of the rail steel bar commodity have been awarded to bending shops. The largest single contract was 1600 tons for a cold storage warehouse and 400 tons will be used in the Chicago Civic Opera Building. Fresh inquiry is promising and many new projects are now in the hands of estimators. Prices for billet steel reinforcing bars are moderately steady at 2.35c. to 2.75c., Chicago warehouses. Evidence of weakness is at hand on quotations for attractive tonnages. Hard steel reinforcing bars are quotable at 1.85c. to 1.95c., the higher price applying on bridge and culvert work.

Hot-Rolled Strip.—Production of this commodity is at capacity. Second quarter books are open at current quotations and forward buying is of fair proportions.

Billets.—The $1 a ton advance in billets announced a week ago by Chicago producers has been well tested by both spot and future orders. Rerolling billets, 4 in. and over, are being quoted at $34 a gross ton.

Sheet Bars.—New sales in this commodity have established prices at $35 per gross ton. Production is at capacity and specifications for the week are heavier than in any like period in the last year and a half.

Cold-Rolled Strip.—Second quarter books for cold-rolled strip are open at 3.15c., Cleveland, or 3.45c., delivered Chicago, in widths less than 12 in. and in lots of 1 to 3 tons. Forward buying is moderately active and specifications are heavy. Output is at close to plant capacity. Shipments in February this year were fully 20 per cent heavier than in the second month of last year.

Rails and Track Supplies.—Prices for steel tie plates are weak at $2.15, base, per 100 lb.. Quotations on other track accessories are steady. Of particular interest in the rail market is the purchase of 13,000 tons of standard-section rails by a Western railroad. This is the first order to be placed in what is referred to as the secondary buying movement. For several weeks past local rail mills have been engaged at 90 to 95 per cent of capacity and it is variously estimated that not more than 30 per cent of the rails purchased in the fall buying movement have been rolled. Shipping schedules are well arranged and they indicate a sustained rate of output up to June 1 or even beyond. Miscellaneous orders for track fastenings total 5000 tons and fresh inquiry is of fair size and active. The light rail market is dull.

Bolts, Nuts and Rivets.—New discounts on stove bolts are 75, 20, 10 and 5 off list in package lots and an additional 2½ per cent off list in bulk. Small rivets are steady at 70 and 10 to 70 per cent off list. Producers have named $3, Chicago, as the second quarter contract price for large rivets. Specifications have not held the gain made a week ago.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per Lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Coke.—Prices for by-product foundry coke are steady at $9, local ovens, and at $9.50, delivered in the Chicago switching district. Shipments have made a slight gain over a week ago. It is reported that sellers of foundry coke in Indiana have named lower prices for spot and future delivery.

Cast Iron Pipe.—Keen competition among producers has again weakened quotations on large tonnages of cast iron pipe. The United States Cast Iron Pipe & Foundry Co. has taken 1600 tons of 8 and 12-in. pipe for Chicago at $26.70, Birmingham, or $34.90, delivered. One competitive price was near these figures, while other bids were close to $30, Birmingham. At Rockford, Ill., the same seller took 500 tons at $36.97, delivered, or $28.77, Birmingham. A number of private lettings in the week were awarded at prices that ranged close to $30, Birmingham. Cast iron pipe is quotable in this market at $35.20 to $38.20, delivered, for 6-in. and larger diameters. Canton, Ohio, has closed for 300 tons of 6, 8 and 12-in. pipe. Noteworthy among fresh inquiries is 1040 tons of 4 to 12-in. class B pipe for Barberton, Ohio. This market is moderately active. Three contractors have placed large orders in the week and public utilities are actively engaged in buying against early spring requirements. Little interest in cast iron pipe is being shown by the railroads.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $35.20 to $38.20; 4-in., $39.20 to $42.20; Class A and gas pipe, $4 extra.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.35c. to 2.75c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb	$3.20
Common wire nails, base per keg	3.00
Cement coated nails, base per keg	2.90

Old Material.—The Chicago scrap market shows a mixed situation. Several large users of heavy melting steel have been getting shipments faster than they could be handled and hold-up orders have been the result. Railroad shipments are large and steady. Distress tonnages are giving more trouble than in many months. Cast iron borings, which formerly were diverted to the Mayville, Wis., furnace when it was in operation, are now reaching the Chicago market and making a bad situation worse. Evidence of speculation is at hand in prices being obtained by the railroads. On such grades as railroad malleable, rerolling rails, short rails and heavy melting steel the Illinois Central got higher than the top of present published quotations. The Santa Fe is advertising a list of 5000 tons.

Prices delivered consumers' yards, Chicago:

Per Gross Ton

Basic Open-Hearth Grades:		
Heavy melting steel	$12.75 to	$13.25
Shoveling steel	12.75 to	13.25
Frogs, switches and guards, cut apart, and miscellaneous rails	14.25 to	14.75
Hydraulic compressed sheets	11.25 to	11.75
Drop forge flashings	9.75 to	10.25
Forged, cast and rolled steel carwheels	15.25 to	15.75
Railroad tires, charging box size	16.50 to	17.00
Railroad leaf springs, cut apart	16.50 to	17.00
Acid Open-Hearth Grades:		
Steel couplers and knuckles	14.50 to	15.00
Coil springs	16.50 to	17.00
Electric Furnace Grades:		
Axle turnings	13.00 to	13.50
Low phosphorus punchings	14.25 to	14.75
Low phosphorus plate, 12 in. and under	13.50 to	14.00
Blast Furnace Grades:		
Axle turnings	10.75 to	11.25
Cast iron borings	9.75 to	10.25
Short shoveling turnings	9.75 to	10.25
Machine shop turnings	7.25 to	7.75
Rolling Mill Grades:		
Iron rails	13.50 to	14.00
Rerolling rails	15.00 to	15.50
Cupola Grades:		
Steel rails less than 3 ft	15.50 to	16.00
Angle bars, steel	14.25 to	14.75
Cast iron carwheels	14.00 to	14.50
Malleable Grades:		
Railroad	13.00 to	13.50
Agricultural	12.50 to	13.00
Miscellaneous:		
*Relaying rails, 56 to 60 lb	23.00 to	25.00
*Relaying rails, 65 lb. and heavier	26.00 to	31.00

Per Net Ton

Rolling Mill Grades:		
Iron angle and splice bars	14.00 to	14.50
Iron arch bars and transoms	18.75 to	19.25
Iron car axles	21.50 to	22.00
Steel car axles	16.00 to	16.50
No. 1 railroad wrought	11.00 to	11.50
No. 2 railroad wrought	11.25 to	11.75
No. 1 busheling	9.25 to	9.75
No. 2 busheling	4.25 to	4.75
Locomotive tires, smooth	12.50 to	13.00
Pipes and flues	8.00 to	8.50
Cupola Grades:		
No. 1 machinery cast	14.50 to	15.00
No. 1 railroad cast	13.00 to	13.50
No. 1 agricultural cast	13.00 to	13.50
Stove plate	11.25 to	11.75
Grate bars	11.50 to	12.00
Brake shoes	11.50 to	12.00

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

The American Rolling Mill Co. has purchased two slab-heating furnaces, a holding furnace and a continuous rough-plate heating furnace from the Flinn & Dreffein Co., Chicago. This equipment will be installed at the company's East Side works at Middletown, Ohio, where extensive improvements are being made.

Philadelphia

Steel Contracts for Second Quarter Made at 1.85c. Pittsburgh

PHILADELPHIA, March 6.—Although plates, shapes and bars have been advanced to 1.90c. per lb., base Pittsburgh, contracts are being made for second quarter at 1.85c. per lb., Pittsburgh, for bars, 2c., Coatesville, for plates and at 2c., Bethlehem, for shapes. There is still expectation of a further advance about April 1, but with most consumers covered, the value of such an increase is beginning to be doubted. A producer of shapes in eastern Pennsylvania is quoting on the basis of current contracts, which are at 1.80c. per lb., Pittsburgh, or 2.12c. per lb., delivered Philadelphia. Sheet prices are developing a stronger tendency, particularly blue annealed and galvanized. Black sheets are still obtainable at small concessions from the nominal market price of 2.90c. per lb., Pittsburgh.

There is some pig iron inquiry for second quarter, but many consumers are apparently inclined to delay action pending further developments in the situation on Buffalo barge shipments, which they believe may result in more competition and a recession from the present price level. A small basic tonnage has been closed at about $20 per ton, delivered.

Pig Iron.—In the local market, eastern Pennsylvania furnaces are still quoting foundry iron at $20 per ton, base, and offers of lower prices by consumers have brought no concessions acceptable to the buyer. The probability of a decided increase in barge and barge and rail shipments of iron from Buffalo into eastern Pennsylvania is viewed with some concern, but producers here are inclined to doubt some of the extremely low barge rates reported. Nevertheless, even at the regular rates for barge shipment from Buffalo, a highly competitive situation might develop. A Gloucester, N. J., consumer has bought 2000 tons of foundry iron, part foreign and part domestic, at slightly under published prices. A purchase of 6000 to 7000 tons of basic iron has been made by an eastern Pennsylvania consumer at a delivered price about $20 per ton. Low phosphorus iron is quiet, but prices are firm.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.		$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.		21.26
East Pa. No. 1X		21.76
Basic (delivered eastern Pa.)	$19.50 to	20.00
Gray forge	19.75 to	20.25
Malleable	21.00 to	21.50
Standard low phos. (f.o.b. New York State furnace)	23.00 to	24.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to	24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to	25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to	25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, $\frac{3}{16}$-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.50c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.60c.
Steel bands, No. 12 gage to $\frac{3}{16}$-in., inclusive	3.35c.
Spring steel	5.00c.
Black sheets (No. 24)	4.25c.
Galvanized sheets (No. 24)	5.10c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
$\frac{3}{16}$-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

Billets.—Despite advances in prices of plates, shapes and bars, rerolling billets continue at $33 per ton, base Pittsburgh, and forging grade at $38 per ton, Pittsburgh. A slight increase in small orders is reported.

Plates.—Quotations on small current purchases are 2.05c. per lb., Coatesville, or 2.15c. per lb., delivered Philadelphia, but contracts for second quarter are being made at 2c. per lb., Coatesville, or 2.10c. per lb., Philadelphia. Eastern Pennsylvania producers of plates are fairly busy and in one instance a mill has exhausted its reserve supply of ingots and now has additional open-hearth capacity in operation. The Reading Co. is inquiring for six car floats requiring about 200 tons of plates.

Shapes.—Current demand is small, but on small orders for prompt shipment 2.05c. per lb., Bethlehem, or 2.18c. per lb., Philadelphia, is being maintained with the exception of one eastern Pennsylvania mill, which is still quoting the current contract price of 1.80c. per lb., Pittsburgh, or 2.12c. per lb., Philadelphia. Specifications against first quarter contracts are slightly better than during February, but consumers are still delaying in asking for shipments. Six car floats for the Reading Co. will require 500 to 600 tons of shapes. Building permits issued in Philadelphia in January and February exceeded the first two months of 1927 and there is some sizable bridge construction in prospect for the present month.

Bars.—Specifications against contracts are coming out more freely than last month, but the market is rather inactive, particularly on current purchases for prompt shipment. On new business for immediate delivery, mills are quoting 1.90c. per lb., Pittsburgh, or 2.24c. per lb., Philadelphia. On contracts for second quarter 1.85c. per lb., Pittsburgh, or 2.17c. per lb., Philadelphia, are the prevailing quotations.

Sheets.—More firmness is evident in sheet prices. No concessions from 2.10c. per lb., base Pittsburgh, on blue annealed have been reported recently and galvanized sheets are fairly stable at 3.75c. per lb., Pittsburgh, with only small concessions obtainable. Black sheets are still off from the nominal basis of 2.90c. per lb., Pittsburgh. In line with the evident strengthening of sheets there is more interest among consumers in contracts for the next quarter, although very few such contracts have been closed.

Old Material.—The scrap market continues to show slight weakness in some grades. No. 1 heavy melting steel is going forward to consumers on $13.50 and $14 contracts, but no new purchases are reported. A Phoenixville, Pa., consumer has purchased a tonnage of stove plate at $12.50 per ton and is now offering to buy at $12, delivered. This mill is also offering to buy machine shop turnings at $10.50 per ton, delivered, but has not yet succeeded in closing at this price. A tonnage of forge fire has been purchased at $11 per ton, delivered Coatesville, Pa.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to	$14.00
Scrap T rails	13.00 to	13.50
No. 2 heavy melting steel	11.00 to	11.50
No. 1 railroad wrought	15.00 to	15.50
Bundled sheets (for steel works)	10.50 to	11.00
Machine shop turnings (for steel works)		11.00
Heavy axle turnings (or equivalent)	12.00 to	12.50
Cast boring (for steel works and rolling mill)		11.00
Heavy breakable cast (for steel works)	15.50 to	16.00
Railroad grate bars		12.50
Stove plate (for steel works)		12.50
No. 1 low phos., heavy, 0.04 per cent and under	18.00 to	18.50
Couplers and knuckles	16.00 to	16.50
Rolled steel wheels	15.50 to	16.00
No. 1 blast furnace scrap	10.50 to	11.00
Machine shop turnings (for rolling mill)		11.00
Wrought iron and soft steel pipes and tubes (new specifications)	12.50 to	13.00
Shafting	17.50 to	18.00
Steel axles	19.00 to	20.00
No. 1 forge fire	11.00 to	12.00
Steel rails for rolling	15.00 to	15.50
Cast iron carwheels	15.50 to	16.50
No. 1 cast	16.00 to	16.50
Cast borings (for chemical plant)	14.50 to	15.00

Warehouse Business.—Jobbers report a moderate volume of purchasing. Effective March 2, warehouses in this district have advanced steel bars, hoops and

CARNEGIE LIBRARY OF ATLANTA

bands $2 per ton. Bars are now quoted at 2.50c. per lb., hoops at 3.60c. per lb. and bands at 3.35c. per lb., base.

Imports.—In the week ended March 3, no pig iron ore arrived at Philadelphia. A total of 310 tons of structural shapes arrived from Belgium and 26 tons from France, 57 tons of steel bars from Belgium and 35 tons from Germany, 72 tons of bands and strip steel from Belgium and 21 tons from the United Kingdom, 20 tons of reinforcing bars from Belgium and 34 tons of steel scrap from Germany.

New York

Steel Contracting for Second Quarter at Former Prices—Pig Iron Active

NEW YORK, March 6.—Sustained interest in pig iron is reflected by the sales of local brokers for the week, which totaled close to 10,000 tons. While most of the larger buyers have covered for their second quarter needs, considerable business continues to be placed by small melters. Pig iron consumption in this district is holding its own, but shows few indications of increasing. Meanwhile, with the season of navigation approaching, competition among furnaces is growing keener. On 2100 tons of foundry for the Gloucester, N. J., plant of the American Radiator Co., eastern Pennsylvania producers refused to shade their price of $20, base furnace. The iron was bought at lower prices, however, being divided between foreign and outside domestic furnaces. Delivery will be by water. The Crane Co., Bridgeport, Conn., has bought 1500 tons of domestic iron for barge delivery. Buffalo foundry iron continues to be quoted at $16.50, base furnace. Indian iron has been sold at $19.75 to $20.25, duty paid, port of entry.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$21.41 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Reinforcing Bars.—Bids were taken this week on the anchorage and abutment towers for the Hudson River bridge, New York, involving approximately 500 tons of bars. Not all distributers in this territory have advanced their mill price to 2c., Pittsburgh, and 1.95c. is still the ruling price on any considerable tonnage. The Youngstown warehouse price is unchanged at 2.20c., or 2.57½c. on cars at New York, and out of New York warehouse the general quotations are 2.80c. for lots of 5 tons or more, 2.95c. for lots of 2 to 5 tons and 3.24c. for less than 2 tons, all delivered at job.

Finished Steel.—Steel business, as represented by new orders and specifications against first quarter contracts, continues at a good rate in this district. The common report from most of the steel companies' offices is that orders and shipments about balance, but contract specifications form a large proportion of mill rollings for the reason that nearly all buyers are protected through the quarter. It is now two weeks since the Carnegie Steel Co. announced an advance to 1.90c., Pittsburgh, on plates, shapes and bars, and within that time nearly all other steel companies have taken like action, but the $1 advance has not become firmly established even as a second quarter contract price because of the wide coverage mills have given buyers for second quarter at 1.85c., Pittsburgh, or at corresponding levels at Eastern basing points. Eastern plate mills have made contracts for second quarter on the basis of 2c., Coatesville, and Eastern shape mills have contracted at 2c., Bethlehem. Moreover, additional tonnage for shipment this month has been taken from contract customers at the prices existing before the Feb. 21 advance. In sheets there has been very little second quarter contracting, but current shipments on contract remain at a high level. Structural steel contracts closed in New York within the last week totaled more than 14,000 tons, of which 5200 tons was for a loft building. Specifications for the Kill van Kull bridge, taking 15,000 tons, will be issued by the Port Authority on May 5.

Warehouse Business.—Since the first of the month there has been a slight increase in the volume of orders for material from stock and individual purchases are generally larger than for some time. Demand for structural material is good and there is a moderate tonnage of sheet buying. Prices are unchanged.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.17½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Cast Iron Pipe.—Although most makers are fairly well booked with enough tonnage of bell and spigot pipe to carry them for the next month to six weeks,

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.34c.
Soft steel bars and small shapes	3.24c.
Iron bars	3.24c.
Iron bars, Swedish charcoal	7.00c. to 7.25c
Cold-finished shafting and screw stock—

low prices continue to appear on desirable business. With Northern makers quoting low delivered prices, Southern producers who have a $9.25 per ton freight rate to pay are not offering much competition at present. Foundries have a fair total of business in small-size pipe, but are seeking tonnage in the larger diameters. The Long Island Lighting Co. is inquiring for about 600 tons of 20-in. pipe for Hempstead. The Department of Purchase, New York, is inquiring for about 3000 tons of cast iron pipe. Except for New York, no municipal buying of consequence has appeared in this district. Private purchasing continues fairly active.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.25 to $38.25; 4-in. and 5-in., $42.25 to $43.25; 3-in., $52.25 to $53.25; Class A and gas pipe, $4 to $5 extra.

Coke.—Purchasing of both furnace and foundry grades of coke is mostly in carload lots. Standard furnace coke ranges from $2.75 to $2.85 per ton, Connellsville, and standard foundry is quoted at about $4 per ton, Connellsville, with special brands bringing up to $5.10 per ton. Delivered prices of Connellsville foundry coke are: To northern New Jersey, $8.03 to $8.53; to New York or Brooklyn, $8.79 to $9.29; to Newark or Jersey City, $7.91 to $8.41. By-product prices are unchanged at $9 to $9.40 per net ton, delivered Newark or Jersey City.

Old Material.—No. 1 heavy melting steel is unchanged with brokers still buying at $13.50 per ton, delivered eastern Pennsylvania. Some other grades, however, show a tendency to weakness. On the basis of recent sales of stove plate at $12.50, brokers are offering $12 per ton, delivered Phoenixville, Pa. Machine shop turnings are being purchased at $10.50 per ton, delivered, but a consumer of turnings is refusing to pay more than $10.50 per ton on further contracts. A broker who has been paying $11 per ton, delivered eastern Pennsylvania, for yard grade of heavy melting steel is offering $10.75 per ton. The scrap list of the Pennsylvania Railroad opening this week offers 40,000 to 50,000 tons. As a result of recent meetings of dealers and brokers in New York and Philadelphia, a committee has been appointed to form an Eastern Scrap Iron Association.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to $10.85
Heavy melting steel (yard)	7.00 to 7.25
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	8.50 to 9.00
Locomotive grate bars	8.75 to 9.00
Machine shop turnings	6.75 to 7.50
Short shoveling turnings	7.00 to 7.50
Cast borings (blast furnace or steel works)	6.75 to 7.50
Mixed borings and turnings	7.00 to 7.50
Steel car axles	16.00 to 16.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.75
Forge fire	6.75 to 7.00
No. 1 railroad wrought	10.50 to 11.00
No. 1 yard wrought, long	9.00 to 9.50
Rails for rolling	10.50 to 11.00
Cast iron carwheels	11.25 to 11.75
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00 to 10.50
Cast borings (chemical)	11.00 to 11.50

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.75 to $14.25
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.75 to 12.25
No. 2 cast (radiators, cast boilers, etc.)	11.25 to 11.75

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.

*Net base, including boxing and cutting to length.

Cleveland

New Price of 1.90c. for Plates, Shapes and Bars Not Established

CLEVELAND, March 6.—Efforts to establish 1.90c., Pittsburgh, as the price on steel bars, plates and structural material for current orders and the second quarter have not been wholly successful. Some of the outside mills made contracts at 1.85c. before the advance and other buyers in some cases have insisted on getting the same price from their regular sources of supply. As a result there is at present a price range of from 1.85c. to 1.90c., Pittsburgh, for both current orders and contracts. A few contracts have been taken at the higher price. A local mill is quoting steel bars at 1.90c., Cleveland. Specifications against 1.80c. contracts are fairly heavy.

Orders for steel are more numerous than recently, but the average size is smaller. Some of the mills declare that they will not accept large specifications on first quarter contracts at the end of the month, but it is expected that considerable steel will be ordered against the expiring contracts, deliveries on which will extend well into April. Consumers as a rule are not yet showing a great deal of interest in second quarter contracts.

The automotive industry continues to take sheets, strip steel and steel bars in good volume. Some of the motor car builders have placed second quarter contracts and several inquiries for that delivery are pending from this source. However, there seems to be a disposition in that industry to limit purchases to April requirements. A lull has developed in structural activity in this territory and local contractors are reaching out into other districts for business. A good amount of highway bridge work is in prospect in Ohio, western New York and Pennsylvania. Present prices on wire products and wire rods have been reestablished for the second quarter.

Pig Iron.—Sales have been rather moderate in the northern Ohio, Michigan and Indiana territories the past week, but the Eastern market has continued active and this has kept up the total sales. Cleveland interests during the week sold 31,000 tons in foundry and malleable iron, a large share of which was for shipment from Buffalo. No change has developed in the price situation. Cleveland furnaces are taking some business in foundry and malleable grades at $17, with full differentials, but still seem willing to shade this price 25c. to 50c. a ton for shipment to competitive points. One Lake interest is able to make some small-lot sales at $17.50. In Michigan the market is firm at $18, furnace. The automotive industry has issued heavy shipping orders for March. While jobbing and other gray iron foundries in this territory are doing somewhat better than last month, they are taking iron in rather moderate volume and some of the furnaces are shipping less iron than they are making. Some of the stove manufacturers and other makers of heating equipment are not very busy. There is a little activity in low phosphorus iron. A Valley producer sold two lots aggregating 500 tons during the week at $27, furnace. The American Steel & Wire Co. blew in one of its Central furnaces this week, now operating three out of four.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fdy., sil. 1.75 to 2.25	22.00
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic, Valley furnace	17.00
Standard low phos., Valley furnace	$26.50 to 27.00

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Semi-Finished Steel.—The present price of $44, Cleveland and Pittsburgh, for wire rods has been established for the second quarter. Specifications for sheet bars, billets and slabs for March delivery have been fairly heavy and the leading local producer has placed two additional open-hearth furnaces in operation, now running 12 out of 14. Prices are unchanged at $33, Cleveland, for the three products.

Wire Products.—The leading producer, effective March 5, opened its books for the second quarter at the present prices of $2.65 per keg for wire nails and $2.50 per 100 lb. for plain wire. Manufacturers' wire is moving well, but the demand for nails is moderate. Jobbers have large stocks bought late in the year at low prices and some are reported to be moving these stocks by meeting present mill prices.

Cold-Finished Steel Bars.—Specifications for March shipment against low-priced contracts are heavy. For current orders the market is firm at 2.35c., Cleveland. The second quarter price has not been announced. While there has been talk of a further advance, it seems probable that the present price will remain in effect.

Reinforcing Bars.—Inquiry is fair for small lots but no large projects are pending. New billet steel bars are still offered at 1.85c., Cleveland, and rail steel bars at 1.75c., mill. Stock prices continue irregular.

Sheets.—Mills have taken a fair amount of business in auto body sheets for the second quarter at the new 4.15c. price. Contracting for other grades is slow. Buyers show hesitancy because they do not seem convinced that the new prices will hold. Specifications for black and blue annealed sheets are fairly heavy and prices are firm. Some of the mills will be making shipments on present low-price contracts through the greater part of April. Galvanized sheets are still irregular but the price shading is attributed largely to jobbers who were able to place contracts late last year as low as 3.50c. Galvanized sheets sold during the week at 3.65c., Valley, equivalent to 3.55c., Pittsburgh, although 3.75c., Valley mill, is the more common minimum quotation.

Strip Steel.—Not much business in second quarter contracts for hot and cold-rolled strip has been taken at the higher prices recently announced, but the market appears firm at the new quotations. Specifications continue good.

Warehouse Business.—Jobbers are doing a fair volume of business, which shows a slight gain. With the approach of spring, galvanized sheets are moving better. Regular prices are well maintained.

Old Material.—With shipments still restricted by mills and no new demand, the market continues inactive. Dealers are buying very little scrap, as they have commitments for more than they can ship for some time. With the large output of the automotive industry, scrap is coming on the market faster than it is being absorbed and the tone of the market is weak. The local supply of old automobile cast scrap is in excess of the demand from Cleveland foundries and some of this grade is being shipped from here to Michigan points. This scrap is bringing $15.50 to $16 per net ton.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$13.75 to $14.00
No. 2 heavy melting steel	13.25 to 13.50
Compressed sheet steel	12.75 to 13.00
Light bundled sheet stampings	11.50 to 11.75
Drop forge flashings	12.50 to 13.00
Machine shop turnings	9.00 to 9.25
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	13.50 to 14.00
No. 1 busheling	11.00 to 11.25
Pipes and flues	9.00 to 9.50
Steel axle turnings	12.50 to 13.00
Acid Open-Hearth Grades	
Low phosphorus forging crops	16.50 to 17.00
Low phosphorus, billet, bloom and slab crops	17.00 to 17.50
Low phosphorus sheet bar crops	16.50 to 17.00
Low phosphorus plate scrap	16.00 to 16.50
Blast Furnace Grades	
Cast iron borings	10.00 to 10.25
Mixed borings and short turnings	10.00 to 10.25
No. 2 busheling	10.00 to 10.25
Cupola Grades	
No. 1 cast	16.50 to 17.00
Railroad grate bars	11.00 to 12.00
Stove plate	12.00 to 12.50
Rails under 3 ft.	18.00 to 18.50
Miscellaneous	
Railroad malleable	15.00 to 15.50
Rails for rolling	16.25 to 16.50

Bolts, Nuts and Rivets.—Bolt and nut manufacturers have re-established the present discounts for the second quarter, except on stove bolts, which have been advanced, new discounts being 80, 10 and 5 per cent off list. Rivet manufacturers have advanced large rivets $3 a ton to $2.90 per 100 lb., Pittsburgh and Cleveland, and $3, Chicago, effective March 1. A leading local interest has made no announcement of a higher price for small lots, but will adhere to its usual policy of charging more for very small miscellaneous lots. The new prices will apply to second quarter contracts. For small rivets the present discount of 70 and 10 per cent off list, Pittsburgh and Cleveland, has been re-established for the second quarter. Bolt and nut and rivet manufacturers have opened their books for that delivery. Specifications for bolts and nuts are fair, but hardly up to expectations. The demand for rivets is rather slow.

Coke.—New demand for foundry coke is slow, but consumers are taking shipments fairly well against contracts. Prices are unchanged at $8, Painesville, or $9.01, delivered Cleveland, for by-product coke and $3.75 and $5.10 for Connellsville foundry coke. Yard dealers are stocking up on by-product coke for domestic use, which has become more active. The price is unchanged at $4.50, Ohio ovens.

Jones & Laughlin Earned 6.9 Per Cent on Stockholders' Investment in 1927

The Jones & Laughlin Steel Corporation, in its pamphlet report for the year ended Dec. 31, last, shows a decrease of $3,910,155 in net income, as compared with 1926, and an addition to surplus of $4,293,002 or slightly more than half that added in the previous year. Stockholders' investment at the end of 1926 totaled $163,638,470, comprising $57,036,400 in preferred stock, $57,332,000 in common stock and $49,270,070 in surplus. The 1927 net income was equivalent to approximately 6.9 per cent on that investment, comparing with 9.8 per cent earned in 1926 on a stockholders' investment of $155,124,635.

In 1927 the company produced 2,348,719 gross tons of ingots and shipped 1,937,645 net tons of steel products, comparing with 2,591,140 and 2,136,141 tons respectively in 1926.

Earnings and other statistics for the year compare with those for 1926 as follows:

	1927	1926	*Decrease*
Total earnings	$16,559,320	$21,210,206	$4,650,886
Depreciation and depletion reserve	4,572,359	5,210,631	638,272
Interest, etc.	748,021	850,481	102,460
Net income	11,238,939	15,149,094	3,910,155
Dividends	6,945,937	6,570,859	*375,078
Surplus for year	4,293,002	8,578,235	4,285,233
Total surplus	53,413,072	49,270,071	*4,143,001

*Increase.

Production	1927	1926

Empire Steel Corporation Announces Further Sales Appointments

Glenn D. East, who was manager of sales of the Empire Steel Co., Cleveland, has been appointed Cleveland district sales manager of the new Empire Steel Corporation, succeeding F. F. Huber, formerly Cleveland sales manager of the Mansfield Sheet & Tin Plate Co., who will be transferred to the general sales office of the Empire Corporation in Mansfield. C. H. Beach, who represented the Mansfield Sheet & Tin Plate Co. in Indianapolis, has been appointed Indianapolis sales manager of the Empire Steel Corporation.

Boston

Large Pig Iron Sales Bring Out Low Prices—Scrap Weak

BOSTON, March 6.—Several thousand tons of pig iron were bought in this territory the past week, including 2000 tons of No. 2X and No. 1X by the General Fire Extinguisher Co., Providence, R. I., and 1000 tons of No. 2X by a central Massachusetts foundry. Most of this iron was for second quarter delivery. It is reported that the largest tonnages were sold on a basis of $16, Buffalo, slightly higher for No. 2X, and $17 for No. 1X. On small tonnages, Buffalo iron and iron made east of Buffalo sold generally on a basis of $17, Buffalo, for No. 2X, and $17.50 for No. 1X. Transactions included some western Pennsylvania and Southern iron at full prices for mixture purposes. Little eastern Pennsylvania or foreign iron is selling in New England at the moment.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$21.41 to	$21.91
Buffalo, sil. 2.25 to 2.75	21.41 to	22.41
East. Penn., sil. 1.75 to 2.25	23.15 to	23.65
East. Penn., sil. 2.25 to 2.75	23.65 to	24.15
Virginia, sil. 1.75 to 2.25		25.71
Virginia, sil. 2.25 to 2.75		26.21
Alabama, sil. 1.75 to 2.25	22.91 to	24.77
Alabama, sil. 2.25 to 2.75	23.41 to	25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Reinforcing Bars.—The local market for reinforcing bars is firmer. Some bids submitted on prospective business the past week were subsequently withdrawn, indicating higher prices. Mill representatives generally are holding to 1.90c. per lb., base Pittsburgh, but some business has been placed at 1.95c. Reinforcing bars from stock here are now generally 2.90c. per lb., base, compared with 2.75c. and 2.80c. a week ago.

Bars, Shapes and Plates.—Since mills announced an advance on bars, shapes and plates to 1.90c. per lb., base Pittsburgh, offers have been made consumers here at 1.85c. on contracts. Buying of finished material is light owing to the fact that most consumers and warehouses are well covered at 1.80c. Steel fabricators report practically no improvement in business, but say the outlook for early spring is encouraging.

Cold-Rolled Strip.—Although mills have opened books for second quarter, there has not been enough buying to test prices. On current business 3.15c. per lb., base Pittsburgh, prevails. The Worcester, Mass., mill is quoting 3.30c. per lb., base, on lots of 1 to 3 tons, and 3.05c. on larger lots.

Warehouse Prices, f.o.b. Boston

	Base per Lb.
Plates	3.365c.
Structural shapes—	
Angles and beams	3.365c.
Tees	3.365c.
Zees	3.465c.
Soft steel bars and small shapes	3.265c.
Flats, hot-rolled	4.15c.
Reinforcing bars	3.265c. to 3.54c.
Iron bars—	
Refined	3.265c.
Best refined	4.60c.
Norway, rounds	6.60c.
Norway, squares and flats	7.10c.
Spring steel—

Squares and flats	*3.95c. to 6.95c.
Toe calk steel	6.00c.
Rivets, structural or boiler	4.50c.
	Per Cent Off List
Machine bolts	50 and 5
Carriage bolts	50 and 5
Lag screws	50 and 5
Hot-pressed nuts	50 and 5
Cold-punched nuts	50 and 5
Stove bolts	70 and 10

*Including quantity differentials.

Coke.—No improvement in the movement of by-product foundry coke is noted. Fuel is being billed at $11.50 a ton, delivered within a $3.10 freight rate zone. Demand for by-product domestic coke is fairly active on a basis of $8.50 a ton on cars at ovens. The large New England producers still have sizable reserve stocks.

Warehouse Business.—Warehouse prices on cold-rolled strip steel have been advanced from $5.10 to $5.30 per 100 lb., base. Iron and steel products otherwise are unchanged in price despite the advance in mill quotations. The movement of iron and steel out of warehouses is fairly heavy, but individual orders call for small amounts. February billings were about 30 per cent larger than those for that month last year, but as January billings fell off, the showing for the year to date is only a little larger than 1927. One warehouse recently made 239 charges in one day, a new high record.

Old Material.—A further falling off in old material sales has caused a shading of prices on some grades, but in contrast railroad wrought is up 50c. a ton, and $6 a ton on cars was the lowest price reported paid last week for mixed borings and turnings, as against $5.75 the previous week. Prices on forged flashings take an unusually wide range. While $8 a ton is the prevailing top on girder rails, $8.10 was paid in at least one instance. Demand for steel turnings has fallen off. For shafting the average top price is $13.50 a ton on cars, but selected stock for eastern Pennsylvania delivery, sold recently as high as $14. Shipments of pipe have been held up by consumers. Borings are in limited supply. The General Electric Co., West Lynn, Mass., this week will close bids on 40 cars of miscellaneous material.

Buying prices per gross ton f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$9.00 to	$9.10
Scrap T rails	8.50 to	9.00
Scrap girder rails	7.50 to	8.00
No. 1 railroad wrought	10.50 to	11.00
No. 1 yard wrought	8.50 to	9.00
Machine shop turnings	5.75 to	6.25
Cast iron borings (steel works and rolling mill)	6.00 to	6.25
Bundled skeleton, long	6.00 to	6.50
Forged flashings	6.10 to	7.00
Blast furnace borings and turnings	5.75 to	6.25
Forge scrap	6.00 to	6.50
Shafting	13.00 to	13.50
Steel car axles	15.00 to	15.50
Wrought pipe (1 in. in diameter, over 2 ft. long)	7.50 to	8.25
Rails for rolling	10.00 to	10.50
Cast iron borings, chemical	9.50 to	10.00

Prices per gross ton delivered consumers' yards:

Textile cast	$14.00 to	$14.50
No. 1 machinery cast	14.50 to	15.00
No. 2 machinery cast	12.50 to	13.00
Stove plate	10.50 to	11.00
Railroad malleable	13.50 to	14.00

Youngstown

Automobile Companies Specifying Steel Close to Requirements

YOUNGSTOWN, March 6.—With the exception of pipe, business in steel products is fairly satisfactory to manufacturers in this area. The automotive industry is taking sheets, bars and strips freely and makers of body sheets find it necessary to operate extra turns to satisfy delivery requirements. Automobile builders continue to place entire dependence upon the steel companies to produce and ship promptly and upon the railroads to deliver freight practically on an express schedule. The time was when they had at least two weeks' supply rolling; now in not a few products they are depending upon daily deliveries to maintain production schedules and inventories are not merely zero, they are zero minus, since it frequently happens that the arrival of a car of steel is the determining factor of maintenance of one department or another of automobile plants.

The backlogs of the mills in the area are for the most part the contracts written late last year, plus the additions that were allowed prior to the recent price advances. Specifications are coming along well, but there is not a company in the Youngstown district that can tell what its operations will be as much as two weeks ahead, so closely are specifications confined to nearby requirements.

The district is producing steel ingots at about 75 per cent of capacity, which is fairly good considering the smallness of the demand for pipe. That product may do better later on when the oil industry gets straightened out. Some think that such a development is nearer, in view of the strengthening tendency in oil prices, but just now there is at best only a moderate demand for oil country pipe, while line pipe orders are pretty well completed and the call for standard-weight pipe for building and construction work, though fairly good, is not yet up to the average of a year ago.

Some complaint is heard over prices, since the bulk of the movement is at lower figures than now are quoted and buyers have had such full coverage at the lower quotations that there is not much hope of net returns being better until after the turn of the second quarter because buyers under contract have until the end of this month to specify against their commitments. Manufacturers here still find prices competitive and do not take as cheerful a view of the situation as might be expected with a steady flow of specifications and production and shipments in keeping with that fact.

Bars now are quoted at 1.90c., base Pittsburgh, for large lots and 2c. for small lots, but it is admitted that not much business has been done at these prices, while it was necessary because of competitive conditions to take considerable business at 1.85c. Some success has attended the effort to establish sheets at 2.90c., base Pittsburgh, for black, 3.75c., base, for galvanized and 2.10c. base, for narrow, and 2.20c., base, for wide blue annealed, although getting the full price on galvanized remains difficult.

The Republic Iron & Steel Co. is making good progress in getting its spike-making equipment installed and expects to be producing in another 60 days.

Youngstown district steel makers are much interested in the proposal of the Pittsburgh Coal Co. to connect the district with the Ohio River through an extension of its Pittsburgh, Lisbon & Western Railroad, but are not yet ready to go on record as believing that the project will materialize. It is recognized that a railroad built solely to give Youngstown a river-rail service on coal would hardly pay unless it had something to carry on the return trip. It is also realized that existing railroads are likely to oppose the building of the line on the ground that additional trackage is not needed. It is probable that James A. Campbell, who on his way south a few weeks ago conferred with presidents of the railroads serving this district, may have some views on the matter when he returns this week.

In view of the suggestion that one end of the proposed road would connect with the Erie Railroad just outside Youngstown, some believe the move is being sponsored by that road, which lately has not been getting much of the soft coal that has been moving to the Lakes. There is also a suggestion that the request for permission to build the new line is an effort by the Pittsburgh Coal Co. to force existing railroads to do something about coal freight rates that would not merely open up the Youngstown district to greater tonnages of river coal, but would help the coal companies to more speedily recover the lost Lake trade.

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.
	Per Cent Off List
Tank rivets, $\frac{7}{16}$-in. and smaller, 100 lb. or more	70
Less than 100 lb.	65
Machine bolts	60
Carriage bolts	60
Lag screws	60
Hot-pressed nuts, square, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

St. Louis

Wabash Buys 5000 Tons of Tie Plates —Pig Iron Quieter

St. Louis, March 6.—The pig iron market is quiet. Sales for the last week amounted to about 3000 tons, ranging from 500 tons for a district melter to a carload. A radiator manufacturer is in the market for a round tonnage, including 2000 to 2500 tons for its plants in this district, for second quarter delivery. Melters are well supplied with pig iron for the remainder of first quarter, and very little interest is being taken in second quarter requirements.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25 f.o.b. Granite City, Ill.	$19.50 to $20.00
Northern No. 2 fdy., delivered St. Louis	20.66
Southern No. 2 fdy., delivered	20.42
Northern malleable, delivered	20.66
Northern basic, delivered	20.66

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Finished Iron and Steel.—The Wabash Railway has placed orders for 5000 tons of tie plates in equal amounts with Southwestern and Eastern mills at what a purchaser would call "attractive" prices. Buying of plates, shapes and bars for second quarter is fairly large. Warehouse business is picking up, February's sales being about 10 per cent ahead of January's, although 10 per cent less than in February, 1927. Business with structural fabricators is light.

Coke.—Demand for domestic grades of coke is holding up very well, especially in view of warmer weather in this section. A fairly good demand is reported for foundry grades. Prices are unchanged.

Old Material.—Although consumption of old material in the St. Louis district continues heavy, mills have ceased buying until they have liquidated stocks on hand and material still to be delivered on contracts. It is not expected the mills will resume buying until late in March. The result is the market is weaker. Heavy melting steel, heavy shoveling steel, No. 2 railroad wrought, while steel rails less than 3 ft. are 25c. a ton lower, while steel car axles and cast iron carwheels are off 50c. The remainder of the list is unchanged. Railroad lists include: Pennsylvania, 39,435 tons; Baltimore & Ohio, 9670 tons; Missouri Pacific, 4200 tons; New Orleans & Great Northern, 355 tons; Frisco lines, 55 carloads.

Prices per gross ton f.o.b. dealers' yards and delivered St. Louis district consumers' works:

Heavy melting steel	$11.50 to $12.00
No. 1 locomotive tires	12.75 to 13.25
Heavy shoveling steel	11.50 to 12.00
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	14.00 to 14.50
Railroad springs	14.50 to 14.75
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.50 to 12.00
No. 1 busheling	9.75 to 10.25
Cast iron borings	9.00 to 9.50
Iron rails	13.00 to 13.50
Rails for rolling	14.25 to 14.75
Machine shop turnings	7.50 to 8.00
Steel car axles	19.00 to 19.50
Iron car axles	24.00 to 24.50
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft.	15.50 to 16.00
Steel angle bars	12.50 to 13.00
Cast iron carwheels	13.50 to 14.00
No. 1 machinery cast	14.00 to 14.50
Railroad malleable	11.00 to 11.50
No. 1 railroad cast	13.50 to 14.00
Stove plate	13.00 to 13.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Manufacturing production in the United States in January is placed by the Department of Commerce at 116, on a basis of 100 in 1919. Iron and steel ranks high, at 130, with other metals at 139 and automobiles at 132.

More beehive coke was made in February than in January, according to the United States Bureau of Mines. The gain was from 376,000 net tons to 390,000 tons. Both were far below the 754,000 tons of February, 1927.

Buffalo

Pig Iron Inquiry Falls Off—Large Sale of Steel Mill Scrap

BUFFALO, March 6.—Inquiry for pig iron has fallen off and the lots that producers are quoting on are comparatively small. Carload lots are in demand and a few 200 to 300-ton inquiries are out but the larger consumers seem to have covered for nearby requirements, though there is considerable iron yet to be placed for second quarter. The price of $17 is steady in the district, though it is understood that a $16.50 quotation is still being offered to New England consumers by one Buffalo maker. Bethlehem has five stacks blowing; Donner Steel Co., two; Hanna Furnace Co., three; Wickwire-Spencer, one, and Tonawanda Iron Corporation, one.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2X foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	$17.00 to 17.50
Basic	16.50 to 17.00
Lake Superior charcoal	27.28

Old Material.—A large sale of heavy melting steel, No. 1 and No. 2 grade, hydraulic compressed sheets and No. 1 busheling was made in the week. It is said that between 30,000 and 40,000 tons of material was involved. The price paid was around $14.50 to $14.75 for the No. 1 heavy melting steel, with $1.50 lower for the other grades. The specifications are slightly different from those of another mill which paid $15.25 for its last tonnage of heavy melting steel, around 8000 tons being involved in that purchase. Another sale of 1000 tons of No. 2 steel was recently made at $12.75, delivered.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$14.75 to $15.25
No. 2 heavy melting steel	13.00 to 13.50
Scrap rails	13.75 to 14.25
Hydraulic compressed sheets	13.25 to 13.75
Hand bundled sheets	9.00 to 9.50
Drop forge flashings	12.00 to 12.50
No. 1 busheling	13.25 to 13.75
Heavy steel axle turnings	12.75 to 13.25
Machine shop turnings	8.50 to 9.00
Acid Open-Hearth Grades	
Railroad knuckles and couplers	16.00 to 16.50
Railroad coil and leaf springs	15.50 to 16.00
Rolled steel wheels	15.75 to 16.25
Low phosphorus billet and bloom ends	17.00 to 17.50
Electric Furnace Grades	
Heavy steel axle turnings	12.75 to 13.25
Short shoveling steel turnings	11.00 to 11.50
Blast Furnace Grades	
Short shoveling steel turnings	10.75 to 11.00
Short mixed borings and turnings	10.00 to 10.50
Cast iron borings	10.00 to 10.50
No. 2 busheling	9.00 to 9.50
Rolling Mill Grades	
Steel car axles	17.00 to 17.50
Iron axles	22.00 to 23.00
No. 1 railroad wrought	12.50 to 13.00
Cupola Grades	
No. 1 machinery cast	14.50 to 15.00
Stove plate	13.00 to 13.25
Locomotive grate bars	11.50 to 12.00
Steel rails, 3 ft. and under	17.00 to 17.25
Cast iron carwheels	13.00 to 13.50
Malleable Grades	
Railroad	15.50
Agricultural	15.50
Industrial	15.50

Finished Iron and Steel.—Mill operation continues to improve. Bar, shape and plate mills are adhering to 2c., Lackawanna, for nearby delivery, or 1.90c., Pittsburgh, depending on the location. The market for automobile body sheets is particularly good. The Donner Steel Co. has established a cold-drawn department for carbon and alloy steel, though specializing in alloy. Bolt and nut specifications are better. A steel fabricator has obtained the contract for 550 tons of structural steel for a high school at Kenmore, N. Y.

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finished flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire, base per 100 lb.	3.90

Canada

Growing Demand Across Border for Iron and Steel Products

TORONTO, ONT., March 6.—Canadian steel companies report a growing demand for iron and steel products. In addition to orders booked for domestic consumption, Canadian interests have closed some contracts for export. The Algoma Steel Corporation, Sault Ste. Marie, Ont., reports its plant running on double shift with approximately $8,000,000 worth of orders on its books. The British Empire Steel Corporation, Sydney, N. S., has upward of $5,000,000 worth of orders ahead.

R. J. Magor, Dominion Iron & Steel Co., is en route to Europe to negotiate iron ore business, particularly in Germany and England, the ore to be supplied by the company's mines in Newfoundland. Iron ore contracts already closed for this year's delivery include 800,000 tons for delivery to Germany and 100,000 tons for delivery to the United States, in addition to upward of 400,000 tons to be shipped to the company's own furnaces at Sydney, N. S.

Pig Iron.—Business in this market shows very little change from last week. Demand is increasing, but sales for the week were chiefly for spot delivery. Inquiries are appearing for second quarter. A small number of melters have already covered for second quarter needs, but the majority have yet to make known their requirements.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.60
No. 2 foundry, sil. 1.75 to 2.25	23.60
Malleable	23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	$25.00 to $25.50
No. 2 foundry, sil. 1.75 to 2.25	25.00 to 25.50
Malleable	25.00 to 25.50
Basic	24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Old Material.—Business is increasing and individual orders call for larger tonnages. Canadian interests are of the opinion that the bottom has been reached. Prices are firm but unchanged.

Dealers' buying prices:

	Toronto	Montreal
Per Gross Ton		
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00
No. 1 wrought	9.00	11.00
Machine shop turnings	7.00	6.00
Boiler plate	7.00	7.00
Heavy axle turnings	7.50	7.50
Cast borings	7.50	6.00
Steel turnings	7.00	6.50

Stove plate	9.00	....
Standard carwheels	13.00	....
Malleable scrap	13.00	....

Birmingham

Pig Iron Buying Improves—Steady Flow of Steel Orders

BIRMINGHAM, March 6.—There was some improvement in the last week in pig iron buying. A number of plants had underestimated their requirements and came into the market for March fill-in tonnage. Some of the larger pipe plants are expected to place additional tonnage soon. There has been very little second quarter business, but some of the iron already booked will be carried forward. Quotations for foundry iron continue on a $16 base. The two new 600-ton Fairfield furnaces of the Tennessee Coal, Iron & Railroad Co. probably will be ready for operation some time next month. Seventeen blast furnaces are in operation, nine on foundry iron.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil	$16.00
No. 1 foundry, 2.25 to 2.75 sil	16.50
Basic	15.00

Finished Steel.—New business is steadily coming in and inquiries indicate that a substantial tonnage is in prospect for second quarter. Bookings in some lines exceed current production, and forward tonnage is accumulating. Structural steel fabricators received several new orders last week, each being about 100 tons. Open-hearth operations are unchanged, the Tennessee company operating 13 and 14 and the Gulf States Steel Co. four.

Cast Iron Pipe.—A normal amount of new tonnage in small lots is being received. No large orders are reported. Plant operations have changed but little within the past several weeks. These are at a fair level due to accumulation of small orders. Quotations continue on a $29 to $30 base. The National Cast Iron Pipe Co. has awarded the structural steel contract for an addition to the Virginia Bridge & Iron Co.

Coke.—Spot demand is not active and little interest is being shown in second quarter tonnage. Quotations for March and second quarter remain at $5.

Old Material.—No improvement is reported in demand. The market has been quiet and prices stationary for some time.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.50 to	$10.00
Scrap steel rails	11.00 to	11.50
Short shoveling turnings	8.00 to	8.50
Cast iron borings	8.00 to	8.50
Stove plate	13.00 to	14.00
Steel axles	19.00 to	20.00
Iron axles	20.00 to	21.00
No. 1 railroad wrought	10.00 to	10.50
Rails for rolling		13.00
No. 1 cast		15.00
Tramcar wheels	12.50 to	13.50
Cast iron carwheels	12.00 to	13.00
Cast iron borings, chemical	13.50 to	14.00

Cincinnati

Pig Iron Sluggish—Scrap Weak—Steel Demand Steady

CINCINNATI, March 6.—Pig iron buyers are manifesting little interest in second quarter needs, with the result that the local market is sluggish. Aside from 1000 tons of malleable for a Parkersburg, W. Va., company and 500 tons of malleable for a Tennessee melter, inquiries are of little consequence. Sales likewise have been unimportant, the largest in the past week having called for 300 tons of foundry iron. The price situation is slightly firmer, with northern Ohio furnaces having advanced to a minimum of $16.75, base furnace, and some makers having quoted as high as $17.50. Ironton producers are holding firmly to $19, base furnace, and in the South both Alabama and Tennessee interests are maintaining foundry iron on a basis of $16, Birmingham, although movement of material into this territory is light. Demand for Jackson County silvery iron is only fair. Extensive improvements to the blast furnace of the Norton Iron Works Co. at Ashland, Ky., are nearing completion, but it probably will not be lighted for 30 to 60 days.

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes	3.40c.
Bars, soft steel or iron	3.30c.
New billet reinforcing bars	3.15c.
Rail steel reinforcing bars	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)	4.05c.
Galvanized sheets (No. 24)	4.90c.
Blue annealed sheets (No. 10)	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire, per 100 lb.	$3.00
Common wire nails, base per keg	2.95
Cement coated nails, base 100 lb. keg	2.95
Chain, per 100 lb.	7.55
	Net per 100 Ft.
Lap-welded steel boiler tubes, 2-in.	$18.00
4-in.	38.00
Seamless steel boiler tubes, 2-in.	19.00
4-in.	39.00

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$20.89
So. Ohio malleable	$20.14 to 20.89
Alabama fdy., sil. 1.75 to 2.25	19.69
Alabama fdy., sil. 2.25 to 2.75	20.19
Tennessee fdy., sil. 1.75 to 2.25	19.69
Southern Ohio silvery, 8 per cent	26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Finished Material.—Specifications against current contracts have been liberal in the past week and forward buying is beginning to assume larger proportions. Many consuming industries are slowly increasing operations, but have not reached the point where they need to augment present stocks. The Stacey Mfg. Co., this city, has contracted for the erection of three gas tanks requiring about 1400 tons of steel. Bars, structural shapes and plates are quoted at 1.90c., base Pittsburgh. Sheet manufacturers are booking heavy specifications applying against present contracts, and new sales for second quarter delivery have been on the basis of 3.75c., base Pittsburgh, for galvanized, 2.90c. for black, 2.10c. for blue annealed and 4.15c. for automobile body stock. The only variation is to be found in light gage galvanized sheets for roofing purposes, which are being sold at concessions of from $2 to $3 a ton. Movement of wire goods has been about normal. Common wire nails are quoted at $2.65 per keg, base Ironton or Pittsburgh, and plain wire at $2.50 per 100 lb., Ironton or Pittsburgh.

Reinforcing Bars.—Rail steel bars are quoted mostly at 1.80c. or 1.85c., base mill, and it is becoming less easy to get large tonnages at 1.75c. Makers of new billet stock are asking from 1.90c. to 2c., base Pittsburgh.

Warehouse Business.—Local jobbers report that sales have been only fair. The number of orders has been liberal, but the total tonnage is below that in the same period of 1927. In view of the upward trend of mill prices, the schedule for delivery from Cincinnati warehouses is firm.

Coke.—An increase in the foundry melt in this district is responsible for heavier shipments of by-product foundry coke, the production of which has been expanded in the Portsmouth-Ironton district. The Portsmouth By-product Coke Co. has permanently doubled its output, while an Ironton company, formerly manufacturing furnace coke, has gone over to foundry coke principally because of the fact that no merchant blast furnaces at Ironton are active. Quotations of Wise County and New River bee-hive coke remain firm and unchanged.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.52 to $9.64; Wise County coke, $7.59 to $8.09; New River coke, $10.09 to $10.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—Melting steel has declined 50c. a ton and a number of other items are off from 50c. to 75c. a ton because of the lack of interest on the part of consumers and the refusal of steel plants to buy material unless concessions are made. Dealers are of the opinion that quotations are likely to remain at about their present level during the next month.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$11.00 to	$11.50
Scrap rails for melting	11.75 to	12.25
Loose sheet clippings	8.50 to	9.00
Bundled sheets	9.50 to	10.00
Cast iron borings	8.00 to	8.50
Machine shop turnings	7.50 to	8.00
No. 1 busheling	10.00 to	10.50
No. 2 busheling	7.00 to	7.50
Rails for rolling	12.50 to	13.00
No. 1 locomotive tires	12.75 to	13.25
No. 1 railroad wrought	10.50 to	11.00
Short rails	16.00 to	16.50
Cast iron carwheels	12.25 to	12.75
No. 1 machinery cast	15.50 to	16.00
No. 1 railroad cast	13.00 to	13.50
Burnt cast	7.50 to	8.00
Stove plate	8.25 to	8.75
Brake shoes	9.50 to	10.25
Railroad malleable	12.25 to	12.75
Agricultural malleable	11.75 to	12.25

San Francisco

Structural Steel, Plates and Cast Iron Pipe Fairly Active

SAN FRANCISCO, March 3 (*By Air Mail*).—Movement of steel products generally is being well maintained and some fair-sized structural plate and cast iron pipe awards were made this week. Awards included 1200 tons of plates for a penstock for the Southern California Edison Co., Los Angeles, and 1000 tons of plates for a municipal pipe line at Tacoma. Prices appear to be holding fairly firm.

Pig Iron.—Another shipment of Indian iron has arrived on the Coast, 1000 tons being unloaded at San Francisco and 400 at Los Angeles. Most of this was used to apply against contracts. The next shipment of Indian pig is due here during the first half of the month, about 1250 tons being aboard. Demand is only fair. Little improvement is noted in the rate of operations among foundries. No change in prices is noted.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Shapes.—The two outstanding structural awards of the week involved 800 tons for a power house at San Diego for the San Diego Consolidated Gas & Electric Co., booked by the McClintic-Marshall Co., and 480 tons for the Heinz plant addition in Berkeley, secured by Judson-Pacific Co. Awards this week exceeded 1800 tons. Considerable new work is in sight. Bids are being taken on 4000 tons for the Capwell store in Oakland and on 3000 tons for the Coyote Point bridge across San Francisco Bay. Pending business totals over 16,000 tons. While fabricated prices are still low in many instances, due to foreign competition of plain material, domestic plain shapes continue firm at 2.35c. c.i.f.

Plates.—Awards of plates during the past week were the heaviest of any week so far this year. The Southern Pacific Co. has placed a contract with an unnamed mill for three months' requirements, totaling about 400 to 500 tons. A pipe line project at Milton, Ore., involving 625 tons, was booked by King Brothers' Boiler Works. The Southern California Edison Co. has placed 800 tons and 400 tons respectively with the Western Pipe & Steel Co. and the Lacy Mfg. Co. for a penstock. The Birchfield Boiler Works, Tacoma, took 1015 tons of ¼ and 5/16 in. material for a pipe line for the city. Bids were opened this week on 2000 tons for a penstock at Seattle and the Navy Department has taken bids on 750 tons for Western yards. Prices are firm at 2.30c., c.i.f.

Bars.—Awards of reinforcing steel were mostly lots of less than 100 tons. A San Francisco jobber took 200 tons for a store in San Francisco and a memorial building at Oakland. Bids were opened this week on 1950 tons for Pier 48, San Francisco, and an award is expected soon. Foreign competition continues to keep the out-of-stock price in the bay district low and 2.25c. is being quoted. On the other hand, some interests using domestic material report the booking of less than carload lots at 2.75c. and larger lots from 2.50c. to 2.60c. High carbon angles range from 2.35c. to 2.40c., c.i.f., including extra for carbon. High carbon reinforcing bars are quoted the same as structural material, namely, 2.35c., c.i.f.

Cast Iron Pipe.—Awards were as follows: 218 tons of 12-in. class 150 universal pipe for Colfax, Wash., to Central Foundry Co.; 155 tons 4 to 10-in. for Modesto, Cal., to Grinnell Co. and the Pacific States Cast Iron Pipe Co.; the Southern Pacific Co., San Francisco, has placed 560 tons of 4 to 12-in. class B pipe with unnamed interests; James Young, Oakland, took 145 tons of 4 and 6-in. pipe for the fair grounds at Sacramento, Cal.; Grinnell Co. secured 624 tons of 6 to 12-in. class D pipe for Vancouver, B. C., and Leith Murray & Co. took 619 tons of 6 and 8-in. class C for the same city; Lafayette, Colo., has placed with an unnamed interest 651 tons of 4 to 12-in. class B pipe and the United States Cast Iron Pipe & Foundry Co. booked 128 tons of 48-in. class A pipe for Los Angeles. Bids were opened this week on 663 tons of 6 to 20-in. classes B and C pipe for Santa Barbara, Cal., and on 188 tons of 20-in. class C pipe for Tacoma, Wash. The National Cast Iron Pipe Co. was low bidder on 136 tons of 18-in. class C pipe for San Diego, Cal. Other pending business includes 3095 tons of 4 to 12-in. class B pipe for Southgate, Cal., and 222 tons of 4 and 8-in. class B for Armona, Cal.

Steel Pipe.—The Petroleum Securities Co., Los Angeles, has placed 650 tons of 3½ to 16-in. plain-end line pipe with the American Seamless Tube Co. and the South Chester Tube Co. for its new Richmond, Cal., plant. The Pacific Gas & Electric Co. has placed 1472 tons of 2 to 16-in. line pipe and 518 tons of ¾ to 3-in. black pipe with unnamed interests. The Standard Oil Co., San Francisco, is reported to be in the market for 22,000 tons of 8-in. line pipe for a line from Pasotex to El Paso, Tex.

Coke.—A shipment of English bee-hive and by-product foundry coke is scheduled to arrive about the middle of the month. There will be approximately 4000 tons aboard, part of it for Los Angeles and part for San Francisco consumers. By-product material is quoted from $11.50 to $13 a net ton at dock, depending upon the quality, while bee-hive coke is quoted at from $16 to $17 a net ton.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, 3/16-in. and over	3.15c.
Small angles, under 3/16-in.	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Detroit Scrap Market Shows Further Weakness

DETROIT, March 6.—Further reductions in the scrap market in this district were noted during the past week. Blast furnace materials showed the greatest declines. This is due in part to the large tonnage coming from producers and the fact that shipments to some districts have been restricted.

Dealers' buying prices per gross ton, f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to $11.50
Borings and short turnings	7.25 to 7.75
Long turnings	6.75 to 7.25
No. 1 machinery cast	14.00 to 15.00
Automobile cast	19.50 to 21.00
Hydraulic compressed sheets	10.00 to 10.15
Stove plate	11.00 to 12.00
No. 1 busheling	8.50 to 9.00
Sheet clippings	6.00 to 7.00
Flashings	9.25 to 9.75

Permanent-Magnet Steel

Principles governing the choice and utilization of permanent-magnet steels are discussed in scientific paper No. 567 of the United States Bureau of Standards, which was prepared by Raymond L. Sanford, physicist of the bureau. A copy of this paper may be obtained from the Superintendent of Documents, Government Printing Office, Washington, for 5c. It was found that the addition of substantial percentages of cobalt to the composition of permanent-magnet steels leads to markedly superior qualities. Inasmuch as the cost of cobalt steels is much greater than that of older types, their use may be warranted only under special circumstances. Criterions for the comparison of the quality of magnet steels are discussed, and conditions are outlined under which the use of the more expensive steels is justified.

NON-FERROUS METAL MARKETS

The Week's Prices

Cents per Pound for Early Delivery

	Mar. 6	Mar. 5	Mar. 3	Mar. 2	Mar. 1	Feb. 29
Lake copper, New York	14.25	14.20	14.20	14.20	14.20	14.20

Zinc, St. Louis	5.50	5.47½	5.45	5.45	5.45	5.45

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, March 6.—There are signs of more activity and strength in several of the markets. Concessions on copper have virtually disappeared and inquiry is better. Demand for tin is moderate at practically unchanged prices. The lead market is more active and prices are firm. Quotations for zinc have started to advance and buying is a little better.

Copper.—After several weeks of decided inactivity and some weakness in prices, the market yesterday and today has turned stronger. One cause is advancing prices in London. Electrolytic copper, which was available from two or three sources as low as 13.87½c., delivered in the Connecticut Valley last week, is reported unobtainable today below 14.12½c., the price which leading producers have been quoting for some weeks. Sales to domestic consumers thus far have been light at any price, but inquiry has improved and it is stated that considerable metal must yet be bought even for March consumption. Last week Russia bought about 3500 tons and today buying for export has been considerably better, with sales estimated at over 2000 tons today and about 1000 tons yesterday. The official quotation of Copper Exporters, Inc., is unchanged at 14.50c., c.i.f. usual European ports. Sellers generally today are more optimistic than in some time and predict higher prices.

Copper Averages.—The average price of Lake copper for February, based on daily quotations in THE IRON AGE, was 14.24c. The average price of electrolytic copper was 13.82c., refinery, or 14.07c., delivered in the Connecticut Valley.

Tin.—In an unusually quiet market sales were light for the week ended Saturday, March 3, totaling scarcely 600 tons. Dealers did most of the buying, consumers being inactive and uninterested. Yesterday, Monday, dealers bought the greater part of the 200 tons which changed hands and today the market was extremely quiet. Spot Straits tin today was quoted at 51.62½c., New York. Prices in London today were only slightly higher than a week ago, with spot standard quoted at £231 17s. 6d., future standard at £234 2s. 6d., and spot Straits at £235 17s. 6d. The Singapore market today was £237 10s. Statistics for February were considered very unfavorable, but the market has been holding well in spite of this. There was an increase in the world's visible supply of 2401 tons, which was considerably more than the 1500 to 2000 tons expected. Straits shipments were very large at about 8400 tons, while Banca shipments were small at 695 tons. Deliveries of metal in the United States were 5790 tons, which was lower than expected. Stocks of tin in the United Kingdom were 3240 tons of all brands and about 10,300 tons is reported as in sight for American consumers. Arrivals thus far this month have been 605 tons, with 8360 tons reported afloat.

Lead.—Consuming demand is reported more active and dealers are inclined to buy futures. The market in general is stronger in tone because of higher prices in London. The leading interest during the week changed its quotation to 6c., New York, as its contract price, which continues firm. In the outside market quotations are steady at 5.75c., St. Louis.

Zinc.—With higher prices for ore last Saturday and with a stronger market in London, prime Western zinc here has begun to develop strength and quotations are tending higher. The market today is stronger, with slab zinc quoted and sold at 5.50c., St. Louis, or 5.85c., New York. While demand is not heavy, a fair amount of buying is reported and specifications from consum-

Metals from New York Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	53.25c. to 54.25c.

ers are satisfactory. Ore at Joplin on Saturday was quoted at $36, an advance of $1 per ton, with production last week at least 12,000 tons and sales about 9150 tons. Stocks are still large at close to 63,000 tons.

Nickel.—Wholesale lots of ingot nickel are quoted at 35c., with shot nickel at 36c., and electrolytic nickel at 37c. per lb.

Antimony.—Several carloads have been sold in the last week, but prices are practically unchanged, with Chinese metal for spot delivery quoted at 10.25c., and futures at 10.37½c., New York, duty paid.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb. delivered.

Non-Ferrous Metals at Chicago

Chicago, March 6.—This market is quiet and buyers are resisting present prices. Quotations of tin and lead are lower. The old metal market is without feature.

Prices, per lb., in carload lots: Lake copper, 14.25c.; tin, 53.25c.; lead, 5.85c.; zinc, 5.60c.; in less-than-carload lots, antimony, 12.50c. On old metals we quote copper wire, crucible shapes and copper clips, 10.50c.; copper bottoms, 9.50c.; red brass, 9.25c.; yellow brass, 7c.; lead pipe, 4.75c.; zinc, 3.25c.; pewter, No. 1, 30c.; tin foil, 36c.; block tin, 45c.; aluminum, 11.75c.; all being dealers' prices for less-than-carload lots.

REINFORCING STEEL

New Projects Will Require 8200 Tons—5400 Tons in Awards

WITH a manufacturing building at Winston-Salem, N. C., and a pier at San Francisco requiring 2800 and 1950 tons respectively, new projects brought out during the week amounted to 8200 tons. Awards totaled 5400 tons, the largest of which was 1600 tons for a cold storage building in Chicago. Awards follow:

Baltimore, 300 tons of rail steel bars, barracks at Camp Meade, to Dietrich Brothers.

Philadelphia, 750 tons, Blum Store, to Concrete Steel Co.

Chicago, 300 tons of rail steel bars, apartment building at 73 East Elm Street, to Calumet Steel Co.

Chicago, 400 tons, Civic Opera Building, to American System of Reinforcing.

Chicago, 1600 tons, cold storage building, reported to have been awarded to Kalman Steel Co.

Chicago, 180 tons of rail steel bars, apartment building at 917 Eastwood Avenue, to Inland Steel Co.

Chicago, 270 tons of rail steel bars, Lincoln Hotel, to Calumet Steel Co.

Chicago, 200 tons of rail steel bars for two apartment buildings, to Olney J. Dean & Co.

State of Iowa, 700 tons, road work, to unnamed bidder.

State of Wisconsin, 350 tons, road work, to unnamed bidder.

Ellensburg, Wash., 118 tons, Kittitas diversion dam; C. F. Graff, Seattle, low bidder.

Oakland, Cal., 100 tons, Legion Memorial building, to unnamed San Francisco jobber.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

Burlington, Vt., 125 tons, bridge.

New York, 1000 tons, Eleto warehouse; White Construction Co., general contractor. Previously reported as 500 tons.

New York, 500 tons, anchorage and abutment towers for Hudson River Bridge; Arthur McMullen Co., low bidder on general contract.

Old Metals, Per Lb., New York

The buying prices represent what large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their use.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.00c.	13.50c.
Copper, heavy and wire	11.75c.	12.875c.
Copper, light and bottoms	10.00c.	11.25c.
Brass, heavy	7.00c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.625c.
No. 1 yellow brass turnings	7.75c.	9.00c.
No. 1 red brass or composition turnings	8.75c.	9.75c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.50c.	4.00c.
Sheet aluminum	12.50c.	14.50c.
Cast aluminum	12.50c.	14.50c.

Philadelphia, 275 tons, public school at Sixth and Buttonwood Streets, bids in.

Cumberland, Md., 160 tons, hospital building, bids in.

Winston-Salem, N. C., 2800 tons, building for Reynolds Tobacco Co.; general contractor, James Baird, Washington.

Austin, Ill., tonnage being estimated, high school.

Chicago, 277 tons, superstructure for Women's Athletic Club; Phillip E. Maher, architect.

Chicago, tonnage not stated, 20-story office building at 301 West Jackson Boulevard; A. S. Alschuler, architect.

Chicago, tonnage being estimated, Ogden National Bank Building; K. M. Vitzthum, architect.

Chicago, tonnage not stated, Roosevelt State Bank; Emil Miska, architect.

Chicago, 1000 tons, printing plant for R. R. Donnelly Co.; Howard Shaw and Associates, architects.

Chicago, 100 tons, Chicago Sanitarium; W. C. Wallace, architect.

Chicago, 100 tons, Oscar Wolff office building.

West Pullman, Ill., tonnage being estimated, building for Columbia Mills, Inc.; Lockwood, Greene & Co., engineers.

St. Louis, 400 tons, track construction work for Missouri Pacific Railway between Allenton and Boles, Mo.

San Francisco, 1950 tons, Pier 48; Healy-Tibbetts Construction Co., low bidder.

RAILROAD EQUIPMENT

Orders for 400 Box Cars and 300 Refrigerators—Canadian National Will Buy 55 Passenger Cars

PURCHASES of 400 box cars by the Minneapolis, St. Paul & Sault Ste. Marie and of 300 refrigerator cars by Wilson & Co., packers, were the outstanding transactions in the equipment market in the last week. The Canadian National is inquiring for 55 passenger cars. Details of the week's business follow:

Western Union Telegraph Co. is inquiring for five steel underframes and trucks for box cars.

American Smelting & Refining Co. has ordered 60 30-ton gondola ore cars from Koppel Industrial Car & Equipment Co. for shipment to Newfoundland.

St. Louis-San Francisco has ordered six air-dump cars from Magor Car Corporation, and is in the market for 15 baggage cars.

Canadian National has issued inquiry for 55 passenger cars.

Northern Pacific is inquiring for four gas-electric rail motor cars.

Boston & Maine has made inquiry for 10 combination baggage and mail cars.

Missouri-Kansas-Texas is inquiring for eight combination mail and baggage cars.

Minneapolis, St. Paul & Sault Ste. Marie has ordered 200 box cars from Pullman Car & Mfg. Corporation, and a like number from Siems-Stembel Co.

Wilson & Co. have ordered 300 refrigerator cars from Bettendorf Co.

Akron, Canton & Youngstown is in the market for two Mikado type locomotives.

Southern Pacific will buy three Pacific type locomotives and either 21 Southern Pacific type or 17 Mallet type locomotives.

Chicago, Burlington & Quincy has ordered six baggage and three passenger baggage cars from Pullman Car & Mfg. Corporation.

FABRICATED STRUCTURAL STEEL

Awards of 45,000 Tons—40,000 Tons in New Work Under Negotiation

AWARDS of 45,000 tons in the last week were widely distributed in a number of fair-sized projects, the largest of which were a loft building in New York requiring 5200 tons, a building in Pittsburgh of 5000 tons and a club in Chicago which took 4500 tons. Including 5000 tons for a section of the subway in New York, 4800 tons for 41 Mississippi River barges and 4000 tons for a department store in Oakland, Cal., inquiries amounted to 40,000 tons. Awards follow:

Boston & Maine Railroad, 1700 tons, 13 small bridges, to Phoenix Bridge Co.

Bridgeport, Conn., 800 tons, department store, to Shoemaker Bridge Co.

New York, 5200 tons, Lefcourt Building at Seventh Avenue and Twenty-sixth Street, to Levering & Garrigues Co.

New York, 4000 tons, State Office Building, to A. E. Norton, Inc.

New York, 2300 tons, loft building at 235-247 East Forty-fifth Street, to Hay Foundry & Iron Works.

New York, 1800 tons, Kent Automatic Parking Garage at 209 East Forty-third Street, to Post & McCord.

New York, 400 tons, section 6 of Tudor City, to Harris Structural Steel Co.

New York, 400 tons, transfer bridge in Bronx, to American Bridge Co.

Albany, N. Y., 700 tons, law school building, to McClintic-Marshall Co.

Burlington, N. J., 190 tons, pattern storage building, to American Bridge Co.

Philadelphia, 480 tons, column cores and plate girders for Blum store, to American Bridge Co.

Philadelphia, 700 tons, bridge for Pennsylvania Railroad, to Bethlehem Steel Co.

Reading Railroad, 150 tons, bridges, to Shoemaker Bridge Co.

Hopewell, Va., 100 tons, 150,000-gal. gas tank for Atmospheric Nitrogen Corporation, to Stacey Mfg. Co.

Charleston, S. C., 175 tons, work for Port Authority, to Virginia Bridge & Iron Co.

Birmingham, 100 tons, National Cast Iron Pipe Co. plant addition, to Virginia Bridge & Iron Co.

Birmingham, 150 tons, Strowd-Holcombe Cotton Mills addition, to Ingalls Iron Works Co.

Columbus, Ohio, 470 tons, 120 tons for chemistry building and 350 tons for power house for Ohio State University, to Massillon Bridge & Structural Co.

Youngstown, 500 tons, furnace bindings for Youngstown Sheet & Tube Co., to Pittsburgh Bridge & Iron Co.

Pittsburgh, 5000 tons, building for Pittsburgh Plate Glass Co., to McClintic-Marshall Co.

Pittsburgh, 1450 tons, municipal boulevard extension and viaduct, to McClintic-Marshall Co.

Buffalo, 150 tons, plant building for Wickwire-Spencer Steel Co., Inc., to Lackawanna Steel Construction Co.

Kenmore, N. Y., 550 tons, high school, to R. S. McMannus Steel Construction Co.

Detroit, 625 tons, transmission towers for Detroit Edison Co., to American Bridge Co.

Chicago, 250 tons, Women's Athletic Club building, to Mississippi Valley Structural Steel Co.

Chicago, 4500 tons, Steuben Club building, to Gage Structural Steel Co., local.

Missouri-Kansas-Texas Railroad, 500 tons, bridges, distributed among three fabricators.

Chicago, 3000 tons, office building at Michigan Avenue and South Water Street, to American Bridge Co.

Ottawa, Ill., 2500 tons, building for National Plate Glass Co., to unnamed bidder.

Granite City, Ill., 1200 tons, 2,000,000-cu. ft. gas holder for Illinois Power & Light Co., to Stacey Mfg. Co.

St. Louis, 200 tons, southern approach to municipal bridge across Mississippi River, to Mississippi Valley Structural Steel Co.

Tacoma, Wash., 1015 tons, plates, 32 and 48-in. pipe line for city, to Birchfield Boiler Works.

Seattle, Wash., 100 tons, crane girders for Pacific Coast Steel Co., to Wallace Bridge & Structural Steel Co.

Milton, Ore., 625 tons, plates, pipe line and penstock for city, to King Brothers Boiler Works.

Los Angeles, 1200 tons, plates, penstock for Southern California Edison Co.; 800 tons to Western Pipe & Steel Co. and 400 tons to Lacy Mfg. Co.

San Diego, 800 tons, power house for San Diego Consolidated Gas & Electric Co., to McClintic-Marshall Co.

Berkeley, Cal., 480 tons, addition to Heinz plant, to Judson-Pacific Co.

San Francisco, 150 tons, apartment building, Pacific and Laguna Streets, to Western Iron Works.

San Francisco, 160 tons, apartment building, Fell and Buchanan Streets, to Golden Gate Iron Works.

Santa Ana, 100 tons, water tank tower for city, to Llewellyn Iron Works.

Santa Ana, 275 tons plates, tank for city, to Llewellyn Iron Works.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

State of Vermont, 715 tons; highway bridges at Montpelier, Sharon, West Hartford, Richmond and Richmond Village.

Boston, 200 tons columns, Sears, Roebuck & Co. warehouse.

New York, 5000 tons, section of subway in Bronx; bids in.

New York, 2250 tons, anchorage and tower foundations for Hudson River Bridge; Arthur McMullen Co., low bidder on general contract.

Jamaica, N. Y., 500 tons, Church of the Immaculate Conception.

Orange, N. J., 250 tons, substation for Public Service Corporation.

Kingston, Pa., 500 tons, Memorial Hospital.

Washington, 600 tons, seaplane hangars for Government at various locations.

Great Bridge, Va., 200 tons, highway bridge for Virginia State Highway Department.

Laurel, Md., 1600 tons, grandstand for race track, bids in.

Cleveland, 1000 tons, Main Street lift bridge.

Bay City, Mich., 1600 tons, building for Chevrolet Motor Co.

Buffalo, 300 tons, three Erie County bridges.

State of New York, 600 tons, four bridges for State Highway Department.

Dayton, Ohio, 250 tons, Municipal Art Institute.

Dayton, Ohio, 200 tons, building for Young Women's Christian Association.

Memphis, Tenn., 4800 tons, 41 barges for Mississippi River Commission; American Bridge Co., low bidder.

Chicago, 500 tons, warehouse for Illinois Central Railroad.

Chicago & North Western Railroad, 6000 tons, bridges.

Detroit, 2500 tons, building for National Plate Glass Co.

Shreveport, La., 450 tons, viaduct; Wisconsin Bridge & Iron Co., low bidder.

Chicago, 200 tons, auditorium and natatorium in Holden Park.

Chicago, 220 tons, apartment building at 3216 North Sheridan Road.

Chicago, 360 tons, apartment building at 3270 North Sheridan Road.

Minneapolis, 1600 tons, Medical Arts Building.

Minneapolis, 1500 tons, auditorium for University of Minnesota.

Shawano, Wis., 675 tons, State highway bridge over Wolf River; Wausau Iron Works, Wausau, Wis., low bidder at $157,342.

Marinette, Wis., 350 tons, new interstate bridge; bids about March 20, Klug & Smith, Milwaukee, engineers.

Saukville, Wis., 150 tons, State highway span over Milwaukee River; bids about March 19.

Des Moines, Iowa, 700 tons, United States Court House.

St. Louis, 500 tons, Knights of Pythias building.

San Francisco, 3000 tons, Coyote Point bridge across San Francisco bay; bids being taken.

San Francisco, 225 tons, sheet piling, Esplanade seawall; Healy-Tibbets Construction Co., low bidder.

South San Francisco, 370 tons, plant for E. H. Edwards Wire Rope Co.; bids in.

Oakland, Cal., 4000 tons, Capwell's Department Store; bids in next week.

San Francisco, 100 tons, Weinstein Department Store addition; bids next week.

Sacramento, Cal., 225 tons, theater; bids being taken.

Kellogg, Ore., 280 tons, bridge over Umpqua River; bids March 8.

Ellensburg, Wash., 155 tons, Kittitas diversion dam; general contract to C. F. Graff, Seattle.

PERSONAL

William B. Updegraff, for 15 years engaged in engineering and sales work for the Watson-Stillman Co., 75 West Street, New York, manufacturer of hydraulic machinery, has been elected vice-president in charge of sales of that company. He is a graduate of Harvard University and a member of the Harvard Engineering Society and of the American Society of Mechanical Engineers.

William J. Chapin, formerly combustion engineer for the Peoples Gas Light & Coke Co., Chicago, and more recently engineer with the Eclipse Fuel Engineering Co., Rockford, Ill., has become identified with the Chicago Steel Foundry Co., Chicago, and will have charge of engineering and sales of Pyrasteel, a heat-resisting alloy manufactured by that company.

W. S. Carson, formerly in the Cleveland office of Joseph T. Ryerson & Son, Inc., has been placed in charge of a new district sales office opened by the Globe Steel Tubes Co., Milwaukee, at 1436 Engineers National Bank Building, Cleveland.

D. K. Swartwout, Sr., president Swartwout Co., Cleveland, accompanied by Mrs. Swartwout, sailed on March 3 for a vacation of several weeks in the West Indies.

Joseph B. Montgomery, Jr., who has been assistant to the president of the Berger Division, Central Alloy Steel Corporation, Canton, Ohio, has been elected vice-president and a director of the division. Other officers have been reelected.

Edward H. Ingram, recently associated with the Landis Tool Co., Waynesboro, Pa., has been appointed general superintendent and works manager of the Automatic Nut-Thread Corporation, 3617 North Eighth Street, Philadelphia, manufacturer of automatic nut tapping machines.

F. E. Burgess, secretary and assistant treasurer of the Burgess-Norton Mfg. Co., Geneva, Ill., manufacturer of screw machine products, sheet metal stampings, piston pins and automotive replacement parts, has been elected vice-president and assistant treasurer of the company. W. D. Smith, auditor, has been made secretary. C. M. Burgess, president and treasurer, has been reelected.

Norman W. Foy, in charge of sales at Boston for the Republic Iron & Steel Co., has been appointed district sales manager at Birmingham for that company. He succeeds E. M. Barnes, who has been made manager of pig iron sales, with headquarters at Birmingham. The company's Boston office will continue to function as a branch of the New York sales office, which is in charge of W. H. Oliver.

O. C. Hoffman, president United States Can Co., Norwood, Ohio, was elected a director of the Continental Can Co., New York, at a recent meeting of the latter company's stockholders. I. W. England, president Passaic Metal Ware Co., Passaic, N. J., was also elected a director of the Continental company, succeeding T. R. Morgan, resigned. At the same meeting stockholders approved the purchase of the entire outstanding stock of the Passaic company and of the Seattle-Astoria Iron Works, Seattle, Wash. Acquisition of the United States Can Co. by the Continental organization was consummated a few weeks ago.

John J. Malloy and Ludwig Saudenmeir, designers in the plant of the National Lamp Works, Cleveland, have received the Charles A. Coffin Foundation Awards for 1927. The award came to Mr. Malloy for the designing and building of a basing and soldering machine for miniature incandescent lamps, and to Mr. Saudenmeir for a new type of combination stem and inserting machine for lamps. The Charles A. Coffin Foundation was established in 1922 by the General Electric Co. as an expression of appreciation of Mr. Coffin's work for the company and the industry as a whole, and the awards are made yearly to men who contribute the most to the efficiency of the company or to the progress of the electrical industry.

J. I. Andrews, vice-president and general manager of sales for the American Sheet & Tin Plate Co., accompanied by Mrs. Andrews, sailed this week for an extended European tour. Fred M. Fuller, assistant general manager of sales, will be in charge of the department until Mr. Andrews returns about the middle of June.

George R. Bennett, formerly vice-president and general manager Edgar Allen Steel Co., Inc., New York, has joined the Braeburn Alloy Steel Corporation, Braeburn, Pa., as assistant district manager at the Chicago branch, 223 North Desplaines Street. A. J. Coursen has become associated with the Braeburn corporation as special representative with headquarters in Chicago. He was formerly assistant sales manager of the Edgar Allen company.

Merrill P. Wolfe, Praetorian Building, Dallas, Tex., has been appointed sales representative of the Pennsylvania Pump & Compressor Co., Easton, Pa., in the Dallas territory.

James Otis Handy, director of chemical and metallurgical investigators for the Pittsburgh Testing Laboratory, now has his office at 72 Washington Street, New York.

B. S. Livingston, vice-president Foreign Traders Co., 17 Battery Place, New York, will leave March 10 on the Columbus for a short business trip to Germany, Belgium and Denmark.

D. F. Geissinger has been appointed direct factory representative in western Pennsylvania, with headquarters at 602 Oliver Building, Pittsburgh, of the Metal Saw & Machine Co., Inc., Springfield, Mass.

Myron F. Westover, for 34 years secretary of the General Electric Co., Schenectady, N. Y., retired on March 1, and has been succeeded by William W. Trench, who has been assistant secretary. Mr. Westover has been actively identified with the electrical industry for 40 years, his first position having been secretary to the late Charles A. Coffin, at that time treasurer and manager of the Thomson-Houston Electric Co., now the West Lynn, Mass., plant of the General Electric Co. The new secretary, a member of the New York bar, is a graduate of St. Lawrence University, Canton, N. Y., and of the Brooklyn Law School, Brooklyn.

T. F. Scannell, formerly associated with the Chain-Belt Co., Milwaukee, has been appointed exclusive representative at St. Louis for the Magnetic Mfg. Co., Milwaukee, manufacturer of magnetic separation equipment. His office will be at 502 Ambassador Building.

W. R. Bean, vice-president Grindle Fuel Equipment Co., Harvey, Ill., will speak on the "Relation of Melting Furnace Operation to Cost and Quality of Malleable Castings" at a meeting of the Quad City Foundrymen's Association, to be held at the Davenport, Iowa, Chamber of Commerce on March 19.

E. D. Hill has established headquarters at 42 Church Street, New Haven, Conn., as representative of the Allis-Chalmers Mfg. Co., Milwaukee. Sales will be under the direction of A. F. Rolf, manager of the company's New York office.

William G. Clyde, president Carnegie Steel Co., Pittsburgh, is back at his desk after a six weeks' stay in California.

W. W. Nichols, vice-president and mechanical engineer of D. P. Brown & Co., 1440 Park Place, Detroit, has recently had conferred upon him membership in the Masaryk Academy of Work, of Prague, Czechoslovakia. Mr. Nichols previously had been admitted to membership in the Institute of Scientific Management, Warsaw, Poland.

H. B. Hirsh, president Belmont Iron Works, Philadelphia, has been appointed first vice-president of the American Institute of Steel Construction. He has been a director of the institute for a number of years. His term of office expires in the fall of 1928.

Gordon E. McNamee, for seven years Milwaukee representative for Briggs & Turivas, Chicago, has organized the G. E. McNamee Co., with offices at 425 East Water Street, Milwaukee, and will handle iron and steel scrap and other iron and steel products.

A. L. Roberts, formerly with the railroad sales department of the Central Alloy Steel Corporation, Massillon, Ohio, has joined the development and research department of the International Nickel Co., Inc., New York, and will devote his time to railroad development work.

Earl H. McCarty, for the past six years general sales manager of the Nash Motors Co., Kenosha, Wis., has been elected a vice-president of the company, continuing in general charge of merchandising.

C. E. MacQuigg, manager Union Carbide and Carbon Research Laboratories, Long Island City, N. Y., will address the New Haven chapter of the American Society for Steel Treating, Thursday evening, March 8, his subject being "Some Present Trends in Engineering Steels."

George H. Cleaver, for 21 years connected with the Oswego Tool Works, Oswego, N. Y., has resigned to become treasurer of the Dime Building and Loan Association in that city.

Isaac Black has been made vice-president and manager of the Russell & Erwin Division, American Hardware Corporation, New Britain, Conn., succeeding the late B. A. Hawley.

Malcolm Farmer, vice-president of the Stanley Works, Bridgeport, Conn., spoke recently before the Worcester Exchange Club, Worcester, Mass.

Robert W. Adams, formerly manager of sales at the Providence office of the General Electric Co., has been made manager of the public utility division in Northeastern United States with offices at 83 State Street, Boston.

Robert E. Clingan has been made assistant to Lester G. Sigourney, secretary and sales manager New Departure Mfg. Co., Bristol, Conn.

Phillip S. Graver, president of the Graver Corporation, East Chicago, Ind., manufacturer of steel tanks, has been elected a member of the South Park Board, Chicago, succeeding Bernard E. Sunny, chairman of the board of the Illinois Bell Telephone Co.

E. W. Kempton, educational director of the American Steel & Wire Co., gave an illustrated talk on steel manufacturing on Feb. 21, at a dinner meeting of the Western Michigan Purchasing Agents' Association at the Rowe Hotel, Grand Rapids, Mich.

William J. Lavelle has resigned as sales manager of the New England Coal & Coke Co. He had been associated with the company about 20 years. Robert P. Tibolt, who has been with the company eight years, succeeds Mr. Lavelle.

V. C. Voight, formerly in the Pittsburgh office of Briggs & Turivas, has joined the sales department of Erman, Howell & Co., McCormick Building, Chicago, dealers in iron and steel scrap.

E. M. Adams, first vice-president and general sales manager of the Inland Steel Co., Chicago, returned March 7 from a four weeks' pleasure trip in California and the Hawaiian Islands.

Wilbur C. Otis, for 13 years associated with the Otis Elevator Co. at Quincy, Ill., has been transferred to the efficiency engineering department of the company at Yonkers, N. Y., factory.

New High-Speed Steel Developed for Cutting Manganese Steel

A new high-speed steel, claimed to be capable of machining manganese steel, has been placed upon the market. For some time tests have been conducted by the Firth-Sterling Steel Co., McKeesport, Pa., on a new type of high-speed steel, which has been designated "Circle C." While the experiments on this steel were being conducted, it was discovered that the capacity of the steel was such that standard test bars were not of a sufficiently rigorous nature to measure this capacity. It was, therefore, decided to use manganese steel in the tests.

The test bars used in testing the new high-speed steel were 3-in. diameter, rolled manganese steel, containing about 12 per cent manganese and 1.20 per cent carbon. The cutting test is reported to have been unusual. Using a test bar that was supposedly unmachinable, the accustomed "break-down" process was not attempted. Instead, all effort was directed to prevent tool failure, according to the statement of one of the company's engineers. The object of the test was to demonstrate that manganese steel can be machined on a commercial scale. The operating conditions and the details of the tests are reported to have been as follows:

> The tests were carried on under circumstances that would obtain in almost any ordinary machine shop. The lathe used was a 24-in. back-geared, cone-pulley, belt-driven and gear-feed machine in fair condition. The lathe tools were forged from ⅞ x 1¼-in. Circle C steel. In form these tools were similar to those used on heavy duty work and in many cutting tests, with a front and side clearance of between 6 and 8 deg., a top back rake or clearance of 8 deg. and a top side rake or angle of 14 deg. The nose had a radius of 7/16-in. (half the width of the tool). Cutting edge was on the center line of the work.
>
> During the progress of the tests, cutting speeds ranging from 7½ to 28 ft. per minute were tried. It was found that the range from 7½ to 15 ft. per minute gave the best results. When suitable cutting speeds were established, various depths of cuts and feeds were tried. Within the speed range mentioned above, the tools stood up satisfactorily on feeds ranging from 1/60 to 1/50 in., taking cuts from 1/16 to 5/32 in.
>
> The chip formed was a very tight and compactly curled ribbon, in color deep dark blue or the brownish gunmetal peculiar to manganese steel. This chip was oily smooth on the under side and would break only when it became entangled. Five to 10 min. before the tool was ready to be taken out for regrinding, the chip would begin to straighten out into a long wavy ribbon which, under an electric light, would show a dull red color 3 or 4 in. from the cut.
>
> At no time during the test were the tools allowed to fail completely. At the first sign of failure they were removed and reground to carry on with further tests. When this stage of failure was reached the cutting edge was slightly rounded, and at a small spot a concentrated erosion and discoloration was evident.
>
> The great pressure against the cutting edge suggested that the work might push the tool away on fine cuts. To determine this point, the tool was set to take a cut 1/64 in. deep, which it would hold accurately and without difficulty across the entire length of the test bar, indicating that manganese steel can be machined to close size limits.

Concerning the heat treatment of this new high-speed steel, the statement is made that this does not differ radically in procedure from that of other high-speed steels, except that it requires a distinct increase in the heats used.

OBITUARY

Henry Phelps Howland, superintendent of blast furnaces for the Wisconsin Steel Co., South Chicago, whose death in Boston on Feb. 24 was mentioned in THE IRON AGE last week, was widely known among blast furnace and coke oven operators. He was born at Marion, Mass., April 23, 1878, and later removed to Springfield, Mo., where he was graduated from Drury College in 1898. After two years of railroad work in the Southwest he entered the University of Wisconsin, receiving his degree in mechanical engineering from that institution in 1903. He entered the steel industry at the South works of the Illinois Steel Co., and the following year was transferred to the Joliet works. In 1905 he returned to Chicago to become superintendent of the old Union works at Thirty-first Street and the Chicago River. Late in 1907 he was transferred to the South works as assistant superintendent of blast furnaces, but in 1909 he left the Illinois company to become head of the blast furnace department of the Wisconsin Steel Co. In 1915 and 1916 he established new records for coke consumption on No. 1 furnace at that plant, making iron on less than 1700 lb. of coke per ton, and in April, 1915, he established a record of 1588 lb. per ton of iron on the same furnace. He also established a new record for production on one lining. This record was made on No. 2 furnace between September, 1915, and May, 1922, when the stack produced 1,332,665 tons of iron and was in blast continuously during the period. Besides effecting economies in production and in coke consumption and playing a prominent part in the development of blast furnace construction, he contributed to the science such papers as a "Discussion of Modern Methods of Burning Blast Furnace Gas in Stoves and Boilers," read before the American Iron and Steel Institute in 1915, and "Calculations With Reference to the Use of Carbon in Modern American Blast Furnaces," read before the American Institute of Mining and Metallurgical Engineers in 1916. Mr. Howland was one of the founders and charter members of the Blast Furnace and Coke Association of the Chicago District, organized in 1916. He served as a director of this organization during 1916, 1919 and 1920, and as vice-president and president respectively during 1917 and 1918. In March, 1917, in collaboration with Walter Mathesius, he presented a discussion before this organization of "Hot Dry vs. Cold Wet Gas Cleaning."

H. P. HOWLAND

—

Arthur W. Fox, vice-president and general manager Billings & Spencer Co., Hartford, Conn., died at the Hartford Hospital on March 1, following an illness of three months. He was 46 years of age and began his business career with the Johns-Pratt Co., Hartford. He was successively advanced to factory manager of the company, and, following the death of its president, E. B. Hatch, was made vice-president and general manager. When the company became a part of the Colt's Patent Fire Arms Mfg. Co. in 1922 he retained his position with the Johns-Pratt organization and was responsible for the transfer of the plant to a site adjoining the Colt factories. He went to the Billings & Spencer Co. in 1924 as vice-president and general manager to assist in the reorganization and development of the company.

—

William W. Hanlon, general superintendent of the Granite City Steel Co., Granite City, Ill., died recently at his home in St. Louis, aged 70 years. He also was vice-president of the Granite City National Bank and president of the Western Fire Brick Co., Granite City. He entered the steel business at Pittsburgh, and in 1895 moved to Granite City, where he became assistant superintendent of the National Enameling & Stamping Co., later the Granite City Steel Co. Two years later he became general superintendent.

—

Frank A. Tyler, for the past 10 years president and treasurer of the J. C. Metcalf Machinery Co., Inc., Boston, died at his home in Lynn, Mass., Feb. 28, aged 59 years.

—

John Bogenberger, a former president of the Consolidated Sheet Metal Works, Milwaukee, died suddenly on Feb. 25, aged 60 years. He was widely known for his development of hollow metal window frames and other fireproofing products for industrial and commercial buildings. In recent years he had been associated with the Biersach & Niedermeyer Co., Milwaukee, and was a past president of the Wisconsin Sheet Metal Contractors' Association.

—

Orlando J. Root, in recent years associated with the Standard Calorimeter Co., East Moline, Ill., and a pioneer in the automotive industry of this country, died suddenly on Feb. 16 at his home at Moline, Ill. He was born at West Bay City, Mich., in 1869 and was graduated in mechanical engineering from the Michigan State Agricultural College, Lansing. He then became associated with William G. Vandervoort in the manufacture of gas engines at Champaign, Ill. Later the plant was removed to Moline, where automotive manufacture was begun. During the war the factory was expanded for the manufacture of ammunition, but operations were suspended some years ago.

—

George W. Hite, for nine years in the roll sales department of the Pittsburgh Iron & Steel Foundries Co., Pittsburgh, prior to its absorption by the Mackintosh-Hemphill Co., died suddenly at Atlantic City, N. J., March 3. He had lived in that city in recent years on account of his health.

—

Frank I. Hoover, assistant general sales manager Central Iron & Steel Co., Harrisburg, Pa., died of pneumonia, March 3, at his home in Harrisburg.

—

Newton S. Calhoun, president Johnston & Jennings Co., Cleveland, died at Pasadena, Cal., on March 3, aged 73 years. He was born in Connecticut, was graduated from Brown University, Providence, in 1879, and had lived in Cleveland since 1882. A son, Tracy Jennings Calhoun, is vice-president of the Johnston & Jennings Co.

—

William H. Taylor, president Goodwin Car & Mfg. Co., 17 Battery place, New York, died on Feb. 29 at his home in that city, aged 68 years. He had also been prominently identified with a number of coal companies in eastern Pennsylvania.

—

Ernst Boley, assistant to the vice-president in charge of operations of the American Steel & Wire Co., Cleveland, and for years prominently identified with the operating department of that company, died suddenly Feb. 20, aged 66 years. He had been connected with the company since 1884. He was born in Germany and after going to Cleveland was employed in the H. P. nail works of the American Steel & Wire Co., of which his uncle, Michael Baackes, was superintendent. Later he became superintendent of the H. P. works. He then became assistant to the general superintendent of all the American Steel & Wire Co. plants. Later he was made assistant to the vice-president, holding that position until his death. A son, Ernest W., is connected with George W. Prentiss & Co., Holyoke, Mass., wire manufacturers, and another, Herman V., is president of an importing company in Buenos Aires, Argentina.

AIRCRAFT CONSTRUCTION STEEL

Steels and Special Alloys Used to a Greater Extent Than in Any Other Class of Machinery

DATA assembled in the table below are taken from a paper by Edward A. Richardson of Bethlehem, Pa., read before the recent New York meeting of the American Institute of Mining and Metallurgical Engineers. The author states that research to develop metals and methods for aircraft production is warranted, because it has frequently developed light construction later used in many other industries, and to an extent greatly in excess of anything that might be expected of aeronautics for many years to come.

"It is obvious that materials meeting the specialized demands of such light and strong structures as aircraft would, if sufficiently cheap in the fabricated condition, greatly modify methods in many fields. It is not inconceivable that all-metal house construction, for instance, might be rendered economically, esthetically and comfortably desirable if we could provide a 'board' of light metal, insulated and sound-proofed, resistant to corrosion, designed for ease of attachment to a metal frame and for ease of cutting (by special equipment, if necessary), and capable of architectural treatment."

Common Practice in Aircraft Manufacture

Part	Detail	Material
Wings	Beams	Wood
	Drag trussing	Stream-line wires
	Drag struts	Wood
	Leading edge	Thin sheet duralumin
	Fittings	S.A.E. 1020 sheets (a)
Tails	Frame	Drawn steel tubing (S.A.E. 1010 or 1020) bent and welded
	Ribs	Thin sheet steel, flanged
Fuselage	Frame	Steel tubing, S.A.E. 1010, 1020, or alloy (b)
	Engine cover	Aluminum sheet
	Rear cover	Fabric
	Formers	Wood
Interplane	Struts	Steel or duralumin tubing
	Wires	Streamline; special alloy, possibly S.A.E. 2330 or 3330
Landing gear	Axle tube	S.A.E. 2340 or 3140, at least 200,000 lb. ultimate.
	Struts	Steel tubing, S.A.E. 1020 or alloy (b)
	Disk wheels	Duralumin
Parts for surface control	Low strength	S.A.E. 1025 sheets
	Medium strength	S.A.E. 2330 bars
	High strength	S.A.E. 3315 and 6130 bars
	Elevator tubes	Rarely alloy
	Bolts	S.A.E. 2330
	Gasoline tanks	Welded aluminum sheet

(a) Cut, bent to shape, reinforcements welded on, dip-brazed, normalized, cleaned, electro-galvanized, and enamel baked on.

(b) Carbon, 0.25 to 0.35 per cent; chromium, 0.80 to 1.10 per cent; manganese, 0.40 to 0.60 per cent, molybdenum, 0.15 to 0.25 per cent. Used without heat treatment. Material is air-hardening, so butt-welded joints develop 84 per cent efficiency.

Canadian Rail Mill Practice

During the discussions held by the American Society for Steel Treating at Montreal, Que., during February, W. R. Werther, Algoma Steel Corporation, Sault Ste. Marie, Ont., said that it is necessary for his company to give extreme care to the open-hearth practice to avoid "off" heats, because its mills are not equipped to roll softer or harder steel into marketable shapes. The result is an unusual uniformity in chemical analysis.

Canadian railroads are following the practice originated by the Canadian Pacific Railway of rejecting *all* A rails. When, in addition to the normal crop, enough additional is taken to make a full-length rail, the discard becomes as great a percentage as is required for high-grade forging billets. To avoid the extra premium which such steel demands, the roads accept the steel which would ordinarily be put into the top rail after it has been rolled into tie plates.

Even after this excessive discard, the stub end cut from the top rail is tested under the drop. If it shows no evidence of seaminess, fissures or segregation, all the rails in that ingot are accepted. If it does, the top rail (which would be the B rail in American practice) is discarded, and its lower end is used for another drop test. If this passes, the rest of the rails are accepted; otherwise the process is continued until a satisfactory test is found.

In this way every ingot is given an individual fracture test, and only the rails from that ingot are accepted on the basis of that test. This is contrasted with the American plan of testing a few rails from each heat selected at random by the inspector.

Transverse fissures have been reduced by the practice of rolling only from reheated blooms, rather than direct from the hot ingot. In general, the problem to be met when making heavy-section rails is to produce a section free from sizable internal stresses or differences in composition, and possessing a fine-grained, uniform structure which resists wear and yet retains maximum toughness.

Refractory Problems of Electric Steel Foundries

The joint committee on foundry refractories has been active in several different ways recently. At present the subcommittee on survey for the electric steel castings industry is hard at work on the refractory problems of the electric castings foundries. This subcommittee is planning to circulate a questionnaire to all electric steel foundries to obtain additional information to aid them in their studies. They hope that the response to this will be generous. The committee is composed of the following members: Lee Everett, chairman, Illinois Clay Products Co.; J. M. Geopferd, Racine Steel Castings Co.; W. Harvey Payne, Pittsburgh Electric Furnace Co.; P. C. Leonard, General Refractories Co.; Samuel Arnold, Heroult Electric Furnace Co.; H. L. Smalley, Harbison-Walker Co.; A. C. Gierach, American Manganese Steel Co., and F. W. Brooke, William Swindell Brothers.

Paying Employees by Check for Safety

Advantages and disadvantages of check payment of employee wages are outlined in a pamphlet recently issued by the Policyholders' Service Bureau of the Metropolitan Life Insurance Co., New York. The pamphlet is based upon the experience of 50 companies which have lately adopted check payment. Only one of these firms has returned to the cash payroll system. In nearly every case the safety factor has been uppermost in prompting the adoption of check payment. The danger of the cash plan is evidenced by the fact that in a recent six months' period, according to the American Bankers' Association, there were 205 payroll robberies resulting in the loss of $1,850,000, the wounding of 40 employees and the death of 20.

The United States Steel Corporation, one of the companies which contributed to the survey, has recommended to its subsidiary companies that employees be paid by check. A few companies find check payment not practical, either because cash is preferred by their employees or because there are no banking facilities in the towns where the plants are situated. In such cases payment by check would be expensive and troublesome. Among the important reasons why the Steel Corporation prefers its subsidiaries to pay by check are the following: It reduces hazard to employees while protecting cash; eliminates temptation for theft; eliminates disputes as to amounts received by employees; reduces force and equipment which would be necessary if employees were paid by cash; saves time by making it possible to pay employees at their posts; is more economical, and encourages thrift.

Locomotive Shipments Still Low

WASHINGTON, March 6.—Railroad locomotives to the number of 59 were shipped in February, comparing with 47 in January, according to the Department of Commerce, and unfilled orders at the end of each month were 204 and 222 respectively. With two exceptions, the February shipments were the lowest in more than a year. In February, 1927, the total was 80 locomotives, and 163 were shipped in February, 1926.

Metallic Flow During Rolling

(*Continued from page* 667)

Conditions shown in Fig. 4c and 4d may be combined to yield the highly complicated condition shown in Fig. 4e. As the crystal rolls out, both twinning and slip undoubtedly occur, the former offering a rational plan for the shift in the crystalline orientation experimentally observed, and the latter providing for most of the plastic thinning of the crystal.

Postulates Advanced by Professor Mathewson

Such a brief account of the principal points in the lecture can do little more than glimpse the experimenation and deductions underlying the following postulates, a series of provisional conclusions, "which may at least stir up an amount of useful discussion":

1. When in the inhomogeneous deformation of a metal by slip combined with distortion, the atoms in certain zones reach positions more nearly approximating equilibrium positions in a possible twin than in the original crystal, twin lamellae will be formed with partial relief of stress and the residual distortion will be distributed in harmony with the geometrical requirements of each special case.
2. By far the great majority of the metals are subject to structural alteration of this character.
3. Under slowly applied loads there is a minimum occurrence of the continuous distortion from plane to plane required to initiate twining, owing to the tendency toward premature slip along "weak" planes of variable spacing depending upon the concentration of impurities or the operation of other factors which may affect the cohesion between planes.
4. Under impact loading a given small displacement is momentarily distributed among many planes, and favors the formation of sizable twin bands.
5. The distortion around simple twin bands wholly inclosed within the original crystal may be confined to the ends as distinguished from the parallel sides bounded by twinning planes and this brings about end growth on annealing which may spread along the sides. In other cases distortion may exist at the composition planes and bring about direct lateral growth.
6. Both the quantity and the size of deformational twins are greatly affected by the kinds of deformation and the purity of the metal.
7. Distortion and thermal instability are especially pronounced in the vicinity of faults or direct intersections where twin bands enter into conflict with one another.
8. One form of recrystallization is essentially granulation produced by irregular and competitive growth of interstratified twin lamellae (which may be termed "crystallographic fragments" in that they cannot be fitted together without distortion in spite of their crystallographic relationship through the parent crystal).
9. Recrystallization in the absence of twinning is a similar reaction between lamellae (fragments) formed by inhomogeneous distortion during slip, e.g., variable rotation of the slip planes. This leads to less pronounced changes in orientation from grain to grain than is effected by twinning.
10. In conformity with the conception of recrystallization expressed in (8) and (9), diversity of orientation after a succession of deformational and annealing treatments is due to multiple internal twinning, rotation during slip, or some combination of these two causes depending upon the nature of the metal, the initial orientation of the crystals and the kind of deformation.

Allis-Chalmers Mfg. Co. Buys Monarch Tractor Corporation

The Allis-Chalmers Mfg. Co., Milwaukee, has purchased the entire capital stock of the Monarch Tractor Corporation, Springfield, Ill., and will operate the plant as a subsidiary without immediate changes in personnel. Manufacturing, engineering, purchasing, accounting and sales activities will be coordinated with the Allis-Chalmers organization and arrangements are being made to install additional machinery and equipment to increase the range of production at Springfield.

The Monarch plant consists of assembly and machine shops of modern construction with approximately 75,000 sq. ft. of floor space, and a six-acre tract of land provides for further expansion. The corporation was formed in January, 1926, to succeed the Monarch Tractor Co., with plant at Watertown, Wis. The plant was moved to Springfield and operation begun in May, 1926.

Baldwin Locomotive Works Site in Philadelphia to Be Sold

The Baldwin Locomotive Works, which has gradually been moving its manufacturing facilities from its Philadelphia plant at Broad and Spring Garden Streets, that city, to the new plant at Eddystone, Pa., will have completely vacated the Philadelphia plant by July 1, it is announced, and the property will be offered for sale. Samuel M. Vauclain, president, said that there are no negotiations under way at present for its sale, but in the past year or so there have been various reports as to the use which would ultimately be made of the property, which is centrally located, one being that a group of railroads would use it as a site for a union station. At a meeting of the Baldwin stockholders on March 1 all of the directors were re-elected.

Ottawa Silica Co., Ottawa, Ill., has acquired the plant and property of the United States Silica Co., also at Ottawa. The plant of the United States company will be operated and all trade names of established brands of products will be used. General offices of the new company will be at Ottawa, Ill.

New McWane Cast Iron Pipe Plant Increases Operations

BIRMINGHAM, March 3.—The new 16-ft. pipe unit of the McWane Cast Iron Pipe Co., Birmingham, which began operations Jan. 1, has been pronounced so successful that the plant goes on double-shift early this month. This is in accordance with schedules fixed some time ago when the company announced that the manufacture of sand cast pipe by its new process would be put on a mechanical basis. The originators of this new method of making pipe claim that it promises to be of far-reaching importance.

The McWane mechanical method is said to be both revolutionary and evolutionary. It is termed an adaptation of up-to-date foundry processes and principles to the manufacture of pipe in green sand and follows the plan upon which the foundries of large automobile manufacturers operate.

The McWane method of manufacture differs from the old methods in that heretofore pipe has been cast vertically in pits, the molds and cores being dried before the iron is poured. By the use of a patented device for holding the cores central in the mold, the pipes are cast by this new method while the molds are in a horizontal position without the necessity of drying either the molds or the cores.

A distinct feature is that the operation is continuous. In ordinary foundry practice a certain number of molds is prepared and the iron is subsequently poured into them, which constitutes a day's work.

Another unusual feature is the flexibility of the plant under the process. Instead of a number of sizes of pipe being made each day and the capacity of a given size being limited to the amount of equipment available, the entire unit runs on a given size, as in a rolling mill, until the orders for that size are completed, when the equipment may quickly be changed to make another size. In this way the plant makes what the market demands, rather than having to sell what the plant makes.

Shipments of fire-extinguishing equipment in January included 53 pumping engines and 18 other automobile-type units, compared with 80 and 34 in December, and with 70 and 23 in January, 1927.

British Produce More Foundry Iron

Hematite Make Is Curtailed—Restriction of Tin Plate Output Still Effective—Japan Places Tin Plate With Welsh Mills

(*By Cable*)

LONDON, ENGLAND, March 5.

DEMAND for Cleveland pig iron has improved and makers are well booked both for prompt and forward delivery. Consequently output is to be increased by Bolckow, Vaughan & Co., blowing in an additional furnace.

Hematite is dull and makers have agreed to combat competition by regulating production, which has consequently been curtailed by Pease & Partners blowing out one Normanby furnace and Gjers, Mills & Co. blowing out their remaining two Ayresome furnaces and closing down entirely, dismissing 360 men. Foreign ore is firmer as a result of the Swedish strike, but buyers are not seeking to make new contracts.

Finished iron and steel is generally quiet for export and plate mills are still in need of tonnage. Domestic business is unimproved by the recent increase in rebates.

Tin plate inquiry is moderately active, but business is restricted as buyers are hoping makers will accept the schedule price. Sellers are firm at 18s. ($4.39) per base box, although some business has been done at less. Output is to be restricted by closing the mills for three weeks during a period of 13 weeks beginning March 5.

Galvanized sheets are moderately active in small lots and works are sold out for March in the heavy gages. Black sheets continue quiet.

The Clyde shipbuilding output in February was 16 vessels totaling 61,751 tons. This brings the total for January and February to 117,762 tons.

The Continental market is firm, but British consumers are purchasing no more than is necessary to cover immediate requirements.

EUROPEAN CARTELS WEAK

Division of Markets Has Failed—Overproduction Greater—Rails Only Price-Controlled Product

(*Special Correspondence*)

HAMBURG, GERMANY, Feb. 25.—There is a great deal of discussion among producers and consumers of iron and steel as to the future of the cartel system. There seems to be considerable misinformation and not a little misunderstanding of the entire cartel structure. If the existing cartels are to be judged by their actual success, they are far from satisfactory. Recently, at a meeting of shareholders of a German steel corporation, the statement was made that existence of cartels had not added a single ton to the production or exports of Germany or other European countries.

Today, the only cartels and syndicates of importance are the International Steel Cartel, which includes all European producers except Great Britain, Italy and Poland; the Wire Rod Cartel, which includes Germany, France, Belgium and Luxemburg; the International Tube Cartel, which consists of three groups of members, one including France, Belgium, Luxemburg and the Saar, another including Germany and Holland and a third for Poland and Czechoslovakia. The European Rail Makers' Association (E. R. M. A.), of which all European producing countries except Italy and Poland are members, attempts to maintain a minimum base price for rails and to a certain extent has been successful. Most other cartels have little or no influence. The wire, wood screw and wire netting cartels have failed to function and the enamelware association has no influence in its field.

The European Rail Makers' Association, which is one of the most successful of the international syndicates, not only seeks to maintain prices among its members, but a year ago devised a plan for the division of markets to reduce the severity of competition. Under this plan, the markets in British possessions are retained by British mills, those in French colonies are set aside for French producers, and Germany has cer-

tain priority rights in some European and Latin American markets. The Far East was to be allocated to all members on a tonnage basis. This plan of dividing world markets has proved unsuccessful and is understood to have been practically abandoned.

The purpose of all these international syndicates is to maintain prices, eliminate disastrous competition, avoid overproduction and to dispose of surplus output in foreign markets. After long negotiation Poland finally entered the tube cartel, but at the end of last year tube prices were lower than at the end of 1926. Under the regulations of the cartel, France and the Saar may not do business with Scandinavian countries, Germany, Spain or Portugal. Actually, merchants in London, Antwerp or Hamburg can buy as much as they wish from these countries and ship to any foreign markets. The International Steel Cartel has had no influence on prices, and European production of steel last year, instead of being reduced, was far in excess of 1926. Nor has the International cartel reduced competition between member countries. More steel was imported by Germany from France and Belgium in 1927 than in previous years.

While the cartels do not yet exercise much influence on business, it is believed in many quarters that they promise much for the future. If central sales offices are established—and there is a movement in that direction that may meet with success—there will be better distribution of orders and more rigid control of prices and output. Anything like complete success in central selling, however, is not regarded as at all probable.

Japan Buys Tin Plate from Welsh Mills

NEW YORK, March 6.—The total quarterly requirements of the Nippon Oil Co., Tokio, Japan, about 64,000 base boxes of oil can tin plate, has been placed with Welsh mills. It was first offered to American mills at the Welsh price, but was refused. This is the second successive order awarded to Britain by the Nippon Oil Co., which usually purchases a large part of its requirements from American mills. It is claimed by the purchasers that British tin plate has recently been improved in quality so that the American product is not worth a large premium over that of the Welsh mills.

The light-gage black sheet market is quiet, with Japanese merchants buying small lots from British sellers who continue to quote £14 18s. ($72.57) per ton, c.i.f. Japanese port. Mills in the United States are quoting $77 per ton, c.i.f. Japan, but buyers believe that this might be shaded slightly on a sizable tonnage.

Some inquiry for rails is appearing from Japanese railroads. The city of Tokio is in the market for about 4 miles of grooved and girder rails, and the Hanshin Electric Railroad, Osaka, will open bids shortly on about 1100 tons of high T-rails.

Disappointment Over Course of Coal Probe

PITTSBURGH, March 2.—Those who had expected that the Senatorial investigation of the soft coal industry in Pennsylvania, West Virginia and Ohio would be a thorough-going examination of the situation, and that all phases of the dispute between operators and the miners' union would be looked into, are disappointed over the course of the probe, which got under way here recently.

The committee has found that there has been suffering, misery and want among union miners and their families as a result of the idleness of the bread-winners, and it has been brought out that one or two coal companies, after signing the union wage scale agreement in Jacksonville in February, 1924, subsequently broke it, but so far nothing has been introduced as to the fundamental causes for the rupture, nor has anything been said that establishes the responsibility for the conditions under which miners and their families have been found to live.

EXPECT MORE JAPANESE BUYING

Merchants Stocks Smaller—Consumers Buying Tin Plate Seconds from Government Steel Works

Total Japanese imports of iron and steel in 1927 were about 715,000 tons, or nearly 30 per cent less than in 1926, says the monthly report of market conditions issued by A. Cameron & Co., Ltd., Kobe, Japan. The Yawata works' low prices and the increased domestic production, in addition to the trade depression, are responsible for the decline. There has also been a considerable falling off in stocks held by merchants. A conservative estimate would place stocks at 30 per cent lower than 12 months ago. So it is reasonable to expect resumption of imports of foreign material before very long, for the Japanese manufacturers cannot supply the entire normal consumption.

The recent decline in the prices of raw cotton has hit the Japanese spinning companies severely. The purchasing power of the nation has declined considerably because of the recent financial panic. A plan to stabilize raw silk prices is working better, and the price of raw silk has advanced slightly due to lower stocks. No spectacular advance is expected, however, in view of the improvement in the manufacture of artificial silk.

Business conditions in China remain chaotic. A revival of trade in China would aid Japanese business materially, and, in turn, an improvement in Japanese conditions would result in heavier imports.

Light-gage black sheets registered a considerable decline in prices in January. It had been expected that the Government would further increase the duty and, in anticipation of this advance, prices became firmer and there was some speculation. When the cabinet was dissolved and there was no further prospect of passage of the tariff bill before next fall, the price situation weakened. In addition, stocks at the Kawasaki Dockyard Co. are being liquidated at reduced prices.

The tin plate market has not been particularly active. There is a growing demand from consumers for tin plate seconds and wasters because of the lower price and the smaller duty. The recent heavy stocks of British 170-lb. boxes of tin plate have been considerably reduced, but there has been no fresh buying, as the Government works at Yawata is selling tin plate seconds of a quality equal to British seconds at a price 2s. 6d. (61c.) per box lower.

Effect of Variables in Foundry Practice

"The most difficult problem of the foundryman can be summed up in the word 'variable,'" said J. Ramsey Speer, president Mackintosh-Hemphill Co., Pittsburgh, before the February meeting of the Pittsburgh Foundrymen's Association. "Taking foundry practice in general, it is hard to conceive of any business where the variables which enter into the daily practice have more to do with success or failure than in the foundry business. Of course, every industry, where metallurgy plays a prominent part, is affected by a great many variables, but somehow or other it seems that the extent of these variables is greater in jobbing foundry practice than in almost any other line.

"There are three things among these 'variables' which stand out as dominating the situation to a greater extent than anything else—gating, heading, venting. Give us the man," said Mr. Speer, "who can gate his castings intelligently; who, when he sees a pattern, knows from his experience and intuition where and how it should be gated; couple this knowledge with the correct conception of how the casting should be headed to insure its being sound in every particular, and add to this the ability to diagnose the problem of venting the casting properly; give us such a man, I say, and he will add several per cent to the yields which we can expect and depend upon. With such yields, the foundryman's problem is more than half solved."

Machinery Exports Less in January

Seven-Month Total 13 Per Cent Ahead of Last Year—Imports Less Than Year Ago

EXPORTS of machinery of all kinds in January were valued at $36,183,571, against $38,169,898 in December, according to figures prepared in the Department of Commerce. For the seven months ended with January they were valued at $260,552,482, compared with $229,527,021 for the corresponding period of the previous year. In January, 1927, exports were valued at $33,447,732.

Imports of all machinery and vehicles in January were valued at $1,744,604, against $2,163,001 in January, 1927, and for the six months ended December, 1927 and 1926, they were valued at $12,185,838 and $12,683,740, respectively. Imports of machinery listed in THE IRON AGE table were valued in January at $1,157,964.

Exports of industrial machinery as classified by the division of statistics, Department of Commerce, were valued at $16,202,582 in January, against $17,206,531 in December. For the six months ended December, 1927 and 1926, they were valued at $101,334,260 and $91,968,259, respectively. Exports of "other industrial machinery" in January were valued at $5,729,391, against $5,224,582 in January, 1927, and for the six-month period ended December, 1927 and 1926, they were valued at $35,932,752 and $29,431,743, respectively.

Power-driven metal-working machinery to the value of $2,089,802 was exported in January, against $1,494,127 in January, 1927. For the six months ended December, 1927, the value was $11,599,377, compared with $7,336,956 during the six months ended December, 1926. Machine tools exported in January, 1928, totaled 686, valued at $1,315,771, against 623, valued at $1,215,992, in December.

Industrial, office and printing machinery imported in January were valued at $1,074,638, against $1,432,842 in January, 1927. For the six months ended December, 1927 and 1926, the values were $7,393,794 and $8,378,896, respectively.

Decline in Immigration

WASHINGTON, March 3.—Immigrant aliens admitted to the United States in December, 1927, totaled 22,350, the lowest number since February, 1927, with a total of 21,695. Departing emigrant aliens in December numbered 9085. During the six months ended Dec. 31 of last year 164,665 immigrant aliens were admitted, as against 159,220 for the first six months and 175,955 during the last half of 1926. Of the December admissions of aliens, 11,933 were quota immigrants, 11,753 coming from Europe, which during the last six months of last year provided 75,394 of the 76,852 quota immigrants. Iron and steel workers admitted in December totaled only 98, while for the six months period the number was 926.

Machinery Exports from the United States

Much Higher Tonnage of Iron Ore Imports

January imports of iron ore into the United States are reported by the Department of Commerce at 251,178 gross tons. This represents a gain of more than 90 per cent over the low tonnage that came in in December. It is, however, only moderately above the average month of 1927 and is 15 per cent below the imports in January of that year, at 295,480 tons. For the seven elapsed months of the fiscal year, the incoming movement has been 1,591,139 tons, which is within about 1 per cent of the slightly larger imports of the corresponding period of the preceding year.

Chile maintains a lead in incoming tonnage, having furnished 60 per cent of the total in January, compared with less than 39 per cent a year earlier. French Africa has taken second place, having advanced far ahead of Cuba, which was in second place a year ago. Details are shown in the table.

Sources of American Imports of Iron Ore
(In Gross Tons)

	January		Seven Months Ended January	
	1928	1927	1928	1927

German Iron Ore Imports Principally Swedish

HAMBURG, GERMANY, Feb. 11.—The change in sources of German iron ore supplies since the war is shown in the recently published import totals for 1927. While iron ore imports in the years 1910 to 1913 averaged 5,390,000 tons a year, 17,400,000 tons of iron ore was brought into Germany in 1927, compared with 9,550,000 tons in 1926. Of the 1927 total, Sweden supplied 8,620,000 tons, Spain 3,100,000 tons and France 2,900,000 tons.

German steel works are seeking to obtain their ore supplies from mines owned by them in foreign fields. The large Swedish mine, Aktiebolaget Nya Noragruffoorna, has been purchased by a combination of Krupp, Hoesch and Gutehoffnungshütte interests.

Molybdenum Output Increased in 1927—Price Reduced

Three companies produced molybdenum ore in the United States during 1927: the Climax Molybdenum Co., at Climax, Colo.; the Molybdenum Corporation of America at Sulphur Gulch, near Questa, N. M.; and the Santo Niño Mining Co. at Helvetia, Ariz., according to data collected by the United States Bureau of Mines. A total of 216,595 net tons of ore was milled, from which concentrates carrying from 75.14 to 95.4 per cent of molybdenum sulphide, MoS_2, equivalent to 2,299,217 lb. of elemental molybdenum, were obtained, an increase of about two-thirds over 1926. Of the concentrates produced 2,286,075 lb., valued at the mines at $1,858,786, was shipped. Nearly all of the output was made into calcium molybdate, in which form it is added to steel.

Perhaps the most important event of the year in the molybdenum industry was the announcement that the price of metal contained in calcium molybdate would be reduced at the beginning of 1928 from $1.20 to 95c. per lb. The reasons for the reduction were that the larger sales had allowed mills to be run more nearly at full capacity with consequent lower costs and that the lower prices would probably encourage a still larger use.

Net profits for 1927 of the United States Cast Iron Pipe & Foundry Co. were $3,373,976, compared with $5,049,367 in 1926, or a decrease of approximately 33 per cent.

Russian Iron and Steel Output Increased Last Year

WASHINGTON, March 5.—Provisional figures received by the iron and steel division, Department of Commerce, from Assistant Commercial Attaché Daniel J. Reagan, Paris, show that the heavy iron and steel industry of Soviet Russia greatly increased its output during the fiscal year 1926-27. The total output was 2,946,900 tons of pig iron and 3,533,000 tons of steel, increases of 34.9 per cent and 32.3 per cent when compared with the previous year. The figures also show a production of 2,687,100 tons of finished steel, an increase of 20.7 per cent.

Russian siderurgical production was valued at a total of 307,700,000 rubles (approximately $158,157,000) in 1926-27, an increase of 9.5 per cent over the preceding year. The number of workers increased 10.6 per cent, with a total of 191,154 engaged. In spite of the marked increases reported in the total output, the daily average production per man increased only 1 per cent while the average pay increased 18.40 per cent.

Reduction in Stocks of Industrial Coal

Bituminous coal stocks on Feb. 1, in industries in the United States, are estimated by the National Association of Purchasing Agents at 50,595,000 net tons. There has been a progressive decline from the high figure of last April at about 75,000,000 tons. Present stocks are estimated to constitute an average supply for 42 days, compared with a 40-day supply a year ago. Stocks are about equivalent to those of two years ago, but present consumption is 14 per cent below consumption at that time.

Industrial consumption in January is placed at 37,678,000 net tons. This shows an increase of more than 1 per cent above December and is the largest figure in about a year. The recent low was recorded in September, with 33,195,000 tons. Production of bituminous coal in January is placed at 49,645,000 tons.

Production of bituminous coal in the United States in the week ended Feb. 25 is reported by the Bureau of Mines at 10,181,000 net tons. This is a substantial gain over the production of the two preceding weeks, but it is considerably below the 12,763,000 tons of the corresponding week a year ago.

Steel Furniture and Shelving Orders at Highest Level Ever Reached

Steel furniture orders in January are reported by the United States Department of Commerce at $3,248,165. This is about 6 per cent higher than the largest month previously reported since these figures have been gathered—that is, since September, 1924. The increase over December was approximately $400,000, while the gain from January, 1927, was $361,000. The previous highest figure was that of January, 1926, at $3,063,833.

Shipments at $2,712,663 in January were about 1 per cent lower than in December and slightly lower than in the preceding January. They were, however, higher than the average month of either of the two preceding years. Unfilled orders at $2,000,450 made the highest total ever recorded, being about 1 per cent above the previous high of two years ago. The increase in unfilled orders during the month was $587,000, or nearly 42 per cent.

New orders for steel shelving made the highest total over recorded, at $768,748, in January. The gain over December was about $150,000, while the figure was nearly $200,000 above that of a year earlier. Shipments of steel shelving were $680,264, a gain of more than $100,000 over December, but a figure which was exceeded last March and also in March and April, 1926. Unfilled orders for shelving were $679,745, the highest total since September.

Oglebay, Norton & Co., Hanna Building, Cleveland, dealers in iron ore, on March 1 opened a department for the sale of coal and coke.

Machinery Markets and News of the Works

MARCH TRADE BETTER

Improved Business in Machine Tools Noted in Some Districts

St. Louis-San Francisco Railroad Issues Orders Against List—Radial Drill Manufacturer Advances Prices

MACHINE tool sales have turned upward, according to reports from some districts, and give promise of reaching a fairly high point this month. A considerable volume of inquiry is pending and fresh inquiries are being received at a good rate.

A feature of the current business is that orders are coming from diversified industries and most frequently are for single machines. Railroads and the automobile companies, which are usually depended upon to take a large share of the machine tool output, are not conspicuously large buyers.

In the railroad field the principal buying of the week has been done by the St. Louis-San Francisco, which ordered a number of tools against a recent inquiry. The Chicago, Burlington & Quincy is getting prices on several tools. The New York Central, Delaware, Lackawanna & Western and Atchison, Topeka & Santa Fe have taken no action on tools which builders have recently quoted on.

In the Chicago district the week's business was stepped up by the purchase of about $50,000 worth of tools by T. L. Smith & Co., Milwaukee. A list is expected soon for the Fort Wayne, Ind., plant of the International Harvester Co.

A radial drill manufacturer in Cincinnati has advanced its prices and similar action is expected on competitive lines.

New York

NEW YORK, March 6.

ACTIVITY in machine tools is well maintained, with a fairly steady flow of new inquiries and a substantial volume of purchasing. Most of the present business is in equipment of medium size, but it is fairly well distributed. There is steady purchasing by large industrial users, such as the General Electric Co., which has made further purchases in the past week and still has a considerable list of tools to buy, and the Wright Aeronautical Corporation, which has bought several tools in the past week. Engine and turret lathes have been a feature of recent sales. The American Machine & Foundry Co., Brooklyn, has purchased four lathes, the Fairchild Airplane Mfg. Corporation, Farmingdale, L. I., bought one lathe and the Worthington Mower Co., Stroudsburg, Pa., a small lathe.

The railroads which buy in this district continue inactive. No action is as yet reported on the list of about 30 items issued by the Delaware, Lackawanna & Western and no purchases have been made by the New York Central, although it has a considerable list of inquiries for single tools that have been sent out since the first of the year. In the West, the St. Louis-San Francisco has purchased a Niles combination journal turning and axle lathe.

Included in recent machine tool purchases are a 40 x 48-in. lathe by a company in Worcester, Mass., 6 x 20-in. and 6 x 60-in. thread milling machine by a Rhode Island tool maker, Pratt & Whitney No. 3 die sinker by a forge company in Chicago, 14-in. vertical surface grinder by a Dayton, Ohio, tool company, 16 x 36-in. lathe by an Ohio manufacturer, a lathe of the same size by a Detroit motor manufacturer, 16 x 60-in. lathe, by an electric manufacturing company in the East, Pratt & Whitney 6 x 60-in. thread milling machine, by a Connecticut machine tool company, single spindle Sigourney drill, 7 x 32-in. bench lathe and a 13 x 30-in. engine lathe by a company in Newark, N. J.

Bids have been asked on general contract by Progressive Table Co., Inc., 272-78 Newport Street, Brooklyn, for a two-story factory, to cost $60,000 with equipment. Kesster & Goldsmith, 4914 Church Avenue, are architects.

Packard Motor Car Co., Broadway and Sixty-first Street, New York, has filed plans for a three-story service, repair and garage building, 210 x 225 ft., to cost $500,000 with equipment. Frank S. Parker, 119 West Fifty-seventh Street, is architect and engineer.

Bureau of Supplies and Accounts, Navy Department, Washington, is asking bids for 82 metal propeller blades for Long Island City base; also other similar blades for Great Lakes navy yard and Philadelphia navy yard, Schedule 8613.

Huschle Brothers, Inc., Anable Avenue and Creek Street, Long Island City, manufacturer of paper boxes and containers, has completed plans for a new three-story plant, 100 x 125 ft., to cost $130,000 with machinery. Frank S. Parker, 119 West Fifty-seventh Street, New York, is architect and engineer. Anthony J. Huschle is head.

Bids will be asked at once by Otis Elevator Co., Eleventh Avenue and Twenty-sixth Street, New York, for a two-story addition to plant at Yonkers, N. Y., to cost more than $100,000 with equipment. W. O. Moyer is engineer in charge of construction.

Clark Lighter Co., Inc., has been formed to take over and expand W. G. Clark & Co., Inc., 9 Maiden Lane, New York, manufacturer of pocket lighters and kindred products. New company has capital of 150,000 shares of stock, no par value, and will dispose of a block of stock for increased production.

Board of Education, Amenia, N. Y., is considering installation of manual training equipment in two-story and basement high school to cost $175,000. Ernest Sibley, Bluff Road, Palisade, N. J., is architect.

Henry Fuldner & Sons, Inc., 404 East Fourteenth Street, New York, manufacturer of furniture, has acquired property at 217-25 East Forty-seventh Street, as site for a sixteen-story factory, 100 x 100 ft., to cost in excess of $500,000. Present plant will be removed to new location.

Quartermaster Department, United States Army, Mitchel Field, N. Y., has plans for a new two-story repair field shop to cost about $80,000, for which it is expected to ask bids during the summer.

Associated Gas & Electric Co., 61 Broadway, New York, is arranging for bond issue of $50,000,000, a portion of fund to be used for extensions and improvements in light and power properties, and for acquisition of additional utilities.

Albany Perforated Wrapping Paper Co., Albany, N. Y., is arranging for increase in capital from 96,000 to 156,000 shares of stock, no par value, a portion of fund to be used for expansion. A special meeting has been called on April 2 for approval of new bond issue of $3,000,000, part of proceeds to be used for similar purposes.

Ovens, power equipment, conveying and other machinery will be installed in the one-story baking plant to be erected at Newburgh, N. Y., by W. E. Long Co., 155 North Clark Street, Chicago, to cost $100,000.

Safe-T-Stat Co., Inc., 79 Bridge Street, Brooklyn, manufacturer of patented thermo-electric indicating equipment for combustion engines, etc., is arranging for sale of 55,000 shares of common stock, portion of proceeds to be used for expansion. Company recently acquired plant and business of W. G. Nagel Electric Co., Toledo, Ohio, and will develop facilities for manufacture of a complete electric-controlled dashboard panel of gages for automobiles.

Fords Porcelain Works, Inc., Lehigh Avenue, Perth Amboy, N. J., manufacturer of sanitary ware, plans rebuilding portion of plant destroyed by fire March 1, with loss reported at $150,000 including equipment.

Asbury Park Ramp Garage, Inc., Asbury Park, N. J., has begun work on a four-story service, repair and garage building, 100 x 150 ft., to cost $125,000 with equipment.

American Smelting & Refining Co., Perth Amboy, N. J., has filed plans for a one-story addition, 78 x 432 ft., with lean-to extension, 25 x 90 ft., for lead refining, to cost about $75,000. Headquarters are at 120 Broadway, New York.

Vacuum Oil Co., 61 Broadway, New York, has awarded general contract to White Construction Co., 1015 Chestnut Street, Philadelphia, for a three-story addition to refinery at Paulsboro, N. J., for oil compounding and wax production, to cost $75,000.

Board of Education, New Milford, N. J., plans installation of manual training equipment in new junior high school to cost $400,000, for which plans will be drawn by Ernest Sibley, Bluff Road, Palisade, N. J., architect.

British-American Metals Co., South Second Street, Plainfield, N. J., manufacturer of brass and copper tubing, etc., is adjusting insurance on portion of plant recently destroyed by fire, with loss of close to $300,000, and contemplates rebuilding at an early date.

Curtisce Mfg. Co., Newark, manufacturer of furnace blowers, etc., has leased a floor in the building at Central Avenue and Washington Street, for a new plant.

Public Service Electric & Gas Co., Public Service Terminal, Newark, has plans for erection of a two-story power substation, 30 x 62 ft., at Rahway, N. J., to cost close to $50,000 with equipment.

Board of Education, Great Neck, L. I., plans installation of manual training equipment in new high school to cost more than $400,000, for which bids will soon be asked on general contract. Guilbert & Betelle, 20 Branford Place, Newark, are architects.

Phoenix Welding & Machine Co., formerly at 389 Montgomery Street, Jersey City, has moved into larger quarters at 405 Montgomery Street. Additional machinery will be installed. W. A. Huff is president.

Wickes Machinery Co., 421 Clarmont Avenue, Jersey City, will sell its stock of machine tools and power equipment at public auction March 13. Sale will include machine tools, air compressors, motors, steam engines, hoisting engines, boilers, blowers and other equipment, nearly all of which has been rebuilt.

Buffalo

BUFFALO, March 5.

PLANS are being considered by Ansco Photo Products, Inc., Charles Street, Binghamton, N. Y., manufacturer of cameras, tripods and other photographic equipment, for an addition to cost upward of $50,000 with machinery.

Certain-Teed Products Corporation, 100 East Forty-second Street, New York, manufacturer of roofing materials, building products, etc., is arranging for early acquisition of Beaver Board Companies, Inc., and Beaver Products Co., Inc., Buffalo, manufacturer of wallboard, roofing and kindred products. Local plants will be continued and expansion carried out. A bond issue of $13,500,000 is being sold by purchasing company, a considerable portion of proceeds to be used for project.

Thomas Carr, 1047 Monroe Parkway, Rochester, N. Y., and associates have organized Doraldina Co., capitalized at $30,000, to establish a local plant for manufacture of automatic machines and other equipment.

Foote & Carpenter, 14 Franklin Street, Rochester, architects, have plans for a two-story and basement automobile service, repair and garage building, to cost close to $90,000 with equipment.

Continental Can Co., Inc., Syracuse, N. Y., has purchased Passaic Metal Ware Co., Passaic, N. J., and will continue operations at same location as a subsidiary. Purchasing company also has recently acquired plant and property of United States Can Co., Norwood Station, Cincinnati, and Seattle-Astoria Iron Works, Inc., Seattle, both of which will be maintained in operation.

South Atlantic States

BALTIMORE, March 5.

PLANS are being considered by Bowker Chemical Co., Canton, Baltimore, for rebuilding portion of its fertilizer plant destroyed by fire Feb. 27, with loss in excess of $200,000 including equipment. Company is a subsidiary of American Agricultural Chemical Co., 420 Lexington Avenue, New York.

Board of Awards, office of City Register, City Hall, Baltimore, will receive bids until March 14 for pumping machinery and accessories for Guilford waterworks station and Montebello filtration plant. E. G. Rost is water engineer.

Consolidated Gas, Electric Light & Power Co., Lexington Building, Baltimore, has secured permission to take over and consolidate Baltimore County Electric Co., Belair Electric Co., and other light and power properties with total capitalization of about $20,000,000, and plans expansion and betterments, including transmission line construction.

Willys-Overland Co., Toledo, Ohio, manufacturer of automobiles, is reported considering erection of new assembling plant at Columbia, S. C., to cost more than $500,000 with machinery.

Chief of Engineers, United States Army, Washington, will receive bids until March 13 for 15,000 ft. lead-covered cable and armored cable, with eight reels, circular 16.

C-P Motors, Inc., West Eighth Street, Charlotte, N. C., Edwin Burke, president, has plans for a new automobile manufacturing works, to cost in excess of $200,000 with equipment. J. C. Boyd, First National Bank Building, is architect.

Carolina Power & Light Co., Raleigh, N. C., plans early construction of one-story power substation at Sanford, N. C., to cost close to $100,000 with equipment.

Bureau of Supplies and Accounts, Navy Department, Washington, is asking bids until March 13 for 24,080-lb. condenser tube sheets for Mare Island, Cal., Navy Yard, and for like amount for Puget Sound, Wash., yard, schedule 8589; for two electric winches and spares for Mare Island and two for Puget Sound, schedule 8595; until March 20 for hydraulic winches and parts for Mare Island and Puget Sound yards, schedule 8596; and for screwdrivers, etc., for Eastern and Western yards, schedule 8617.

Plainville Brick Co., Inc., Plainville, Ga., will make extensions and improvements in plant, with installation of crushing and other equipment. A light and power plant will be installed.

Lambeth Electric Supply Co., Winston-Salem, N. C., is planning establishment of a factory for manufacture of electrical specialties. Paul T. Lambeth is head.

Potomac Edison Co., Cumberland, Md., has secured permission to acquire Clear Spring Electric Light & Power Co., and controlling interest in Piedmont Electric Light & Power Co., and Potomac Light & Power Co., operating in western Maryland, and plans extensions and improvements, including transmission line construction.

Eagle Rock Lime Co., Eagle Rock, Va., plans installation of crushing and other machinery.

School Commissioners of Dorchester County, Cambridge, Md., contemplate installation of manual training equipment in three-story high school to cost $175,000, for which plans are being drawn by Henry P. Hopkins and Allan C. Burton, 347 North Charles Street, Baltimore, architects.

Foard Mfg. Co., Lenoir, N. C., recently formed by Fred Foard and S. S. Jennings, both of Lenoir, plans operation of a local mill for manufacture of dowel pins and kindred specialties, with initial equipment for output of about 100,000 per day.

Commissioners of Public Works, Seneca, S. C., are asking bids until March 15 for a steel tank on steel tower, capacity 150,000 to 200,000 gal. H. S. Jaudon Engineering Co., Elberton, Ga., is engineer.

General Purchasing Officer, Panama Canal, Washington, will receive bids until March 20 for twist drills, files, tinners' snips, shovels, valves and other equipment, Panama schedule 1862.

Eastern Shore Public Service Co., Salisbury, Md., plans construction of a high-tension transmission line from Salisbury to Vienna, Md., where work is under way on initial unit of steam-operated electric generating plant, to cost more than $500,000.

Wilder Lumber Co., 512 South Main Street, Tifton, Ga., is planning installation of a planer and other tools in woodworking plant. A new one-story mill, 50 x 120 ft., will be built.

American Radiator Co., West Thirty-eighth Street, Norfolk, Va., has leased a unit of property of Union Warehouses, Inc., for a new factory branch and distributing plant. Headquarters are at 40 West Fortieth Street, New York.

Georgia-Florida Motor Lines, Inc., Forsyth Theater Building, Atlanta, Ga., recently formed with capital of $1,000,000 to take over and consolidate ten motor bus transportation companies in Georgia and Florida, is planning the establishment of central repair and reconditioning shops, with parts department, etc., at Albany and Valdosta, Ga., to cost more than $85,000.

F. M. Collins, Jr., 144 Olympic Place, Decatur, Ga., plans purchase of a motor-driven portable power saw, for use at local lumber plant.

New England

BOSTON, March 5.

MACHINE tool sales the past week fell off somewhat, and in most instances involved low priced tools. A new jig borer, taken by a Massachusetts manufacturer, was almost the only exception. The city of Boston has placed two cone-head lathes with the Hendey Mfg. Co., and a milling machine and grinder with the Brown & Sharpe Mfg. Co., also a fairly long list of sheet metal equipment, for its new continuation school. Quite a list of machine tools and wood-working equipment has yet to be placed by the city. The Pneumatic Drop Hammer Co. reports the sale of a 600-lb. and a 300-lb. hammer to an Ontario manufacturer. This company has just completed assembling a 500-lb. hammer in a Columbus, Ohio, shop, and a large Providence jewelry manufacturer has just installed a battery of four hammers. It expects to close soon on an order for a battery of 23 hammers. Other recent sales include a No. 1 Lapointe broaching machine to a Massachusetts shop, a 16-in. lathe to a Maine company, a 14-in. and a 16-in. lathe, two two-spindle drills, two Brown & Sharpe millers, a small power press, a three-spindle drill, a surface grinder, a fairly large planer and several bench tools, most of them to Massachusetts and Rhode Island users.

New inquiries are coming in slowly, and manufacturers who have had inquiries out for tools as far back as last October apparently are in no hurry to purchase. General business in New England is increasing, particularly in the textile and shoe industries, but recovery in metal-working lines is slow and there is a large number of skilled mechanics out of employment. Customers of metal working plants are buying on a hand-to-mouth basis. With practically no backlog orders on their books metal workers are putting off purchases of equipment until the business outlook is more assuring.

February small tool sales fell short of those for the previous month. January, however, was better than any month last year as some large buyers placed orders for first half requirements.

Industrial conditions in Springfield, Mass., are a little better than in most New England centers. Gilbert & Barker Mfg. Co. has added 400 to its force and is operating full time. Blair Mfg. Co. is employing a full force and operating overtime. Increases in operating schedules are reported also by Moore Drop Forging Co., Package Machinery Co. and Indian Motocycle Co. Tiley Pratt Co., Essex, Conn., recently acquired by Torrington Co., is operating on a 24 hr. schedule with three shifts. Plant expansion this spring is under consideration.

Plant, real estate, machinery and equipment of Freeman-Daughaday Co., Chartley, Mass., will be sold at public auction March 13.

Plans are in progress for a two-story machine shop for Emile St. Jacques, Main Street, Wareham, Mass.

Lockwood Greene & Co., 24 Federal Street, Boston, are preparing plans for a three-story, 80 x 100 ft., automobile service and repair shop for Charles Street Garage Corporation, Boston. L. K. Morse is president.

E. Sykes Goodwin, 29 Weybosset Street, Providence, has completed plans for a $100,000 artificial ice plant at New Shoreham, R. I., to be built by Rhode Island Fish Co., 169 South Water Street, Providence.

Contract has been let by Royal Typewriter Co., New Park Avenue, Hartford, Conn., to Denis O'Brien & Sons, Inc., local, for a one-story addition, 35 x 120 ft., to cost about $40,000.

Department of Public Buildings, City Hall, Boston, will soon take bids for a one-story power plant, to cost approximately $100,000 with equipment. Desmond & Lord, 1 Beacon Street, are architects.

North Shore Delivery Co., 46 Lake Street, Lynn, Mass., is having plans drawn for a new one-story ice-manufacturing plant, to cost more than $40,000. Funk & Wilcox Co., 26 Pemberton Square, is architect.

Municipal Light Board, Chicopee, Mass., has asked bids on general contract for a three-story automobile service, repair and garage building, 60 x 75 ft., to cost close to $90,000 with equipment. H. J. Tessier, 1132 Main Street, Springfield, Mass., is architect.

Charles H. Tenney & Co., 200 Devonshire Street, Boston, operating public utility properties, including Salem Electric Lighting Co., Salem, Mass., have plans under way for a super-power electric generating plant at Salem, where waterfront site has been secured, to cost more than $750,000 with transmission lines.

P. J. Kiley, 101 Washington Street, Somerville, Mass., will erect a one-story plant, 95 x 100 ft., for manufacture of automobile bodies.

Beardsley & Wolcott Mfg. Co., Waterbury, Conn., has been formed to take over and consolidate Beardsley Mfg. Co., with local plant, and Wolcott Mfg. Co., Hartford, Conn., both manufacturers of electrical products. Operations will be continued at both factories at present, with anticipated consolidation at Waterbury. C. E. Beardsley is president and treasurer; Frank E. Wolcott, vice-president; and Rowley W. Phillips, secretary.

Jackson-Butler Corporation, St. Johnsbury, Vt., contemplates rebuilding its two wood-working plants partially destroyed by fire Feb. 27, with loss estimated at $75,000 including equipment.

Milwaukee

MILWAUKEE, March 5.

WHILE the volume of machine-tool sales is slow in making gains, the number and character of inquiries indicate a substantial improvement in business. In most quarters the expectancy relative to March trade is encouraging. Although the dearth of industrial construction in this locality is still evident, several of the largest industries are entering the market for additional equipment for replacement or to provide greater capacity. Foundry and machine shop employment continues to gain as automotive shops furnish delivery specifications in greater volume on castings, forgings, and other equipment.

Twin Disc Clutch Co., 1328 Racine Street, Racine, Wis., manufacturer of industrial and automotive clutches and transmission specialties, is erecting a one and two-story addition, 60 x 180 ft., and is inquiring for miscellaneous equipment, including automatic machinery. Investment will be approximately $65,000.

E. I. Du Pont de Nemours Co., Wilmington, Del., has plans for the remodeling of branch works at Barksdale, near Washburn, Wis., and erection of four additional units, with installation of a new acid process, at a cost of $425,000. R. T. Cann is general superintendent at Barksdale.

Appleton Steel Tube Co., 924 West Spencer Street, Appleton, Wis., a new organization which recently took over operation of an existing plant, is erecting a shop extension, 30 x 60 ft. and will require some additional equipment.

Fire, Feb. 25, destroyed one-story frame machine shop, 120 x 200 ft., of Racine Screw Works, Racine, Wis., and damaged a quantity of automatic screw machines and other equipment. Loss is estimated at fully $200,000.

United Coal & Dock Co., 8 Wells Street, Milwaukee, has plans for construction and equipment of a plant costing $250,000 for manufacturing coal briquettes. It will be the first industry of its kind in Milwaukee. Similar plants are operating at Duluth and Superior. Milwaukee plant will be ready to start operations about Oct. 1. Capt. A. P. King is president and general manager.

Wisconsin Motor Bus Lines, division of Milwaukee Electric Railway & Light Co., 215 Michigan Street, Milwaukee, has purchased a site at Madison, Wis., for a motorbus terminal, garage and service station, to be erected at once at a cost of $50,000. Fred H. Luber is company architect.

Minogue Engineering Co., Manitowoc, Wis., has been organized by Roland E. Minogue, engineer, 1302 Wisconsin Avenue, local, and will establish a plant for manufacture of machinery, motors, engines, etc. Definite details have not been made public.

Milwaukee Department of Public Works will soon be ready for bids for the erection of a two-story building, 100 x 140 ft., for use as a fire department construction and repair shop. Complete production equipment and a 5-ton electric, hand controlled crane are specified. C. E. Malig is city architect, and R. E. Stoelting, commissioner of public works. The cost is estimated at $100,000.

Parker Harvester Corporaton, Cedarburg, Wis., has been incorporated with $100,000 capital stock to take over plant of former Lowenbach Shoe Co., for production of a newly developed beet harvesting machine designed by Stanley F. Parker, 963 Mitchell Street, Milwaukee. Other principals are E. B. Lowenbach, 420 Newberry Boulevard, and Anton Harlfinger, 773 Twenty-second Avenue, Milwaukee. Alterations to plant are under way.

Detroit

DETROIT, March 5.

WORK will soon begin on an addition to plant of Sparks-Withington Co., Jackson, Mich., manufacturer of radio and automotive equipment, to cost upward of $75,000 with equipment. A boiler plant will also be erected. Lockwood, Greene & Co., 400 North Michigan Avenue, Chicago, are architects and engineers.

Consumers Power Co., Jackson, Mich., is considering a two-story equipment storage and distributing plant, with repair department, at Grand Rapids, Mich., to cost about $50,000.

City Council, Royal Oak, Mich., has plans under way for a municipal pumping plant to cost about $75,000, of which close to $50,000 will be expended for equipment.

Universal Cooler Co., 1214 Eighteenth Street, Detroit, manufacturer of electrical supplies and equipment, is arranging for sale of a bond issue for $250,000, a portion of proceeds to be used for expansion and improvements.

Karp Brothers Coal & Ice Co., 3900 Orleans Street, Detroit, has plans for a new one-story ice-manufacturing plant, 50 x 175 ft., to cost about $100,000 with equipment.

Aero-Craft Mfg. Co., Detroit, care of Peerless Pattern Works, 1489 East Fort Street, recently organized, is planning early erection of a new plant for manufacture of commercial airplanes, with main model of bi-plane type, equipped with 120-hp. motor. Initial planes will be manufactured at plant of Peerless company. Clement W. Brown is president, and Frederick West, vice-president.

United States Radiator Corporation, 133 East Grand River Boulevard, Detroit, is disposing of a bond issue of $3,500,000, a portion of proceeds to be used for expansion and improvements, including recent acquisition of Pacific Steel Boiler Co., Waukegan, Ill., to be operated as a subsidiary.

Chris Smith & Sons Boat Co., Algonac, Mich., manufacturer of motor boats, has an expansion and improvement program in progress, following partial destruction of plant a few months ago by fire. Increased floor space will be arranged, with installation of equipment and facilities to triple former output.

Detroit Edison Co., Second Avenue, Detroit, has plans for a new power substation at Royal Oak, Mich., to cost $135,000 with equipment. Extensions will be made in transmission lines.

Philadelphia

PHILADELPHIA, March 5.

CONTRACT has been let by Department of City Transit, 1211 Chestnut Street, Philadelphia, to Pennsylvania Engineering & Construction Co., Real Estate Trust Building, for a one-story equipment storage and distributing building, with repair department, to cost about $65,000.

Olney Foundry Co., 180 West Duncannon Street, Philadelphia, manufacturer of gray iron castings, etc., has filed plans for a one-story addition, to cost about $40,000 with equipment.

Philip S. Tyre, 114 South Fifteenth Street, Philadelphia, architect, has plans for a one and two-story automobile service, repair and garage building at Chester, Pa., to cost approximately $90,000 with equipment.

National Steel Equipment Co., 3342 Rorer Street, Philadelphia, manufacturer of filing cabinets, etc., has filed plans for two one-story additions, one to be equipped as a machine shop and other for general manufacturing, to cost about $24,000 with equipment.

Clarence E. Wunder, 1520 Locust Street, Philadelphia, architect, has filed plans for a one-story automobile service, repair and garage building, to cost about $100,000 with equipment.

Board of Trustees, Haverford College, Haverford, Pa., will soon take bids for a two-story and basement engineering laboratory, 70 x 80 ft., to cost approximately $110,000, with testing and other machinery. Mellor, Meigs & Howe, 205 South Juniper Street, Philadelphia, are architects.

Officials of Eureka Flint & Spar Co., New York Avenue, Trenton, N. J., operating a feldspar grinding mill and raw material properties, have formed new company of same name, with capital of $1,350,000, to take over and expand present organization. Thomas H. and Frank W. Thropp head new company.

John W. Knerr, Cedar Grove, near Belvidere, N. J., operating ice-manufacturing plants, has plans for a new plant on the Pequest River, Belvidere, to cost $60,000 with machinery.

School District of Upper Merion Township, Swedeland, Pa., is considering installation of manual training equipment in two-story junior high school to cost $200,000. Ritter & Shay, Fifteenth and Chestnut Streets, Philadelphia, are architects.

Roxborough Motors, Inc., Lyceum Street and Ridge Avenue, Philadelphia, local representative for Chrysler automobiles, has leased a new multi-story building, 45 x 200 ft., to be erected at 6221 Ridge Avenue, for a service, repair and sales building, to cost in excess of $125,000 including equipment.

National Power & Light Co., Allentown, Pa., operating Pennsylvania Power & Light Co., East Penn Electric Co., Harrisburg Light & Power Co., and other electric light and power properties, has arranged for preferred stock issue to total $10,314,000, a portion of fund to be used for expansion and improvements. Pennsylvania Power & Light Co. is arranging for construction of 66,000-volt transmission line from substation at Berwick, Pa., to power plant of Luzerne County Gas & Electric Co., in Hunlock Creek section. National company is under direction of Electric Bond & Share Co., 71 Broadway, New York.

Plant and machinery of Gehret Brothers, Inc., East Fourth Street, Bridgeport, Pa., manufacturer of structural steel and ornamental iron products, will be offered for sale by W. R. Browne, receiver, March 17.

Bellanca Aircraft Corporation, Arlington, S. I., will begin immediate construction of plant at New Castle, near Wilmington, Del., where 350 acres recently was acquired, to cost $100,000 with equipment. Giuseppe Bellanca is head.

Scranton Gas & Water Co., Scranton, Pa., has arranged for bond issue of $11,000,000, a portion of proceeds to be used for extensions and improvements in plant and system.

Danville Structural Steel Co., Danville, Pa., has plans for a new unit to cost in excess of $75,000. Company was acquired recently by Charles M. Schwab, head of Bethlehem Steel Corporation, Bethlehem, Pa.

Chicago

CHICAGO, March 5.

FEBRUARY closed with total sales above those in January and in excess of the same month last year. Purchases in the last seven days showed marked improvement, but orders and new inquiry are spotty. A number of old propositions have been revived. T. L. Smith & Co., Milwaukee, have purchased $50,000 worth of machine tools, and it is probable that the International Harvester Co. will soon issue a list for its Fort Wayne, Ind., plant.

Fresh railroad inquiry includes a 2 x 14-in. Norton grinder by the Santa Fe; a Canedy-Otto drill, a 36-in. drill press and a No. 660 CAW semi-portable grinder by the Rock Island, and a heavy-duty portable grinder, a two-wheel vertical spindle grinder, a 1 x 10-in. grinder and a 2 x 12-in. grinder by the Burlington. A fair amount of inquiry is noted for used machinery, but dealers are experiencing some trouble in finding good equipment of this kind.

Hayes-Custer Stove & Furnace Co., Bloomington, Ill., has recently acquired additional property on which it will erect a plant extension.

G. Phillips, Southerland Hotel, Chicago, will build a three-story brick garage, 100 x 175 ft.

Commonwealth Edison Co., 72 West Adams Street, Chicago, will build a substation, 42 x 103 ft. H. V. Von Holst, 140 Monroe Street is architect.

Wenig & Tennis, 1406 Greenlea Avenue, Chicago, will build a four-story garage, 100 x 100 ft. to cost $150,000.

Troy Laundry Machinery Co., East Moline, Ill., has arranged for bond issue of $3,000,000, a portion of proceeds to be used for expansion and improvements. Company is operated by Manhattan Electrical Supply Co., Inc., 11 Park Place, New York.

Board of Trustees, Illinois College, Jacksonville, Ill., is considering a new steam power plant at the institution, primarily for heating service, to cost about $50,000 with equipment.

Chamberlain Machine Works, 2500 East Fourth Street, Waterloo, Iowa, Floyd L. Chamberlain, head, has filed plans for a one-story addition, 36 x 100 ft., a portion of structure to be used for assembling.

Northern States Power Co., Minneapolis, Minn., is arranging an expansion and improvement program to cost approximately $8,000,000, of which about $2,000,000 will be used for completion of projects now under way. New work includes a hydroelectric generating plant at Chippewa Falls,

The Crane Market

THERE is very little new inquiry for either overhead or locomotive cranes, but there is a fair volume of business to be placed that has accumulated since the first of the year. Apparently, with many prospective purchasers, business has not been quite as large as had been expected earlier in the year, so that they are inclined to delay placing orders for additional equipment pending further improvement. About the largest current inquiry for overhead cranes is the list of two 225-ton locomotive handling cranes and one 50-ton standard overhead crane for the Reading Co. In the locomotive crane field, the Amtorg Trading Corporation, 165 Broadway, New York, is reported about to close on six 15-ton, kerosene driven crawl-tread locomotive cranes and one 25-ton standard gage locomotive crane for Russia. This company is understood to be preparing a future inquiry for nine 40-ton locomotive cranes for export to Russia.

Among recent purchases are:

New York, New Haven & Hartford Railroad, New Haven, Conn., 10-ton, 70-ft. span electric traveling crane with 2-ton auxiliary from Niles Crane Corporation.

City of Hagerstown, Md., 10-ton, 42-ft. 6-in. span electric traveling crane from Niles Crane Corporation.

Sanderson & Porter, consulting engineers, New York, 10-ton, 22-ft. 10-in. span hand power crane for use in West Virginia from Box Crane & Hoist Corporation.

Wis., extensions in power plants at Minot and Grand Forks, N. D.; transmission lines, power substations and miscellaneous construction. Company is under direction of H. M. Byllesby & Co., 231 South La Salle Street, Chicago.

Board of Education, Great Falls, Mont., plans manual training department in three-story high school to cost $800,000, for which it is expected to ask bids on general contract in May. Bird & Van Teylingen, Great Falls, are architects, and Croft & Boerner, 1004 Marquette Avenue, Minneapolis, Minn., associate architects.

Chicago, Burlington & Quincy Railroad, 547 Jackson Boulevard, Chicago, will soon take bids for a one-story local power plant, to cost more than $40,000 with equipment. W. T. Krausch is chief engineer.

Reliance Enameling & Stamping Co., Belleville, Ill., is reported planning an addition, to cost in excess of $50,000 with equipment.

Kremer Motor Co., 1518 Hennepin Avenue, Minneapolis, Minn., expects to ask bids in about 30 days for a one-story and basement service, repair and garage building, 150 x 155 ft., to cost about $100,000 with equipment. Perry E. Crosier, New York Life Building, is architect.

J. I. Case Threshing Machine Co., Racine, Wis., has plans for a three-story and basement addition to its factory branch and distributing plant at Des Moines, Iowa, to cost about $34,000. C. V. Johnson, Commonwealth Building, Des Moines, is architect.

Hannifin Mfg. Co., 621 South Kolmar Avenue, Chicago, manufacturer of air chucks, machine tool equipment, etc., has acquired adjacent property, 75 x 125 ft., and contemplates early erection of two-story plant to cost about $55,000. It is understood that present works will be removed to new location.

Barnes Zinc Products Co., 1531 Kingsbury Street, Chicago, fabricator of conductor pipe, eaves troughs and fittings, has changed its name to Barnes Metal Products Co.

St. Louis

ST. LOUIS, March 5.

PLANS are being drawn by Atchison, Topeka & Santa Fe Railroad Co., Topeka, Kan., for a one-story machine shop at repair works at Guthrie, Okla., 80 x 135 ft., to cost about $45,000.

Silica Mines Co., Meade, Kan., is planning to rebuild plant, with installation of new equipment, to cost $65,000. M. T. Garlow is head.

Oklahoma Power & Water Co., Tulsa and Sand Springs, Okla., is disposing of bond issue of $4,500,000, portion of fund to be used for expansion and improvements in electric light and power properties, including purchase of additional utilities. William H. Colvin is chairman of the board.

Arkansas Cold Storage Co., foot of Rock Street, Little Rock, Ark., will soon break ground for a three-story addition to ice-manufacturing and cold storage plant, to cost approximately $90,000 with equipment. Clarence E. Rose is general manager.

South Side Chevrolet Co., 3645 South Grand Boulevard, St. Louis, representative for Chevrolet automobile, has plans for a three-story automobile service, repair and garage building, to cost more than $100,000 with equipment. D. R. Harrison, Ambassador Building, is architect.

Corn Products Refining Co., Tenth and Cherry Streets, North Kansas City, Mo., has superstructure under way for a five-story and basement addition, 90 x 140 ft., to cost close to $200,000 with equipment. Engineering department, 208 East Illinois Street, Chicago, is in charge.

Camden Ice & Coal Co., Camden, Ark., has taken out a permit for an ice-manufacturing and cold storage plant, to cost $80,000 with equipment.

Ovens, power equipment, conveying and other machinery will be installed in the new plant of Rex Baking Co., Tulsa, Okla., on which work has begun, to cost more than $200,000. Patterson Corporation, 4050 Pennsylvania Avenue, Kansas City, Mo., is in charge.

Oliver Anthony, Bearden, Ark., and associates are planning establishment of a furniture factory to cost about $55,000 with equipment. A company will be organized to carry out project. J. L. Williams, Bearden, is interested.

E. A. Liebman, 3509 Classen Street, Oklahoma City, Okla., is at head of a project to construct and operate an ice-manufacturing plant at Shawnee, Okla., to cost $75,000.

Studebaker-Riley Co., 2610 Grand Avenue, Kansas City, Mo., representative for Studebaker automobile, has leased a new two-story and basement building, 105 x 185 ft., to be erected on Ward Parkway, for a service, repair and sales building, to cost in excess of $100,000 with equipment. E. W. Tanner, Meyer Boulevard, is architect.

Board of Education, Lincoln, Neb., plans installation of manual training equipment in new two-story Everett Junior High School, for which bids are being received on general contract until March 13, to cost $300,000. Davis & Wilson, 525 South Thirteenth Street, are architects.

Cincinnati

CINCINNATI, March 5.

MACHINE tool sales again have turned upward and give promise of reaching a fairly high point during March. Fresh inquiries are in less volume, but the amount of pending business is large. One interesting development is that some builders reporting increased bookings did not participate in the flurry of buying in January and February. Orders are well diversified both as to the class of buyers and territories. Production in local plants is being maintained at a moderate rate.

The St. Louis-San Francisco Railroad closed the past week against its list. Some of the tools, including a shaper and a combination journal turning and axle lathe, were placed with companies in this district, but purchases also were made from Eastern builders. The Chicago, Burlington & Quincy has issued a list of equipment which Cincinnati manufacturers now are bidding on. It is understood that the Santa Fe has not yet taken action on its requirements.

A leading radial drill builder has revised its prices upward the past week. Advancing costs are likely to result in similar action on the part of other drill manufacturers in the near future.

Contract has been let by Cincinnati Ball Crank Co., Disney Street, Cincinnati, to Austin Co., Cleveland, for a one-story addition to cost about $15,000.

Harry Hake, 2400 Gilbert Avenue, Cincinnati, architect, has plans for a four-story automobile service, repair and garage building, to cost about $500,000 with equipment.

Ovens, power equipment, conveying and other machinery will be installed in the one-story baking plant to be erected by Earl Dickason, Chillicothe, Ohio, to cost about $125,000. W. E. Long Co., 155 North Clark Street, Chicago, is architect.

Air Corps, Material Division, Wright Field, Dayton, Ohio, is asking bids until March 15 for airplane parts, including cowling assemblies, shutter and bracket assemblies, etc., circular 258; until March 12 for 1145 streamline tie rods, circular 255; and until March 15 for tubing, safety nipples, etc., circular 257.

City Council, Bowling Green, Ky., will receive bids until March 27 for a water-softening and filtration plant, including motor-driven pumps, traveling water screen, pipe lines, etc., and elevated water tank. J. N. Chester Engineers, Union Bank Building, Pittsburgh, are engineers.

Dayton Friction Toy Co., Hawthorn and Krug Streets, Dayton, Ohio, will proceed with erection of one-story addition to cost $21,000, for which general contract has been let to F. K. Vaughn Building Co., Dayton.

Mississippi River Commission, Memphis, Tenn., First and Second Districts, will receive bids until March 20 for two all-steel bins with batch-measuring devices, and for two concrete mixers with boom and bucket; also for machinery for concrete slab casting plant; until March 15 for one boiler and equipment.

Fire recently destroyed a portion of building at Louisville, occupied by Childers Electric Co., Brandeis Machinery & Supply Co., and Tafel Electric Co., with total loss estimated at $80,000.

Board of Education, Louisville, is considering installation of manual training equipment in new three-story junior high school to cost about $350,000, for which plans will be drawn by J. M. Colley, architect for board.

Service Motor Car Co., Memphis, Tenn., has plans for a one-story machine and repair works, 195 x 210 ft., to cost about $85,000 with equipment. Hanker & Cairns, Hill Building, are architects.

American Radiator Co., 40 West Fortieth Street, New York, has leased property at Brook Street and Eastern Parkway, Louisville, and contemplates establishment of new factory branch and distributing plant.

Board of County Commissioners, Springfield, Ohio, is considering purchase of new stone crushing plant and has instructed W. H. Sieverling, County engineer, to secure costs.

Pittsburgh

PITTSBURGH, March 5.

ALTHOUGH individually small, machine tool orders are sufficiently numerous for dealers to report business as fairly good. Purchases usually represent actual needs and there is not as much delay between the inquiry and sale as is often the case. In the heavier lines of equipment, a good inquiry is noted for cranes, but orders are few. The Jones & Laughlin Steel Corporation has ordered a second seamless pipe-making unit for its Aliquippa works and the Carnegie Steel Co. is reported as planning an extension of its McDonald, Ohio, bar mills.

Plans are being arranged by Allegheny Steam Heating Co., 435 Sixth Avenue, Pittsburgh, subsidiary of Duquesne Light Co., for a central steam power plant for heating service, with boilers, stokers, skip hoists and other coal and ash-handling machinery, to cost close to $1,800,000, including tunnels and underground pipe lines.

Pittsburgh Safety Glass Co., operated by Pittsburgh Plate Glass Co., Frick Building, Pittsburgh, has plans for first unit of plant at Creighton, Pa., adjoining works of parent company, for production of laminated shatterproof sheet glass, to cost more than $600,000 with equipment. Company was formed recently with capital of $1,000,000. H. S. Wherrett is president.

United States Engineer, Keenan Building, Pittsburgh, is asking bids until March 28 for a hydroelectric power plant at Lock 6, Allegheny River, near Clinton, Pa.

Beaver Valley Water Co., Beaver Falls, Pa., will soon take bids for a one and two-story equipment storage and repair shop, to cost more than $75,000 with equipment. J. E. Martsolf, 512 Third Avenue, New Brighton, Pa., is consulting architect.

City Council, Parkersburg, W. Va., is asking bids until March 13 for a high-lift pumping station, iron removal plant and other equipment for municipal waterworks. Morris Knowles, Inc., Westinghouse Building, Pittsburgh, is engineer.

Northside Garage, Pittsburgh, has leased two-story building, 50 x 180 ft., at 104-8 West North Avenue, and will remodel for a service, repair and garage building, total project to cost in excess of $120,000 including rental.

George & Sherrard Paper Co., Wellsburg, W. Va., operated by International Paper Co., 100 East Forty-second Street, New York, has approved plans for extensions and improvements in mill to double present capacity, including facilities for production of heavy bags for cement, lime, etc., to cost more than $50,000 with equipment.

Pennzoil Oil Co., Oil City, Pa., has plans for an addition to its generator plant at Rouseville, Pa., 50 x 80 ft., to cost approximately $45,000 with equipment.

Pittsburgh Water Heater Co., Jenkins Building, Pittsburgh, with plant at Crafton, Pa., is disposing of a bond issue of $1,200,000, a portion of proceeds to be used for expansion and improvements. Company also operates Pittsburgh Melting Co.

Board of Education, Ambridge, Pa., contemplates installation of manual training equipment in new junior high school to cost $180,000, for which plans will be drawn by W. Ward Williams, 309 Fourth Avenue, Pittsburgh, architect.

Cleveland

CLEVELAND, March 5.

A BRIGHTER outlook in the machine tool industry than for some time is indicated by a better volume of inquiry, according to reports of most manufacturers and dealers. Sales were fair the past week, although orders were limited to single machines. February sales with some dealers and manufacturers showed a slight gain over January, but with others business was slightly below the previous month. No inquiries of any size came out during the week. Following the recent spurt of activity in the automotive field, the Detroit market is rather quiet.

National Sanitary Co., Salem, Ohio, will rebuild its plant recently destroyed by fire. Contracts will be placed soon for new buildings, including foundry and cleaning room, enameling department and warehouse. Considerable equipment will be required.

Vermont Marble Co., 9508 Quincy Avenue, Cleveland, has awarded general contract to H. K. Ferguson Co., for a one-story plant, 80 x 280 ft., for cutting, grinding, polishing, etc., with two-story office, to cost $120,000 with equipment. A. T. Howe is branch manager. Headquarters are at Proctor, Vt.

Lake Erie Power & Light Co., Sandusky, Ohio, has applied for permission to purchase Suburban Power Co., operating in Erie, Wood and Sandusky counties, and plans expansion in power facilities and transmission lines.

Sun Oil Co., East Toledo, Ohio, will rebuild portion of local refinery and distributing plant destroyed by fire Feb. 26, with loss in excess of $150,000 including equipment.

Hinde & Dauch Paper Co., Sandusky, Ohio, manufacturer of corrugated paper boxes and containers, etc., is arranging for sale of preferred stock to total about $4,500,000, a portion of fund to be used for expansion and improvement. Company recently acquired Thompson & Norris Co., Brooklyn, N. Y., and J. M. Raffel Co., Baltimore, manufacturers of kindred products, and is now operating thirty plants in sixteen different cities.

Federal Radiator & Boiler Co., Zanesville, Ohio, will rebuild portion of plant destroyed by fire Feb. 28, with loss close to $90,000 including equipment.

Gulf States

BIRMINGHAM, March 5.

PLANS are being considered by Louisiana Oil Refining Corporation, Minden Road, Shreveport, La., for rebuilding portion of refinery recently destroyed by fire, with loss estimated at $100,000 including equipment.

Uriah Ice & Gin Co., Pensacola, Fla., is planning construction of a new ice-manufacturing and cold storage plant, to cost approximately $90,000 with machinery.

Board of Education, Corpus Christi, Tex., plans installation of manual training equipment in new high school, for which bonds for $300,000 have been voted. Hardy & Curran, Nixon Building, are architects.

John E. Mitchell Co., 600 South Sixth Street, St. Louis, manufacturer of cotton ginning machinery, flour mill equipment, etc., has received a low bid from Lee Morris Co., 5617 East Grand Street, Dallas, Tex., for a two-story branch plant, 100 x 216 ft., at last noted place, to cost approximately $100,000 with equipment. J. A. Pitzinger, Southwestern Life Building, Dallas, is architect and engineer.

Texas-Louisiana Power Co., Pecos, Tex., will proceed with extensions and improvements in local power plant, including installation of three 1250-hp. generating units and auxiliary equipment; provision will be made for addition of two more units of like capacity. Extensions will be made in transmission lines. Entire project will cost more than $200,000. Allen J. Smith is general manager.

Sibert-Hayes Motors, Inc., 1920 South Fourth Avenue, Birmingham, has arranged for erection of two-story service, repair and garage building, 100 x 100 ft., to be occupied under lease, to cost close to $90,000 with equipment. Turner & McPherson, Martin Building, are architects.

United States Engineer, Galveston, Tex., will receive bids until March 12 for two 20-in. dredging pumps and other pumping units, with impeller shafts, liners, etc., circular 182.

Texas Ice & Fuel Co., Houston, Tex., will soon begin work on a one-story ice-manufacturing plant, to cost $85,000 with machinery.

Interstate Cotton Oil Refining Co., Sherman, Tex., has plans for a one-story addition for manufacture of containers, to cost $40,000 with machinery.

Southern Packing Corporation, Eleventh Avenue, St. Petersburg, Fla., recently formed by William Stephany, 119 West Fifty-seventh Street, New York, and associates, with capital of $300,000, is completing plans for a local plant for production of chemical specialties, to cost more than $100,000 with machinery.

C. F. Elledge, 554 Forest Street, Jacksonville, Fla., is in the market for a machine for compressing and baling sheet metal scrap.

Shreveport Producing & Refining Corporation, Commercial Bank Building, Shreveport, La., has begun an expansion and improvement program at its oil refinery at Jewella, La., with additional equipment for handling 10,000 bbl. of crude oil per day, to cost in excess of $200,000.

Hillsborough County Board of Public Instruction, Tampa, Fla., has approved plans for a one-story manual arts building at Ballast Point school, to cost close to $26,000 with equipment. Galliher & Crowe, Ashley Street, are architects.

Bayou State Refining Corporation, Slattery Building, Shreveport, La., has awarded general contract to Graver Corporation, 844 Rush Street, Chicago, for a new oil refinery at Rosston, La., to cost about $225,000 with machinery.

Glidden Co., 2876 Attleboro Road, Cleveland, manufacturer of paints, varnishes, etc., is reported considering erection of new plant at Houston, Tex., to cost close to $130,000 with equipment.

Wichita Falls Airport Co., Wichita Falls, Tex., plans construction of a hangar, machine and repair shop, and other buildings on a 240-acre tract on Burkburnett Road to be developed for an aviation field, to cost more than $45,000 with equipment.

Houston Lighting & Power Co., Houston, Tex., is said to be arranging an expansion and improvement program and is authorizing fund of about $6,000,000 for increased power and transmission facilities. Plans are being completed for a power substation to cost about $200,000 with equipment.

Southern Ice & Utilities Co., Santa Fe Building, Dallas, Tex., will proceed with erection of one-story ice-manufacturing plant at Odessa, Tex., to cost about $45,000 with equipment.

Union Carbide & Carbon Co., 30 East Forty-second Street, New York, is said to have plans for two one-story plant units at Shreveport, La., to cost $150,000 with equipment.

Indiana

INDIANAPOLIS, March 5.

PLANS are under way by E. F. Miller, Farmers' Trust Building, Anderson, Ind., architect, for a two-story and basement automobile service, repair and garage building, 85 x 125 ft., at Logansport, Ind., to cost $95,000 with equipment.

National Radiator Co., Utica, N. Y., formed by recent merger of Utica Radiator Co., Niagara Radiator & Boiler Co., Continental Boiler & Radiator Co., and other interests, has leased space on West Georgia Street, Indianapolis, for a new factory branch and distributing plant. A similar factory branch will be established at Louisville. H. Weers, 57 South Bolton Avenue, Indianapolis, is local manager.

Delco-Remy Corporation, Anderson, Ind., manufacturer of automobile starting and lighting equipment, will soon break ground for a one-story and basement foundry to cost about $75,000. Company is a division of General Motors Corporation.

Durant Motor Co., 250 West Fifty-seventh Street, New York, has disposed of its plant at Muncie, Ind., formerly works of Interstate Motor Co., to Merchants' Trust & Savings Co., Muncie, and will discontinue operations permanently at that point.

Dixon Burial Casket Co., Dixon, Ill., is said to be planning establishment of a branch plant at Richmond, Ind. It is understood that company has acquired local property of Richmond Casket Co., recently offered at a receiver's sale, and will remodel.

Board of Education, Elkhart, Ind., has begun superstructure for a three-story and basement high and vocational school addition at Second and High Streets, to cost $160,000. Hubert Miller, Monger Building, is associate architect.

Fame Canning Co., Shelbyville, Ind., contemplates rebuilding portion of plant recently destroyed by fire, with loss in excess of $350,000 including machinery. Headquarters are at 58 East Washington Street, Chicago.

Pacific Coast

SAN FRANCISCO, Feb. 29.

CONTRACT has been let by Bunting Iron Works, 820 Parker Street, Berkeley, Cal., to Lawton & Vezey, 354 Hobart Street, Oakland, Cal., for a new one and two-story plant to cost close to $28,000. Benjamin G. McDougall, 353 Sacramento Street, San Francisco, is architect.

Monolith Portland Cement Co., Bartlett Building, Los Angeles, is arranging an expansion and improvement program at its mill at Tehachapi, Cal., to cost about $250,000, including installation of additional equipment.

American Fiber Products Co., 526 Bay Street, San Francisco, contemplates a new plant in vicinity of Chico, Cal., for manufacture of strawboard, rice paper specialties, etc., to cost more than $75,000 with equipment.

East Bay Iron & Metal Works, 2310 Peralta Street, Oakland, Cal., is considering rebuilding portion of plant recently destroyed by fire, with loss estimated at $65,000 including equipment.

Santiago Orange Growers' Association, Orange, Cal., plans installation of an ice and pre-cooling plant in connection with a new one-story packing house. Conveying and other mechanical equipment will be installed in packing division. Entire project will cost about $125,000.

Pacific Gas & Electric Co., 245 Market Street, San Francisco, is planning extensions and improvements in power plant and transmission lines at Lodi, Cal., and vicinity to cost about $75,000. A new power substation will be built in vicinity of Yuba City, Cal., and additions made in transmission lines to cost a like amount.

Doernbecker Mfg. Co., East Twenty-eighth Street, Portland, manufacturer of furniture, has plans under way for an addition, to cost about $450,000 including machinery.

Belmont Copper Co., Superior, Ariz., has approved plans for a new flotation plant with capacity of about 200 tons, to cost in excess of $450,000 with equipment.

San Juan Pulp Mfg. Co., Laurel Street and Cornwall Avenue, Bellingham, Wash., is contemplating an addition with capacity of about 40 tons of pulp per day, doubling present output, to cost more than $100,000. Ossin Anderson is president.

Cousins Tractor Co., Hanford, Cal., has acquired adjoining property, 50 x 150 ft., and plans erection of an addition, to be used primarily for machine shop and tractor assembly, to cost about $60,000. Edward Cecil is head.

Arizona Light & Power Co., Phoenix, Ariz., is arranging an expansion and improvement program to cost approximately $1,100,000, including additional power facilities, new transmission lines, power substations and miscellaneous work.

Board of Public Utilities, Riverside, Cal., is considering a new municipal steam-operated electric power plant, with capacity of 5000 kw., and has authorized R. L. Boulden, superintendent, to secure details of equipment and estimates of cost.

National Ice & Cold Storage Co., Postal Telegraph Building, San Francisco, plans construction of ice-manufacturing and cold storage plant at Hollister, Cal., where site, 70 x 240 ft., has just been purchased, to cost about $70,000.

Beall Pipe & Tank Corporation, Portland, Ore., has opened a branch office at 2342 Sixty-second Street, Seattle, under management of J. V. Hyde. It is stated company is considering building a branch plant there.

Barde Steel Co., Seattle, has been granted a charter with a capital of $300,000, and has succeeded to business formerly carried on under name of M. Barde & Sons Steel & Machinery Co.

A machine shop, 40 x 80 ft., will be built by Farrell Iron Works at 1215 Valley Street, Seattle.

Canada

TORONTO, March 5.

LOCAL dealers and builders report a good volume of machine tool business. While much of this consists of orders for single tools for garages and repair plants, some lists are in prospect for additions and replacements by automobile manufacturers. A strong demand for equipment features both Toronto and Montreal markets as a result of the heavy buying by mining interests in northern Ontario, Manitoba and Quebec. Municipal governing bodies are preparing to enter the market for equipment for local waterworks, sewage and power plants, and some large orders from this source are expected within the next few months.

Plans and specifications are being prepared by F. A. Dallyn, consulting engineer, 71 King Street West, Toronto, and tenders will be called in about a month for new waterworks and sewage systems to be installed at Blind River, Ont., to cost between $200,000 and $250,000.

Town Council, Glencoe, Ont., is having plans prepared by F. A. Dallyn, consulting engineer, 71 King Street West, Toronto, for waterworks plant and system to cost $70,000.

Loretteville, Que., will install new waterworks and sewage plants to cost $200,000. Langlais, Ricard & Royer, 126 St. Peter Street, Quebec, are engineers. Bids are being received by E. A. Martel, secretary, municipal council.

Springer Lock Works, Coleman Street, Belleville, Ont., will build a two-story addition, 40 x 60 ft., to cost $10,000.

W. E. Dillon Co., Ltd., 189 George Street, Toronto, manufacturer of sheet metal products, etc., will build a two-story addition, 35 x 56 ft.

A. Mason, 130 McRoberts Avenue, Toronto, has let contract to W. H. Little, 63 Edna Avenue, for erection of a one-story foundry, 80 x 200 ft., brick construction.

Brantford Roofing Co., 22 Sydenham Street, Brantford, Ont., has let contract to Schultz Construction Co., Ltd., local, for an addition to its plant.

Western Canada

British Columbia Refractories, Ltd., 265 Water Street, Vancouver, B. C., has let contract to A. Roger Contracting Co., 744 Hastings Street West, for a plant to cost $40,000.

Foreign

MUNICIPAL COUNCIL, Moscow, Russia, has plans for an automobile manufacturing plant to cost close to $12,000,000, to specialize in production of cars of light type, with facilities for output of approximately 10,000 automobiles per year. A special commission will be formed to purchase machinery, including equipment in United States.

Director of gas works, Zurich, Switzerland, has been authorized to have plans drawn for extensions and improvements in artificial gas plant, including installation of improved type ovens, reconstruction of gas-coke division, facilities for coal and coke-handling, storage, etc., and other work, to cost about $1,350,000. American Consulate, Berne, Switzerland, Charles E. Lyon, commercial attaché, has information regarding project.

Aluminum Co. of Italy, Marbhera, near Venice, Italy, officially known as Societa Italiana dell' Alluminio-Milano, has arranged for increase in capital from 1,000,000 to 80,000,000 lire, a considerable portion of proceeds to be used for extensions and improvements in hydroelectric power facilities, electric furnaces and other departments. Company has secured rights to process for treating bauxite and pyrite minerals in electric furnaces. Main offices are at Milan.

Supreme Council of National Economy, Petrograd, Russia, has plans under advisement for construction of a new graphite refinery in Ukraine. Information at American-Russian Chamber of Commerce, 143 West Fifty-seventh Street, New York.

Government Railways of New Zealand, Wellington, is asking bids until June 25 for machine tools and other equipment, including four milling machines, three boring mills, one is to be vertical type, two screening and mixing machines, one face grinding machine, welding machines, rivet heaters, pipe and tube bending machines, etc.

Oslo Gas & Electricity Works, Oslo, Norway, known as Oslo Gas og Elektricitetsverker, is disposing of bond issue of $6,000,000 in United States, a portion of proceeds to be used for extensions and improvements. H. Horn is director general.

San Salvador Electric Light Co., San Salvador, Salvador, has acquired additional properties suitable for hydroelectric power development and will complete plans soon for a station with capacity of 4500-hp. Extensions will be made in transmission lines.

P. Schreiner sen. & Co., Oslo, Norway, request catalogs describing brazing, welding and cutting equipment for iron, steel and metals.

NEW TRADE PUBLICATIONS

Board Drop Hammers.—Erie Foundry Co., Erie, Pa., has issued a 16-page bulletin, No. 160, describing the various types of construction regularly furnished, including the four-roll hammers and those with inserted guide box-section frames, and picturing installations of the several types.

Heat Control.—Brown Instrument Co., Philadelphia. 24-page illustrated booklet entitled "How the Other Fellow Does It," describing 20 installations, some of them in unusual applications, of automatically controlled heat-treatment furnaces.

Arc Welders.—Fusion Welding Corporation, 103rd Street and Torrence Avenue, Chicago. Bulletin of four pages devoted to the Fuzon flexible arc welder, with description of the operation, control and other features of the job. Three models are available with welding ranges going up to 300, 400 and 600 amp. respectively.

Heating Resistors.—Monitor Controller Co., Baltimore. Bulletin 111 of eight pages illustrates and describes Monitor resistors in three groups: Edgewound for highest current values; hexwound for intermediate current values; smoothwound for lowest current values. The units are designed for heavy-duty service and are stated to be unusually compact, light and practically unbreakable.

Air Filters.—National Air Filter Co., 5130 Ravenswood Avenue, Chicago. Folder illustrated and describing a set of air filters installed in a large rolling mill. Six units are designed to clean a total of 300,000 cu. ft. of air a minute, for ventilation of mill motors and motor-generator sets.

Dust Problems.—Dust Recovery, Inc., 15 Park Row, New York. Bulletin No. 1 of 36 pages is devoted to an analysis of dust problems, the selection of dust-collecting equipment and methods of testing that equipment. There are a number of line drawings and several pages of tables dealing with the matter of cleaning the air of dust.

Tube and Rod Straighteners.—Torrington Mfg. Co., Torrington, Conn. Two-page folder giving standard specifications and a description of a roll-type straightener for tubes and rods.

Recording Wattmeters.—Bristol Co., Waterbury, Conn. Catalog 1502 of 28 pages illustrates and describes a complete line of wattmeters for a wide variety of requirements. Charts of various descriptions are illustrated, as well.

Direct-Current Heavy-Duty Motors.—Reliance Electric & Engineering Co., Cleveland. Bulletin 202 of eight pages illustrates and describes heavy-duty motors of type 7, fitted with ball and roller bearings. The description is quite complete, including dimensioned sketches for the various sizes.

Airport Lighting Equipment.—Crouse-Hinds Co., Syracuse, N. Y. Bulletin 2108, showing the necessary equipment for the guidance of night flying. Course lights, field beacons, boundary lights, obstacle lights and various special illuminators, such as ceiling projectors, are described.

Globe and Gate Valves.—Wellman-Seaver-Morgan Co., Cleveland. Bulletin No. 89, 20 pages, describes and illustrates a new line of Supertest globe and gate valves having bodies and bonnets of forged steel. Advantages claimed include simplicity of design, demountable cages, cage and seats integral, all parts interchangeable and easily removable without removing the valve bodies from the line. Gate valves are made from 1 in. to 6 in. and upward and globe valves from ½ in. to 2 in. and upward.

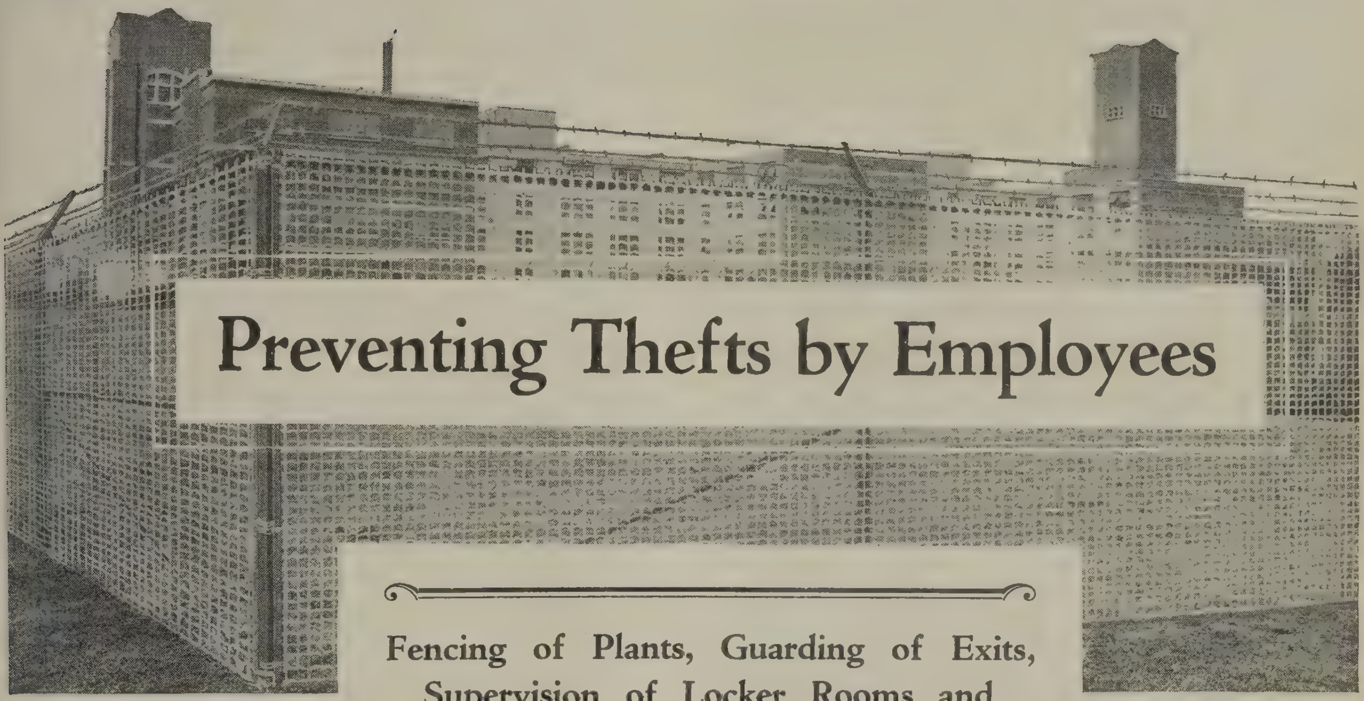
THE IRON AGE

New York, March 15, 1928

ESTABLISHED 1855

VOL. 121, No. 11



Preventing Thefts by Employees

Fencing of Plants, Guarding of Exits, Supervision of Locker Rooms and Building Up Trustworthy Personnel Are Effective Means

THEFT by workmen in plants manufacturing brass, copper or other metal products of relatively high intrinsic value is largely kept in check by regulating the entrance and exit of the employees and by building up a feeling of responsibility in the worker. This conclusion is borne out by a survey of a number of such plants by THE IRON AGE. The survey was prompted by the experience of a manufacturer in Iowa which had been faced with the problem of theft in its brass departments. This company's factory buildings are not surrounded by a fence, and although employees are expected to leave by definite doors, there is always possibility for exception.

Fencing of Plants a General Practice

A large number of the companies canvassed in THE IRON AGE survey have found that fencing the plant, thereby securing control of the entrance and egress of employees, is the most effective means of preventing theft. In most cases workmen are required to have passes for taking packages out of the gates. Examination of such packages is usually left to the judgment of the watchman at the gate, and employees seldom resent such inspection if the company frankly explains the reason. A large canning company states that the gate examination is "to prevent pilferage from the locker rooms as well as from manufacturing areas. It is taken for granted that a package will be examined, and as the employee bearing a parcel approaches the watchman he opens it for inspection."

By prohibiting automobiles within the mill inclosure most companies have effectively checked the stealing of large pieces. One company reported the extreme case of a workman's throwing a pig or ingot outside of the company inclosure during the day and returning in the evening to recover the material for subsequent sale to a scrap dealer.

The concealment of valuable articles in dinner buckets has always been a rather common form of petty thievery. Some companies prevent this by not permitting employees to take their dinner buckets into the work room. Under this plan workmen enter the shop through a locker or wash room, where they leave their dinner pails, and return to this room to eat their lunches. One plant which does not have such a system is seriously considering prohibiting workmen from eating their lunches in the work shop. A manufacturer of brass specialties in Los Angeles makes the observation that nearly all its employees bring their lunches to work in a paper sack or grocer's bag, which is, of course, destroyed as soon as the lunch is eaten. Of this company's 65 employees only one regularly carries a dinner pail.

Rigid Locker Room Practice

Preventing workmen from concealing valuable materials in their clothes is usually accomplished by careful supervision of the locker room. A large manufacturer of plumbing supplies and fittings in Philadelphia writes as follows: "Our locker rooms for the workmen all have open lockers without doors, and the rooms are in charge of reliable men who have supervision over the workmen. It would be difficult to carry anything into these rooms without being seen." Other plants require their workmen to change their clothing in a locker room that is constantly under supervision and have found this practice a very satisfactory one in preventing thievery.

A large brass works in Michigan, forced to take measures to prevent theft, established a separate locker room into which all men coming to the plant leave their street clothes, put on their factory clothing and overalls and also leave their dinner buckets. "During all the working hours," the company states, "this room is closed and the men cannot reach their street clothes or dinner pails. At noon and at night a watchman is at the entrance to the locker room, and any package or article the men bring with them at either time must be initialed by the inspector whose duty it is to do that work. When a man wishes to take his factory clothing home the package is O.K.'d by the foreman of the department in which the man is employed."

"In the past," this company relates, "we have found that the taking of overalls and other clothing home to be washed was a common excuse for having a package, and, of course, most anything could be concealed in such a bundle and taken out of the plant. To overcome this we established our own washing machine in the plant and wash our men's clothing as required, so that the only time they have occasion to take out such a package is when clothing is to be discarded. It is pertinent to state that we have never had the least objection to our system, and the honest men appreciate the fact that there is no reflection upon them to have some method of checking up on those who are dishonest."

Checking Up on Materials In Process

Another effective method of preventing theft is the checking up of materials in process. A Cleveland brass manufacturing company "accounts for all the castings the molder makes, checking up on the good castings as well as the defective ones. The number of good castings is recorded in the foundry and delivered to the machine department where the account is verified. Any loss through machining or in the form of defective castings is recorded on the machine shop time cards. This count is then passed on to the next department, and any losses which may occur in this department are handled in the same manner, and so through all departments."

"Our storerooms," writes a manufacturer of specialized office equipment in New England, "are very carefully operated. All of our raw materials, parts in process and finished machines are carefully accounted for, and about the only things an employee could get away with might be a few small parts of the machines which would have no real value to him."

Nearly all companies send their finished parts to the warehouse as soon as possible, and this helps considerably to remove temptation where the manufactured products are of rather high intrinsic value. A manufacturer of non-ferrous metal products at Milwaukee locks up its valuable products and employs a trustworthy watchman who is responsible for them. "It is also our practice," the company states, "to ship out all completed castings before the closing of the shop in the evening. Our last pour is left in the sand until the men have gone home, after which the castings are taken out under the care of the watchman."

Many of the companies which employ a careful system for accounting for work in process believe that the psychological effect upon the workmen is such as to reduce the likelihood of thievery.

Selling Stolen Scrap Metal

Some companies have suffered considerable losses in the sale of scrap metal from their yards. A large hardware manufacturer in New England writes as follows regarding its solution of the problem: "The greatest difficulty we have had has been when metal has been sold to junk men in the yard and they have taken away new metal with the old, or the weights have been juggled. This has been remedied by putting the sale of old metal in the hands of our purchasing department, where the handling and packing of the metal is done by men who do not know to whom it has been sold."

A manufacturer of metal products in Milwaukee reports an unusual experience of this sort. "A few years ago," the company writes, "a neighboring foundry was buying scrap metal from a local scrap dealer. The company's scrap purchases included sprues and gates and other material that would never be sold by a foundry. Realizing this, the neighboring company made an investigation and found that these sprues and gates came from our plant. We immediately made an investigation and found that there was a small scrap dealer who had influenced some of the men in our cleaning room to fill their dinner pails with our scrap and receive a nominal amount for it, possibly 10c. or 15c. for material which was worth five or 10 times as much. This dealer sold this material through responsible metal dealers."

This same company also suffered losses when pigs or ingots were buried in wheelbarrow loads of waste and taken out of the plant, but has been able to stop these practices by carefully watching suspected employees and taking particular precautions in the hiring of new men.

A company in Delaware has been able to prevent the theft of scrap materials by keeping in close touch with the police department in the town where the plant is located. "As we are in a small town," the company states, "we do not believe local junk dealers would take a chance on accepting anything which they suspected of having been stolen from local plants. We recall several cases where attempts have been made to sell stolen scrap, but they have quickly been reported to the police department and the guilty party has been immediately apprehended."

Employing Detectives Unpopular

A State manufacturers' association in the Middle West states that hiring a private detective in the plant has often been a satisfactory method of preventing thievery. Individual companies, however, have not always found this means successful. "Some companies go so far," says a brass manufacturer in Michigan, "as to hire private detectives who are mechanics to spy on the various ones who may have aroused suspicion. This method is rather expensive and, when found out, creates an ill feeling among employees."

A Cleveland company had similar experiences with this plan. "We have employed inside men for the purpose of checking up on thefts," the company observes, "but the results have not been good and the practice has led to several mix-ups. We later instructed our foremen in the different departments to keep a sharp look-out for any irregularities of this sort and this materially helped to solve our problem."

Many companies have found that the prosecution of guilty parties has helped prevent further dishonesty among employees and, therefore, do not stop at the mere discharge of the men who have been caught stealing.

Building Up a Trustworthy Personnel

Small companies having a low labor turnover are not often troubled with plant thefts. A small maker of water heaters in California states that its policy of maintaining its labor force practically constant has virtually eliminated the problem of stealing by employees. A manufacturer of office equipment in New England with a small labor turnover reports that this fact has been largely responsible for its success in dealing with the theft problem.

This plan of placing trust in its workmen has been very liberally interpreted by a Pennsylvania manufacturer. "We had trouble some time ago with petty thefts," the company writes, "but have eliminated them by letting our men know that what is worth having is worth asking for. We make it a practice not to charge our employees for such things as a single faucet or stop cock, and only charge them actual cost on a bill of goods for use in their homes when the bill covers two or more pieces. We also have a cooperative buying plan by which we purchase things which are needed in our workmen's homes and for which they cannot afford to pay cash. For such things we charge actual cost prices and allow the men to pay us by small weekly payments. We also frequently loan our employees limited amounts of money in case of emergencies, which we allow them to repay in small payments."

Careful selection and training of personnel has also solved the theft problems of a large manufacturer of barber shop equipment in St. Louis. "Before anyone is employed by us," the company states, "a careful investigation is made to ascertain his honesty and integrity. If he is employed he is trained to become a specialist in a particular line. In most cases the employee becomes a real asset to the firm and feels that it is to his best interest to keep things running smoothly. This also reduces the number of temporary workers."

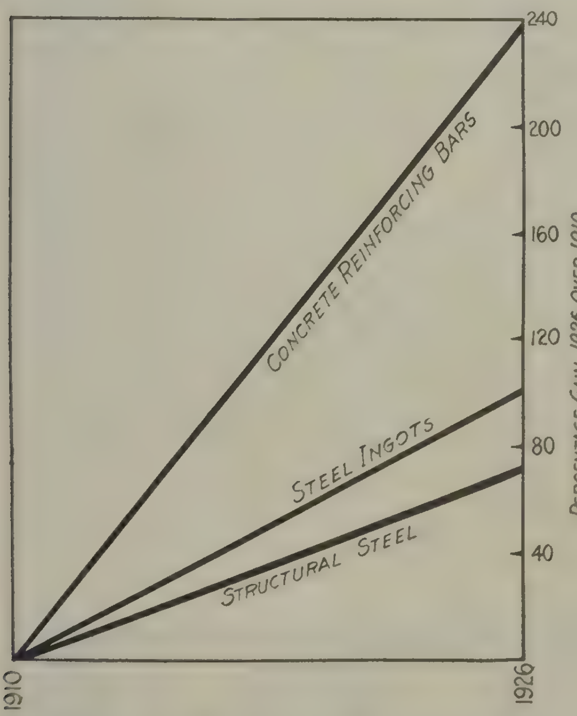
A brass and metal casting manufacturer in Minnesota has the following to say on the subject: "The only way we have been taking precautions in this line is by having 'trusty' foremen and a few of the older employees keep their eyes open at all times. Quite frequently in this way we get information leading to the discovery of a dishonest worker."

Structural Steel and Concrete Bars

Steel Market Lost to Concrete Estimated at Over 2,000,000 Tons a Year —Structural Shapes Not Keeping Pace with Ingots

MANY analyses have been made in an effort to determine the steel market which has been lost to reinforced concrete. Two independent calculations show results close enough to each other to indicate that a fair estimate has been made of the extent of that loss. Some of the data are given in the following paragraphs.

Production of concrete reinforcing bars in 1926 was reported by the American Iron and Steel Institute at 815,829 tons. It is estimated that 70 per cent of this, or 571,000 tons, was used in the structural part of buildings. When thus used it has been estimated that 1 ton of concrete bars displaces about 5 tons of structural steel. Consequently, the structural equivalent of the concrete bar tonnage which went into buildings would be 2,855,000 tons. If we deduct from this the tonnage of concrete bars used in the buildings, the possible steel market lost in one year to concrete is 2,284,000 tons.



Percentage Growth of Concrete Reinforcing Bar Production Since 1910 Has Been More Than Three Times That of Structural Steel. The latter has not made so good a showing as have ingots

Another method of approach is based on an estimate that 60 per cent of all the structural steel made goes into large buildings. Production of structural steel in 1926 was 3,911,663 tons, of which 60 per cent is 2,347,000 tons. It is reported that about half of our large buildings are erected with structural steel frames. As the other half are built of concrete, the possible structural steel market lost in one year would thus be about as great as the amount which is used. This figure is within 3 per cent of that determined by the other method. It does not, however, take account of the concrete bars.

Graphic representation of the growth in the use of concrete bars in buildings and of structural steel in buildings appears in a diagram. For purposes of comparison, the growth of steel ingot production is shown also. In this diagram no effort has been made to show intervening years between 1910 and 1926. Such years would provide varying figures and give irregular curves, instead of the straight lines shown.

It will be noted that the use of concrete bars has been more than trebled in the interval, whereas the use of structural steel has increased only about 73 per cent. Steel ingot production meantime has more than doubled.

As a further light on this general subject of the replacement of steel by concrete, a tabulation made some time ago of the percentage distribution of the cement production of the United States may be of interest. The information available is unfortunately inadequate to make a highly accurate tabulation, but the figures are given for what they may be worth.

Uses	*Per Cent*
Public and commercial buildings	26.0
Houses, exclusive of rural	8.5
Sidewalks and private driveways, exclusive of rural	5.5
Small town and farm uses	18.0
Sewerage, drainage, irrigation, culverts and concrete pipe	4.5
Paving and highways	27.5
Railroads	5.5
Bridges, river and harbor works, dams and water-power projects, storage tanks and reservoirs	3.0
Miscellaneous uses	1.5
Total	100.0

On this basis the 26 per cent use of cement in public and commercial buildings would represent over 40,000,000 bbl. in a year. More than half of this amount is believed to go into footings and other "mass" work, without reinforcing bars.

H. C. and W. C. Fownes have given 10,000 shares of the preferred stock of Spang, Chalfant & Co. received by them in exchange for their holdings of the Standard Seamless Tube Co. to 50 men long identified with the Standard company as department heads and plant officials. H. C. Fownes was president, and W. C. Fownes was vice-president, of the Standard company, and they held almost all of the stock. The par value of the preferred stock is $100 per share.

Aluminum Foundry Rearranged

Double Output with 40 Per Cent Less Molding Floor Space—Routing and Handling of Materials Well Planned

INCREASED production at the plant of the Packard Motor Car Co., Detroit, made it necessary to reduce the floor space of the aluminum foundry about 40 per cent to make room for a decided expansion of the core room and at the same time virtually to double the output of castings. After careful study it was decided that the installation of an extensive series of power-driven conveyors was not required. Instead, the desired expansion in production was achieved by the selection of other materials-handling units.

The drags of large crankcases are made in two Osborn roll-over machines, shown in the middle foreground of Fig. 1. These machines are served by overhead cranes which were moved from another department. The gravity conveyor shown in the left background is used to bring drags, with the crankcase castings in them, back to the molding department. The cranes pick them up from the conveyor and shake them out in the sand pile shown in front of the machines. The sand is wet down, cut over, and enough of it is put through a riddle to serve as facing. The castings themselves land in the foreground, where the core butts,

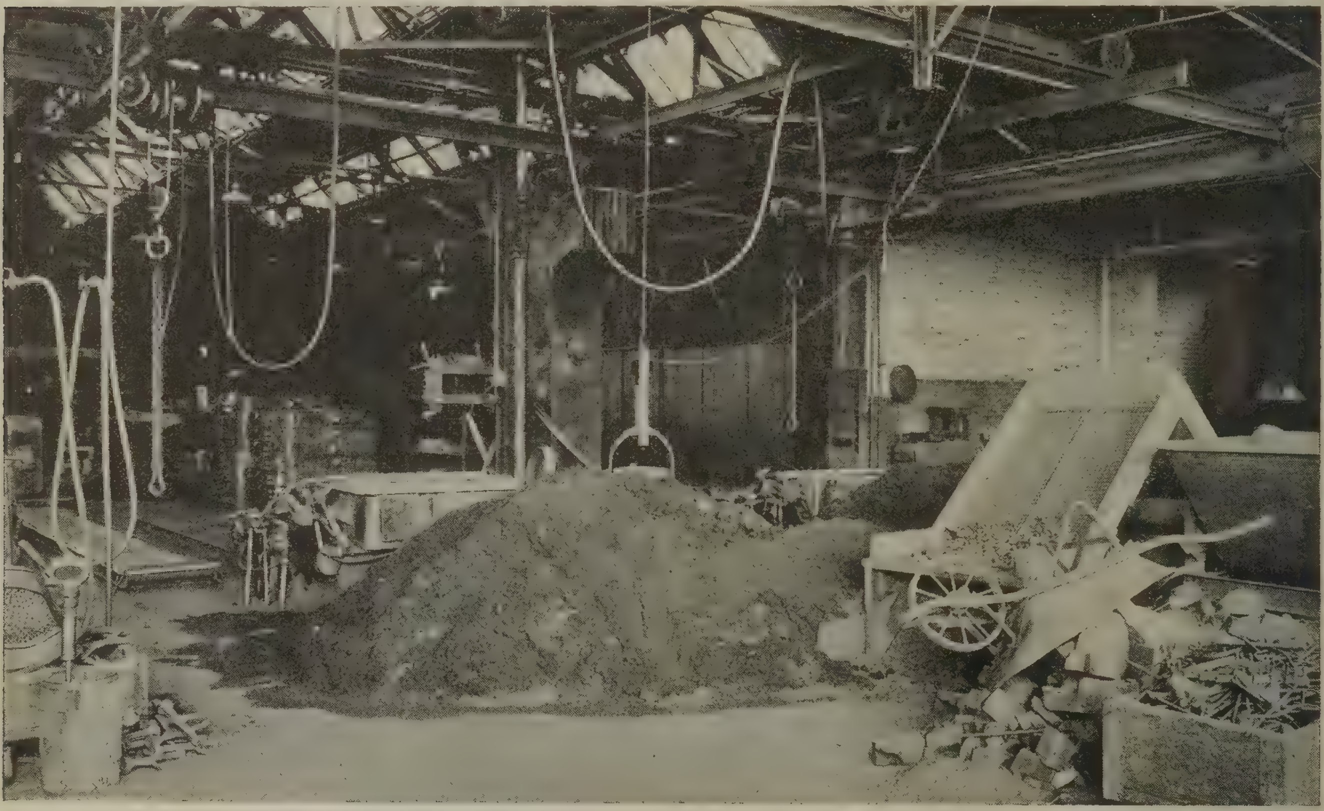


Fig. 1—In the Crankcase Molding Department the Drags Are Made on the Osborn Jar Roll-Over Machines Shown Behind the Sand Pile. The drags are delivered back into the foundry proper by carriages which run out from under the machines. Cranes then deliver them down the floors, and the poured molds come back on gravity carriers to be shaken out on the sand pile. The castings are knocked out in the foreground, and the rods, chills and chunk cores are recovered

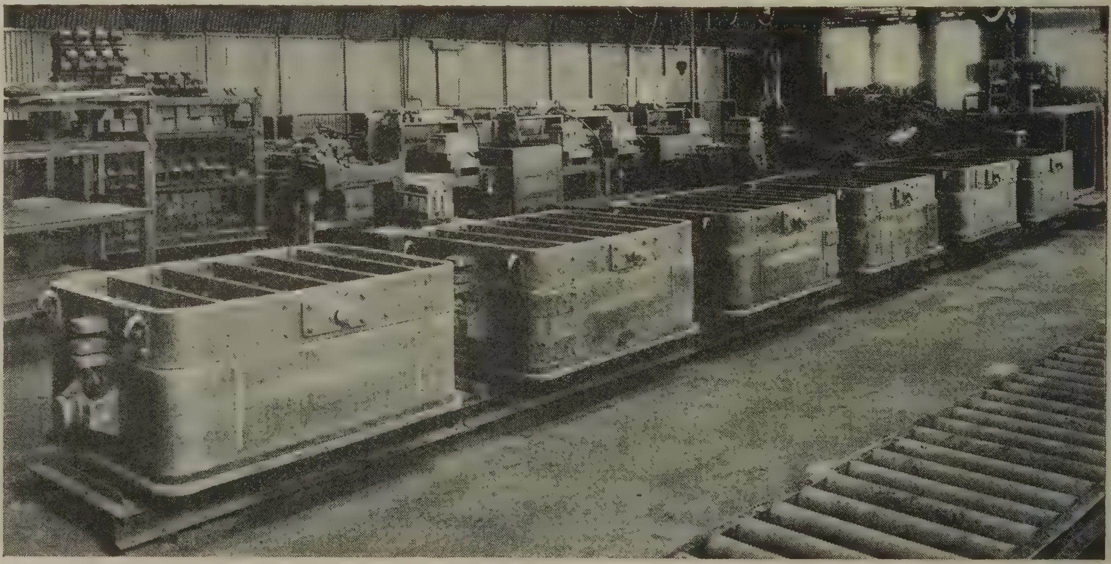

Fig. 2—The Finished Crankcase Drags Are Brought by a Crane to the End of the Gravity Carriers Shown. Here dry sand and green sand cores are assembled, the copes are closed on, and the molds are poured and run back for shaking out

rods, etc., are knocked out and put over the inclined riddle shown. The castings then pass to the cleaning room and the various materials knocked out go to the salvage or dump, as the case may be.

The flasks are returned by the crane to the molding machines. After a drag is completed, a car to which it is lowered transports it to a point where it is picked up by another crane and taken to the back end of another molding floor and placed in the position occupied by the empty flasks shown in Fig. 2. From this point the drags are pushed toward other molding machines.

Located between the two sets of gravity carriers is the green sand core department, as shown in detail in Fig. 3 and in the background of Fig. 2. Green sand

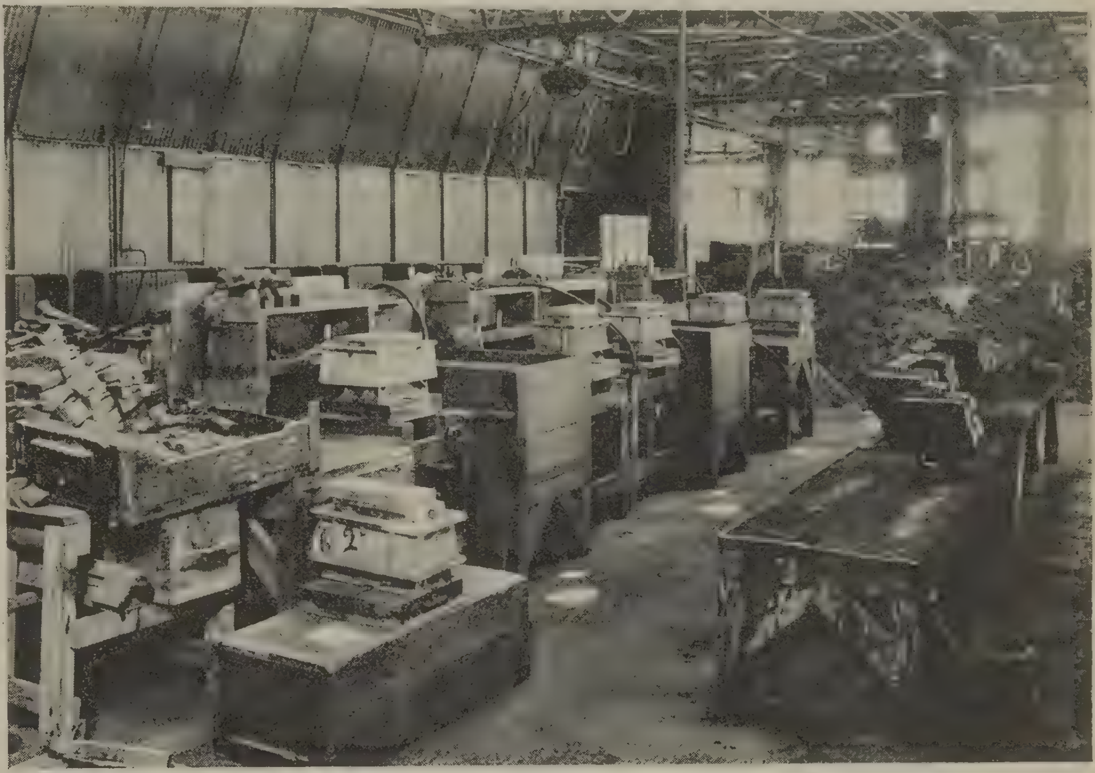

Fig. 3—Green Sand Core Department for Crankcases. The cores in the center of crankcases are made of green sand, being supported by special chairs and arbors, as shown on the bench in the right foreground

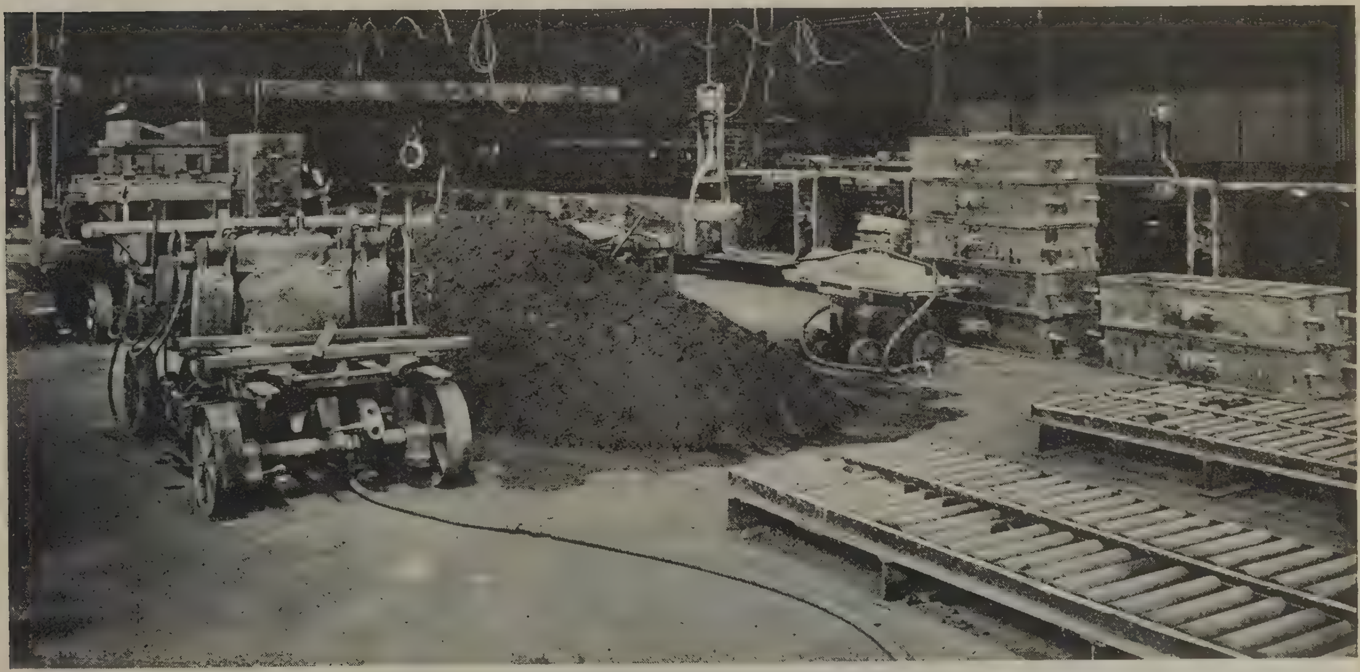

Fig. 4—In the Oil Pan and Floor Plate Molding Floor the Molds Are Lifted on and off Molding Machines by Light Overhead Cranes and Are Handled on the Floor by Gravity Carriers

Fig. 5—In the Light Work and Snap Molding Department, Molds Are Made on Molding Machines or Benches, and Then Are Run Down Gravity Carriers, Poured off, and Run Back for Shakeout

cores can be seen standing on the table in the right foreground of Fig. 3, and the green sand core boxes are shown on the various benches. As the drag progresses from where it is first set on the carrier, dry sand and green sand cores are placed in position, and then opposite the sand heap shown beyond the coremakers' benches a flat back cope is rammed up and closed on. The mold is then poured and, after the cope is shaken out in the sand heap shown at the end of the core room, progresses still further toward the final shakeout shown in Fig. 1.

For molding oil pans, foot plates and other fairly bulky castings a group of four machines is placed in the center of the foundry, with gravity carriers extending from it, as indicated in Fig. 4. In this case, the mold parts are handled with overhead cranes, while the work is transported on gravity carriers and is subsequently returned to a point near the molding machines for shakeout.

For making small work, raised gravity carriers are used in connection with benches or light molding machines. A portion of this department is shown in Fig. 5.

The melting department of the foundry consists of a battery of oil-fired furnaces arranged along the wall at one end but in such a position that the metal is relatively close to the pouring point for most of the work.

The principal gain from the rearrangement of the foundry was that by judicious selection of equipment and careful planning of the work increased output and a considerable saving in the number of man-hours entering into the product were obtained without a heavy capital investment.

The H. M. Lane Co., Detroit, acted as consulting foundry engineer in connection with the undertaking, and the work of the installation itself was done by the construction division of the Packard Motor Car Co.

Magnet Handles Strip Steel Successfully

Two Coils Lifted in Novel Manner with Flat Plate Without Uncoiling—Boxed Strip Picked Up Readily

COILED strip steel is a difficult material to handle, for unless the coils are tightly bound together they will pull apart and cause confusion to the handlers and damage to the steel. A strip steel coil, even though securely bound, is a heavy, awkward thing to handle and the moving of any amount of this steel requires a gang of husky men who must be continually cautioned against battering the finished steel strip.

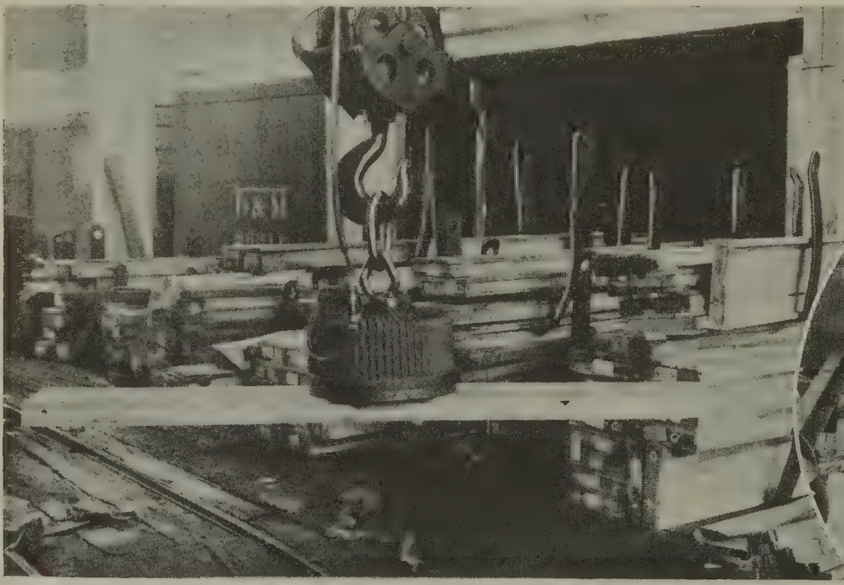
The Superior Steel Corporation, Carnegie, Pa., whose product is largely cold and hot-rolled strip that is shipped both in coils and boxed flat, has adopted lifting magnets for handling finished steel. Manual labor is used only where necessary to move the bundles or boxes into closed freight cars. At this plant they recently loaded 200,000 lb. of strip steel into box cars with the magnet and four men during a 10-hr. shift. Before the magnet was purchased, the most that six men could load was 140,000 lb. in a 10-hr. shift.

The magnets usually handle two coils at a time. If these two coils are not placed tightly up against each other, one or both of the coils have a tendency to fall away from the magnet and be held in a vertical position. Because the steel must not be battered, it is not satisfactory for the coils to be dropped on their edge.

In experimenting with the magnets on this job of handling coiled strip steel, the Superior company discovered that a thin sheet of steel placed over the two coils to be lifted would spread the flux from the magnet sufficiently to hold both coils flat against the plate. It is a peculiar fact that this plate does not short circuit the flux, but causes the magnet to do a better job than without the plate.

The fact that much of the strip steel is boxed flat does not interfere with its being handled by the lifting magnet. One photograph shows an Electric Controller & Mfg. Co. lifting magnet moving a long box of strip steel. This particular package weighed a little over 600 lb., while the same magnet is handling packages that run as high as 1000 lb.

A double-magnet lifting rig, used at the same plant for coils of wide strip steel, was illustrated in THE IRON AGE of Feb. 16, page 472.



Avoiding the Loosening of Coils and Damage to Material Resulting from Ordinary Handling of Strip Steel by Magnets (Upper Right) by the Use of a Flat Plate (Lower Right)

Systematic View of Stainless Steels

High-Chromium Steels Classified into Three Groups—Properties Briefly Described and Utility for Various Purposes Noted

BY FRANK R. PALMER*

DOZENS of brands of corrosion-resisting alloys or "stainless steels" are now being manufactured by many different mills, under a variety of trade names. It is only natural that data regarding them may be contradictory, incomplete and even inaccurate. After some 10 years' experience with them, it is possible to classify them into three general groups. These three groups may be designated as A, B, and C, and the rules which govern this sub-division are so fundamental and important that they may be called the "A B C of Stainless Steel."

Each group is characterized by certain properties

	Group A	Group B	Group C
Analysis	Chromium less than about 14 per cent. Carbon less than about 0.40 per cent. May contain small percentages of tungsten, copper, nickel, silicon or molybdenum. This group is magnetic.	Chromium more than about 16 per cent. Carbon less than about 0.40 per cent. May contain small percentages of copper, nickel, silicon, molybdenum or tungsten. The group is magnetic.	Contain enough chromium and nickel to make steel austenitic and non-magnetic. Usually contain twice as much chromium as nickel or vice versa.
Heat Treatment	Respond to hardening, tempering and drawing. Resulting physical properties depend on analysis.	Heat treatment not recommended. Are naturally soft — usually having a Brinell under 200 and seldom over 250.	Do not respond to heat treatment.
Toughness	Are structurally dependable. Are not brittle in sharp-notched sections or under impact.	Have low impact resistance especially in notched sections. Not dependable for bolts and similar notched parts when used under impact.	Extremely tough at all times. Thoroughly dependable for any type of shock service within the capacity of their strength.
Grain Growth	Not subject to excessive grain growth at incandescent temperatures. Thoroughly dependable at any temperature for supporting any load or shock within their carrying capacity.	This group is divided with regard to grain growth. The simple chromium irons and those containing high silicon or aluminum are subject to excessive and dangerous grain growth and become very brittle. Grain growth is reduced by use of carbon, manganese, copper and nickel. Some steels containing these elements are not subject to grain growth at all.	Do not become brittle because of grain growth—thoroughly dependable for high temperature service.
Hot Working Qualities	Readily forged, pierced or rolled. Air-harden on cooling.	May be forged, rolled or pierced. Those steels subject to grain growth must be heated very quickly. Those not subject to grain growth are heated in the usual way.	May be forged, rolled or pierced. Become work-hardened progressively below 1800 deg. Fahr. Do not air-harden.
Cold Working Qualities	Can be cold drawn into wire, cold rolled, bent, formed, upset, coined and deep drawn.	Can be cold drawn into wire, cold rolled, bent, formed, upset, coined and deep drawn. Not quite so easily worked as Group A with equal carbon content.	Can be cold drawn into wire, cold rolled, bent, formed, upset, coined and deep drawn. Work-harden twice as rapidly as Group A.
Machinability	Machine readily with properly designed tools.	Machine readily with properly designed tools.	Very difficult to machine. This is an outstanding objection to this group.
Riveting	Make excellent cold rivets. Not recommended for hot rivets driven above 1500 deg. Fahr. on account of air-hardening.	Due to low impact values, not desirable for either hot or cold rivets.	Excellent for either hot or cold rivets. Hot rivets may be driven at a high temperature.
Welding	Can be welded by oxy-acetylene flame, electric arc or resistance. Weld air-hardens. No grain growth.	Can be welded by oxy-acetylene flame, electric arc or resistance. Those metals subject to grain growth become very brittle adjacent to the weld. Those metals not subject to grain growth yield satisfactory welds.	Can be welded by oxy-acetylene flame, electric arc or resistance. Weld does not air-harden and is very tough. This is an excellent group for welded products.
Corrosion Resistance	Very satisfactory for resisting weather, water and many organic and inorganic corrodents.	Possesses corrosion-resisting properties superior to Group A.	Corrosion resistance depends largely upon chromium content. This group will resist some types of action that Groups A and B will not. With chromium over 16 per cent the resistance is excellent.
Scale Resistance	Useful for temperatures up to about 1500 deg. Fahr.	Superior to Group A—recommended for temperatures about 1500 deg. Fahr.	The high-chromium steels are as good or better than steels of equal chromium in Group B.
Strength at Elevated Temperatures	Much better than straight carbon steel for temperatures up to 1000 or 1200 deg. Fahr.	Steels subject to grain growth not safe at high temperatures. Steels not subject to grain growth are better than Group A above 800 deg. Fahr.	Better than Group B at temperatures over 1000 deg. Fahr.

---

*Metallurgical department, Carpenter Steel Co., Reading, Pa.

which are common to all steels falling therein. The exact properties of the individuals will vary considerably depending upon the percentage of carbon and chromium, and to a lesser extent upon special additions of other alloying elements, such as nickel. It does not therefore follow that all steels within a given group are interchangeable in their application, and we must still take cognizance of brand names and detailed analyses. On the other hand, it should be emphasized that all corrosion-resisting steels at present commercially produced fall into one of these three groups and therefore exhibit the general peculiarities of that group.

A most common error is the disposition of many to say "pigs is pigs" and accept or condemn all stainless steels on the performance of one grade or the performance of one group. As a matter of fact, the three groups of stainless steel have very little in common one with another—one might only say "they are all steels containing chromium and all of them have certain corrosion or heat-resisting properties." The three groups should no more become confused than should three totally different alloys like nickel silver, bronze and monel metal. Although these all contain copper and all possess corrosion-resisting properties, we are not tempted to classify them under one head for construction purposes. We should be just as careful not to comprehend all grades of stainless steel in any general statement.

For the sake of brevity the general properties of each group of stainless steels are presented in tabular form. It is not possible to deal fully with all details and exceptions, and furthermore no effort has been made to extend the table beyond the mere delineation of group characteristics. There is a considerable choice of brands available in each group and they will not all serve equally well for a given purpose. The detailed properties of any given steel should be secured from the manufacturer of the brand in question, or from experiment under the required conditions of service.

It should be noted under "Analysis" that Group A has for its top limit about 14 per cent chromium, while Group B has for its lower limit about 16 per cent chromium. Steels containing from 14 to 16 per cent chromium partake of the properties of both groups. It must be understood that these group limits are not rigidly set, but fluctuate with the other elements contained in the steel. For example, stainless iron with about 0.10 per cent carbon may contain up to about 14 per cent chromium and still remain in Group A. When the carbon is raised to 0.30 per cent the chromium can be increased to 15 or even 16 per cent and the steel will still exhibit the properties of Group A.† The introduction of high manganese or nickel will also tend to raise the chromium limits of Group A and the introduction of silicon or aluminum will tend to lower them. With these reservations, the table applies to all high-chromium corrosion-resisting steels regardless of brand names or identity of manufacturer.

While it should scarcely be necessary to emphasize the term "quality" in connection with highly specialized products such as stainless steel, a word on this subject is in order. There is no grade of steel which reflects more honestly the skill of the workmen and the diligence of the inspection than stainless steel. Quality in this class of product is evident not only in narrowness of chemical limits and the purity and cleanliness of the product, but is very conspicuous in the uniformity of different shipments carrying the same brand label. It should be emphasized, however, that no amount of "quality" injected into a stainless steel will lift it from one group into another.

---

†EDITOR'S NOTE: The reason for these variations has been given by E. C. Bain. See THE IRON AGE, Feb. 23, 1928, page 535.

Iron-Silicon Equilibrium Diagram

A DISCUSSION of several published investigations on iron-silicon alloys, including an early one of his own together with careful studies of high silicon alloys, has enabled T. Murakami to prepare a complete equilibrium diagram. (Science Reports, Tohoku Imperial University, Japan, May, 1927). His original suggestion that the compound Fe_3Si_2 existed was doubted by Phragmen, but the latter has been able to find X-ray evidence of its occurrence subsequently in well-annealed specimens. Other students postulated a gamma to alpha change in alloys containing free iron, and occurring at 800 deg. to 400 deg. C., depending upon the silicon content. Murakami made careful X-ray and microscopic studies on this point, and finds only the body-centered cubic lattice characteristic of alpha or delta iron. A magnetic change does occur unaccompanied by any atomic rearrangement.

Studies on higher silicon alloys, where agreement by various investigators is far from complete, were made on special melts of Armco ingot iron plus measured amounts of carbon-free ferrosilicon. These were studied by thermal analysis, X-rays, and the microscope. All results are summarized in the diagram, the meaning of the various fields being as follows:

Area A B M P, alpha iron with silicon in solid solution

Line A_2 N O, magnetic change in iron.

Line P Q, magnetic change in Fe_3Si_2.

Line B J, solidification of iron-FeSi entectic.

Line B M, entectic mixture of iron and FeSi.

Area B J M K, iron-FeSi entectic plus excess FeSi.

Line M L K, formation of Fe_3Si_2 by reaction of iron and FeSi.

Area P M L O, saturated alpha solid solution plus Fe_3Si_2.

Line L O, solid compound, Fe_3Si_2.

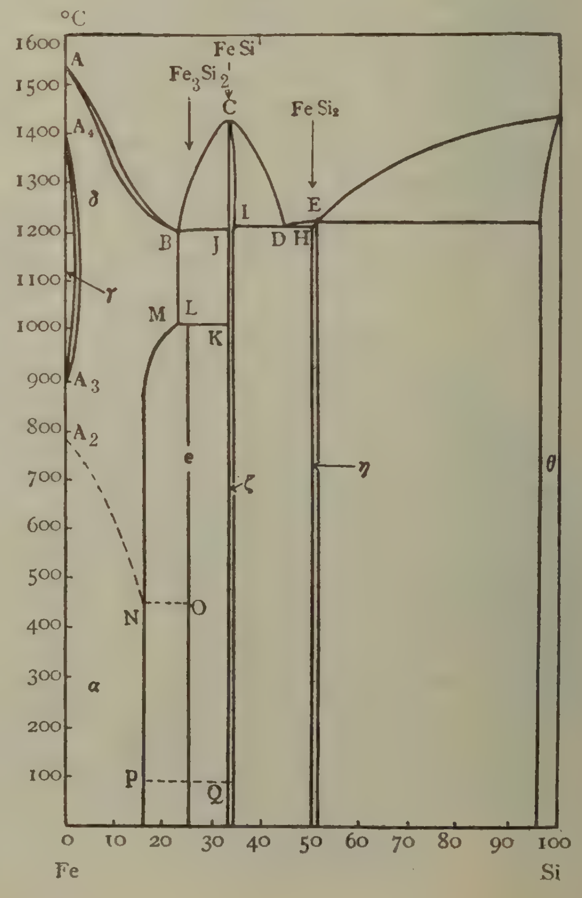
Area O L K Q, mixture of Fe_3Si_2 and FeSi.

Narrow strips at about 33 per cent silicon and 50 per cent silicon represent the ability of the compounds FeSi and $FeSi_2$ respectively to dissolve a small amount of silicon.

Between 96 and 100 per cent silicon, iron is held in solid solution.

The vertical hand between I and H is a mixture of FeSi and $FeSi_2$ (each with a little silicon in solution).

The broad area between 50 and 96 per cent silicon is a mixture of $FeSi_2$ (with a little silicon in solution) and silicon saturated with iron.



One-Ton Acid Open-Hearth Furnace

Some Experimental Results Obtained in a Small Furnace Operating Under Regular Conditions—Unusually High Temperatures Available

BY C. E. MEISSNER*

NEED for a practical method of deciding upon new alloy steel analyses to widen its markets was the problem facing the Chrome Steel Works at the beginning of 1927. In addition to determining the physical properties of the alloys under consideration, it was necessary to test their value in service. Small melts of steel in a crucible, from which test specimens could be made, were insufficient to determine more than physical properties. Therefore actual castings and ingots had to be made before the products could be placed in service. To save further experimental work, it was desirable that these heats should be made on a "pilot" basis; that is, actually duplicating regular open-hearth furnace practice. Therefore a 1-ton (2000-lb.) acid open-hearth furnace was built.

There are no special features in the design of this furnace. Standard acid open-hearth practice is followed, with the reproportioning of the dimensions necessitated by its small size. Notably, there is a considerably increased length in proportion to width, to get proper flame propagation. After the first heat was made it was found that the checkers were insufficient. The checker chambers were increased in size and the checker openings were made much smaller. The furnace was started late in March, 1927, and made 65 heats. The run was resumed in November and the furnace is still operating, having made 60 additional heats. For the last series there was some rebuilding of both the furnace itself and the checkers. Slag pockets were added.

Bottom is made of a regular acid bottom sand, using a sand paddle. It needs little repairing and lasts about five heats. Charging is done by hand. The charge generally consists of about 1800 lb. of scrap and 200 lb. of pig. Alloy additions bring up the charge to about 2000 lb. of metal. The furnace loss is 6 to 10 per cent. Alloy losses are not greater than in a standard furnace. All alloys are added in the furnace except ferromanganese, which is sometimes added in the ladle.

Melts can be made as high in carbon as desired. As our average analyses are high-carbon (0.65 to 0.90 per cent) alloy steels, a ratio of 10 to 20 per cent pig to scrap is mostly used. Practice is to melt about 15 points higher in carbon than the final carbon desired and then work down before additions of alloys. Ease of holding both heat and carbon is normal. Carbons as low as 0.04 per cent have been attained and 0.06 carbon is quite easily reached. Slags have been worked very successfully with iron reduced as low as 18 per cent FeO.

The furnace is oil-fired, using light, low-sulphur oil of 22 deg. Beaumé. The oil consumption is about 80 gal. per ton, which is double that normally used on the larger furnaces. This greater consumption is due to greater relative heat losses in this small unit. The oil is vaporized with compressed air at 100 lb. pressure. Standard burners are used. The flame is not more oxidizing than in the larger furnaces. Reversals are made every 15 min. Average time from charge to tap on normal heats is 4 hr.

Furnace life can only be estimated, but it is believed that the front and back walls will be the first to go, at around 200 heats. Metal temperatures during tapping have been noted as high as 3100 deg. Fahr. by optical pyrometers. The furnace crew consists of a first helper

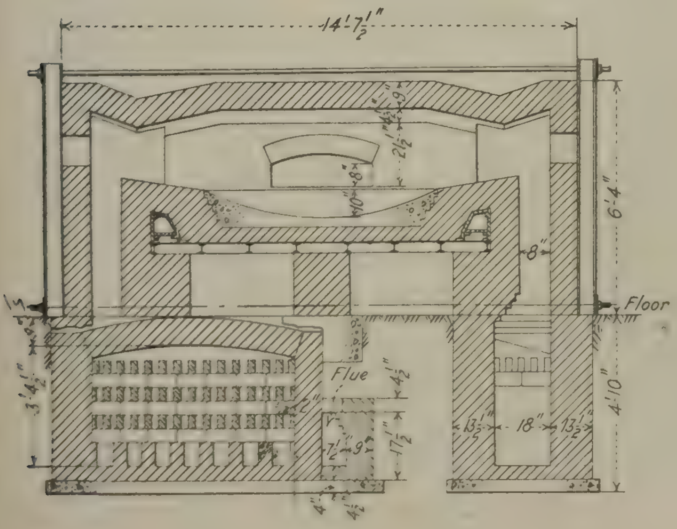
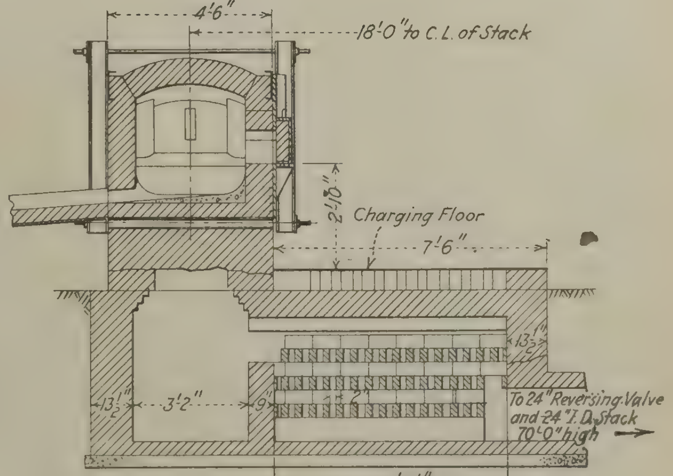
THREE Sections of the Furnace and One of the Ladle. At upper left the size of bath is shown, with arrangement of ports. At lower left is longitudinal section through bath, showing also the regenerator chamber. Transverse section is at lower right





with assistance from the regular pit gang for charging, tapping, etc. Heats as small as 1000 lb. have been made. Some of the steels have been very low in phosphorus and sulphur. Small ladles previously used for an old crucible plant were rebuilt for this furnace. Bottom pour was found to be more satisfactory than the teapot pour.

Several ranges of analysis have been worked on, which may be summarized as follows:

High-carbon steels with varying percentages of chromium from 0.30 to 1.00 per cent.

Chromium steels with carbon from 0.20 to 0.90 per cent and chromium from 1.00 to 3.57 per cent.

Chromium-molybdenum steels with carbon 0.60 to 1.45 per cent, Mo, 0.25 to 0.35, Cr from 0.80 to 2.50, and Mn from 0.60 to 2.50 per cent.

Chrome cast iron with carbon 2.75 per cent and chromium 12 to 18 per cent.

Chrome iron with carbon 2.75 per cent and chromium 23.0 to 27.0 per cent.

NEW LIST OF STANDARDS

Samples of Steels and Alloys Now Available from Bureau of Standards

THE United States Bureau of Standards is now prepared to furnish the tabulated standard samples, new and old, a list of which has not been published for some years.

Information as to the history of the standard samples, their use in checking methods of analyses, standardizing solutions, calibrating pyrometers, etc., is given in Bureau of Standards Circular No. 25. Summaries of analyses of the standard samples and general information are given in the supplement to Circular No. 25. These can be obtained without charge upon application to the Bureau of Standards, Washington. Detailed certificates of analyses are sent under separate cover to the same destination as the samples.

Orders should give both the number and name of the sample wanted. No samples of smaller size than those listed are distributed.

Sample Number	Name	Constituents Determined or Intended Use	Weight of Sample in Grams	Fee per Sample
88	Dolomite	Complete analysis	50	\$2.00
70	Feldspar	Complete analysis	40	2.00
80	Glass, soda-lime	Complete analysis	45	2.00
89	Lead barium glass	Complete analysis	45	2.00
76	Burnt refractory (40% Al_2O_3)	Complete analysis	60	2.00
77	Burnt refractory (60% Al_2O_3)	Complete analysis	60	2.00
78	Burnt refractory (70% Al_2O_3)	Complete analysis	60	2.00
81	Glass sand	Fe_2O_3, Al_2O_3, TiO_2, ZrO_2, CaO, MgO	60	2.00
2	Zinc ore D	Zinc	50	1.00
25b	Manganese ore	Manganese, available oxygen	100	2.00
26	Crescent iron ore	Al_2O_3, CaO, MgO	100	2.00
27a	Sibley iron ore	SiO_2, P, Fe	125	2.00
28	Norrie iron ore	Mn (low)	50	1.00
29	Magnetite iron ore (titaniferous)	Complete analysis	50	1.00
56	Phosphate rock	P_2O_5, Fe_2O_3, Al_2O_3, etc	60	2.00
69	Bauxite	Complete analysis	60	2.00
71	Calcium molybdate	Mo, Fe, Ti	60	2.50
4c	Cast iron	C, Mn, P, S, Si, Ti, (Cu, Ni, Cr, V)	150	2.50

Unemployment Not Machine-Made

Mechanization of Industry, According to Magnus W. Alexander, Creates New Wants and New Tasks—Labor Reserve Normally Exceeds 1,500,000

AVAILABLE information indicates that employment conditions in the country as a whole have been improving since December, even though public attention was not focussed on the unemployment situation until late in January and in February, according to Magnus W. Alexander, president of the National Industrial Conference Board, speaking before the Fortnightly Forum at the Park Lane, New York, March 11. He characterized the claim that mechanization of industry is responsible for unemployment as a generally unwarranted contention.

"As mechanization of industry with its requirement of fewer workers per unit of production decreases production costs and prices, the demand for commodities simultaneously increases and causes not only the theoretically released workers to be reabsorbed but, in addition, calls new workers into production," Mr. Alexander declared.

The text of Mr. Alexander's address is, in part, as follows:

At all times, barring perhaps periods of warfare, there exists an unemployment situation and, therefore, an unemployment problem. I am, therefore, ready to admit that our country is facing an unemployment situation and I shall endeavor briefly to clarify the issue and to present some observations and facts on the causes, extent and effects of prevailing unemployment in the United States.

After nearly seven years, or since the depression period of 1921 to 1922, unemployment has again found its way to the front page of our newspapers and, as seems always to be the case, widely diverging guesses and assertions are made as to the extent of this unemployment and its consequences. As a matter of fact, there are in our country no comprehensive statistics available which would supply an adequate basis for measurement of unemployment. The National Industrial Conference Board, for instance, publishes every month, and has done so for many years, figures showing the fluctuating employment in about 2000 manufacturing establishments in the country employing somewhat over three-quarters of a million people.

Long-Time Changes in Occupational Distribution of Employment

These and all similar data reflect, therefore, employment fluctuations in a selected area of employment, but do not take into account new individual enterprises or new kinds of industries that are constantly springing up, nor employment in other fields of occupation. How interestingly this process of change in occupational distribution is going on is well illustrated by comparing United States Census figures of 1920, the latest available data, with similar information for 1870. In this 50-year period with its tremendous growth in gainfully occupied, from 12,500,000 to somewhat over 41,000,000 in a population of respectively 38,500,000 to substantially 106,000,000, the number of farmers and agricultural laborers per million population decreased from 152,100 to 95,100 or by about 37 per cent, while brick and stone masons decreased from 2300 to 1300 or by 43 per cent; blacksmiths from 3700 to 1850 or by 50 per cent; and boot and shoe workers from 4400 to 2900 or by 34 per cent, with servants, housekeepers and stewards decreasing from 25,300 to 16,300 or by 36 per cent. On the other hand, barbers, hairdressers and manicurists per million population increased from 621 to 2045 or by 229 per cent, and clerical workers in offices and stores from 8060 to 41,260 or by over 460 per cent.

Labor exchanges and employment bureaus of all sorts, public and private, are making reports from time to time, but even a marked increase for a certain time in applications for work, the same as in applications for charity to charity organizations, while it would generally suggest increasing unemployment, would hardly give a basis for accurate measurement of the number of unemployed. Then there are the valuable reports of unemployment among trade union members. But inasmuch as all trade union membership in the United States represents only about 10 per cent of all gainfully occupied, these data can hardly be called representative. They doubtless indicate conditions in highly labor-organized industries and in the few localities where the reports originate.

Statistics Show Considerable Range

Neither is the lack of generally accepted, broad statistical information, and with it the opportunity for guessing, a new phenomenon. In the reports of the President's Conference on Unemployment in 1921, issued under the auspices of Secretary Hoover, the number of unemployed at that time was placed at from "four to five millions." The United States Bureau of Labor Statistics furnished the United States Senate in August, 1921, an estimate of 5,735,000, basing its estimate on differences in numbers carried on payrolls in July, 1921, as compared with the peak of employment in 1920. It should here be remembered that 1920 was a year of high general inflation of production, prices and wages, in consequence of which many persons were drawn into industrial and other occupational employment who ordinarily would not have done so, such as women, young men and girls who would have remained at school or continued with household duties. When the inevitable contraction in business came, many women who had gainful jobs in 1920 returned in 1921 and 1922 to their homes for domestic duties, and many youths who had been attracted by high wages into the industrial establishments returned to their schools for further education. It would, therefore, seem clear that the 5,735,000 estimated by the United States Department of Labor as unemployed in 1921 did not picture unemployment in the usual sense.

Normally Unemployed Number 1,500,000

At that time, the National Industrial Conference Board published in the press an opinion that the total number of unemployed might be placed at about 3,500,000, and this figure was not challenged either by Governmental or private authority and was subsequently requoted many times. The Conference Board called attention at the same time to what might be considered a normal unemployment, or a normal "labor reserve," in our country of about 1,500,000 persons, composed of those who are unemployable because of sickness and similar reasons, of casual workers and drifters, seasonal workers who draw high wages because of the intermittent character of their employment and who, therefore, usually do not want to accept employment in other lower paid occupations, and of those who actually are deprived of opportunity of employment even though they are honestly seeking it. Considering our present population of perhaps 118,000,000, and our about 43,000,000 gainfully occupied persons, a steady minimum labor reserve, so-called, of about 1,500,000 would be relatively small.

We have definite indications that there has been a decline in employment in 1927, but there are also similar indications that employment since December, 1927, has again been slightly increasing, and the increase has continued until the present time.

Machine Production Not Cause of Unemployment

There has, however, in later years come a new aspect into the unemployment situation that seems not to be fully understood and, therefore, is leading to confusion of thought. That is the superficial interpretation of the effects of mechanization of industry. This substitution of power-driven machinery for manual labor, it is claimed, is throwing people out of work, and a magazine writer recently stated that "the price of industrial progress is unemployment." If this conception were true we might as well renounce our entire system of present-day civilization and return to the more primitive conditions of living as still exist in certain parts of Asia, where in spite of immense natural resources millions of people are near the starvation line or actually starving.

Let us concretely analyze the situation as the National Industrial Conference Board has found it by its study of the latest available comprehensive data, those revealed in the United States Census of Manufactures for 1925. At that time, 71 wage earners instead of 100, and 82 managerial and supervisory persons instead of 100, produced the same volume of production as was obtained in 1914. The cost of management in 1925 was actually 10 per cent less and the cost of labor, in spite of wage levels about twice as high as those prevailing before the war, was actually reduced by about 4 per cent per unit of production in contrast with the cost in 1914. Nor was this productivity of the wage earners achieved by longer hours or harder work, for the number of hours in 1925 per worker employed were about 9 per cent less than in 1914 and yet the productivity per wage earner was actually 40 per cent greater. A study of several hundred corporation returns leads me to say that this general picture holds good also for 1927, even to an increasing degree. This almost paradoxical condition is explainable largely on the ground of a more than 30 per cent increase in mechanical power in the productive process, of improved machinery, tools and production methods, of better organization in the utilization of human factors and their better coordination with all other production factors.

This process of mechanization, resulting in greater productivity per worker employed, has been a fundamental factor in our post-war national prosperity and has attracted world-wide attention. It has multiplied the available stock of consumption goods, has made possible the wider use of many products formerly in the class of luxuries, and is reflected in an effectual increase of our national wealth and our annual national income by about 40 per cent since 1914.

Released Workers Find New Occupations

The very pertinent question, however, arises as to what has become of the 29 per cent of workers in manufacturing without whom the same amount of production is now being carried on as compared with 1914. The answer is that although, as stated before, productive output per wage earner between 1914 and 1925 had increased by 40 per cent, the total manufacturing production in the same period increased over 65 per cent and necessitated an increase in the required labor force of about 1,500,000 wage earners. In other words, while 71 men in 1925 did produce as much as 100 men did in 1914, the demand for manufactured goods at their lower production cost and selling price expanded sufficiently to reabsorb not only the 29 per cent of workers theoretically released, but in addition called 1,500,000 more workers into action. The result was that the value of manufacturing production in 1925 amounted to nearly $63,000,000,000, as against only $24,000,000,000, in 1914, but manufacturing used nearly 36,000,000 hp. for its processes as against only 22,250,000 hp. in 1914. Consequently, an increase of 1,500,000 workers, but at the same time an increase of 13,750,000 hp. resulted in an increase in production of $39,000,000,000, of commodities within the 12-year period from 1914 to 1925.

These observations refer only to manufacturing industries. A similar contraction of the number of workers employed has, however, been found to have occurred in transportation, construction, mining and agriculture, and for similar reasons as in manufacturing. But all these activities do not exhaust the entire field of gainfully occupied. The point which I want to emphasize here is that the process of mechanization in industry is a gradual one, leaving ample leeway for adjustment. Moreover, only in rare instances does the substitution of machinery for hand labor actually remove large numbers of workers from the payroll.

It is a well demonstrated economic principle that increased production creates new wants, and that new industries bring with them new demands for both goods and services.

Labor Works Fewer Hours and Earns More

Increased mechanization of industry with its mass production at lower cost has had another very vital effect upon the economic status of the wage earner and is of great significance in relation to temporary unemployment such as we have no doubt been facing in the past few months. Under these new conditions of production, industry has been able to maintain the very high wage levels which the circumstance of the World War helped to establish, even though the cost of living has declined considerably from the peak of the post-war inflation period. At the present time, wages in manufacturing are considerably more than twice as high as they were in 1914, while the cost of living is only about 63 per cent above the level of 1914. The net result is that the real wage, that is, the purchasing power of the wage which the average industrial worker receives in his weekly pay envelope, is now by about one-third greater than it was just prior to the beginning of the World War. In other words, the worker of today, performing the same class of work and even during fewer hours of the week, can buy with his average weekly pay envelope fully one-third more of the same goods of the same quality that he bought in 1914 or, correspondingly, can buy goods of higher quality than he could afford to buy in 1914. In addition, employment has been fairly stable in the past five years or more with the exception of a brief interruption in 1924.

Great Increase in Savings Insurance Against Unemployment

The average industrial worker is thus enjoying a greater margin of earnings over his necessary living costs and is also enjoying stable earnings over a consecutive period of years. The wage-earning population is, therefore, in a better position to cope with temporary unemployment than it has been in our industrial history prior to the World War, when opportunity for saving money was considerably smaller. With a population of about 100,000,000 in 1914, the savings deposits in banks, building and loan association assets and life insurance premiums, all forms of savings of the great mass of people, amounted to $14,700,000,000, and in 1926, with an estimated population of 117,000,000 people, they amounted to $43,800,000,000. Eliminating the population increase, the growth in savings in the short span of 13 years was nearly 150 per cent per capita of population.

On the whole, while I will not undertake to estimate the total number of unemployed at the present time, I believe that there is a temporary condition of unemployment in excess of the so-called normal. I do not consider it, however, as acute or as critical. The weather man may be blamed in part for this condition. We must not forget, also, that certain extraordinary conditions, like the strike in the bituminous coal fields, are contributing to the amount of unemployment, although the solution of this particular problem transcends the field of unemployment relief. Taking it all in all, the striking feature is not that we have at this time of the year a somewhat greater amount of unemployment, but that the situation did not, as heretofore, come gradually to our attention, but was almost precipitated into the arena of public discussion by the dramatic way in which the Governor of New York State called attention to it just about a month ago. The main reason why we needed some one in a high place to call our attention to the unemployment situation, rather than to have the situation call attention to itself, may be found in the fact previously

Emergency Repairs to Sheet Mill Drive Made by Cutting Blow Pipe and Oxygen Lance

BY W. I. GASTON*

AN INSTANCE of the manner in which the oxy-acetylene cutting flame is essential to the steel mill master mechanic in keeping essential units in constant operation occurred recently in a sheet mill in the Chicago district.

It was reported by the mill superintendent that the big split gear on the main drive was slipping on the shaft and it was impossible to tighten up the bolts enough to prevent slippage, even though the mill was throwing no undue load on the engine. Inspection showed that the gear had been already drawn up to the point where the split hub was closed, shoulder to shoulder. It would be necessary to cut away some metal in order to renew the grip on the shaft.

The master mechanic estimated that repairs would require taking the heavy 23-ft. gear apart, moving it to the machine shop and cutting ¾ in. of metal from one-half of the hub with a planer. Dismantling, handling, machine shop work and reerection would require four days and cost about $2,000.

Since the mill was then operating on a 100 per cent production basis, stoppage of work for three days would have meant further losses to the plant in profits, overhead, delayed production schedules and general all-around disorganization. In order to avoid, if possible, the large losses which always follow a shutdown in the height of the rush season, a service engineer of the company supplying oxygen to the steel mill was asked whether the excess metal could be removed by the cutting flame without removing the gear from the shaft. He reported that it could be done by a cutting blowpipe supported by an oxygen lance and offered to supervise the work, so it would be promptly done without damage to the main shaft.

It required 14 hr. for five men to remove the bolts and do this job of cutting. The total cost of the work, including oxygen, acetylene, labor and steel pipe for the oxygen lance, amounted to about $110.

The illustration gives some idea of the size of the gear. The section cut was 3 ft. 11 in. in its greatest length and 15½ in. in breadth; the cutting blowpipe removed altogether about 470 cu. in. of cast steel from the hub. A gap smooth enough for the purpose was left behind.

Cut Made in Hub of 23-Ft. Gear by Oxygen Lance

The cost of oxy-acetylene cutting was just a little over one-twentieth of the estimated cost of machining and handling to the machine shop and back. The important factor, however, was the saving in time. The job was completed by Sunday afternoon and the gear was tight in place ready for operation on Monday morning. Some time subsequent to this first work, when a good opportunity occurred, a similar cut was made on the opposite side of the hub in order to equalize the strain on the bolts and the internal strains in the hub and spokes of the gear.

About the only unusual feature of this gear job was the fact that the shaft must be protected. Most heavy cutting with the oxygen lance is such that the slag produced can run freely out the bottom of the cut. In the latter case the work may be done as follows:

One workman handles a cutting blowpipe. His cut starts at one corner and opens a kerf 2 in. wide, penetrating 6 to 8 in. and delivering a stream of hot slag dripping out of the bottom of the cut. After this slot has advanced 3 in. into the metal, the oxygen lance is brought into play by the second operator, and follows along after the cutting blowpipe. The lance should be ¼-in. pipe (no larger). Oxygen pressure at the regulator varies with the variety of steel, about 75 lb. for medium carbon or machinery steel containing up to 0.5 per cent carbon, and 100 lb. for low-carbon or soft steel. The pressure should not be so high as to "blow the flame cold."

It will be found that the stream of oxygen coming from the lance will pick up the hot slag drip prepared by the cutting blowpipe. The lance then is moved slowly down the face of the cut close behind the advancing incandescent region so produced. On reaching the bottom, the lance is lifted, and again lowered behind the glowing mass of slag and metal. The motion is like a cross-cut saw, up and down, each time removing a layer of metal.

---

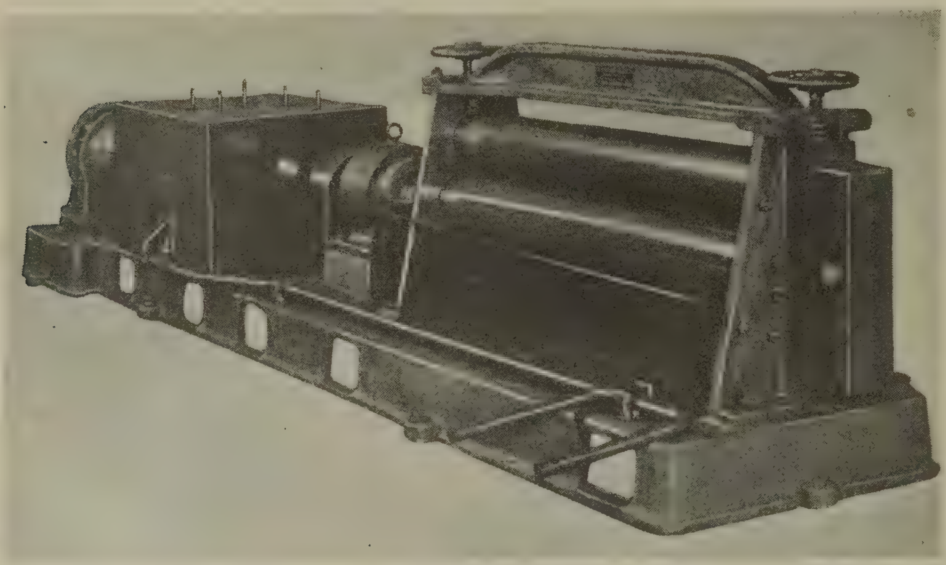
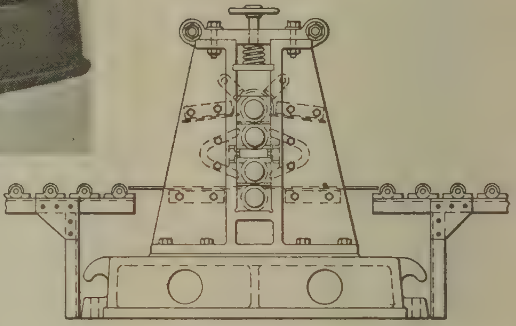
LARGE SHEET PACK OPENER

Machines May Be Operated from Either Side and Moved from One Location to Another

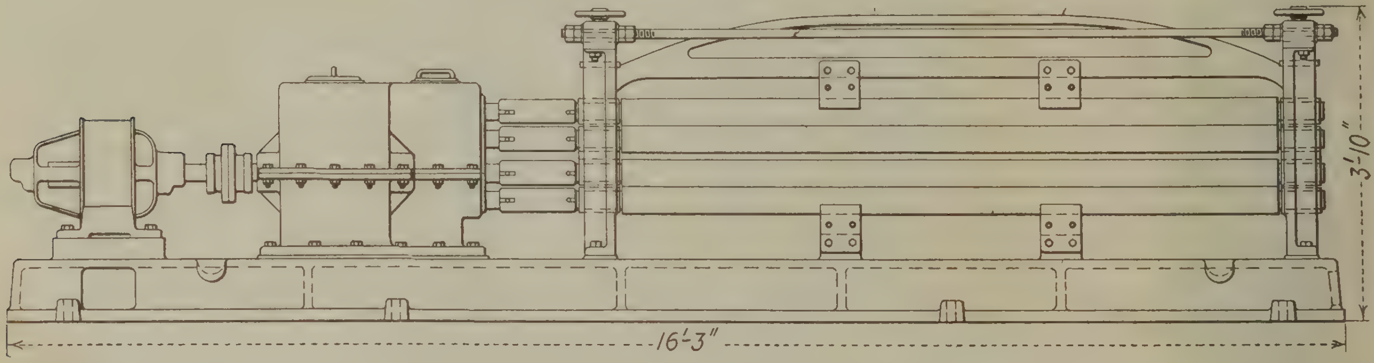
THE Aetna-Standard Engineering Co., Youngstown, Ohio, is adding to its line a sheet pack opener designed to handle 60-in. by 120-in. sheets when passing through the machine at an angle of 15 deg., and longer and wider sheets if straightened before passing through the rolls. A smaller opener of the same general design, for widths up to 36 in., is also available.



THE Smaller Sheet Pack Opener, Shown at the Left, Is for Widths Up to 36 In. The larger machine, below, is for sheets up to 60 x 120 in., when passed through the opener at 15-deg. angle



FOR Convenience in Handling the Packs, a Light Roller Table Is Provided on Each Side of the Machine, as Shown in the End View at the Right



Packs of sheets can be opened from either side of the machine. For instance, should a pack of six sheets be tightly stuck, it would be desirable to open one sheet from the pack going in one direction, and another sheet from the pack going in the opposite direction. In this way there is no time lost in handling the pack from one side to the other. For convenience in handling packs, a light roller table is provided on each side of the machine. The machines can be operated by one man and a helper.

The base of the machine is of cast iron and lifting lugs are provided so that the unit can be moved to different positions in the mill. It also has foundation bolt holes for use when the opener is to be set on a permanent foundation. The overall length of the unit is less than 17 ft. and the overall width is 4 ft. There are four opening rolls, which are of forged high-carbon steel and are 4 in. in diameter and 96 in. long. These rolls are carried in cast-iron housings and are backed up top and bottom, as well as horizontally, to take the pull of the sheets. At the front and back of the two middle rolls there is a U-shaped cross bar, over which the sheets being separated pass. This bar has a tendency to break the sheets apart without cutting or scratching them.

The rolls are carried in brass-bushed bearings and supported top and bottom and horizontally by brass backing-up bearings. They are adjusted by means of hand screws. The adjustment and play of the rolls is such that packs of sheets can be opened between any two sheets, that is, taking one sheet off the top of the pack, opening the pack in the middle, or taking one sheet from the bottom. The rolls are driven by flexible couplings from steel pinions that are mounted in an oil-tight case with the reduction gears. The machine is driven by a 20-hp. reversing motor which is controlled from a push-button station on a swinging arm which may be conveniently located on either side of the opener.

Acquires Lamb & Nash Line of Shears

The Shaw Crane-Putnam Machine Co., Inc., which is owned by Manning, Maxwell & Moore, Inc., 100 East Forty-second Street, New York, has purchased the sheet-metal cutting machine line of the Lamb & Nash Co., Boston.

Rotary gang slitting machines for shearing tin plate, blue annealed and other steel sheets, cold-rolled strip steel, and brass, copper and aluminum sheets and strips, are included in the line, as well as squaring shears for use in sheet mills. These machines will be built at the Putnam works, Fitchburg, Mass., of the Shaw Crane-Putnam Machine Co.

New Cold-Rolling Equipment

Several new cold-rolling mills are to be furnished to the Sharon Steel Hoop Co., Sharon, Pa., by the E. W. Bliss Co., Brooklyn. About half of these mills will be of the cluster type. Some of the mills will be arranged in tandem and will be fitted with roller bearings, motor screwdowns, etc. The tandem mills will have the Clark tension control, which permits the metal to be rolled under tension between stands.

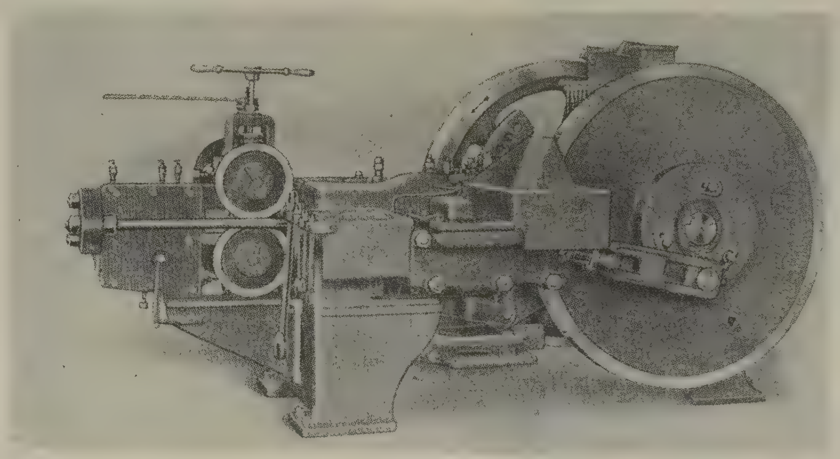
PLOW BOLT COLD HEADER

Single-Stroke Solid-Die Unit Incorporates Relief Mechanism and Other Features

A SINGLE-STROKE solid-die cold header, with relief mechanism and other features intended to make for rapid and economical production of plow bolt blanks or similar upsets, is being marketed by the E. J. Manville Machine Co., Waterbury, Conn.

Except for the relief mechanism, the general construction of the machine is similar to the company's recent model single-stroke solid-die rivet or ball headers. Three sizes, designated as the Nos. 375C, 500C and 625C respectively, are available. No. 500C, which is shown in the illustration, is for making plow bolts from ⅜ to ½ in., inclusive, in diameter, and from ¾ to 2½ in. long. Production is at the rate of 125 bolts per min. By reducing the speed, the machine can be used for making plow bolts 3 in. long.

The 500C machine will make a ⅜ or 7/16-in. carriage bolt with a head approximately ¾ in. in diameter, using 0.330-in. wire. The length of the square would be about 3/16 in. by 0.360 in. across flats. A ⅜-in. cut thread carriage bolt can also be made and a standard head with square ¼ in. long by 0.370 in. across flats developed. The machine will also make a Deering oval guard bolt that has an oval top and long countersunk head with four small keys on the side of the countersink. No. 3 plow bolts with a long square can also be produced.



Plow Bolts From ⅜ to ½ In., Inclusive, and From ¾ to 2½ In. Long Are Produced at the Rate of 125 Per Min.

The frame of the machine is of high-tensile cast iron and is heavily reinforced. An arch or tie is cast integral across the main crankshaft journal bearings to add to the strength and rigidity of the frame and to prevent deflection of the crankshaft and journal during the interval of heading. The heading ram side and bottom bearings in the frame consist of hardened and ground inserted steel plates, which, in the event of wear, can be removed and reground to a parallel thickness. Machines with frames of cast steel can also be furnished.

Crankshafts are of cheekless design, of chrome-nickel steel and heat treated. The crankpin and journal sections are of large proportions to minimize deflection. Journal bearings are of nickel bronze and are provided with means of lubrication.

The heading ram and bearing construction is of the same type as in the company's models B and C ball headers. To safeguard against bearing mutilation, use is made of hardened and ground inserted ram bearing plates in bottom and side bearings in the frame. To release the pressure on the blank and heading die, whenever the header is stopped on dead center, a large adjustable wedge is provided in the heading ram or gate. The wire feed, located on the left side of the machine, is usually of ratchet type, but a friction feed can be furnished if desired. The feed is operated from an eccentric on the crankshaft, connected with an adjustable rocker lever. In addition to general adjustments of the wire feed, made in the large feed rocker on the side of the machine, a finer feed adjustment, for small variations, is provided in the feed rocker on the lower feed shaft. Improved roll-feed bearing construction is a feature emphasized. Bearings in the feed frame are of hardened and ground tool steel and wear is taken on bronze bearings, which may be readily replaced when worn.

It is stated that the chief advantage of making plow bolts on this type of machine is in the relief mechanism, which permits the knock-out pin to recede while the head is being formed. This mechanism includes a substantial toggle unit, which is operated by a cam slide pivotally connected to a lower projection of the pitman connection, thus producing an elliptical motion as it actuates the movement of the toggle mechanism.

When the wire blank is pushed into the heading die and against the knock-out pin, that portion of the blank which projects unsupported in the front of the die is forced into the mouth of the die by the heading punch. In compressing the metal to form the head it is necessary, in order to fill out the square portions of the head, that the knock-out pin recede just as the first portion of the upset is formed in the mouth of the die. To properly coordinate the knock-out pin relief motion in relation to the compressed portion of the upset, suitable adjustments have been provided in the connection between the pitman connection and the reciprocating cam in the toggle motion. Fine adjustments, for varying the length of the blank, are also provided in the relief mechanism.

A cutting-off mechanism of improved construction is employed. The area of the cut-off slide has been markedly increased on the thrust side and the cutter bar is equipped with three bearings to minimize wear. The cutter bar is provided with an adjustable stop. By means of a spring mechanism, in combination with the hardened cam insets in the reciprocating slide, the bar can be adjusted to feed through or in front of the cut-off knife.

The punch block and die block are of hammered alloy steel, heat-treated. A split die block can be furnished in place of the solid block if desired. A foot brake is standard equipment, as well as a gravity feed lubricating system with piping leading to important parts of the machine. When motor driven, the motor is attached to a pad at the rear of the frame of the machine. The floor space occupied by the No. 500C machine is 81⅝ in. by 125 in. and the weight, net, is 17,188 lb. Approximately 15 hp. is required.

Pressure Burners Ordered for Blast Furnace Stoves

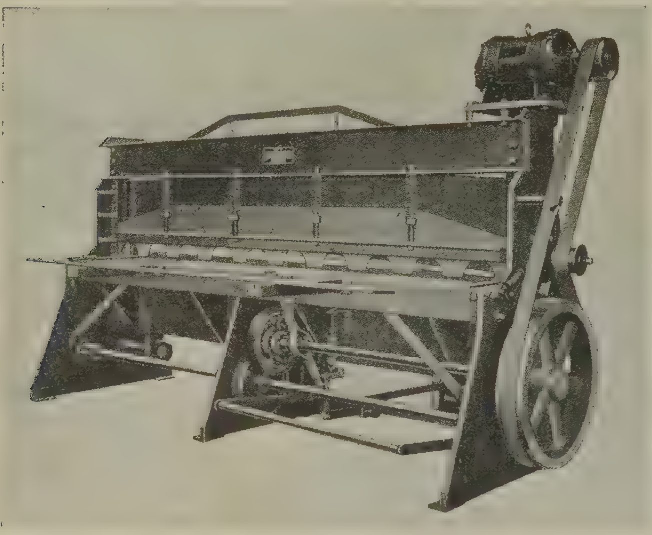
Pressure burners for blast furnace stoves have been ordered from the Freyn Engineering Co., Chicago, by the Sharon Steel Hoop Co., Sharon, Pa., and the Republic Iron & Steel Co., Youngstown, Ohio. This increases the number of Freyn-design pressure burner installations to include eight different plants.

These burners will be of the unit or integral type and will be motor driven. Both installations will have automatic control, governing the blower speed to supply the correct amount of air for the gas available. For the Republic installation a large burner, capable of burning 14,000 cu. ft. of gas a minute will be supplied. This size of burner is required because of the large size stove (95,000 sq. ft. heating surface) on which the burner will be operated.

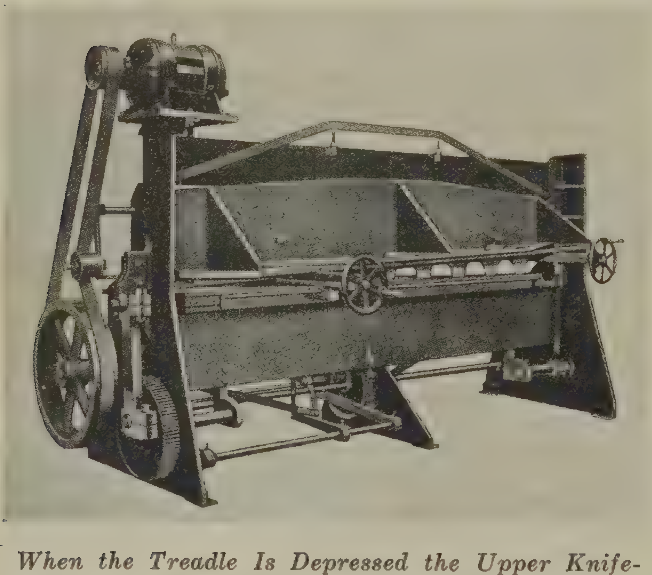
New Shears for 3/16 and ¼-In. Mild Steel

A new shear, in four sizes, with capacity for cutting mild steel 3/16 in. by 8 ft., 3/16 in. by 10 ft., ¼ in. by 8 ft., and ¼ in. by 10 ft., respectively, has been placed on the market by the Kutscheid Mfg. Co., 911 West Forty-ninth Place, Chicago.

The housings, upper knife-bar and bed of this machine are of high-carbon steel plates, the upper knife-bar and bed being of welded construction. The sliding surface of the upper knife-bar at each end is faced with phosphor-bronze. The crank gears at each end of the machine are carried on high-carbon steel shafts, the bar which connects them to the upper knife-bar being also of high-carbon steel. The connecting bars are split at each end and equipped with phosphor-bronze bearings. The pin through the bar and crank gear is of Nikrome axle steel. All gears are of steel, with cut teeth, and all bearings are split so that they may be taken up for wear. The shaft bearings are of Bearingoy metal and are grooved for oiling.



Housings, Upper Knife-Bar and Bed Are of High-Carbon Steel Plate, the Knife-Bar and Bed Being of Welded Construction



When the Treadle Is Depressed the Upper Knife-Bar Makes One Complete Stroke; When Held in Depressed Position, It Operates Continuously

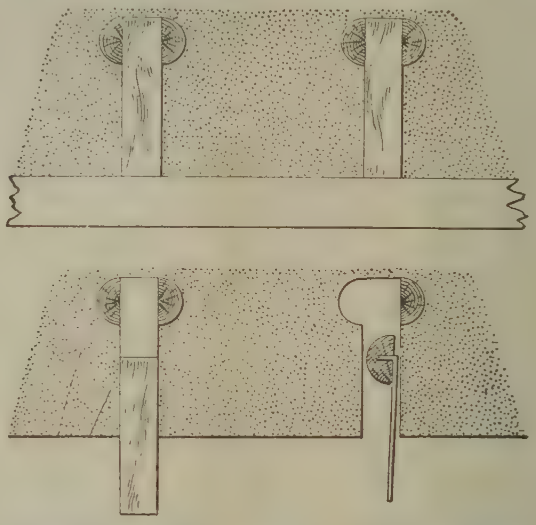
Simplicity of operation and effective performance of the holddown are features emphasized. Steel pins, which are welded at each end in back of the holddown, rest on two pins protruding from the upper knife-bar. These pins are arranged so that when the knife-bar is at its highest point the holddown is 1 in. above the table. When the upper knife-bar lowers to 1 in. above the table, pressure is applied on the metal just before the knife enters it by means of four large springs. As the upper knife-bar returns to its highest point at the completion of the stroke, it raises the holddown to its original position. An automatic friction clutch, with positive action, is employed. With a slight depression of the treadle the upper knife-bar makes one complete stroke and stops at the highest point. If the treadle is held in the depressed position the upper knife-bar will operate continuously. By means of a safety lever the upper knife-bar can be stopped at any point during the stroke.

Sectional or composite knives, with one cutting edge, are standard equipment, as well as front, side and back gages. The front gage has a steel scale set in the bed of the shear, and the back gage is of screw-adjusting type with steel scale and pointer. Lubrication is by means of oil cups at each bearing, but a centralized lubricating system can be furnished as an extra. The shear has been designed so that tapered roller bearings may be applied.

Beaded Ribs on a Pattern

To facilitate their removal from the mold, beaded ribs are sometimes arranged on the pattern in the mold as shown in a recent issue of *Power*. The patterns for the beads are separate from those for the ribs and the rib patterns are withdrawn first, as will be noted. Then the bead patterns are taken out by means of a small tool arranged to grip them through sockets left in the bead pattern.

Beaded ribbing has been used all over the outside of the casings for many steam turbines. The principal object of this was to avoid deformation under operating temperatures, while a secondary object was to minimize vibration. Loose cores would be likely to shift, thus interfering with uniformity of section. The design shown was adopted so that the beads could be picked conveniently out of the mold.



Illustrating the Method of Withdrawing the Pattern, in Sections, in Preparing a Mold for Beaded Ribs

Automotive Parts Makers Merged

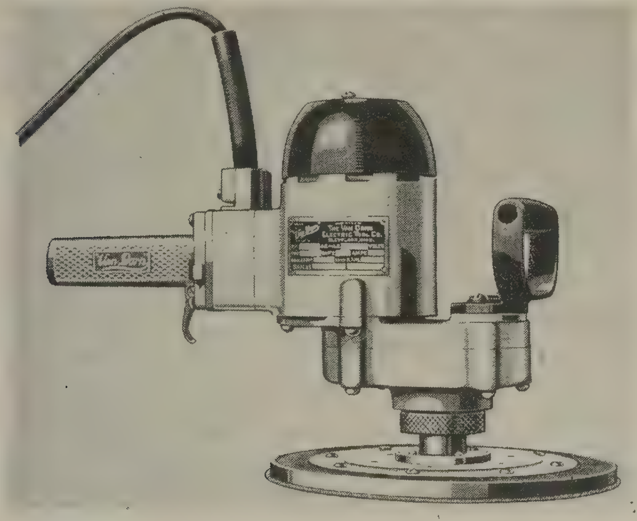
The Diamond Motor Parts Co., St. Cloud, Minn., has taken over the Gill Mfg. Co., Chicago, manufacturer of piston rings, and the Schlieder Mfg. Co., Detroit and Milford, Mich., maker of valves for the automotive industry. Operations have been discontinued in the Chicago and Milford plants, and all machinery, equipment and stocks have been removed to the Diamond plant at St. Cloud. The company now makes a complete line of piston rings, piston pins, diachrome, steel and cast head valves, steel and bronze bushings, steering knuckles, tie rod and spring bolts, water pump shafts and impellers. Plans of the company include the merging of other parts manufacturers, increasing the number of direct factory branches.

George G. Bouthinon, head of the Diamond company, is president, treasurer and general manager of the new company. E. J. Smith, president of the Gill company, is vice-president and will be in charge of sales, and V. W. Schlieder, vice-president of the company bearing his name, will be secretary and in charge of the equipment division of the new corporation.

Portable Electric Grinder and Sander Employs Flexible Disk

An electric grinder designated as the Flex-Disc, and intended to meet the demand for a portable grinding and sanding machine that will surface both metal and wood, has been brought out by the Van Dorn Electric Tool Co., Cleveland.

The general arrangement of the machine, including the motor, is the same as that of the company's electric drills. The motor can be operated either on alternating or direct current and has a no-load speed of 2400 r.p.m. The grinder is equipped with a 9-in. flexible rubber pad which serves as a base for 9¼-in, diameter abrasive disks, the flexible disk feature being emphasized as permitting grinding or sanding operations on curved surfaces. A smaller flexible rubber pad, 6 in. in diameter, is also available for use with the machine, and when the 9¼-in. abrasive disks become worn they may be cut down for use on the 6-in. flexible pad. A Duco or lacquer polishing pad of heavy felt, and covered with a removable cloth bonnet, is interchangeable with the flexible rubber pad for polishing operations. When the removable bonnets, five of which are supplied with each polishing pad, become soiled they may be laundered. In addition to the 9-in. flexible rubber pad, regular equipment includes 12 9¼-in. abrasive disks of various grits, and 15 ft. of cable, with plug. The machine can be furnished for use on 110, 220 or 250-volt current.

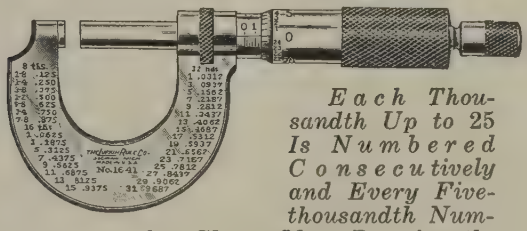


A Felt Polishing Pad, With Removable Cloth Bonnet, Is Interchangeable With the Rubber Pad

Micrometers Arranged for Rapid Reading

Micrometers with graduations intended to facilitate reading have been brought out by the Lufkin Rule Co., Saginaw, Mich.

Instead of numbering every five-thousandths on the sleeve of the tool, each thousandth is numbered consecutively up to 25, with every five-thousandths number showing more prominently. This tends to simplify reading and assist in eliminating mistakes, as it is only necessary to add the figure showing at the reading line on the sleeve to the last 25-thousandths line showing on the hub of the micrometer.



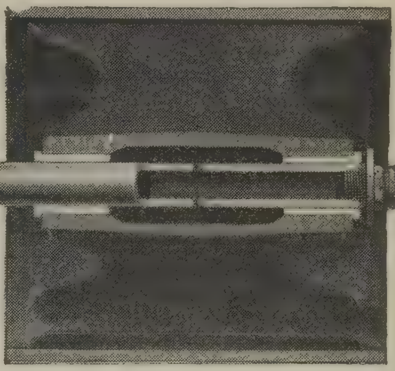
Each Thousandth Up to 25 Is Numbered Consecutively and Every Five-thousandth Number Shows More Prominently

Steel strip for shoe hooks, eyelets and buttons has been placed on the free list in connection with changes made by Italy in its tariff, and have a period of one year for reexportation.

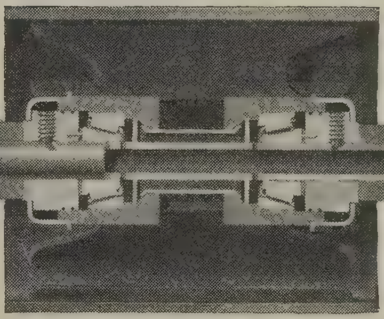
Conveyor Carriers Arranged to Use Three Types of Bearings

Belt carriers for belt conveyors manufactured by the Jeffrey Mfg. Co., Columbus, Ohio, have been standardized so that the same stands and bases can be used with any of three types of pulleys—plain bearing, bronze-bushed or roller bearing.

The pulleys are of gray iron and are made with open ends. In place of solid ends three arms connect the hub and the roll, additional rigidity being provided by six ribs between the arms. Pulleys with plain or bronze-bushed bearings have hubs which are cored out to form large recessed grease pockets, as shown in the illustrations. The latter connect with the Alemite pressure lubrication fittings at the end of the hollow shaft, and are designed to hold a reserve supply of grease. An advantage claimed for the grease pocket is that the grease does not harden in the feed holes. Plain bearing pulleys that are worn may be drilled out and put back into service with new bronze bushings. The roller-bearing pulley, which is pressure greased, accurately fitted and grease sealed, is for use on belt conveyors carrying coke breeze or other materials that are severe on metal bearings. The labyrinth construction is emphasized as providing five pairs of closely joined metal surfaces which keep powdery abrasives from reaching the bearings. In addition, the grease under pressure from the inside tends to flow all dirt outward. Slots are provided in each collar to permit adjustment and concentric running.



The Plain and Bronze Bushed Bearings Have Cored Out Hubs Which Form Grease Pockets Connecting to Fittings at End of the Shaft



The Pressure-Greased, Sealed Roller - Bearing Pulley, at Left, Is for Materials That Are Severe on Metal Bearings

"The Story of Iron" Motion Picture Produced by Bureau of Mines

WASHINGTON, March 13.—In cooperation with three large iron companies the Bureau of Mines has just produced "The Story of Iron," an educational motion picture. The film shows workings of iron ore mines in the various districts of the country, and goes into methods of mining, processes of treatment, etc., unloading at docks and shipment to furnaces. Another series of pictures shows blast furnace operations. Copies of "The Story of Iron" are available for distribution to schools, churches, clubs, civic and business organizations, miners' local unions, scientific societies and other bodies. The only charge to the exhibitor is the cost of transportation. Detailed information may be obtained from the Graphic Section, Pittsburgh Experiment Station, United States Bureau of Mines, Pittsburgh.

The Consolidated Steel Corporation, jobber in sheets and strip steel, has moved into a new warehouse at 2421 Smith Avenue, Detroit.

Testing Society's Committees Meet in Washington Next Week

Arrangements have been completed for holding a group meeting of committees of the American Society for Testing Materials at the Mayflower Hotel, Washington, March 21 to 23. The following committees in the metal-working field are scheduled: A-1 on steel, A-2 on wrought iron, A-3 on cast iron, A-5 on corrosion of iron and steel, A-6 on magnetic properties, A-8 on magnetic analysis, B-1 on copper wire, B-3 on corrosion of non-ferrous metals and alloys, D-1 on preservative coatings for structural materials, joint committee on phosphorus and sulphur in steel, and a few sectional and sub-committees of other major committees.

Inspection trips will be provided to various Government and other institutions. At an informal dinner on Thursday evening, March 22, one or two prominent speakers will be provided. Entertainment and other features are in the hands of a local committee of which Jerome Strauss, material engineer United States Naval Gun Factory, is chairman.

Pacific Northwest Iron and Steel Conference

The Northwest Iron and Steel Conference held its first meeting recently at Tacoma, Wash. It was attended by about 100 men representing the iron and steel industry of the Pacific Northwest States. Ray M. Hudson, Department of Commerce, Washington, and Charles F. Abbott, executive director American Institute of Steel Construction, New York, were among the speakers. E. C. Pape, president Willamette Iron & Steel Co., Portland, Ore., was elected chairman of the conference, whose next meeting is to be held at Olympia, Wash., Feb. 27, 1929.

Waste Material Dealers to Meet

The annual convention of the National Association of Waste Material Dealers, Inc., Times Building, New York, will be held March 20 and 21 at the Hotel Astor. The fifteenth annual dinner of the association is scheduled for March 21. Among the divisional meetings the first day of the convention, the foreign trade division meets at 12.30 and the metal division at 2 p. m. Following the general meeting of the convention on the second day, the scrap iron division will meet at 2 p. m.

Latin-American Trade to Be Subject at National Foreign Trade Convention

Trade with Latin America will be the principal theme at the fifteenth annual convention of the National Foreign Trade Council, to be held at Houston, Tex., on April 25-27. Business delegations from a numfer of Latin-American countries will attend the meetings and will confer with American executives on sales and distribution practices which are most successful south of the Rio Grande.

A special feature of the convention will be a series of nine addresses on the basic factors of export merchandising which will take the place of the usual group sessions of the convention. These talks will cover the entire subject of export practice, including preparatory market analysis, legal protection, trademarks and patents, distribution, merchandising, credit and finance, advertising, dealer cooperation, packing and shipping, and insurance. Among the speakers will be George P. Auld, Haskins & Sells, New York, formerly accountant-general of the Reparations Commission, who will speak on the "Prospects in Europe"; Norman F. Titus, chief of the transportation division, Bureau of Foreign and Domestic Commerce, Washington, whose subject will be "Fundamentals of an American Merchant Marine"; William Werckenthien, export manager Island Petroleum Co., Baltimore; Lawrence Langner, of Langner, Parry, Card & Langner, New York, and Allen B. Cook, vice-president Guardian Trust Co., Cleveland. James A. Farrell, president United States Steel Corporation and chairman of the National Foreign Trade Council, will deliver the closing address at the convention, his subject being "Foreign Trade Progress."

Metallurgical Fellowships Open at University of Michigan

Six industrial fellowships in metallurgical engineering and chemical engineering will be open at the University of Michigan, Ann Arbor, Mich., next fall, according to a statement issued by William P. Wood, associate professor of metallurgical engineering. The fellowships pay $750 a year and carry remission from tuition to courses of advanced study which the holder may elect, supplementing the main investigation assigned him. The announcement also says that holders of a fellowship usually receive an increase in stipend during the second year.

For administrative purposes, the department of metallurgical engineering at University of Michigan is associated with the department of chemical engineering, and is housed in the new East Engineering Building. Twenty rooms, including one double-unit and two single-unit research laboratories, are devoted exclusively to metallurgy, in addition to the general laboratries and those occupied by the teaching staff. Equipment is complete for the production and heat treatment of alloys and their study by metallography and physical testing.

Application for fellowships should be made to the university before April 1. Professor Wood is of the opinion that no one should make application for these fellowships, or indeed consider graduate work, unless his standing as an undergraduate has been in the upper third of his class, and unless he is interested in continuing studies in mathematics and physics.

Further information as to facilities, fellowships and requirements is contained in a bulletin just issued, which may be obtained by writing to the department of metallurgical engineering, East Engineering Building, Ann Arbor, Mich.

COMING MEETINGS

March

Concrete Reinforcing Steel Institute. March 19 to 21. Fourth annual meeting, Edgewater Gulf Hotel, Biloxi, Miss. M. A. Beeman, 2112 Tribune Tower, Chicago, secretary.

American Society for Testing Materials. March 20 to 23. Spring group meetings of committees, Mayflower Hotel, Washington. C. L. Warwick, 1315 Spruce Street, Philadelphia, secretary.

April

American Oil Burner Association. April 3 to 5. Fifth annual convention, Hotel Stevens, Chicago. Leod D. Becker, 350 Madison Avenue, New York, secretary.

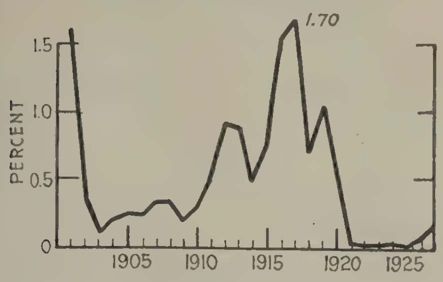
American Gear Manufacturers Association. April 19 to 21. Twelfth annual meeting, Hotel Seneca, Rochester, N. Y. T. W. Owen, 3608 Euclid Avenue, Cleveland, secretary.

American Society of Mechanical Engineers. April 23, 24. Meeting of materials handling division, Benjamin Franklin Hotel, Philadelphia. Calvin W. Rice, 29 West Thirty-ninth Street, New York, secretary.

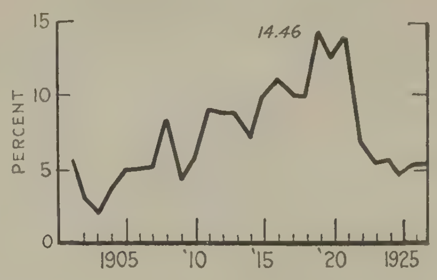
National Metal Trades Association. April 25, 26. Annual convention, Hotel Astor, New York. J. E. Nyhan, Peoples Gas Building, Chicago, secretary.

National Foreign Trade Council. April 25 to 27. Fifteenth annual convention, Rice Hotel, Houston, Tex. O. K. Davis, India House, New York, secretary.

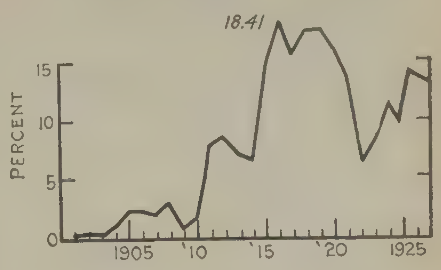
American Welding Society. April 25 to 27. Annual meeting, Engineering Societies Building, New York. Miss M. M. Kelly, 33 West Thirty-ninth Street, New York, secretary.



Exports of Pig Iron and Ferroalloys Have Been Well Below ¼ Per Cent of Production in the Last Several Years. This is in sharp contrast with some of the years shown in the diagram



Recent Exports of Rolled and Finished Steel Have Averaged Between 5 and 6 Per Cent of Total Production



Tin Plate Exports Since the Beginning of the World War Have Averaged Well Over 10 Per Cent of All the Tin Plate Produced in the United States. Heavy exports have featured the last two years

Changes in Exports and Imports

More Rough Material Going Out and More Finished Material Coming In—Great Increase in Imports of Structural Shapes and Plates

ABOUT 18 months ago THE IRON AGE published two articles dealing with (1) the trend of exports of iron and steel products from the United States and (2) of imports of those products into the country. The export article, "A Quarter-Century of Steel Exports," appeared at page 220 of our issue of July 2, 1926. The import article, "A Quarter-Century of Imports," appeared at page 492 of the Aug. 19 issue. The following paragraphs, together with the tables and diagrams, are designed to bring this story up to date. Figures to the end of 1927 are incorporated.

To avoid repetition of tabular matter, the tables are confined to the last seven years. They are on the same basis as the tables in the preceding articles and show the same things, with the addition of the two later years. Exports of the principal lines of finished products are covered in one table, exports of the principal items of rough material in another in which the total exports and the percentage of finished to total are shown, and imports of the pricipal items are given in the third table.

During the seven years under review there has been a fairly progressive decrease in the quantity of steel bars, plates and rails exported. Exports of tin plate have increased heavily, while sheets have shown a moderate gain. Structural material has declined irregularly, as have pipe and tubes. Wire manufactures are at about the level of the opening of the period, but were much higher in some of the intervening years.

Scrap exports have grown greatly. The 1927 total was more than six times that of 1921 and more than twice that of any of the preceding years in the table. Pig iron and ferroalloys made a larger total in 1927 than in any of the preceding years shown. The same is true of castings and forgings. As a result of the above, the total exports of rough material, so called, were more than 50 per cent higher in 1927 than in the largest of the six preceding years. Except for 1926, the

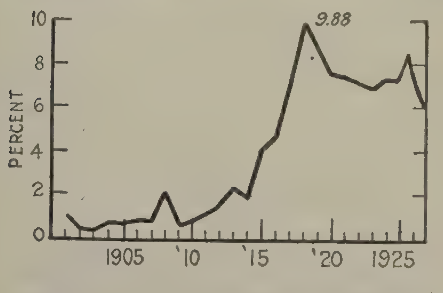
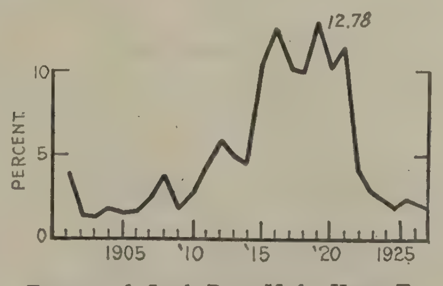
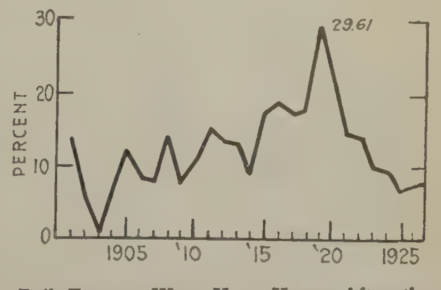
(a) Includes 93,865 tons of skelp.



Since the War, the Exports of Hoops and Bands Have Declined from Nearly 10 Per Cent to 6 Per Cent of Production, But Are Much Higher Than in the Pre-War Period

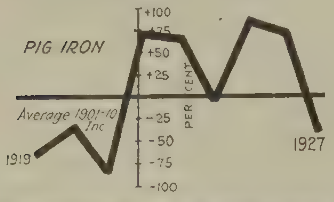


Exports of Steel Bars Made Huge Tonnages During the War Period, But Now Have Returned to about 2 Per Cent, Similar to 20 Years Ago

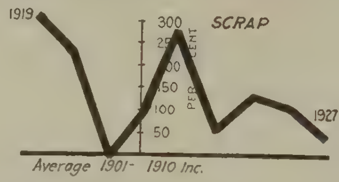


Rail Exports Were Very Heavy After the Armistice. They have dropped, now, however, to about one-quarter of that proportion of our output

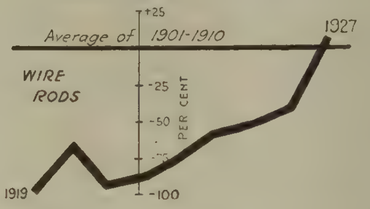
Foreign Pig Iron (Including Ferroalloys) Has Come into the United States in Large Quantities. The diagram traces the movement since the War. In four of the last six years the excess has been high



Scrap Imports Have Been Heavier in Each of the Past Six Years Than the Average of the First Ten Years of the Century, Particularly in 1923, When the Excess Over the Earlier Average Was Nearly 300 Per Cent



Wire Rods Have Been Coming into the United States in Continually Increasing Quantity Since the War. In only 1927, however, did the import tonnage reach as high as the average figures of 1901-1910



1927 total was more than double any of the years immediately before.

Consequently it follows that, although 1927 made the largest total for all iron and steel exports since 1921, it was exceeded by three of the five immediately preceding years in exports of rolled and finished material. Only in two years of the seven were the rolled and finished exports lower than in 1927.

Export diagrams for six particular products show the percentage between the amount exported and the total amount produced. These figures vary markedly over a period of 27 years of the study. Pig iron and ferroalloys reached almost 2 per cent in the early days of the war, but in the last two years have been less than one-sixth of 1 per cent. Rolled and finished steel as a whole approached 15 per cent near the end of the war, but in the last few years has hovered around 5 per cent. Tin plate exports exceeded 18 per cent early in the war and averaged about 14 per cent in 1926 and 1927. Hoops and bands, which were close to 10 per cent at the close of the war, are now down around 6 per cent. Steel bars, after approaching 13 per cent in 1919, are only slightly above 2 per cent. Rails reached almost 30 per cent in 1919 and lately have been between 7 and 8 per cent.

Pig Iron Imports Decline, Finished Steel Imports Gain

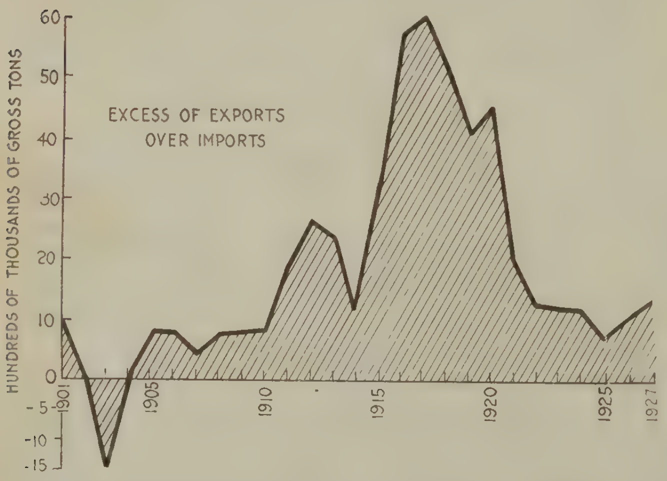
Pig iron has come into the country in very large quantities in four of the seven years under survey. In 1922, 1923, 1925 and 1926 the average was more than 495,000 tons a year. Last year, however, imports of

United States Imports of Iron and Steel Products, in Gross Tons

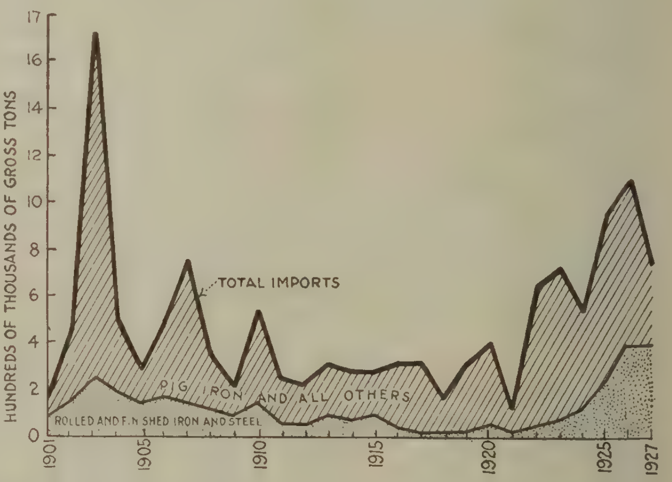
	Pig Iron and Ferroalloys	Scrap	Ingots, Blooms and Bars	Wire Rods	Plates, Sheets, Hoops, Etc.	Tin Plate	Structural Shapes	Rails	Iron Bars	Total*	Per Cent† Rolled and Finished
1921......	44,036	41,469	10,024	917	1,976	455	777	22,048	1,913	123,615	28.4
1922......	492,595	82,854	27,720	1,726	1,947	2,682	7,823	26,629	8,092	654,606	10.6
1923......	468,083	162,068	22,671	3,948	4,572	10,037	10,674	29,706	7,754	734,674	12.3
1924......	268,911	66,841	39,024	6,851	6,064	1,036	43,245	43,358	4,325	556,621	28.6
1925......	521,449	99,815	86,686	7,989	15,309	383	77,293	38,669	11,738	957,451	26.6
1926......	502,830	86,725	134,646	10,074	44,024	2,160	121,099	62,776	5,623	1,110,049	36.3
1927......	175,279	60,203	105,290	17,990	53,612	5,665	161,848	16,145	4,220	750,467	53.1

*Including items not separately shown. Cast iron pipe is the largest, with 46,900 tons in 1924; 50,939 tons in 1925; 83,873 tons in 1926, and 81,769 tons in 1927. Other pipe and tubes accounted for 7573 tons in 1924; 25,869 tons in 1925; 31,073 tons in 1926, and 50,088 tons in 1927.

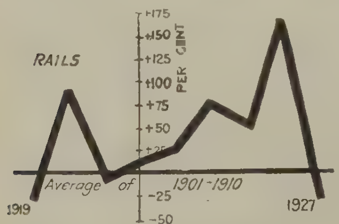
†Estimating 70 per cent in 1921 to 1924 for steel bars included with ingots and blooms.



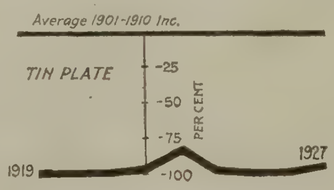
Only in One Year of the Last Quarter Century Have Imports of Iron and Steel Exceeded Exports. That was in 1903. In only one other year of that period—1926—have imports reached 1,000,000 tons. The excess of exports annually, as shown in the diagram, reached a peak in the early years of the War, at about 6,000,000 tons



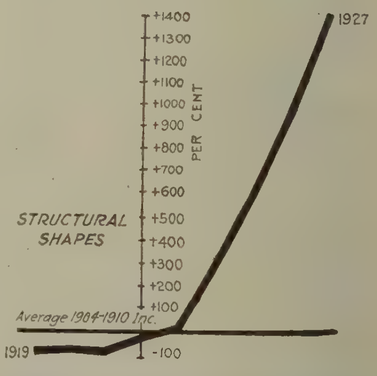
Rolled and Finished Iron and Steel, While Accounting for Only One-Quarter of All the Incoming Tonnage in the Last Quarter Century, Have Been Increasing Heavily in the Past Few Years. They reached a higher level in 1926 and 1927 than at any previous time covered in the diagram (upper right)



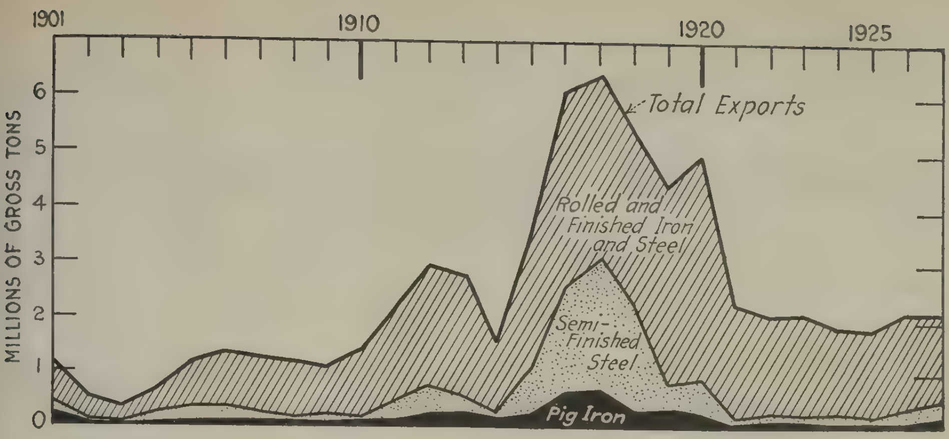
Rail Imports Since the War Culminated in 1926 in More Than 62,000 Tons. The incoming tonnage dropped last year to a figure lower than the average of 1901-10



Tin Plate Imports, While Slightly Fluctuating, Are No Longer of the Importance of 25 Years Ago. In place of an average of 62,000 tons a year, the average of the past seven years stands little more than 3000 tons



Imports of Structural Shapes Have Increased Greatly Over the 1904-1910 Average. Last year they were more than 14 times as heavy as in the early years of the century, while in 1926 the excess was nearly 1000 per cent



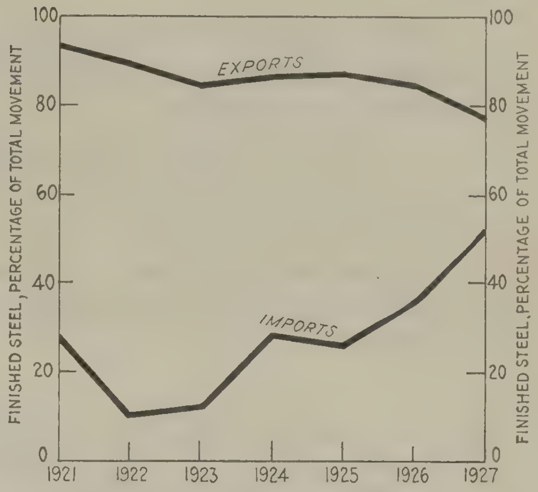
Exports of Rolled and Finished Steel and Iron Continue at Nearly Double the 1901-1910 Level (Left). The semi-finished steel tonnage sent abroad has dropped sharply since the War, while some of the rough materials, including pig iron and scrap, have made recent gains

pig iron dropped to 175,000 tons, or about one-third of the incoming movement of the two preceding years. This loss of more than 300,000 tons from 1926 accounts for almost all of the drop in total iron and steel imports between the two years.

What is of particular importance in many respects is the fact that in the last two years the amount of finished iron and steel products coming in has been much higher than in many years past. In each of the last two years it has been between 390,000 and 400,000 tons, and in 1927 was more than 53 per cent of the total incoming movement.

Most prominent in the increase has been the large amount of structural shapes coming in. The import total shows a steady and rapid increase from less than 1000 tons in 1921 to more than 160,000 tons in 1927. Each year has shown a large gain over the preceding year and each of the two last years has shown a gain in excess of 40,000 tons.

Plates, shapes and hoops, considered as one group, show a steady and rapid increase since 1922, when the incoming tonnage was less than 2000. During the past two years it has averaged nearly 49,000 tons, which is more than three times the highest of the preceding year's total. Imports of wire rods likewise have shown a steady, though less spectacular, gain. From less than 1000 tons in 1921, the quantity has risen to about 18,000 tons in 1927.



Our Exports Have Been Gaining Mainly in the Rougher Categories, While Imports of Finished Steel Have Made Larger and Larger Percentages of the Incoming Tonnages

One diagram shows the relation between the finished products and the total movement, both for exports and for imports. It shows an almost continuous rise in the import ratio from 1922 through 1927, and a steadily downward trend in the export ratio. In fact, in 1927 imports at more than 53 per cent of the total have approached the export ratio of 77.6 per cent. As a comparison, finished products in 1922 constituted only 10.6 per cent of imports and about 90 per cent of exports.

Increase in Shipments of Sheet-Metal Ware

Shipments of enameled sheet-metal ware in January, as reported to the Department of Commerce by 18 manufacturers, comprising approximately 80 per cent of the industry, totaled 319,218 dozens, valued at $1,091,350. This compares with 307,280 dozens, valued at $1,085,762, in December. The enameled ware included in the reports consists of cooking, household and hospital utensils having a vitreous coat on a sheet steel or iron base.

January shipments of galvanized sheet-metal ware, as reported by 15 concerns comprising a large proportion of the industry, were 184,993 dozens, valued at $691,348. This compares with 107,267 dozens, valued at $398,199 in December, and with 173,899 dozens, valued at $676,768, in January, 1927.

Statistical Abstract of the United States—1926

Following a series of 48 predecessors the Statistical Abstract of the United States for 1926 has been issued by the Department of Commrece. It consists of a book of 831 pages, and copies may be obtained at $1 each from the superintendent of documents, Government Printing Office, Washington. As in previous editions, it consists of a compendium of information covering many features of the progress of the United States along material lines.

It is divided into a series of general topics: Area and population, vital statistics, immigration and emigration, education, public lands and national parks, climate, army, navy, etc., national Government finance, State, city and local Government finance, money and banking, wealth, business finance, prices, wages, postal service, telephone, telegraph and cable, electric light and power, public roads and automobiles, steam and electric railroads and express companies, waterways and water-borne commerce, foreign commerce, irrigation and drainage, farms and their products, including crops and animals, forests, fisheries, mining and mineral products, and manufactures. All of these are reported in tabular form and in great profusion of detail.

Highest February Building Construction Ever Recorded

Building and engineering contracts in February in 37 States, east of the Rocky Mountains, are reported by F. W. Dodge Corporation at $465,331,000. This is the highest February total ever achieved. It represents a gain of 18 per cent over last year and is 9 per cent more than the preceding month. The area accounts for about 91 per cent of the total construction volume of the United States.

Four districts made new high records for February, these being New York and northern New Jersey, the Middle Atlantic States, the Central West and the Texas district. In New England the total was the second highest for February. More than half of the total was for residential buildings, these aggregating $238,985,000. Public works and utilities provided $59,980,000; commercial buildings, $57,695,000; social and recreational buildings, $35,414,000; and industrial buildings, $34,881,000.

For the first two months of this year contracts have been awarded to the extent of $892,500,000. This is 15 per cent ahead of the same two months last year.

Business Analysis and Forecast

BY DR. LEWIS H. HANEY

DIRECTOR, NEW YORK UNIVERSITY BUREAU OF BUSINESS RESEARCH

Statistical Data Concerning the Chief Consuming Industries Indicate That:

Expansion of activity in chief consuming industries is at hand, but demand is not insistent.

Car and locomotive buying in February picked up from the unusually low January level.

Automobile production is clearly expanding, but severe competition is apparent.

Building volume continues large; residential building assures good demand for pipe and nails; structural sales are improving.

Outlook for tank plates in petroleum States may improve, as storage of oil is becoming a problem.

Iron and steel exports have been only moderately active.

ALL barometers indicate an increased demand for steel. In view of this fact it seems noteworthy that the demand is not urgent or keen. A large quantity of sheets and bars is obviously required by automobile manufacturers, and structural steel orders continue in good volume as building activity expands. But in almost every direction one notes a lack of snap and spontaneity, while close attention is paid to prices. This is far from suggesting the development of anything approaching boom conditions or a sustained advance in iron and steel prices. The condition is due to the obvious fact that iron and steel consumers are proceeding cautiously. Their volume of business is large in quantity and has picked up sharply, but competition is severe in many lines and the outlook for further expansion becomes more uncertain with each month of increased production. On the average, profits are not satisfactory.

The net conclusion appears to be that the volume of steel business will increase somewhat further and will be well sustained during the first half of the year. In fact, steel production has not yet responded fully to the influence of conditions reflected in the rising P-V line. But it seems probable that the volume of business will not be done on a very profitable basis.

Large Potential Demand Indicated

OUR composite demand line rose sharply in January, to a point nearly as high as that reached in February, 1927. This means that the activity of the chief iron and steel consuming industries was such as to indicate a large potential demand. Assuming operations in these industries to be profitable, their activity would sooner or later result in a proportionate increase in the buying of iron and steel and justify a similar increase in the steel output.

The composite demand index is estimated at 114 in January, against 101 in December, and 112 in January, 1927. This rise of 13 per cent in a month is the sharpest on our record and appears to justify completely the similar rise in the steel ingot output—the volume of which we were inclined to doubt a month ago. The chief factors in the rise were increased activities in the automobile, building and general manufacturing lines of industry. There were gains also in mining, machine tool orders, and exports of iron and steel. Strangely enough, the only factor in the composite demand index

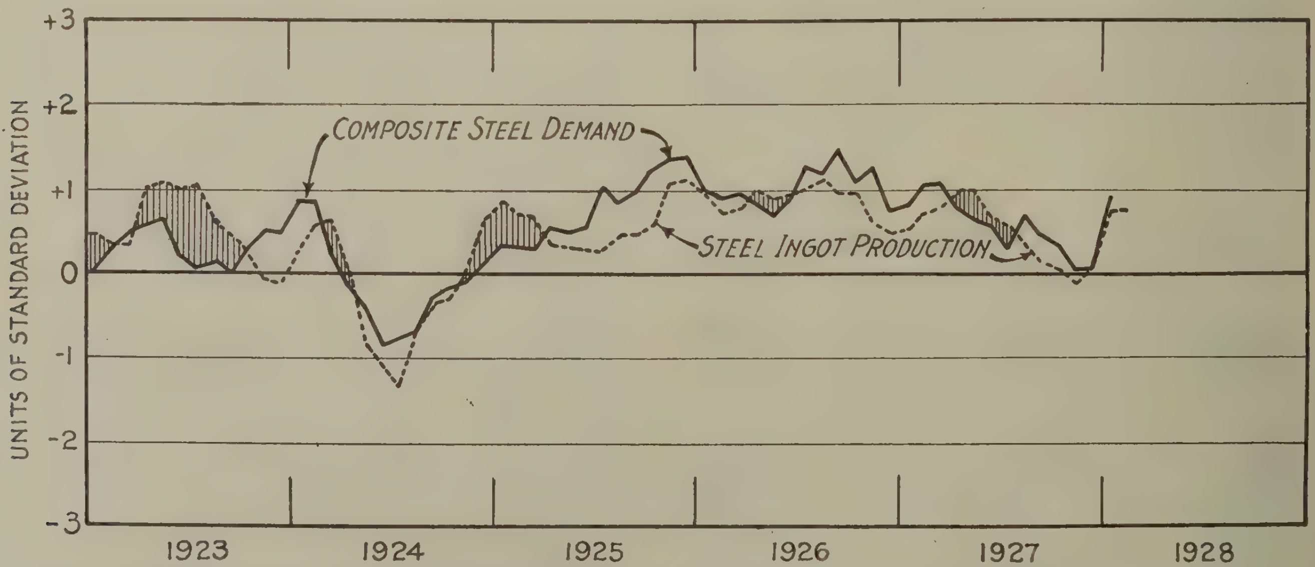


Fig. 1—Steel Production Carried Forward in February the High Level of January—the Sharpest Advance in Nearly Five Years. But the curve of composite demand rose still higher. The outlook for the immediate future is encouraging

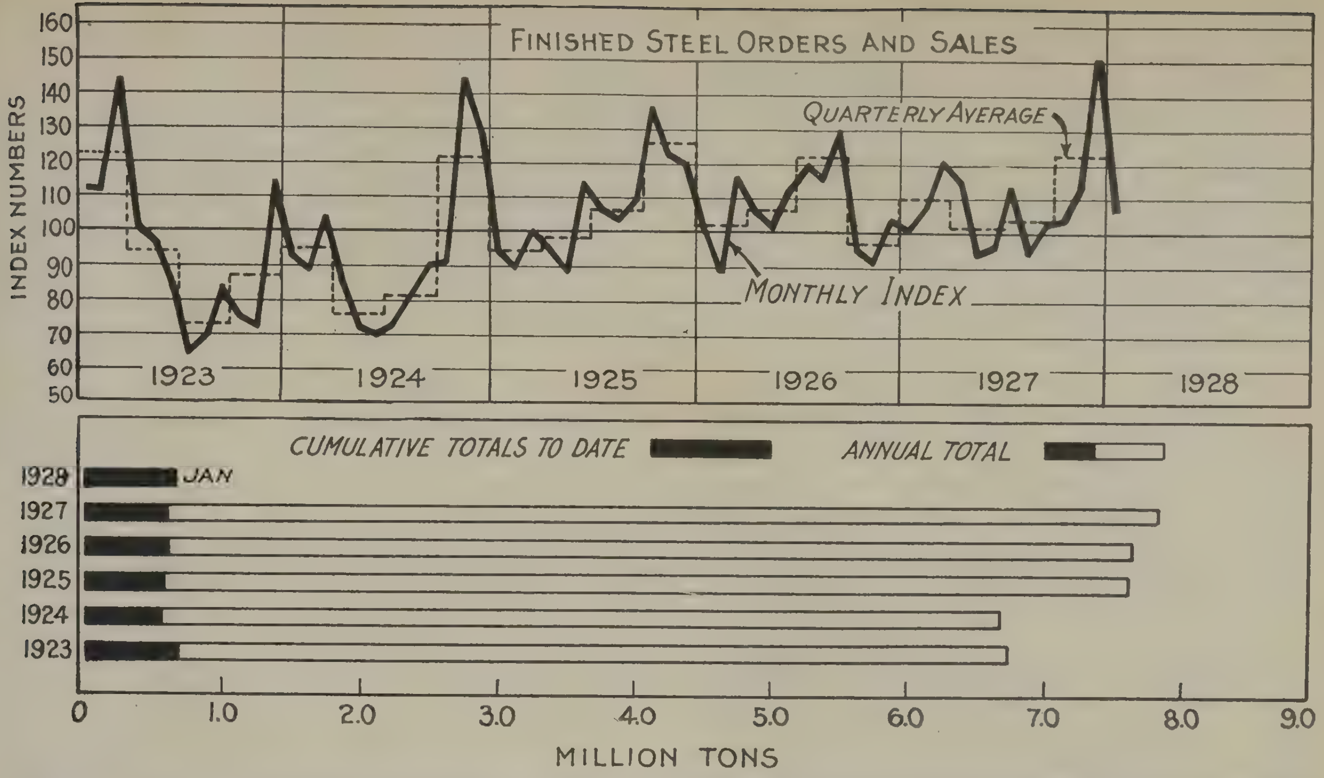

Fig. 2—Buying of Finished Steel Dropped Sharply After the Great Spurt in December, But Constituted the Highest January Since 1923. The peak of resultant production may follow in February or March

which declined in January was farm purchasing power, which was affected by the small marketings of the chief farm products and by somewhat lower farm prices.

Preliminary February data indicate a further sharp gain in the composite demand line. Allowing for seasonal variation, automobile production, building activity and railroad traffic were all considerably higher in that month. If we assume that this activity in the consuming industries means a proportional need of steel, it may therefore be said that the present level of steel output is conservative. But it must also be said that the price situation shows that the intensity of the demand, as measured in dollars, is not so great as the volume of demand measured in tons.

As shown in the chart, the average daily output of steel ingots, adjusted to eliminate the merely seasonal movements, held practically level in February at about the same figure that obtained in March last year.

Conditions in Certain Industries

As to the future, most indications favor the conclusion that further expansion of industrial activity is to be expected and that the output of steel will increase also. *Railroad freight traffic* was on the up-grade in February, making due allowance for seasonal conditions. The increase in basic industries, including building, automobile production and steel, indicates a more than seasonal gain this spring. The condition of railroad equipment also seems to indicate some increase in requirements for cars and locomotives. (This matter is touched upon again later.)

Building activity promises to continue in large volume. Easy money and a good investment demand are reassuring factors. Considering the season, building permits have steadily increased. This should mean a gain in residential construction sufficient to insure a better demand for nails, standard pipe and other similar items. Moreover, construction contracts as a whole increased sharply in February, which fact promises a continuation of the good demand for structural steel.

Manufacturing activity in general (excluding the iron and steel and automobile industries) has not increased in proportion to the large gains in a few of the more basic industries. But, even so, there has been a recovery that is sufficient to bring the general level higher than it has been since last fall. In this connection it is significant to note that the movement of machine tool orders has been upward for four months and that, considering the season, the volume of such orders in January was the largest since September, 1926. Moreover, current reports indicate continued good business in this line.

Automobile Industry Expanding Seasonally

The upward trend of *automobile* production carried through February, when, preliminary estimates indicate, approximately 350,000 cars and trucks were turned out. There seems every reason to anticipate a further increase that will last through April, and a proportionally large volume of business in sheets, bars and other automobile raw material. Every indication of severe competition, however, is apparent in this industry, and the tendency toward price cutting appears to mean that the profits in the industry will not be in proportion to the volume of business done.

Mining industries, including petroleum, have shown little change and are not likely to expand much during the next few months. The level here has been running along about steady at the general average of the last seven years. The coal business is poor, with no turn yet in prospect. The chief opportunity for improvement lies in the *oil industry,* although even here the huge stocks of crude oil now in storage constitute a problem. Current petroleum production, however, is not excessive and drilling activity is at a low level. The industry is dragging bottom, with improvement only a question of time.

As to *agriculture,* we do not find the immediate outlook for farmers as good as it seemed at the end of 1927. Average farm prices have declined and the purchasing power of the farm dollar is not quite so high. Also, the number of dollars received by farmers has been reduced by the relatively small quantity of the chief crops and animals marketed.

Seasonal Decline in Orders

AS usual, the orders for finished steel declined in January. Owing to the extraordinary peak attained by such orders in December, the decline was larger in amount than usual; but, even so, the January volume of finished steel orders, covering items that represent roughly 50 per cent of the steel business, was the largest for that month since 1923. Ordinarily the short month of February shows a decrease in such orders, 1927 furnishing the only recent expansion. This year, owing to the extra day in February and to the unusually sharp expansion in the automobile and building industries, it seems probable that little, if any, decline is to be expected in the orders. Thus 1928 is off to a good start.

The best showing made in the January figures is

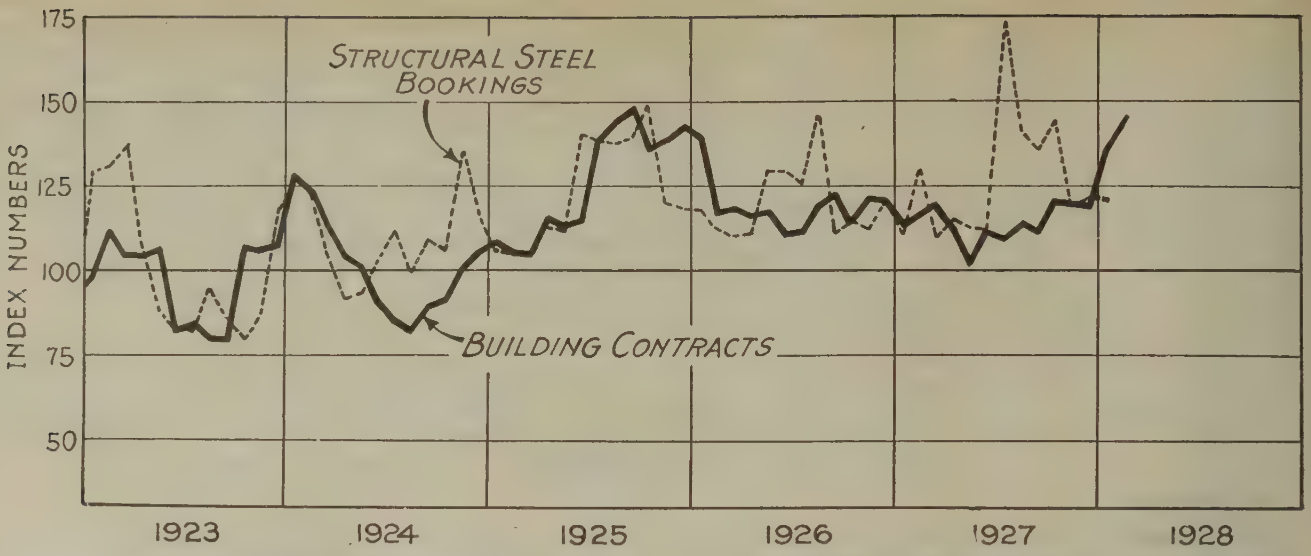

Fig. 3—Building Contracts Continued Upward in February. Structural steel bookings, after dropping in December, have remained above the seasonal average. The outlook is encouraging for the next few months

found in sheets and in fabricated structural steel. The January volume of independent sheet sales amounted to 302,900 tons, far exceeding the business in any previous January on our record. It compares with 261,400 tons in 1927 and 253,300 tons in 1926. Structural steel sales amounted to 213,800 tons, which is the largest January volume since 1924. The business in fabricated plates was about average for January, though somewhat below a year ago.

The poorest showing was made by steel castings, of which item only 90,900 tons is reported as ordered, against 107,800 tons in 1927 and 112,000 tons in January, 1926. The decrease in the orders for castings between December and January, however, was almost exactly the usual seasonal amount, so that no downward *trend* was indicated. The orders for castings seem to furnish an excellent index of general business conditions, and the low levels of recent months fairly represent the average situation. But the three months from November to January, inclusive, show a considerable recovery, which gives a favorable impression as to the recent trend, and the orders were above production in all three months.

Structural Steel Orders Above Average

OUR third chart has been revised in an attempt to allow for seasonal variation in the orders for structural steel. A seasonal factor exists, the peak of the orders usually coming in April and being about 13 per cent above the monthly average for the year, while the low point usually occurs in August or September, and is about 4 per cent under the average. Although the seasonal variaton is most irregular and the number of years available for determining it is too small for satisfactory results, it is believed that the adjusted curve gives a truer picture of the actual trend than would be presented by the actual figures.

The chart shows an extraordinarily high peak in July last year, since when the trend has been irregularly downward. But it may be said that December and January showed a sidewise movement, the bookings of structural steel being sustained at a level well above the average. The situation resembles that found at the turn of the year between 1925 and 1926, an analogy which is encouraging. Moreover, in January the level was well below that of the building activity curve.

After rising sharply in January, the adjusted curve of building activity (floor space in contracts awarded) continued upward in February, and *nearly reached the record peak made in September*, 1925. This is one of the most favorable indications as to business in general, and the iron and steel industry in particular, that has yet appeared. Perhaps the extra day in February helped make this showing, but even the average daily volume of building contracts would show a substantial gain. The index is now 155, against 142 in January and 124 a year ago, the average for the seven years 1921-1927 being taken as 100. More than this, both building permits and contemplated new construction gained more than usual in February. Thus all phases of building present favorable indications and strongly suggest a continued large volume in this basic industry throughout the spring.

Better Equipment Orders

WHILE the volume of railroad equipment orders also picked up in February, some allowance must be made for the extra day, due to the fact that 1928 is

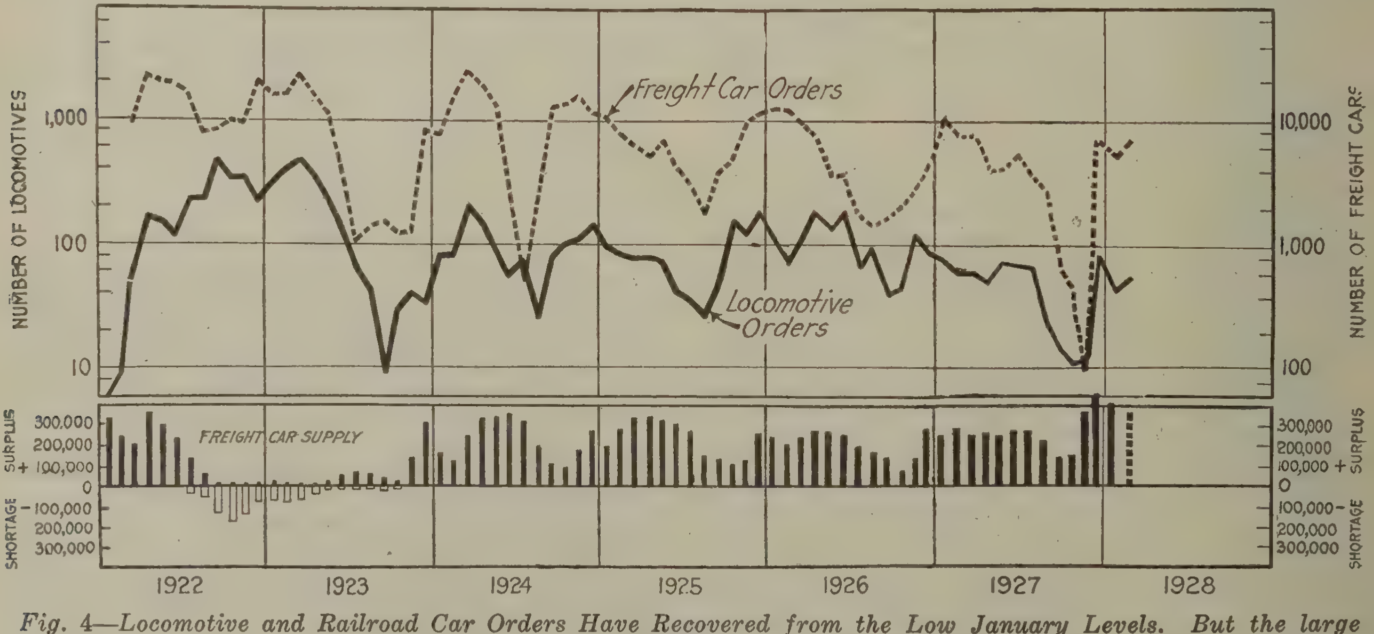

Fig. 4—Locomotive and Railroad Car Orders Have Recovered from the Low January Levels. But the large surplus of cars does not indicate need for heavy purchases

leap year. According to *Railway Age*, domestic freight car orders in February numbered 5876, an increase over January and, except for December last year, the largest since June, 1927. This figure may be called fairly good, but the fact remains that the first two months of 1928 saw the smallest volume of freight car orders for the period that has existed in any recent year. It must be remembered also that the surplus of freight cars is large. Nevertheless, freight traffic is gaining gradually, considering the season, and the outlook appears to be fair. The locomotive orders, too, showed a gain over January, the domestic business amounting to 30 units. This compares unfavorably, however, with domestic orders for 85 locomotives in February last year.

On the whole, it looks very much as if the equipment business touched bottom last November, and it does not seem too optimistic to conclude that, with the gradual improvement in railroad traffic that is indicated, it will expand this spring. In reaching this conclusion, however, one must allow for the existence of a considerable surplus of equipment and for the fact that railroad earnings are small, on the average. The latter fact makes it probable that the carriers will endeavor to use the more obsolete types of equipment, and that for a time they will not order new equipment in proportion to the growth of their traffic.

Steel Corporation's Unfilled Orders Increase Again in February

A moderate increase in the unfilled orders of the United States Steel Corporation was reported for February. The total on Feb. 29 was 4,398,189 tons, a gain of 122,242 tons over the 4,275,947 tons on Jan. 31. The increase in January over December was 303,073 tons. The February gain was the fifth in succession. A year ago the unfilled orders were 3,597,119 tons. The February total this year was the largest since February, 1926. The following table gives the unfilled tonnage by months, commencing with January, 1926:

	1928	1927	1926
Jan. 31.......	4,275,947	3,800,177	4,882,739
Feb. 28.......	4,398,189	3,597,119	4,616,822
Mar. 31.......	....	3,553,140	4,379,935
April 30.......	....	3,456,132	3,867,976
May 31.......	....	3,050,941	3,649,250
June 30.......	....	3,053,246	3,478,642
July 31.......	....	3,142,014	3,602,522
Aug. 31.......	....	3,196,037	3,542,335
Sept. 30.......	....	3,148,113	3,593,509
Oct. 31.......	....	3,341,040	3,683,661
Nov. 30.......	....	3,454,444	3,807,447
Dec. 31.......	....	3,972,874	3,960,969

The high record in unfilled orders was 12,183,093 tons at the close of April, 1917. The lowest was 2,674,757 tons on Dec. 31, 1910.

Increase in Finished Iron and Steel Imported into India

Imports of all classes of iron and steel at the port of Karachi, India, in 1927 totaled 84,645 tons, against 73,333 tons in 1926, according to a report received by the iron and steel division, Department of Commerce, from E. Verne Richardson, consul at Karachi. The gain was the result of enlarged receipts of bars, 15,144 tons, against 8928 tons in 1926; of rods, 7490 tons, against 6608 tons; of galvanized sheets, 10,639 tons, against 5946 tons; and of miscellaneous iron and steel, 36,503 tons, against 30,783 tons. These were offset, however, in some measure by reduced imports of sheets and plates, 10,709 tons, against 12,049 tons; and of hoops, 4160 tons, against 9019 tons.

Report on Migration of Industry Nears Completion

WASHINGTON, March 13.—As a basis for determining the mobility of industry, data from more than 700 cities and towns in the United States designed to show the main currents for 1927 are being compiled by the organization service of the Chamber of Commerce of the United States. The report, nearing completion, will indicate geographically the establishment of new or primary industrial plants, the establishment of branches and the relocation of plants. It will indicate whether or not industry is shifting from large to smaller cities and towns. It is recognized, the organization service says, that industry is readjusting itself to new conditions, but no measure of the extent of this readjustment has been available.

"The scramble for industries on the part of many cities has been largely a free-for-all struggle with no knowledge of where the industry was coming from or why it was moving or whether one city's gain was to be another city's loss," it is pointed out. "The purpose of the present survey is to provide a basis for orderly economic and industrial development.

"Tabulated returns show, for example, an apparently unusual activity in Texas, where the establishment of 45 plants is reported, 35 of them being primary plants. But Ohio, an old industrial State, discloses a similar degree of adjustment."

New Alloy Steel Bar Schedule With Common Base Price Announced

A new schedule of alloy steel bar prices, based upon producing costs of the leading manufacturers, has been announced, and it shows slight advances in most grades and substantial declines in a few. All grades now take a common base price of $2.65 per 100 lb., mill, which, it is said, measures the increase in producing costs over carbon steel bars at $1.90 per 100 lb. In other words, the producing cost of alloy steel bar practice runs $15 a ton higher than that in ordinary carbon bar practice. To the base price is added a charge in keeping with the alloy content and what the study of the costs of the several manufacturers in this connection disclosed. The new and old schedules make the following comparison:

S.A.E. Series Numbers	Extra per 100 Lb. Over Base	New Price	Old Price
2000 (½% nickel)	$0.25	$2.90	......
2100 (1½% nickel)	0.55	3.20	......
2300 (3½% nickel)	1.50	4.15	$4.00 to $4.10
2500 (5% nickel)	2.25	4.90	5.00 to 5.25
3100 (nickel chromium)..	0.55	3.20	3.00 to 3.10
3200 (nickel chromium)..	1.00	3.65	4.75 to 5.00
3400 (nickel chromium)..	3.20	5.85	6.00 to 6.25
3300 (nickel chromium)..	3.80	6.45	6.75 to 7.00
4100 (chromium molybdenum, 0.25 to 0.40% molyb.)...	0.70	3.35	......
4100 (chromium molybdenum, 0.15 to 0.25% molyb.) ..	0.50	3.15	......
4600 (0.20 to 0.30% molyb., 1½% nickel)	1.05	3.70	......
5100 (low carbon, 0.60 to 0.90% chrom.)..	0.35	3.00	......
5100 (forging, 0.80 to 1.10% chrom.)..	0.45	3.10	......
5100 (chromium spring).	0.20	2.85	3.00 to 3.10
6100 (forging bars, chrom. vanadium)	1.20	3.85	4.00 to 4.15
6100 (spring steel, chrom. vanad.)	0.95	3.60	3.50 to 3.75
Nickel chromium vanadium	1.50	4.15	4.05 to 4.20
Carbon vanadium	0.95	3.60	4.10 to 4.20
9250 (sil. mang. spring steel)	0.25	2.90	3.00 to 3.15

*Schedule of the next installments of the **Business Analysis and Forecast,** by Dr. Lewis H. Haney, Director New York University Bureau of Business Research, follows: **March 22—Position of Iron and Steel Producers; March 29—General Business Outlook; April 12—Activity in Steel Consuming Industries.***

SMALLER ORE SHIPMENTS

Lake Superior Ranges Show Drop of 12.7 Per Cent from 1926 Movement

IRON ore shipments from Lake Superior district in 1927, as compiled by *Iron Trade Review*, amounted to 52,343,336 gross tons. This is a decline of more than 7,600,000 tons from the 1926 shipments, which totaled 59,972,038 tons, and is the smallest movement since 1924. Of the total, 51,107,136 tons was shipped by steamer and 1,236,200 tons by rail. Both methods of shipment participated in the decline, that by lake having dropped 12.7 per cent and that by rail 13.8 per cent.

As has been the case for many years, the lead was taken by the Oliver Iron Mining Co. (United States Steel Corporation subsidiary), which shipped 21,511,525 tons, or 41.10 per cent of the total. This was a reduction of 4,541,733 tons from the company's 1926 shipments, which aggregated 43.43 per cent of the total. Thus the Oliver tonnage decrease was approximately 60 per cent of the total tonnage decrease. The Oliver company has shipped 434,585,575 tons since 1908. In comparison with this all the ranges have shipped, since their several beginnings, 1,346,264,975 tons.

Six other operators shipped more than 1,000,000 tons each in 1927. Their aggregate was 23,299,720 tons. Adding this to the Oliver shipments, a total of 44,811,245 tons was shipped by seven companies, amounting to 85.6 per cent of all the ore. The remaining 14.4 per cent was shipped by a small group of independent companies.

All the ranges showed a decline in shipments from 1926. These declines varied from nearly 30 per cent of the small shipments from Mayville-Baraboo to less than 7 per cent from the Marquette range, less than 5 per cent from the Cuyuna range and less than 3 per cent from the Vermilion range.

In spite of the smaller shipments from all ranges there were 86 mines active on the Mesabi range in 1927, compared with 79 in 1926 and 87 in 1925. As a result the average production per mine declined considerably. It was 383,420 tons in 1927, compared with 479,111 tons in 1926. This range provided 63.0 per cent of the total tonnage, against 63.8 per cent in 1926.

Active mines in the other districts showed 34 for Menominee against 32 in 1926; 26 in Marquette against 22; 20 in Gogebic, the same as in 1926; 13 in Cuyuna against 15; five in Vermilion, as in 1926, and one in Mayville-Baraboo, as in 1926. The total for the seven ranges was 185 active mines, compared with 174 in 1926 and 186 in 1925. The average mine shipment for all ranges in 1927 was 282,922 tons, which is considerably lower than in the two preceding years. In 1926 the average was 344,737 tons, while in 1925 it was 298,475 tons.

Ore beneficiated before shipment made up nearly three-eighths of the total tonnage. The amount in 1927 was 19,266,850 tons, or 37 per cent of the total, the same proportion as in 1926. Of this, the quantity crushed in 1927 was 14,124,960 tons; washed ore was 4,766,997 tons; dried ore, 190,543 tons; sintered, nodulized and briquetted, 107,950 tons; jigged ore, 76,400 tons. All of these figures showed declines from 1926.

TABLE I.—SHIPMENTS BY PORTS AND ALL-RAIL

	1927	1926	1925	1924	1923	1922
Escanaba	5,865,224	6,599,597	5,644,278	4,244,669	5,607,411	4,592,354
Marquette	3,238,855	3,417,462	3,487,968	2,516,548	2,789,285	1,976,220
Ashland	6,239,774	7,139,865	6,664,501	4,807,565	6,237,449	5,813,207
Two Harbors	5,703,159	6,266,272	6,016,096	4,817,494	6,418,464	5,952,437
Superior	14,627,936	16,476,264	14,560,477	13,355,214	17,820,476	11,234,240
Duluth	15,432,188	18,638,395	17,707,978	12,882,082	20,163,619	13,044,771
Total by lake	51,107,136	58,537,855	54,081,298	42,623,572	59,036,704	42,613,229
Total by rail	1,236,200	1,434,183	1,435,046	1,271,538	1,743,299	1,376,867
Total	52,343,336	59,972,038	55,516,344	43,895,110	60,780,003	43,990,096

TABLE II.—IRON ORE SHIPMENTS BY RANGES

	1927	1926	1925	1924	1923	1922
Mesabi	32,974,157	38,249,793	35,889,988	29,141,665	41,814,463	28,055,394
Marquette	4,151,868	4,442,765	4,185,533	3,174,660	3,892,666	2,817,390
Menominee	5,211,215	5,945,811	5,268,846	3,836,707	4,854,781	4,078,519
Gogebic	6,383,408	7,536,389	7,068,296	5,159,838	6,579,950	6,218,610
Vermilion	1,547,732	1,586,054	1,437,577	978,097	1,278,598	1,211,467
Cuyuna	1,982,302	2,079,276	1,509,217	1,468,940	2,220,745	1,497,615
Mayville-Baraboo	92,654	131,950	156,887	135,203	138,800	110,101
Total	52,343,336	59,972,038	55,516,344	43,895,110	60,780,003	43,990,096

Nearly 6,000,000 Tons of Iron and Steel in Water-Borne Commerce

WASHINGTON, March 10.—Of the total of 531,614,691 net tons of freight, exclusive of lighterage, which constituted the 1926 water-borne commerce reported by the Bureau of the Census for continental United States and Alaska, domestic transportation made up 405,210,902 tons, or 76.2 per cent, and foreign commerce consisted of 126,403,861 tons. Of the foreign commerce, 76,324,861 tons was exports and 50,078,928 tons was imports. While, of course, all the domestic commerce was carried in American vessels, only a little more than one-third, 33.9 per cent, of the foreign commerce was carried in American vessels.

Unmanufactured iron and steel constituted 5,847,145 tons of the total water-borne transportation, 3,035,500 tons being in domestic commerce and 2,811,645 tons in foreign commerce. Foreign vessels carried 1,613,678 tons and American vessels 1,197,967 tons, or 42.6 per cent, of the foreign commerce. The total water-borne iron ore transportation was 69,514,069 tons, of which 64,581,613 tons was in domestic commerce and 3,932,456 tons in foreign commerce. Of the latter total, 2,303,719 tons was carried in foreign vessels and 1,628,737 tons, or 41.4 per cent, in United States ships.

The active fleet of continental United States in 1926 numbered 37,561 vessels, with a gross tonnage of 18,415,893, as against 40,383 vessels of 12,371,269 gross tons in 1916.

Danger of Extinction of Merchant Marine Is Emphasized

WASHINGTON, March 11.—The unsatisfactory condition of the United States merchant marine was recently emphasized before the House Committee on Merchant Marine and Fisheries by H. G. Smith, vice-president of the National Council of American Shipbuilders, in the course of testimony in connection with the White and Wood bills. The measures are designed to establish a privately owned and operated merchant marine by means of assistance in the form of construction loans and mail and naval subventions. Mr. Smith told the committee that the American shipbuilding industry is now in a far more unsatisfactory condition than it was before the World War and is threatened with extinction if a merchant marine is not developed through government assistance.

YOUNGSTOWN-INLAND MERGER

Negotiations Have Been Dropped—Sheet & Tube Company to Expand in Chicago District

YOUNGSTOWN, March 13.—Merger negotiations between the Youngstown Sheet & Tube Co., Youngstown, and the Inland Steel Co., Chicago, which were first made public late in December, have been dropped on account of disagreement on certain features of the consolidation. An official statement issued on March 8 follows:

"J. A. Campbell, president of the Youngstown Sheet & Tube Co., and L. E. Block, chairman of the board of the Inland Steel Co., announced today that the parties have been unable to agree on certain important features of the proposed merger of the two companies and that the merger therefore will be abandoned."

The Youngstown-Inland merger would have brought together steel ingot capacities amounting approximately to 5,000,000 tons, exceeded only by the Steel Corporation and the Bethlehem Steel Corporation. It was approved by the directors of both companies on Jan. 31 and meetings of stockholders to ratify the action had been called for March 15. Plans of the new company, which was to have been known as the Youngstown-Inland Steel Corporation, called for the issuance of 3,200,000 shares of stock, of which 2,000,000 shares were to have been given to holders of Sheet & Tube common stock on a basis of two new shares for one old, and 1,200,000 shares to holders of Inland common on a share for share basis.

Following the failure of the merger, the Youngstown Sheet & Tube Co. is planning to develop further its Chicago district properties. Installation of sheet and rail mills is under consideration and a further rounding out of present capacity is planned, while harbor frontage is to be improved.

President James A. Campbell, in his annual statement, states that last year the company expended $8,879,727 for new construction, improvement of equipment and for other capital outlays, and has under construction at present a new boiler and power plant at the Campbell works, and new coke ovens at the South Chicago plant. These two developments, together with some other improvements, will require a capital expenditure of about $12,500,000. Last year, the company put into operation its new tin plate plant at Indiana Harbor and seamless tube mills at the Campbell works.

"During January, 1928," the statement continues, "there has been a noticeable increase in volume of business and from every indication this volume should be maintained. It is expected that there will be an improvement in prices as compared with the last half of 1927."

Differences over directorate control were largely responsible for the failure of the merger plan, which was dropped after agreement had been reached upon nearly all other major details.

February Sheet Production by Independent Mills Was 330,565 Tons

PITTSBURGH, March 13.—February was a good shipping and production month for the independent sheet steel manufacturers reporting to the National Association of Sheet and Tin Plate Manufacturers, which in its monthly report discloses production of 330,565 net tons or 14,024 tons ahead of that for January, while the month's shipments of 298,420 tons were 24,294 tons in excess of those of the month before.

Sales for the month were 266,210 tons, or 36,711 tons below those for January. Unfilled orders at the end of February amounted to 667,054 tons, a loss for the month of 27,143 tons.

The report does not include figures of orders on hand awaiting shipment or unsold stocks.

The total number of mills in the United States was 718, having a capacity for February of 461,750 tons and the percentage of that capacity reporting was 72.6. Sales were 79.5 per cent of capacity reporting, production 98.7 per cent, shipments 89.1 per cent and unfilled orders 199.2 per cent. Comparative figures follow:

	February	January	December
Total number of mills......	718	720	719
Capacity per month........	461,750	486,550	472,064
Per cent reporting.........	72.6	72.6	72.6
Sales	266,210	302,921	530,197
Production	330,565	316,541	260,130
Shipments	298,420	274,126	221,689
Unfilled orders	667,054	694,197	745,393
Unshipped orders	......	110,945	97,630
Unsold stocks	......	59,508	53,474
Percentages to Capacity			
Sales	79.5	85.7	154.7
Production	98.7	89.6	75.9
Shipments	89.1	77.6	64.7
Unfilled orders	199.2	196.5	217.5
Unshipped orders	....	31.4	28.5
Unsold stocks	....	16.8	15.3

The twelfth annual Swiss Industries Fair will be held at Basel, Switzerland, April 14 to 24, inclusive. The fair embraces 20 industrial groups and about 1000 exhibitors are expected. Information may be obtained from the Consulate General of Switzerland, 479 Fourth Avenue, New York.

British Steel Output Large in February—Pig Iron Small

LONDON, ENGLAND, March 13 (*By Cable*).—Pig iron output in February was 550,800 gross tons, while that of steel was 764,400 tons, castings included. In January pig iron was 560,600 tons and steel was 626,200 tons.

The February steel output was the largest since September, 1927, when it was 777,000 tons. The pig iron production last month was the smallest since January, 1927. A comparison of the February production with January and the monthly rate for previous years is shown in the following table in gross tons:

	Pig Iron, Tons	Steel Ingots and Castings, Tons
1913—Average monthly......	855,000	638,600
1920—Average monthly......	669,500	755,600
1922—Average monthly......	408,500	490,100
1923—Average monthly......	620,000	706,800
1924—Average monthly......	609,900	685,100
1925—Average monthly......	519,700	616,400
1926—Average monthly......	203,500	296,700
1927—Average monthly......	607,800	758,200
1928—January	560,600	626,200
1928—February	550,800	764,400

Stronach Nail Co. to Manufacture Special Nails at Ellwood City, Pa.

The Stronach Nail Co., recently incorporated under the laws of Pennsylvania, is engaged in the manufacture of a special nail which, on account of a triangular point of smaller section than the cross-section of the shank, does not spread the fibers of the wood, thus helping to avoid splitting. The company has acquired the former plant of the American Steel Co., at Ellwood City, Pa., containing 110,000 sq. ft. of floor area and a 20-acre plot. Several of the special machines for making the new nail, which were built by the Pennsylvania Engineering Works, New Castle, Pa., have been installed, and the company plans eventually to install 100 of these machines at this plant and to locate manufacturing facilities in other parts of the country. The new nail was designed by H. S. Stronach, formerly head of the industrial department West Coast Lumber Trade Extension Bureau, who now is vice-president and sales manager of the Stronach Company.

OXYGEN PRODUCTION

Nearly All American Plants Use Liquid Air Process

DATA on the amount of oxygen produced for cutting and welding were given by H. J. Mueller, president Universal Oxygen Co., Sheboygan, Wis., in an address before a welding conference at the University of Wisconsin, Feb. 8, 1928. He noted that the commercial production of oxygen from water by electrolysis commenced in the United States in 1907. Many improvements were made by American engineers, and before long electrolytic oxygen plants were found in nearly every State.

Liquid air oxygen was first produced in 1907 by the Linde Air Products Co. at Buffalo. The Superior Oxygen Co., Pittsburgh, was started in 1913, using processes patented by the German, Doctor Hildebrand, but was later absorbed by the Air Reduction Co., operating under French patents of Doctor Claude. The majority of the electrolytic oxygen producers have also converted their plants to use either the "Messer" or the "Heylandt" system of separating oxygen from liquid air.

At the present time there are approximately 155 oxygen producing plants in the United States, and in addition at least 500 warehouses and distributing stations. From these sources an increasing amount of oxygen is being used for cutting and welding all kinds of metal.

Total production is estimated by Mr. Mueller as follows:

Year	Cubic Feet Produced	Total Value	Cost Per Cubic Foot
1909	3,814,000	$177,469	4.7c.
1914	104,714,000	1,829,446	1.75c.
1918	1,355,000,000	18,292,500	1.35c.
1919	1,173,414,000	16,545,137	1.41c.
1921	1,059,825,000	13,964,952	1.32c.
1923	2,057,526,000	23,382,236	1.14c.
1925	2,073,826,000	22,577,110	1.09c.

While the actual figures for 1926 and 1927 are not available, it is thought that the volume produced is steadily increasing. The average cost per cubic foot is now less than one cent.

Data for European countries in 1926 are as follows:

Germany	1,050,000,000 cu. ft.
France	700,000,000 cu. ft.
Italy	350,000,000 cu. ft.
Great Britain	320,000,000 cu. ft.
All other Europe	504,000,000 cu. ft.

Receivers Appointed for Bollinger-Andrews Construction Co.

Theodore I. See and John H. Lucas have been appointed temporary receivers of the Bollinger-Andrews Construction Co., Verona, Pa. A bill in equity filed by John W. Fisher and Violante Bennett, the latter the principal owner, in which they asked for the receivers, said that this was essential to safeguard the interests of the creditors and stockholders. The company, which is engaged in the manufacture and erection of structural steel buildings and steel fabricating, has a plant at Verona. The assets amount to $1,081,000, and there are liabilities of $770,000. The company has materials on hand and also contracts, and it is necessary to borrow funds with which to complete the contracts.

Butte to Produce Manganese Ore

BUTTE, MONT., March 12.—Construction work at the Domestic Manganese & Development Co. is nearing completion, according to a statement issued by John H. Cole, president. It is planned to start operations in the spring, when deliveries of ore from the Anaconda Copper Mining Co. are due to commence. The five-year contract calls for 400,000 to 500,000 tons of rhodochrosite ore, crushed through 2½-in. screen.

Equipment is being installed in the dust chamber of the late Sen. W. A. Clark's smelter, idle 17 years. Alongside this building has been built a 45-ft. trestle, with bins underneath for the incoming ore. Apron-type feeders discharge into a conveyor and elevator leading to a central overhead feed bin. From here the ore is spouted into four rotary kilns, 8 ft. in diameter by 125 ft. long, made by Allis-Chalmers Mfg. Co., Milwaukee. Moisture and carbon dioxide gas will be driven from the ore before it gets very far in these kilns, and toward the hot lower end it will be sintered into clinker.

Emerging from the lower end of the kiln, the hot clinker will fall through the floor into a rotary cooler, 5 ft. diameter by 50 ft. long, set in the cellar. Each kiln has its own cooler. Cooled clinker (a high grade manganese ore) will be loaded into box cars for shipment to eastern furnace plants. Furnace gases are wasted through the old smelter stack of concrete, 360 ft. high.

Aliquippa Furnace Produced 285,148 Tons of Iron in 1927

A remarkable blast furnace performance called to the attention of THE IRON AGE is that of No. 2 Aliquippa furnace of the Jones & Laughlin Steel Corporation. This furnace in 1927 produced 285,148 gross tons of pig iron, which exceeds by more than 1000 tons the production of the A furnace of the American Steel & Wire Co., Cleveland, reported last week. Since its last relining on Dec. 14, 1924, the Aliquippa stack has been in continuous operation and had produced up to March 9, this year, 863,545 gross tons. Its best daily performance was on March 1, 1927, when it produced 1022 gross tons.

Sheffield Steel Corporation Issues $2,000,000 Bonds for Expansion

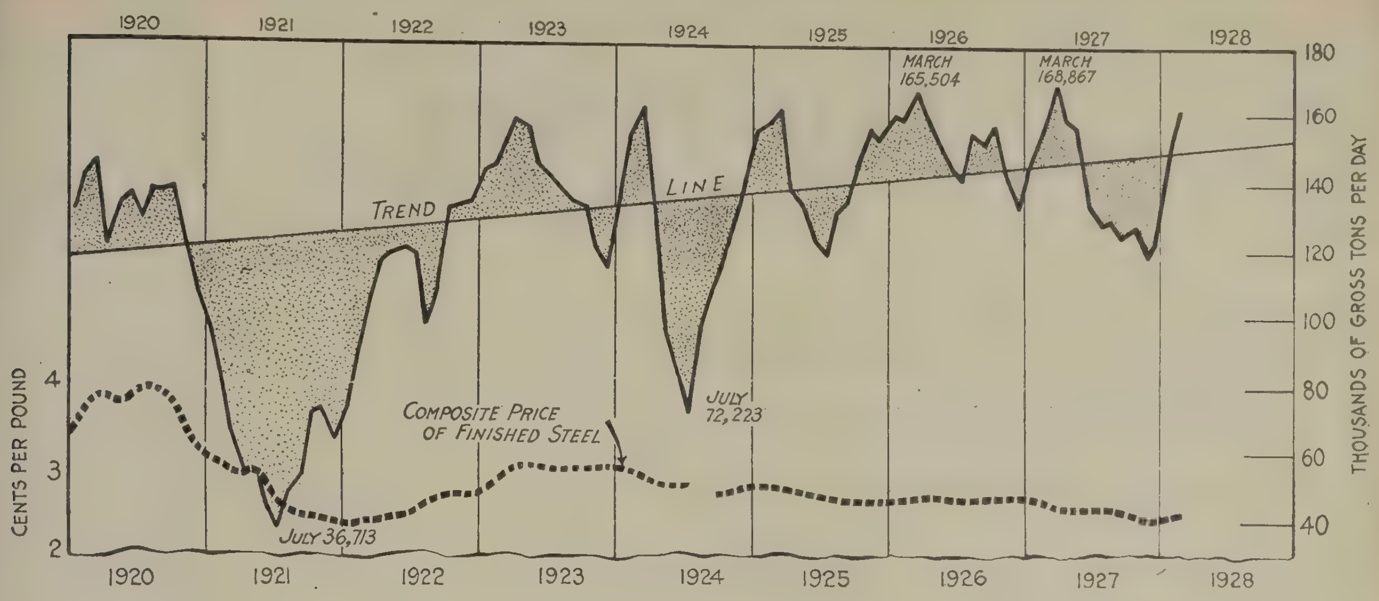
The Sheffield Steel Corporation, Kansas City, Mo., formerly the Kansas City Bolt & Nut Co., has announced the issuance of $2,000,000 worth of 5½ per cent gold bonds, the proceeds to be used for plant expansion. The company now has three open-hearth furnaces, a bar iron and rail rerolling mill, sheet mill and bolt, nut and forging works. To this equipment will be added a fourth open-hearth furnace, a wire mill, a combination bar and rod mill and a blooming mill. The bolt and nut department will be rearranged and enlarged. In addition to the $2,000,000 bond issue, the company has arranged for the sale of $1,250,000 preferred stock. Total expenditures for plant improvements will be about $3,000,000 and the balance, derived from bond and stock sales, will be added to working capital. W. L. Allen is president of the company. The bond issue has been arranged through Eastman, Dillon & Co. and the Prescott, Wright, Snider Co., New York.

The Sheffield company has awarded a contract to the Morgan Construction Co., Worcester, Mass., for a combination bar and rod mill and a continuous billet mill. Contracts for the blooming mill and wire equipment have not been awarded.

Rates on Pipe to Oklahoma Held Unreasonable

WASHINGTON, March 13.—Passing upon a complaint by the Oklahoma Natural Gas Co. and others, Examiner W. M. Carney, in a proposed report made to the Interstate Commerce Commission last week, held that freight rates charged on carload shipments of wrought iron and steel pipe, fittings and connections from certain points in Pennsylvania, Ohio and West Virginia to numerous destinations in Oklahoma were unreasonable. Reparation was recommended on the basis of the rates prescribed in the Southwestern cases. Typical rates to a large destination group in Oklahoma were 88.5c. and 85.5c. per 100 lb. from Pittsburgh and Youngstown respectively. In the decision in the Southwestern cases Youngstown was given the same rates as Pittsburgh, and the findings of the examiner are in accordance with that opinion but, he pointed out, "are in that respect without any prejudice to any different conclusion that may hereafter be adopted as to the proper relationship of rates from Pittsburgh and Youngstown."

With the Largest February Ingot Production Ever Recorded, the First Two Months of 1928 Are Ahead of Any Previous Year. Prices were slightly higher than in January



Largest February Ingot Production

Daily Rate of 160,591 Tons Was 5 Per Cent Above January —Two-Month Total Largest Ever Recorded

PRODUCTION of steel ingots in the United States in February is calculated by the American Iron and Steel Institute at 4,014,774 gross tons. This is based on returns from companies which in 1926 produced 95.40 per cent of the total. It represents the largest February tonnage ever recorded and is the fifteenth time any month has gone past 4,000,000 tons. With 25 working days, the estimated output was 160,591 tons a day, the fourth month which ever exceeded 160,000 tons a day. This compares with 152,354 tons (revised) in January and with less than 120,000 tons as recently as November. Only one month last year—March, with the highest tonnage ever made in one month—exceeded last month's daily rate.

For the two elapsed months of the year the calculated production of 7,975,983 tons is the greatest ever made in the first two months of any year. It exceeds by less than 1 per cent the corresponding figures of 1926 and 1925, and by a considerably larger margin the figures for 1927, 1924 and 1923, all of which showed more than 7,300,000 tons in the first two months. Gains in February were made both in open-hearth and in Bessemer steel. Compared with a year ago, however, the open-hearth production shows an increase of nearly 9 per cent, while the Bessemer production shows a drop of nearly 8 per cent. The total output, with one extra working day, represents a gain of about 6 per cent over February, 1927.

Estimating production in February of electric and crucible steel ingots (no longer covered in the institute's monthly figures) at 1200 tons a day, the total February ingot output would appear to be about 161,800 tons each working day. Details of the past 14 months are shown in the table.

Lower Pig Iron Imports

Reduction of 22 per cent in imports of pig iron is shown by the January total of 11,090 gross tons, compared with 14,299 tons in December. A much greater decline is indicated by the totals for seven months ended Jan. 31, which were 83,376 tons this year, against 138,053 tons last year, a drop of over 39 per cent.

British India has dominated the scene in the seven months, having furnished nearly 60 per cent of the total, whereas in the preceding year Germany supplied 53 per cent of all and India only 11 per cent. Netherlands has occupied second position in each period. The table gives details.

This Issue in Brief

Unemployment situation is not critical, says economist. While the present number of unemployed is probably in excess of normal, the average industrial wage earner is in an excellent condition to cope with unemployment, inasmuch as the margin between wages and living expenses is larger than ever.—Page 734.

Prevent petty thefts on the part of employees by careful supervision of labor and materials in process. Hiring of paid spies is expensive and creates ill-will.—Page 723.

Aluminum foundry doubles output, with 40 per cent less floor space, by rearrangement of equipment. Careful planning of material-handling equipment installation enables foundry to make a considerable saving in man-hours without a heavy capital investment.—Page 728.

Cutting blowpipe saves $1,900 in repairing main drive gear. To remove gear from shaft and machine off surplus metal would have taken four days' time and cost $2,000. Cutting blowpipe and oxygen lance did the work in 14 hours, at a cost of $110. —Page 735.

Midget open-hearth furnace is found successful in experimental work. One-ton furnace duplicates results produced by its full-grown brothers. A very high temperature is obtainable. —Page 731.

Electro-magnet picks up wooden boxes filled with steel. Strip steel producer finds that magnet handles his product most satisfactorily. When coils are to be lifted, the lifting capacity of the magnet is increased by interposing a sheet of steel between the magnet and the coils.—Page 728.

Steel loses two million tons a year to concrete building construction. About half of our large buildings are now structural steel, and the other half are concrete, but the gains made in concrete are much larger than in steel.—Page 725.

In using stainless steel, be sure you select the right grade for your particular requirements. There are three distinct groups, each with its own properties. A metallurgist tells you which is best suited for each purpose.—Page 730.

You can obtain standard samples of raw materials from the Bureau of Standards for $1 to $3. The bureau lists the kinds available, and furnishes a certificate of analysis with each.—Page 732.

Favorable business is forecast by continued rise in building contracts, says Dr. Haney. The indications are for continued large volume, an optimistic omen of considerable weight.—Page 741.

More foreign steel coming into the country. Imports are considerably above pre-war totals, while steel exports are below the pre-war average.—Page 741.

Good business but small profits for steel industry during first half of year, Dr. Haney forecasts. Indications are that the volume of steel business will increase, but that it will not be done on a very profitable basis.—Page 744.

Labor-saving equipment is not responsible for unemployment, says National Industrial Conference Board chief. Mechanization of industry creates new wants and new tasks, he declares.—Page 733.

February daily steel output was highest in history, with a single exception. Daily tonnage was 160,591, a gain of 5 per cent over January, and exceeded only in March, 1926, with 166,633.—Page 751.

Automotive output gains 40 per cent. Total production of cars and trucks (without Ford) in February was 325,778, as against 232,685 in January. The increase over February, 1927, was 30 per cent.—Page 754.

Unfilled steel orders at highest point in two years. Steel Corporation reports a total of 4,398,189 tons of orders on Feb. 29, a gain of almost 3 per cent over January.—Page 747.

Automobile Plants Doing Well

PRODUCTION of automobiles in February was remarkably heavy. Already the reports from the trade show larger production for this month, and shipping orders from that quarter to the steel mills indicate a further gain for April. As Ford is still in light production, and Ford output is not reported to the National Automobile Chamber of Commerce, the chamber figures are of particular interest. Covering substantially the total production of cars and trucks in the United States and Canada outside of Ford the chamber reports for February of this year 325,778, or 40 per cent increase over January of this year (232,685), and 30 per cent increase over February, 1927, for which the figure was 251,137.

Ford was in production in February, 1927, when the total production according to Department of Commerce figures was 323,418. Thus the N. A. C. C. members produced 2360 more units last month than the entire industry, including Ford, produced in the preceding February, and that production was not particularly low. It was under that of February in 1926 and 1924, but was above February production in 1923 and 1925.

There has been much speculation as to what will happen to the sale of other cars when Ford has been in heavy production for a while and will be able to make prompt deliveries. Such discussion is largely beside the mark, for the most active season will be long past when that occurs. In 1924, 1925 and 1926 April was by far the heaviest month, and in 1927 it yielded to May by only a few hundred cars. Ford produced 1200 daily last week with an expectation of a 1500 daily rate by the end of this week. With a five-day week a permanent fixture, that is a monthly rate of 32,500, or just one-tenth of last month's N. A. C. C. production. Obviously the Ford peak will not come until after July 1.

The automobile trade has reflected its prosperity by not being captious about the steel industry's efforts to secure higher prices for its products. Individual buyers in the automobile trade express their willingness to pay advanced prices for steel when such advances are being paid generally.

Yet heavy deliveries of steel to the automobile industry should not be interpreted as placing the steel industry in particularly favorable position. According to the annual presentations of THE IRON AGE as to the distribution of steel, the average allocation to the automobile industry in the past three years has been about 14 per cent, and as the average car is lighter now than formerly a little discount needs to be applied when figures of number of automobiles produced are considered. By far the more important showing of the automobile statistics is the evidence of the public's buying power. Granting for argument that the automobile has changed from a luxury to a necessity, it would still appear that a new car instead of retention of an old one may be regarded as a luxury.

Railroad Gage Runs High

THE freight ton-mileage of the railroads is one of the best indexes of general industrial activity; and as railroad work is industrial activity the total, including non-revenue freight movement, is perhaps a better index than the revenue ton-mileage alone. There has been remarkably little variation in the past five years, as shown by the following figures, with the percentage departure from 1923 indicated:

Freight Ton-Mileage

	Ton-Miles, Revenue and Non-Revenue	Percentage-Variation From 1923
1923........	456,237,879,523	....
1924........	426,833,710,571	—6.4
1925........	452,818,681,431	—0.7
1926........	488,701,825,000	+7.1
1927........	474,682,943,000	+4.1

It seems unfair in the light of these figures to call 1927 an off year at all. Rather there is plainly indicated a longer range increase. It is quite true there has been a much smaller increase in freight movement, on the ton-mile basis, in recent years than there used to be, but railroading is now mature and a slower growth is perfectly natural.

Of course, from the railroad viewpoint the showing is unfavorable. The railroads have been earnestly striving to show greater and greater efficiency, and one result of their success has been steadily increasing car surpluses. The average surplus in 1927 was 260,958 cars. It would be much better for the railroads if enough increase in freight movement were forthcoming to engage their facilities, which are thus increasing through gains in efficiency.

On the basis of public interest, the service rendered by the railroads has increased much more than the ton-mileage figures indicate. The railroads have lost business, so to speak, to water and motor transport. This was business which shippers preferred to divert. There is correspondingly greater increase in that service which railroads are best fitted to perform.

There has been also an improvement in the value of service relative to the ton-mile, the proportion of less valuable movement decreasing while the relative movement of foodstuffs and other high-class material has increased. Foods formerly considered out of season are made available by long hauls. There is no likelihood, therefore, that railroad freight movement will fail to continue increasing, though at what may seem like a moderate pace by comparison with old standards, for long ago the total railroad freight ton-mileage had a way of doubling approximately every dozen years.

Salvaged Metal Acquires Dignity

EVEN though all of us recognize the need of saving scrap metal in order to conserve natural resources, and most of us were once thrifty enough to seek a purchaser for any waste metal we may have had (from an old kitchen stove to continuous tonnages of brass turnings from screw machines), yet when we speak of the scrap metal industry there is commonly the vision of a miserable pony hauling a rickety spring wagon down the back alley, and a bearded junk dealer jangling a cracked cow-bell.

Eventually the gleanings of this lowliest member of a large industry reach the smelter or melter for conversion into useful ingot form. Before they can go to the furnace, however, they must all pass over the sorter's table, and he is a man whose skill must be uncanny. We who could not surely sort a lot of mixed malleable castings, steel castings and drop forgings without a laboratory full of scientific tools are lost in admiration for the man who with a file and a hammer can sort yellow brass into a dozen principal classes, who can throw zinc-bearing die castings into the proper bin and keep aluminum bronzes all by themselves, and can generally classify the incoming material into the 250 lots made necessary by the requirements of the smelting department and the ingenuity of the alloy makers. He must have all the attributes of a member of a skilled profession.

How well the secondary metal industry is organized from top to bottom may be inferred from the knowledge that more than half as much copper is salvaged and resold as is made from virgin ores. Of lead, 25 per cent; of aluminum 40 per cent. Obviously such large by-product supplies are effective balance wheels, preventing violent fluctuations in market prices. Higher prices of virgin metals tend to bring out increasing supplies of second-hand material; on the other hand, if prices drop unduly, the total supply of used material contracts sharply, because it is no longer profitable to collect and dispose of the old stuff. Low prices are checked by scarcity.

It is time to revise antique opinions about the salvaged metal industry. It requires the services of skilled professions; it is blessed by economic science, and it has a national trade association. In other words, it is quite respectable.

Steel Company Earnings

EARNINGS of steel producers in the first quarter probably will not greatly exceed those of the disappointing fourth quarter of last year, notwithstanding the heavier production and shipments in the current period, and it is not to be expected that this quarter's profits will equal those of the first quarter of last year. During 1927, it will be recalled, prices declined steadily and the average in December, as shown by THE IRON AGE composite price, was $2.44 per ton below that of the opening month of the year. It was upon the low level of last December that most of this quarter's contracts were based. In plates, shapes and bars, for example, a heavy tonnage moved to consumers during January and February at 1.75c., Pittsburgh, and not until this month have steel companies got the full benefit of the contracts made at 1.80c. The increased operations since the first of the year will help out earnings in this quarter to some extent, but it is to the second quarter that the steel trade looks for real improvements in the profit column.

The Senate and Coal Economics

EIGHTEEN years ago the United States Senate was moved by "the high cost of living" to instruct a committee to investigate and report. The committee's findings came out about the middle of 1910. The Senate did not act to bring down the cost of living, which continued to increase. The report stressed two things—the migration from farm to town (which has continued but which has not forestalled the development of the opposite problem, the farm problem) and the introduction of higher standards of living. James J. Hill previously had put it more briefly, that the trouble was not the high cost of living but the cost of high living.

The Senate committee on coal has gone into the earnings of coal mine employees and it considers them too low; but it does not compare these earnings relative to the effort with earnings similarly considered in other industries. If it were to study all other industries it would find that the total income of the people of the United States is quite insufficient to buy as many eggs and as much bacon and numerous other things as the people ought to have. Yet all the commodities produced find buyers. The committee would also find that in manufacturing and mining industries generally a high degree of efficiency has been reached, with men hard at work all year, while in coal there are so many miners that employment averages very light.

There is good reason to expect that the Senate report on coal will fall as flat as did the report on the cost of living 18 years ago. Things will keep working out along the lines already being followed.

The cost of living did not come down. The higher standard came to be expected, and as to the number of people working on farms the idea nowadays is that the number ought to be reduced—and by the help of revolutionary machinery it is being reduced—while the old investigation had it that the difficulty was the number had been reduced.

What chiefly interests the general public today is the position of the coal miners who went on strike nearly a year ago, though the United Mine Workers called the affair a "suspension"—a technical hedge against the payment of strike benefits. The essence of the matter today, in the relation of these miners to the public, is that the miners have gone on a hunger strike. They want employment in the coal mines at union wage rates. If Washington wants to do something useful, to meet the precise situation that exists, it should endeavor to decant miners, whether those now at work on the terms available or those who are idle. The condition will not grow better in the near future, for doubtless on April 1 the union men in Illinois and other western States who have been working for some five months past on a temporary arrangement will resume their strike.

The New Scrap Situation

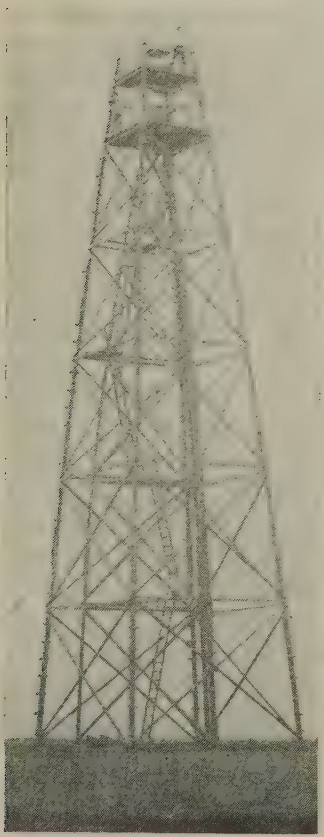
DEALERS in iron and steel scrap find it hard to account for a dull market at a time when steel works engagement is high; they are equally at sea in trying to formulate their plans. If steel manufacturers can get along with only moderate purchases of scrap when they are running at 85 per cent of capacity, there is naturally concern as to the scale of buying when the operating rate is at or below the average.

The problem is not nearly so complex as it appears. It is probable that the amount of commercial scrap taken by the steel makers is as large as it has been in recent years and that the dullness is more apparent than real. Buying of scrap, as of almost all commodities, has changed since it has become apparent to consumers that the necessity no longer exists for commitments well in advance of actual use. Steel works operating men must know the costs of their raw materials if they would make steel cheaply enough to meet the competition there has been and still is in prices of finished products. Scrap was the one item that in former years could not be safely figured until the scrap was ready to charge, because there never was absolute certainty that the manufacturer would get what he bought for the price he contracted to pay.

The remedy came in the large blast furnace and the reduction in unit cost which it afforded. Making pig iron in large quantities and at costs that were well defined, the steel companies merely figured pig iron instead of the fluctuating scrap price. Not only was speculation in old material largely eliminated, but control of prices passed from the scrap dealer to the consumer through the use of pig iron when the price of scrap was out of line. Thus the rate of steel works operation has had less than ever to do with the size of the demand for scrap. If the latter is cheap in relation to pig iron it will be bought, and there is just as much chance of good business in old material when steel production is moderate as when it is high.

Steel Replaces Wood in Survey Towers

BY J. S. BILBY*

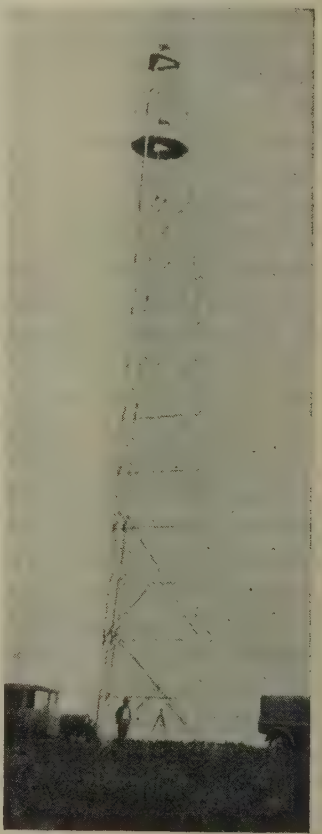


IN the measurement of long distances between primary survey points, the United States Coast and Geodetic Survey uses tall towers to enable the instrument men to sight over intervening obstacles. Formerly these were constructed of wood, at a labor and material cost of about $400 per tower.

During the winter of 1926, J. S. Bilby, chief of party, designed a steel tower for this duty. A trial tower was built by the Aeromotor Co., Chicago, and some modifications were made in the design. Thirteen additional towers were bought, and were used in South Dakota and Minnesota last summer with great success. It will be observed that the inner tower, which supports the theodolite, is entirely separate from the outer, which supports the observer's platform and the signal top. The steel towers are so much more rigid than the wooden ones that work is not interrupted by a breeze, as in the past, but can continue in a wind of 25 miles per hour.

One double tower 75 ft. high weighs 4000 lb. complete. It can be dismantled and loaded on a truck by four men in 3 hr. and re-erected in 3½ hr. The total cost of a move of about 90 miles is about $140, including all direct expense, overhead, depreciation and operation of truck, and subsistence.

Steel has thus effected a large saving in the cost of the triangulation towers, and an even greater saving in reducing the percentage of delays in observation time from windy weather.



---

*Chief of party, United States Coast and Geodetic Survey, Washington.

FABRICATED STRUCTURAL STEEL

New Projects Will Take 38,000 Tons—Awards of 37,250 Tons

INCLUDING an office building at Toronto and a pipe line at Oakland, Cal., requiring 8000 tons each, new projects amounted to 38,000 tons. Awards totaled 37,250 tons, the largest of which were a manufacturing building at Ford City, Pa., requiring 5000 tons, and 41 barges for use on the Mississippi River which took 4800 tons. Awards follow:

Boston, 200 tons, columns for Sears, Roebuck & Co. warehouse, to New England Structural Co.

Richmond, Vt., 321 tons, two bridges, to Bethlehem Bridge Co.

State of Vermont, 400 tons, four bridges, to American Bridge Co.

New York, New Haven & Hartford Railroad, 150 tons, bridge, to American Bridge Co.

New York, 2000 tons, hotel at Forty-ninth Street and Lexington Avenue, to Harris Structural Steel Co.

New York, 1000 tons, loft building at 241 West Twenty-ninth Street, to Hinkle Steel Construction Co.

New York, 1075 tons, apartment buildings at 326 East Fifty-seventh Street and at 19 East Ninety-eighth Street, to Paterson Bridge Co.

New York, 300 tons, apartment building on East Eighty-fifth Street, to Easton Structural Steel Co.

Brooklyn, 3300 tons, Greenpoint Avenue Bridge over Newtown Creek, to Bethlehem Steel Co.

Yonkers, N. Y., 300 tons, Homeopathic Hospital, to Hinkle Steel Construction Co.

State of New Jersey, 400 tons, highway bridge, to Phoenix Bridge Co.

Philadelphia, 525 tons, American Bank & Trust Co. building, to American Bridge Co.

Philadelphia, 175 tons, Quaker City Garage, to McClintic-Marshall Co.

Seaboard Air Line Railroad, 166 tons, Stony Creek bridge, to Virginia Bridge & Iron Co.

Laurel, Md., 1800 tons, grandstand, to Belmont Iron Works.

Birmingham, 150 tons, river terminal at Birmingport, to Virginia Bridge & Iron Co.

Shreveport, La., 450 tons, viaduct, to Wisconsin Bridge & Iron Co., Milwaukee.

Memphis, Tenn., 4800 tons, 41 barges for Mississippi River Commission, to American Bridge Co.

Pittsburgh, 550 tons, Stanley East Liberty Theater, to Fort Pitt Bridge Works.

Ford City, Pa., 5000 tons, Pittsburgh Plate Glass Co. plant, to McClintic-Marshall Co.

Scranton, Pa., 475 tons, warehouse for Continental Terminals, Inc., to Bethlehem Fabricators, Inc.

Detroit, 2500 tons, building for National Plate Glass Co., to Mississippi Valley Structural Steel Co.

Toledo, Ohio, 650 tons, Catholic High School, to Massillon Bridge & Structural Co.

Dayton, Ohio, 250 tons, building for Dayton Art Museum, to Massillon Bridge & Structural Co.

Chicago, 100 tons, auditorium and natatorium in Holden Park, to Midland Structural Steel Co., local.

Chicago, 1500 tons, gas holder for By-Products Coke Corporation, to an unnamed bidder.

Chicago, 2800 tons, Robey Street viaduct; 1200 tons in Bascule span, to Mount Vernon Bridge Co., and 1600 tons in approach, to American Bridge Co.

Des Moines, Iowa, 1850 tons, telephone building, to Pittsburgh-Des Moines Steel Co.

Ottawa, Ill., 2500 tons, building for National Plate Glass Co., to Mississippi Valley Structural Steel Co.; reported last week as having gone to an unnamed fabricator.

St. Louis, 750 tons; 450 tons for Knights of Pythias Temple, and 300 tons for Nafziger Bakery, to Mississippi Valley Structural Steel Co.

Albuquerque, N. M., 350 tons, bridge across Rio Grande River, to Kansas City Structural Steel Co.

Seattle, Wash., 1500 tons, office building at Fourth Street and Union Avenue, to Wallace Bridge & Structural Steel Co.

San Francisco, 300 tons, apartment building at Stockton and Pine Streets, to Herrick Iron Works.

San Francisco, 225 tons sheet piling, Ocean Beach Esplanade, to United States Steel Products Co.

South Pasadena, Cal., 100 tons, high school, to Minneapolis Steel & Machinery Co.

Monrovia, Cal., 100 tons, high school, to Minneapolis Steel and Machinery Co.

Los Angeles, 620 tons, two 80,000-bbl. tanks for Western Oil Co., to Western Pipe & Steel Co.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

New Haven, Conn., 1600 tons, power house for United Illuminating Co.

Weymouth, Mass., 600 tons, switch house addition for Edison Electric Illuminating Co. of Boston.

Albany, N. Y., 600 tons, office building.

New York, 5000 tons, section 2, route 109, of municipal subway system; bids March 23.

State of New York, 500 tons, highway bridges.

Ventnor, N. J., 165 tons, Town Hall, bids opened.

Perth Amboy, N. J., 218 tons, Fayette Street bridge.

Pennsylvania Railroad, 600 tons, bridges at Philadelphia and Harrisburg, Pa.

Rockland, Del., 104 tons, "Rising Sun" bridge over Brandywine Creek.

Cumberland, Md., 2300 tons, Celanese Corporation, plant addition, Hughes-Foulkrod Co., general contractor.

New Castle, Pa., 200 tons, garage for Shenango Motor Co.

Newark, Ohio, 200 tons, Baltimore & Ohio Railroad freight station.

Toronto, 8000 tons, office building for Canadian Bank of Commerce.

Toronto, 500 tons, electrical and engineering building for Canadian National Exhibition.

Toronto, 200 tons, addition for Patterson Canady factory.

Toronto, 200 tons, addition to Lackie Mfg. Co.

Evanston, Ill., 185 tons, Boltwood School.

Chicago, 125 tons, coal trestle for Department of Public Works.

Chicago, 5000 tons, building for Peet Soap Co., Holabird & Roche, architects.

Klamath Falls, Ore., 1000 tons, timber mill building.

Great Falls, Mont., 600 tons, high school.

Pullman, Wash., 130 tons, home economics building, Washington State College; bids in.

Seattle, 2000 tons plates, penstock for city; Puget Sound Machinery Depot, low bidder.

Oakland, Cal., 8000 tons, plates, pipe line for East Bay Municipal Utility District; bids April 20.

Hanna Company to Rebuild No. 4 Susquehanna Stack at Buffalo

The Hanna Furnace Co., Cleveland, will soon begin the rebuilding of one of its blast furnaces in Buffalo. The stack to be torn down and replaced by a larger furnace is the No. 4 Susquehanna furnace acquired from the Rogers-Brown Iron Co. last year. The present stack was built in 1912.

The new stack will have a 20-ft. hearth, 24-ft., 3-in. bosh and its height will be 85 ft., 4½ in. Its rated capacity will be 700 to 800 tons per day, but conforming to what is commonly regarded as good furnace practice in the manufacture of pig iron for the foundry trade, no attempt will be made to obtain a maximum output. It probably will be operated at a capacity of about 600 tons per day. Present stoves will not be replaced, but the stoves, boiler plant and auxiliary equipment will be modernized. Pressure burners will be installed on the stoves and boilers. The furnace will be equipped with a new gas washer and dust catcher.

Contracts for rebuilding the furnace will be placed shortly, and it is expected to be ready for operation next fall.

Higher Trackwork Shipments

February shipments of trackwork are reported by the American Iron and Steel Institute at 11,371 tons, the largest total since last August. The gain over January's 9332 tons was nearly 22 per cent. In February, 1927, the shipments were 13,678 tons, and the average month of 1927 showed 13,386 tons.

Iron and Steel Markets

Steel Prices Less Buoyant

Advance on Cold-Finished Steel Bars Withdrawn—Test of Increased Prices on Plates, Shapes and Bars Further Deferred—Steel Production Holds at High Rate

THE steel market has lost some of the momentum that carried production and prices sharply upward in the first two months of the year. Ingot output continues at a high rate, but there has been a shrinkage in new business, which is not uncommon following a period of heavy buying, and recent price advances have been proportionately less effective. In fact, a less uncompromising attitude toward prices on the part of the mills is interpreted as indicating their growing concern over the duration of the present high rate of operations.

The average daily output of ingots in February, at 160,591 tons, was unusually heavy, being the fourth highest rate ever reached and coming within 3.6 per cent of the record made in March, 1927. So far this month there has been no recession from the February rate, and it is now conceded that production for the 31 days may match that of March a year ago. Steel Corporation plants continue to operate at 90 per cent of ingot capacity, and independents are probably averaging somewhat better than 80 per cent, as a result of heavier output in the Youngstown district.

At Chicago the tendency is definitely in the direction of further increases in production, since buyers are specifying heavily against expiring contracts written at lower prices than now prevail. Shipping orders there, which were 20 per cent heavier than in the preceding week, were the fourth largest since 1925. Mill schedules are so well filled that deliveries, of necessity, will lap over into the second quarter.

Specifications, particularly for automobile steel, have also shown a gain at Cleveland. In the Pittsburgh and Philadelphia districts shipping orders for plates, shapes and bars are lagging and there is correspondingly less insistence on advanced prices. Buyers generally have been permitted to cover for second quarter at 1.85c., base Pittsburgh, or $1 a ton below the recent advance, and many of them still have considerable tonnage due them on first quarter contracts at 1.80c., possibly enough to supply their April requirements. The test of the advance to 1.85c., let alone the later one to 1.90c., may not come for another month.

Makers of cold-finished steel bars have withdrawn an advance of $2 a ton, announced early last month, and are continuing first quarter prices of 2.20c. per lb., Pittsburgh or Chicago, on second quarter business. Producers of wire nails, who raised prices and revised extras late last year, are being undersold, in some instances, by distributers who stocked more heavily than consuming demand warranted. Another factor for weakness in nails is the fact that mill shipments against low-priced contracts have not yet been completed. Unsatisfactory demand for pipe continues to be reflected in price irregularities.

Sheet prices, on the other hand, appear to have held their advance, although some shading on the galvanized finish is reported in northern Ohio. However, sheet and strip steel buyers, including the automobile companies, are showing little interest in second quarter contracts. Meanwhile, sheet mill operations for the country average 88 per cent of capacity, but backlogs are being reduced. Unfilled orders of independent mills at the end of February amounted to 667,054 tons, a loss of 27,143 tons in the month. Sales in February were at the rate of 79½ per cent of capacity, as against an output of 98.7 per cent.

This showing is regarded as a truer reflection of the current trend in the steel industry than the unfilled orders of the Steel Corporation as of Feb. 29, which, contrary to expectations, showed an increase of 122,242 tons. This gain, however, is believed to have been due in large part to one or two installments on running contracts for material apart from railroad, automobile or building steel.

Alloy steel bars have been placed on a common base of $2.65 per 100 lb., f.o.b. mill, with a schedule of alloy differentials for various grades. Changes in the prices of given alloys will be reflected in the differentials for the alloy steels affected, while general fluctuations of the steel market will show in the base price.

Among steel consuming lines, the automobile industry is conspicuous for its expanding operations. Railroad buying of rails has been virtually completed, but orders for track supplies at Chicago totaled 8000 tons for the week. The use of track accessories, particularly tie plates, has been increasing rapidly in recent years. Production of tie plates in 1926, at 608,878 tons, showed a gain of 100,000 tons over the preceding year and nearly 350,000 tons over the output of 1920.

Railroad car buying is still below expectations, but prospects have been brightened by the appearance of inquiries for 1000 automobile car bodies for the Chicago & North Western, 425 cars for the Southern Pacific and 192 for the Detroit, Toledo & Shore Line.

Two aqueducts to be built near Oakland, Cal., will require 8000 tons of steel pipe or 25,000 tons of cast iron pipe. Other construction work includes 41 Mississippi River barges, for which 4800 tons of steel was ordered, and a building at Ford City, Pa., calling for 5000 tons.

For oil storage tanks, orders have been received by Chicago mills for 15,500 tons of plates, and several new developments running into good-sized tonnage are taking form.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Some Steel Price Weakness Develops—Output Averages 80 Per Cent

PITTSBURGH, March 13.—Major developments of interest in the market this week have to do chiefly with prices, and the showing has not been all on the side of strength. Makers of cold-finished steel bars have cancelled the advance of $2 per ton announced early last month and are continuing first quarter contract prices on second quarter business. There is lack of evidence that more than 1.85c. has been done on second quarter contracts for bars, plates and shapes, as against 1.90c., announced as effective Feb. 21 last, and there is also lack of any definite signs that manufacturers will cancel portions of first quarter contract tonnages carrying 1.80c. which remain unspecified at the end of this month. It develops that all of the low-priced contracts for nails entered late last year have not yet been completed, and the advances made in strips do not yet mean much in actual performance, since buyers are covered at low prices to the end of this month and will be able to carry these low prices at least through April, by specifying in the next few weeks, and even longer, unless makers insist upon shipping orders, with cancellation as the alternative. So far as the test has applied, sheet prices appear to have held their advance. Pipe prices are easy.

The volume of specifications and the rate of steel production remain satisfactory, but it is becoming plainer that the demand lacks the momentum of a few weeks ago, and whatever change there may be in the attitude of the mills on prices without doubt springs from the belief that there is not enough business to give all producers in this district a full or relatively full operation and from the fear that a too firm insistence on the advanced prices will be at the expense of orders. The weakness in prices of the primary materials has not been helpful to the advance in steel prices. Pig iron and scrap prices have not been as low in years as now.

Ingot production for the Greater Pittsburgh district, due to a high rate in the Youngstown district, where heavy sheet specifications make increased production essential and a high rate among the Steel Corporation units, is at least 80 per cent of capacity. The Steel Corporation is doing better both in orders and production than the independents. Activity is still lacking in pig iron, scrap and coal and coke. In these products prices still favor buyers.

Pig Iron.—A Pittsburgh district sheet steel manufacturer is reported to be getting prices on a round lot of basic iron and on a smaller lot of Bessemer iron for its steel foundry, but interest in the market on the part of other melters does not amount to much. It is doubtful if merchant producers will get any of the business in the steel-making irons because they are all located in the Valleys with a freight charge to Pittsburgh of $1.76 per ton as against $1.13 to $1.26, the rates from Pittsburgh district steel plants having surplus iron to sell. Thus, with the f.o.b. furnace prices the same, the nearby furnaces would have the advantage of lower delivered prices. Valley furnace prices are substantially where they have been for several months, but they are purely nominal, notably on basic iron. Recent transactions in steel-making iron have been merely sales by one steel company to another, and in not a few instances the seller conceded more than the freight advantage. It is probable that if Valley producers wanted business in the Pittsburgh district they would have to go to $16, furnace, to get it. On foundry iron $17.25, Valley furnace, for No. 2 is the usual price, but it is not the absolute minimum, and there are instances of price shading on Bessemer iron. The present merchant production added to the steel company's surplus means a supply too great for consumption and there is too much selling pressure for prices to develop strength. The Carnegie Steel Co. has taken off one of its Carrie furnaces, but the Youngstown Sheet & Tube Co. has put on a furnace at Hubbard, Ohio.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$17.00
Bessemer	17.50
Gray forge	16.75
No. 2 foundry	17.25
No. 3 foundry	16.75
Malleable	17.25
Low phosphorus, copper free	27.00

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—Steel makers' reserves of ferromanganese appear to be getting low, as their specifications call for very prompt shipment. A free movement of spiegeleisen on contracts is noted also, and high grade ferrosilicon is moving well. New business amounts to little.

Fluorspar.—While most producers are quoting $15, f.o.b. mines, for gravel spar, that price is still subject to concessions of as much as 50c. a ton. Producers say there is a loss of at least a dollar a ton in sales at present prices, and an advance to $16 is said to be under consideration.

Semi-Finished Steel.—There is a steady movement of billets, slabs and sheet bars to sheet, strip and tin plate companies which depend on outside sources for their crude steel, but the open market does not register this activity because most buyers are not sending out inquiries as they formerly did. No change in prices is reported. Pipe skelp is going rather slowly because of relatively light pipe mill operations. Wire rod buyers are not rushing to cover for second quarter tonnages at the present price of $44, base Pittsburgh or Cleveland, as that price is $4 a ton above the ruling figure on this quarter's contract tonnage.

Bars, Plates and Shapes.—The market does not appear to have advanced beyond 1.85c., base Pittsburgh. Buyers are generally covered for second quarter at that price, but they still have considerable tonnage due them on first quarter contracts at 1.80c., which perhaps will be sufficient to supply their April requirements. Therefore the test of 1.85c. may not come for another month. Not much variation is noted in the rate of mill shipments, but specifications with most makers are running lighter than deliveries. Cold-finished steel bar makers are ordering hot-rolled bars less freely in keeping with lighter releases for their product. Plates are helped by river craft business, but the smallness of railroad car and of pipe business leaves plenty of open capacity. Structural steel inquiry is good, but comes largely from points outside the immediate Pittsburgh district. Competition for medium and small jobs is sharp because the smaller fabricating companies are short of orders.

Rails and Track Supplies.—Track fastenings are beginning to move on old orders, but new business is negligible and probably will remain so until track laying is on a heavier scale. The roads are taking out standard-section rails steadily. Light section rails are slow.

Wire Products.—The movement of nails suffers now from the fact that January shipments of most producers were so heavy that distributers' stocks increased more rapidly than the consuming demand and these stocks still are ample without much new buying. Some jobbers who bought late last year at the then existing prices of around $2.45, base, per keg, Pittsburgh, and the old card of extras, have been underselling the mills, since with the application of the new extras they have a good margin of profit at well under the present mill base. It also develops that all mills have not yet completed orders taken late last year for delivery at mill convenience. Specifications on contracts for other wire products are coming in steadily and in good volume, but second quarter contracting is not active.

Tubular Goods.—The West Texas Gas Co., subsidiary of the Prairie Oil & Gas Co., has divided an order for 154 miles of 3-in., 4-in., 6-in., 8-in. and 10-in. line pipe between a Pittsburgh district and an Eastern mill. This order and a slightly better demand for buttweld pipe are the interesting developments of the week. Oil country goods still are dull and neither the Monroe-St. Louis nor the Amarillo-Kansas City gas pipe lines has reached the quoting stage. It is believed the former is nearer the mills than the latter. Price irregularity continues.

Sheets.—There has been no let-down in the specifications for sheets and there is an operation of independent capacity of approximately 90 per cent, while the American Sheet & Tin Plate Co. last week produced between 80 and 85 per cent of capacity. This would indicate an operation for all makers of 88 per cent. Sheet prices appear to be somewhat firmer, as is indicated by fair-sized pick-up orders at the full quotations. Even a very firm market usually is marked by some deviations and the present is no exception.

Tin Plate.—There is little business beyond specifications on contracts. While tonnage releases are substantial, it is necessary for manufacturers who want to operate economically to roll against specifications yet to come. The mills are averaging an 80 per cent operation, but some are doing better than others and buyers are not finding much difficulty in getting prompt shipments.

Cold-Finished Steel Bars and Shafting.—Makers generally are taking second quarter contracts at 2.20c., base Pittsburgh or Chicago, the same price as on first quarter contracts. This represents a recession of $2 a ton, as almost all makers went to 2.30c. several weeks

F.o.b. Sparrows Point	2.00c.
F.o.b. Lackawanna	1.95c.
Del'd New York	2.17½c. to 2.22½c.
C.i.f. Pacific ports	2.30c.

Structural Shapes

	Base Per Lb.
F.o.b. Pittsburgh mills	1.85c. to 1.90c.
F.o.b. Chicago	1.95c. to 2.10c.
F.o.b. Birmingham	2.05c. to 2.15c.
F.o.b. Lackawanna	1.95c.
F.o.b. Bethlehem	2.00c.
Del'd Cleveland	2.04c. to 2.09c.
Del'd Philadelphia	2.12c. to 2.18c.
Del'd New York	2.14½c. to 2.19½c.
C.i.f. Pacific ports	2.35c.

Hot-Rolled Flats (Hoops, Bands and Strips)

	Base Per Lb.
Narrower than 3 in., P'gh	2.20c. to 2.40c.
Wider than 3 in. to 6 in., P'gh	2.10c. to 2.20c.
6 in. and wider, P'gh	*1.90c. to 2.00c.
Narrower than 3 in., Chicago	2.30c. to 2.50c.
From 3 to 6 in., Chicago	2.20c. to 2.30c.
in. and wider, Chicago	2.00c. to 2.10c.

---

*Mills follow plate or sheet prices according o gage on wider than 12 in.

Cold-Finished Steel

	Base Per Lb.
Bars, f.o.b. Pittsburgh mills	2.20c.
Bars, f.o.b. Chicago	2.20c.
Bars, Cleveland	2.25c.
Shafting, ground, f.o.b. mill	*2.45c. to 2.90c.
Strips, under 12 in., 1 up to 3 tons, P'gh	3.00c. to 3.15c.
Strips, under 12 in., 1 up to 3 tons, Cleveland	3.00c. to 3.15c.
Strips, under 12 in., 1 up to 3 tons, del'd Chicago	3.30c. to 3.45c.
Strips, under 12 in.. 1 up to 3 tons, Worcester	3.25c. to 3.40c.

---

*According to size.

Wire Products

(To jobbers in car lots, f.o.b. Pittsburgh and Cleveland)

	Base Per Keg
Wire nails	$2.65
Galvanized nails	4.65
Galvanized staples	3.35
Polished staples	3.10
Cement coated nails	2.65

	Base Per 100 *Lb.*
Bright plain wire, No. 9 gage	$2.50
Annealed fence wire	2.65
Spring wire	3.50
Galv'd wire, No. 9	3.10
Barbed wire, gal'd	3.35
Barbed wire, painted	3.10

Chicago district mill and delivered Chicago prices are $1 per ton above the foregoing. Birmingham mill prices $3 a ton higher; Worcester, Mass., (wire) mill $3 a ton higher on production f that plant; Duluth, Minn., mill $2 a ton higher; Anderson, Ind., $1 higher.

Woven Wire Fence

	Base to Retailers Per Net Ton
F.o.b. Pittsburgh	$65.00
F.o.b. Cleveland	65.00
F.o.b. Anderson, Ind.	66.00
F.o.b. Chicago district mills	67.00
F.o.b. Duluth	68.00
F.o.b. Birmingham	68.00

Sheets

Blue Annealed

	Base Per Lb.
Nos. 9 and 10, f.o.b. Pittsburgh	2.10c. to 2.20c.

No. 24, del'd Cleveland	3.09c.
No. 24, del'd Philadelphia	3.22c.
No. 24, f.o.b. Birmingham	3.05c.

Metal Furniture Sheets

No. 24, f.o.b. Pittsburgh, A grade	4.05c.
No. 24, f.o.b. Pittsburgh, B grade	3.85c.

Galvanized

No. 24, f.o.b. Pittsburgh	3.65c. to 3.75c.
No. 24, f.o.b. Chicago dist. mill	3.85c.
No. 24, del'd Cleveland	3.84c. to 3.94c.
No. 24, del'd Philadelphia	4.07c.
No. 24, f.o.b. Birmingham	3.90c.

Tin Mill Black Plate

No. 28, f.o.b. Pittsburgh	3.00c.
No. 28, f.o.b. Chicago dist. mill	3.10c.

Automobile Body Sheets

No. 20, f.o.b. Pittsburgh	4.15c.

Long Ternes

No. 24, 8-lb. coating, f.o.b. mill primes	4.10c.

Tin Plate

	Per Base Box
Standard cokes, f.o.b. P'gh district mills	$5.25
Standard cokes, f.o.b. Gary and Elwood, Ind.	5.35

Terne Plate

(*F.o.b. Morgantown or Pittsburgh*)
(Per package, 20 x 28 in.)

8-lb. coating I.C.	$11.20	25-lb. coating I.C.	$16.70
15-lb. coating I.C.	14.00	30-lb. coating I.C.	17.75
20-lb. coating I.C.	15.30	40-lb. coating I.C.	19.85

Alloy Steel Bars

(F.o.b. Pittsburgh, Chicago or Ohio mill.)

S.A.E. Series Numbers		*Per* 100 *Lb.*
2000	(½% Nickel)	$2.90
2100	(1½% Nickel)	3.20
2300	(3½% Nickel)	4.15
2500	(5% Nickel)	4.90
3100	Nickel Chromium	3.20
3200	Nickel Chromium	3.65
3300	Nickel Chromium	6.45
3400	Nickel Chromium	5.85
4100	Chromium Molybdenum (0.15 to 0.25 Molybdenum)	3.15
4100	Chromium Molybdenum (0.25 to 0.40 Molybdenum)	3.35
4600	Nickel Molybdenum (0.20 to 0.30 Molybdenum, 1.25 to 1.75 Nickel)	3.70
5100	Chromium Steel (0.60 to 0.90 Chrome)	3.00
5100	Chromium Steel (0.80 to 1.10 Chrome)	3.10
5100	Chromium Spring Steel	2.85
6100	Chromium Vanadium Bars	3.85
6100	Chromium Vanadium Spring Steel	3.60
9250	Silicon Manganese Spring Steel	2.90
Chrome Nickel Vanadium		4.15
Carbon Vanadium		3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, 9/16 in. and larger	$2.70 to $2.80
Spikes, ½ in. and smaller	2.70 to 2.80
Spikes, boat and barge	2.90 to 3.00
Tie plates, steel	2.15
Angle, bars	2.75
Track bolts, to steam railroads	3.80 to 4.90
Track bolts, to jobbers, all sizes, per 100 count,	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Steel			*Iron*		
Inches	Black	Galv.	Inches	Black	Galv.
⅛	45	19½	¼ to ⅜	+11	+39
¼ to ⅜	51	25½	½	22	2
½	56	42½	¾	28	11
¾	60	48½	1 to 1½	30	13
1 to 3	62	50½			

Lap Weld

2	55	43½	2	23	7
2½ to 6	59	47½	2½	26	11
7 and 8	56	43½	3 to 6	28	13
9 and 10	54	41½	7 to 12	26	11
11 and 12	53	40½			

Butt Weld, extra strong, plain ends

⅛	41	24½	¼ to ⅜	+19	+54
¼ to ⅜	47	30½	½	21	17
½	53	42½	¾	28	12
¾	58	47⅛	1 to 1½	30	14
1 to 1½	60	49½			
2 to 3	61	50½			

Lap Weld, extra strong, plain ends

2	53	42½	2	23	9
2½ to 4	57	46½	2½ to 4	29	15
4½ to 6	56	45½	4½ to 6	28	14
7 to 8	52	39½	7 to 8	21	15
9 and 10	45	32½	9 to 12	16	2
11 and 12	44	31½			

On carloads the above discounts on steel pipe are increased on black by one point, with supplementary discount of 5 and 2½%, and on galvanized by 1½ points, with supplementary discount of 5 and 2½%. On iron pipe, both black and galvanized, the above discounts are increased to jobbers by one point with supplementary discounts of 5 and 2½%.

Note.—Chicago district mills have a base two points less than the above discounts. Chicago delivered base is 2½ points less. Freight is figured from Pittsburgh, Lorain, Ohio, and Chicago district mills, the billing being from the point producing the lowest price to destination.

Boiler Tubes

Base Discounts, f.o.b. Pittsburgh

Lap Welded Steel		*Charcoal Iron*	
2 to 2¼ in.	27	1½ in.	+18
2½ to 2¾ in.	37	1¾ to 1⅞ in.	+ 8
3 in.	40	2 to 2¼ in.	— 2
3¼ to 3¾ in.	42½	2½ to 3 in.	— 7
4 to 13 in.	46	3¼ to 4½ in.	— 9

Beyond the above discounts, 7 fives extra are given on lap welded steel tubes and 2 tens to 2 tens and 1 five on charcoal iron tubes.

Standard Commercial Seamless Boiler Tubes

Cold Drawn

1 in.	60	3 in.	45
1¼ to 1½ in.	52	3¼ to 3½ in.	47
1¾ in.	36	4 in.	50
2 to 2¼ in.	31	4½, 5 and 6 in.	45

Hot Rolled

2 and 2¼ in.	37	3¼ and 3½ in.	53
2½ and 2¾ in.	45	4 in.	56
3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

ago, and it was expected that price would be named for the second quarter. The higher price, however, brought considerable resistance, particularly in Detroit, where buyers pointed out that they paid an advance on cold-finished bars for first quarter and had not paid higher for any other grades of steel.

Hot-Rolled Flats.—Consumers are specifying freely against lower-priced first quarter orders, but are not exhausting their coverages, and unless makers cancel unspecified tonnage on March 31 it will be at least another month before a real test of present prices will come. There has been some second quarter contracting at the advanced prices, but it is early for specifications against them.

Cold-Rolled Strips.—The advance of more than a month ago to 2.90c., base, for lots of 3 tons or more and to 3.15c., base, for lots of 1 to 3 tons, is not yet fully established, because of liberal coverage of consumers for this quarter. New requirements are not large enough to provide a test of the recent advance. Business both for prompt and second quarter shipment has been done at the higher levels, but it has been chiefly with buyers who take small lots and whose quality requirements are exacting.

Bolts, Nuts and Rivets.—Business in bolts and nuts is better than it was during the first five or six weeks of the year, but local producers are not fully engaged. Makers' prices are firm, but in the secondary market some irregularity exists, with Cleveland jobbers taking business here at less than the prices of local jobbers. Most rivet makers have gone along with the advances recently announced, but small wagon and tinners' rivets are obtainable at less than the quoted discounts.

Coke and Coal.—Only one Valley furnace now active is uncovered on second quarter requirements of coke. For that period coke producers are asking from $2.85 to $3, but $2.75 seems to have been the basis of most of the business now on the books and will probably be the basis of a contract now pending which amounts to approximately 16,000 tons a month. The market for spot furnace coke is limited and prices are largely of buyers' making. There is no change in foundry coke prices. The coal market shows no more life or strength than it has for some time. Some yearly contracts to run from April 1 next, are being written, but the prices indicate that operators are anxious to keep their mines active.

Old Material.—On the buying side there is little interest in the market except on the part of dealers, who, not being pressed for deliveries, are not taking hold hurriedly or without an effort to purchase against their sales at prices that mean a profit. It is commonly said that if any consumer wanted a sizable tonnage of heavy melting steel the price would not be under $15, but, in the absence of any such inquiry, this is merely conjecture. Dealers are not paying much higher than $14.75 for material to be applied against old orders of exacting melters. Machine shop turnings have dropped further, having sold at as low as $10; supplies out of Detroit are large, and there is not the usual market in Youngstown and to the west. Blast furnace scrap also is weaker, because consumptive demand is so light and dealers have been able to get supplies against short orders so readily that they have reduced their bids. There is little activity in the foundry grades, and on railroad specialties prices are at least 25c. a ton lower.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
Heavy melting steel	$14.50 to $15.00
Scrap rails	14.00 to 14.50
Compressed sheet steel	14.00 to 14.50
Bundled sheets, sides and ends	13.00 to 13.50
Cast iron carwheels	14.50 to 15.00
Sheet bar crops, ordinary	15.00 to 15.50
Heavy breakable cast	13.00 to 13.50
No. 2 railroad wrought	15.00 to 15.50
Heavy steel axle turnings	13.00 to 13.50
Machine shop turnings	10.00 to 10.50
Acid Open-Hearth Furnace Grades:	
Railroad knuckles and couplers	16.50 to 17.00
Railroad coil and leaf springs	16.50 to 17.00
Rolled steel wheels	16.50 to 17.00
Low phosphorus billet and bloom ends	18.50 to 19.00
Low phosphorus, mill plate	17.50 to 18.00
Low phosphorus, light grade	16.50 to 17.00
Low phosphorus sheet bar crops	17.50 to 18.00
Heavy steel axle turnings	13.00 to 13.50
Electric Furnace Grades:	
Low phosphorus punchings	16.50 to 17.00
Heavy steel axle turnings	13.00 to 13.50
Blast Furnace Grades:	
Short shoveling steel turnings	10.50 to 11.00
Short mixed borings and turnings	10.50 to 11.00
Cast iron borings	10.50 to 11.00
No. 2 busheling	9.50 to 10.00
Rolling Mill Grades:	
Steel car axles	18.00 to 19.00
No. 1 railroad wrought	11.00 to 11.50
Sheet bar crops	17.00 to 17.50
Cupola Grades:	
No. 1 cast	14.50 to 15.00
Rails 3 ft. and under	15.00 to 15.25
Malleable Grades:	
Railroad	14.50 to 15.00
Industrial	14.00 to 14.50
Agricultural	13.50 to 14.00

New Coast Company to Manufacture and Distribute Corrugated Sheets

LOS ANGELES, CAL., March 10.—J. E. Webster, E. B. Fish, John A. Lambie and others have organized the Superior Culvert & Flume Mfg. Co., capital $100,000, with offices and factory at 2440 East Fifteenth Street, to manufacture and distribute corrugated culverts.

The Central Alloy Steel Corporation, Massillon, Ohio, has given the new company exclusive manufacturing and distributing rights for its Toncan molybdenum corrugated culverts in the States of California, Utah, Nevada, New Mexico and Arizona. In addition, a regular line of copper-bearing sheet steel culverts will be manufactured.

The first of the company's plants is now in operation at Union and Nineteenth Streets, Oakland, Cal., and the Los Angeles factory will be operating before April 1. Plants will also be established some time during this year in Phoenix, Ariz., and Salt Lake City, Utah.

The president of the company is J. E. Webster, one of the best known iron and steel men on the Pacific Coast. For some years he has been general manager of the Ducommun Corporation of Los Angeles, large distributer of steel and metal products. E. B. Fish is vice-president, John A. Lambie, secretary and manager, and Oliver P. Stewart, treasurer. The latter three men, all officers of the West Coast Pipe & Steel Co., Los Angeles, together with J. E. Webster and J. Overholtzer, compose the board of directors.

Chicago

Steel Specifications Heavy and Deliveries Will Extend Into Second Quarter

CHICAGO, March 13.—Mill schedules are so well filled to the end of this month that much tonnage now being specified against contracts will of necessity be delivered after the turn of the second quarter, even though such tonnage was written at prices lower than those now asked. It was originally the intention of producers to terminate at the end of March deliveries on business taken at 1.90c. and 1.95c., but there has been an effort to satisfy users' urgent demands, and this has resulted in frequent rearrangements of rolling schedules and delaying of shipments not immediately needed.

It is not to be doubted that many buyers are resisting recent advances in prices and are specifying ahead of actual requirements, and by so doing are building stocks which will postpone the establishing of higher quotations. This situation is reflected by steel specifications that are 20 per cent heavier than a week ago and are the fourth largest for any like period since 1925. In the meantime, forward contracting is only moderately active. Among structural awards is 2900 tons for the Robey Street viaduct, Chicago. Orders have been placed by the Rock Island for 36 passenger and baggage cars. Sellers of hot-rolled strip are accepting 1.95c. for heavy gages and in widths over 12 in.

Pig Iron.—Various estimates place second quarter iron now under contract at 70 per cent of the normal requirements of users in this district. New contracts are less numerous than last week, though the volume is considered satisfactory by sellers. Spot sales are increasing, having so far this month passed the total of like purchases in February. The trade takes this as an indication that first quarter contracts were conservative, but it may also mean that many buyers were doubtful of the business trend in the early months of the year and therefore were not willing to buy until better demand for foundry products was in sight. Furnace output is steady but is below shipments, affording producers an opportunity to reduce stocks built up during the winter months.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.50
N'th'n No. 1 fdy., sil. 2.25 to 2.75	19.00
Malleable, not over 2.25 sil.	18.50
High phosphorus	18.50
Lake Superior charcoal, averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	21.18
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—Specifications for these commodities are large, but new buying is widely scattered and in car lots. A carload of ferromanganese has been sold at $100, seaboard.

Prices delivered Chicago: 80 per cent ferromanganese, $107.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $38.76 to $39.76.

Plates.—Oil tank storage programs are developing rapidly and for the second week purchases of plates for that purpose have been heavy. In the last week 15,500 tons has been added to local makers' books. All of this tonnage is for delivery in the Southwest, principally Texas. Subjected to sharp competition from other steel producing centers, prices did not hold to the full 2c. quotation which producers are naming in and near Chicago. Inquiry for new oil storage projects is lacking but several new developments are taking form. Shipments against recent tankage material contracts have moved forward rapidly and orders received this week are for delivery at the earliest convenience of mills. Small tank manufacturers in this district are busy and it is noticeable that general merchandising of plate mill products is becoming more extended. Plate business is well proportioned in accordance to capacity of sheared and universal mills. Of special interest to railroad equipment plants is an inquiry by the Chicago & North Western for 1000 automobile car bodies, and one from the Southern Pacific for 200 automobile cars and 175 oil cars. Orders are small but pending business is active. Buyers in many quarters are resisting the quotation at 2c. for second quarter delivery, but some tonnage has been sold at that price.

Mill prices on plates per lb.: 1.95c., base Chicago.

Structural Material.—New business in structural material is not heavy, but local shops are well fortified by order books which have grown rapidly because of recent heavy tonnage awards. Foremost among outstanding inquiries is 6000 tons of bridge work for the Chicago & North Western. The Chicago Board of Trade has leased temporary quarters, and it is not improbable that its building program, calling for a 35-story structure, will soon take definite form. The American Bridge Co. is furnishing foundation steel for the Robey Street bridge approach, Chicago. The entire project will require about 3000 tons. Fresh inquiry is widely scattered. A timber mill building in Oregon will take 1000 tons and a high school for Great Falls, Mont., calls for 600 tons. Chicago prices at 2c. for structural material require further tests, though some business is being taken at that figure. Mill deliveries range from four to six weeks.

Mill prices on plain material per lb.: 1.95c. to 2.10c., base, Chicago.

Bars.—New buying in soft steel bars is about equal to shipments. Specifications are practically equal to last week, making this the fourth largest seven-day period since the close of 1925. Forgers are busy, and a steady volume of specifications emanates from bolt and rivet manufacturers. Farm implement plants remain active. Soft steel bar prices are fairly well established at 2c., Chicago. Demand for iron bars is larger, but it still far from taxes local mill capacity. Sellers of alloy steel bar established March 9 a base price of 2.65c. per lb., to which are added alloy differentials. Announcement of these prices inaugurates the opening of second quarter books. In adopting the new schedule producers plan to hold differentials subject to changes in prices of alloys, whereas the base price will fluctuate with the general market. Second quarter contracting for alloy bars is making progress but not at a rapid pace. Deliveries range from two to three weeks and mills are operating at close to capacity. New business in rail steel bars is not as large as the weekly average in February, and specifications also have dropped. Notwithstanding this change in the last week, total shipments of hard steel bars in the first two and one-half months of this year are well ahead of the corresponding period in 1927. Spot business is being taken at 1.80c., Chicago Heights mills, while sales for delivery after March 31 are being made at 1.85c.

Mill prices per lb.: Soft steel bars, 1.95c. to 2.10c., base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.80c. to 1.85c., base, Chicago Heights mill.

Wire Products.—Indications are at hand that the peak of the spring demand for wire products has been reached. Producers already have adjusted operations downward about two points, or to a rate of 73 per cent of capacity. Orders from jobbers in the South are well sustained and some improvement is noted west of the Mississippi River and in the near Northwest, but business is lagging in the North Central States. Railroads are taking wire products in quantities which are normal for this time of the year. Orders from the manufacturing trade is steady. New business in nails is unusually dull because dealers have stocked more heavily than spring building activity warranted. Prices for wire and wire products are shown on page 761.

Rails and Track Supplies.—Miscellaneous track accessory orders for the week total 8000 tons. Inquiry is small, but requests for prices from several Western railroads are expected at an early date. Prices for steel tie plates are fairly steady at $43 per ton. Several buyers have placed orders for iron tie plates. Light rail business is confined to carlot orders.

Cast Iron Pipe.—Not less than 7000 tons of cast iron pipe has been ordered in the last week. Contractors' lettings, including 1000 tons for Niles Center, Ill., total more than 5000 tons. The National Cast Iron Pipe Co. has taken 150 tons of 6-in. and 125 tons of 8-in. pipe for Appleton, Wis., and the United States Cast Iron Pipe & Foundry Co. has been awarded 150 tons of 8 and 12-in. pipe by Grosse Point Farms, Mich. Saginaw, Mich., has ordered 475 tons of 6 to 24-in. pipe from James B. Clow & Sons. Fresh inquiry includes 380 tons of 24-in. class B pipe for Springfield, Ill., 600 tons of 10-in. pipe for Painesville, Ohio, and 115 tons of 4 and 6-in. class C pipe for Alliance, Ohio. Buying by public utilities and railroads is light, but fresh inquiry from the latter is promising. Deliveries are now not far from 40 days. Prices are not changed from a week ago, though sentiment among producers is becoming stronger for a closer adherence to a price level near $30, Birmingham, for 6-in. diameters and larger. This is indicated by the low bids at Columbus, Ohio, and at Berea, Ohio. The former were on 2000 tons of 6 to 16-in. pipe and the low bid was $27.95, Birmingham. The lowest quotation at Berea was $28.35, Birmingham, on 1100 tons.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $35.20 to $38.20; 4-in., $39.20 to $42.20; Class A and gas pipe, $4 extra.

Bolts, Nuts and Rivets.—Second quarter contracting is rapidly getting under way and reports indicate that little resistance is being offered to recent advances in prices for small and large rivets and stove bolts. Specifications are a shade lighter, but as yet this situation has not affected output of these commodities.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per Lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Cold-Finished Steel Bars.—Efforts to hold prices for this commodity at 2.30c. have failed, and books for second quarter have been opened at 2.20c. Contracting is slow, and specifications are in smaller volume than at the turn of the month.

Sheets.—Specifications for sheets to Chicago district mills are steady, and output remains at 90 per cent of capacity. Orders from the Southwest are more numerous and manufacturers of roofing and conductor pipe are taking larger quantities. Second quarter contracting is moderately active at present quotations.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 3.05c.; No. 24 galvanized, 3.90c.; No. 10 blue annealed, 2.25c. to 2.35c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Reinforcing Bars.—Many projects that have been before the trade for some time now give promise of developing into actual orders. Although in recent years cold weather has not deterred buying materially, it is apparent that with the last of the extreme weather in sight many projects are becoming more active. State road contractors have placed fully 2000 tons of reinforcing bars. The bulk of this tonnage is in straight lengths and will be shipped directly from mills. Rail steel reinforcing bars are being quoted at 1.85c. to 1.95c., and warehouse prices on billet steel concrete bars range from 2.25c. to 2.75c.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.25c. to 2.75c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb	$3.20
Common wire nails, base per keg	3.00
Cement coated nails, base per keg	2.90

Hot Rolled Strip.—Shipments of this commodity are at mill capacity, and prices are fairly well established. An automobile manufacturer near Chicago is operating at a 30 per cent higher rate than in February.

Coke.—This market is steady. Spot buying is dull, but specifications against first half contracts indicate that the local foundry melt is sustained.

Old Material.—A Chicago mill has bought about 8000 tons of No. 1 heavy melting steel at $13.25 a gross ton, delivered. This price is 25c. below that recently paid by the same user. Dealers have dropped their trading prices to $12.50 for the ordinary grade, but in some instances they must pay $13 for heavy melting steel that will meet the rigid inspections made at some receiving points. A user has taken a round tonnage of hydraulic compressed sheets at $11.60 a gross ton, delivered, but later in the week another user refused to consider that price. Malleable and cast grades are lower in price, and rerolling rails are off 50c. a gross ton. Buying of many specialties is moderately active, but in small lots and usually upon active solicitation by sellers. Although forged wheels and scrap plate have sold higher in the week, the general tendency of prices is to seek lower levels.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$12.75 to $13.25
Shoveling steel	12.75 to 13.25
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to 14.00
Hydraulic compressed sheets	11.25 to 11.75
Drop forge flashings	9.75 to 10.25
Forged, cast and rolled steel car-wheels	15.50 to 16.00
Railroad tires, charging box size	16.25 to 16.75
Railroad leaf springs, cut apart	16.50 to 17.00
Acid Open-Hearth Grades:	
Steel couplers and knuckles	14.00 to 14.50
Coil springs	16.50 to 17.00
Electric Furnace Grades:	
Axle turnings	13.00 to 13.50
Low phosphorus punchings	14.25 to 14.75
Low phosphorus plate, 12 in. and under	14.00 to 14.50
Blast Furnace Grades:	
Axle turnings	10.75 to 11.25
Cast iron borings	9.50 to 10.00
Short shoveling turnings	9.50 to 10.00
Machine shop turnings	7.00 to 7.50
Rolling Mill Grades:	
Iron rails	13.50 to 14.00
Rerolling rails	14.50 to 15.00
Cupola Grades:	
Steel rails less than 3 ft	15.00 to 15.50
Angle bars, steel	14.00 to 14.50
Cast iron carwheels	14.00 to 14.50
Malleable Grades:	
Railroad	12.50 to 13.00
Agricultural	12.00 to 12.50
Miscellaneous:	
*Relaying rails, 56 to 60 lb	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angle and splice bars	14.00 to 14.50
Iron arch bars and transoms	18.75 to 19.25
Iron car axles	21.50 to 22.00
Steel car axles	16.00 to 16.50
No. 1 railroad wrought	11.00 to 11.50
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	9.25 to 9.75
No. 2 busheling	4.25 to 4.75
Locomotive tires, smooth	12.50 to 13.00
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.50 to 15.00
No. 1 railroad cast	12.50 to 13.00
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.25 to 11.75
Grate bars	11.50 to 12.00
Brake shoes	11.50 to 12.00

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

The Rust Engineering Co., Pittsburgh, has received a contract from the American Mond Nickel Co. for the construction of a batch type in and out billet reheating furnace to be built at its Hyde, Pa., plant. The furnace will be used to reheat nickel billets 4 in. by 4 in. by 5 ft. for rolling down into rods and shapes.

Philadelphia

Pig Iron Price Menaced by Buffalo Offers—Steel Is Quiet

PHILADELPHIA, March 13.—Specifications against first quarter contracts on plates, shapes and bars are lagging, but most mills are able to maintain a good rate of operation. The intention seems to be to establish the current quotation of 1.90c. per lb., Pittsburgh, on bars, 2.05c., Bethlehem, on shapes and 2.05c., Coatesville, on plates for second quarter contracts not made by the end of this month. Black and galvanized sheet prices continue to show more firmness and mills are making a decided effort to establish the second quarter contract price at 2.90c., Pittsburgh, on black and 3.75c., Pittsburgh, on galvanized. Consumers, however, are receiving deliveries on current contracts at lower prices and are hesitant in placing second quarter contracts at current quotations.

Eastern Pennsylvania furnaces are maintaining $20 per ton, furnace, on foundry iron, but continued reports of low barge rates from Buffalo and some actual sales for second quarter have caused concern as to the future course of the market.

Pig Iron.—Some small tonnages for second quarter are being negotiated. Evidently $20 is being maintained as the contract price for the next quarter, despite competition offered by Buffalo furnaces quoting on water and rail and all water delivery. A Lancaster, Pa., company reports the purchase of 600 to 700 tons of foundry grade from a Buffalo producer at about $1 per ton under the lowest eastern Pennsylvania offer. Another eastern Pennsylvania consumer is reported to have bought a small tonnage for third quarter delivery from Buffalo at considerably less than the lowest eastern Pennsylvania quotation, which was based on $20, furnace. The Delaware, Lackawanna & Western is asking for 50 tons of foundry iron for Scranton. Foreign iron has appeared in sizable quantities, but the recent arrival of a cargo of foundry grade from the United Kingdom is understood to be one of four cargoes going to a Delaware River cast iron pipe producer. Indian foundry pig iron is obtainable at about $20.25, duty paid, Philadelphia. No sales of domestic low phosphorus are reported and the basic market is quiet.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.	$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.	21.26
East. Pa. No. 1X	21.76
Basic (delivered eastern Pa.)	$19.50 to 20.00
Gray forge	19.75 to 20.25
Malleable	21.00 to 21.50
Standard low phos. (f.o.b. New York State furnace)	23.00 to 24.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to 24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to 25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to 25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, 3/16-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.50c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.60c.
Steel bands, No. 12 gage to 3/16-in., inclusive	3.35c.
Spring steel	5.00c.
Black sheets (No. 24)	4.25c.
Galvanized sheets (No. 24)	5.10c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
3/16-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

Ferromanganese.—Requisitions against contracts are coming in more freely and there are occasional carload purchases in the open market. Prices continue firm at $100 per ton, seaboard.

Billets.—Some small inquiry for second quarter delivery has begun to develop and there is still the usual small-lot purchasing for prompt shipment. Producers believe that prices of semi-finished material should be advanced about $1 per ton in view of the higher finished material market, but $33, Pittsburgh, is still being quoted on rerolling billets with forging quality at $38, Pittsburgh.

Plates.—The market is quite firm at 2c., Coatesville, on contracts for the next quarter and 2.05c., Coatesville, is quoted for current delivery. Shipments on contracts are good, but new business is light.

Shapes.—Many consumers are delaying specifications against contracts, so it appears that there will be some shipments carried over into second quarter, unless mills cancel contracts not fully specified by the end of this month. Quotations continue at 2c., Bethlehem, or 2.13c., delivered Philadelphia, on contracts and 2.12c. to 2.18c., delivered Philadelphia, on current purchases. Bridge construction projects promise some desirable tonnage for the spring.

Bars.—There is a moderate volume of shipment on contracts, as a result of continued pressure by the mills for specifications. On contracts for the next quarter 1.85c., Pittsburgh, is quoted, or 2.17c., Philadelphia, while the current delivered price is 2.22c., Philadelphia.

Sheets.—Black and galvanized sheet prices continue to exhibit a tendency to greater strength and mills are quoting 2.90c., Pittsburgh, on black and 3.75c., Pittsburgh, on galvanized as the schedule for second quarter contracts. Consumers, however, are receiving deliveries on lower-priced purchases and manifest little interest in contracting at these prices. Blue annealed and strip sheets seem to be firm on the basis of 2.10c., Pittsburgh.

Warehouse Business.—There is a good volume of purchasing, but tonnages involved are small. Prices are being better maintained than in several months. The quantity differentials on bars and small shapes are being adhered to and jobbers are beginning to consider extension of these differentials to hoops, bands and other products.

Imports.—In the week ended March 10, a total of 250 tons of Spanish iron ore and three tons of British steel bars arrived at this port.

Old Material.—A continued tendency toward weakness in prices is noted. The market on all grades is quiet. Forge fire has been purchased at $11 per ton, Coatesville, and $11.50 per ton, Reading, Pa. Machine shop turnings are quoted at $11 per ton on the basis of current contracts, but consumers are offering to buy at lower prices. There was about 3500 tons of heavy melting steel on the Pennsylvania Railroad list this month. The only items sold in eastern Pennsylvania were a small tonnage of grate bars at about $12.65 per ton, delivered Harrisburg, and a tonnage of breakable cast at $15.40, Harrisburg, and turnings at $11.35, Pencoyd.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to $14.00
Scrap T rails	13.00 to 13.50
No. 2 heavy melting steel	11.00 to 11.50
No. 1 railroad wrought	14.50 to 15.00
Bundled sheets (for steel works)	10.50 to 11.00
Machine shop turnings (for steel works)	11.00
Heavy axle turnings (or equivalent)	12.00 to 12.50
Cast borings (for steel works and rolling mill)	11.00
Heavy breakable cast (for steel works)	15.50 to 16.00
Railroad grate bars	12.50
Stove plate (for steel works)	12.50
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to 18.00
Couplers and knuckles	16.00 to 16.50
Rolled steel wheels	15.50 to 16.00
No. 1 blast furnace scrap	10.50 to 11.00
Machine shop turnings (for rolling mill)	11.00
Wrought iron and soft steel pipes and tubes (new specifications)	12.50
Shafting	17.50 to 18.00
Steel axles	19.00 to 20.00
No. 1 forge fire	10.00 to 11.50
Steel rails for rolling	15.00 to 15.50
Cast iron carwheels	15.50 to 16.00
No. 1 cast	16.00 to 16.50
Cast borings (for chemical plant)	14.50 to 15.00

New York

Pig Iron Sales About 8500 Tons—New Steel Buying Light

NEW YORK, March 13.—Sales of pig iron by local brokers during the week totaled about 8500 tons. The larger consumers seem to have covered their second quarter requirements, and only a small total of inquiries is pending. There is in evidence a tendency on the part of consumers to compare their inventories and order books and return to hand-to-mouth buying. Buffalo furnaces are maintaining $16.50 per ton, base, and consumers at water delivery points are showing increasing interest in barge shipments. About 2000 tons of foundry iron for a Port Chester, N. Y., consumer is still under negotiation, owing to difficulty in arranging for barge delivery at the buyer's dock. Competition for freight among companies operating barge service from Buffalo to New York has been so keen recently that less than $2 per ton is said to have been quoted if tonnage was available before the wheat movement from Buffalo. As a result, barge operators and shippers met yesterday to confer on the situation. Foreign pig iron has begun to appear, following a long period of high prices and small arrivals. A cargo of British foundry iron has arrived at Philadelphia, and several more are scheduled, also a cargo of low phosphorus. A small lot of German iron is reported to have been sold in eastern Pennsylvania, and Indian pig iron is slightly more competitive with the domestic product.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$21.41 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Ferroalloys.—New business in both ferromanganese and spiegeleisen is confined to carloads and small lots. Specifications on contract for both alloys are reported as exceedingly heavy. There is also a good specification demand for ferrosilicon and ferrochromium.

Reinforcing Bars.—The Truscon Steel Co. will furnish approximately 1500 tons of bars for the Eleto warehouse in New York. Other business taken during the week has been in small tonnages, although fair in point of total volume. Effective March 15, distributers will advance the mill price $1 a ton to 2c., Pittsburgh. No immediate change in warehouse prices is contemplated.

Finished Steel.—Conditions in this market have been quiet during the past week. Consumers and mill representatives seem hesitant about testing the advanced prices recently announced on a number of products. Although some scattered orders have been taken at the new prices, a real test is yet to be made. This condition applies mostly to bars, shapes and plates, on which 1.90c., Pittsburgh, and 2.05c., Eastern mills, were recently announced. While a considerable tonnage was placed on order for second quarter delivery at the old prices, $1 a ton less than the new, many consumers are not yet covered. In sheets and strip, specifications are coming in freely, but new business is not so satisfactory. Structural awards in the metropolitan territory, exclusive of bridges, subways, etc., as reported to the Structural Steel Board of Trade, fell off in February, amounting only to 24,000 tons. This compares with 30,000 tons in January and with 58,000 tons in February, 1927. Prospects for new business, however, are encouraging.

Cast Iron Pipe.—An effort is being made by Birmingham producers of cast iron bell and spigot pipe to establish $31 per ton, base, for lots of 200 tons or less and $29 or more for purchases in excess of 200 tons. A producer in the North which recently booked some business at less than the scheduled market is quoting on a higher basis. There is a moderate volume of private purchasing of pipe, but New England municipalities have not yet appeared with their usual pipe requirements for spring delivery. The Department of Purchase, New York, opens bids March 14 on 3280 tons of 8-in., 1830 tons of 12-in. and 245 tons of 6-in. pipe, a total of 5355 tons. Montclair, N. J., has placed 245 tons of 6, 8 and 12-in. water pipe with the National Cast Iron Pipe Co.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.25 to $38.25; 4-in. and 5-in., $42.25 to $43.25; 3-in., $52.25 to $53.25; Class A and gas pipe, $4 to $5 extra.

Warehouse Business.—The usual spring demand for structural material has increased the tonnage of purchases from stock. Steel bars are in fair demand. Jobbers in this district are showing interest in the possibility of adopting quantity differentials on steel bars

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.34c.
Soft steel bars and small shapes	3.24c.
Iron bars	3.24c.
Iron bars, Swedish charcoal	7.00c. to 7.25c.
Cold-finished shafting and screw stock—	
Rounds and hexagons	3.40c.
Flats and squares	3.90c.
Cold-rolled strip, soft and quarter hard,	5.15c. to 5.40c.
Hoops	4.49c.
Bands	3.99c.
Blue annealed sheets (No. 10 gage),	3.84c. to 3.89c.
Long terne sheets (No. 24)	5.80c.
Standard tool steel	12.00c.
Wire, black annealed	4.50c.
Wire, galvanized annealed	5.15c.
Tire steel, 1½ x ½ in. and larger	3.30c.
Smooth finish, 1 to 2½ x ¼ in. and larger	3.65c.
Open-hearth spring steel, bases	4.50c. to 7.00c.

Machine bolts, cut thread:	Per Cent Off List
¾ x 6 in. and smaller	55 to 60
1 x 30 in. and smaller	50 to 50 and 10
Carriage bolts, cut thread:	
½ x 6 in. and smaller	55 to 60
¾ x 20 in. and smaller	50 to 50 and 10
Coach screws:	
½ x 6 in. and smaller	55 to 60
1 x 16 in. and smaller	50 to 50 and 10

Boiler Tubes—	Per 100 Ft.
Lap welded steel, 2-in	$17.33
Seamless steel, 2-in	20.24
Charcoal iron, 2-in	25.00
Charcoal iron, 4-in	67.00

Discounts on Welded Pipe

Standard Steel—	Black	Galv.
½-in. butt	46	29
¾-in. butt	51	37
1-3-in. butt	53	39
2½-6-in. lap	48	35
7 and 8-in. lap	44	17
11 and 12-in. lap	37	12
Wrought Iron—		
½-in. butt	5	+19
¾-in. butt	11	+ 9
1-1½-in. butt	14	+ 6
2-in. lap	5	+14
3-6-in. lap	11	+ 6
7-12-in. lap	3	+16

Tin Plate (14 x 20 in.)

	Prime	Seconds
Coke. 100 lb. base box	$6.45	$6.20
Charcoal, per box—	A	AAA
IC	$9.70	$12.10
IX	12.00	14.25
IXX	13.90	16.00

Terne Plate (14 x 20 in.)

IC—20-lb. coating	$10.00 to $11.00
IC—30-lb. coating	12.00 to 13.00
IC—40-lb. coating	13.75 to 14.25

Sheets Box Annealed—Black, C. R. One Pass

	Per Lb.
Nos. 18 to 20	3.80c. to 4.00c.
No. 22	3.95c. to 4.15c.
No. 24	4.00c. to 4.20c.
No. 26	4.10c. to 4.30c.
No. 28*	4.25c. to 4.45c.
No. 30	4.50c. to 4.70c.

Sheets, Galvanized

	Per Lb.
No. 14	4.35c.
No. 16	4.45c.
No. 18	4.35c. to 4.60c.
No. 20	4.50c. to 4.75c.
No. 22	4.55c. to 4.80c.
No. 24	4.70c. to 4.95c.
No. 26	4.95c. to 5.20c.
No. 28*	5.20c. to 5.45c.
No. 30	5.60c. to 5.85c.

---

*No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

and small shapes. Black and galvanized sheets are quiet, with purchases confined to small lots. Prices are generally firm.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.17½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Coke.—Standard foundry grade is offered for prompt shipment at $4 per ton, Connellsville, and sometimes for less. Standard furnace coke is obtainable at $2.75 per ton, Connellsville. Current purchasing is in most cases limited to carload lots. Delivered prices of Connellsville foundry coke are: To northern New Jersey, $8.03; to New York or Brooklyn, $8.79; to Newark or Jersey City, $7.91. By-product coke is unchanged at $9 to $9.40 per net ton, delivered Newark or Jersey City.

Old Material.—Shipments of No. 1 heavy melting steel are going to Bethlehem, Steelton, Coatesville, Pa., and Claymont, Del. On recent contracts for steel mill stove plate, brokers are paying $12 per ton, delivered. Forge fire is being purchased at $10.50 per ton, delivered Coatesville, and $11 per ton, Reading. Machine shop turnings are still quoted by dealers at $10.50 per ton, delivered eastern Pennsylvania, and no sale at $10.50 per ton, the offering price of consumers, has been reported. Railroad grate bars on the Pennsylvania Railroad list brought $12.65 per ton, Harrisburg; heavy breakable cast, $15.40, Harrisburg; steel axles, $20.75 per ton, Columbia, Pa., and machine shop turnings, $11.35, Pencoyd, Pa.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to $10.85
Heavy melting steel (yard)	7.00 to 7.25
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	8.50 to 9.00
Locomotive grate bars	8.75 to 9.00
Machine shop turnings	6.75 to 7.50
Short shoveling turnings	7.00 to 7.50
Cast borings (blast furnace or steel works)	6.75 to 7.50
Mixed borings and turnings	7.00 to 7.50
Steel car axles	16.00 to 16.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.75
Forge fire	6.75 to 7.00
No. 1 railroad wrought	10.50 to 11.00
No. 1 yard wrought, long	9.00 to 9.50
Rails for rolling	10.50 to 11.00
Cast iron carwheels	11.25 to 11.75
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00 to 10.50
Cast borings (chemical)	11.00 to 11.50

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.75 to $14.25
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.75 to 12.25
No. 2 cast (radiators, cast boilers, etc.)	11.25 to 11.75

Cleveland

Heaviest Demands Still from Automotive Industry—Alloy Bars Higher

CLEVELAND, March 13.—The demand for steel in specifications against contracts continues heavy from the automotive industry and good from other consuming industries. Orders booked so far this month by leading producers show quite a gain over the corresponding period in February. As considerable tonnage in steel bars, plates and structural material against first quarter 1.80c. contracts is still unspecified, a good volume of orders against these contracts is expected during the latter half of the month. Most contract buyers have placed second quarter contracts for steel bars, plates and shapes at 1.85c. and some contracts that had been taken at 1.90c. have been revised to the lower figure. Mills are now asking 1.90c., but this will apply to small consumers who do not place contracts. However, one Ohio plate mill is still quoting plates at 1.85c. The local mill price on steel bars is 1.90c., Cleveland.

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.60c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb.	$2.90
No. 9 galvanized wire, per 100 lb.	3.35
Common wire nails, base per keg	2.90

*Net base, including boxing and cutting to length.

Buyers of sheets and strip steel, including the large consumers in the automotive industry, are showing little interest in second quarter contracts. In the case of sheets, particularly, there is a hesitancy about buying, as many consumers seem to be doubtful whether present prices will hold. The automotive industry is covered by low-priced sheet and strip first quarter contracts and is devoting its attention to getting in specifications against these contracts, and these shipments will about cover its April requirements.

Inquiry in the structural field is light. Keen competition still prevails. On one job, for which bids were taken during the week, a price of $60 a ton fabricated and delivered is reported. The smaller local fabricating shops have little work. No Lake shipbuilding work is in prospect. The Akron, Cleveland & Youngstown Railroad is expected to be in the market shortly for 4000 to 5000 tons of rails.

The only important price announcements during the week were the establishment of new prices on alloy steel, including the adoption of a base price and the reestablishment of the first quarter price on cold-finished steel bars.

Pig Iron.—Sales for the second quarter, while not as large as during some of the previous weeks, are holding up well. Cleveland interests during the week sold 31,000 tons in foundry and malleable grades. While inquiry is light, producers believe there is considerable business yet to be placed for the second quarter. The market has a firm tone and Cleveland furnaces are holding closely to $17 for foundry and malleable iron for outside shipment and to $18, furnace, for local delivery. However, the lower price might still be shaded 25c. a ton for shipment to points where local furnaces have a freight disadvantage. One Lake furnace interest is holding to $17.50, and in Michigan the market is firm at $18. Shipments show some gain over last month. Several of the foundries in the automotive industry which took heavy shipments last month are taking the same volume of iron this month and one or two are taking larger quantities. Outside of the automotive industry, shipments show quite a little gain over February.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fdy., sil. 1.75 to 2.25	22.00
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic, Valley furnace	17.00
Standard low phos., Valley furnace	$26.50 to 27.00

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Iron Ore.—All rail shipments of Lake Superior ore during 1927 amounted to 1,238,845 gross tons and the total movement both all rail and water for the season was 52,344,099 tons, according to figures just tabulated by the Lake Superior Iron Ore Association. Total shipments by ranges were: Mesabi, 32,975,506; Gogebic, 6,385,558; Menominee, 5,213,256; Marquette, 4,147,777; Cuyuna, 1,981,501; Vermilion, 1,547,847; Mayville-Baraboo, 92,654. Ore shipments from Lake Erie ports during February were 303,114 tons. The dock balance March 1 was 5,987,408 tons, compared with 6,062,608 tons on the same date a year ago.

Alloy Steel.—New net prices on alloy steel have been announced by leading manufacturers. The method of quoting prices for each grade heretofore followed has been abandoned and in its place one base price figured on alloy bars has been adopted and the price of each grade is determined by an alloy differential that is added to the base. The base adopted is 2.65c. per lb. Hereafter when market conditions warrant a change this will be made in the base, not disturbing the differential and preserving the price relationship between the grades. However, should changes in prices of any alloy user warrant a change on a certain grade irrespective of other grades, the differential on that grade will be changed. Widely varying changes are shown in the new prices. Two largely used grades, series 2300, 3½ per cent nickel, and 3100 nickel chromium are advanced $3 and $4 a ton respectively over the recently ruling minimum prices. Sharp declines have been made on some of the other nickel chromium series, being as much as $12 a ton on series 3200. Other grades show both declines and advances. The new prices became effective March 7 on current orders, but will not apply to contract customers until March 16. This will give these customers an opportunity to specify steel to be shipped during the remainder of March at the old prices. The leading Ohio producer who has been holding largely to a Pittsburgh base has abandoned the Pittsburgh base entirely, now quoting only a mill base.

Coke.—Foundry coke shipments are fair but the new demand is light. Connellsville foundry coke is steady at $3.75 to $5.10. Connellsville heating coke ranges from $2.65 to $3. Ohio by-product foundry coke is quoted at $8, Painesville, for March shipment.

Bolts, Nuts and Rivets.—Bolt and nut manufacturers have started to take contracts for the second quarter at the prices that prevailed this quarter, except on stove bolts, which were advanced 10 per cent, as announced last week. While specifications are fair, they do not show an increase over the previous few weeks. The industry is now operating at close to 70 per cent of capacity. Rivet makers have taken second quarter contracts from some of the large consumers at the $3 per ton price advance and do not expect to meet serious objection to the higher price.

Sheets.—The automotive industry continues to take heavy tonnages against contracts, but the demand from other sources is moderate, and there is not much activity either in current orders or in second quarter contracts. Mills are getting a good volume of orders for auto body sheets at the present 4.15c. price, but orders for other grades are largely against lower-priced contracts. Galvanized sheets are irregular, with concessions of $2 a ton from the regular 3.75c. Pittsburgh price, but other grades appear firm.

Cold-Finished Steel Bars.—One of the smaller producers took second quarter contracts in Detroit at 2.20c., Pittsburgh, during the week, and other manufacturers, who had expected to cover their trade at $2 a ton higher and to make another advance to 2.40c. for current orders, fell in line so that 2.20c., Pittsburgh, and 2.25c., Cleveland, are the established prices for the second quarter. These are the prices that prevailed on contracts during the present quarter.

Strip Steel.—Specifications are fairly heavy against first quarter contracts and shipments against these contracts will carry many consumers through April. Some of the smaller consumers, but not many of the large buyers, have placed second quarter contracts. Current orders are not numerous. Regular prices are being maintained.

Reinforcing Bars.—A local inquiry for 1000 tons for store and warehouse buildings has been issued, and small lots are in better demand. Billet steel reinforcing bars are still quoted at 1.85c., Cleveland, and rail steel bars are unchanged at 1.75c., mill.

Warehouse Business. — While sales are fair, the volume shows a slight falling off. There is not much demand from the building field. Reinforcing bars out of stock, which are affected by mill competition, are going as low at 2.25c. Other prices are firm.

Old Material.—The supply of scrap continues in excess of the demand and the market is inactive and has a weak tone, although prices are unchanged. Mills are still restricting shipments and local dealers are well covered against outstanding orders. Detroit dealers are reported to have sold considerable tonnage of compressed sheet scrap during the week for shipment to the Pittsburgh district at $14.50. A Buffalo consumer has purchased 20,000 tons of scrap in Detroit, mostly compressed sheets, for delivery when navigation opens. Two cargoes have been loaded and will probably be shipped late in the month. With turnings down to $7 in Detroit, the price is proving attractive to Canadian steel makers and a considerable tonnage has been sold for shipment from Detroit to Canada. Most of this will go to Hamilton.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$13.75 to $14.00
No. 2 heavy melting steel	13.25 to 13.50
Compressed sheet steel	12.75 to 13.00
Light bundled sheet stampings	11.50 to 11.75
Drop forge flashings	12.50 to 13.00
Machine shop turnings	9.00 to 9.25
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	13.50 to 14.00
No. 1 busheling	11.00 to 11.25
Pipes and flues	9.00 to 9.50
Steel axle turnings	12.50 to 13.00
Acid Open-Hearth Grades	
Low phosphorus forging crops	16.50 to 17.00
Low phosphorus, billet, bloom and slab crops	17.00 to 17.50
Low phosphorus sheet bar crops	16.50 to 17.00
Low phosphorus plate scrap	16.00 to 16.50
Blast Furnace Grades	
Cast iron borings	10.00 to 10.25
Mixed borings and short turnings	10.00 to 10.25
No. 2 busheling	10.00 to 10.25
Cupola Grades	
No. 1 cast	16.50 to 17.00
Railroad grate bars	11.00 to 12.00
Stove plate	12.00 to 12.50
Rails under 3 ft	18.00 to 18.50
Miscellaneous	
Railroad malleable	15.00 to 15.50
Rails for rolling	16.25 to 16.50

Largest February Output of Cement

Portland cement production in February is reported by the United States Bureau of Mines at 8,785,000 bbl., a decline of 10 per cent from the January output of 9,766,000 bbl., but the largest February volume ever reached. Shipments were 6,559,000 bbl., about the same as in January, but 2½ per cent below February, 1927. Stocks at the end of the month were 27,339,000 bbl., a gain of 9 per cent on January and the largest total ever recorded.

Bibliography on Mechanical Springs

A notable contribution has been made by the special research committee on mechanical springs of the American Society of Mechanical Engineers in the compilation of a bibliography on mechanical springs, which has been published recently by the A. S. M. E.

More than 600 references to the design, materials, manufacture, testing, use, etc., of flat, helical, spiral and other types of springs are briefly abstracted. The publication, made up of 71 pages, is divided into three sections, in the first of which the material is arranged by authors. There is also a chronological index, beginning with the year 1678, and a subject index. References to articles published in 1927 are not included, and blank pages have been added to permit notation of 1927 and current references. Copies of the bibliography may be obtained from the A. S. M. E., 29 West Thirty-ninth Street, New York. The price per copy is $1.25.

Business Data in Tabular Form

In a "Record Book of Business Statistics," the Department of Commerce has issued a pamphlet of 60 pages, mostly tabular, giving pertinent facts regarding metals and machinery, in the shape of shipments, orders, production, prices, imports and exports, unfilled orders and other particulars. The materials covered include ores, pig iron, ingots, sheets, castings, fabricated material of various types, machine tools, stokers, pumps, farm implements, non-ferrous metals, plumbing fixtures and a number of other items. Some of the series of tables run back to 1910 and most of them are carried through to the end of 1926. As a pamphlet of reference, this record book is of great value. Copies may be obtained at 10c. each from the superintendent of documents, Government Printing Office, Washington.

Birmingham

Steel Demand Well Maintained—Pig Iron Buying for Spot Shipment Only

BIRMINGHAM, March 13.—Sales of pig iron during the past week were practically all for spot delivery. Very little second quarter tonnage has been placed. Shipments continue on about the same level as for the past few weeks. One company is slightly ahead of production. Ruling prices remain at $16, base furnace. The Tennessee Coal, Iron & Railroad Co., on March 6, blew in its No. 1 furnace at Bessemer, Ala., on foundry iron. There were no other changes. Eighteen furnaces are now in blast, 10 being on foundry, seven on basic and one on recarburizing iron.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil	$16.00
No. 1 foundry, 2.25 to 2.75 sil	16.50
Basic ◆	15.00

Finished Steel.—New business is developing at an even rate, and prices are unchanged but firm. Reinforcing bar manufacturers have taken a fair number of small orders, ranging from 50 to 75 tons each. Only a nominal amount of business has been booked by structural steel fabricators. Open-hearth operations are unchanged, the Tennessee company having 13 to 14 furnaces active and the Gulf States Steel Co. four.

Cast Iron Pipe.—A fair amount of new business is being received, consisting chiefly of small orders. Inquiries are more numerous, and the market appears stronger than last week. Tuscaloosa, Ala., is expected to place some tonnage within two or three weeks. The McWane Cast Iron Pipe Co. will ship 500 tons of 6 and 8-in. pipe to Syracuse, N. Y. The new mechanical unit of this company, placed in operation in January, is now on double shift. The ruling base quotation on pressure pipe remains at $29 to $30, Birmingham. Plant operations and shipments continue at about the same level as for the past several weeks.

Coke.—More interest is being shown in second quarter buying, and a fair amount of tonnage is being booked. No improvement is shown in spot buying of foundry coke. Both spot and contract quotations remain at $5, ovens. Shipments continue at a regular rate.

Old Material.—A slight increase in demand is evident, and more inquiries are being received. Prices are unchanged.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.50 to $10.00
Scrap steel rails	11.00 to 11.50
Short shoveling turnings	8.00 to 8.50
Cast iron borings	8.00 to 8.50
Stove plate	13.00 to 14.00
Steel axles	19.00 to 20.00
Iron axles	20.00 to 21.00
No. 1 railroad wrought	10.00 to 10.50
Rails for rolling	13.00
No. 1 cast	15.00
Tramcar wheels	12.50 to 13.50
Cast iron carwheels	12.00 to 13.00
Cast iron borings, chemical	13.50 to 14.00

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.

Less than 200 lb.	50

St. Louis

Further Declines in Scrap Prices—Fair Bookings in Plates, Shapes and Bars

ST. LOUIS, March 13.—Melters have sufficient pig iron in stock or on the way for their first quarter requirements, and buying for second quarter has been done sparingly. Shipments have been holding up well, and prices are firm. The melt in the district is reported to be increasing. The Granite City maker during the week sold 3100 tons, all of which was foundry iron except 300 tons of malleable. An Illinois equipment builder bought 1000 tons, and a local specialty maker placed 300 tons. A leading Southern furnace sold 400 tons, 300 tons for prompt shipment.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25 f.o.b. Granite City, Ill.	$19.50 to $20.00
Northern No. 2 fdy., delivered St. Louis	20.66
Southern No. 2 fdy., delivered	20.42
Northern malleable, delivered	20.66
Northern basic, delivered	20.66

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Coke.—Warmer weather is causing a decline in the demand for domestic grades. The consumption of foundry grades is being well maintained, but buying continues largely on a hand-to-mouth basis. Prices are unchanged.

Finished Steel. — New business and specifications against contracts for plates, shapes and bars were received in fair volume during the week. A slight improvement is reported in the bookings of structural steel fabricators. Warehouse business continues only in fair volume.

Old Material.—Consumers of scrap in the St. Louis district still refuse to buy, pending a further reduction of their stocks. Dealers are hoping that the mills, which are all busy, will resume buying by April 1 at least. In the meantime, the market is weak, with half a dozen items 25c. to 50c. a ton lower than a week ago. Railroad lists include: Santa Fe, 5980 tons; Chesapeake & Ohio, 8949 tons; Southern Pacific, 2325 tons; Wabash, 1655 tons; Texas & Pacific, 870 tons; International-Great Northern, 400 tons (steel rails); Ann Arbor, 360 tons; Toledo & Western, 350 tons; Kansas City Southern, 290 tons; Great Northern, 120 carloads; Nickel Plate, 34 carloads.

Prices per gross ton, f.o.b. dealers' yards and delivered St. Louis district consumers' works:

Heavy melting steel	$11.50 to $12.00
No. 1 locomotive tires	12.75 to 13.25
Heavy shoveling steel	11.50 to 12.00
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	13.50 to 14.00
Railroad springs	14.25 to 14.75
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.50 to 12.00
No. 1 busheling	9.75 to 10.25
Cast iron borings	9.00 to 9.50
Iron rails	13.00 to 13.50
Rails for rolling	13.75 to 14.25
Machine shop turnings	7.50 to 8.00
Steel car axles	18.50 to 19.00
Iron car axles	23.50 to 24.00
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft.	15.00 to 15.50
Steel angle bars	12.00 to 12.50
Cast iron carwheels	13.50 to 14.00
No. 1 machinery cast	14.00 to 14.50
Railroad malleable	11.00 to 11.50
No. 1 railroad cast	13.50 to 14.00
Stove plate	13.00 to 13.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Production of bituminous coal in the United States in the week ended March 3 is estimated by the Bureau of Mines at 10,044,000 net tons. This is 1 per cent under the preceding week and compares with 13,262,000 tons in the corresponding week of last year. Total coal raised in the coal year, to March 3, is given as 439,876,000 tons.

Canada

Steel Mills Operate at High Rate—Large Tonnage of Structural Work Pending

TORONTO, ONT., March 13.—With the opening of spring but a few days in the future, iron and steel interests of Canada are looking forward to improvement in many lines of industry. Business at the present time is good, and each week some branch of industry is able to report some betterment. While railroad equipment makers have not booked many orders for rolling stock, several have branched out into other lines, with the result that these plants are not faced with slack seasons as in former years. Canadian automobile plants are speeding up operations and in turn are placing orders with other manufacturers for castings, body frames, sheets, bolts, nuts, etc. Improvement in steel consuming lines is reflected in better conditions at steel mills. In addition to the large rail orders which have been placed, there has been better buying of other mill products, with the result that steel plant operations now average between 80 and 100 per cent.

Pig Iron.—Local blast furnace representatives have opened their books for second quarter contracts. So far, however, there has been no rush on the part of melters to cover, although several have come forward with contracts calling for 500 to 5000 tons. Inquiries, however, indicate that considerable business will be placed in this market during the next three months. Spot demand for foundry and malleable iron has also become stronger. Improvement in melt is resulting in more extensive raw material buying, and pig iron sales have increased accordingly. Low prices in the Buffalo market, together with a vigorous selling campaign carried on here by American pig iron interests, are responsible for the prevailing low prices of Canadian iron, and local interests do not expect advances until there has been some change in these conditions.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.60
No. 2 foundry, sil. 1.75 to 2.25	23.60
Malleable	23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	$25.00 to $25.50
No. 2 foundry, sil. 1.75 to 2.25	25.00 to 25.50
Malleable	25.00 to 25.50
Basic	24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Structural Steel.—Inquiries for structural steel and reinforcing bars are increasing, and in the Toronto district alone building projects already announced call for upward of 25,000 tons of steel. Pending business includes 500 tons for the Electrical and Engineering Building at the Canadian National Exhibition, Toronto; 8000 tons for a new head office building for the Canadian Bank of Commerce, Toronto; 200 tons for an addition to the Patterson Canady factory, Toronto; 200 tons for an addition for Lackie Mfg. Co., Toronto. Several other buildings in Toronto, for which plans have not yet been completed, will require 500 to 5000 tons each.

Old Material.—Sales continue to increase and tonnages placed are larger than they were earlier in the year. Advance buying is again featuring the local market. Prices are firm but unchanged.

Dealers' buying prices:

Per Gross Ton	Toronto	Montreal
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00
No. 1 wrought	9.00	11.00

Stove plate	9.00	....
Standard carwheels	13.00	....
Malleable scrap	13.00	....

Boston

Scrap Price Trend Is Downward—Less Pig Iron Sold

BOSTON, March 13.—Sales of pig iron fell off the past week, and were just under 5000 tons. No large individual sales were made, and Buffalo furnaces and furnaces east of Buffalo again took the bulk of orders. The price situation is still unsettled. On the ordinary run of business, No. 2X Buffalo iron is obtainable at $16.50 a ton on cars, furnace, and No. 1X at $17, but on large tonnages these prices have been shaded. One Buffalo furnace is obtaining a limited amount of business at $17 a ton for No. 2X and $17.50 for No. 1X. New York State No. 2 plain is generally $18 a ton on cars, furnace, No. 2X, $18.50, and No. 1X, $19. The Mystic Iron Works, Everett, Mass., is meeting prices made by Buffalo stacks. Some interest is still shown in foreign irons, sales the past week including Indian iron equivalent to domestic No. 2X at $21.75 to $22 on dock here, duty paid. Sales of eastern and western Pennsylvania, Virginia and Alabama irons are confined to car lots for mixture or special purposes.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$21.41 to $21.91
Buffalo, sil. 2.25 to 2.75	21.41 to 22.41
East. Penn., sil. 1.75 to 2.25	23.15 to 23.65
East. Penn., sil. 2.25 to 2.75	23.65 to 24.15
Virginia, sil. 1.75 to 2.25	25.71
Virginia, sil. 2.25 to 2.75	26.21
Alabama, sil. 1.75 to 2.25	22.91 to 24.77
Alabama, sil. 2.25 to 2.75	23.41 to 25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Bars.—There is a fair demand for steel bars at 1.90c. per lb., base Pittsburgh, or 2.26½c. delivered common Boston freight rate points. Buying for second quarter has not started. Current reinforcing bar orders are mostly small, but the weekly total is fairly good. The market on reinforcing bars is firm at 1.90c. to 1.95c. per lb., base Pittsburgh, and 2.90c. per lb. from stock here.

Shapes and Plates.—Fabricating prices on jobs of any size are lower than they have been in years owing to keen competition. The largest prospective job calls for 1600 tons of steel for a power house at New Haven, Conn. Small jobs are in fair supply.

Cold-Rolled Strip.—Mills continue to take small orders at 3.15c. per lb., base Pittsburgh. The Worcester, Mass., mill is quoting 3.30c. per lb., base, on lots of 1 to 3 tons, and 3.05c. on larger lots. In the absence of sufficiently large tonnages to test prices, the market appears steady. Mills will open their books for second quarter business within a week.

Coke.—By-product ovens are getting quite a few rush orders for foundry coke, indicating that some

Warehouse Prices, f.o.b. Boston

	Base per Lb.
Plates	3.365c.
Structural shapes—	
Angles and beams	3.365c.
Tees	3.365c.

Cold-punched nuts	50 and 5
Stove bolts	70 and 10

---

*Including quantity differentials.

foundries have been holding raw material supplies at a minimum. There is a slight improvement in contract specifications. New England ovens are billing foundry coke at $11.50 a ton, delivered within a $3.10 freight rate zone. Domestic coke is moving in large volume and the market is firmer, although not higher; $8.50 a ton on cars Everett, or its equivalent, is well maintained.

Old Material.—With scrap rails, railroad wrought, skeleton, forge flashings, chemical borings, stove plate and railroad malleable approximately 50c. a ton lower, and with wavering prices on other kinds of scrap, the old material market is weaker than it has been for some time. Offerings of textile machinery cast are in excess of demand. A shipper paid $9.25 a ton on cars for heavy melting steel, presumably on an old order, but on new business $9.10 is the best price offered.

Buying prices per gross ton f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$9.00 to $9.10
Scrap T rails	8.00 to 8.50
Scrap girder rails	7.50 to 8.00
No. 1 railroad wrought	10.00 to 10.50
No. 1 yard wrought	8.00 to 8.50
Machine shop turnings	5.75 to 6.25
Cast iron borings (steel works and rolling mill)	6.00 to 6.25
Bundled skeleton, long	5.50 to 6.00
Forged flashings	6.00 to 6.50
Blast furnace borings and turnings	5.75 to 6.25
Forge scrap	6.00 to 6.50
Shafting	13.00 to 13.50
Steel car axles	15.00 to 15.50
Wrought pipe (1 in. in diameter, over 2 ft. long)	7.50 to 8.25
Rails for rolling	10.00 to 10.50
Cast iron borings, chemical	9.00 to 9.50

Prices per gross ton delivered consumers' yards:

Textile cast	$13.50 to $14.00
No. 1 machinery cast	14.50 to 15.00
No. 2 machinery cast	12.50 to 13.00
Stove plate	9.50 to 10.00
Railroad malleable	13.00 to 13.50

Buffalo

Steel Operations Continue at High Rate —Pig Iron Quieter

BUFFALO, March 13.—Pig iron inquiry has not been heavy. Most of the larger requirements apparently have been satisfied. A Utica inquiry is for 2000 tons of No. 2 plain and a Rochester consumer seeks 200 to 300 tons of foundry. Another inquiry was for 900 to 1000 tons of foundry and malleable, but this has apparently been withdrawn. In this district $17 continues firm, though it is being shaded at outside competitive points.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2X foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	$17.00 to 17.50
Basic	16.50 to 17.00
Lake Superior charcoal	27.28

Finished Iron and Steel.—Mill operation continues at a high rate. Prices for most products are firm. Fair demand is reported for bars, shapes and plates and a particularly good demand is noted for automobile body sheets, some of the companies having placed large orders. Reinforcing bar business is brisk. Three Batavia schools will require 154 tons of structural steel. Bids are being taken this week on an addition to the Trico Products Co.'s plant, Buffalo, requiring 225 tons of reinforcing bars.

Old Material.—There have been no important purchases following the tonnage reported last week. Rejections on No. 2 grade heavy melting steel are considerable as mills are becoming more exacting on inspections. Prices are a little easier.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$14.75 to $15.25
No. 2 heavy melting steel	13.00 to 13.50
Scrap rails	13.75 to 14.25
Hydraulic compressed sheets	13.25 to 13.75
Hand bundled sheets	9.00 to 9.50
Drop forge flashings	12.00 to 12.50
No. 1 busheling	13.25 to 13.75
Heavy steel axle turnings	12.50 to 12.75
Machine shop turnings	8.50 to 9.00
Acid Open-Hearth Grades	
Railroad knuckles and couplers	15.50 to 16.00
Railroad coil and leaf springs	15.50 to 16.00
Rolled steel wheels	15.50 to 16.00
Low phosphorus billet and bloom ends	17.00 to 17.50
Electric Furnace Grades	
Heavy steel axle turnings	12.75 to 13.25
Short shoveling steel turnings	10.75 to 11.25
Blast Furnace Grades	
Short shoveling steel turnings	10.50 to 11.00
Short mixed borings and turnings	9.75 to 10.25
Cast iron borings	10.00 to 10.50
No. 2 busheling	9.00 to 9.50
Rolling Mill Grades	
Steel car axles	17.00 to 17.50
Iron axles	22.00 to 23.00
No. 1 railroad wrought	12.50 to 13.00
Cupola Grades	
No. 1 machinery cast	14.50 to 15.00
Stove plate	13.00 to 13.25
Locomotive grate bars	11.50 to 12.00
Steel rails, 3 ft. and under	17.00 to 17.25
Cast iron carwheels	13.00 to 13.50
Malleable Grades	
Railroad	15.00 to 15.25
Agricultural	15.00 to 15.25
Industrial	15.00 to 15.25

San Francisco

Aqueducts to Take Large Tonnage —Heavy Building Permits

SAN FRANCISCO, March 10 (*By Air Mail*).—Outstanding among the awards this week was the placing of 1500 tons of shapes for an office building at Seattle and the award of two storage tanks, calling for 620 tons of plates and shapes, for an oil company in Los Angeles. The trade is particularly interested in an inquiry of the East Bay Municipal Utility District, Oakland, Cal., for two aqueducts involving either 8000 tons of plates or 25,000 tons of cast iron pipe, bids on which will be taken April 20.

Construction activity is being well maintained, and building permits issued during the past month were about on a par with those for the same month last year. For the five leading cities on the Coast the value of the permits issued were as follows:

Los Angeles	$7,947,728
Seattle	4,126,795
San Francisco	2,398,450
Portland	1,530,325
Oakland	1,349,380

Pig Iron.—The market for foundry pig iron is quiet, sales and inquiries being limited to unimportant lots. Imports of iron for the year 1927 on the Pacific Coast totaled 17,673 tons, of which 10,769 tons came from British India, 3876 tons from the Netherlands and 2562 tons from Germany. Interests in the San Francisco district took 8770 tons, and foundries in the Los Angeles district absorbed 6538 tons, the remainder having gone through the ports of Portland and Seattle. Prices are unchanged.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Shapes.—In addition to the Seattle office building reported above, 300 tons for an apartment house in San Francisco has been placed with the Herrick Iron Works. Approximately 4000 tons of steel are required in the 2000 underframes for refrigerator cars placed by the Pacific Fruit Express Co., as reported in THE IRON AGE last week. Bids have been opened on 3000 tons for the Coyote Point bridge across San Francisco Bay. Imports during 1927 totaled 34,029 tons, of which 24,812 tons came from Belgian producers, 6866 from French makers and 2083 from German mills. San Francisco interests took 20,123 tons, and Los Angeles buyers imported 7428 tons. Plain material continues firm at 2.35c., c.i.f., for domestic material, with foreign shapes being quoted around 1.55c., c.i.f., duty paid. Prices for fabricated material and fabricated and erected work in the San Francisco district, due to the use of foreign material, are exceptionally low, one apartment job recently going for less than $75 a ton, erected.

Plates.—Interest now centers on the inquiry for the Sequoia and Wildcat Canyon aqueducts for the East Bay Municipal District, requiring 8000 tons of plates. Bids will be taken on welded steel, lock-bar, cast iron and concrete steel-lined pipe. The pipe ranges in diameter from 50 to 60 in. The Puget Sound Machinery Depot was low bidder on 2000 tons for a penstock at Seattle, Wash. The only award of importance was 620 tons for two 80,000-bbl. tanks for the Western Oil Co. at Los Angeles. It was reported in last week's issue of THE IRON AGE that the Lacy Mfg. Co. secured 400 tons for a penstock for the Southern California Edison Co. This was in error, as another Los Angeles fabricator secured the tonnage. Prices are firm at 2.30c., c.i.f.

Bars.—Bookings of reinforcing steel this week were confined to small lots. Pending business, however, includes several large projects totaling over 16,000 tons. Bids were opened this week on 1950 tons for pier No. 48, San Francisco, and for 1000 tons for the Ocean Beach Esplanade. New inquiries include 5257 tons and 1220 tons respectively for drainage improvement districts Nos. 23 and 22, Los Angeles. Imports of bars, both merchant and reinforcing, totaled 37,220 tons in 1927. Of this total, Belgian mills supplied 22,558 tons, German mills 8459 tons and French makers 4599 tons. Distribution was as follows: San Francisco, 14,463 tons; Portland, 10,431 tons; Los Angeles, 9354 tons, and Seattle, 2972 tons.

Cast Iron Pipe.—One of the largest, if not the largest, inquiry that has ever come up for figures on the Pacific Coast developed this week, and calls for 25,000 tons of 50, 56 and 60-in. pipe for the Sequoia and Wildcat Canyon aqueducts in Oakland, bids on which go in April 20. Awards include 420 tons of 4 to 12-in. pipe for Tucson, Ariz., placed with an unnamed interest; 188 tons of 20-in. Class C for Tacoma, Wash., placed with the United States Cast Iron Pipe & Foundry Co.; and 136 tons of 18-in. Class C pipe for San Diego, Cal., booked by the National Cast Iron Pipe Co. Pending business embraces 500 tons of 10 to 24-in. Class B for Santa Ana, Cal., bids on which go in March 19. The Pacific States Cast Iron Pipe Co. is low bidder on 188 tons of 6 and 8-in. Classes 150 and 250 for the improvement of Municipal District No. 3, Monrovia, Cal. The United States Cast Iron Pipe & Foundry Co. was low bidder on 663 tons of 6 to 20-in. Classes B and C pipe for Santa Barbara, Cal. During the year 1927 imports totaled 37,563 tons. Belgium shipped 14,143 tons, and France, 21,874 tons. The largest portion, 23,824 tons, entered the port of Los Angeles, Seattle took 7025 tons, and San Francisco 6133 tons.

Steel Pipe.—Awards of standard pipe are limited to small lots. New inquiries include 360 tons of 8-in. steel pipe for Los Angeles, bids on which will be taken March 13, and 100 tons of 6 and 8-in. standard pipe, lapweld, for Monrovia, Cal., on which the Santa Fe Pipe & Supply Co. is low. Imports of tubular products, exclusive of cast iron pipe, aggregated 39,167 tons during the past year, and of this amount 21,027 tons originated in Germany. Los Angeles consumers took 31,296 tons of the total.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, $\frac{3}{16}$-in. and over	3.15c.
Small angles, under $\frac{3}{16}$-in	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Coke.—Demand for foundry coke is quiet, and sales and inquiries involved unimportant lots. During the year 1927, 58,452 tons of foreign material was imported at Coast ports. The United Kingdom shipped 17,218 tons, and Germany, 32,179 tons. Los Angeles foundries took 21,410 tons, San Francisco interests took 26,803 tons, and Seattle melters, 6315 tons. Prices continue unchanged.

Cincinnati

Pig Iron Market More Active—Sheet Mills Continue High Operations

CINCINNATI, March 13.—Increased activity in the pig iron market is reflected by both sales and inquiries. Among sales were 1000 tons of malleable for a southern Ohio consumer and 500 tons of foundry for a Parkersburg, W. Va., company. Pending business is the largest in several months. The Marmon Motor Car Co., Indianapolis, is expected to buy 3000 tons of malleable and the Servel Corporation, Evansville, Ind., is asking for 1000 to 1500 tons of malleable. Competition between northern Ohio producers and those in this district is keen. A sale of 300 tons of foundry iron is reported to have been made to a local melter by a Lake Erie furnace at a base price of $16.75, furnace. Makers at Ironton continue to quote $19, base furnace, but are losing much tonnage, which is being purchased elsewhere at lower figures. Tennessee and Alabama irons are firm at $16, base Birmingham, while Jackson County silvery iron also is steady at $25, Jackson, for 8 per cent.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$20.89
So. Ohio malleable	$20.14 to 20.89
Alabama fdy., sil. 1.75 to 2.25	19.69
Alabama fdy., sil. 2.25 to 2.75	20.19
Tennessee fdy., sil. 1.75 to 2.25	19.69
Southern Ohio silvery, 8 per cent	26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Reinforcing Bars.—New billet bars are quoted at 1.90c. to 2c., base Pittsburgh, with most material being sold at the lower price. Rail steel makers are asking 1.85c., base mill, and are getting that amount for small tonnages, but sizable lots are being taken at 1.80c.

Warehouse Business.—There has been a slight increase in the volume of orders placed with local jobbers, but tonnage in the aggregate is still below the normal level for this time of the year. Prices are firm and unchanged.

Finished Material.—As the end of the first quarter approaches specifications against old contracts at low prices are growing heavier, and many customers will enter the new quarter with plenty of material on hand to care for their needs through the month of April. This is especially true of the larger buyers. Bars, structural shapes and plates are becoming more firmly established on the basis of 1.90c., Pittsburgh, which is being quoted by all mills. The structural steel market still shows a tendency to lag behind the normal scale of operations for March. Activity in sheets continues to afford encouragement to producers, who are well satis-

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes	3.40c.
Bars, soft steel or iron	3.30c.
New billet reinforcing bars	3.15c.
Rail steel reinforcing bars	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)	4.05c.
Galvanized sheets (No. 24)	4.90c.
Blue annealed sheets (No. 10)	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire, per 100 lb.	$3.00
Common wire nails, base per keg	2.95
Cement coated nails, base 100 lb. keg	2.95
Chain, per 100 lb.	7.55
	Net per 100 Ft.
Lap-welded steel boiler tubes, 2-in	$18.00
4-in.	38.00
Seamless steel boiler tubes, 2-in	19.00
4-in.	39.00

fied with the amount of material which has been sold in the past two weeks. Automobile makers are taking liberal tonnages, but are doing little forward buying, preferring instead to hold purchases down to current requirements. The stability of prices is a feature of the sheet market, blue annealed being steady at 2.10c., base Pittsburgh, black at 2.90c., automobile body sheets at 4.15c., and galvanized at 3.75c. Mills are operating at 100 per cent of capacity, and orders in hand are sufficient to insure the maintenance of production on the present basis for from two to three weeks. The movement of wire goods is considered fairly good, the demand for common wire nails having been brisk. Plain wire is selling at $2.50 per 100 lb., Ironton or Pittsburgh, and common wire nails at $2.65 per keg, Ironton or Pittsburgh. Sellers of cold-rolled bars report that bookings have been of fairly good volume.

Coke.—Specifications of by-product foundry coke from foundries making automobile castings have been heavy and in a few cases orders at hand are greater than producers can supply within the time specified. On the other hand, there has been a seasonal decline in the demand for domestic grades. A drop in prices of by-product domestic coke about April 1 is regarded as a possibility. One reason for such expectation is severe competition, especially in western Ohio and Indiana, which companies at Indianapolis, Portsmouth and Ashland have encountered from coke originating in the Youngstown, Canton and Massillon districts. Another reason is that sales of domestic coke in the past year have been below normal.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.52 to $9.64; Wise County coke, $7.59 to $8.09; New River coke, $10.09 to $10.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—Shipments on contracts to district steel plants have been moderate and foundries are taking only a fair amount of material. Prices are firm and little change is anticipated in the immediate future. The Southern, Louisville & Nashville and Chesapeake & Ohio railroads have their usual monthly lists, which close this week.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$11.00 to $11.50
Scrap rails for melting	11.75 to 12.25
Loose sheet clippings	8.50 to 9.00
Bundled sheets	9.50 to 10.00
Cast iron borings	8.00 to 8.50
Machine shop turnings	7.50 to 8.00
No. 1 busheling	10.00 to 10.50
No. 2 busheling	7.00 to 7.50
Rails for rolling	12.50 to 13.00
No. 1 locomotive tires	12.75 to 13.25
No. 1 railroad wrought	10.50 to 11.00
Short rails	16.00 to 16.50
Cast iron carwheels	12.25 to 12.75
No. 1 machinery cast	15.50 to 16.00
No. 1 railroad cast	13.00 to 13.50
Burnt cast	7.50 to 8.00
Stove plate	8.25 to 8.75
Brake shoes	9.50 to 10.25
Railroad malleable	12.25 to 12.75
Agricultural malleable	11.75 to 12.25

Commerce Commission to Consider Youngstown-Ohio River Railroad

WASHINGTON, March 13.—Reply is expected to be made within three or four weeks by the Pittsburgh, Lisbon & Western Railroad to the questionnaire of the Interstate Commerce Commission regarding the application of the carrier for permission to build two branch lines with a total of 40 miles trackage, which would provide direct rail connection between Youngstown and the Ohio River. The answer of the railroad, owned by the Pittsburgh Coal Co., will show the business the line expects together with its amount and character. Inasmuch as it will tap the Valley district through rail and water connection, development of substantial iron and steel tonnage with attractive rates is looked for, as well as lowering of rates on coal and coke into the Youngstown or Valley district from the Pittsburgh district.

Preliminary invitations to the World Engineering Congress, to be held at Tokio, Japan, in October, 1929, have been issued by the American Committee of the Congress. Maurice Holland, 29 West Thirty-ninth Street, New York, is secretary of the committee.

Detroit

Steady Gains in Automobile Production—95,000 Now on Ford Payroll

DETROIT, March 13.—The steel market here continues more than good. Production schedules in the automotive industry are still increasing, and the outlook for the next few months is very promising. The Hupp Motor Car Co. broke all production records in February with an output of 5214 cars. This compares with 4016 cars in February, 1927, and 3610 cars in January, 1928. In spite of this record the company has on its books about 3000 unfilled orders from the past month's sales. The projected schedule for March is 7000 cars.

The Oakland Motor Car Co. started February with a projected production schedule of 22,268 cars, which was later raised to 25,000, and again to 26,200, which is the final figure for last month. This may be compared with the January production of 19,273. The March quota as now set stands at 27,773 cars, which will be more than 10,000 units ahead of the March figure for 1927.

The Hudson Motor Car Co. established a new record in February with a volume of 30,300 cars. Their January production was 25,390 cars. The March schedule calls for a somewhat greater output than the February production.

The Packard Motor Car Co. turned out 4400 cars during the past month, which shows a sharp increase over that of February, 1927, when 2186 cars were produced.

The March production for the Chevrolet Motor Car Co. reached a new peak of 116,943. This figure represented an increase from a previous schedule of 110,000 cars for the month. Production for February last year totaled only 85,817. The schedule for this month is set at 135,000, having been increased from 127,000 cars.

February records were broken by the Willys-Overland Co. with a production of 25,000 units. At the close of the month this company was turning out about 1200 cars a day.

Output by Dodge Brothers, Inc., totaled 20,727 cars and trucks during February, comparing favorably with 12,764 units in the month previous and 16,463 in February of last year. The rate of production March 1 is given at 1650 units per day.

The Buick Motor Co.'s February production totaled 18,600, or better than 1500 cars more than in January. The projected schedule for March is now set at 20,000 units.

Production of the Cadillac Motor Car Co. in February was 44 per cent greater than for any previous February in the company's history.

The output of the Ford Motor Co. is probably more than 1200 units a day, with the 2000 mark only a short distance ahead. Employees in the Ford Motor Co. increased 1369 during the past week. This brings the total up to 95,369 and compares favorably with 52,000 a year ago and the peak of 108,000 in 1926.

Prices on Nos. 9 and 10 blue annealed sheets range from 2.10c. to 2.20c., Pittsburgh. Automobile body sheets are quoted at 4.15c., Pittsburgh.

There is no particular change in the structural market. Prices on plain material remain firm at 1.85c. to 1.90c., Pittsburgh.

Shipments of pig iron in the district promise to be on a par with those of March, 1927, which was the highest melting month during the past year.

There have been no further changes in the prices on old material in this district during the past week. Very few sales have been reported.

Dealers' buying prices per gross ton, f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to $11.50
Borings and short turnings	7.25 to 7.75
Long turnings	6.75 to 7.25
No. 1 machinery cast	14.00 to 15.00
Automobile cast	19.50 to 21.00
Hydraulic compressed sheets	9.75 to 10.25
Stove plate	11.00 to 12.00
No. 1 busheling	8.50 to 9.00
Sheet clippings	6.00 to 7.00
Flashings	9.25 to 9.75

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, March 13.—Prices in all markets but tin are strong and demand is fairly good. Copper prices are firm in a quiet market. Quotations for tin are lower and buying is moderate. Prices for both lead and zinc have advanced and consumer buying has been good.

Copper.—Purchases of electrolytic copper for both domestic and foreign consumption have been quite heavy the last week. Foreign buying has predominated. Today demand turned quiet but prices remain exceedingly firm at 14.12½c., delivered in the Connecticut Valley. Practically no metal is obtainable at concessions and the sales referred to have been made in nearly every case at the firm quotation maintained by all producers. Statistics for February appeared today and showed a decrease in stocks of refined metal and an increase in copper in blister form, one practically offsetting the other. Deliveries into consumption were close to 135,000 tons, the largest in many months, and probably a record for February since the war. There is no change in the official price of Copper Exporters, Inc., which stands at 14.50c., c.i.f. European ports. Lake copper is moderately active and steady at 14.25c., delivered.

Tin.—Sales for the week ended Saturday, March 10, were light at about 850 tons. The market as a whole has been featureless both here and abroad, with sentiment veering easily. Transactions have been confined almost entirely to dealers and the decline in prices, which has been fairly sharp both in London and New York, has been due largely to lack of support by consumers. Today's London prices declined £4 per ton from yesterday's and prices stood at £224 10s. for spot standard, £226 15s. for future standard, and £228 10s. for spot Straits. These values are £7 to £8 per ton less than a week ago. The Singapore price was £232 5s. Today the market was exceedingly active, 500 to 600 tons being bought by both consumers and dealers. Spot Straits tin was quoted at 50.12½c., New York. The rumor, which was active some time ago, that consumers were to form a pool for the purchase of their requirements has again been revived, but no details are obtainable. Arrivals thus far this month have been 2865 tons, with 7760 tons reported afloat.

Lead.—Purchases were fairly heavy during the week ended Saturday, March 10, but thus far this week the market has been quiet. A moderate business is being done each day, principally for March-April delivery. The quotation of the leading interest continues unchanged at 6c., New York, and in the outside market prices are a little easier at 5.80c. to 5.85c., St. Louis.

Zinc.—Advancing prices of ore have stimulated those for prime Western slab zinc and quotations are about ¼c. higher than those recently touched. Buying has been fairly brisk, but has quieted down the last day or two, partly because sellers are restricting their offerings. For March and early April delivery, the market is quoted at 5.65c., St. Louis, or 6c., New York, and is very firm at these levels. Possibly 5.67½c., St. Louis, could be obtained. Ore advanced to $38 on March 10 and higher prices are expected this week. Production, contrary to expectations, continued heavy, but the promised curtailment is looked for this week. The ore has not been freely offered, sales being only about 9500 tons, with production over 12,000 tons. Statistics for February showed a reduction in stocks of refined

Metals from New York Warehouse

metal of about 800 tons, but this was considered significant because it is the first reduction in a long period.

Nickel.—Ingot nickel in wholesale lots is quoted at 35c., with shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—Buying has been fairly good and prices are a little higher, with Chinese metal quoted at 10.50c., New York, duty paid, for all positions.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

CHICAGO, March 13.—Demand for copper is steady and prices are firm. Sales of lead and zinc are brisk and quotations have advanced. Prices for tin continue to sag under the influence of foreign markets. The old metal market is quiet.

Prices, per lb., in carload lots: Lake copper, 14.25c.; tin, 52.50c.; lead, 5.925c.; zinc, 5.75c.; in less-than-carload lots, antimony, 12.50c. On old metals we quote copper wire, crucible shapes and copper clips, 10.50c.; copper bottoms, 9.50c.; red brass, 9.25c.; yellow brass, 7c.; lead pipe, 4.75c.; zinc, 3.25c.; pewter, No. 1, 30c.; tin foil, 36c.; block tin, 45c.; aluminum, 11.75c.; all being dealers' prices for less-than-carload lots.

REINFORCING STEEL

New York Warehouse Takes 1500 Tons—Sizable Projects in New Work

AWARDS of concrete reinforcing bars, as reported to THE IRON AGE in the last week, amounted to 4500 tons, outstanding among which was a warehouse in New York which took 1500 tons. Three projects requiring more than 1000 tons each brought the total of new work to 4700 tons. Awards follow:

BOSTON, 150 tons, North Station, to Joseph T. Ryerson & Son, Inc., Boston.

BURLINGTON, VT., 100 tons, bridge, to Edward A. Tucker Co.

NEW YORK, 1500 tons, Eleto warehouse, from White Construction Co., general contractor, to Truscon Steel Co.

PHILADELPHIA, 800 tons, Quaker City Cold Storage Co. building, to Kalman Steel Co.

BUFFALO, 100 tons, pack house for Huron Cement Co., to a local maker.

STATE OF ILLINOIS, 300 tons of rail steel bars for road work, to Calumet Steel Co.

CHICAGO, 100 tons of rail steel bars, apartment building at Seventy-fifth Street and South Shore Drive, to Inland Steel Co.

CHICAGO, 110 tons, arcade building on Thirty-seventh Street, to Kalman Steel Co.

CHICAGO, 350 tons of rail steel bars, Steuben Club, to Inland Steel Co.

CHICAGO, 300 tons, superstructure for Women's Athletic Club, to Olney J. Dean & Co.

MILWAUKEE, 440 tons, public school, to Concrete Steel Co.

ST. LOUIS, 440 tons; 280 tons for southern approach to municipal bridge across Mississippi River, and 260 tons for Jefferson Plaza garage, to Missouri Rolling Mills Corporation.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

BOSTON, 500 tons, United Shoe Machinery Corporation office building.

BETHLEHEM, PA., 100 tons, Lehigh University building; bids in.

CUMBERLAND, MD., 180 tons, hospital, general contractor George A. Fuller Co.

Old Metals, Per Lb., New York

The buying prices represent what large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their use.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.00c.	13.50c.
Copper, heavy and wire	11.75c.	12.875c.
Copper, light and bottoms	10.00c.	11.25c.
Brass, heavy	7.00c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.625c.
No. 1 yellow brass turnings	7.75c.	9.00c.
No. 1 red brass or composition turnings	8.75c.	9.75c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.25c.	3.75c.
Sheet aluminum	12.50c.	14.50c.
Cast aluminum	12.50c.	14.50c.

WASHINGTON, 1050 tons of 30-ft. round deformed bars for Panama Canal, delivery at Balboa or Cristobal; bids to be opened March 15.

BUFFALO, 225 tons, addition for Trico Products Co.; bids taken this week.

CLEVELAND, 1000 tons, two store buildings and warehouses for Sears, Roebuck & Co.

CLEVELAND, 100 tons, building for Cleveland Clinic.

AKRON, OHIO, 300 tons, garage.

LOS ANGELES, 1220 tons, Drainage Improvement District No. 22; bids April 9.

RAILROAD EQUIPMENT

Chicago & North Western Will Buy 1000 Automobile Car Bodies—12 Locomotives Placed

WITH inquiry for 1000 automobile car bodies from the Chicago & North Western, 250 automobile and 175 oil cars from the Southern Pacific and 192 gondolas from the Detroit & Toledo Shore Line, railroad business in prospect is somewhat larger than in recent weeks. The locomotive market has been featured by the purchase of 10 locomotives by the New York Central and an inquiry for eight switching units from the Chicago, St. Paul, Minneapolis & Omaha. Details of the week's business follow:

New York Central has ordered five Hudson-type and five suburban type locomotives for service on the Boston & Albany from American Locomotive Co.

Chicago, St. Paul, Minneapolis & Omaha is inquiring for eight 8-wheel switching locomotives.

Illinois Terminal Co. has ordered one Mogul-type locomotive from Baldwin Locomotive Works.

City of Seattle has ordered one Prairie-type locomotive from Baldwin Locomotive Works.

Union Refrigerator Transit Co. has placed an order for 50 refrigerator cars with American Car & Foundry Co.

Chicago & North Western has made inquiry for 1000 automobile car bodies.

Safety Car Heating & Lighting Co. has ordered 30 special refrigerator cars without ice bunkers from American Car & Foundry Co.

Detroit & Toledo Shore Line is inquiring for 192 50-ton gondola cars.

Chicago, Rock Island & Pacific has ordered 10 suburban cars from Standard Steel Car Co., 10 coaches from Pullman Car & Mfg. Corporation and 10 baggage and six baggage-mail cars from American Car & Foundry Co.

Southern Pacific will buy 250 automobile cars and 175 oil cars.

Northern Pacific will purchase 50 caboose car underframes.

The March meeting of the Pittsburgh Foundrymen's Association, at the Fort Pitt Hotel, Pittsburgh, Monday evening, March 19, will be featured by the presentation of a five-reel film, "Jewels of Industry," by Vernon W. Wells, of the Carborundum Co., Niagara Falls, N. Y. The film depicts the development of electric energy from Niagara Falls, the electric furnaces used in the manufacture of carborundum and aloxite and the uses of these grinding materials.

TO STUDY GRAY IRON FOUNDRY

Institute Formed at Pittsburgh to Study Problems Aims to Correct Economic Ills of Industry

PITTSBURGH, March 13.—Forty-six gray iron foundrymen from 14 States met here today at the Carnegie Institute of Technology and founded an organization which it is believed will provide the means for not only correcting the evils which have beset the gray iron casting industry for several years but for restoring it to its former prominent place in the general iron and steel industry. The new body, to be known as the American Gray Iron Institute, is to consist exclusively of those engaged in the production of gray iron castings. In a resolution offered by Walter Seelbach, Walworth Run-Forest City Foundry Co., Cleveland, and unanimously adopted, the following purposes of the organization were included:

> An intensive study to increase the quality of gray iron castings and of increasing their utilization by industry, and a study of foundry costs.
>
> A study of hand-to-mouth buying to ascertain whether it is here to stay.
>
> A study of the over-production facilities at present existing in the foundry industry.
>
> A study of new methods for merchandising the production of gray iron castings.
>
> A study of methods to strengthen present markets for gray iron.
>
> The development of new markets and ascertaining new products for manufacture.
>
> A study relating to the liquidation of unprofitable foundries and their space turned into other channels.
>
> A study of the possibility of consolidation or merging and strengthening of foundries.
>
> Discouraging further building of additional foundry capacity for some years.
>
> Encouraging users of castings who at present operate foundry departments to abandon these foundry departments if possible and again purchase their castings in the open market.
>
> The use of advertising and publicity in its many ways for the purpose of enhancing the use and purchase of the product.

B. H. Johnson, Cresson, Morris & Co., Philadelphia, was chairman of the meeting and D. M. Avey, editor *Foundry*, Cleveland, was secretary. A committee on organization was appointed to meet subject to call and it will offer its report at a meeting to be held during the annual convention of the American Foundrymen's Association in Philadelphia in the week of May 14.

The gathering brought together those active in the industry from all parts of the country for what proved to be a thorough-going discussion of the problems of the gray iron castings and their market. C. E. Hoyt, Chicago, secretary American Foundrymen's Association, was present and expressed not only the interest of that organization in the new body, but extended its cooperation in its efforts. W. H. Barr, president National Founders' Association, brought a similar message.

Walter Wood, R. D. Wood & Sons, Philadelphia; A. F. Jensen, Hanna Engineering Works, Chicago; Dr. Richard Moldenke (in letter read by J. L. Carter, Barlow Foundry Co., Newark, N. J.; A. J. Tuscany, secretary Ohio Foundrymen's Association, and J. T. McKenzie, American Cast Iron Pipe Co., Birmingham, were among those who contributed to the discussion of the need of such an organization as the meeting had been called to formulate and pointed out what should be its functions.

OBITUARY

CHARLES D. MASON, secretary of the Cleveland-Cliffs Iron Co., Cleveland, died March 7 of pneumonia after an illness of three weeks, aged 53 years. He had been connected with the Cleveland-Cliffs company 26 years, having started as an auditor in the blast furnace department at Gladstone, Mich. He was transferred to Cleveland as assistant auditor of the company in 1911 and was made secretary in 1926.

—

JONATHAN DIXON MAXWELL, a pioneer automobile manufacturer of the United States, died on March 8 at his home at Worton Manor, Md. He was born in Indiana in 1864, and after learning the machinist's trade became associated with Elmer Apperson in a bicycle repair shop at Kokomo, Ind. Here, in association with Mr. Apperson and Elwood Haynes, he carried on experiments which led to the building of what is thought to have been the first automobile constructed in this country. Mr. Maxwell then went to Montreal, where he experimented with motor-driven tractors. He next became associated with R. E. Olds in the development of the Oldsmobile car. Finally establishing his own factory at Tarrytown, N. Y., he brought out the Maxwell automobile, and when the United States Motors Co. was formed he became vice-president. Mr. Maxwell retired from active business 15 years ago.

—

ALFRED E. TRYON, since 1908 treasurer and manager of the Vermont Construction Co., Inc., Burlington, Vt., died on Feb. 29, at Roanoke, Va., following an operation. He was 69 years of age.

—

WILLIAM E. WIGHTMAN, treasurer New Departure Mfg. Co., Bristol, Conn., died at his home in that city, March 7. He was born in South Meriden, Conn., in 1868, and at one time was associated with the Russell & Erwin Co. In 1903 he went with the New Departure company and became treasurer about 11 years ago.

LAZARD KAHN, president of the Estate Stove Co., Hamilton, Ohio, died at his home in Cincinnati, March 7. With his brothers, Felix and Samuel, he became associated with an old firm of stove founders at Hanging Rock, Ohio, in 1873, and in 1881 he and his brother Felix bought the business and continued to operate it under the name of F. and L. Kahn Brothers, with offices in Cincinnati. In 1884 the company erected a plant at Hamilton, but still retained its general offices at Cincinnati. The business was incorporated as the Estate Stove Co. in 1906, and the general offices were removed to Hamilton. Mr. Kahn was born in Alsace in 1850. At the International Exposition in Paris in 1900 he was a juror of awards, and a year later was made a Chevalier of the Legion of Honor of France. As president of the Estate Stove Co. he was active until about a year ago.

—

C. ARTHUR SCHOESSEL, general superintendent of the John Deere Harvester Works, East Moline, Ill., died on March 8 at his home in Rock Island, Ill., aged 37 years. He had been associated with the John Deere industries for 15 years, having been transferred a few years ago from the Deere & Co. plant to the East Moline harvester works. He advanced from one plant executive position to another until he became general superintendent.

Electric industrial trucks and tractors to the number of 120 were shipped in February, as against 112 in January, according to reports received by the Department of Commerce from nine leading manufacturers. Of the February shipments, 102 units were for domestic use, 15 being tractors and 87 trucks. Shipments abroad included 18 units.

The Western Machine Tool Works, Holland, Mich., has appointed Manning, Maxwell & Moore, Inc., Chicago, agent in that territory for its radial drills and tappers.

PERSONAL

J. C. Gore, whose appointment as general sales manager of the St. Louis Gas & Coke Corporation, 1502 Telephone Building, St. Louis, to succeed Walter H. Underwood, was mentioned in The Iron Age of March 1, began his career in the pig iron business in 1906 as secretary to James Bonnyman, vice-president of the old Birmingham Coal & Iron Co., Birmingham. When that company was taken over by the Woodward Iron Co., Birmingham, Mr. Gore went to Cincinnati, where he became associated with the Domhoff & Joyce Co., Cincinnati, former sales agent for the Birmingham Coal & Iron Co. He remained with the Domhoff & Joyce organization for 12 years, two years at Cincinnati, eight years at Indianapolis and two years as manager of the company's Chicago office. He joined the St. Louis Coke & Iron Co. in 1923 as assistant sales manager at Chicago, and was transferred to the St. Louis office on July 1, 1927.

J. C. GORE

E. A. Lerner has been made vice-president of the Kensington Steel Co., Chicago, rather than president as announced recently in these columns.

J. L. Gregg, metallurgical engineer Western Electric Co., Chicago, addressed the Chicago Foundrymen's Club, March 10, on "Metallography."

Robert T. Rossell, vice-president of the Bessemer & Lake Erie Railroad, a subsidiary of the United States Steel Corporation, has been elected president to succeed the late James H. Reed.

Harold Strouse, advertising manager Harnischfeger Corporation, Milwaukee, has been elected president of the Milwaukee Association of Industrial Advertisers, succeeding the late Howard A. Winton, of the Heil Co.

Floyd W. Moore has been made manager of the Vermont Construction Co., Inc., Burlington, Vt., to succeed the late Alfred E. Tryon. He is a graduate of Syracuse University and has been chief engineer of the Burlington company since 1924.

Charles L. Allen, president and general manager of the Norton Co., Worcester, Mass., on March 6, his seventieth birthday, was presented with a bronze statuette, "The Scout," by employees of the company. He has been general manager of the company for 43 years and president for 10 years.

George B. Michie has been appointed Western representative of the Niagara Falls Smelting & Refining Corporation, Buffalo, and will have headquarters in Chicago.

Charles B. Acheson has been made district manager of a sales office opened at 122 South Michigan Avenue, Chicago, by the Erie City Iron Works, Erie, Pa. J. R. LeValley has been assigned to the office as special engineer and D. F. Lytle as sales representative. E. J. Clerget will be in charge of a sub-office at 511 Traction Terminal Building, Indianapolis.

Jordan Korp, of the Leeds & Northrup Co., Philadelphia, addressed the Indianapolis chapter of the American Society for Steel Treating on March 12. His subject was "Pyrometers and Furnaces." At a meeting on April 9 T. D. Taylor, metallurgist of the Bliss & Laughlin Steel Corporation, Chicago, will be the speaker.

James T. Lee and John O. Clark, of Lee & Clark, Inc., Chicago, have become associated with the Adkins, Young & Allen Co., 32 South Jefferson Street, Chicago, dealers in pumps, air compressors, hydraulic equipment and power plant supplies.

J. B. Stam, sales manager of the Portland, Ore., branch of the Clyde Equipment Co., has been made general sales manager of the company's Seattle office.

Tom Hanning, president; George Dierking, vice-president; R. T. Wetteland, secretary, and George Raitt, treasurer of the Steel Tank & Pipe Co. of Oregon, Portland, have been elected directors of the company. Plowden Stott, L. M. Pickett and George Priestley have been elected to the board, also.

Prof. Henry le Chatelier, noted French chemist, on Feb. 28 was presented with a medal and certificate of honorary membership in the American Society of Mechanical Engineers. The presentation was made by Charles M. Schwab, past-president of the society, at a luncheon at the American Embassy in Paris. The honor was in recognition of Professor le Chatelier for his introduction of new methods of physico-chemical analysis now widely used in metal-working establishments.

H. N. Kelsey has been placed in charge of a new branch office of the United States Electrical Tool Co., Cincinnati, at 205 University Building, Syracuse, N. Y. His territory will include all of New York State with the exception of region adjacent to New York City, which remains in charge of W. B. Da Silva. Mr. Kelsey was recently connected for five years with the Syracuse Twist Drill Co., Syracuse, and previously was identified with the Waltham Grinding Wheel Co., Waltham, Mass., and with the Ross Mfg. Co., Cleveland.

Charles A. Boultman has been appointed manager of the supply division in the sales department of the Pangborn Corporation, Hagerstown, Md., manufacturer of sand blast and dust collecting equipment. He was formerly with the Carborundum Co., Niagara Falls, N. Y., and later with the E. A. Kinsey Co., Cincinnati. In his new capacity he will have charge of abrasive and supplies service for sand blast users. Grant Davis, formerly advertising manager of the Marion Steam Shovel Co., Marion, Ohio, has joined the Pangborn organization as manager of its advertising division.

C. J. Walters, who has been with the Lamson & Sessions Co., Cleveland, for 21 years, the past eight years as assistant sales manager, has resigned to become associated with his brother, Cornelius G. Walters, in the Master Products Co., Cleveland, manufacturer of steel stampings, wrought washers and riveting burrs.

William M. Henry has been elected president and E. D. Clapp vice-president of the Crouse-Pope Foundry Corporation, Auburn, N. Y. Mr. Henry, who succeeds his father, the late William J. Henry, in the Crouse-Pope organization, is also president of the Henry Forge & Tool Co., Auburn. Mr. Clapp, who takes the place of the late William Crouse, founder of the corporation, is also treasurer of the E. D. Clapp Mfg. Co., Auburn.

E. W. Fulton has been made general manager of the Oswego Tool Co., Oswego, N. Y., succeeding the late William J. Henry, who was president and general manager. Mr. Fulton went to the Oswego company in August, 1924, as works manager and last June became sales manager.

J. R. Stebbins has been elected president of the Rebo Co., Watertown, N. Y., recently organized to succeed the Adams Equipment Co., manufacturer of extensions for hand trucks. O. L. Stevens will be vice-president of the new company and D. N. Gilbert secretary and treasurer.

Howard Bruce, for 18 years president of the Bartlett Hayward Co., Baltimore, has been elected chairman of the board, and has been succeeded by Howell Fisher, who has been first vice-president and general manager for 12 years. Albert C. Bruce has been made a vice-president. The remainder of the executive personnel remains unchanged.

—

George C. McClure, formerly purchasing agent of the American Rolling Mill Co., Middletown, Ohio, and more recently Chattanooga, Tenn., representative of the Ashland Fire Brick Co., Ashland, Ky., has been transferred to the main office of the Ashland company and will have charge of sales in the Ohio territory.

—

John R. Davis, for many years vice-president and a director of the Moore Push-Pin Co., Philadelphia, has been elected president, succeeding the late William Percy Mills.

—

Dr. Harvey Nathaniel Davis, professor of mechanical engineering at Harvard University, has been elected president of the Stevens Institute of Technology, Hoboken, N. J., succeeding the late Dr. Alexander C. Humphreys, and will assume his new duties on Sept. 1. Dr. Davis has occupied the chair of mechanical engineering at Harvard since 1919 and previously served as instructor and assistant professor of physics at that institution. He was born at Providence in 1881, the son of the late Nathaniel French Davis, for many years head of the department of mathematics at Brown University. The younger Doctor Davis was graduated from Brown, receiving the degrees of A. B. and A. M. He later attended Harvard, his work there leading to the degrees of A.M. and Ph.D. His professional activities include service as an engineer in the turbine department of the General Electric Co., as an aeronautical mechanical engineer in the United States Air Service and as a consulting engineer in the Bureau of Mines and for the Franklin Railway Supply Co. and the Air Reduction Co. He is a fellow of the American Academy of Arts and Sciences, a member of the Washington Academy of Sciences, the American Society of Mechanical Engineers, the American Physical Society and of the American Mathematical Society. He is also a member of the honorary fraternities, Phi Beta Kappa and Sigma XI. He is the author, with Prof. L. S. Marks, of "Steam Tables and Diagrams," and of various papers on thermodynamic subjects.

DR. H. N. DAVIS

—

Edward F. Hartnett, associated with the sales department of the United States Radiator Corporation, has been appointed sales manager of the Green Island, N. Y., plant.

—

R. S. Archer, research metallurgist Aluminum Co. of America, Cleveland, discussed "Aluminum" before the Hartford, Conn., and the Worcester, Mass., chapters of the American Society for Steel Treating on March 13 and 14 respectively.

—

Thomas A. Arthur has resigned as vice-president and a director of Hickman, Williams & Co., Pittsburgh, but expects to continue in the iron and steel brokerage business with which he has been identified for 30 years. He joined Hickman, Williams & Co. in 1907 and about 10 years ago was elected vice-president. Before making that connection he had been with Naylor & Co. and with Banning Cooper & Co., which in 1899 took over the Pittsburgh office of the Naylor organization.

—

T. E. McLaughlin has been appointed superintendent of the Youngstown plant of the Truscon Steel Co., succeeding Albert Senf, who has been made manager of the company's new property at Los Angeles.

—

Boyd B. Jack, who was vice-president and general manager of the Empire Steel Co., Cleveland, taken over by the new Empire Steel Corporation, Mansfield, Ohio, has resigned.

—

G. A. Hughes, chief electrical engineer Truscon Steel Co., Youngstown, will address the Pittsburgh section of the American Welding Society at the monthly meeting, Wednesday evening, March 28, in the quarters of the Engineers Society of Western Pennsylvania, William Penn Hotel. His subject will be "Spot Welding."

—

Fred E. Wilhelm has resigned from the Judson Mfg. Co., San Francisco, and has joined the sales organization of the Pacific Coast Steel Co., with headquarters in the Hunter-Dulin Building in that city. He had been with the sales department of the Judson company since 1919.

New Sheet and Strip Association to Be Incorporated in Ohio

PITTSBURGH, March 12.—A joint meeting of the members of the National Association of Sheet and Tin Plate Manufacturers, the Hot-Rolled Strip Steel Institute and the Cold-Rolled Strip Steel Institute held here last Wednesday considered and approved with minor alterations the plan for merging these organizations into one association to be known as the National Association of Flat Rolled Steel Manufacturers.

The new organization is to be chartered under the laws of Ohio, which are more favorable in respect to trade association incorporations than those of other States. This means that the new body must legally have an office in that State and strengthens the idea that the headquarters will be located in Cleveland. The sheet and cold-rolled strip associations now are located in Pittsburgh and headquarters of the Hot-Rolled Strip Steel Institute are in Canton, Ohio.

Before the new association becomes operative, it will be necessary to secure the signed acceptance of the plan by companies representing enough of the country's sheet, strip and wide strip productive capacity to assure its success, and the getting of acceptances now is in progress.

Foreign Commerce Handbook

Under date of February, 1928, the foreign commerce department of the Chamber of Commerce of the United States has issued its biennial edition of a handbook giving sources of information regarding exports, imports and foreign trade generally. References are listed under alphabetically arranged topical headings. One such, selected at random to indicate the method of treatment, follows:

Combination in Export.—Information regarding combinations in export trade formed under Export Trade Act (Webb-Pomerene Law) may be obtained from Federal Trade Commission, Washington. Names of all combinations formed under act are on record there. Consult also Bureau of Foreign and Domestic Commerce, Washington.

About 90 topics are treated in similar manner in the 42 pages of text.

The Illinois Commerce Commission has ordered a reduction in rates for the transportation of coal from Illinois mines to Chicago. The order states that rates maintained by railroads for transportation of coal from Pennsylvania, Maryland, Virginia, Kentucky, West Virginia and Tennessee are lower than corresponding rates in Illinois.

NEW TRADE PUBLICATIONS

Punches, Shears and Bending Rolls.—Hendley & Whittemore Co., Beloit, Wis. Catalog No. 12. Sixty pages, illustrating and describing both power and hand-operated punches and shears, slip roll hand-forming machines and various types of bending rolls.

Air Filters.—Staynew Filter Corporation, Rochester, N. Y. Bulletin 30D3, of 24 pages, illustrates and describes an industrial air filter designed to protect machinery, buildings and employees from abrasive dust. The device is attached to air inlets of various types of internal combustion engines and is made in various sizes.

Drum Controllers.—General Electric Co., Schenectady, N. Y. Bulletin GEA887, of four pages, illustrates and describes controllers for motors used on crane hoists and similar applications.

Parts Molded of Thermoplax.—Cutler-Hammer Mfg. Co., Milwaukee. Pamphlet of 24 pages devoted to the use of an insulating material having both electrical and mechanical strength and low cost for material and assembly. The material is synthetic and will stand temperatures up to 400 deg. Fahr., or more. It is used for electric plugs and many parts where momentary temperatures may run high.

Electric Crane Operation and Maintenance.—Whiting Corporation, Harvey, Ill. Bulletin 179 of 32 pages, thoroughly illustrated, gives a good deal of information and some advice in connection with assembly, operation and maintenance of electric overhead traveling cranes. Included is a pictorial representation of the standard signals to cranemen, as adopted by the Bethlehem Steel Co.

Helicoid and Sectional Flight Screw Conveyors.—H. W. Caldwell & Son Co. (Link Belt Co.), Western Avenue and Seventeenth Street, Chicago. List price book No. 989 of 88 pages, illustrated, is devoted to the helicoid type of screw conveyor and the gearing and parts necessary for its operation. Spare parts are listed in many tables, with dimensions and prices, covering the entire range of this type of equipment.

"Switch-Start" Motors.—Lincoln Electric Co., Cleveland. Four-page folder describing the starting and operating characteristics of a motor started by throwing the switch right across the line. This is one of a line of motors in which arc welding has had a large place.

Tiering and Piling Equipment.—Economy Engineering Co., 2639 West Van Buren Street, Chicago. Folder illustrating several types of lifting, tiering, stacking and piling equipment for use in manufacturing plants and warehouses and operated both by hand and electric power. Four units are shown, varying in capacity from 500 to 8000 lb., and in range from 10 to 30 ft.

Speed Reducers.—Palmer-Bee Co., Detroit. Catalog No. 48, 48 pages, devoted to speed reducers of both herringbone and spur gear types. The herringbone units employ the Sykes herringbone gear with continuous teeth and sharp apices, and are available in ratings from fractional to 200 hp., and in ratios from 2 to 1 up to 4000 to 1. Salient features, including the method of lubrication, are described and illustrated. Tables intended to facilitate selection of units for various classes of service are included, as well as tables of dimensions and weights. Other sections are devoted to spur gear reduction units and to the company's flexible couplings.

Sand-Mixing Equipment.—Standard Sand & Machine Co., 5151 St. Clair Avenue, Cleveland. Binder of 30 pages describes briefly some of the important features of design and construction of a line of sand-mixing machinery. Dimensions and capacity are given, with full-page illustrations of various types of the machine and sectional views.

Automatic Stokers.—American Engineering Co., Philadelphia. Pamphlet of 12 pages devoted to the use of the Taylor stoker for steam boilers. The pamphlet is well illustrated and shows the operation of the stoker in forcing coal into the fire zone and ashes out at the bottom of the grate.

Machinery and Equipment.—Walter A. Zelnicker Supply Co., St. Louis. Bulletin 355, listing various cranes, engines, motors, generators, air compressors, derricks, tanks, rails, shovels, locomotives, cars and other equipment in company's present stock.

Gas Burners.—Lee B. Mettler Co., 406 South Main Street, Los Angeles. Folder devoted to Mettler gas burners for various industrial installations.

Coking Equipment.—Semet-Solvay Engineering Corporation, 40 Rector Street, New York. Pamphlet 337, an index of literature on Semet-Solvay and Steere coke oven, by-product, water gas and gas plant equipment and processes.

Alloy Steel Castings.—Nugent Steel Castings Co., Wood and Thirty-first Street, Chicago. Booklet telling of the application of Nugent alloy steel to various types of machinery.

Magnetic Separator Pulleys.—Cutler-Hammer Mfg. Co., Milwaukee. Bulletin P-26, explaining in detail construction and design of all types of magnetic separator pulleys made by company. Several tables giving cu. ft. per hr. capacity of various sizes and correct width and thickness of belts to be used are included.

Vertical Chamber Gas Oven.—Carl Still Corporation, 114 Liberty Street, New York. Pamphlet of 14 pages devoted to the Indugas vertical chamber oven, operated on the recuperative or the regenerative principle and heated with its own or auxiliary gas. This is based on a German invention redesigned and adapted to American practice in gas works and coke oven construction.

Starter for Electric Motors.—Allen-Bradley Co., Milwaukee. Folder describing an automatic compression resistance starter, type J-3052, designed for smooth starting and gradual acceleration.

Refractory Materials.—General Refractories Co., 106 South Sixteenth Street, Philadelphia. Brief folder devoted to Arcofrax high-alumina brick for use in the hot zones of kilns.

Car Dumpers.—Roberts & Schaefer Co., Wrigley Building, Chicago. Bulletin 103, describing varied installations of company's rotary car dumpers for use in mines and industrial plants.

Steel Tanks.—Sistersville Tank & Boiler Works, Sistersville, W. Va. Catalog listing various types of tanks for filling station, bulk station, pressure, oil field, fuel oil and other liquid storage purposes. Tanks are built in welded, standard, riveted-welded and other types in capacities from 220 to 26,000 gal.

Rebuilt Machinery.—J. L. Lucas & Son, Inc., Bridgeport, Conn. List 73, containing wide range of used and rebuilt machine tools and machinery carried in stock by company.

Steel Shelving.—Universal Fixture Corporation, 133 West Twenty-third Street, New York. Leaflet dealing briefly with various types of unit and other steel shelving.

Electrical Fixtures.—Crouse-Hinds Co., Syracuse, N. Y. Bulletin 2107, devoted to pipe hangers, flexible fixture hangers and self-threading unions and connections.

Portable Conveyors.—George Haiss Mfg. Co., 141st Street and Park Avenue, New York. Catalog 1127 of 24 pages illustrates and describes a line of portable conveyors driven by electric motors or gasoline engines and with different types of operating surfaces. These are shown in use in a wide variety of industrial activities.

Unemployment Not Machine-Made

(*Concluded from page 734*)

alluded to, that the large accumulated savings of the workers in our country and the greater ability of the workers to temporarily contract their standard of living, which had so greatly increased in the last decade, have allowed many of the unemployed to tide over for a short period.

It was the statesmanship of America's industrial management that was alert enough to make use of the power-driven machinery which led our country into a period of prosperity during the very years which proved so difficult for other industrial countries after the war. The machine releases men from routine hand labor so that more of them may devote themselves to tasks of higher order. It is now the task of industrial management so to increase the stability of production that employment fluctuations may be reduced to a minimum. Public authorities and private management should alike be watchful that no undue employment situation develops and should be ready to counteract by proper means the hardships of material unemployment that may exist in any particular locality. True signs, however, are lacking that there is a marked increase of forced idleness in the United States involving growing poverty.

European Mills in Firm Position

Prices Strong and Deliveries Becoming Extended—British Pig Iron Market Quiet But Steel Demand Improves

(*By Cable*)

LONDON, ENGLAND, March 12.

DEMAND for Cleveland pig iron has declined, but makers expect spring requirements to appear shortly. Imports of foreign iron into Tees are diminishing. Export demand has improved, but actual sales are small.

Hematite is still quiet although the East Coast output has been reduced to 10 blast furnaces. Producers, however, are hoping to reduce their stocks. Foreign ore is inactive, but prices are advancing as a result of the continued strike at the Swedish mines.

Finished steel demand is improving, with increased domestic shipbuilding orders, but export demand is generally poor and plate mills are in need of tonnage.

February exports of pig iron totaled 27,816 tons of which the United States received none. Total exports of iron and steel were 317,036 tons.

Tin plate is moderately active. The Asiatic Petroleum Co. has placed a large order with Welsh mills at a price that was not disclosed, but is believed to have been a minimum of 17s. 9d. ($4.33) per base box, f.o.b. works port. Tin plate makers are meeting Tuesday and it is believed they will increase the scheduled price to 18s. ($4.39) per base box, as there are few sellers below that figure. Users have been attracted by low prices and a fair general demand is developing.

Galvanized sheets are quiet and easier. Black sheets are idle.

Continental demand for iron and steel is generally quiet, as consumers are not inclined to pay the present high prices. British users of semi-finished material are purchasing only small lots for prompt delivery. Most Continental mills are reported to be well booked with business and many have withdrawn quotations. The International Wire Rod Cartel has advanced its price to £5 15s. ($28.01) per ton, f.o.b.

In France there were 144 furnaces in blast on Jan. 31. Production of pig iron in January totaled 809,000 metric tons and of steel ingots and castings, 750,000 tons. The pig iron output of the Saar in January was 156,000 metric tons and the steel production 170,000 tons. There were 25 furnaces in blast in the Saar Jan. 31.

FRENCH PRICES STRONG

Pig Iron and Steel Products Advancing—Mills Quoting Longer Deliveries

PARIS, FRANCE, Feb. 24.—Although the domestic iron and steel market still shows decided strength and some prices are advancing, sellers for export have encountered difficulty in obtaining the high prices asked on certain products. Prices for export are firm, however, and there has been an increase of business from South America and Japan. In the domestic market there is still a scarcity of certain products, but with the new comptoir for semi-finished material and beams effective a steadier market is expected. A further increase in freight rates of about 11 per cent is expected.

Pig Iron.—As a result of increased demand from domestic foundries, producers have increased the total iron available for March by 5000 tons, having made 38,000 tons of phosphoric foundry iron. The price established for March is 445 fr. ($17.49) per ton. Producers of hematite have made 35,000 tons available for March consumption and 15,000 tons for April. Domestic demand is good, with many buyers laying in stocks in anticipation of higher prices. In view of the prospective increase in freight rates, foundries have decided to add 5 fr. (20c.) per ton to quotations on all products which are sold at delivered prices. At a recent meeting of the entente of French, Belgian and Luxemburg producers of phosphoric pig iron the following export prices were established: For Great Britain and overseas countries, £3 5s. 6 d. ($15.95) per ton; for Holland, £3 7s. ($16.32) per metric ton, delivered Dutch

---

British and Continental European prices per gross ton, except where otherwise stated, f.o.b. makers' works, with American equivalent figured at $4.87 per £ as follows:

Durham coke, del'd.	£0	18s.				$4.39		
Bilbao Rubio ore*	1	1¾	to	£1	2s.	5.30	to	$5.36
Cleveland No. 1 fdy.	3	7½				16.44		
Cleveland No. 3 fdy.	3	5				15.83		
Cleveland No. 4 fdy.	3	4				15.59		
Cleveland No. 4 forge	3	3½				15.46		
Cleveland basic (nom.)	3	15	to	3	15½	18.27	to	18.39
East Coast mixed	3	9	to	3	10	16.80	to	17.05
East Coast hematite	3	9½	to	3	10½	16.93	to	17.17
Rails, 60 lb. and up.	7	15	to	8	0	37.75	to	38.96
Billets	6	0	to	6	10	29.22	to	31.66
Ferromanganese	13	10				65.75		
Ferromanganese (export)	13	0	to	13	5	63.31	to	64.53
Sheet and tin plate bars, Welsh	5	7½	to	5	15	26.18	to	28.01
Tin plate, base box.	0	17¾	to	0	18¼	4.33	to	4.45
Black sheets, Japanese specifications	13	5	to	13	10	64.53	to	65.75
						C. per Lb.		
Ship plates	7	12½	to	8	2½	1.66	to	1.77
Boiler plates	9	2½	to	9	12½	1.98	to	2.09
Tees	8	2½	to	8	12½	1.77	to	1.99
Channels	7	7½	to	7	17½	1.60	to	1.71
Beams	7	2½	to	7	12½	1.55	to	1.66

(a) Nominal.

frontier; for Italy, £2 19s. 6d. ($14.50), Thionville; for Switzerland, 79.25 Swiss francs ($15.25) per ton, delivered Basle, ex-duty. Reductions from these prices are granted for large tonnages. Basic pig iron for export is quoted at £2 18s. to £2 19s. ($14.13 to $14.42) per metric ton, f.o.b. Antwerp.

Semi-Finished Material.—Mills are well booked with business and in some cases cannot offer deliveries inside of three months. Export quotations range from £4 3s. 6d. to £4 7s. ($20.33 to $21.19) per ton on blooms; £4 10s. to £4 14s. ($21.92 to $22.90) per ton on billets and £4 13s. to £4 16s. ($22.65 to $23.38) per ton on sheet bars, all f.o.b. Antwerp.

Finished Material.—The market is firm, and, although beams are the only finished product controlled by the comptoir, others are following the same upward movement. Most rolling mills are well covered and are quoting prices 30 to 40 fr. ($1.18 to $1.57) per ton higher than at the beginning of February. For export, beams are quoted at £4 14s. to £4 16s. per ton (1.04c. to 1.06c. per lb.). Bars range from £5 6s. to £5 7s. per ton (1.17c. to 1.18c. per lb.), with some mills not seeking further tonnage quoting £5 7s. 6d. per ton (1.18c. per lb.). The sheet market is active, but the advance in prices has been less pronounced than in other products. Longer deliveries are being offered by mills. The tube market has been rather active lately. The European Tube Syndicate is negotiating for a steel pipe line in the oil fields of Baku, requiring about 50,000 tons. British and American makers, also, are competing for this business.

Italian Steel Cartel Formed

HAMBURG, GERMANY, Feb. 26.—It is reported from Italy that Italian steel producers, who have not been united in any association, have established a cartel similar to the German Steel Syndicate. Only one small producer is not a member. It is expected that the new association, which will control sales in Italy, will reduce prices.

German Armco Iron Output Increased

HAMBURG, GERMANY, Feb. 26. — Production of "Armco" ingot iron under license from the American Rolling Mill Co., Middletown, Ohio, was begun by the United States Works, Düsseldorf, last summer. Output has been about 340 tons a month and will be considerably increased as a result of heavy demand.

Japan to Use Heavier Rails

As part of a program to replace the rails on the Imperial Japanese Government railroads with 100-lb. sections, the entire track from Yokohama to Kobe is to be relaid in 1931. In line with this program it has been announced that work over a distance of about 70 miles out of Kozu will be undertaken soon, says a report received by the Department of Commerce, Washington, from J. H. Ehlers, assistant commercial attaché, Tokio.

Exports of Tractors at New Record Level

Tractors make up by far the largest item of farm equipment exported from the United States. Shipments abroad during the past few years have grown so rapidly that they are now in excess of the peak of $30,000,000 reached in the unusually active year of 1920, according to the agricultural division, Department of Commerce. This item represents more than 40 per cent of the total agricultural implement exports. In 1927 tractors to the value of $37,102,302 were exported, compared with $30,485,519 in 1926; $27,980,568 in 1925 and $14,669,971 in 1924.

Revenue freight loaded in the week ended Feb. 25 is reported by the American Railway Association at 869,590 carloads. This is the lowest figure for several weeks and is nearly 50,000 cars below the figures for the corresponding weeks of 1927 and 1926.

BELGIAN MILLS WELL BOOKED

Mills Adopt Independent Attitude Although Price Peak May Have Been Reached

ANTWERP, BELGIUM, Feb. 25.—The market continues active, and prices are firm and in some cases advancing. The volume of business being transacted is not large, however, as many mills are well booked with tonnage and willing to accept further business only at prices which consumers are as yet unwilling to pay. In some quarters it is believed that the peak of the present advance has been reached. It is pointed out in some quarters that the highest prices have been paid by speculators, most consumers not being inclined to buy at the prices quoted by the mills. In some cases, also, stocks have been replenished so that users have their immediate requirements well covered. Exporters have begun to quote foreign buyers on the higher price basis and are booking some tonnages which had been withheld in the hope that prices would decline. Although there may be a temporary reaction in prices, it is not expected to be of long duration, as output is restricted by the International Steel Cartel and unless there is a decided decline in demand there will be no surplus to depress the market.

Pig Iron.—Stocks are small, demand is good, and prices are firm. No advances have been made by the syndicate because of competition from British furnaces. No. 3 phosphoric foundry iron is quoted at about $16.25 per ton, f.o.b. furnace, while Middlesbrough foundry iron is offered at $16.70 per ton, delivered Antwerp. Export prices are being maintained at about £3 3s. ($15.34) per ton, f.o.b. Antwerp.

Semi-Finished Material.—There is a decided scarcity of semi-finished steel, so that, despite offers of high prices by buyers in need of material, little business is being booked. Current quotations are nominally £4 4s. to £4 7s. ($20.46 to $21.19) per ton for blooms; £4 11s. to £4 14s. ($22.16 to $22.90) per ton for billets and £4 16s. ($23.38) per ton for sheet bars.

Finished Material.—Prices are nominally higher, but mills are so well booked that even at the advances few are interested in additional tonnage. Beams are firm, and prices show an upward tendency at £4 15s. per ton (1.05c. per lb.). Bars are quoted at £5 7s. per ton (1.18c. per lb.). Hoops are quoted at £6 5s per ton (1.38c. per lb.). Corrugated reinforcing bars are £5 12s. 6d. per ton (1.24c. per lb.), f.o.b. Antwerp.

German Unemployment Payments Shifted to Industry

HAMBURG, GERMANY, Feb. 26.—Total payments to the unemployed during 1927 were 908,300,000 m. ($217,083,700), compared with 1,179,000,000 m. ($281,781,000) in 1926. These payments are now to be shifted to employers and employees. In 1927, by special tax, employers and employees paid to this fund a total of 682,300,000 m. ($163,069,700), compared with 523,600,000 m. ($125,140,400) in 1926; local municipalities paid 53,800,000 m. ($12,858,200), compared with 148,400,000 m. ($35,467,600) in 1926, counties paid 52,800,000 m. ($12,619,200), compared with 243,000,000 m. ($58,077,000) in 1926, and the Government paid 116,000,000 m. ($27,724,000) compared with 258,000,000 m. ($61,662,000) in 1926.

Luxemburg Increases Output

Production of pig iron and steel in Luxemburg, amounting to 2,723,359 and 2,470,172 metric tons respectively in 1927, reached the highest peaks in the history of the industry, according to a report received by the iron and steel division, Department of Commerce, Washington, from the office of the trade commissioner in Paris. In 1926 the totals were 2,511,561 tons of pig iron and 2,243,722 tons of steel. This gain, it is pointed out, is in line with the programs of the three large Luxemburg sales groups, the Columbia, the Sogeco and the Soco-Belge.

Machinery Markets and News of the Works

SALES IN FAIR VOLUME

Present Rate of Activity Expected to Continue Throughout March

International Harvester Co. Issues Inquiry and Willis Motors, Inc., Has List of Tools in Preparation

MACHINE tool sales continue in fair volume, and it is expected that bookings will be maintained at the present rate during the remainder of the month. It is reported from Cincinnati that, barring a radical change in conditions in the next two weeks, the volume of business booked by some companies during the first three months of this year will show an appreciable increase over the corresponding period of last year. In the Chicago district sales are at the rate of the latter part of February, with farm implement manufacturers the most active group.

A fair showing of machine tool sales for the first quarter of this year is also indicated by a tentative calculation of the machine tool orders index of the National Machine Tool Builders' Association. According to this index, allowing for the shorter month, orders during February were only slightly less than those of January, which were higher than for any month since May, 1920.

The automobile industry is expected to be more active in placing orders for machine tools in the next few months. One large builder in the Cincinnati district has quoted on about $300,000 worth of such equipment, most of which is expected to be placed during the first half of this year.

Railroad buying is comparatively light, although there are a number of pending lists. The Lehigh Valley is reported to be preparing a short list. The Transit Commission, New York, has asked for additional information regarding tools for one of the shops that will serve the new subway. In New England, inquiries have been received from railroads for radial drills and other heavy equipment.

The International Harvester Co. has issued a list for its Moline, Ill., tractor plant, and a tractor builder at Waterloo, Iowa, is in the market for a number of machine tools. The Willis Motors, Inc., Chicago, is said to be preparing a list, which will include lathes, milling machines and other standard tools.

Small lot purchases have been made by the Ford Motor Co., which placed 10 universal grinders during the week. Tool room equipment has been taken by the Studebaker Corporation, South Bend, Ind., and among other machines the Stewart-Warner Speedometer Corporation, Chicago, has ordered 15 presses.

New York

NEW YORK, March 13.

BUSINESS in machine tools is somewhat irregular, some sellers reporting continued activity and others slightly less demand. Many users are apparently inclined to delay placing orders, but there is still a fair volume of single tool purchases. The Delaware, Lackawanna & Western has closed for about half its original list of 30 items and has postponed indefinitely purchase of the remainder. The Lehigh Valley is reported to be preparing a short list of machine tools. The Transit Commission, New York, has been asking for additional information in preparing a list of tools for a shop at the 207th Street yard of the new subway. The New York Central, which has issued inquiries for 20 or more tools since the first of the year, has recently inquired for any changes that may have been made in prices submitted on inquiries made prior to Jan. 1.

Among industrial users of machine tools, the Wright Aeronautical Corporation, Paterson, N. J., has made some further purchases of used equipment the past week and expects to be in the market for more tools when its new building is started. The Fairchild Airplane Mfg. Corporation, Farmingdale, Long Island, which recently purchased a turret lathe, has also bought a boring mill. The General Electric Co. has made further purchases of tools in the week.

Other sales include a No. 1 Pratt & Whitney jig boring machine to a manufacturer in Connecticut, No. 3 die sinker to a company in Chicago, No. 4 A universal die sinker to a forge company in Illinois, two 13 x 30-in. lathes to a maker of automobile accessories in Chicago, No. 2 jig boring machine to a manufacturer in Cincinnati, four 5-in. production hand milling machines to a motor company in Detroit, No. 0 Sigourney drill to a manufacturer of office supplies in New York, No. 4 A universal die sinker to a railroad supply company in Pennsylvania and No. 2 A Browne & Sharpe universal milling machine and No. 2 surface grinder to a company in Salt Lake City.

Plans have been arranged by Transogram Co., Inc., 148 Thirty-ninth Street, Brooklyn, manufacturer of toys, etc., for a one-story and basement plant, 100 x 400 ft., at Haskell, N. J., to cost approximately $100,000 with equipment. Present business will be removed to new location. Oscar Goldschlag, Inc., 1482 Broadway, New York, is architect and engineer.

Max Pollak Iron Works, 504 East Seventy-sixth Street, New York, has purchased five-story building of Continental Baking Corporation at 337 East Seventy-fifth Street, and will remodel for an extension.

Board of Education, Bronxville, N. Y., plans installation of manual training equipment in two-story junior high school to cost $750,000, for which plans are being completed by H. Leslie Walker, 144 East Fifty-fourth Street, New York, architect.

Port of New York Authority, 75 West Street, New York, is asking bids until March 26 for electrical equipment for Elizabeth-Howland Hook bridge over the Arthur Kill, between New Jersey and Staten Island. J. E. Ramsey is chief executive officer.

United States Shipping Board, Department of Maintenance and Repair, 45 Broadway, New York, will receive bids until March 28 for 66 pumping units for salt-water cooling and general service, fresh-water piston cooling, lubricating oil, etc., and for eight electric motors; on March 26 for 6 thrust bearings.

A. E. Kluepelberg, 375 East Fordham Road, New York, architect, will take bids on general contract in about 30 days for a two-story automobile service, repair and garage building to cost close to $100,000 with equipment.

Cities Service Co., 60 Wall Street, New York, is arranging for sale of stock to total $20,000,000, proceeds to be used for expansion in public utility properties, including extensions and improvements in power plants and transmission lines, and acquisition of new light and power properties.

Board of Education, White Plains, N. Y., plans installation of manual training department in three-story high school to cost $1,000,000. Starrett & Van Vleck, 393 Seventh Avenue, New York, are architects.

William Shary, 41 Union Square, New York, architect, has filed plans for a two-story automobile service, repair and garage building, 100 x 142 ft., to cost about $90,000 with equipment.

Electric Bond & Share Co., 71 Broadway, New York, operating electric light and power properties, including Pennsylvania Power & Light Co., Utah Power Co. and Southwestern Power & Light Co., has arranged for increase in capital from $100,000,000 to $300,000,000, a portion of fund to be used for expansion in power and transmission lines, acquisition of additional properties, etc.

New York Central Railroad Co., C. S. White, room 344, 466 Lexington Avenue, New York, purchasing agent, is asking bids until March 19, for wire fence and fence posts, serial contract No. 5-1928.

Union Bag & Paper Corporation, Woolworth Building, New York, has awarded general contract to Star Iron & Steel Co., East Eleventh Street, Tacoma, Wash., for pulp and paper mill at Tacoma, to cost $800,000 with machinery. A lumber mill for raw material for pulp production will be operated.

Corona Corporation, 346 Claremont Avenue, Jersey City, N. J., manufacturer of gas and electric fixtures, has asked bids on a new five-story plant to cost in excess of $85,000 with equipment. Christian H. Ziegler, 75 Montgomery Street, is architect.

Betz Brothers, 32 James Avenue, Jersey City, N. J., manufacturers of hollow steel doors and trim, etc., have leased a portion of former mill of Passaic Cotton Mills, Passaic, N. J., and will remodel for new plant. It is understood that present works will be removed to new location later. Another portion of mill property was secured recently by Triplex Safety Glass Co., Hoboken Terminal Building, Hoboken, N. J., for manufacture of special sheet glass for automobile windshields, almost exclusively for Ford Motor Co.

Art Metal Works, 7 Mulberry Street, Newark, has taken title to adjoining property and will use for expansion.

Samuel Sanbar and Albert Caracus, Newark, have leased property at 510 North Eleventh Street and will establish a plant for manufacture of radiator enclosures.

Radio Frequency Laboratories, Inc., Richard W. Seabury, 245 Rockaway Avenue, Boonton, N. J., president, has leased 125 acres in Rockaway Valley section as site for a new laboratory and aircraft field, to be operated for experimental work in conjunction with Bureau of Standards, Department of Commerce, Washington. Hangars, repair shop and other airplane buildings will be erected.

George E. Edmunds, Detroit, formerly connected with Edmunds & Jones Corporation of that city, manufacturer of automobile headlights, etc., and Col. E. C. Carrington, chairman Hudson River Night Line, Pier 32, North River, New York, have secured a controlling interest in Eastwood Mfg. Corporation, Belleville, N. J., manufacturer of brass wire screen used for paper mill service, and other wire goods. New owners plan an expansion. C. H. Neally, heretofore principal owner, will continue as chairman of board; Mr. Edmunds will be president, Col. Carrington, vice-president, and George C. Warner, treasurer.

Commercial Steel Equipment Co., 45 Morris Street, Jersey City, has been formed to manufacture steel equipment for office, store and factory and will also produce household specialties, including radiator enclosures and kitchen cabinets. T. W. Becker is president of company, G. F. Meyer, vice-president, and V. C. Stephens, treasurer.

New York branch sales office and factory of Carbon Sales Division, National Carbon Co., Inc., Cleveland, will be moved on March 15 from 357 West Thirty-sixth Street, New York, to larger quarters at Fourteenth and Henderson Streets, Jersey City. Considerable additional manufacturing equipment has been added.

Kastwell Foundry Co., 185 Christie Street, Newark, formerly Transfer Metal Castings Co., is building extension to plant.

Ideal Plating & Polishing Co., 57 Bradford Street, Newark, has been licensed by Chromium Corporation of America to do "Crodon" chromium plating. Company also expects to build plant extension adding 50,000 sq. ft. to its present floor space.

Automatic Gear Shift Corporation, 55 West Forty-second Street, New York, has been organized to manufacture automatic gear shifts for automobiles. Manufacturing will be done by contract. Awards have not yet been made.

Hasselman & Szekely, Inc., 143 East Forty-fifth Street, New York, has been incorporated to manufacture wrought iron and bronze work, including stair railings, iron doors, lighting fixtures, lanterns, hardware, balconies, etc. Company has factory fully equipped.

New England

BOSTON, March 12.

THE machine tool market is more quiet than a week ago. Few new inquiries have been received, the largest coming from the railroads and calling for radial drills and other heavy-duty equipment. Outstanding inquiries apparently are no nearer closing than a fortnight ago and sales of new tools are at a minimum. A 14-in. lathe to a Providence shop and a Peerless power hack saw to a railroad, in addition to further awards by the city of Boston for its continuation school for approximately 16 machines, are the most important reported the past week. Quite a little used equipment has been sold to small shops, including a sizable punch, two blowers to a railroad, 3-in. inclinable power press, 16-in. x 6-ft. Reed-Prentice geared head lathe, two milling machines, shaper, and an Excelsior upright drill to Boston shops, and a 16-in. x 8-ft. lathe to a Gardner, Mass., plant, in addition to less important tools. Local firms handling radial drills have been notified that a change in the rating of such tools will soon be put into effect.

Small tool sales are keeping pace with those in February, but running behind those in January. Compared with a year ago they are slightly better.

Confirming previous statements regarding business conditions in the machine tool trade, the Associated Industries of Massachusetts has just issued its January report. Its index number for the metal trades is 81.5, contrasted with 101.3 for December and 79.6 for January, last year.

Barnes Airport Co., Westfield, Mass., will erect a 60 x 80-ft. hangar and 12 x 30-ft. machine shop. Plans are by Austin Co., New York.

Plans will be out this week for a two-story, 68 x 93-ft. automobile body manufacturing plant for the Waterhouse Co., Tracy Court, Webster, Mass. L. J. Chafee, Oxford, Mass., is architect.

Peter McLaughlin, 78 North Street, Pittsfield, Mass., has plans for a two-story, 60 x 65-ft. addition to be erected by Pittsfield Electric Co., 92 Renne Avenue.

Bids are about to close on a four-story and basement, 60 x 100-ft. plant to be built by Seth Thomas Clock Co., Thomaston, Conn. Lockwood, Greene & Co., Inc., 24 Federal Street, Boston, are engineers.

Ralph M. Siger, 12 Elm Street, Westfield, Mass., is preparing plans for a local two-story and basement, 72 x 118-ft., boys' trade school. C. Derby is principal.

New York offices of the Union Drawn Steel Co., Hartford, Conn., will be discontinued. New local offices are at 647 Main Street.

Crane Co. has purchased 50,000 ft. with 555 ft. frontage on Vassar Street, Cambridge, Mass., and Boston & Albany Railroad. New owner expects to improve and occupy property.

Hub Wire Cloth & Wire Work Co., 16 Chanal Street, Boston, has leased a portion of building at 28 Lancaster Street for expansion.

Smith, Seymour & Sons, Inc., Oakville, Conn., manufacturer of hardware, has plans for a two-story and basement addition, 50 x 150 ft., to cost about $80,000.

New England Metal Culvert Co., Tenneyville Street, Palmer, Mass., is having plans drawn by Monks & Johnson, 99 Chauncy Street, Boston, architects and engineers, for a new one-story plant, 80 x 90 ft., on site recently secured at South Boston.

Board of Public Works, Springfield, Mass., is considering construction of a new pumping plant, to cost more than $25,000 with equipment. McClintock & Craig, Springfield, are engineers.

Western Electric Co., 80 John Street, New Haven, Conn., is considering erection of a two-story factory branch at West Haven, Conn., to cost more than $50,000 with equipment. Headquarters are at 195 Broadway, New York.

Cinder Concrete Unit Corporation, 79 Milk Street, Boston, has awarded general contract to W. M. Bailey Co., 88 Broad Street, for a one-story plant, 85 x 100 ft., at Somerville, Mass., to cost approximately $40,000 with equipment.

General Electric Co., Pittsfield, Mass., has plans for a two-story addition in the Silver Lake section, 40 x 280 ft., to cost in excess of $80,000 with equipment. It will be used largely for mixing and molding.

Officials of Stone & Webster, Inc., 49 Federal Street, Boston, operating electric light and power properties, have formed Eastern Utilities Associates, Inc., with capital of 2,000,000 shares of stock, no par value, to take over and consolidate Blackstone Valley Gas & Electric Co., Pawtucket and Woonsocket, R. I.; Edison Electric Illuminating Co., Brockton, Mass.; and Electric Light & Power Co., Abington and Rockland, Mass. Company plans expansion and improvements, including transmission line construction.

Brockton Ice & Coal Co., Main Street, Brockton, Mass., will build a one-story ice-manufacturing plant, 80 x 150 ft., to cost more than $50,000 with equipment. Funk & Wilcox, 26 Pemberton Square, are architects.

Gulf States

BIRMINGHAM, March 12.

PLANS are being considered by Magnolia Petroleum Co., Dallas, Tex., for extensions and improvements in its oil refinery at Beaumont, Tex., with installations of additional units for lubricating oil production, to cost $200,000 with machinery.

West Texas Utilities Co., Abilene, Tex., is disposing of a block of 25,000 shares of stock, a considerable portion of proceeds to be used for extensions and improvements, including transmission line construction.

Southern Pacific Lines in Texas, Houston, R. W. Barnes, chief engineer, will make extensions and improvements in power plant at car shops at Jacksonville, Tex., with installation of additional equipment. Work will be carried out in connection with an expansion program at that point to cost $100,000.

Dothan Casket Co., Dothan, Ala., will rebuild portion of plant destroyed by fire March 1, with loss close to $40,000 including equipment.

Gulf Coast Shell & Cement Co., Kress Building, Houston, Tex., is reported planning a new cement mill on 75-acre tract at Palacios, Tex., to cost in excess of $100,000 with equipment. Company has arranged for an increase in capital to $150,000.

John W. Hooser, Dallas, and W. H. Eddleman, Wichita Falls, Tex., receivers for American Refineries Co., with plant at last-noted place, have been authorized to dispose of property of company on May 3. Refinery, pipe lines, etc., are said to be valued at $6,000,000.

San Antonio Public Service Co., San Antonio, Tex., has work under way on its power development at New Braunfels, Tex., including installation of 30,000-kw. turbo-generator and auxiliary equipment. Extensions will be made in transmission lines. Entire project will cost in excess of $350,000.

Western Mfg. Co., San Angelo, Tex., recently formed with capital of $100,000 to take over and expand Western Iron Works, Avenue D, has plans for four one-story additions, including machine shop, 40 x 275 ft.; foundry, 30 x 100 ft.; forge and blacksmith shop, 40 x 40 ft.; and warehouse, 40 x 40 ft. Work will begin at once. B. W. and M. S. Willig are heads.

Pasotex Petroleum Co., subsidiary of Standard Oil Co. of California, 225 Bush Street, San Francisco, will soon begin superstructure for initial units of its refinery near El Paso, Tex., to cost about $800,000 with machinery.

Tridex Corporation, Dallas, Tex., recently organized by W. P. Gage, Dallas, and associates, has closed negotiations with Guiberson Corporation, operating a local iron and steel works, for manufacture of a new automatic cleaning machine for garage service, and quantity production will be arranged. Later, Tridex company proposes to establish its own factory. Mr. Gage is president; S. A. Wier, vice-president, and H. E. Hobson, secretary.

F. A. Mason, 2058 College Avenue, Ocala, Fla., is at the head of a project to construct and operate an ice-manufacturing and cold storage plant at Ocala, Fla., to cost about $70,000.

Packard Motor Car Co., San Angelo, Tex., has plans for a two-story service, repair and garage building, 75 x 190 ft., to cost about $85,000 with equipment. Beverly W. Spillman & Son., Alamo National Bank Building, San Antonio, Tex., are architects.

Markle Steel Co., Shepherd Street, Houston, Tex., is said to have plans under way for two one-story additions to be used largely for storage and distributing service, to cost close to $70,000.

Board of Education, San Angelo, Tex., is planning construction of a new vocational school to cost close to $100,000, and will soon take bids on general contract. Phelps & Dewees, Gunter Building, San Antonio, Tex., are architects.

Humble Oil & Refining Co., Houston, Tex., is reported planning a new storage and distributing plant in Winkler County, comprising 40 tanks, each with capacity of 55,000 bbl., pumping and power equipment, and auxiliary apparatus. Site has been selected.

Southern Mfg. Co., Houston, Tex., has leased plant of Harlingen Planing Mills, Harlingen, Tex., and will remodel for manufacture of school furniture and supplies, to cost more than $35,000 with machinery.

City Council, Brownsville, Tex., has arranged for bond issue of $100,000 for a municipal airport, using tract about three miles from city. Plans will soon be arranged for hangars, machine and repair shops, oil storage and distributing building, and other structures.

Walter J. Lloyd, 702 N. E. First Avenue, Miami, Fla., is at head of a project to establish and operate a local plant for manufacture of extracts, using palmetto roots as raw material, reported to cost about $35,000 with equipment.

Birmingham Engine & Machinery Corporation, Birmingham, is in market for motor generator set of 100 to 150-kw. capacity. Direct current side must be 250 volts and alternating current motor side, three-phase, 60-cycle, 220 volts. Only modern unit with switchboard will be considered.

Philadelphia

PHILADELPHIA, March 12.

CONTRACT has been let by Brown Instrument Co., Roberts and Wayne Streets, to Robert E. Lamb Co., local, for a two-story addition to cost close to $40,000 with equipment. Ballinger Co., Twelfth and Chestnut Streets, is architect and engineer.

Locust Construction Co., Sixth and Locust Streets, Philadelphia, has plans for a three-story automobile service, repair and garage building to cost $150,000 with equipment.

Nice Ball Bearing Co., Thirtieth Street and Nicetown Avenue, Philadelphia, has awarded general contract to J. S. Rogers Co., Drexel Building, for a one-story and basement addition, 65 x 190 ft., with two extensions, each 40 x 65 ft., and for one-story garage and repair shop, 36 x 60 ft., to cost more than $50,000 with equipment.

Valvoline Oil Co., 4001 North Fifth Street, Philadelphia, has awarded general contract to William C. Wright & Son, 22 Harvey Street, for a one-story machine shop.

Silverman & Levy, 313 South Smedley Street, Philadelphia, architects, have awarded general contract to F. W. Mark Construction Co., Commercial Trust Building, for a three and four-story automobile service, repair and garage building, 93 x 110 ft., with extension, 17 x 55 ft., to cost $150,000.

Quaker City Cold Storage Co., Delaware and Spruce Streets, Philadelphia, has awarded contract to J. A. Hauser, Water and Spruce Streets, for an eleven-story and basement ice and cold storage plant, 110 x 130 ft., to cost close to $1,000,000 with machinery. Ballinger Co. is architect and engineer.

Philadelphia & Reading Railroad Co., Reading Terminal, Philadelphia, has plans for a one-story addition to locomotive and car shops at Reading, Pa., to be equipped primarily as a welding works, to cost close to $35,000.

Penn-Jersey Transportation Co., Camden, N. J., operating a motor bus line, has begun erection of a one-story service, repair and terminal building with foundations for additional stories. Complete machine and repair shop will be installed. Entire project will cost $100,000. Company is reported planning erection of other such structures in different parts of this district.

Board of Education, Trenton, N. J., has plans for a new two-story high school on 36-acre tract, to cost about $2,000,000, and will install manual training department. Ernest Sibley, Bluff Road, Palisade, N. J., is architect.

General Aircraft Corporation, Hazleton, Pa., recently organized, has acquired local plant of Hazleton Mfg. Co., heretofore used for manufacture of caskets, etc., for establishment of a plant. B. S. Stewart is chief engineer.

Board of Education, Lock Haven, Pa., plans installation of manual training equipment in three-story high school to cost $275,000, for which bids are being asked on general contract. Lawrie, Green & Co., Third and Forster Streets, Harrisburg, Pa., are architects.

Fire, March 6, destroyed a portion of ice plant and power house at the plant of Dairymen's League, Wyalusing, near Towanda, Pa., with loss reported at $22,000 including equipment. It is planned to rebuild.

Pennsylvania Gas & Electric Co., York, Pa., has arranged for a bond issue of $700,000, a portion of proceeds to be used for expansion, including transmission line construction.

Pennsylvania Railroad Co., C. E. Walsh, purchasing agent, room 415, 15 North Thirty-second Street, Philadelphia, is asking bids until March 22 for piston heads, contract No. 20,1928.

Haddock Mining Co., Silver Brook, Pa., will make extensions and improvements in its machine repair shops, including installation of additional equipment for repairs to engines, cars and other heavy machinery, including coal-mining equipment.

American Ice Co., City Centre Building, Philadelphia, is arranging an expansion and improvement program, including construction of a new ice-manufacturing plant at Brighton, Boston, with initial capacity of 180 tons per day, and a second plant in Boston district with output of about 120 tons daily. Another plant of like capacity will be built in New England district.

Muller & Postle, Inc., 2615 York Street, Philadelphia, has been organized to fabricate structural steel and ornamental iron, specializing in stair work and kindred lines. Company is opening new plant and desires catalogs of firms in its field. H. E. Muller is president and A. H. Postle, vice-president.

Pittsburgh

PITTSBURGH, March 12.

MACHINE tool business is notable more for the number than the size of orders, as is usually true when demand is for replacement rather than the tooling or retooling of complete shops.

Packard Motor Car Co. of Pittsburgh, 4709 Baum Boulevard, has awarded general contract to Rust Construction Co., 311 Ross Street, for a one-story and basement service, repair and sales building, 135 x 190 ft., to cost $130,000 with equipment.

Dravo Contracting Co., Neville Island, Pittsburgh, operating a shipyard for building steel barges, etc., has begun an extension and improvement program along Ohio River, including a new one-story machine shop, with outfitting dock to be equipped with a terminal crane and runway, to cost more than $75,000.

Lazote, Inc., Belle, W. Va., a subsidiary of E. I. du Pont de Nemours & Co., Wilmington, Del., has plans for enlargements for production of ammonia, methanol and kindred products, to cost in excess of $350,000 with machinery. DuPont Engineering Co., du Pont Building, Wilmington, is engineer in charge.

United States Corrugated Fibre Box Co., Wheeling, W. Va., is reported planning an addition to cost about $120,000 with equipment. H. J. Lacy is in charge.

Monongahela-West Penn Public Service Co., Fairmont, W. Va., is said to have concluded arrangements for acquisition of light and power properties in vicinity of Salem and West Union, W. Va., and plans expansion and betterments, including construction of transmission lines.

Cleveland

CLEVELAND, March 12.

SOME machine tool dealers report a fair number of single orders, although sales and inquiries dropped off the past week. A few moderate sized lots of machines are pending in this territory, but prospective purchasers seem to be in no hurry to place orders. The market in Detroit is dull, buying by the automotive industry which recently took a little spurt, having subsided. The Ford Motor Co. continues to purchase equipment in small lots and during the week bought 10 universal grinders. The Willys-Overland Co., Toledo, purchased two multiple spindle drilling machines.

Plans are being arranged by Cleveland Electric Illuminating Co., Illuminating Building, Cleveland, for construction of a steel tower transmission line in northeastern Ohio, 59 miles long, to cost $1,800,000. Company will make extensions and improvements in Avon power plant to cost about $55,000. A fund of $11,600,000 is being developed for expansion and betterments in power lines, plants, substations, etc.

Hydraulic Pressed Brick Co., Central National Bank Building, St. Louis, is completing plans for a new works at Cleveland for manufacture of hollow tile, to cost $60,000 with equipment. K. H. Mittendorf, Interstate Building, Kansas City, Mo., is engineer.

Ludlow Window Ventilator Co., East Liverpool, Ohio, recently formed by Robert J. McElravy, East Liverpool, and James Ludlow, Carrollton, Ohio, has leased quarters in the Milliron Building, for manufacture of a patented window ventilator. Operations will begin at once.

Ohio Valley Gas Corporation, operating Zane Gas Co., Zanesville, Ohio, and other natural gas properties and pipe lines, is disposing of note issue of $400,000, portion of proceeds to be used for extensions and improvements, including acquisition of additional properties.

Fostoria Pressed Steel Co., Fostoria, Ohio, has plans for a one-story addition for enameling service, to cost more than $50,000. Forster & Wernert, Nicholas Building, Toledo, Ohio, are architects and engineers.

Officials of Akron Rubber Reclaiming Co., Barberton, Ohio, are organizing Midwest Rubber Reclaiming Co., capitalized at $1,000,000, to construct and operate a mill at East St. Louis, Ill. J. B. Huber is president of parent organization, and W. A. Hart, secretary.

Safety Stair Tread Co., Spruce Street, Wooster, Ohio, manufacturer of metal stair treads, has revised plans for an addition, to cost close to $40,000 with equipment. Bids on first plans were recently rejected. Christian, Schwarzenberg & Gaede Co., 1900 Euclid Avenue, Cleveland, is architect and engineer.

Detroit

DETROIT, March 12.

BIDS are being asked by Chrysler Motor Corporation, 12265 East Jefferson Avenue, Detroit, for a six-story addition, 25 x 75 ft., for body production, to cost $125,000. Smith, Hinchman & Grylls, Marquette Building, are architects.

Ralston Purina Mills, Inc., Battle Creek, Mich., plans rebuilding portion of mill destroyed by fire March 4, with loss estimated at close to $250,000 with equipment. Headquarters are at 801 South Eighth Street, St. Louis.

Lohman & Lohman, 2 Huron Street, Ypsilanti, Mich., architects, have plans under way for a two-story automobile service, repair and garage building at Ann Arbor, Mich., to cost about $100,000 with equipment.

Koestlin Tool & Die Co., 3601 Humboldt Avenue, Detroit, has awarded general contract to Krieghoff Co., 4815 Belleview Avenue, for an addition to cost more than $40,000 with equipment. Janke, Venman & Krecke, 1346 Broadway, are architects.

Board of Water Commissioners, 176 East Jefferson Avenue, Detroit, is asking bids until March 21 for two pumping units for auxiliary low-lift waterworks station, one pump to have a capacity of 260-million gal. per day, and other 200-million gal. per day, complete with accessory apparatus. George H. Fenkell is general manager and chief engineer.

Chevrolet Motor Car Co., Flint, Mich., has plans for a one-story addition, 225 x 900 ft., to cost in excess of $500,000 with equipment. Wright & Nice, South Saginaw Street, are architects. Company is also said to be planning a one-story forge shop to plant at Detroit, to cost more than $75,000. Albert Kahn, Inc., Marquette Building, Detroit, is architect for last-noted structure.

Grand Trunk Railway Co., Detroit, is reported planning a new engine house with repair facilities at Muskegon, Mich., to cost upward of $70,000 with equipment. J. A. Heaman is chief engineer.

New Era Spring & Specialty Co., Grand Rapids, Mich., has developed a new type of pneumatic bumper for automobiles and will devote a considerable portion of plant output to this product. It consists of an inflated rubber tube supported by steel reinforcements.

Clark Equipment Co., Buchanan, Mich., manufacturer of automobile wheels, axles, transmissions, etc., is completing three new units, totaling about 40,000 sq. ft. of space, as a part of a general expansion program. Work is in progress on a two-story building at branch plant at Battle Creek, Mich., which is given over to the manufacture of tractors.

King-Seeley Co., Second Street, Ann Arbor, Mich., manufacturer of gasoline gages, etc., is having plans drawn for a two-story addition, to cost about $75,000 with equipment. Verner, Wilhelm & Molby, Book Building, Detroit, are architects.

Beecher, Peck & Lewis, 125 West Jefferson Avenue, Detroit, paper products, is having plans drawn for a new two-story storage and distributing plant to cost about $60,000 including mechanical-handling equipment. Albert Kahn, Inc., Marquette Building, is architect and engineer.

The Crane Market

VERY little new inquiry for overhead cranes has appeared in the past week, but locomotive crane inquiries continue to accumulate. The New Haven Illuminating Co., New Haven, Conn., is about to close on a 50-ton electric crane. The Reading Railroad has not yet purchased two 225-ton locomotive handling cranes and a 50-ton standard overhead crane. The Amtorg Trading Corporation, 165 Broadway, New York, is reported to have closed on six 15-ton crawl-tread locomotive cranes and one 25-ton standard gage crane for Russia and has pending nine 40-ton locomotive cranes. The Delaware, Lackawanna & Western is taking bids on a 20-ton locomotive crane. The Frederick Snare Corporation, New York, which has closed on a 25-ton locomotive crane for Peru has purchased a steam shovel and is preparing an inquiry for a crawl-tread locomotive crane for the same project.

Among recent purchases are:

United Gas Improvement Co., Philadelphia, 20-ton locomotive crane for Vicksburg, Miss., from American Hoist & Derrick Co.

Frederick Snare Corporation, New York, 25-ton locomotive crane for Lima, Peru, from Ohio Locomotive Crane Co.

New York Edison Co., New York, 2-ton, monorail electric hoist with bucket from American Engineering Co.

Advance Bag & Paper Co., Boston, 5-ton hand power crane from Armington Engineering Co.

Union Bag & Paper Power Corporation, 233 Broadway, New York, 3-ton, grab bucket electric hoist and two 2-ton, 36-ft. 9-in. span, 3-motor overhead cranes for Tacoma, Wash., from Box Crane & Hoist Corporation.

South Atlantic States

BALTIMORE, March 12.

NEGOTIATIONS have been concluded by A. V. Moore Brass Works, Inc., Portsmouth, Va., for purchase of property in East Camp district, Norfolk, Va. New owner will remodel for a brass smelting and refining plant to cost in excess of $60,000.

Virginia Electric & Power Co., Richmond, Va., is arranging an expansion and improvement program to cost $4,000,000, including extensions in power facilities and transmission lines. About $1,700,000 of amount noted will be used for power substations and distributing systems.

Board of District Commissioners, District Building, Washington, is asking bids until March 23 for five road rollers.

Southern Metal Products Co., Winston-Salem, N. C., is arranging for erection of one-story plant, 40 x 79 ft., for manufacture of metal weatherstrips, etc., to cost about $18,000.

Duke Power Co., Charlotte, N. C., will proceed with construction of steel tower transmission line to Marion, N. C., and points in McDowell County, from power plant at Lake James. Tract of 5 acres has been purchased on outskirts of Marion as site for new power substation. Entire project will cost in excess of $100,000.

Wilson-Nash Motors Co., 1109 Cathedral Street, Baltimore, representative for Nash automobile, has awarded contract to Price Construction Co., Maryland Trust Building, for two-story service, repair and sales building, 130 x 200 ft., to cost about $85,000 with equipment. Owens & Sisco, Continental Building, are architects.

Bureau of Supplies and Accounts, Navy Department, Washington, is asking bids until March 20 for carbon and high speed twist drills for Eastern and Western yards, schedule 8615; for flat and soldering irons, and electric glue pots for Eastern and Western yards, schedule 8625; until March 22 for socket wrench equipment for Philadelphia yard, schedule 8544, and for one turret lathe, schedule 8104; until March 27 for 6000 lb. steel forgings, cruising turbine rotor, for Mare Island and Puget Sound yards, schedule 8682.

Chattahoochee Sand & Gravel Co., Columbus, Ga., is said to be planning new works on Chattahoochee River for gravel and sand washing, screening, etc., to cost in excess of $175,000 including machinery. A similar plant is contemplated in Floyd County.

Central Atlantic States Service Corporation, Lynchburg, Va., operating local light and power properties, with other plants and system at Staunton, Harrisonburg, Radford, Pulaski, Va., has arranged for a bond issue of $1,000,000 and note issue in same amount, proceeds to be used in part for extensions and improvements, including transmission line construction.

F. S. Royster Guano Co., Royster Building, Norfolk, Va., manufacturer of commercial fertilizer, has acquired 60 acres of water-front property at Wilmington, N. C., for a new plant, to cost in excess of $100,000 with equipment.

General Purchasing Officer, Panama Canal, Washington, is asking bids until March 22, for 4¼-hp. electric motors, bench grinder, 5000 pipe clamps, six journal jacks, 100 steel reflectors, bolts, nuts, rivets, 3000 lb. cast iron washers, tacks, grindstone frames, and other mechanical equipment for Canal Zone, Panama, schedule 2456.

Board of Education, Charlotte, N. C., is considering installation of manual training equipment in an addition to Graham Junior High School to cost $150,000. Charles C. Hook, Commercial Bank Building, is architect.

A. J. Nackley, 1121 Rugby Boulevard, Roanoke, Va., is at head of a project to establish a local mill for production of dowel pins, brackets, cross-arms and other line equipment.

Aldrich Machine Works, Inc., Greenwood, S. C., is reported planning immediate rebuilding of portion of plant destroyed by fire recently, with loss reported in excess of $30,000, including equipment. Company specializes in textile mill equipment.

Atlanta Textile Supply Co., Austell Building, Atlanta, Ga., manufacturer and distributer of cotton mill equipment and supplies, is completing plans for a new factory, to cost close to $30,000 with equipment.

J. L. Dorning and W. R. Massey, 1020 Boylan Drive, Raleigh, N. C., are at head of a project to construct and operate an ice-manufacturing plant at Midway, near Burlington, N. C., to cost in excess of $40,000 with machinery.

Arnold Stone Co., Inc., Forty-seventh Street, Jacksonville, Fla., will erect a one-story plant at Greensboro, N. C., 50 x 100 ft., for cutting, polishing, grinding, etc., to cost $25,000 with equipment.

St. Louis

ST. LOUIS, March 12.

BIDS will soon be taken by Southwestern Bell Telephone Co., Bell Telephone Building, St. Louis, for a three-story addition to its equipment storage and distributing plant, to cost approximately $85,000 with equipment.

Associated Motors Terminal Co., 117 South Broadway, St. Louis, has asked bids on general contract for a six-story automobile service, repair and garage building, 80 x 100 ft., to cost close to $330,000 with equipment. Gill & Jackson, Buder Building, are architects; W. J. Knight & Co., Wainwright Building, are engineers.

Shaffer Oil & Refining Co., Cushing, Okla., operating a local refinery and pipe line, is disposing of a note issue of $10,000,000, a portion of fund to be used for extensions in plant and system.

City Council, Marshall, Mo., has authorized plans for a municipal electric light and power plant, to cost about $80,000 with equipment. Bonds will soon be voted. Henrici-Lowry Engineering Co., Security Building, Kansas City, Mo., is engineer.

Midwest Piping & Supply Co., 1452 South Second Street, St. Louis, manufacturer of pipe, pipe fittings, etc., has plans for a two-story addition, to cost upward of $75,000 with equipment. Klipstein & Rathman, Security Trust Building, are architects.

Southwest Pump & Machinery Co., 2720 McGee Road, Kansas City, Mo., has leased a two-story building at 2710-12 McGee Road for an addition. Considerable increase in production facilities will be arranged.

Landis Machine Co., Gano and Second Streets, St. Louis, manufacturer of leather stitching machinery, etc., is planning an expansion program, including purchase of additional property for early occupancy. A note issue of $500,000 will be sold.

Diamond Truck Co., 1737 Locust Street, Kansas City, Mo., has leased a building to be erected on Holmes Avenue for a new service, repair and garage building. Entire project will cost in excess of $90,000.

Empire Refineries, Inc., Tulsa, Okla., is considering erection of a new plant unit at Ponca City, Mo., for production of industrial alcohol, to cost in excess of $300,000 with machinery.

United States Cold Storage Co., Third and Locust Streets, Kansas City, Mo., is said to be arranging for extensions in cold storage and refrigerating plant, including remodeling of ice-manufacturing plant and installation of additional equipment, to cost more than $1,000,000.

United Motor Service Co., Twenty-seventh and Warwick Streets, Kansas City, Mo., is arranging for a lease of two-story and basement building, 100 x 120 ft., to be erected at Twenty-fifth and McGee Streets, and will occupy for a new service, repair and garage building. It will cost about $90,000. R. H. Sanneman, Lee Building, is architect.

Buffalo

BUFFALO, March 12.

PLANS are being drawn by Thompson, Holmes & Converse, 311 Alexander Street, Buffalo, architects, for a five-story automobile service, repair and garage building, to cost $100,000 with equipment.

Binghamton Brick Co., Binghamton, N. Y., is planning the early rebuilding of portion of plant destroyed by fire March 3, with loss reported in excess of $175,000 with equipment.

J. M. & L. A. Osborn Co., 64-72 Rapin Place, Buffalo, iron and steel products, has filed plans for a one-story addition for storage and distributing service, to cost about $21,000 with equipment.

Victor Plaster Co., Powers Building, Rochester, N. Y., A. H. Dewey, secretary and treasurer, is planning construction of a new mill at Victor, N. Y., for production of gypsum plaster, to cost in excess of $75,000 with machinery. S. Firestone, 59 South Avenue, is engineer.

Buffalo, Niagara & Eastern Power Corporation, Buffalo, is arranging for a consolidation of all associated interests, including Niagara, Lockport & Ontario Power Co., Niagara Falls Power Co., and Tonawanda Power Co., Niagara Falls and Tonawanda, N. Y., to include general expansion in combined facilities, with extensions in transmission lines.

Union School District, Penn Yan, N. Y., is considering installation of manual training equipment in new junior high school to cost approximately $250,000. John Johnson is president, in charge.

Indiana

INDIANAPOLIS, March 12.

BIDS are being asked by Board of Trustees, Water Works Department, Evansville, Ind., until March 29 for equipment for waterworks extensions and improvements, including steam engines, generators and switchboards, pumping machinery, boiler feed and sump pumps, coal and ash-handling machinery, boiler room equipment, valves and boxes, and traveling crane. Black & Veatch, Mutual Building, Kansas City, Mo., are consulting engineers.

Interstate Public Service Co., Indianapolis, is disposing of bond issue of $12,554,000, a portion of fund to be used for extensions and improvements in power facilities and transmission lines, including acquisition of other properties. E. Van Arsdel is president.

Following recent acquisition of plant of Durant Motor Co. at Muncie, Ind., to Merchants' Trust & Savings Co., Muncie, property has been transferred to General Motors Corporation, Detroit, and will be used by Delco-Remy Corporation, Anderson, Ind., a division of purchasing company, for a new plant for manufacture of storage batteries. It is purposed to have factory ready for service in about 60 days. A. L. Hopkins, formerly chief engineer for Prest-O-Lite Co., Indianapolis, will be in charge of engineering at new unit; L. C. Goad, process engineer at Anderson plant, has been appointed superintendent at Muncie works.

Bantam Ball Bearing Co., Bantam, Conn., will proceed at once with superstructure for a one-story plant at South Bend, to cost about $70,000 with equipment, for which general contract was recently let to H. G. Christman & Co., 306 South Notre Dame Street. Company will remove from Bantam to new location and provide for increased output.

Doeppers & Lennox, 226 East Michigan Street, Indianapolis, architects, have asked bids on general contract for a two-story automobile service, repair and garage building, 90 x 145 ft., to cost about $90,000 with equipment.

Indiana General Service Co., Muncie, is arranging an expansion and improvement program to cost $2,500,000, including extensions in power facilities, transmission lines and power substations. Plans are under way for construction of a double circuit steel tower transmission line from Fort Wayne to Marion, Ind., about 58 miles. At last-noted place a 20,000-kw. switching and power substation will be built, and a 25,000-kw. substation will be constructed at Muncie. Company is operated under direction of American Gas & Electric Co., 30 Church Street, New York.

Major Brothers Packing Co., South Logan Street, Mishawaka, is said to be planning installation of ice and cold storage plant in three-story packing house to cost $350,000, for which bids will be asked on general contract in April. Packers' Architectural & Engineering Co., 431 South Dearborn Street, Chicago, is architect and engineer.

Board of Education, Burlington, has authorized installation of manual training department in two-story addition to high school to cost $75,000, for which plans have been drawn by C. E. Werking & Son, American Trust Building, Richmond, Ind., architects.

Mid-States Steel & Wire Co., Crawfordsville, formed recently by merger of Adrian Wire Fence Co., Adrian, Mich., Crawfordsville Wire & Nail Co., Crawfordsville, and Dwiggins Wire Fence Co., Anderson, will remove plant of Adrian company to Crawfordsville and consolidate with mill of Wire & Nail company. Facilities will be provided for production of field and poultry wire fencing, gates and ornamental fence, heretofore carried on at Adrian. Crawfordsville division will continue production of nails and kindred products, and Dwiggins plant will remain at Anderson without change in products.

Chicago

CHICAGO, March 12.

MACHINE tool sales the first two weeks in March were steady and at the rate of those in the latter part of February. Fresh inquiry gives promise that purchasing will be sustained over the next few weeks. Farm implement manufacturers are still the most active buyers. The International Harvester Co. has issued a list for its Moline plant and a tractor builder at Waterloo, Iowa, is in the market for a number of machine tools. Automobile accessory plants and a drop forge manufacturer are making purchases. The Stewart-Warner Speedometer Corporation, Chicago, has ordered 15 presses and other equipment. Willis Motors, Inc., Chicago, is preparing to issue a list including milling machines, lathes, boring mills and radial and multiple-spindle drills. Studebaker Corporation, South Bend, Ind., has purchased several tool-room items. Several inquiries emanate from Rockford, Ill., tool manufacturers who are improving their manufacturing facilities.

Two manufacturers of radial drills have advanced prices 10 per cent.

Plans are being considered by Blake Specialty Co., 360 North Michigan Avenue, Chicago, manufacturer of well augers, pipe bends, etc., for a new one-story foundry to cost about $35,000 with equipment.

Firebrand Fuel Co., Norris City, Ill., is considering early rebuilding of portion of power house at local coal mining property destroyed by fire March 7, with loss of $100,000, including boiler and engine equipment.

City Council, Cedar Falls, Iowa, is considering construction of municipal artificial gas plant, to cost about $150,000 with equipment. A bond issue is being arranged.

Iowa Power & Light Co., Adel, Iowa, is disposing of bond issue of $6,000,000, a portion of proceeds to be used for expansion and improvements, including transmission line construction. Company is affiliated with Illinois Power & Light Corporation, Chicago.

Walter H. Wheeler, Metropolitan Life Building, Minneapolis, Minn., engineer, has plans for a steam-operated electric power house at Polson, Mont., to cost more than $50,000 with equipment.

Welfare Seating Co., 1119 Glenrock Avenue, Waukegan, Ill., W. J. Bargen, head manufacturer of car seats, etc., is planning for a new one-story factory to cost about $35,000.

Produce Terminal Cold Storage Co., Chicago, care of Henschin & McLaren, 1637 Prairie Avenue, engineers, has awarded general contract to Wells Brothers Construction Co., 53 West Jackson Boulevard, for an eleven-story cold storage and refrigerating plant, to cost approximately $2,000,000 with machinery.

Fire, March 2, destroyed a portion of the commissary department at car shops of Pullman Co., 110th Street, Chicago, with loss close to $100,000 including equipment.

Iowa Railway & Light Co., Cedar Rapids, Iowa, has approved plans for a new steam-operated electric power plant at Webster City, to cost about $40,000.

Solem Machine Co., 158 Morgan Street, Rockford, Ill., manufacturer of wood-working machinery and parts, has plans for a one-story addition, to cost in excess of $100,000 with equipment. Peterson & Johnson, Swedish-American Bank Building, are architects.

Corona Pen Co., 134 North La Salle Street, Chicago, will rebuild its plant at Antioch, Ill., recently partially destroyed by fire, with loss estimated at $50,000 including equipment. Edgar M. Newman, 107 North Clark Street, Chicago, is architect.

City Council, Carlisle, Iowa, is asking bids until March 20 for pumping equipment, water tank and tower, with accessory apparatus, for a municipal waterworks. W. E. Buell & Co., Davidson Building, Sioux City, Iowa, are consulting engineers.

National Plate Glass Co., General Motors Building, Detroit, will soon begin erection of new unit at plant at Ottawa, Ill., to cost in excess of $200,000 with equipment.

Shops of Rapid City, Black Hills & Western Railroad, Rapid City, S. D., were destroyed by fire March 5, with loss of $200,000.

Milwaukee

MILWAUKEE, March 12.

DEMAND for machine-tools is improving, and while the volume of new business is still limited, production schedules are tending upward. The automotive industries are furnishing a more substantial market, although purchases as yet are hardly equal to the broad average of recent years at this season. On the other hand, manufacturers of agricultural power machinery, building and road construction equipment and general metal products shops are relatively good customers. Inquiry is generally active and continued betterment of demand is believed in sight.

American Metal Products Co., 1348 Burnham Street, Milwaukee, manufacturer of bronze castings, bearing metal, forgings, etc., has placed contracts for construction of a brick and steel foundry addition, 80 x 100 ft., to cost about $40,000 complete. Inquiry is being made for equipment, including a 5-ton electric traveling crane. Improvements also are being made in forge shop and rolling mill.

Wisconsin Iron & Wire Works, 1660 Booth Street, Milwaukee, is erecting a one-story addition, 42 x 62 ft., designed by F. H. Hollister, consulting engineer, 428 Wisconsin Avenue. An investment of $25,000 is planned.

Minneapolis, St. Paul & Sault Ste. Marie Railway contemplates installation of a new turntable at its terminal and division shops at Stevens Point, Wis., at a cost of $35,000.

Reliable Mfg. Co., 417 Lake Avenue, Racine, Wis., manufacturer of hot plates, toasters and other electrical devices, has plans by A. L. Flegel, architect, Baker Building, for a new two-story shop, 40 x 120 ft., to cost about $40,000 complete.

Bluhm Cab Co., 410 Washington Street, Wausau, Wis., will build a two-story garage and service shop in two units, 60 x 65 ft. and 37 x 60 ft., starting work April 15. The architect is H. C. Manecke, care of Wausau Iron Works.

Kerner Automatic Hoist Co., Milwaukee, has been incorporated with 1050 common shares without par value, to take over operation of Milwaukee Hoist Co., 128-132 Ferry Street. Company manufactures hoists for building materials and expects to materially increase its output. Officers of new company also are officers and principal owners of Kerner Incinerator Co., Milwaukee, with Mackey Wells as president. Theodore and Herbert Zetterlund, principals in old company, are directors of new company and will be active in management.

Vincent-McCall Co., Kenosha, Wis., manufacturer of bed and cushion springs, is completing work on a $35,000 factory addition, to be ready about April 1.

Miller Investment Co., Milwaukee, has engaged Martin Tullgren & Sons Co., architects, 9 Waverly Place, to design a three-story and basement garage, 100 x 150 ft., to be erected at a cost of $200,000.

Bergstrom Paper Co., 225 West Wisconsin Avenue, Neenah, Wis., expects to start work May 1 on construction of a new power plant costing about $75,000, consisting of a turbine room, 50 ft. sq., and a boiler house, 50 x 110 ft., requiring turbines of 2500 kw. capacity and three boilers. Engineers are Orbison & Orbison, 110 West College Avenue, Appleton, Wis.

Carl Bobke, 3030 Lisbon Avenue, Milwaukee, manufacturer of copper building supplies and other goods, is preparing to build a two-story shop addition, 35 x 78 ft., designed by A. J. Pietsch, 3515 State Street, local. Machinery requirements have not been decided upon as yet.

Jambor Tool & Stamping Co., 1261 Thirtieth Street, Milwaukee, has increased its capital stock from $100,000 to $200,000. Plant has been enlarged during past year and further additions are contemplated. A. L. Kaems is president and general manager.

Wisconsin Fabricating Co., 401 Pearl Street, Geen Bay, Wis., is establishing a new department for manufacture of tanks for gasoline and oil trucks.

Century Boat Co., Milwaukee, has been incorporated with $100,000 capital to manufacture standard type of boat designed especially for outboard engines. Manufacturing plans call for an output of 500 to 1000 units this year. Principals are represented by law firm of Quarles, Spence & Quarles, 490 Broadway, Milwaukee.

Western Metal Specialty Co., Thirtieth Street and Calhoun Place, Milwaukee, manufacturer of automotive and industrial sheet metal products and freight car heaters, is building addition to its plant and purchasing new equipment.

Cincinnati

CINCINNATI, March 12.

MACHINE tool sales the past week have been of fairly good volume and indications are that bookings the remainder of the month will be maintained at about the present rate. Unless there should be a radical change in conditions in the next two weeks, machine tool builders estimate that the volume of business in the first quarter of 1928 will show an increase of from 15 to 20 per cent over that in the corresponding period last year. This, however, does not mean that the industry in general in the Cincinnati district has benefited to a marked extent, because the improvement has been confined to a relatively small number of companies.

That the automobile industry should be productive of a liberal amount of machine tool business in the next few months is the opinion of several manufacturers. At least one important machine tool company has quoted automobile makers in the Detroit district on about $300,000 worth of equipment, practically all of which will be purchased the first half of this year. A Detroit company has ordered eight large lathes from a local builder.

In the railroad field, buying has not opened up, although there are a considerable number of pending transactions. The Atlanta & West Point Railroad, Atlanta, Ga., has closed for a 48-in. 500-ton bevel-end wheel press and a No. 3 axle lathe, while the National Transit Pump & Machine Co., Oil City, Pa., has bought a 42-in. x 30-ft. heavy-duty engine lathe.

Bids will be received by Department of Water, Dayton, Ohio, W. W. Morehouse, director, until April 2, for five motor-driven centrifugal pumping units for sewage service, including complete lubricating system, cast iron pipe, fittings, etc. Metcalf & Eddy, Statler Building, Boston, are consulting engineers.

Board of County Commissioners, Springfield, Ohio, is taking bids until March 26 for equipment for a sand and gravel crushing plant, including crusher unit, power belting, etc.

Guinn Mfg. Co., East Maple Street, Johnson City, Tenn., manufacturer of toys, novelties, etc., plans rebuilding portion of factory recently destroyed by fire, with loss close to $50,000 including equipment.

Southern Refrigerating Co., Bristol, Tenn., will build a new ice-manufacturing and ice cream plant, 75 x 104 ft., at Kingsport, Tenn., to cost about $75,000 with equipment.

Air Corps, Material Division, Wright Field, Dayton, Ohio, is asking bids until March 22, for one surface grinder, one radial drill, one thread comparator machine, one bench saw, one hack saw, one power saw and one nibbling machine, circular 264; until March 23, for 1000 high compression pistons, circular 265.

R. W. Flack, city manager, Springfield, Ohio, is considering installation of pumping plant on South Limestone Street for city sewage, to cost $25,000. William Lucas is city engineer.

Stowers Lumber & Mfg. Co., Harriman, Tenn., will rebuild portion of hardwood mill recently destroyed by fire, with loss more than $40,000. Company proposes to purchase a 300-kw. generator with accessories.

Gillette Grain Co., Nashville, Tenn., will soon begin work on a grain elevator, 200 ft. high, with storage annex, 110 ft. high, capacity 30,000 bu., to cost about $100,000 with conveying, elevating and other equipment. Horner & Wyatt, Board of Trade Building, Kansas City, Mo., are engineers.

International Harvester Co., Chestnut and Water Streets, Columbus, Ohio, has awarded general contract to W. F. Hendrich, 2777 East Fifty-third Street, Cleveland, for a new factory branch, repair, service and sales building at Springfield, Ohio, to cost about $100,000 with equipment. Headquarters are at 606 South Michigan Avenue, Chicago.

United States Engineer, Nashville, Tenn., will receive bids until March 22 for a quantity of annealed steel wire rope sheaves, etc., circular 321; until March 26 for one wire rope block, circular 322.

Tennessee Electric Power Co., Chattanooga, Tenn., will issue preferred stock in amount of $1,250,000, considerable portion of fund to be used in connection with expansion and betterment program, including additional power facilities and transmission line construction.

Cleveland, Cincinnati, Chicago & St. Louis Railway Co., Cincinnati, is planning construction of locomotive and car repair shop units at Bellefontaine, Ohio, to cost in excess of $120,000 with equipment.

C. H. Gosiger Machinery Co., 413-15 West Fifth Street, Dayton, Ohio, dealer in iron and wood-working machinery, is building a new office and warehouse at Bacon and McDonough Streets.

Pacific Coast

San Francisco, March 7.

PLANS are being arranged by Western Oil & Refining Co., Inc., West Eighth Street, Los Angeles, for extensions and improvements in refinery at Wilmington, in harbor district, with installation of equipment to double capacity of lubricating oil division and asphalt refinery; machinery will also be installed in petroleum refinery. Company has arranged for a preferred stock issue of $2,000,000, a portion of proceeds to be used for work.

Bids will be received by United States Indian Irrigation Service, Los Angeles, until March 28 for one 150-hp. boiler, and one 125-hp. boiler, with two superheaters.

Pacific Can Co., 290 Division Street, San Francisco, has superstructure in progress on one-story plant to cost about $400,000, of which approximately $300,000 will be used for machinery installation. H. L. Nishkian, Monadnock Building, is engineer and manager of construction.

Board of County Supervisors, Hall of Records, Los Angeles, is asking bids until March 26 for six water softeners for County farm. Plans at office of County architect, Hall of Records.

Arizona Edison Co., Yuma, Ariz., is arranging an extension and improvement program to cost about $90,000 including transmission line construction.

Longview Fibre Co., Longview, Wash., is arranging for expansion, to include erection of two additional units and power house, to cost more than $90,000.

Pacific Gas & Electric Co., 245 Market Street, San Francisco, has plans for one-story machine shop and repair works, with garage, to cost about $125,000 with equipment.

San Joaquin Light & Power Corporation, Fresno, Cal., plans extensions and betterments in steam-operated electric power plant at Bakersfield, to cost $45,000 with equipment. Improvements will also be made in similar plant at Midway, to cost approximately $41,000 with machinery.

Southern Counties Gas Co., 810 South Flower Street, Los Angeles, has filed plans for a meter repair shop and mechanical works, with garage, 35 x 203 ft., to cost about $40,000 with equipment.

General Electric Co., Portland, Ore., has leased a two-story building to be erected by David T. Honeyman, 703 Prospect Drive, for a new equipment storage and distributing plant; two craneways will be installed. Entire project will cost about $80,000. Morris H. Whitehouse, Railway Exchange Building, is architect.

Los Angeles Pump & Supply Co., 500 East Eleventh Street, Los Angeles, will soon place general contract for a new one-story plant in Maywood section, to cost about $27,000 with equipment.

Pan-American Western Petroleum Co., Los Angeles, E. L. Doheny, president, is arranging an expansion and improvement program to cost approximately $10,000,000, to include additions to present plants and acquisitions of additional properties.

Kendall-Hazelett Battery Mfg. Co., 546 Skinner Building, Seattle, has plans for a new one-story plant for manufacture of electric storage batteries, to cost about $30,000. Samuel W. Kendall is head.

Armijo Union High School District, Fairfield, Cal., has authorized plans for a one-story vocational shop at local high school to cost about $25,000. Coffman Sahlberg & Stafford, Plaza Building, Sacramento, Cal., are architects.

Halcomb Steel Co., Syracuse, N. Y., has opened a warehouse at 1207 Santa Fe Avenue, Los Angeles, under direction of A. A. Westcott. Halcomb high speed and tool steels in rounds, squares and flats will be carried in stock.

Hillman & Cooney, Inc., 2439 Hunter Street, Los Angeles, has been appointed distributer of oil field products manufactured by Standard Machine Co., Torrance, Cal.

Canada

Toronto, March 12.

SALES of machinery and tools are keeping pace with the general improvement in manufacturing business. Specifications on some fair-sized lists are out and others are in course of preparation. While the greater part of the new equipment has been purchased for the Ford plant at Ford City and other districts of Canada, and the Oshawa works of the General Motors Corporation, buying continues for items needed to fill some vacancies in equipment.

Railroads are purchasing tools for replacement, and some large lists are expected for the Point St. Charles plant of the Canadian National Railways and for the Weston shops at Winnipeg of the Canadian Pacific Railway, both of which are undergoing extensions. Demand from northern Ontario, Quebec and Manitoba mining fields is still strong.

Plans and specifications have been received from C. M. Croft, Canadian Trade commissioner at Auckland, New Zealand for equipment for New Zealand Government Railways and Public Works Department, Wellington. These are open for inspection at Commercial Intelligence Service, Department of Trade and Commerce, Ottawa. Tenders should be addressed to chairman, Railway Board, Wellington, New Zealand; the Secretary, Public Works Supplies and Tenders Committee, Wellington, New Zealand; and Secretary, Stores Division, General Post Office, Wellington. Items for New Zealand Government Railways include four ventilating and heating units; four battery shunting locomotives and charging sets; two boring mills for car and wagon tires; one face grinding machine; four plain milling machines; rack feed; 13 electric rivet heaters; two sand cutting machines; two screening and mixing machines for molding and core sands; two pattern makers' sanding machines; four automatic electric melting sets; four pipe and tube bending machines; one shearing machine; one vertical boring mill for wheel centres; four circular saw benches; three oil-fired spring furnaces; four universal spot welding machines; two heavy-duty suspension spot welding machines; one standard spot welding machine; one oil reclaiming plant; seven a.c. arc welding sets; two paint spraying machines, tenders close June 25.

Public Works Department list includes one turbine complete with governor; one generator complete; one complete bearing shell; one set of temperature indicating coils, tenders close May 29. Supply, delivery and erection of one-pipe line, approximately 2464 ft. long and an extension to bus-pipe about 59 ft. long, tenders close June 25.

A company in which I. W. Killam of Royal Securities Corporation, St. James Street, Montreal, is interested, contemplates establishing a pulp and paper plant in Nova Scotia, which will represent an expenditure of between $10,000,000 and $15,000,000. Sully Brass Foundries, Ltd., Toronto, has purchased a foundry building on Wabash Avenue.

Public Utilities Commission, London, Ont., proposes extensions and improvements to waterworks plant, including installation of a 4,000,000 gal. water pump to be operated by 500 kva. synchronous motor, for which bids will be called about April 1.

Grimsby Foundry Co., Ltd., 23-27 John Street, Grimsby, Ont., is having plans prepared for an addition.

Commercial Motor Bodies & Carriages, Ltd., Guelph, plans a three-story, 40 x 48 ft. addition to its plant.

Aerocrete Co. of Montreal, 759 Notre Dame Street West, Montreal, contemplates building factory at Hull, Que.

Willis & Co., Ltd., 580 St. Catherine Street West, Montreal, plans addition to factory at St. Therese, Que., for manufacture of pianos, musical instruments, etc.

Dominion Trap Rock Co., Bruce Mines, Ont., has started work on construction of quarry to cost approximately $185,000. Equipment will be electrically operated.

Department of Public Utilities, Port Arthur, Ont., is arranging for construction of an addition to power plant to cost $40,000.

Plant of Black Donald Graphite Mine, Calabogie, Ont., including refining mill and other buildings, was destroyed by fire with loss of $150,000. Reconstruction will start immediately.

THE IRON AGE

ESTABLISHED 1855
New York, March 22, 1928
VOL. 121, No. 12

Hidden Defects in Iron Castings

Method of Localizing Shrink Cavities and Blowholes to Places Where They Can Do No Real Harm to the Casting

BY PAUL R. RAMP*

A HIDDEN defect in a casting is a defect which occurs at a point that is not machined; it is under the surface, where it is not discovered unless the casting breaks. These defects are often the cause of failures in service. They are more dangerous than defects which appear upon the surface, or defects brought to light in machining, because the latter can often be repaired and the casting made safe and sound for the purpose for which it was intended.

For this reason we believe that, if a casting is so molded that all defects will appear on the surface, or will be discovered during machining, there will be fewer failures in service. And many valuable castings will be saved, which today find their way to the scrap pile.

A solid casting made of good metal, with defective places so located as to indicate that they represent all the defects there are, is a much safer proposition, if welded or repaired, than many apparently perfect castings which contain hidden defects, that cannot be discovered until they cause the casting to fail in service.

It is vitally important that more consideration be given to the method of molding, with a view to making a safe casting, free from hidden defects. The old plan of molding a casting—with the idea of keeping the parts to be machined clean and free from defects, and allowing the unavoidable and other defects to locate where they will not be discovered—should be discontinued.

A mold should be made in such a manner that, when poured, all the defects, if any, will be brought to the surface, or to a point where they will be discovered in machining. Then they can be repaired and a better and safer casting can be produced.

Engineers and machine shops are to some extent responsible for failures in castings in service. They often refuse to accept a large, difficult casting, because of visible defects which could be repaired. Hence, to satisfy them, the foundryman makes his mold in such a manner as to make the casting pass visual inspection. This is sometimes at the cost of strength and safety, because defects such as shrink cavities and blowholes, which he cannot eliminate, he moves to a point where they will not be detected on inspection.

Most large, difficult castings have hidden defects, and some of them are dangerous.

When it becomes possible to have all castings X-rayed for defects, there will be a decided change in molding methods; more minor repair work will be approved by the engineers. It may be demonstrated that many apparently perfect castings contain hidden defects that are dangerous; but which, if they could be moved to a point where they could be repaired, would not affect the quality or strength of the casting. While we cannot look into a casting and see these hidden defects, we know they are there. If the foundryman knows how a casting has been poured, he also knows where there is a possibility of a hidden defect.

Locating Hidden Defects

TWO methods of molding turbine casings—shown in Figs. 1 and 2—form a good illustration of what we are trying to bring out. Fig. 1 is a partial cross-section of a mold, with the bottom of the casing cast up. This plan insures a perfectly clean flange. When this casting has been machined it would readily be accepted, by the inspecting engineers, as a desirable casting. When the flanges are cast down in this manner, all foreign matter and indications of shrink holes are absent from the face of the flange. No trouble is likely to be experienced until the casting is put under pressure. Then it is possible that leaks will be found in the bottom or body of the casting, caused by blowholes or soggy metal.

Insufficient metal pressure on the surface of the molds and cores is the cause of these defects.

On the right-hand side of Fig. 1 (and of Fig. 2) is a scale representing the pounds pressure per square inch, at various depths, that is exerted against the surface of the mold and cores, while the metal is in the liquid state. In Fig. 1 only 6 lb. per square inch of pressure is exerted against the cores and mold that form the lower portion of the body of the casing. This is not enough pressure to prevent blowholes or soggy metal at points indicated by *B* and *C*.

To produce a sound casting of this character at this point the metal pressure against the surface of the mold should be from 15 to 16 lb. per square inch. If the risers and gates on this mold, shown in Fig. 1, were built up high enough to produce the required pressure at this point, the pressure at the joint flanges would be increased to 26 lb. per square inch, which would be

---

*Superintendent of foundry and pattern shop, Newport News Shipbuilding and Dry Dock Co., Newport News, Va.

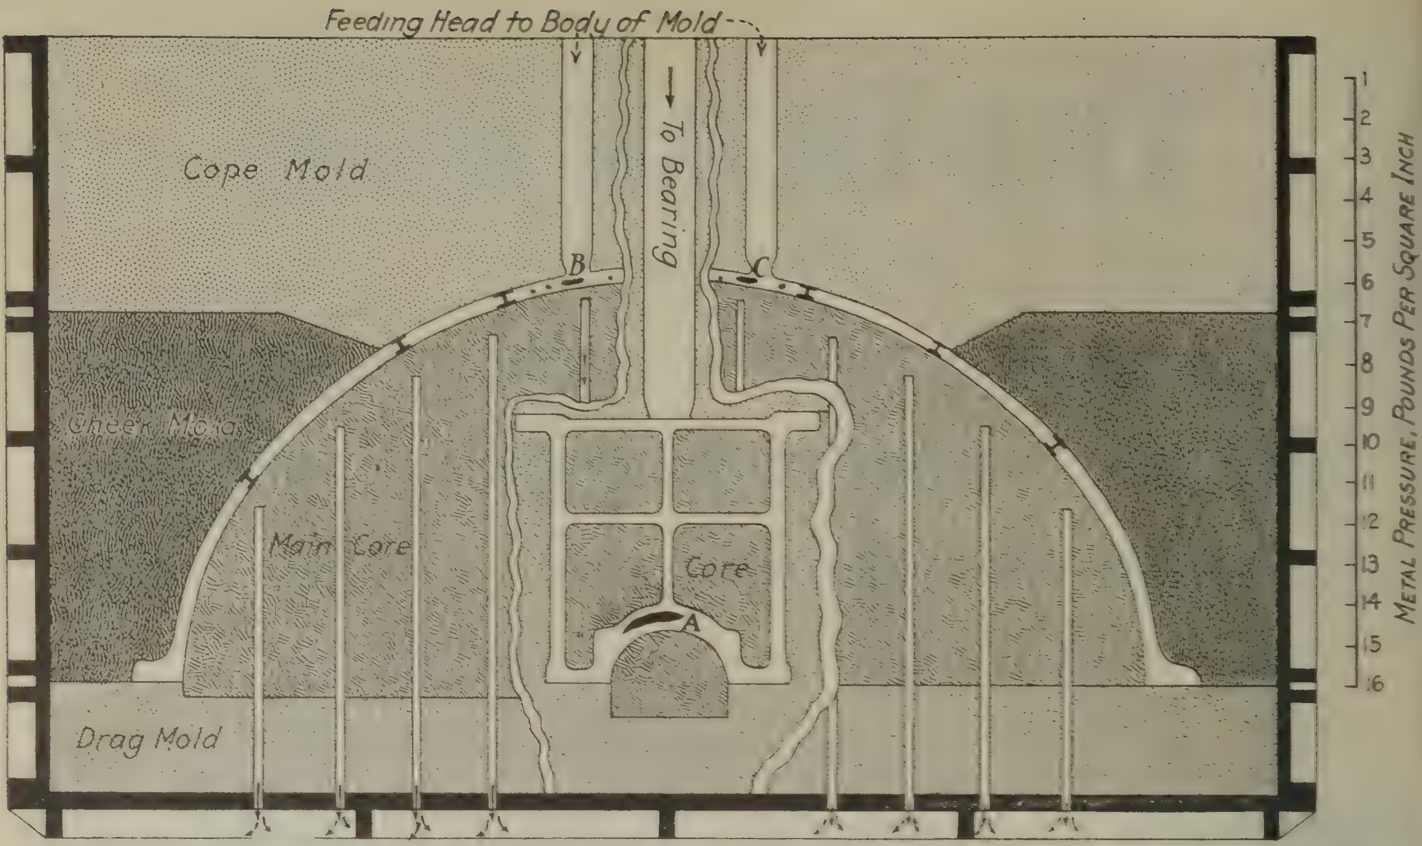

Fig. 1—Former Method of Casting Casing for Steam Turbine, with Flange Downward. Defects shown at A, B and C were caused by having insufficient metal pressure above the points indicated. Formation of defects at B and C was furthered by gases from the vents, working upward instead of downward, as intended

liable to strain the mold there and increase the thickness of the metal. Such irregularity in the thickness of the body is likely to create excessive internal strains in the casting, causing it to crack more easily under vibration.

Thus, while the plan of molding shown in Fig. 1 will produce a clean joint flange, it will produce also a very poor and unreliable metal in the bottom of the casting. When molding the casing in this manner it is impossible to provide the proper feeding heads for the heavy sections of the mold that form the bearings. The only feeding head possible is that shown in Fig. 1, which is a riser located directly over the bearing. But its only connection with the bearing section of the mold is through the thinner section of the housing. As a consequence, long before the bearing proper has solidified, the thinner section of the housing has become solid and shut off the supply of feeding metal from the risers to the bearing. The result is a hidden defect shown at *A*, which materially weakens the bearing. This defect is far more dangerous than a similar defect would be on the machined side of the bearing, where it could be detected and repaired.

Dense and Strong Metal Occurs Naturally at Lowest Point

It is well known that the metal in the lower part of the mold is denser, stronger and more free from blowholes and soggy places than the metal near the top of the mold. This is the result of the greater pressure exerted at the bottom while the metal is in the liquid state. This pressure is great enough in the lower parts to resist or counteract any action from generated gases to produce soggy metal. Consequently, sufficient pressure on the surface of the mold or cores is the best remedy for hidden defects.

This plan sometimes produces defects on the machined joints, as in case of the turbine casing, but these can be repaired readily. There should be no hesitancy on the part of engineers to accept such castings, when they realize that the method of molding has brought all defects to the surface, and at the same time has produced a sound, perfect casting at points where hidden defects have always existed, never to be discovered until the casting is put under pressure or fails in service.

Where the Gases Go

WHEN a turbine casing of this character is cast bottom up, as in Fig. 1, all of the gas generated in the cores must be forced down through the bottom of the mold. These vent passages are shown in Fig. 1. As the pressure of the metal against the cores is not great enough in this case, the casting is liable to have internal blowholes or soggy places at *B* and *C*. This follows, because, instead of the gas traveling down

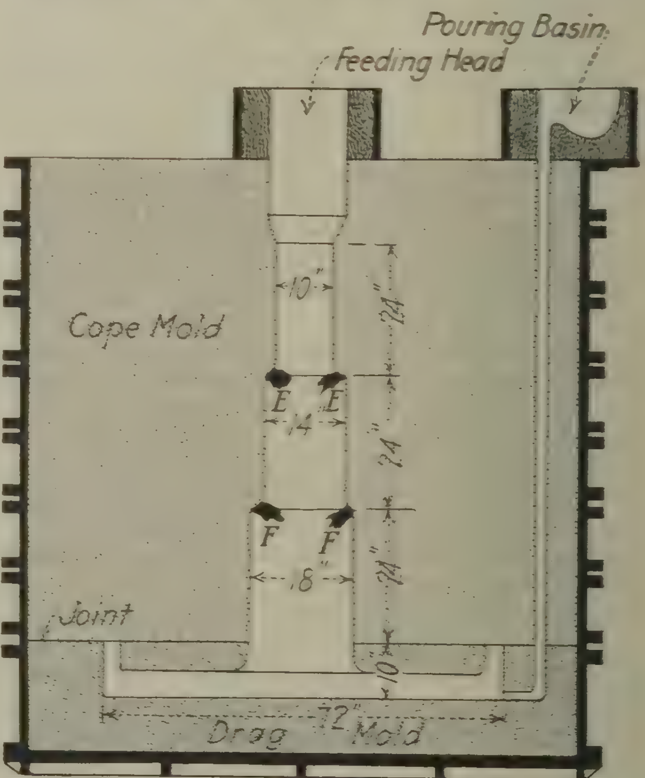

Fig. 3—Method Previously Used in Molding Shaft and Face Plate. This gave an excellent face to the plate, but defects at EE and FF produced a condition damaging to the strength of the shaft

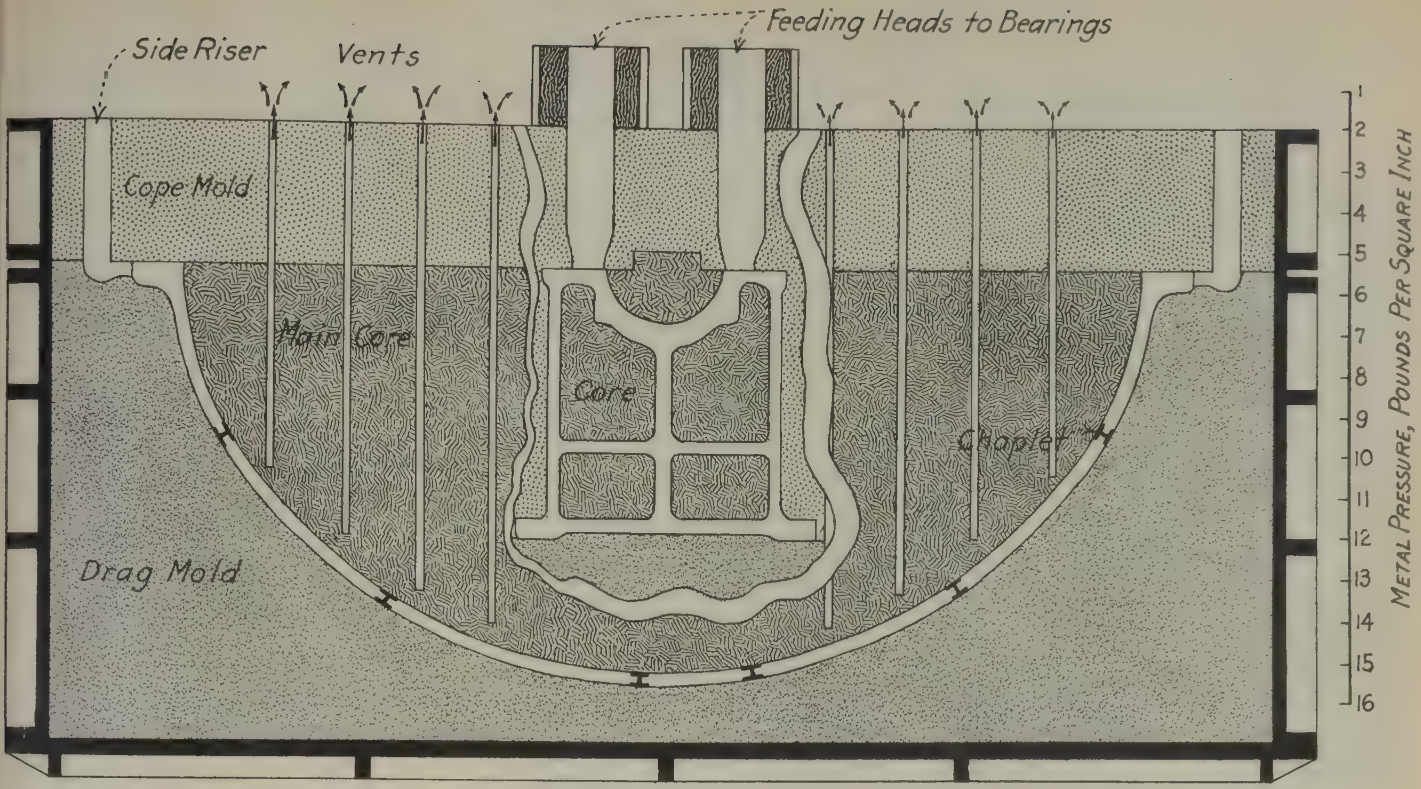

Fig. 2—Correct Method of Molding the Turbine Casing. With the flange placed upward, the defects forming, from whatever cause, will segregate themselves there. Extra thickness, to permit planing them off, may be allowed and welding will readily repair any holes remaining at that point

through the vent passages prepared for it, it will work its way through the metal against the insufficient metal pressure until the metal solidifies. This action produces blowholes, soggy metal and other hidden defects, which are the most difficult kinds of defects to repair.

A turbine casing cast as shown in Fig. 1 is liable to develop cold shuts. These are the most dangerous kind of defects, and can often be classed as hidden defects.

In producing iron castings of this character, it is important to remember that the height of the riser is of value only while the metal in the thinner sections is in the liquid state, except where the riser can be directly connected with a heavy section. It should then be kept open with a churning rod and additional hot metal added.

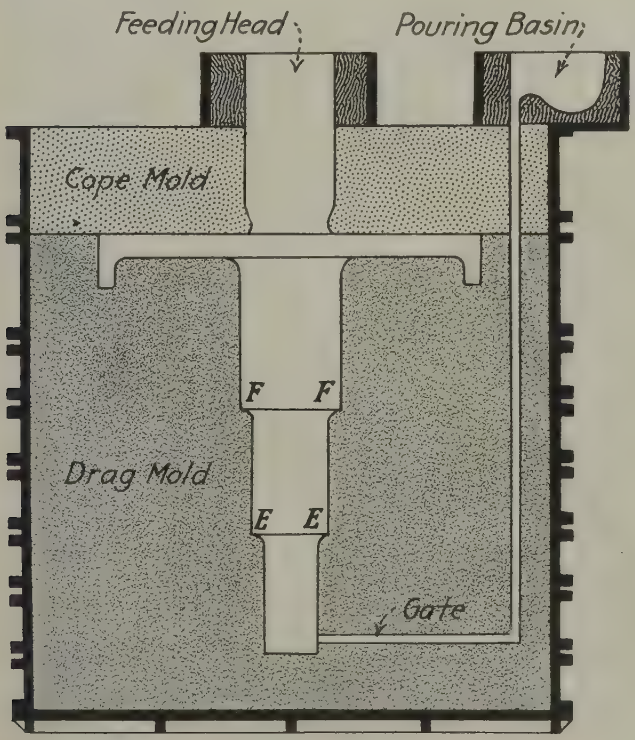

Fig. 4—Better Method of Molding the Shaft and Face Plate. Strength of the shaft is maintained, while extra metal put on the face to accommodate a poor top is planed off to a smooth surface

Avoiding Hidden Defects

WHEN a turbine casing is cast with the bottom down, as in Fig. 2, the gas generated in the cores takes its natural course upward through the vent passages prepared for it. In addition to this advantage, there is a pressure of liquid metal of 15 or 16 lb. per square inch exerted against the surface of the cores and molds at the lower point, instead of 6 lb. pressure per square inch, as when the bottom is cast up.

It is also possible to feed directly the heavy sections of the mold, such as bearings. This should entirely eliminate the danger of a hidden defect, such as shown in Fig. 1 at *A*. With the feeding head connected directly to the heavy section of the mold, it is possible by keeping the feeding head in a liquid state, by churning, to maintain an open channel from the head to the heavy section. This makes it possible to add new metal as the metal in the heavy section cools, and settles away from the upper surface of the mold. This insures a solid and safe bearing, as in any other heavy section where a feeding head can be used.

Often cavities are produced directly under the feeding heads, because the molder has neglected to keep this channel open long enough to add all the new metal required by the heavy section to make it absolutely solid. But a defect directly under the feeding head is never a hidden defect, and it can be safely repaired.

With proper care in preparing the molds, in providing adequate vent passages for carrying off the gas, and properly drying the molds and cores, defects on the flanges of turbine casings can be avoided, even though the flanges are cast up. This is done by the use of side risers, or feeding heads, providing the metal is of the right temperature. There is always less danger from a defect on a flange, cast up, than of a hidden defect and a leak in the body of the casing, with the joint flange cast down. And the defects in the joint flange can be safely repaired; but the defect in the body can seldom be safely repaired, except in case of a loose chaplet, which can be plugged.

In molding and casting large desilverizing kettles

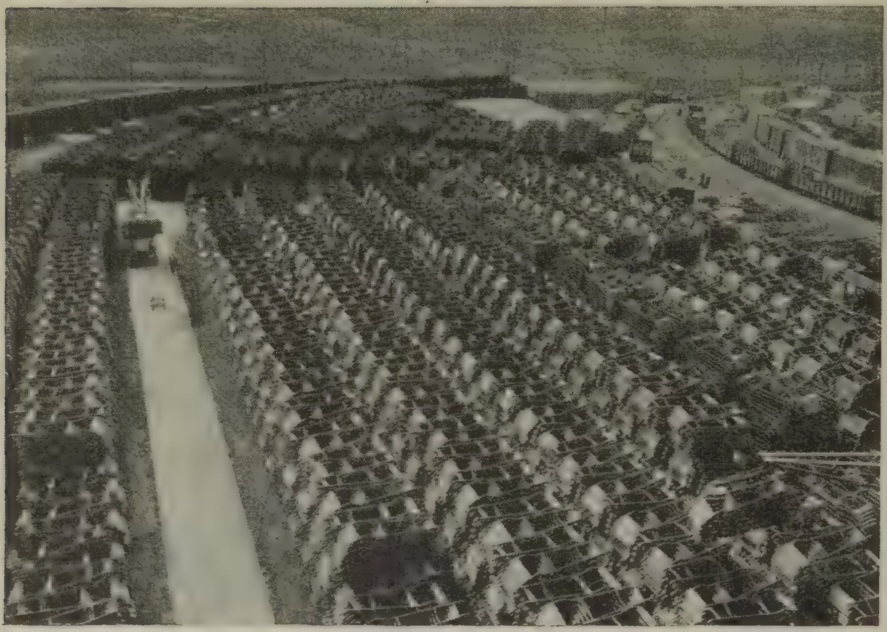
Makes Car Frames Automatically



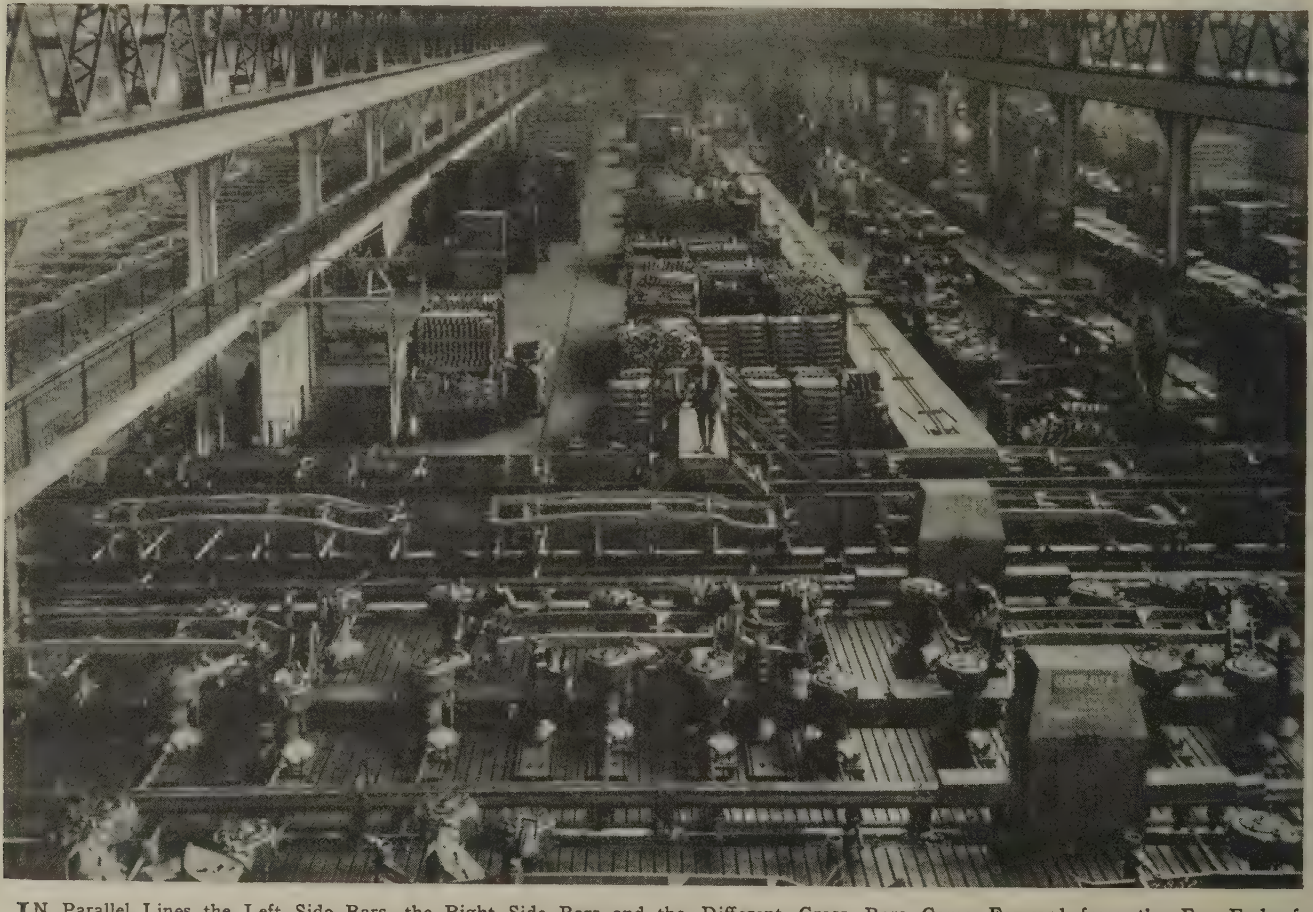
A. O. Smith Corporation, at Milwaukee, With What Is Virtually One Gigantic Machine Occupying an Entire Large Building, Can Turn Out Per Day 7000 Wholly Assembled Automobile Frames

APPLICATIONS of special machinery, both for heavy and light parts manufacture, and production control were the keynotes struck at a machine shop practice meeting of the Chicago section of the American Society of Mechanical Engineers, held at the Morrison Hotel, Chicago, March 14.

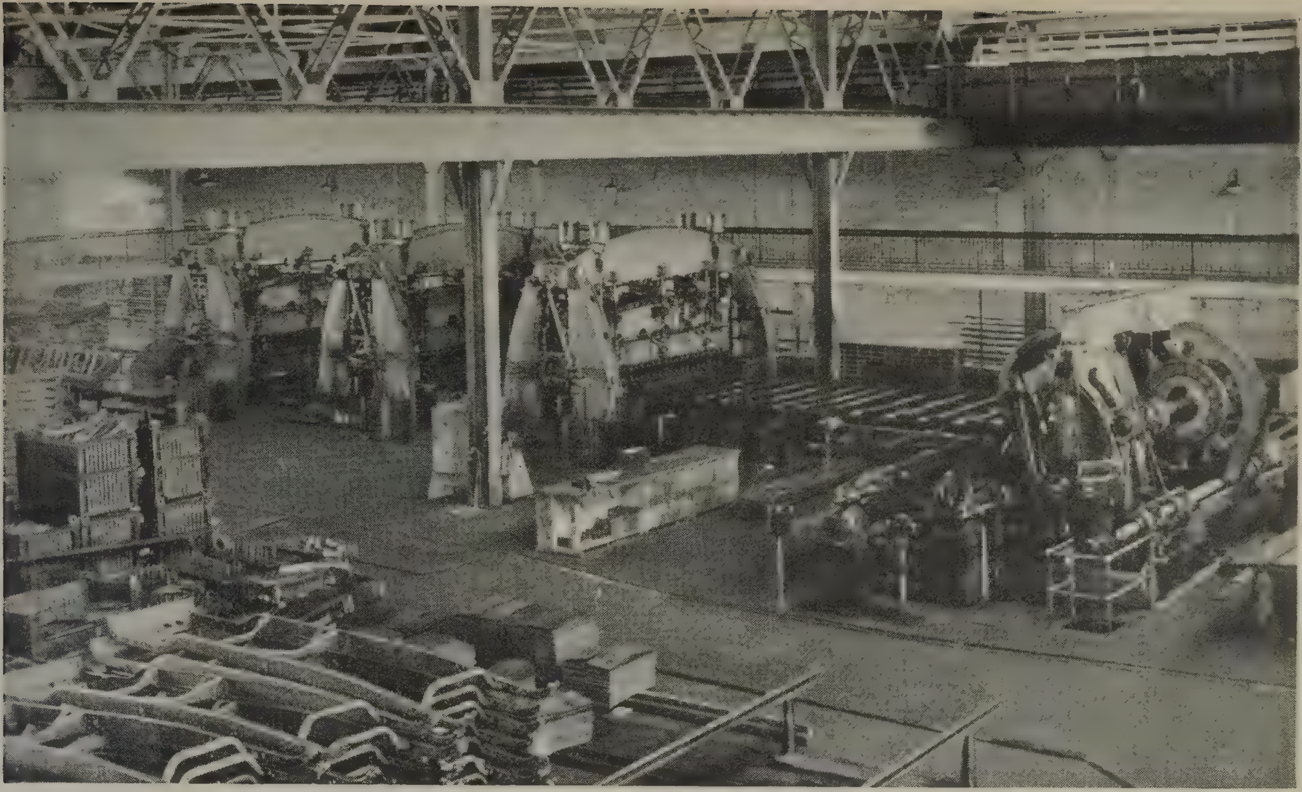
The history of the pressed steel automobile frame in this country dates back to 1903, said John P. Kelley, sales manager A. O. Smith Corporation, Milwaukee, who, in a paper entitled "Production of Pressed Steel Frames by Automatic Machinery," outlined methods employed in the frame plant operated by his company.

Counting 7000 frames as maximum daily production and 552 operations on each frame, the automatic machinery performs nearly 4,000,000 operations in a single day. The number of men employed to supervise this equipment is about 200, or less than one-fifth of the number that would be needed for equal production in a semi-automatic plant, one of which is also operated by the A. O. Smith Corporation. This machinery is tooled for individual orders calling for as many as 75,000 frames a year and has handled single runs of 10,000 frames. As many as 100,000 frames have been manufactured at a single set-up. A complete change of tools is accomplished in 6 to 8 hr.

The first unit in the manufacturing line is the automatic inspection machine. All side bars and most cross bars are made from strip steel, and the automatic inspec-



IN Parallel Lines the Left Side Bars, the Right Side Bars and the Different Cross Bars Come Forward from the Far End of the Building, Receiving Automatically on the Way Various Machining and Other Operations. In the foreground is the part of the machine to which these sub-assemblies of bars are delivered, progress now being transversely across the building. The parts are clamped together and fastened by rivets fed through compressed air tubes to the riveting guns



THERE Are Six Presses at the Starting End of the Side Bar Manufacturing Line. Besides the piercing, blanking and forming of the strip steel used, they give the offsets (in the plane of the strip) to provide for the "Kick off" over the rear axle and the front and rear end drops

tion machine rolls this steel to remove curvature, measures and stacks it in loads of predetermined sizes. The strips are measured for length, width, thickness and curvature, and all rejections are automatically thrown out into separate piles. The machine has a capacity of 900 strips per hour.

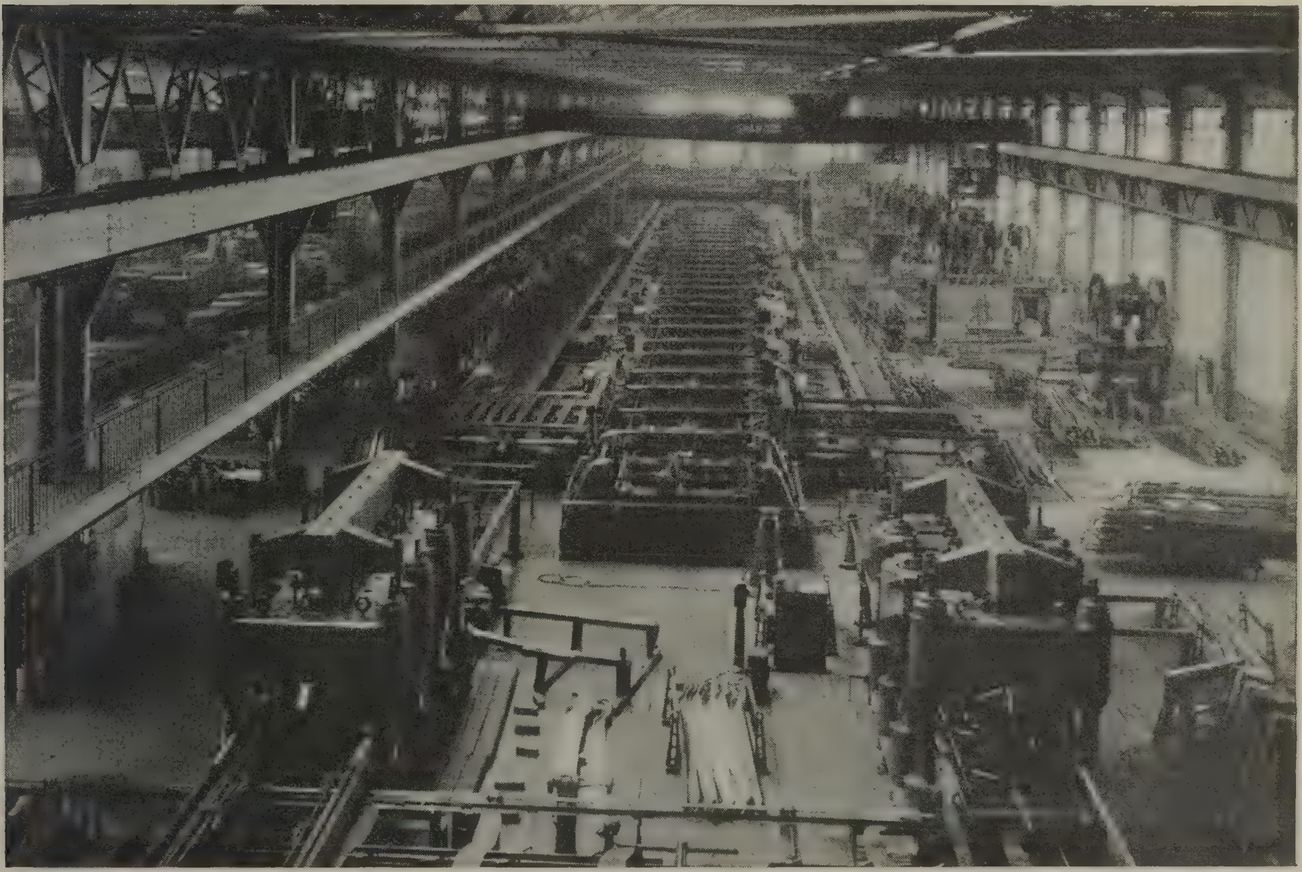
From the inspection machine the steel is conveyed by monorail crane to the pickling department. Loaded crates are carried through acid tanks, rinse tanks, alkali and oil, the last to give a sufficient protective coating of oil for the subsequent fabricating operations. The crew of this department consists of seven men in each shift, and the pickling capacity is 500 to 600 tons in 24 hrs.

Pickled steel for side bars is carried by monorail crane to the feeder for Unit No. 3, where the strips are automatically conveyed to the side bar manufacturing line. There are six presses in this line, all driven by a single 500-hp. motor, with the following order of operations:

1. Vertical offsetting of blanks for kick-up over rear axle; also for front and rear end drops.
2. Piercing left-hand bars.
3. Piercing right-hand bars.
4. Blanking left and right-hand bars.
5. Forming left-hand bars.
6. Forming right-hand bars.

The capacity of this line is 900 bars per hour.

The pickled steel for cross bars is conveyed by mono-



HERE Are Shown the Parallel Ways for the Right and Left Hand Side Bar Assemblies, Which Are Completed at the Far End. There are 19 stations at each of which there are special machines for various operations. The progressive shift from station to station of all this mass of metal is controlled by apparatus which spots every part to the precise position opposite the working tools rail cranes to Unit No. 4, which is the cross bar manufacturing and parts assembly line. There are four lines in this unit, each driven by a single motor of 100 hp. Each line consists of a blanking press, drawing press, automatic drilling machines and small power riveting presses—the latter for the completion of cross bar sub-assemblies, if required.

All holes that can be conveniently and correctly placed in the bars are pierced automatically in the blanking operation. The holes subject to distortion in the drawing operations are drilled with automatic machines after the forming of the bars. The end-lapping of cross bars is done in the forming operation.

Steel is fed to the four lines by automatic feeders and carried between the presses on reciprocating feed-

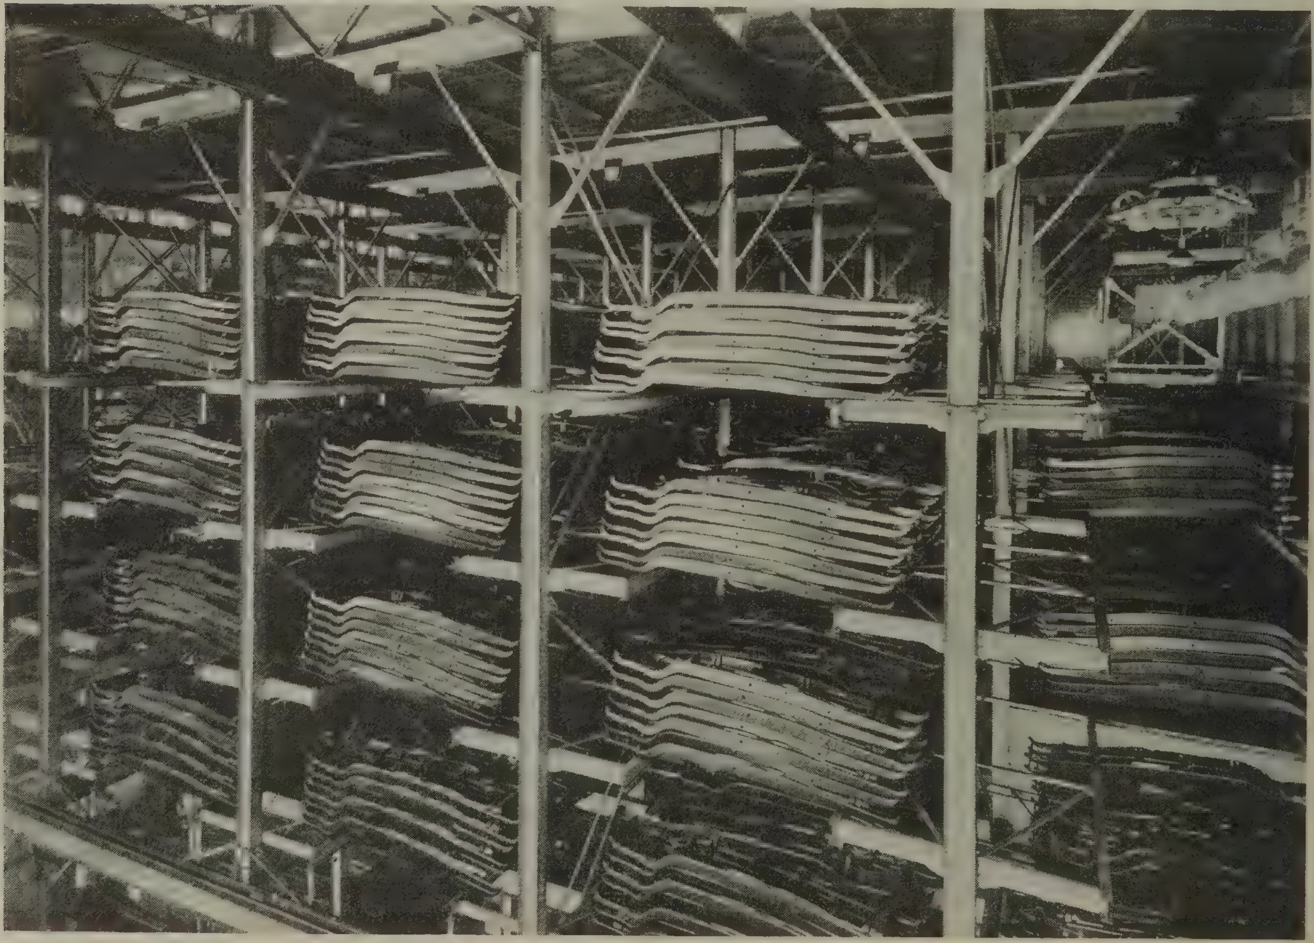
DISTRIBUTED Alongside the Sub-Assembly Section, (as indicated in the view on the bottom of page 795), Are a Number of Special Machines. One of them here shown is for finishing the spring hangers, which are attached at the proper station to the bars in process of assembly



BELOW Is a View of the Upper Part of a Lofty Storage Building, Which Communicates with a High Production Continuous Painting Machine. At the upper right may be seen the traveling monorail crane, which can be run over any aisle of the storage space, depositing groups of frames on the extending brackets

More Thinking Needed at the Top

Manufacturer Finds Danger in Delegating Too Much Authority — Courage Required to Make Necessary Changes in Policy

BY SAUNDERS NORVELL*

ONE night last week I had a most interesting talk with a manufacturer. He told me that he had always been successful in conducting a profitable business until the slump of 1921. That memorable year, in common with the rest of us, he was caught all spread out. He said that he did not get the worst of it until 1922, and then his concern almost went on the rocks. However, he secured financial assistance, sweetened up his loans at the banks and managed to pull through. Today his business, for its size, is one of the most profitable in the country.

As this manufacturer sat and smoked his cigar in an easy chair at the club, he smiled and remarked that no man's business education is complete unless he has been through such an experience—that getting a business on the rocks and then getting it off is one of the best commercial courses that any business man can receive.

"Now," said I, "tell me just what happened in your business. Give me some of the high spots." He smiled and replied: "First of all, we had a very high-priced sales manager. He was a good man and he was loyal to the concern, but he was just full of a lot of theories, and he never seemed to be able to get the idea into his head that finances had anything to do with the business. When we got into the 'hole,' he never took our condition seriously. When I told him about our financial situation, he always seemed to think that I could raise the money in some miraculous manner. He seemed to think that my talk to him about the real condition of our business was just for the purpose of heading him off from asking for a raise.

Sales Department Reorganized with Eye to Profits

"Now, of course," said this manufacturer, "this sales manager was an optimist. Every good sales manager should be an optimist. Then again, notwithstanding the fact that our concern was losing a great deal of money, he was getting his salary—and it was a large one—without any interruption whatever. Naturally, it is rather difficult for a man who has no stake in the business, and who is drawing a good salary, to fully sympathize with the management of a business when the losses are very heavy.

"Finally, after talking and talking to this sales manager, in an effort to get him to cut the suit in our selling expense according to our cloth, and after finding it was simply impossible to secure his cooperation, I decided to let him go, save his salary and take charge of the sales myself. When I announced this to my partners, they were very much opposed to it. They called my attention to the fact that this sales manager knew all the details of our business. He knew all of our business. He knew all of our salesmen. He knew all of our customers. To let him out at a critical time like this was almost suicide. 'All right,' I replied. 'If we are so dependent upon our sales manager, I am more than ever convinced that I should let him go and learn to be the sales manager myself.'

"I did let him go. I did take up the work of being sales manager. I did work about 12 hr. per day myself. At the end of six months, I knew our selling organization thoroughly. Somehow instructions going to salesmen direct from the president of the organization seemed to carry more weight. Somehow letters to customers on selling matters, signed by the president, seemed to carry more weight. Somehow, when I was in selling conferences with customers and with salesmen, we seemed to get better and quicker action than through the sales manager. As a matter of fact, by getting into the details personally, I was able to reduce the number of our salesmen, to cut down expenses, to advance the price of our product where we were selling entirely too low and, strangest of all, to increase the volume of our sales. Now, of course, I had known the business thoroughly in years past. I had grown up in it, but in later years I had become 'rusty.' Nevertheless, it did not take me long, when I got back into the game, to pick up the threads and to see a hole in the grindstone when the hole was there!"

Conservative Factory Superintendent Blocked Changes

Then he continued: "Having got our sales department reorganized and straightened out, I decided to devote practically all of my time for a few months to production. Our factory superintendent was one of the old school type. He constantly talked about old times. He was wedded to old methods. He had never left our factory for a single week for years. When I talked to him about new methods that were being adopted to reduce costs in modern factories, he shook his head and talked in a derogatory manner about these 'efficiency experts.'

"When I put in a large part of my time at the factory, even though I have never claimed to be a factory expert, common sense indicated that many improvements and changes could be made that would lead to economy. In many directions there was duplication of work. Many things were being done which, while interesting, were not profitable. We were in a condition where it was necessary for us to cut things down to hard pan.

"Again, just as in the case of the sales manager, I found strong opposition to these changes that would save money, on the part of our factory superintendent. He talked about the loyalty of our employees, about the splendid organization we had, about what a fine lot of men they were, etc. As a matter of fact, he had a fatherly feeling toward the whole organization. The workmen were his children. Even if some of them were pretty poor, he sympathized with them. When it came to a question of replacing them with others of more ability, he could not part with them for sentimental reasons. Yes," said my friend, "personal acquaintance in a business is a fine thing. Personality is an excellent thing. The human touch is great. However, all these things can be overdone when they lead to losses and inefficiency and when the business itself is going on the rocks because profits are too small and costs and expenses are too high.

Engineer Hired to Introduce New Methods

"I thought the matter out very slowly and carefully, and in the end I hired a man who knew nothing whatever about our business. He was, however, a trained engineer. He had worked in several modern plants. He had an analytical mind. He was not the type of man who thought the main object in life for a factory superintendent was to be popular with his employees. We let out our old superintendent, and then I worked with this new man in reorganizing our factory.

"Of course, at first there were attempts to block these changes. There were murmurings. There were threats on the part of a number of employees that they would quit. But somehow they did not quit, and after a while the foremen began to see that the new factory superintendent knew his business. When he put in changes, he would call his foremen together and ask what objections they had to the changes. If they could bring up sound objections, he would sometimes modify his plans, but usually, by the time the suggestions were made to the foremen, they were so well worked out that the new factory superintendent could answer every question and explain the advantage of every move.

---

*President Remington Arms Co., Inc., New York.

"To make a long story short, at the end of six months this new superintendent had the respect, if not the affection, of all the foremen and workers in our factory. They saw clearly that he was not working for personal popularity. That did not seem to cut any figure with him. However, he was working to handle our factory in a manner that would lead to reduced costs and greater efficiency. At the end of the year this new factory superintendent was able to show us reduced costs in almost every department.

"Another thing that appealed to me in his work was the fact that he worked with records. He put everything on paper. It was not a case of carrying things in his head. He divided the work and the responsibility, so that, when it was necessary for him to leave from time to time, everything was not held up for his return. He organized things so that the factory apparently ran just as well without him as with him.

Success of Large Companies Due to Emphasis on Getting Results

"Too many manufacturers," said my friend, "are afraid to take hold of the business themselves. They are afraid of the amount of work that is involved. One trouble today with a good many manufacturers in the United States who are not making any profits is the fact that the owners—the head men—have delegated practically all of the authority, along with all of the work, to sales managers and factory superintendents. Now, these men are usually on fixed salaries. They get their salaries whether the business makes any money or not, and with this condition they are naturally not so keen to study improvements, economies and possibilities of making profit as direct owners who manage a business and who, by reason of their stock holdings, share largely in the profits or, on the other hand, suffer severely when there are losses."

"But," I inquired of this manufacturer, "how does it happen that so many large corporations in this country are doing very well indeed and are taking the business away from the smaller corporations, when these large corporations are managed almost entirely by salaried officials?"

"Well," said this manufacturer, "in almost all such cases you will find not only that these managers have arrangements by which they share in the profits of the business, but that there are comptrollers, auditors and accountants who are carefully checking the results of every department. One of the advantages of a large corporation is the fact that the personal element actually cuts so little figure that it is a question, not of personal popularity, but of results. The men at the top in these large corporations hardly know the men at the bottom, but they do receive regular reports giving the progress in all parts of the business. The executive committees of these organizations are influenced, not by the charming manners or pleasant ways of some department manager, but only by the results in his department. Just as soon as satisfactory results are not obtained in an organization, you can count on a change following very quickly. These great corporations as a rule are not expecting men who do unsatisfactory work to reform. They haven't time to bother with reformation. They work on the basis that there are plenty of good men to be found for the jobs if they will take the time and trouble to look for the good men."

Lack of Thinking at Top Main Weakness of Business

"What were the weaknesses you discovered in your business," I inquired, "when you took hold personally?"

"One of the main weaknesses," he replied, "was lack of thinking at the top of the business. By that I mean that the men I had running the business were too much immersed in details. They were cleaning up their desks every day. They were too much inclined to do a clerk's work.

"For instance, when I asked our sales manager to tell me the three most important things we should do in our business in the next year, he had to stop and think a long time before he could offer any suggestions. Now, don't you think that any first-class, thinking sales manager would know the three most important things that were needed to make the business prosperous? Then, when he did make suggestions, they were of a detailed nature. The same thing was true of our old factory superintendent. When I asked him to tell me the three most important things we should do in our business in the next year, he also immediately went into comparatively small details.

"Now, when I took hold of the business myself, in a very short time it became apparent to me that three things could be done that would help the business very much. Two of these things were in the direction of increasing our profits. The other important thing was in the direction of economies. I immediately went to work to do these three things and I finally put them over, but in concentrating my effort on these three things, there were, of course, a lot of little things that I neglected. I was working 12 hr. per day. I could not do everything. I could not see to everything. However, I just made up my mind that I would concentrate my efforts in certain directions, and the result in the end proved that this policy was wise."

Competition That Proved Mythical

One of the things that this manufacturer soon discovered when he went into the details about his business was that a very large part of his product was being sold at its figured cost. He was assured that competition made this absolutely necessary—to advance the price was out of the question. This manufacturer very carefully went into the entire situation. He decided that on this important line of goods he must do two things, viz., he must reduce the cost of production and he must get a slight advance in price. He accomplished both results. It was freely predicted that when the price was advanced there would be a large drop in sales.

As a matter of fact, while in the beginning there was some slight resistance to the advanced price on the part of buyers, at the end of the year he found that he had sold more of this line at the advanced price than ever before. In other words, the competition which seemed so serious to his sales manager was largely mythical.

The goods of this house had been well made for years. They had an established reputation. The trade was in the habit of buying them. Therefore, when the small advance came along, which amounted to next to nothing to the jobber, to the retailer and to the consumer, it was easily absorbed, while to the manufacturer this advance, coupled with a reduction in the cost of the goods, was a life-saver.

World's Largest Stainless Iron Chain

London, England, March 10.—Special Sheffield steel has already been employed in the work which is being carried on for the strengthening of St. Paul's Cathedral in this city, and two further interesting applications of this material have been decided upon.

One of them consists of a stainless iron chain which is to be embedded in concrete inside the dome in order to strengthen it and preserve its shape. This chain, which is being made at Brown Bayley's Steelworks, Sheffield, will be 450 ft. long, each link having a length of 15 ft. 4 in. and a width of 3⅜ in. The links are laid in four parallel lines. The chain will weigh 33.5 tons. It will be the largest chain ever made of stainless iron.

The second application consists of the use of large tie bars of stainless iron, which have previously been used in the repairs to the cathedral, for bracing the masonry together.

10-Stand Continuous Sheet Bar Mill

Straight-Line Layout Has Also Three Edgers—All Driven by Seven Electric Motors, Two Being Askew

BY ROGERS A. FISKE*

WHEN the Youngstown Sheet & Tube Co. first reached a decision to build a 21-in. continuous sheet bar and skelp mill at its Indiana Harbor, Ind., plant, thought was given to the necessity of installing additional power plant equipment to furnish part of the electrical energy required by the new unit. Through an ingenious method of electrical hookup, however, it has been possible to increase the power factor of the entire system by more than 20 points, so that the power factor is now close to unity. The greater effectiveness of power equipment thus derived has made unnecessary any expansion in the number of generating units in the power plant.

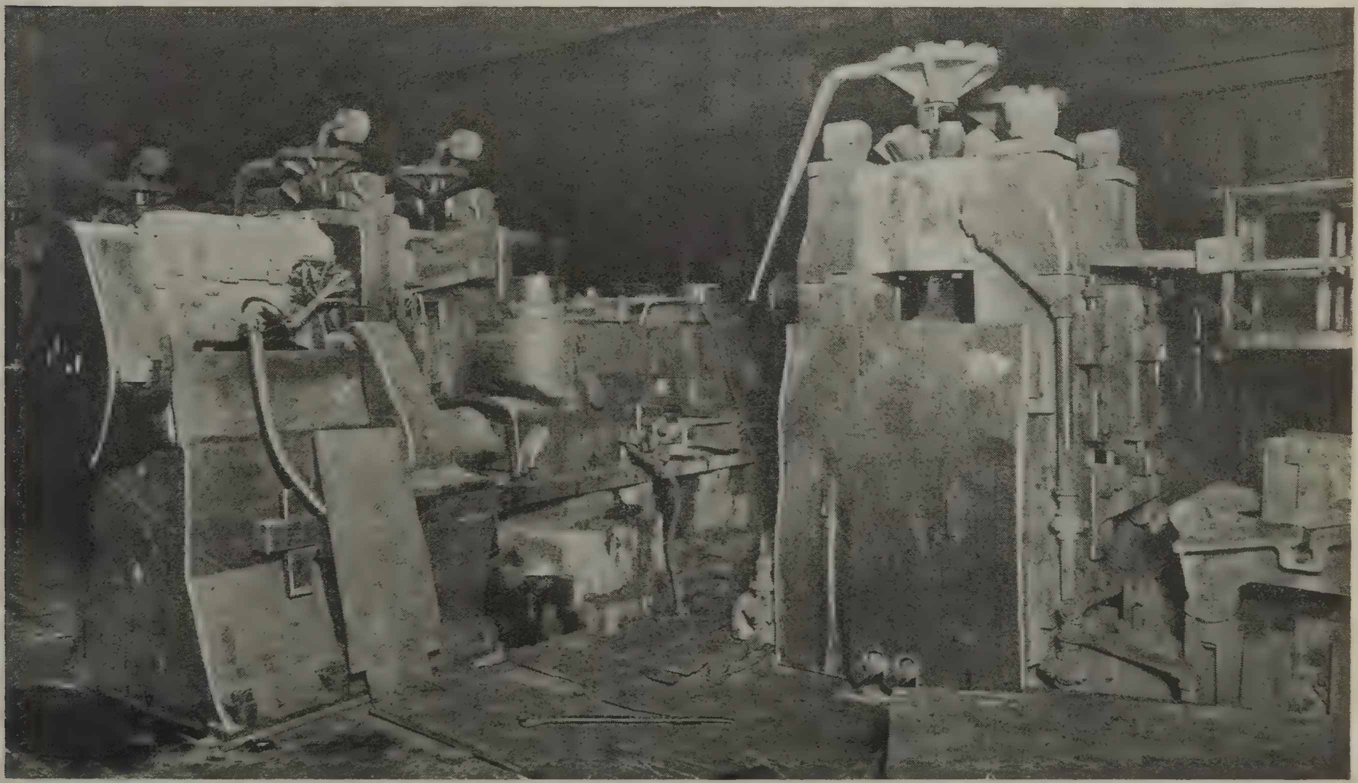
Prior to the installation of the 21-in. continuous mill there was in operation a 28-in. two-high reversing mill which stood in line with the blooming mill. The 28-in. mill was housed in a building 58 ft. wide. Billets rolled on that mill were transferred to the skelp mill furnace by rope-operated cars that traveled on a track. This 28-in. unit still serves the skelp mill, but billets are now delivered from the run-out table to the heating furnace by a direct conveyor line. This method has practically made obsolete the cooling table which formerly served this mill.

That the blooming mill might adequately meet the requirements of the new continuous mill, it was decided to place the latter parallel with the 28-in. mill and adjacent to it. Therefore the old building was widened to 85 ft., so that it now houses both the 28-in. and the 21-in. mills.

Formerly the bloomer rolled plate slabs and also blooms for the 28-in. mill. It now furnishes blooms and slabs for the 21-in. continuous mill, also. This arrangement called for special equipment to be installed between the blooming mill and the two bar mills. At the end of the run-out table from the blooming mill there has been built a slab transfer table, a 1000-ton up-cut, motor-driven shear; a run-out table; scales; a kick-off and slab pilers. The shear was furnished by the Mesta Machine Co., Pittsburgh, and the transfer and tables were built by the Mackintosh-Hemphill Co., Pittsburgh. All of this equipment was placed to one side of the old shear that was ahead of the 28-in. mill. Immediately beyond the old shear a transfer table was built by means of which blooms are delivered to the new 21-in. continuous mill.

The 28-in. mill was left undisturbed except for the installation of Mesta Machine Co. electric manipulators. At a later date electric screw-down mechanisms may be substituted for the present hydraulic devices. This mill now rolls steel into sections varying from 1¾-in. squares up to 2-in. x 9½-in. billets.

The Morgan Construction Co., Worcester, Mass, furnished the complete mechanical equipment for the 21-in. continuous mill, and the General Electric Co., Schenectady, N. Y., built the motors, converters and the electrical control system. Sections rolled include 6¼-in. to 16¾-in. skelp and standard sheet bars in all thicknesses. The feed table to this mill is equipped with roller bearings on the off-drive side. Bronze bushings are used on the drive side. All the drive gears have



Between the Roughing and Intermediate Sections Is an 18-In. Vertical Edger Which Is Driven by a 200-Hp. Separate Motor cut teeth and are run in an oil bath. Ahead of the No. 1 roll stand is an up-and-down-cut shear which is used for cropping ends or for the emergency of cobbles in the mill.

---

*Western Editor, THE IRON AGE, Chicago.

Make-Up of the New Mill

Ten horizontal stands and three edging stands comprise the new 21-in. continuous mill. Rolls on the first three stands, which make up the roughing section of this mill, are 24 in. in diameter. These are driven by a 3600-hp. motor through reduction gears and three sets of bevel gears. Following these stands is an 18-in. edger, which is driven by a separate 200-hp., 300 to 900 r.p.m., 230-volt motor. Stands Nos. 4, 5, 6 and 7 are known as the intermediate section of the mill. The rolls are 21 in. in diameter, and they are driven by a 4040 to 7500-hp. motor through four sets of bevel gears. A 16-in. edger located between stands 5 and 6 is driven from the same large motor. A similar edger, independently driven, has been placed between stands 7 and 8, or between the intermediate and finishing sections of the mill. The three finishing stands, Nos. 8, 9 and 10, are driven by separate direct-current variable-speed motors, each rated at 2000 hp., 86 to 165 r.p.m., 600 volts. The rolls in the last three stands are 21 in. in diameter.

As billets are delivered direct from the blooming mill to the continuous 21-in. mill, the question of conserving heat is important. The bars must reach the finishing stands hot enough to be properly worked. To further this condition it was found advisable to space all of the stands in the continuous mill as closely as possible. Their distance center to center is only a matter of some 10 or 12 ft.

In connection with the low-speed motors operating these stands, bevel gears have been used on the first seven regular stands. On account of the speed relations some of these gears are as much as 13 ft. in diameter. This is greater than the distance center to center of the stands. To avoid increasing the spacing between stands, a diagonal arrangement of the motor shaft was used, so that there would be no interference of the one set of gears with its neighbor. This arrangement in sketch form is shown in a diagram.

LAYOUT (Below) of the New 21-In. Bar Mill, Showing Also Its Relation to the 28-In. Billet Mill, the 35-In. Blooming Mill (Off the Picture, to the Left) and the 10-In. Skelp Mill (Off the Right Border). Steel passes from blooming mill through the new mill without reheating. The blooming mill feeds, also, the billet mill and a plate mill (not shown)

A short section of table delivers the rolled product to a steam-operated flyer shear, which is used for cutting sheet bars and wide skelp. Then follows a motor-driven, rotary-type shear which is used for cutting the smaller sizes of skelp and other sections up to ⅜-in. x 15-in. Each shear has its own automatic measuring device.

Sheet bars or skelp, as the case may be, are then run out on a conveying table to a traveling bar piler located in the sheet-bar yard. The run-out table from the 21-in. mill extends across two storage spaces. The first is the billet yard and the second, in which are located the bar piler and three cooling beds, each 30 x 60 ft., is the sheet bar storage. Each of these yards is 120 ft. wide. The Morgan Engineering Co., Alliance, Ohio, furnished three 15-ton, 120-ft.-span cranes, one of which serves the billet yard and two the sheet bar yard. Sheet bars are loaded on cars by cranes for shipment to the tin mill, and skelp is loaded by the same means on transfer cars for delivery to the pipe mills.

Of special interest in the new mill is the fact that the last run-out table is equipped for "shingling" the bars so that they overlap before reaching the bar piler. This table is designed with inclosed spray boxes for quenching the sheet bars. Water for this purpose is drawn by three motor-driven centrifugal pumps from a 200,000-gal. capacity underground tank. Overflow water drains back to the tank and make-up is taken from the yard mains.

The distance center to center between the 28-in. and the 21-in. mills is 40 ft. The scale pit, which is located between the two mills, measures 21 x 28 ft. It is built of concrete and is lined with rails. A 20-ton Morgan crane serves both mills. Looper tables on the 21-in. mill are hydraulically operated. Roll turning shop space was obtained by building a 110-ft. extension to the 28-in. mill motor house, and rolls are stored between the feed tables to the two mills.

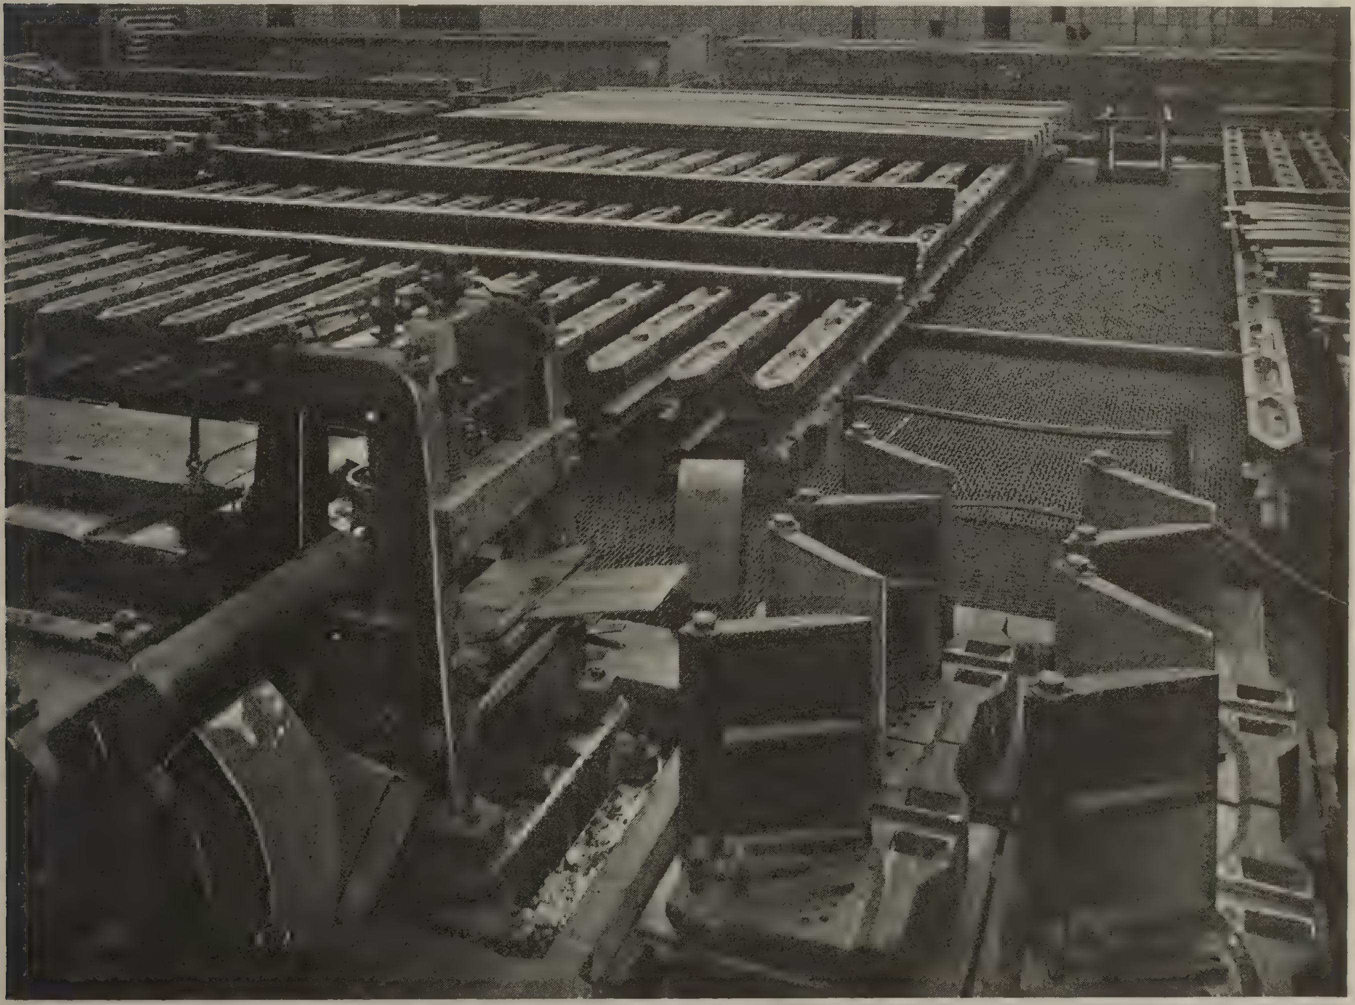
The central pulpit for the five main drives of the new mill is located above and just beyond the last finishing stand. It was built in the wall which separates the mill room from the motor building, so that the operators can readily see into the motor room and also con-

A 16-In. Edger Is Located Between Stands Nos. 5 and 6. A hinged looping table has been placed between this edger and the next intermediate roll stand

trol operations on the mill. Bench board controls are used throughout. Other pulpits for auxiliary motors are located in the incoming end of the building and at the first shear and opposite the intermediate stands. The 18-in. edger, looping tables and roll setting of first and second edgers are controlled from this last station.

Served by a 50-ton crane, the motor room is 308 ft. long and 47 ft. wide. The roof is constructed of tile made by the Federal Cement Tile Co., Chicago. The tile has been overlaid with cork insulation, which in turn is water-proofed by means of a composition roofing material. The walls are laid up with bricks, the inner surface being coated with aluminum paint.

Air filters made by Midwest Air Filters, Inc., Brad-



The Traveling Bar Piler Has Been Placed Under a 120-Ft. Span Crane Which Serves the Billet Yard ford, Pa., are mounted in the outer walls. Air which is used for cooling the motors is drawn through the filters by three Sturtevant motor-driven fans. These force the air through the motors, after which it is discharged into the motor room. The switch gear and the substation are located in the basement and the main switchboard panels are mounted on the motor-room floor.

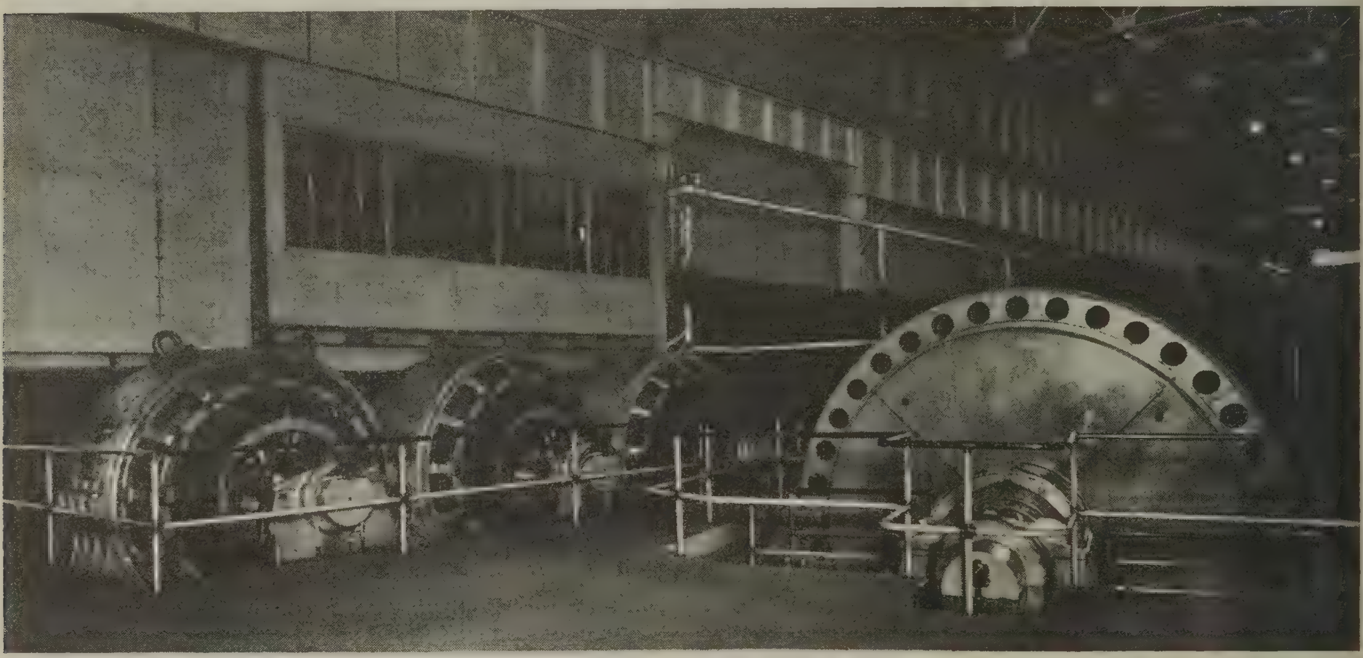
Electric Drive Units

Mill motor equipment consists of five units. The three roughing mills are driven by a 1940 to 3600-hp. induction motor provided with speed regulation from 156 to 290 r.p.m. The 5 to 1 reduction unit on this drive consists of a gear with 147 herringbone teeth and a pinion with 29 teeth. The pitch is 3.14 in. and the faces are 36 in. wide. Each of these three stands is driven through a set of bevel gears. The four intermediate stands are driven through bevel gears by a 4040 to 7500-hp. induction-type motor with speed regulation from 134 to 250 r.p.m. Each of the three finishing roll sets is driven separately by a 2000-hp., 85 to 165-r.p.m., 600-volt, 50-deg. C. rise direct-current motor.

This room also houses three 3400-kw. motor-generator sets of the two-generator type and three synchronous converters, each of which is rated at 1700 kw. The generators are all interchangeable, so that only one set of spare parts is kept in stock. Current is brought to the motor switch gear at 2200 volts, three phase and 60 cycles. Current of these characteristics is used in the two mill induction motors and in the three motor-generator sets.

One generator on each motor-generator set is connected direct to one of the three finishing mill direct-current motors through a Ward-Leonard control system. Speed regulation on the two large induction motors is accomplished by means of interconnection between the two synchronous converters and the three remaining direct-current generators on the motor-generator sets. This hook-up functions essentially as a Kramer drive.

Steel partitions between the motor room and the mill room are bolted in place, to facilitate removal when repairs are being made to the mill drive. Sheet metal housings over the bevel and reduction gears in the motor room are easily removed by the overhead crane.



Each of the Three Finishing Stands Is Driven by an Individual Motor, as Shown. The main pulpit is located above these motors. At right is the "askew" motor driving the four intermediate stands and the edger operated with them

---

Materials-Handling Meeting to Be Held in Philadelphia

Papers and speakers for the national materials-handling meeting of the American Society of Mechanical Engineers at the Benjamin Franklin Hotel, Philadelphia, April 23 and 24, have been announced. At the morning session, April 23, Frank D. Campbell, chief engineer Eastern Steel Castings Co., Newark, N. J., will read a paper on materials-handling methods in his plant. A second paper, "Materials-Handling Features of the DeLavaud Process of Casting Pipe Centrifugally," will be read by H. A. Hoffer, Eastern manager United States Cast Iron Pipe & Foundry Co., Philadelphia.

That afternoon will be devoted to inspection tours, four trips being offered. One trip will be devoted to a study of interior plant handling in Philadelphia; a second, to interior plant handling in Camden; a third, to bulk exterior handling, and the fourth will be a visit to the plant of the United States Cast Iron Pipe & Foundry Co. at Burlington, N. J. At an informal dinner Monday evening addresses will be presented on certain interesting aspects and sidelights on the materials-handling problem.

A technical session Tuesday morning will be featured by three papers. G. C. Woodruff, assistant freight traffic manager New York Central Railroad, will read a paper on "Modern Handling Methods in Railroad Transportation." This will be followed by "Material Handling on Steamship Piers at Home and Abroad," by Willard C. Brinton, president Terminal Engineering Co., New York. A third paper, "Storedoor Delivery of Freight by Motor Trucks," will be read by F. J. Scarr of the Scarr Transportation Service, New York.

Two technical sessions Tuesday afternoon will be devoted respectively to interior handling and to bulk handling of coal, ore, ash, etc. The interior handling papers are two: "Handling Methods and Equipment in a Large Mail Order House," by H. E. Odenath, chief engineer Sears-Roebuck & Co., Philadelphia; "Pneumatic Handling of Materials," by Harry S. Parks of the Holly Pneumatic Systems, Inc., Philadelphia. A technical session Tuesday evening will be devoted primarily to mining problems. The outstanding paper, entitled "Materials Handling," will be read by Harold V. Coes, vice-president Belden Mfg. Co., Chicago, and past vice-president American Society of Mechanical Engineers.

Blast Furnace Practice in Germany

Ores of Various Characteristics Used in Burden—Some Good Coke Available—Methods of Charging Outlined

BY F. H. WILLCOX*

RAW materials used in the Ruhr District of Germany are assembled from Newfoundland, Sweden, Spain, Africa, and from the minette mines of France and Luxemburg. Perhaps 20 per cent of the raw materials originate in Germany. Fifteen years ago the furnaces were based on a larger proportion of minettes and the steel works used Thomas iron, i. e., 0.3 to 0.4 per cent silicon and 1.5 to 3.0 per cent phosphorus.

While the steel capacity of recent installations is largely open-hearth furnaces, usually tilting type, there remains a heavy preponderance of Thomas converter capacity, and the major part of the iron production is Thomas quality. This requires high-phosphorus ores. The basic iron for open-hearth work is very high manganese, up to 4 per cent, always over 2.5 per cent as far as I observed. I believe this is because they concentrate practically all their scrap into the open-hearth, where the pig iron charge is about 25 per cent, the remainder being good plant scrap from mills and pits, with a major part being rather poor light outside scrap.

So the high-scrap heat, with its low iron content, melts down with about a 1 per cent manganese, about the same starting point as with our 50 per cent hot metal of 2 per cent Mn. content open-hearth practice, and is tapped with the same residual Mn. This digression is to explain why they use high-manganese basic pig iron. Manganiferous ore is nil in Germany. The Germans import all of the manganese and conserve it, reusing open-hearth slag and using old ferromanganese and even spiegeleisen slag. This is concentrated, and so-called slag concentrate—running 12 per cent Mn—is recharged. Manganese ore comes from Sweden, Africa and the Near East.

Burdens Most Composite

With such wide sources of supply the burdens found at various plants are of the most composite character. One extreme case was a three-furnace plant, each stack with 17,000 cu. ft. capacity, producing 1500 to 1800 tons of iron a day and using 32 different iron-bearing materials.

An inland plant nearby used a burden made up of 40 per cent Wabana, 20 per cent high-grade lump minette, and 40 per cent roasted and sintered German spathic and limonite ores, together with the usual plant by-products. Going over toward Dortmund, one large plant was using 85 per cent Swedish magnetites, about 40 per cent sintered, with the remainder made up of manganese ore and plant by-products, while at an adjacent operation Wabana made up the major part of the burden. At Bochum, with four furnaces, the burden was made up of sinter, produced from a mixture of flue dust, Spanish, African and Swedish concentrates, all fines, mixed with from 8 per cent to 12 per cent coke braize and sintered on Dwight-Lloyd machines. The Swedish would correspond roughly to our Harmony concentrates in fineness, but the hematites were seemingly as fine as flour.

Low-Grade Native Ore Not Much Used

Germany has considerable ore reserves in Bavaria and southern Germany. They are low-grade and apparently have to be roasted before they can be concentrated. It has been found cheaper to import ores than to develop the low-grade deposits. It is interesting to note that the turn toward imported ores has given the Ruhr District a distinctly better grade ore to work with than was the case formerly. It gives a distinctly superior burden, as compared with our somewhat easily reducible ore burdens. The magnetites, sinters and probably Wabanas are not so quickly affected by the reducing influence of the furnace gas.

Their smoothly working furnaces have a practice which follows that of our Eastern district, where mixtures have been used for many years ranging from 20 per cent sintered ores and 80 per cent hematite, up to 85 per cent sintered ores and 15 per cent hematite, not to mention the 100 per cent sintered ore practice. Such burdens invariably give lower blast pressures, lower coke and greater regularity, the furnace taking heat—even on unfavorable lines—without serious tendency to stick and hang.

They use some ores in a lumpy condition which I think we would refuse to charge. In two plants we are designing for Germany we have to provide clearance in the throat for 14-in. lumps. It is surprising that the German furnaces work as well as they do. It is again surprising, at first glance, that, working with a burden naturally coarse, they show so much interest in rendering fine ores coarser.

I think this can be traced to two factors: First, the fear of fine ores is well founded because many plants where the tonnage has been brought up are blown by gas engines that cannot keep the volume up with much over 15 lb. blast pressure. Moreover, the production of Thomas iron, with its lower silicon, is more sensitive, and, regardless of furnace lines, combustibility of coke and slag characteristics, high blast pressure has to be avoided. Second, the Germans have materials that naturally have to be agglomerated or nodulized or sintered—the latter process being later in practice than with us. Some of the Spanish and Algerian ores are finer than any we have to contend with and are as dry as a bone, and then large quantities of undesirable grades, like pyritic residue and spathic ore, have to be treated.

Sintering African Ores Difficult

I was informed that it is not so easy to sinter fine African hematite ores as a mixture of hematite and magnetite. The tonnage in the Dwight-Lloyd machines drops off by 20 per cent. In this respect, I believe they check our experience with flue dust and a well prepared magnetite concentrate, such as is found at Chateaugay. However, their Dwight-Lloyds are not so well laid out as are certain of our sintering plants with respect to return of screenings for admixture with the fine ores.

They often have good preparation plants for the mixture of ores, the different components being weighed in correct proportion, put through a concrete type mixer before being charged on the machine. As compared with the rate of production here, they run slower on a tons per square foot per day basis. The quality of sinter is poor, compared with some of the American sinter, but it is so much superior to an admixture of fine hematites and magnetites that it is not difficult to see justification for the practice. Their cost is stated to be 35c. a ton.

Swedish shippers are said to screen out the lumps,

(*Concluded on page* 842)

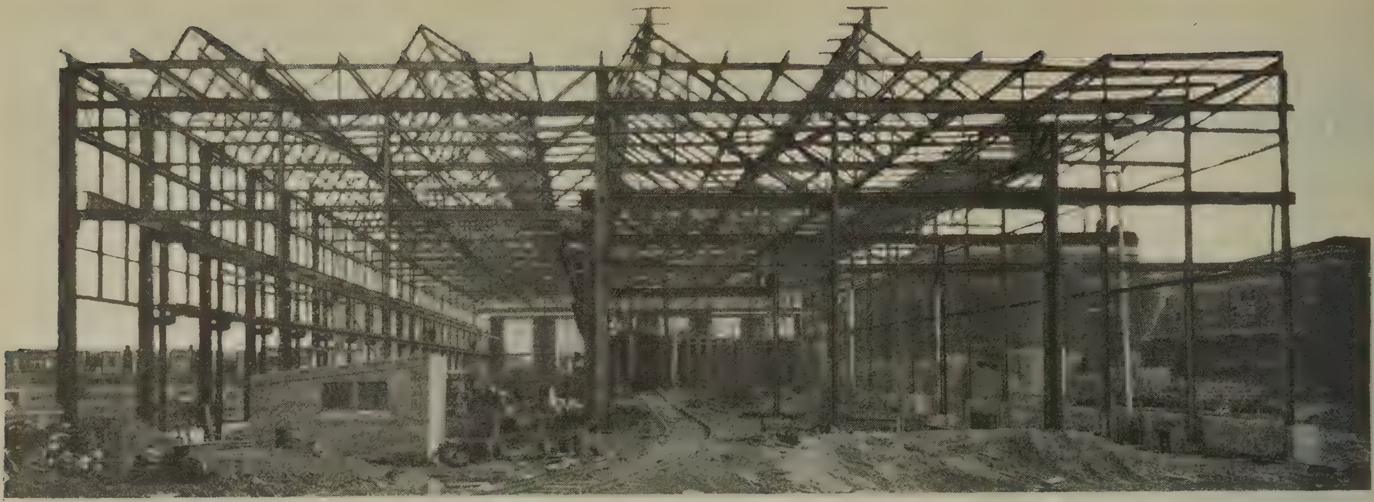
*Vice-president Freyn Engineering Co., Chicago. This is an abstract of an address before the Eastern States Blast Furnace and Coke Oven Association, at the William Penn Hotel, Pittsburgh, on Feb. 17. A second and concluding installment will be published in an early issue.



Thousand-Ton Structure Welded

Simplicity of Joints in Trusses and in Erection Details Eliminates Several Thousand Gusset Plates and Short Angles—11 Per Cent Saving in Steel Effected

A LARGE manufacturing building has been erected by the General Electric Co. at its West Philadelphia, Pa., plant, in which the structural steel was fabricated and the erection joints were made by means of metallic arc welding. The building, shown in end elevation in the view, is approximately 145 x 550 ft. A line of columns runs down the center, thus dividing the structure into two bays, the one to the left being equipped for overhead cranes.

Steel was fabricated in the Trenton, N. J., plant of the American Bridge Co., which also erected it. The structure weighs 989 tons, of which 745 tons passed through the welding shop. The remainder is made up of purlins, punched for angle-iron connecting clips, and erected by bolts. A design made for the more conventional riveted details was figured to weigh 1114 tons; thus a saving of 125 tons, or over 11 per cent, was made in the weight of steel.

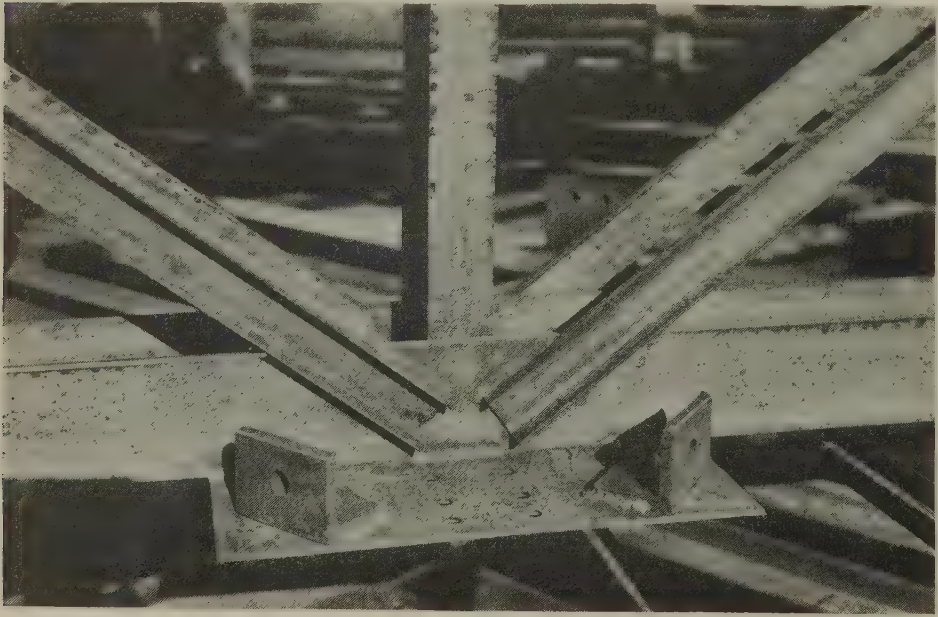
Prof. Frank P. McKibben, formerly of Union College but now consulting engineer for the owners, described the structure in detail at the Philadelphia Engineers Club, March 14. He said that this building is notable for its size, weight and the use of heavy roof trusses, but that it merely represents an orderly development of a new art. He has data concerning 35 buildings with frames either wholly welded or welded in great part; of 25 miscellaneous structures which have either been constructed or reconstructed and reinforced by welding, and 15 ships or barges which have completely welded main frames.

He believes that arc welding has a very promising future for steel truss work, because it requires less steel and is a cheaper method of fabrication, yet producing just as good (or even a better) a joint, and with no noise. The problems yet to be solved before the method is widely used are (a) revision of building codes and education of building inspectors, (b) methods of insuring the skill of welders, (c) educating the draftsmen and detailers, (d) devising proper shop fixtures and jigs and (f) adapting automatic welding machinery.

As indicated by the view, the truss is assembled without gussets, except for the lateral bracing, and the metal is symmetrically placed. All the welds are so placed as to act in shear. Previous tests had shown that a ⅜-in. fillet has an average ultimate strength in shear of 13,400 lb. per linear inch, and a ¼-in. fillet, 10,900 lb. A design stress of 3000 lb. per linear inch of ⅜-in. fillet weld was adopted, thus giving a factor of safety of 4.5.

Column details are very simple. As shown in the photograph, the loose base slab was usually grouted to correct level, and the Carnegie H-beam column with milled end was placed thereon. The single-angle bolt bracket is much more economical than a riveted detail requiring at least five nicely fitted pieces.

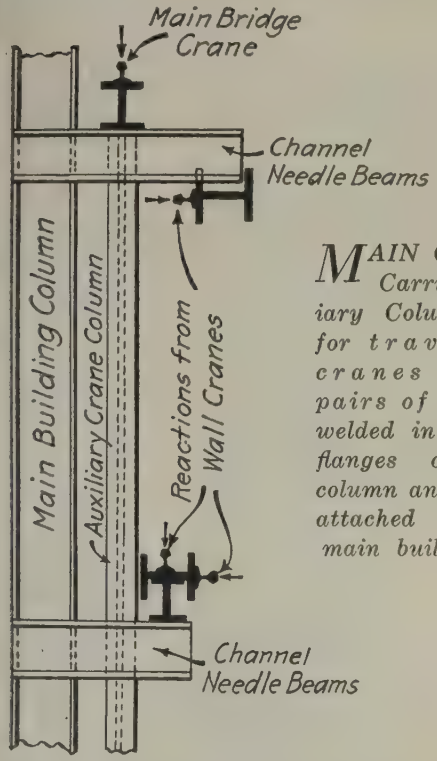
A 1½-in. cap plate was welded to the top of each column, and clip angles to land the lower chords of roof trusses and longitudinal wall trusses. These connections were punched for erection bolts, but were later welded to take all working stresses. It may therefore be seen



LOWER Panel Point of Roof Truss. Chords of main trusses are 8-inch Carnegie H-beams, placed with web horizontal. Verticals are 7-inch I-beams slipped between upstanding flanges, and edge welded. Diagonals are pairs of channels, welded to sides of chords. Gussets for horizontal bracing in plane of bottom chord are welded to lower flanges of bottom chord that one feature of the building is the extreme simplicity of all connections, both in the shop joints and the field joints, thus avoiding the expense of making, routing and assembling several thousand small clip angles, gussets and fillers, and reducing the fabrication expense more than the value of the steel saved.

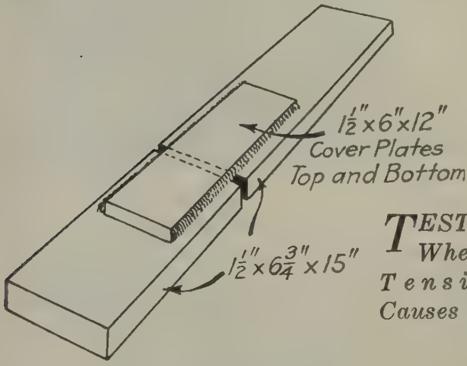
Two fundamentals of procedure control were also discussed by Professor McKibben, namely, verifying the skill of the workmen and testing the completed structure. The five workmen who welded the trusses in the Trenton shops were required to make test pieces. These developed the following strengths in shear:

Welder	Bars, Lb. per Inch	Welder	Bars, Lb. per Inch
A	13,267	D	11,551
	12,070		11,158
B	12,785	E	10,566
	12,063		10,137
C	12,057		
	11,393		



MAIN Crane Beams Carried on Auxiliary Columns. Beams for traveling wall cranes supported by pairs of channels, welded in the field to flanges of auxiliary column and to brackets attached to web of main building column

"While the two specimens made by any individual welder showed remarkably close results, the variation between the poorest and best welder was about 22 per cent of the lowest," said Professor McKibben. "The lowest values, however, were practically the same as those used in design. Taken in connection with other tests and accomplishments of these five shop welders, it is believed that these few specimens represent shop variations. These are no greater than exist in concrete tests, or in riveted-joint tests."



TEST Piece Which, When Pulled in Tension Machine, Causes Welds to Fail in Shear

To test the completed trusses, three were taken and erected on cribbing with the regular cross bracing. Then the center was loaded to twice the maximum design load. The deflection measured 0.89 in. (less than the calculated 0.97 in., because of continuity at all joints). When the load was removed, the deflection returned to zero, which showed there had been no permanent set in any member or slip at any joint.

J. H. Edwards, chief engineer American Bridge Co., in discussing Professor McKibben's paper, said that, after some three years' study, experimentation and practical application, he would have no hesitation in accepting a welded structure if it were designed for the purpose by competent engineers and fabricated and erected by skilled workmen.

Fabrication of the trusses for the West Philadelphia building required a minimum of shop preparation. Five welders did the work, each using a "single-operator motor-generator set." Two of these sufficed for the erection. In the shop a series of 18-in. I-beam skids 24 ft. long were placed about 9 ft. apart, blocked level, and connected together with a steel bar, welded to each beam. The positive terminal of each welding machine was bolted to the web of one of these beams. The large trusses were put together by first laying the bottom chord against a long 8 x 8-in. angle, welded to the I-beam skids and bent to the proper camber. Then the top chord was spaced and clamped to the skids. Finally verticals and diagonals were clamped to the chords with C-clamps, and the joints were welded. All trusses were assembled and welded lying flat on the skids.

Column Foot Saves Five Pieces for Every Foundation Bolt

The 206 skylight trusses were nearly alike and were assembled in jigs. These fixtures were made by tack-welding flat plates to skids, then welding small clips to the plates so that when the truss members were laid against the clips the truss was properly assembled for clamping together. It is then either welded in place, or removed for welding while another truss is being assembled.

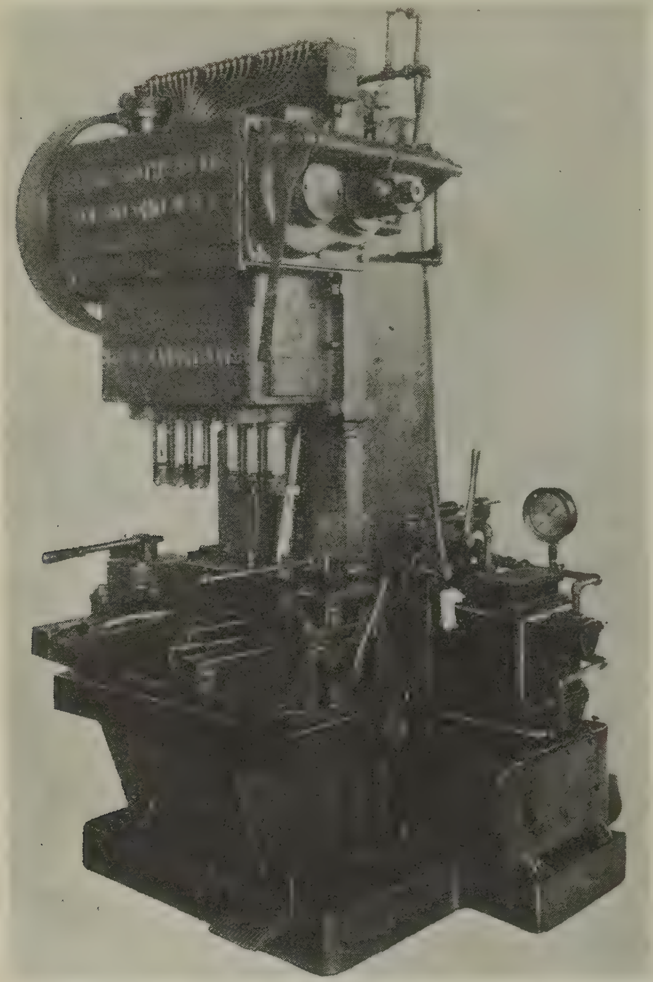
Fabrication and erection took nearly two months.

M. E. Hibbs, representing the Philadelphia Bureau of Building Inspection, said the principal obstacle in his mind preventing a readier acceptance of welded structures was the supposed difficulty in distinguishing a good weld from a bad one after it has been made. Primarily that would be the first duty of an inspector of such structures. But after he had visited a welding school and had had an opportunity to compare the work of beginners, apprentices and expert welders, he found that quality was as easily discernible in such joints as in any other of the more familiar varieties. He was of the opinion, however, that some shapes are more adaptable to welding than others; consequently the Philadelphia regulations now include a provision that certain shapes may be rejected by the chief inspector.

Multiple-Spindle Cylinder Boring Machine with Hydraulic Feed

Simplicity of design is a feature of the new multiple-spindle cylinder boring machine with hydraulic feed which has been added recently to the line of Baker Brothers, Inc., Toledo, Ohio. The machine is built with fixed centers to individual requirements, and can be furnished for two, four, six or eight-cylinder blocks.

Spindles are of forged high-carbon steel and are of maximum diameter permitted by the center distance of the bores of the blocks. Two adjustable taper bearings of ample size are located at the lower end of the head, as close to the start of the cut as possible. The bearings are long and are accessible for adjustment when necessary. It is claimed that machines of this design are being used by a number of companies without any support for the bars, boring both roughing and finishing cuts with a guaranteed accuracy. This, it is pointed out, means greatly simplified tool set-up.



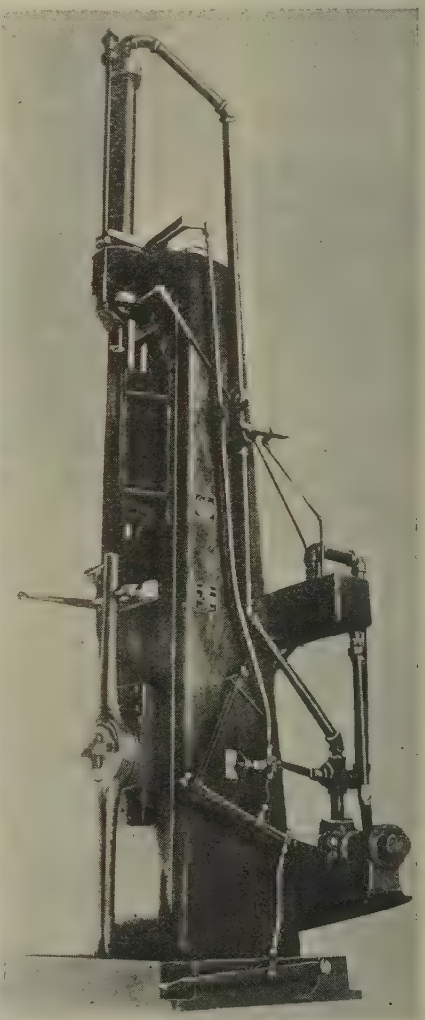
The Hydraulic Feed Cylinder Is Mounted at an Angle So That There Is a Thrust Component Which Holds the Table Rigidly Against the Ways, Assuring Positive Alinement

Feed of the table is actuated by an Oilgear hydraulic pump, which provides rapid advance to the work, automatic engagement of feed at a predetermined point, rapid return, and automatic stopping at the end of the cycle of the machine. The position at which changes from rapid traverse to working feed take place may be made conveniently, the changes being by means of flat cams which may be set at any position. The rate of feed may also be adjusted readily. The rapid traverse and quick return are constant.

The table is equipped with taper take-up gibs and has an extra long bearing on its ways. Feeding of the table is accomplished through the hydraulic cylinder which is mounted on a pivot at the top of the main frame of the machine. This cylinder is arranged at an angle and it is stated that, in addition to feeding the table up there is also a thrust component which at all times holds the table rigidly against the ways of the machine, further assuring positive alinement and accuracy. Careful analysis of conditions is said to have been made in determining the proper angle to give the results desired.

Either belt or motor drive arrangement can be furnished. The main drive to the spindles is through hardened alloy-steel gears with the shafts mounted on ball bearings. Speeds for the spindles are designed with consideration to the size of bores of the cylinder block to be machined. Mechanical start and stop of the spindles is provided by means of a conveniently located lever. Feeds are variable through a wide range through the Oilgear pump. An automatic lubricator provides adequate lubrication for all gears and bearings on the machine. The Oilgear pump is driven by a 2-hp. motor, and this is furnished as part of the standard equipment.

Special Hydraulic Axle-Housing Broaching Machine



For broaching out the flash thrown up from welding operations on axle housings, the American Broach & Machine Co., Ann Arbor, Mich., is offering the special hydraulically operated broaching machine shown in the accompanying illustration.

The machine, shown without the broach in place, is equipped with a rotating head that holds the broach. On the downward stroke the broach cuts out the flash metal left by the welding operation, and upon completion of the cut the head rotates by means of a cam device attached to an angle plate, which is bolted to the frame of the machine. The head rotates so that the broach may be positioned out of the path that it has traveled in its downward stroke. This brings the cutter out of line of contact with the metal surface that it has cut, permitting it to return through the housing without interference. This prevents dragging of the tool on the return stroke.

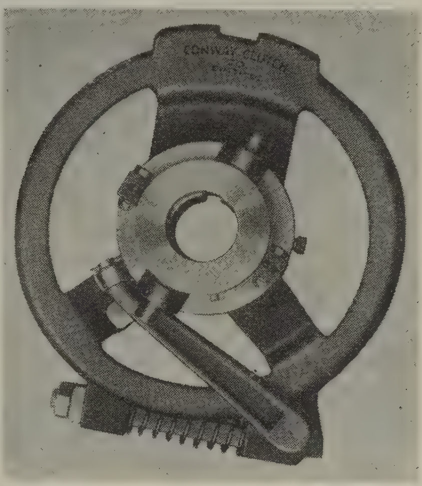
The axle housing is mounted on a large stud and is centered by means of a centering device at the upper end. It is claimed that both ends of the housing are broached in approximately 1 min.

Direct motor drive from a 10-hp. motor is employed. Automatic stops regulate the length of stroke, and both foot pedal control and hand lever control are provided. The machine is of 12-ton capacity and the stroke is 24 in. The operating height is 17 ft. overall.

Orders for 967 steel boilers were placed in February, as reported by the Department of Commerce. These aggregated 1,150,711 sq. ft. of heating surface, compared with 859,301 sq. ft. in 1029 boilers in January. The February rating is the highest for several months, but is considerably lower than that of February, 1927, when 1101 boilers of 1,389,984 sq. ft. were ordered.

Contracting Band Clutch of Compact Design

The Conway Clutch Co., Cincinnati, has placed on the market a new contracting band clutch of simple design and compact construction, both as to swing diameter and lengthwise shaft space required for a given horsepower. Ease of engagement, instant release, drag-free idling and unusually high power capabilities are features claimed. The device is available in four sizes for transmitting up to 75 hp., at 100 r.p.m.; the diameters of the friction surfaces range from 12 to 20 in.



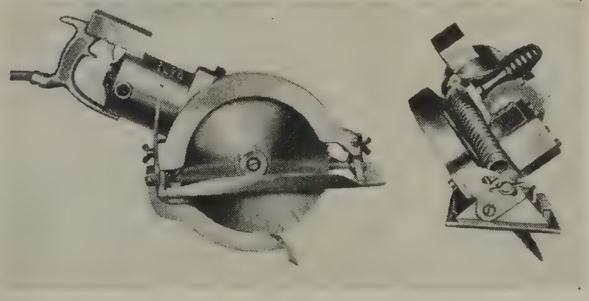
Ease of Replacing the Friction Lining Without Removing the Clutch From the Shaft Is a Feature

This clutch is operated by the familiar form of shifter yoke which slides a cone member under a roller on the end of an operating lever. When the cone slides under this lever, contracting the friction band, high leverage ratio causes the application of ample driving power. When the operating lever is thrown in the reverse direction to release the clutch, a spring assists in throwing the friction band out of engagement. The clutch is of steel and the shifter cone, also of steel, is hardened. As the shifter cone is pushed under the operating roller, the lever slides on a finished surface on the clutch carrier. This takes the end thrust and allows this lever to move freely up and down.

Ease of replacing the friction lining, without removing the clutch from the shaft, is a feature emphasized. By removing two screws and moving the pulley, sprocket, gear or drum along the shaft a distance of slightly more than the width of the friction band, the latter can be slipped over the line shaft.

Portable Hand Saw with Provisions for Bevel Sawing

Bevel sawing at any angle up to 60 deg., as well as the usual vertical sawing, may be done with the new portable electric hand saw recently brought out by the Wodack Electric Tool Corporation, 4627 West Huron Street, Chicago. The bevel sawing is accomplished by a tilting saw base which may be set and locked at any angle within the 60-deg. range by means of a slide and locknut.



Bevel Sawing Is Accomplished by a Tilting Saw Base

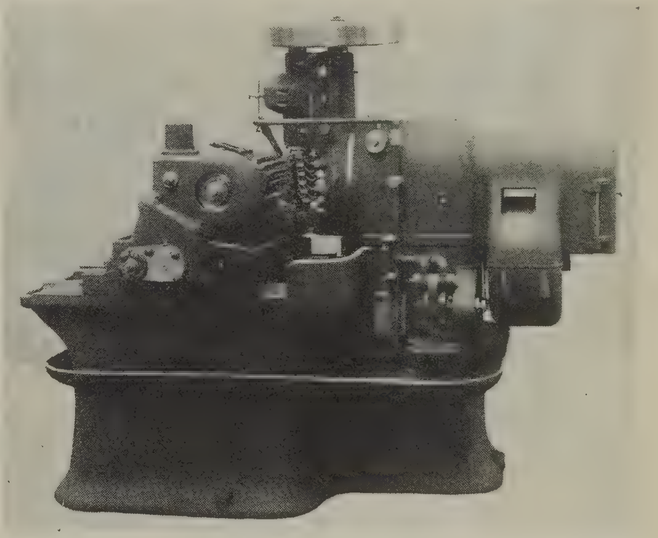
Another feature is the width gage for vertical sawing, which can be set for widths up to 6 in. and is intended to permit sawing strips of various widths with uniform accuracy and without the necessity of marking. The machine, which is designated as the type B, is equipped with a General Electric motor which operates on both alternating and direct current and is available for 110, 220 and 250 volts. Regular equipment includes one 9-in. and one 11-in. saw blade.

Production Hobbing Machine

A high production Pfauter hobbing machine, said to be suitable for spline shafts and spur gears of small diameter, coarse pitch and wide face, and for worms for automobile rear axles, is being introduced by the O. Zernickow Co., 15 Park Row, New York.

The machine is designated as the No. 9, and has a capacity for gears up to 10⅝ in. in diameter and up to 2¼ D.P. It has single pulley drive and can be arranged for direct-connected motor drive, a 7-hp., 1000-r.p.m. motor being employed. Hob speeds are obtained through change gears which have large tapered bores and may, therefore, be easily put on or taken off. The cutter head swivels 100 deg. in either direction. The setting is accomplished by means of a worm drive located inside of the head.

The hob is driven by means of a spur gear drive having a heavy flywheel on the driving pinion to impart steady motion to the hob. The hob spindle is hardened and ground and is adjustable lengthwise and sidewise. The index drive consists of an accurately cut worm gear and a hardened worm which is ground all over. The worm runs in a bath of oil and is adjustable in both directions.



The Cutter Head Remains Stationary While the Work Travels. The work is held between centers or in split collets

The cutter head remains stationary while the work travels. The work is held between centers or in split collets. Radial pressure of the hob is taken on a steady-rest. Feeds are obtained through change gears and the feed may be stopped automatically or by hand. All outside change gears are inclosed within cast-iron guards, but are accessibly located. The coolant tank is located in the bed of the machine.

Specifications include: Swing, 10⅝ in.; distance between centers, 21⅝ in.; minimum center distance, hob and work arbor, 1¼ in.; number of teeth, 4-100; bore of spindle, 3⅛ in.; diameter of hob arbor, 1¼ or 1½ in.; maximum diameter and length of hob, 5¾ in. and 5½ in., and adjustment of hob, 1⅝ in. Speeds of hob are: 44, 53, 67, 84, 106 and 127 r.p.m. The floor space occupied by the machine is 69 x 86 in., and the weight, net, is 5500 lb.

A newly designed calculator that weighs less than 7 lb. is announced by the Burroughs Adding Machine Co., Detroit. It is equipped with regulation size keys, a standard keyboard, visible adding dials and the like, and is 6½ in. wide and 11¼ in. long.

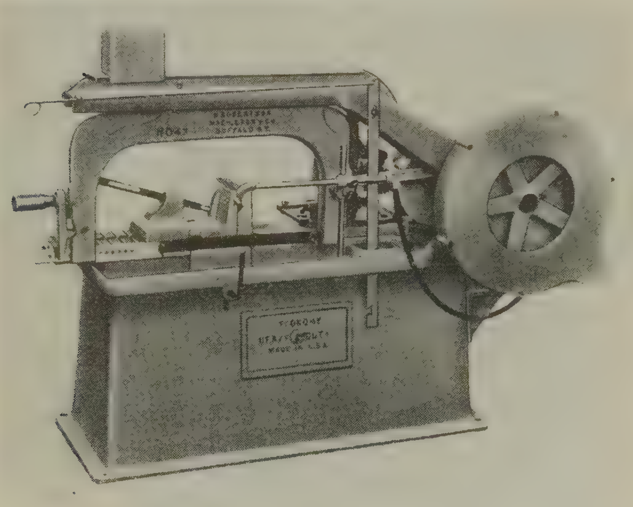
Employment in February showed a good gain over January in the barometer of the National Metal Trades Association. The total reported went up from 583,118 to 602,457, or 3.3 per cent.

Production Metal-Cutting Power Hacksaw

The W. Robertson Machine & Foundry Co., Buffalo, N. Y., has placed on the market a new power hacksaw, designated as the No. 4X, the rated capacity of which is 9 x 9 in.

The machine is of heavy construction and all parts under strain are of alloy steel. The base is of box type and forms a receptacle for the cutting fluid. Bearings are large. There are two shafts, the back or drive shaft, which is 1 in. in diameter and is suspended in a 13-in. long steel sleeve, and the main shaft, or crankshaft, which is 1⅛ in. in diameter and runs in a 6¼-in. long head bearing. These bearings, as well as the connecting rod bearings, are phosphor-bronze bushed. The outer ends of these two shafts are supported in bearings formed by the heavy overhanging gear guard. The frame has a 2½-in. flat dovetail bearing, 14 in. long, running in a hand-scraped bearing to match, with gib for adjustment. All gears have teeth cut from the solid.

Frame speeds of 72 or 100 strokes per min., for cutting hard or soft metals, are available. Change of speed is made by a push or pull on a button lever at the end of the drive shaft. The drive of the machine is from a single pulley on the drive shaft and through the gears to an expanding clutch on the crankshaft. No countershaft is required. Motor driven types are driven direct from a fiber pinion on the motor shaft to a cut gear on the machine which replaces the pulley. The clutch, which nests inside the large gear, is 4½ in. in diameter, 1 13/16 in. face, and is expanded by a hardened steel cone. It is engaged by a conveniently located extended lever and disengages automatically when the cut is completed.



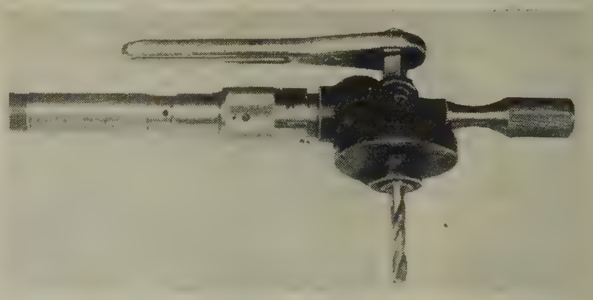
The Saw Frame Is Lifted by an Oil-Compression-Lift Device to Relieve the Blade Teeth of Back Drag on the Return Stroke

The machine is equipped with the company's oil-compression-lift device, which serves to lift the frame and relieve the teeth of the saw blade of all drag on the return stroke. This feature also serves to prevent falling of the frame on the work, eliminating breakage of blades. The device is arranged so that when the machine stops at the end of the cut the frame will stay at any position of its swing until released by the opening valve. Feed is obtained by gravity with the aid of the large weight which is adjustable on a T-rail cast on the top center of the main slide bearing. This arrangement is intended to eliminate the vibration of a weight rod and to apply the feed directly over the center of the blade.

Coolant is pumped from the receptacle in the base to any part of the blade by means of a piston pump and an adjustable piping arrangement. The vise is quickly adjustable up to 9 in. and may be swiveled to 45 deg. for cutting stock at angles. Blades 12 to 18 in. may be used. For motor drive a ¾-hp., 1200 or 1500-r.p.m. motor is employed. The height of the machine overall is 41 in., and the working floor space is 26 x 62 in. The net weight of the belt-driven unit is 700 lb.

Angle Drilling Head for Use With Flexible Shaft Equipment

For drilling in inaccessible locations, where an ordinary electric drill or hand bit cannot readily be used, the Stow Mfg. Co., Binghamton, N. Y., is offering the angle head illustrated. The tool derives its power through flexible shaft that may be driven by an electric drill or by any other available motor. The device is of rigid construction. It is regularly available in ½-in. capacity, but may be furnished in other sizes and with 1¼-in. screw feed with ratchet handle. The socket takes Morse taper shank drills and where space permits a chuck may be applied.



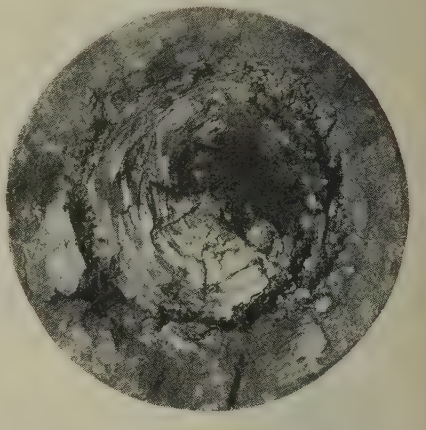
The Device Is Intended for Use in Inaccessible Locations

Axle Failures from Hot Boxes

In the course of a paper on "Types of Failure of Steel," Robert Job, Milton Hersey Co., Ltd., Montreal, Que., read before the midwinter meeting of the American Society for Steel Treating, a fractured freight car axle (known in shop parlance as a "burn-off") was shown. It was dark and discolored on most of the surface, and at places had a magnetic scale adhering. A crater-like spiral of shear surfaces is characteristic of such failures.

The cause was an excessive hot box, which actually caused the axle to run red hot, and the wheel twisted off in the hot soft metal.

Other failures caused by creeping fracture from a tool mark or a sharp fillet were illustrated. Incipient cracks may sometimes be determined by cleaning the surfaces carefully, painting with thin white lead and then sledging the axle on its end. A little ridge in the paint will be a tell-tale of a fine crack.



"Burn-Off" Failure of Freight Car Axle

S. W. Miller in discussion said that hot boxes were likely to cause more serious trouble than often appreciated, especially if the bushings were made of copper-tin bearing alloys. This bronze penetrates readily into hot steel, inducing brittleness. Consequently it is good practice to polish the bearing surface on the steel axle after it has run hot and before repacking, and examine it minutely with a high-powered reading glass to discover stringers or tiny threads of bronze embedded in the steel surface.

The new battery of 63 Koppers-Becker by-product coke ovens of the Tennessee Coal, Iron & Railroad Co., Fairfield, Ala., recently was started. There are now 497 ovens at this plant with an annual coke production of 2,436,250 net tons.

Labor Time Recorded by Machine

Electro-Mechanical Dispatching Device Used by Workmen to Signal Job-Time Changes to Central Board

AN electro-mechanical dispatching device by means of which workmen signal job-time changes to a central board was described by K. R. Wood, works manager Bell & Howell Co., Chicago, at a machine shop practice meeting of the Chicago section of the American Society of Mechanical Engineers, held at the Morrison Hotel, Chicago, March 14. With this equipment it has been possible to eliminate several handlings of shop "paper," to cut the timekeeping force in half, to stop production leaks and to avoid confusion.

When notice of a change from one job to another is dispatched by the workmen to the central station, the change is recorded and the elapsed time is figured. This is accomplished by means of a "temporator" which operates by a dialing method. The central station closely resembles a telephone switchboard in that it has its plugs, jacks and signal lamps. It is different in one respect, i.e., the human voice does not enter into its operation. The dials which the workmen use are the same as those employed in automatic telephones. At the central station the indicating device is a step-by-step mechanism which reveals visually behind a window a row of digits corresponding to the code number dialed by the workmen. Not only does the digit or letter dialed appear in front of the central station operator, but it shows up also in a window at the top of the sending unit. These dispatching units are placed in convenient positions about the departments, wherever there are workmen who have occasion to report direct labor.

Job time cards are printed both in red and in black, and they are alternated daily. Thus one color of card carries Monday, Wednesday and Friday, and the other, Tuesday, Thursday and Saturday. When one set is in use at the central board, the preceding day's cards are in the hands of the accounting department where a disposition is made of elapsed time against the cost card. This dispatching method makes possible the accumulation of the elapsed time on cost cards with but one handling between workmen and accounting department.

The routing or shop order is made in quadruplicate and it carries all the information necessary for directing the routing of tools and work to the department, the reporting of time change, the allowed time to perform the work and the number of pieces to be made. One copy is put into a pocket at the central temporator board and filed under the department heading. The second copy similarly goes into one of a series of pockets at the foreman's desk. The third copy serves as a "traveler" and remains with the work as a means of identification. It is this copy which is used by the workman to dial his time change. The fourth copy is sent directly to the tool storage crib, where it gives information so that tools necessary to perform the work may be turned over to the transfer clerk who dispatches them to the job. This copy is then returned to the central station, where it is placed in a follow-up file against the starting time of the job. Only the first two copies of the routing order bear the allowed time of the operation. Thus, this information is in the hands of the planning department and the foreman only.

As the workman nears the completion of a job upon which he is working, the foreman assigns him his next job. When the job in hand is finished the workman notifies the central office of all the facts by means of the temporator. He steps to the nearest signaling station, presses a button, is assigned a line, and dials his department and check number, the operation number, the design number, the number of pieces completed, together with the symbol for "job finished."

There are available in the temporator apparatus 12 digits and symbols, so that the numbers may be dialed without clearing the line and starting a fresh series. These 12 separate digits are arranged as follows: At the left comes first one letter, then five digits, then two letters and finally four digits. This is sufficient to give all the necessary information relative to finishing the job in hand. After this information has been transcribed by the central operator, the line is cleared and the workman repeats the dialing in reference to the new job about to be started.

While this is going on, the central operator reaches for the job time card in the file and strikes it twice in the time clock—once for a finished job, and once for new job—records the number of pieces completed, the work station, operation number and manufacturing order of the job started. He then passes this card along to an assistant operator, who pulls the routing orders for both jobs and stamps them in the time clock. The assistant then refiles the new job order and turns over the order covering the finished job to the planning clerk who uses it in bringing his pre-planned graph up to date, recording the whereabouts of work in process.

When the planning clerk is through with it the order card is turned over to an assistant who figures the elapsed time against the number of pieces made and time allowed. If the time is bettered, this is recorded on a labor analysis card to be used in the future as allowed time on the job when it is run again.

An interesting feature of the control concerns the watching of elapsed time. If the foreman is doubtful about any job, or thinks he is losing time on it, he is privileged to signal through the temporator signaling station nearest his desk to the central board for a check-up figure. The central operator then dials back to him the total elapsed time on that job. This gives the foreman an opportunity to catch up or speed up on his work before it is too late.

Automobile Production Records Large Gain Over January

WASHINGTON, March 20.—Showing an increase of 91,721, production of motor vehicles in the United States in February totaled 323,368, against 231,647 in January, according to reports received by the Department of Commerce. Of the February output 290,830 vehicles were passenger cars and 32,538 were trucks, compared with 205,543 passenger cars and 26,104 trucks in January. Output in Canada in February totaled 12,504 vehicles, of which 10,315 were passenger cars and 2189 were trucks. Canadian production in January totaled 8463 units, of which 6705 were passenger cars and 1758 were trucks.

February made the largest United States total since last May, when 404,106 vehicles were produced—357,150 passenger cars and 46,956 trucks. It showed a larger total than in February, 1927, when 304,763 vehicles were turned out, but was exceeded by February, 1926, with 364,180 units.

Schedule of the next instalments of the ***Business Analysis and Forecast,*** *by Dr. Lewis H. Haney, Director New York University Bureau of Business Research, follows:* ***March 29****—General Business Outlook;* ***April 12****—Activity in Steel Consuming Industries;* ***April 19****—Position of Iron and Steel Producers.*

Business Analysis and Forecast

BY DR. LEWIS H. HANEY

DIRECTOR, NEW YORK UNIVERSITY BUREAU OF BUSINESS RESEARCH

Current Statistical Data, Considered Independently of Trade Opinion, Indicate That:

Gradual rounding off of unfilled orders may indicate approaching lessening of activity and difficulty of long maintaining the new prices.

Pig iron production has come into line with ingots. But prices probably will not advance while coke and scrap prices are weak.

Commodity prices have begun a downward movement which is accelerating and may cause steel prices to follow by mid-year.

In a good many respects, we find the steel industry at the beginning of March in much the same position as in December, 1925. The rise in the output of steel ingots has been checked after a sharp advance, and the unfilled orders of the Steel Corporation have tapered off in their ascent. Prices of finished steel have risen slightly for three months, but the upward tendency is losing its momentum. Pig iron production has been increasing, but is gaining on the steel-making requirements and prices are barely holding a small rise. Sheet prices are higher. At the same time, the price of steel scrap is sagging.

The chief differences between the two periods lie in the facts that the whole price structure in the iron and steel industry is lower now, and that coke is weak, while at the end of 1925 it was about to begin the rise which occurred in January, 1926. Also, the activity in the chief iron and steel consuming industries averaged a little higher at the end of 1925 than it does now and was notably so in the automobile industry. Building activity, however, is now higher than then, making due allowance for seasonal conditions. On the other hand, the output per employee and per dollar of payrolls is higher now than in the earlier period and it is not improbable that the January earnings of the more efficient steel companies will be about as good as in December, 1925.

The similarity of conditions in the two periods seems sufficiently marked to suggest that, as was the case in the earlier time, the industry is now near the peak of a short period of expansion, and is likely to round off in another month or two.

Three Barometers Point Upward

We find ourselves this month in the pleasant situation of noting that all the curves in the steel chart point upward—production, unfilled orders and finished steel prices. This is as one likes to see the trends in the nation's basic industry. Moreover, some encouraging features are apparent to one examining the chart. In the first place, even after making adjustments to eliminate the merely seasonal variations, the unfilled orders curve has risen to the highest point since March, 1926. It is nearly up to the average of the last five years. It has risen well above its average relationship with the price of finished steel, as indicated by the price curve in the chart. This condition usually means higher prices, and the advance in the price index for February was the answer. There has been no comparable advance in the monthly average price of finished steel since December, 1924. The price level in February was back to about where it was in the months of stability last summer (June, July and August).

Average daily steel ingot output is seen to have increased but slightly in February, when allowance is made for the usual seasonal variation. Usually the average daily production gains more than 4½ per cent in February; the increase this year was hardly 5½ per cent. Accordingly, the adjusted index is 105.3 per cent of normal against 104.7 per cent in January. It compares with 105.4 per cent a year ago, thus being practically at the same level (after making conservative allowance for normal growth). It is reassuring to find this moderation in the rate of activity in steel production, for it indicates that the steel makers are adjusting production to demand and proceeding cautiously. Production is 5 per cent above normal requirements, but, in view of the sharp gains in the building industries, which are doubtless reflected in the increase in unfilled orders, the February level seems reasonable enough.

Perhaps the least favorable aspect of the situation is seen in the marked rounding off of unfilled orders, the increases having been successively smaller in each of the last two months. Presumably, this means that new business has not gained as fast as shipments. Such a rounding off almost always marks the approach of a decline in the unfilled orders of the Steel Corporation.

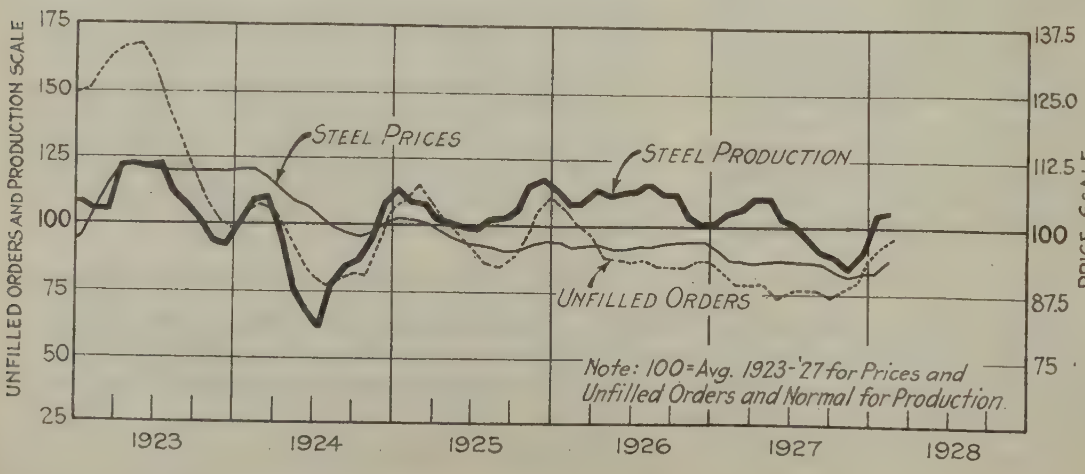


Fig. 1—All Three Curves Point Upward. Finished steel prices advanced well in February; production increased moderately; unfilled orders were higher. But their rounding off tendency is disappointing

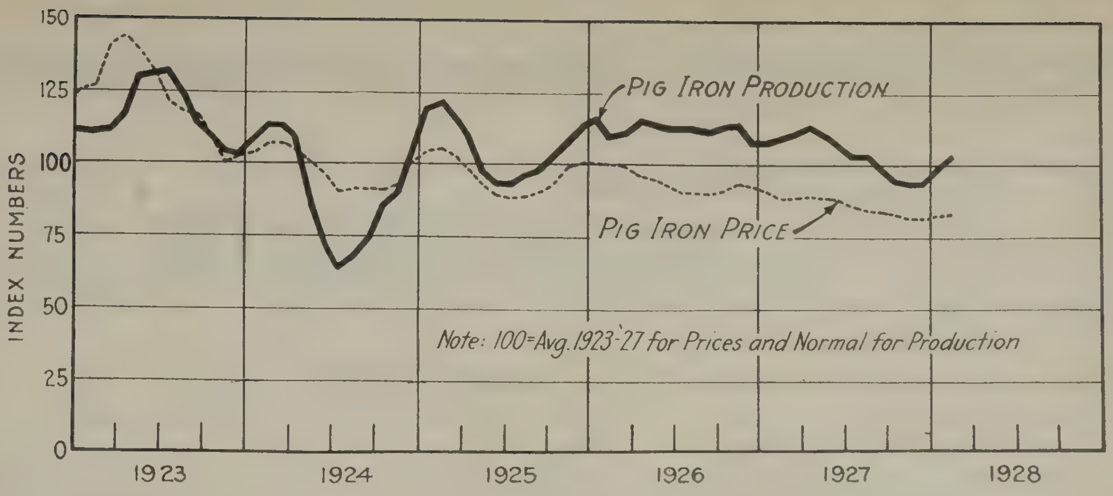
Fig. 2—Output of Pig Iron Is Well in Line With Steel. But weakness in fuel and scrap prices may retard pig iron price recovery



This, together with the flattening of the production curve (see Fig. 1), indicates that the recent spurt may not carry through very far, perhaps not even to the middle of the year.

Pig Iron Output in Line with Steel

PIG iron production in February (average daily rate), was 103.8 per cent of our estimate of normal. Thus pig iron production is not so much above normal as is steel production. The February average compares with 99.7 in January and with 110.1 a year ago. It is not only not so far above normal as is steel production, but it is considerably below the level of a year ago, while steel production is about the same as then. In short, pig iron production seems very reasonable in comparison with the steel output, and if all pig iron were consumed in making steel this commodity would be in a strong position market-wise.

That such is not the case, however, one may infer from the fact that pig iron prices advanced less than steel prices in February. At an average of $17.73 for the month we get a pig iron price index which is only 82.9 per cent of the average during the last five years. This is but little above the January average of 82.5 and compares with 88.8 a year ago. Meanwhile, finished steel prices averaged 93.5 per cent of the five-year average. Furthermore, though pig iron production is still relatively low in comparison with the ingot output, *it increased much more rapidly in February than was the case with steel*, as a comparison of the first two charts will show. If March is to see a similar relative trend we will find pig iron production again too high in comparison with steel production.

The net conclusion from the available statistics (which are now all too few) is that the position of pig iron is still moderately favorable, but that it is somewhat less so than seemed true a month ago. In view of the weakness in the prices of fuel and steel scrap, it now seems probable that the most that can be expected of the pig iron market during the near future is stability. The slightly recessionary trend in the general level of commodity prices, and the inability of steel prices to advance further, support this conclusion.

In short, while our usual pig iron barometers do not indicate a decline in the price of that commodity, the general situation does not indicate a rise.

Commodity Prices on Down-Grade

ONE of the least encouraging features of the general price situation in the steel industry is the fact that the level of commodity prices declined in February and continued irregular in March. As the third chart shows, there is a broad general relationship between finished steel prices and the general trend of commodity price averages. The Bradstreet price index and THE IRON AGE composite index of finished steel prices have held surprisingly similar levels during the last decade, the two curves crossing and recrossing. Frequently turns in the general price level anticipate similar turns in finished steel prices by 4 to 6 months.

For at least two months now, the Bradstreet index has sagged, while steel prices have edged a little higher, so that the two are at about par, judged by their average relationship. Perhaps the present situation most closely resembles that found at the end of 1925, when steel prices, after a small rise, sagged slightly and then stabilized.

Be that as it may, the fact is now apparent that price advances during the last month or two are not yet well established, and that the volume of business offered is not sufficient to allow all producers to operate at as high a rate as they desire. Signs of price competition are not lacking. The advance in finished steel prices is not backed by advances in semi-finished steel or pig iron, and under such circumstances it is likely to be short-lived.

Finished steel prices are not high. In fact, such advances as have occurred fail to bring the price of sheets, nails or bars up to a point that gives a normal spread over billets. But independent sheet makers find their shipments running behind production, and distributers of nails are amply stocked.

The steel scrap price situation is not encouraging; the declining rate of increase in the unfilled orders of the Steel Corporation and the continued evidence of large supplies of old material indicate further weakness.

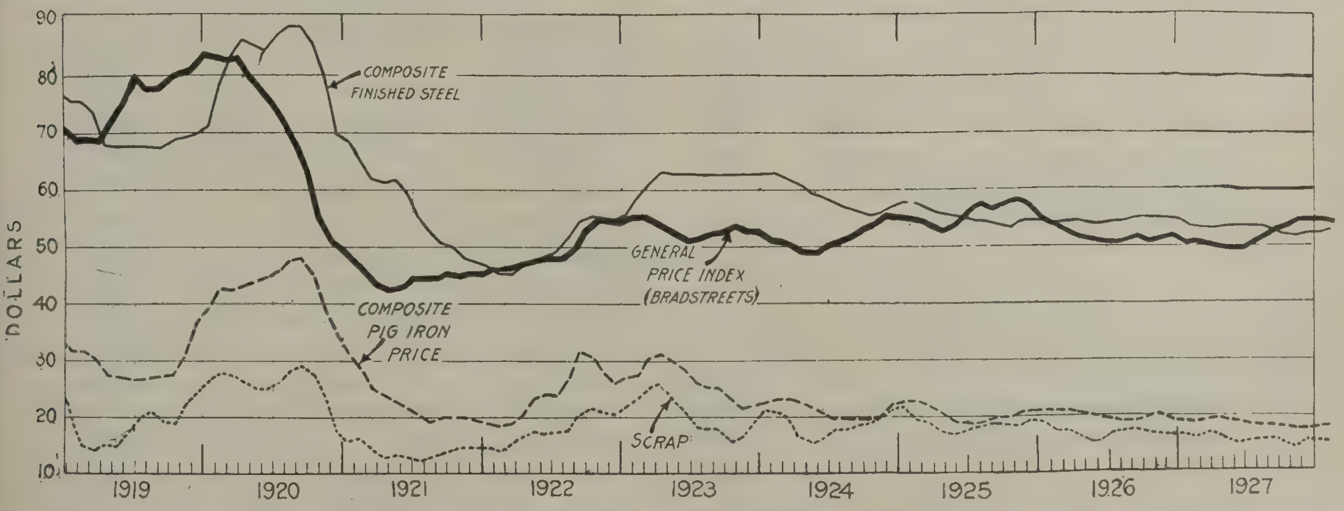


Fig. 3—Commodity Prices Have Been Sagging Slowly. Finished steel price advances are not yet well established. Pig iron prices may be unable to move upward so long as fuels and scrap remain low

This Issue in Brief

Elapsed time on each job is signaled from various stations throughout the shop to a central recording station. The signaling device operates like the dial on an automatic telephone. Thus, only one recording system is needed for the entire plant, and the time-cards receive only one handling.—Page 809.

Slight rise in wholesale prices. Average commodity price was 96.4 in February, 96.3 in January, and 95.9 in February, 1927.—Page 841.

President takes charge of selling, with eminently successful results. He cuts selling expense and increases sales, finding that things move faster and more productively when salesmen and customers learn that the head of the business is at the sales helm.—Page 797.

Saves 11 per cent of steel by welding structural steel building. New factory structure, arc welded, weighs 989 tons. If riveted, the weight would have been 1114 tons.—Page 804.

Encouraging picture of business conditions is presented by upward trend of steel output, unfilled orders and prices, Dr. Haney indicates. Unfilled tonnage is nearly up to average for past five years.—Page 810.

Earnings of steel industry dropped sharply in 1927. In each case 20 of the leading producers earned less than in 1926. Average per cent of earnings to stockholders' value was 5.1 per cent.—Page 845.

One man does the work of five in plant making automobile car frames automatically. With a force of 200 men, 7000 frames are produced per day. The plant is practically wholly automatic, and is virtually a huge machine.—Page 794

Too little thinking at the top is oftentimes the cause of declining profits. "Too many men are cleaning up their desks every day and doing a clerk's work," says manufacturer. He recommends that they concern themselves more with the operations of each department.—Page 798.

Close spacing of stands conserves heat in new continuous sheet-bar mill. The center to center distance between the 10 stands is only 10 or 12 ft., permitting the bars to reach the finishing stands hot enough to be worked properly.—Page 800

Steel chaplets are safer than iron chaplets, says foundrymen, for the former can be much smaller without fusing when the metal is poured around them.—Page 841.

Imperfect steel is automatically rejected by special inspecting machine. Strip steel is measured for length, width, thickness and curvature. Rejections are automatically thrown out into separate piles —Page 795.

Blast furnace produces 1500 to 1800 tons of iron per day. German furnace, with 17,000 cu ft. capacity, owes its high output partially to composite character of burden. In one plant 32 different iron-bearing materials are used.—Page 803.

"Too many manufacturers are afraid to take hold of the business themselves." In many firms too much authority has been delegated, says manufacturer, evils creeping in which would be avoided were the head of the business in closer contact.—Page 798

Better make the casting so that defects will occur where they can be seen, and repaired, rather than hide them and run the danger of failure in service. Buyers are often at fault in demanding that the machined surfaces be free of defects, for this forces the foundryman to cast so that the flaws will be hidden. —Page 792

Will pig iron prices advance or decline? In view of weakness in prices of fuel and steel scrap, it now seems probable, says Dr. Haney, that the most that can be expected of the pig iron market during the near future is stability.—Page 811

Tests of truss welds made by five different welders reveal a 22 per cent variation in strength. "Variations are no greater than exist in concrete tests, or in riveted-joint tests," says consulting engineer.—Page 805

Maintenance of an adequate munitions industry would be endangered by passage of bill prohibiting export of munitions, says Secretary of War. In emergency, the Government would be handicapped were industry totally unequipped for munitions manufacture.—Page 846.

Gray Iron Foundrymen Moving

CONFRONTED for some time with unsatisfactory business conditions, gray iron foundrymen have finally gathered in consultation and the first steps have been taken in a movement which may be of great benefit to the industry. Last week at Pittsburgh representative foundrymen from many parts of the country, after an all-day session, initiated the American Gray Iron Institute, as told in THE IRON AGE of March 15.

Complaints of the quality of gray iron castings, with special reference to the pig iron used, have been rife for several years. The subject has been much discussed and some progress has been made by cooperation between the American Foundrymen's Association and other societies. But more serious conditions have developed in respect to marketing. According to a leading foundryman who presented his views at Pittsburgh, "not only are there over-production facilities, hand-to-mouth buying and competition from users of castings who have added foundry departments and who are now seeking orders in an endeavor to keep these departments going," but gray iron foundries "are finding competition from other branches of the foundry industry, and there is also creeping in competition from other industries which have begun to make inroads on the gray iron business."

Just what the necessary steps are to meet these unfavorable conditions agreement is not unanimous. Research to improve the product and intensive effort for the development of new uses as well as for strengthening the hold on present markets are obviously good suggestions. Cooperation for stabilizing the gray iron castings market should be gone into seriously. A curb must be put on the practice of supplementing orders that yield a profit by business taken at cut prices and serving only to make a small contribution to overhead. By cooperative organization the copper industry has been stabilized and put upon a sound basis in recent years. Likewise, the steel castings and malleable castings industries have profited by association effort. While its wide extent and the diversity of conditions make the problem of the gray iron castings industry especially complicated and difficult, the formation of the American Gray Iron Institute should not be without important results. Certainly it has not come upon the scene before its time.

Usury in Instalment Financing

VARIOUS methods are resorted to by "acceptance corporations," or companies financing instalment purchases, to conceal the usurious interest charged for the accommodation. Professor Seligman, in his monograph on "The Economics of Instalment Selling," holds some of them up for condemnation. One way is to charge interest on the cash price of the article, even though one-third may be paid down on the purchase. Thus, if an oil burner is sold for 5 per cent over cash price when the buyer elects to pay one-third down and the balance in ten monthly payments, the buyer is actually charged at the rate of nearly 17 per cent per annum on the continually decreasing loan outstanding.

Another method is to conceal the insurance charge. On an automobile this is higher than on other commodities, due to the added risk that the car may be destroyed by wreck or lost by unlawful conversion. To protect themselves, finance companies insure the car in their favor for the outstanding loan (ordinarily two-thirds of the purchase price) despite the fact that the balance due is continually decreasing, and the insurance companies would put up a vigorous fight before they would pay two-thirds the purchase price to the owner for his lost car.

The most common method of disguising the finance charge is to quote it as an interest payment on the unpaid balance. Suppose 10 per cent of the unpaid balance on an automatic refrigerator is charged, and the note is liquidated in 12 monthly instalments. Of course, that is the equivalent of treating about one-half the full sum as outstanding for the entire period. Mathematically it would amount to ten times 1.85 or 18½ per cent per annum.

Professor Seligman quotes some "actual examples picked at random from the published rates" and finds that the finance charges on automobiles figure to the following annual rates on the unpaid balances: (a) 26.7 per cent; (b) 27.9 per cent; (c) 38.15 per cent; (d) 13.9 per cent. Details for the last are as follows:

Cash delivered price	$1,500.00
Insurance	13.20
Finance charge	70.80
Total cost to buyer, if cash	$1,584.00
Down payment	564.00
Deferred balance	$1,020.00
Cost of financing	70.80
Unpaid balance on car	$949.20

$70.80 charged for $949.20 to be paid in 12 monthly instalments is at an annual rate of 13.9 per cent.

These figures represent the approximate rates now charged by the reputable companies operating in the Metropolitan district, and, according to the annual report of General Motors Acceptance Corporation, issued last week, are about what this organization is doing. Quoting from this report, during last year 824,190 accounts were liquidated in full. The total volume of business was $842,819,877, which indicates that the average acceptance was for about $1,025. Net profit was $8,578,475, or about $10.50 per account, and is equivalent to 19.04 per cent earned on capital funds. Other computations show that more than three-quarters of the financing was evidently done with cheap money from banks.

This indicates that an organization, whose assets rest directly upon the honesty of the individual customer, conservatively managed and taking carefully selected risks, is able to earn a handsome profit even when charging the lowest rates. Further proof is not needed that those financing charges, running from 20 to 84.5 per cent (cited by Professor Seligman), are usurious and unjustifiable. Economic disaster must overtake a man who is so improvident and so poor a risk that these high rates are necessary to cover losses in expensive collections and unpaid accounts.

A NOTABLE tribute to mechanical engineering design and an example of the courage of American industry is the great aggregation of machinery at Milwaukee for making automatically the chassis frames of automobiles. Some of the features are described elsewhere in this issue, but until fuller particulars become available it will be difficult to convey an adequate idea of the unusual and ingenious character of the mechanisms or of the immense investment involved in such trail-blazing engineering. Imagine several parallel conveying systems carrying lengths of strip steel step by step from one end of a truly large building to cross conveyors at the other end, where parts are assembled into complete frames; remember that this great mass of machinery and metal reciprocates in unison and that not only is it stopped and started as one huge machine but stopped so the parts in process are accurately spotted for a definite operation at each station; realize that at every station is special apparatus to form, to drill holes, to apply a part, to do some riveting, and that manufacturing is thus automatic and men are observers rather than workers; be reminded that the whole affair operates at high speed, as it completes six frames a minute, and that it is adaptable for frames of various sizes and forms of chassis—thus can one appreciate that the Milwaukee development is veritably in a class by itself. It is automatic mass production at high potential—a result of the large volumes peculiar to the automobile industry and of the judgment, which proved well founded, that one company could become the source of supply of a part for many makes of automobiles.

Progress in Using Coal and Steel

WORLD coal production has increased by a trifle less than 10 per cent in 14 years. Obviously that is much less than the gain in the results obtained from coal, for the world is doing a great deal more work and using a great deal more power.

The matter comes up at the moment through the issuance by the Bureau of Mines of its annual report of coal production, covering the year 1927. The figures are in metric tons of 2204.6 lb. For the two pre-war years and the last three years the Bureau of Mines figures are as follows:

World's Production of Coal, Including Anthracite and Lignite

	Metric Tons
1912	1,249,000,000
1913	1,342,000,000
1925	1,372,000,000
1926	1,365,000,000
1927	1,475,000,000

From 1925 to 1926 British coal production dropped by 118,773,919 metric tons and with a drop of only 7,000,000 tons in the world total it is reasonable to conclude that consumption increased at the expense of stocks, replenished in 1927. Accordingly, a comparison between the mean of 1912 and 1913 and the mean of 1926 and 1927 fairly represents the real increase in coal consumption in 14 years. This increase as precisely computed was 9.6 per cent.

That the world's activities increased by much more than 10 per cent in the 14 years will readily be granted, which means that ton for ton coal is doing much more good than 14 years ago. A strong hint in that direction is furnished by the fact that in the same time the world's production of steel increased 26 per cent. It is true the world's pig iron production increased by only 7 per cent. The divergence is due partly to the iron casting not having increased as has rolled steel and partly to more scrap being used in making steel. As a measure of industrial activity, after the pig iron or steel has been made, steel is by far the more indicative.

It is a notable fact, as heretofore commented on in these columns, that in the United States much progress has been made in using coal, so that year by year it renders more service. The public utilities averaged 3.2 lb. of coal per kilowatt-hour in 1919 and 1.83 lb. in 1927, representing a saving of 43 per cent in eight years.

While from 1912-3 to 1926-7 the world's coal production increased by 9.6 per cent, United States production increased 14 per cent and the remainder of the world 7 per cent. We have grown much more than the rest of the world, but it has grown, in service secured, much more than 7 per cent; hence it is evident that it also has developed economies in using coal as we have.

As soon as any statistics are furnished and are studied intelligently, a wish arises for more statistics. It would be interesting to know from year to year what good is got out of this coal production. The same is true of steel. Quality and therefore service per ton has greatly increased, and one would like to have a measure of that increasing service. The railroads give us their statistics, vertically downward. Of locomotives the number is given, then the miles of service and the weight of trains drawn. Ton for ton steel is doing much more good than before the war, but we have no precise measures of the progress.

Structural Steel Lettings Heavy

FABRICATED structural steel lettings in January and February as given in Department of Commerce reports totaled 480,000 net tons, against 439,000 tons in 1927 and 418,000 tons in 1926. With a gain of 10 per cent over a year ago and 15 per cent gain over two years ago 1928 has started out very well. Of course, there is no precise augury in these figures for the whole year, for the incidence of a few large jobs in a given short period may make quite a difference. That a steady and large trade is to be expected on general principles, however, is indicated by the remarkable record of the past three years, which with all their apparent variations from time to time came out just about the same, no one of the three years varying more than 3 per cent from the average.

The increasing fullness of the weekly data of THE IRON AGE on structural steel lettings is shown by comparison of our reports for the first nine weeks with the January and February statements of the Department of Commerce. For 1926 our tonnage was 63 per cent of the department's announced total; for 1927 the proportion was 82 per cent and for this year it was 81 per cent, our nine-weeks totals being: 1926, 262,000 tons; 1927, 353,000 tons; 1928, 390,000 tons. For last year and this our totals were substantially the same as the actual tonnages reported to the Department of Commerce, the department prorating for fabricating shop capacity not reporting. Its reported tonnage was 81 per cent of the computed total for January and February, 1926, 82 per cent for 1927 and 79 per cent for this year. Thus the department is not receiving fuller reports than two years ago, while those of THE IRON AGE are fuller.

Recently there was a little talk that an unusual amount of structural business might have been forced to closing by prospective price advances on plain material, but it is now steel market information that for some time to come steel will be available at such cost as to prevent any hesitancy in construction, while it does not appear that any of the recent business was forced. The tonnage record to date, therefore, stands as a favorable augury for structural steel work in general.

CORRESPONDENCE

Knowing "Why" in Drafting

To the Editor: In the machine shop it is not necessary for the operator on an automatic to be capable of building such a machine in full, but he ought to have a sufficient understanding of its functioning to set it up or to meet an emergency jam or break. The handbook is the automatic screw machine of the drafting room, and its value cannot be overestimated.

But like the machine operator, the draftsman should understand something of the basic facts from which the formulæ and tables are derived. In hiring draftsmen it is often found that the simplest fundamental question about tension, shear or bearing throws them into a panic. They reply that they could answer the question if they had a "Machinery" or "Kent." Provided with it, they nervously fumble through the pages seeking a formula. Finally they apologetically admit they guess they are a little rusty, and at the same time they probably feel the old handbook has fallen down on them in their time of greatest need.

Yet, a few leading questions, adroitly put, soon bring out the fact that back in their minds, suffering from disuse, is at least some knowledge of the "reason why" on which the handbook is based. It is really unfortunate that the mechanical perfection of the handbook has advanced to such a state that draftsmen erroneously believe that it removes the necessity for thinking. The handbook performs many services for draftsmen, but it does not think. Any draftsman using certain sections of the handbook frequently should make it his business to find out why and how a certain formula or table is evolved and used, so that he can be full master of it in applying it.

Similarly a slide rule becomes a mere mechanical adjunct, and the draftsman loses all knowledge of how to perform his mathematical operations without it. Yet the easiest way to explain its use to a novice is to tell him how it functions by adding logarithms to multiply, subtracting them to divide, etc. But it is really good mental exercise to forget the slide rule once in a while and figure things out by long hand or with logarithm tables. In fact, one university regards this idea so highly that it prohibits the use of the slide rule by senior students. We should use these various mechanical helps to aid us, but we should never permit them to master us through losing our greatest asset—our ability to think.

WILLIAM T. VAN HORN.

Oaklyn. N. J.

Eastern Scrap Iron Association Elects Officers

The recently formed Eastern Scrap Iron Association, at a meeting March 15 at the Hotel Astor, New York, elected the following officers: President, Joseph J. Hitner, Henry A. Hitner's Sons Co., Philadelphia; first vice-president, J. V. Bishop, Bishop & Co., Philadelphia; second vice-president, David Straus, Continental Iron & Steel Co., New York; third vice-president, Ben Cohen, L. Cohen & Son, Wilkes-Barre, Pa.; fourth vice-president, S. Dreifus, S. Snyder Corporation, Rochester; fifth vice-president, David Pollock, Mayer, Pollock, Inc., Pottstown, Pa.; secretary, H. Moskowitz, M. Samuel & Sons, Inc., New York; treasurer, Thomas F. Kelly, Brooklyn.

The association, which will include in its membership brokers and dealers in iron and steel scrap in Boston, New York, Philadelphia and other cities of the East, will hold meetings once a month.

Upholds Joint Barge-and-Rail Rates for Warrior River Line

WASHINGTON, March 20.—Refusal of the Southern Railway System to join the Inland Waterways Corporation, operating the Mississippi-Warrior River service under the jurisdiction of the War Department, in certain barge-and-rail and rail-and-barge rates was held to be unreasonable but not unduly prejudicial by Paul Coyle, examiner of the Interstate Commerce Commission, in a report made public last Friday. The water line asked for joint and differential class and commodity rates from New Orleans, and Mobile, Ala., to certain points on the Southern lines in Alabama, Georgia and Tennessee and to all points on the Southern lines in North Carolina, South Carolina and Virginia in both directions. The rates would apply to shipments which are not accorded free storage-in-transit at Birmingport, Ala.

The examiner held that joint rates should be established which are the same as contemporaneous all-rail rates, less differentials of 20 per cent of the all-rail rate between Birmingport, on the one hand, and New Orleans and Mobile, on the other. Wherever rates are established from and to New Orleans, the report said, they should also be established from and to Mobile. In establishing the rates from or to intermediate points, it was held, they should not exceed the rates from or to more distant points. The complainants had sought differentials of 7.5c. per 100 lb. under the all-rail rates on iron and steel products northbound from New Orleans and 7c. northbound from Mobile and 7c. and 5.5c. respectively southbound to New Orleans and Mobile. On steel rails the water line sought differentials of 5c. and 4.5c. respectively southbound to New Orleans and Mobile, and on cast iron pipe it asked for differentials of 11c. and 5c. respectively on southbound traffic to New Orleans and Mobile. These differentials are 20 per cent of the all-rail rates from New Orleans and Mobile to Birmingport and in the reverse direction.

Unemployment Situation to Be Reported on by Labor Department

WASHINGTON, March 20.—The Department of Labor is about to make a report on a labor survey and has already made it known that the unemployment situation, while having a serious aspect, has been greatly overstated. As a matter of fact it has been indicated that unemployment is probably not greatly in excess of the usual idleness throughout the country and is roughly estimated at 1,000,000 workers. Some of the reports have placed the estimate of unemployment as high as 4,000,000. The Department of Labor notified President Coolidge that employment in February showed an increase of 1.5 per cent over February of last year and that the volume of wages paid during February of the current year exceed that of the same month last year by 4 per cent.

Secretary of Labor Davis has stated that the unemployment situation is not so alarming as "interested parties endeavor to make it," but has conceded that it is sufficiently large to give serious thought. Conviction has been expressed by him, however, that with the advancing season much of the present unemployment will disappear of its own accord. Farm labor is opening up, the Government and private enterprises have elaborate building programs and the improvement in the steel industry indicates a general improvement due in industry, he stated.

The broad economic inquiry instituted by the Bureau of Economic Research of New York recently got under way. It likely will take the committee, appointed by Secretary of Commerce Hoover, one year before it makes its report. The scope of the inquiry is extremely broad. It will deal with shifts in employment, changes in methods of production in industry and agriculture, shifts in price levels and profits, movements in the business cycle, shifts in standards of living, foreign trade and foreign credits and other allied subjects which bear upon an understanding of the general business situation of the country.

Ask Modification of Wrought Washer Case Decision

WASHINGTON, March 20.—Modification of the order of the Interstate Commerce Commission in the case of the Wrought Washer Mfg. Co., Milwaukee, in which the commission listed items as scrap which should take the billet rather than the finished product rate is sought in a petition filed yesterday by the Baltimore & Ohio Railroad and other carriers which seek a supplemental hearing in the proceedings. Subsequent to the decision the carriers successfully petitioned the commission to postpone for 90 days the effective date of March 21.

It is contended by the railroads that the finding as to skelp, the defining of the minimum length of strip steel as 10 ft., the inclusion in the order of waster sheets and the definition of crop ends are erroneous. The railroads declare their readiness to introduce evidence to the effect that strip steel is salable and is being regularly sold as such in various lengths under 10 ft. and that skelp is sold in competition with strip steel. These items, together with waster sheets, which are held to constitute prime material, the petition says, should be omitted from the order. It is maintained there is no well recognized distinction between waster sheets and prime material and that waster sheets are being used as substitute for prime material. A definition of crop ends is asked that will cover only such material as comes within the intent of the order. The language of the order would defeat its purpose, the carriers say. To indicate the far-reaching effect the order would have the railroads mention a list of steel producers and consumers in various sections of the country who are seeking billet rates or less on the basis of the decision in the Wrought Washer case

Larger Total of Orders for Fabricated Steel Plate

WASHINGTON, March 20.—Making a gain of 13,801 tons, orders for fabricated steel plate in February totaled 49,588 tons, or 62.1 per cent of capacity, according to reports received by the Department of Commerce from 51 concerns. This compares with 35,787 tons, or 44.8 per cent of capacity, in January.

Bookings for oil storage tanks amounted to 25,532 tons, as against 11,101 tons in January; refinery materials and equipment, 4454 tons, as compared with 2575 tons; tank cars, 592 tons, as against 2412 tons; gas holders, 3679 tons, as compared with 2062 tons; blast furnaces, 143 tons, as against 1225 tons; and stacks and miscellaneous, 15,188 tons, as compared with 16,412 tons.

Truscon Steel Co. Only Bidder on Hydraulic Steel Property

A bid of $1,000,000 cash for the plant and assets of the Hydraulic Steel Co., Cleveland, was made by the Truscon Steel Co., Youngstown, March 14, the date set for taking bids for the property. The Youngstown company was the only bidder. The bid is based on the Hydraulic company's balance sheet as of Oct. 31, 1927. The Hydraulic Steel Co. has been operated by Thomas P. Goodbody, receiver, since 1923. It is understood that if the sale is confirmed, as is expected, the Truscon company will spend considerable money in remodeling.

Railroad and Water Freight Service for Upper Mississippi

Announcement has been made by the War Department that a four-day rail and water freight service between Chicago, St. Paul and Minneapolis will be put into effect April 2, with a saving in cost of approximately 15 per cent as against the all-rail rate. The service will make use of the upper Mississippi division of the Mississippi Barge Line, with sailings from St. Louis for St. Paul and Minneapolis on Mondays and Thursdays. Barges will leave Dubuque, Iowa, on Tuesdays and Saturdays, making the trip in three days.

Iron and Steel Markets

Large April Output Assured

Heavy Steel Specifications on Expiring First Quarter Contracts—Tin Plate Demand Improves—Possible Advance in Pipe—Pig Iron Melt Gains

STEEL production, in contrast with an uneven and not entirely reassuring general business situation, is holding its own and in some districts is making further gains. Steel ingot output for the first quarter now promises to exceed that of the same period of 1927, possibly by several hundred thousand tons. There are no signs of any distinct let-up in production in April. The way business is coming in, mill operations are likely to continue at substantially the pace of March instead of declining as in April last year.

Steel Corporation plants continue to operate at 90 per cent of capacity. Bethlehem operations early in the month were at 75 per cent and for the month up to this time averaged 81 per cent. Among important producing districts, Chicago is still running at 95 per cent, while the Greater Pittsburgh area, including the Youngstown district, is showing a gain over the 80 per cent rate that prevailed last month.

Expanding building operations, increasing automobile production, large backlogs in rails and track supplies, sustained activity among farm implement plants and prospects for heavier tin plate consumption are favorable market factors.

High output in the automobile industry throughout the second quarter is now regarded as assured, but motor car builders are showing hesitancy in placing second quarter contracts. Steel rail producers have had a good operation since Jan. 1, and most of them have sufficient bookings to keep going at an equal rate up to the middle of June. Chicago mills took orders for 8000 tons additional during the week, and there is still some rail business to be placed in the South, Southwest and Far West. The Western Pacific is inquiring for 10,000 tons. The increasing use of track supplies was reflected in orders taken in the past winter, which were 20 per cent heavier than a year ago.

Prospects for a larger pack of canned goods than in 1927 are indicated by heavier specifications for tin plate. Mill operations have increased to 85 per cent of capacity, as against a recent rate of 80 per cent. Both producers and consumers of tin plate are concerned over the price of pig tin, which has advanced from a low of 50c. to 52c. per lb., New York, on heavy sales, totaling 3000 tons for the week. Little spot tin is now available, and metal for nearby delivery is commanding a premium.

Merchant pipe production is commencing to improve under the stimulus of increasing building activity, although pipe mill operations in the Youngstown district are still at a 60 per cent rate. A possible price advance—about 5 per cent—effective early in April, is having consideration in the merchant pipe trade. In the line pipe field, seamless pipe is competing with lapweld pipe in a large way. An order for 200 miles of 8-in. seamless pipe, totaling 13,000 tons, has been placed by the Standard Oil Co. of California for a line from Pecos County, Tex., to El Paso.

Buyers, as a rule, are not hastening to contract for second quarter, believing that the upward movement of prices has reached its peak. On the other hand, the mills, not wishing to discourage the flow of tonnage supporting the current high rate of operations, are accepting heavy specifications on expiring first quarter contracts. In plates, shapes and bars, for instance, shipments of material invoiced at 1.80c. will probably extend through April, deferring a real test of the second quarter contract price of 1.85c. until May.

Recently revised prices on alloy steel bars will not apply to contract consumers until after April 1. While there were some reductions, four grades of alloy steel comprising over 90 per cent of the tonnage used were advanced $2 to $4 a ton.

Irregularities in prices of wire nails and plain wire, although not general, are more numerous.

Structural steel awards of nearly 33,000 tons include 10,000 tons for subway work in New York and 7600 tons for a manufacturing plant at Cumberland, Md. Bids are being taken on 7700 tons of subway work in New York, a bridge approach in St. Louis calling for 6000 tons and an aqueduct at Oakland, Cal., requiring 4830 tons. The total of fresh structural projects is more than 34,000 tons.

February orders for fabricated structural steel are computed at 270,000 tons, the highest figure since last October and the sixth highest in the history of the industry.

Pig iron shows its greatest strength in the Chicago district, where sales for second quarter are much heavier than for the first quarter. In the Central West, shipments of iron to foundries are showing gains, and to some extent this is also true of other sections. With sales of 10,000 tons, of which half was in one lot, the Pittsburgh market was lifted out of a lethargy of many weeks. In New England, sales of Buffalo iron have been made at a new low level.

Steel scrap shows no marked strength, but it is slightly firmer at Pittsburgh while weaker at Chicago. Sales of compressed sheets were made to a Pittsburgh district consumer at $15, an advance of $1 a ton, and heavy melting steel is quotable there at $14.50 to $15.50, a slight rise.

For the sixth successive week THE IRON AGE composite prices remain at the same levels, that for pig iron at $17.75 a ton, while that for finished steel is at 2.364c. a lb.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Mills Accumulate Considerable Steel Tonnage—Price Tests Deferred

PITTSBURGH, March 20.—Steel manufacturers have accumulated considerable tonnage this month either by the extension of existing first quarter contracts into the second quarter or by permitting additions to these contracts. Since consumers generally are covered through April and in some cases and in some products for a longer period at first quarter prices, the test of the higher prices which have been announced since the opening of the year, which ordinarily would come in the next week or 10 days, has been deferred at least a month.

By the course they have pursued, steel manufacturers have pretty well assured themselves of a continued good rate of operation in April and, as this month has shown a gain rather than a loss in ingot production in the Greater Pittsburgh area as compared with February, the expectation that the first four months of the year will compare favorably with that period last year is strengthened.

The steel trade has been disappointed in its expectation of railroad business except in rails and track material. The oil industry, which was counted on to provide a large volume of pipe tonnage, has made no definite progress in the correction of the over-supply situation, and while some storage tank business has been placed and more is ahead, there is no thought that this tonnage will equal that ordinarily taken for oil and gas well development. Incidentally, oil production last week increased to 2,400,000 bbl. a day, and that is well beyond the rate at which it can be consumed.

The total takings of steel by the automotive industry are large and satisfactory, but some motor car builders are operating at a relatively higher rate than others. The agricultural implement industry is doing well, and the only fault that is found with structural steel awards is that the tonnage is mostly in a few large jobs.

Primary materials still are depressed. While there has been a tendency to dissociate the prices of merchant pig iron and those of steel, it is a fairly commonly held idea that the trouble which the manufacturers have encountered in establishing the advances they have proposed this year is partly due to the low prices at which pig iron and other raw materials of steel have been selling. It has been estimated that in this district fully half of the merchant iron that has been marketed in the past few years has been shipped from steel works as distinct from merchant furnaces.

Pig Iron.—In point of tonnage sold, the past week has been the best that local producers have had in some time, but the market has not shown real activity, as half of a total of approximately 10,000 tons in known sales was in one transaction. This lot of 5000 tons was No. 2 foundry sold to a maker of railroad equipment and is for shipment during the next 60 days. The price was $17.25, Valley furnace. Sale of 1000 tons of No. 1 foundry is reported at $18.25, Valley furnace, or at the full silicon differential over the base grade. Scattering sales in lots of a carload up to 250 tons of foundry, malleable and Bessemer iron account for the remainder of the week's business. Prices have developed no important change but some irregularity, ascribable chiefly to freight equalization by Valley furnaces, with more favorably located producers, still is noted. Sales of Bessemer iron at $17.25, Valley furnace, are more representative of equalizing competitive freight rates than of an actual reduction of the price at Valley furnaces. The movement of iron against old orders still is good.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$17.00
Bessemer	17.50
Gray forge	16.75
No. 2 foundry	17.25
No. 3 foundry	16.75
Malleable	17.25
Low phosphorus, copper free	27.00

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—Sustained high rate of steel ingot production accounts for free specifying against contracts for the commonly used alloys, but there is very little new business. Prices are unchanged.

Semi-Finished Steel.—Open market activity in the various forms of crude steel is limited. Strip, sheet and tin plate makers who depend upon others for their steel are having a good operation, but are covered by requirement contracts and are drawing against them instead of broadcasting their inquiries. There is not enough activity in pipe to create much demand for skelp. While specifications on old and lower-priced wire rod contracts are fairly good, consumers are slow to contract for second quarter requirements at the present prices, since secondary manufacturers have not found it possible to advance prices of their products.

Bars, Plates and Shapes.—Buyers are showing less anxiety in getting their orders on mill books than in the first two months of the year, when they were covering against price advances. Bars are still moving well on old orders generally carrying 1.80c., base Pittsburgh, but many buyers still have enough coverage to take them into the second quarter and it will be May before some are called upon to specify against second quarter contracts recently written at 1.85c. The same conditions rule in plates and shapes. Some small tonnages of these products command 1.90c., Pittsburgh, but in a general way 1.85c. is not often exceeded.

Rails and Track Supplies.—Standard-section rails are moving steadily on 1928 contracts, but not much new business is developing. In track fastenings, the railroads are specifying steadily against old orders, but new business amounts to little. Light-section rails are slow.

Wire Products.—Prices, which have shown some irregularity without materially affecting the general market quotations, have in the past week or 10 days developed an unevenness that is attracting notice. Some sales of nails are being made at the full price, but concessions which were pretty well confined to a few localities now are developing elsewhere, notably in the East. In plain wire rather strong resistance is developing to the present base of $2.50 per 100 lb., Pittsburgh, since that represents an advance of $2 a ton over present invoice prices, which manufacturing consumers have not found possible to pass along to the secondary products. Nail business is slow because of the heavy deliveries to jobbers since the opening of the year, but there is a fair degree of activity in other products.

Tubular Goods.—Seamless pipe has invaded the line pipe field in a large way. An order for 200 miles of 8-in. pipe recently placed by the Standard Oil Co. of California for a line from Pecos County, Texas, to its refinery at El Paso, with the National Tube Co., calls for seamless pipe, and this is not the first time it has been ordered for that purpose, as part of the most recent pipe line laid by the Roxana Petroleum Co. was seamless. The latest award emphasizes the growing competition that lapweld pipe must face. Except for this business and a fairly steady expansion in the movement into consumption of buttweld pipe, the general situation is featureless. Oil country demands still are light. Prices are irregular.

Sheets.—There is little complaint as to the volume of specifications on old orders carrying prices lower than now are commonly quoted, but most mills still find limited interest in second quarter tonnages, and while a fair amount of new business is being booked at current prices, it is mostly for early shipment. As the general steel market has halted in its price advances, sheet buyers seem to feel they have nothing to lose by holding off for a while on second quarter commitments. Some producers which lack full rolling mill schedules are disposed to round them out at the expense of prices, but these cases appear to be the extent of the deviations from the regular market quotations. Sheet mill operations average very close to 90 per cent of capacity.

Tin Plate.—There has been a quickening both in specifications and mill operations. The latter have moved up to 86 per cent with the American Sheet & Tin Plate Co. and with independent capacity holding its recent rate, the general average now is not much under 85 per cent, as against 80 per cent, the rate of the past few weeks. Canners are taking a more optimistic view of the season's prospects for perishable foods, and it is now estimated that the requirements will be above the average of the past two years. The market is steady at $5.25 per base box, Pittsburgh, for standard coke tin plate.

Cold-Finished Steel Bars and Shafting.—The market has lost some of its recent activity. Although there has not been much variation in the rate of specifications on contracts for this quarter, buyers are not rushing to cover for the second quarter. The retreat of producers from 2.30c., base, to 2.20c., probably has created conservatism among buyers.

Hot Rolled Flats.—The market is active, but leaves much to be desired from the price angle and in prospects for the second quarter. Buyers are specifying so freely against low-priced first quarter contracts for April shipment that there is a fear that next month's specifications will be light. While it is not a general condition, there is enough extending of first quarter

9250	Silicon Manganese Spring Steel	2.90
	Chrome Nickel Vanadium	4.15
	Carbon Vanadium	3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

contracts into the second quarter to create doubt about the maintenance of the higher prices named about five weeks ago.

Cold-Rolled Strips.—There seems to be some wavering in prices, particularly as applying to the large tonnage buyers, whose recent tendency to hold back specifications with an idea of conserving tonnage for April shipment has prompted increased sales efforts by some producers. If there has not been actual extension of first quarter contracts, there has been acceptance of additional tonnage on first quarter contracts and at first quarter prices. On the large tonnages, therefore, the test of the higher prices announced late in January has been further deferred. There has been a gain in orders but at the expense of prices.

Bolts, Nuts and Rivets.—Rivet makers are insisting firmly on the higher prices recently named, and while very little current business carries the advance, buyers being covered quite generally for this quarter at the old prices, all second quarter contracts are at the new prices. It is of course early for specifications against these contracts. Bolt and nut business is better now than it was at the outset of the year, but is not taxing productive capacity.

Coke and Coal.—Outside of the usual contracting for coal for the year beginning April 1 and some interest on the part of gas companies in furnace coke, the market is devoid of life and of fresh developments. Anxiety on the part of coal operators for backlog tonnage and the keen competition offered by southern West Virginia mines combine to keep prices on future shipments low. The spot market continues depressed by the fact that offerings exceed the demand. Contracting for second quarter tonnages of both furnace and foundry coke is pretty well completed. Almost no spot demand exists for coke for blast furnaces, but gas producers are seeking tonnages of low ash coke, one inquiry calling for approximately 75,000 tons. Producers still are trying to get $2.85 per net ton at ovens on contract furnace coke and $2.75 for spot tonnages, but the actual market is 10c. to 15c. per ton lower.

Old Material.—The event of the week has been a sale of 5000 tons or more of compressed sheets at $15, which is as much as can be obtained for the best of the ordinary heavy melting steel and actually is 25c. per ton more than was paid within the week for a fair-sized lot of that grade. This situation is unusual and may be expected to change quickly. Some consumers in this district prefer the carefully prepared compressed sheet scrap out of Detroit to the regular run of heavy melting steel at even prices, and it is said that purchases also were prompted by fears of a diversion of shipments from Detroit with the opening of the Lake shipping season. While the general scrap market appears weak on the surface and actually is weak on machine shop turnings and blast furnace grades, it is noted that offerings of heavy melting steel at prices under $15 are small, and there is not a dealer who would take orders for strictly No. 1 railroad steel at less than $15.50. The steel in the March list of the Pennsylvania Railroad sold at $15.35 delivered this district. Taking in railroad steel, heavy melting grade is quotable here at $14.50 to $15.50, the lower price applying to small lots picked up by dealers.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
Heavy melting steel	$14.50 to $15.00
Scrap rails	14.50 to 15.00
Compressed sheet steel	14.00 to 14.25
Bundled sheets, sides and ends	13.00 to 13.50
Cast iron carwheels	14.50 to 15.00
Sheet bar crops, ordinary	15.00 to 15.50
Heavy breakable cast	13.00 to 13.50
No. 2 railroad wrought	15.00 to 15.50
Heavy steel axle turnings	13.00 to 13.50
Machine shop turnings	10.00 to 10.50
Acid Open-Hearth Furnace Grades:	
Railroad knuckles and couplers	16.50 to 17.00
Railroad coil and leaf springs	16.50 to 17.00
Rolled steel wheels	16.50 to 17.00
Low phosphorus billet and bloom ends	18.50 to 19.00
Low phosphorus, mill plate	17.50 to 18.00
Low phosphorus, light grade	16.50 to 17.00
Low phosphorus sheet bar crops	17.50 to 18.00
Heavy steel axle turnings	13.00 to 13.50
Electric Furnace Grades:	
Low phosphorus punchings	16.50 to 17.00
Heavy steel axle turnings	13.00 to 13.50
Blast Furnace Grades:	
Short shoveling steel turnings	10.50
Short mixed borings and turnings	10.50
Cast iron borings	10.50
No. 2 busheling	9.50 to 10.00
Rolling Mill Grades:	
Steel car axles	18.00 to 19.00
No. 1 railroad wrought	11.00 to 11.50
Sheet bar crops	17.00 to 17.50
Cupola Grades:	
No. 1 cast	14.50 to 15.00
Rails 3 ft. and under	15.00 to 15.25
Malleable Grades:	
Railroad	14.25 to 14.75
Industrial	13.75 to 14.25
Agricultural	13.25 to 13.75

Gain in Steel Barrel Output

Steel barrels to the number of 518,944 were manufactured in February, a gain of 43,038 over the longer month of January, according to reports received by the Department of Commerce, Washington, from 27 companies owning or operating 31 plants. Shipments were 514,362 and 474,159 barrels respectively, and stocks at the end of the two months were 58,935 and 54,353 barrels. Unfilled orders for delivery within 30 days at the end of February totaled 297,889 barrels, against 241,145 at the end of January. Orders for delivery beyond 30 days were 1,119,738 and 1,110,652 barrels respectively.

Production in February was the highest for any month since October. It compares with 504,134 units in February, 1927, and with 522,486 in February, 1926.

Shipments by members of the Steel Barrel Manufacturers Association in February were 313,163 barrels and orders unfilled March 1 were for 469,553 units. Operation was at 28.7 per cent of capacity for I. C. C. barrels and 52 per cent for light barrels. Total business during the month was $949,825.

The United States Steel Products Co. has been awarded the contract for 1050 tons of 30-ft. round deformed structural reinforcing steel bars for the Panama Canal, the prices being on a delivered basis at either Balboa or Cristobal. The quotations were 2.435c. per lb. for 150 tons of ⅜-in. bars; 2.235c. for 300 tons of ½-in. bars; 2.135c. for 175 tons of ⅝-in. bars and 2.035c. for 100 tons of ¾-in., 75 tons of ⅞-in. and 250 tons of 1-in. bars. Delivery is to be made within 18 to 21 days.

Upset set screws	80, 10 and 10
Milled studs	70 and 5

Chicago

Steel Specifications Continue in Heavy Volume—Price Resistance Lessens

CHICAGO, March 20.—Specifications for finished steel continue in large volume, the past week having been the fourth largest of the year. Purchases are on the increase, but the total falls short of the current shipping rate. The fact that buying is expanding lends strength to the experience of some sellers that resistance to price advances is less pronounced and that a larger portion of current shipments may be going into actual production than had been supposed earlier in the month. Ingot production in this district remains steady, and steel mill backlogs range from six to eight weeks.

Open weather has started the movement of automobiles away from dealers' floors and an increased demand for steel by automobile plants and parts makers is noted. The Overland factories are reported to be on a daily schedule of 1300 cars and Chevrolet has planned a schedule of 370,000 cars to be built in the second quarter.

The Chicago & Eastern Illinois has received revised proposals on 500 freight cars, but is withholding orders until a study can be made of building cost in its own shops. Fresh railroad equipment inquiry is confined to 100 motor cars and 100 trailers by the Chicago Rapid Transit Co.

Pig Iron.—An interesting situation in this market is that second quarter coverage, which is now about 80 per cent completed, is heavier than for either the first quarter of this year or for the second quarter in 1927. Since inventories are usually run low at the end of the year, it is to be expected that first quarter contracts should be heavier than for the second period. Foundry iron production is steady and producers continue to draw on stocks for the difference between output and shipping orders. While forward buying is slowing down, there is an increased tonnage of spot business and also evidence that many purchasers underestimated their requirements for the first quarter. Several users to the west have ordered April iron delivered in March. A foundry in southern Wisconsin has ordered 2500 tons. An inquiry is out for 250 tons of charcoal iron, and brokers are trying to dispose of 500 tons of basic iron that is on track in Chicago. The silvery price schedule is steady, and forward contracting is making fair progress. Low phosphorus iron sales are confined to car lots.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.50
N'th'n No. 1 fdy., sil. 2.25 to 2.75	19.00
Malleable, not over 2.25 sil.	18.50
High phosphorus	18.50
Lake Superior charcoal, averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	21.18
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys. — Specifications for ferroalloys are heavy, but new buying is confined to car lot sales. Current quotations on ferromanganese are $100, seaboard, and spiegeleisen of the 19 to 21 per cent grade in carloads is being sold at $32, Hazard, Pa.

Prices delivered Chicago: 80 per cent ferromanganese, $107.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $38.76 to $39.76.

Plates.—New business in plates is confined to a moderate tonnage placed for second quarter requirements. Following the placing of 25,000 to 30,000 tons of tankage materials in the last few weeks, fresh inquiry has developed for 5000 tons from an oil producer in Texas. Specifications from car builders are of fair size, but new railroad equipment orders are needed if the rate is to be sustained. Reports vary as to the probability of early orders for cars from the Chicago, Milwaukee, St. Paul & Pacific. In some quarters it is believed that at least a portion of the requirements will be placed in the next 10 days. Following several weeks of uncertainty as to the trend of prices for plates, it now appears that 2c., Chicago, is well established for lots of 100 tons each or more. By the latter part of this week mill shipments will start against business taken at this figure. Deliveries range from four to six weeks.

Mill prices on plates per lb.: 2.00c., base Chicago.

Structural Material.—News in the construction field this week is concerned more with records of the immediate past than with what the future holds. Cost of new building construction started in February in Illinois was in excess of $84,000,000, of which $63,500,000 was for work in Chicago. Both of these totals establish records for the second month of the year. In the first two months of this year building construction in Illinois gained 61 per cent over January and February, 1927. The several large tonnage projects on which the trade in this district has been waiting give no indication that they are beyond the designing stage. In the meantime, competition among shops grows keener for the daily lettings of small size, and prices for fabricated materials are unstable and show a tendency to seek lower levels. Mill prices, however, are well stabilized at 2c., Chicago. The Buick Motor Co. has purchased property in Chicago and will erect a warehouse having 240,000 sq. ft. of floor space.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Bars.—Demand for mild steel bars is steady, with new buying running equal to and specifications well ahead of shipments. No recession is noted in activity among farm implement manufacturers, while greater speed of production is the aim of tractor builders, who are feeling the impulse of added business brought about through discontinuance of tractor assembly by one of the largest makers. Soft steel bars are commonly priced at 2c., Chicago. Larger producers still adhere to 2.10c. for lots of less than 100 tons each, but some mills are waiving the extra $2 a ton regardless of the size of the order. Spot orders for iron bars at 2c., Chicago, are more numerous, but the aggregate tonnage is not large. Forward contracting is light. Alloy bar mills continue to operate at not far from capacity. Contracting is moderately active at the new base price, which is 2.65c., f.o.b. maker's mill. In rail steel bars, new business is equal to and specifications are fully 15 per cent above shipments. For the most part purchasers are taking this commodity at close range and as a result future buying has gained little momentum. Deliveries are made in two to three weeks, and prices are steady at 1.80c. to 1.85c., Chicago Heights. Bed manufacturers are speeding production and barn equipment makers are taking their full schedules. Shipments of fence posts are normal for this time of the year.

Mill prices per lb.: Soft steel bars, 2.00c. base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.80c. to 1.85c., base, Chicago Heights mill.

Wire Products.—Specifications against contracts and new orders for immediate shipment to wire mills are heavier, and production has more than gained the two points lost a week or 10 days ago. In fact, output is now close to 77 per cent of mill capacity. Some improvement is noted in shipments of wire nails, although this commodity is not as active as it should be at this time of the year. It is evident that jobbers' stocks are more than ample and mill stocks in wire nails are growing larger. Woven wire fencing is moving steadily and orders for barbed wire are of good size. Slackening in the demand from jobbers, noted in the Middle West a week ago, is no longer in evidence. Orders are somewhat more plentiful from the Northwest. Prices for wire and wire products are shown on page 821.

Rails and Track Supplies.—A Western railroad has bought 5000 tons of standard-section rails. Inquiry before the trade is of small size. Rail mill operations in this district are steady at 90 per cent of capacity. A steam operated railroad has closed for 5000 tons of track accessories and two roads have come into the market for a total of 12,000 tons. Track supply production has reached the highest point so far this year. Light rail orders are confined to carloads.

Cast Iron Pipe.—Evidence is at hand that the spring buying movement in cast iron pipe is under way and with it comes a stronger tone in prices. Detroit will open bids March 26 on 2000 tons of 16-in. class C pipe and Chicago will buy 3200 tons of 24 and 48-in. class B pipe. Milwaukee will soon buy 450 tons of 30-in. pipe and Oshkosh, Wis., will purchase a round tonnage on March 29. James B. Clow & Sons have taken 2000 tons for Columbus, Ohio, at $34.95, delivered, or $27.95, Birmingham, a figure $1 a ton above those on recent lettings. A contractor's award of 1100 tons at Berea, Ohio, is said to have been taken at $28.35, Birmingham. La Porte, Ind., has closed for 230 tons of 6, 10 and 12-in. pipe at $29, Birmingham. Recent quotations show that attractive tonnages now bring $28 to $29, Birmingham, for 6-in. and larger diameters, while on less attractive orders as high as $31 is obtained. Delivered prices at Chicago range from $36.20 to $39.20. Public utilities are buying in small lots. The Northern Indiana Public Service Co. contemplates the construction of a gas line from Valparaiso to Michigan City, Ind., a distance of 23 miles.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $36.20 to $39.20; 4-in., $40.20 to $43.20; Class A and gas pipe, $4 extra.

Sheet Bars.—Specifications are heavy and prices are firm at $34 per gross ton.

Bolts, Nuts and Rivets.—Second quarter contracting is not far from 50 per cent completed, and little resistance has been offered to recent advances in prices. Production in this district is not far from 75 per cent of capacity, but for the country as a whole the rate is a shade less. Specifications for bolts and nuts from the railroads are more numerous and in larger total volume.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Sheets.—The volume of specifications is well sustained, and hot mills are now scheduled two to three weeks ahead, while output averages 90 per cent of capacity. Territorially, the demand is widespread except for the Northwest, where the winter is not yet broken. Among the more active users may be named the roofing trade and manufacturers of small tanks. Distribution from warehouses has grown measurably in the last week. Forward buying is dull, but spot purchases are quite active. Chicago delivered prices are steady at 3.05c. for black, 3.90c. for galvanized and 2.25c. to 2.35c. for blue annealed.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 3.05c.; No. 24 galvanized, 3.90c.; No. 10 blue annealed, 2.25c. to 2.35c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Warehouse Prices. f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.25c. to 2.75c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.

Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets. structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb.	$3.20
Common wire nails, base per keg	3.00
Cement coated nails, base per keg	2.90

Reinforcing Bars.—Two 1000-ton projects are holding the attention of local dealers. One, a printing plant for the Reuben H. Donnelley Corporation, is up for bids. The 1000 tons for the *Daily News* building is assured of early placement as the foundation work on the structure is well advanced. Recent large tonnage awards, coupled with a greater number of orders for less than 100 tons, are strengthening the position of bar dealers who have speeded shop operations. Prices for reinforcing bars are more stable at 2.25c. to 2.75c. for billet stock bars out of warehouses, and 1.85c. to 1.95c., Chicago Heights, for the rail steel commodity. Recent awards and fresh inquiry are shown on page 836.

Coke.—Shipments are gaining slowly. All Chicago ovens are lighted, and the foundry by-product grade is quoted at $9, local ovens, and at $9.50, delivered in the Chicago switching district.

Old Material.—Tendencies in the Chicago scrap market are mixed. Steel mill buyers, who recently purchased heavy melting steel at $13.25 per gross ton, delivered, are now offering $13. The same interests, however, have taken 2000 tons of cast iron borings at 25c. up, or at $10.25 per gross ton, delivered. Brokers are having no trouble in covering on borings, but for heavy melting steel they are often forced to pay $13 for acceptable grades. A recent purchase of rerolling rails brought $14.75 per gross ton. This is 25c. below recent consumer purchases and is the same price obtained by the railroads. Numerous specialties have turned active after many weeks of slow demand. Steel and gray iron foundry grades are being sought by melters. The Gary mills are purchasing scrap from time to time, and with the greater consumption in this district country scrap has again started to flow to Chicago. The Chicago, Rock Island & Pacific is offering 5000 tons.

Prices delivered consumers' yards, Chicago:

Per Gross Ton		
Basic Open-Hearth Grades:		
Heavy melting steel	$12.50 to	$13.00
Shoveling steel	12.50 to	13.00
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to	14.00
Hydraulic compressed sheets	11.00 to	11.50
Drop forge flashings	9.75 to	10.25
Forged, cast and rolled steel carwheels	15.50 to	16.00
Railroad tires, charging box size	16.50 to	17.00
Railroad leaf springs, cut apart	16.50 to	17.00
Acid Open-Hearth Grades:		
Steel couplers and knuckles	14.00 to	14.50
Coil springs	16.50 to	17.00
Electric Furnace Grades:		
Axle turnings	13.00 to	13.50
Low phosphorus punchings	14.25 to	14.75
Low phosphorus plate, 12 in. and under	13.75 to	14.25
Blast Furnace Grades:		
Axle turnings	10.00 to	10.50
Cast iron borings	9.75 to	10.25
Short shoveling turnings	9.75 to	10.25
Machine shop turnings	7.00 to	7.50
Rolling Mill Grades:		
Iron rails	13.50 to	14.00
Rerolling rails	14.50 to	15.00
Cupola Grades:		
Steel rails less than 3 ft.	15.00 to	15.50
Angle bars, steel	14.00 to	14.50
Cast iron carwheels	14.00 to	14.50
Malleable Grades:		
Railroad	12.50 to	13.00
Agricultural	12.00 to	12.50
Miscellaneous:		
*Relaying rails, 56 to 60 lb.	23.00 to	25.00
*Relaying rails, 65 lb. and heavier	26.00 to	31.00
Per Net Ton		
Rolling Mill Grades:		
Iron angle and splice bars	14.00 to	14.50
Iron arch bars and transoms	18.75 to	19.25
Iron car axles	21.50 to	22.00
Steel car axles	16.00 to	16.50
No. 1 railroad wrought	11.00 to	11.50
No. 2 railroad wrought	11.00 to	11.50
No. 1 busheling	9.25 to	9.75
No. 2 busheling	5.25 to	5.75
Locomotive tires, smooth	12.50 to	13.00
Pipes and flues	8.00 to	8.50
Cupola Grades:		
No. 1 machinery cast	14.50 to	15.00
No. 1 railroad cast	12.50 to	13.00
No. 1 agricultural cast	12.50 to	13.00
Stove plate	11.25 to	11.75
Grate bars	11.25 to	11.75
Brake shoes	11.00 to	11.50

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Philadelphia

Pig Iron Quiet—Steel Business Largely Confined to Contract Shipments

PHILADELPHIA, March 20.—Most mills are endeavoring to maintain 1.90c., Pittsburgh, on bars; 2.05c., Coatesville, on plates, and 2.05c., Bethlehem, on shapes for current delivery and second quarter contracts. Consumers, however, are in most cases covered for the next quarter at prices $1 a ton lower. There is very little purchasing for prompt shipment, as buyers are apparently covered for all or more than they will require for the rest of the present quarter. Mills expect a large number of consumers to specify fully against current contracts by the end of this month.

There is a fair tonnage of steel in fabricated projects, of which bridge construction is a feature. Activity in new construction appears to be in prospect, with the city considering expenditures for public works to relieve unemployment and the United Gas Improvement Co. reported as contemplating considerable construction in the belief that the time is opportune from the standpoint of costs of materials and labor.

Consumers of pig iron have thus far purchased only moderately for the next quarter, their present rate of operation in most cases promising a carry-over of present contracts well into the second quarter. Recent sales of Buffalo iron in this district have also been a factor, buyers preferring to await possible price developments from this competition.

Pig Iron.—Buyers do not seem to expect any advance in the present market of $20, furnace, on foundry iron, and as their present contracts are in many cases sufficient to carry them well into the next quarter, not much interest has developed in new contracting. The competition of Buffalo iron has caused some hesitation, consumers preferring to await further price developments. Recent inquiries have included 600 tons of foundry iron and 50 tons of basic for the Hilles & Jones plant of the Consolidated Machine Tool Corporation at Wilmington, Del., and about 900 tons of foundry for the **Foran Foundry & Mfg. Co., Flemington, N. J.** No further purchasing of basic is reported.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.		$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.		21.26
East. Pa. No. 1X		21.76
Basic (delivered eastern Pa.)	$19.50 to	20.00
Gray forge	19.75 to	20.25
Malleable	21.00 to	21.50
Standard low phos. (f.o.b. New York State furnace)	23.00 to	24.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to	24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to	25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to	25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, 3/16-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.50c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.60c.
Steel bands, No. 12 gage to 3/16-in., inclusive	3.35c.
Spring steel	5.00c.
Black sheets (No. 24)	4.25c.
Galvanized sheets (No. 24)	5.10c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
3/16-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

Billets.—Only small tonnages are under inquiry. Rerolling grade continues at $33 per ton, Pittsburgh, and forging quality at $38, Pittsburgh.

Bars.—There is a lag in specifications, so that there may be some tonnage carried over into the next quarter unless extensions are refused by the mills. While 1.90c., Pittsburgh, is being quoted on both prompt business and second quarter contracts, most consumers are covered for the coming quarter at 1.85c. per lb., Pittsburgh.

Shapes.—Quotations for immediate shipment are 1.97½c. per lb., Pottsville, and 2.05c. per lb., Bethlehem, or 2.12c. to 2.18c., delivered Philadelphia. Although 2.05c., Bethlehem, is being quoted on second quarter contracts, it is admittedly difficult to maintain this in view of the large number of contracts already made at 2c., Bethlehem. Fabricators are working on a number of bridge contracts and some sizable projects are in prospect.

Plates.—Most mills are moderately active, but buyers evidently encounter no difficulty in getting prompt shipments. The pressure is still by the mills for more specifications rather than by consumers for deliveries. Prices are being maintained at 2.05c., Coatesville, or 2.15c., delivered Philadelphia, but contracts for next quarter have been made at 2c., Coatesville.

Sheets.—The blue annealed market seems to be quite firm at 2.10c., Pittsburgh. Occasionally 2.15c. per lb. is being obtained on small lots. Black sheets are 2.90c., Pittsburgh, and galvanized 3.75c., per lb., Pittsburgh, with occasional concessions.

Warehouse Business.—Concessions still appear on galvanized sheets and black sheets are inactive. Quantity differentials on bars and small shapes are being adhered to successfully and if differentials on bands are adopted by the mills generally warehouses will take like action.

Imports.—Pig iron arrivals at this port were the feature of the week ended March 17. Of a total of 8596 gross tons, 7947 tons came from the United Kingdom, 348 tons from India and 301 tons from the Netherlands. A total of 300 tons of spiegeleisen arrived from Germany. Steel imports consisted of 455 tons of shapes and 38 tons of bars from Belgium, 12 tons of strip steel and 52 tons of steel bars from Sweden.

Old Material.—Consumers show little interest in purchasing. No. 1 heavy melting steel is active only in shipments on contracts. A Phoenixville consumer is offering to purchase machine shop turnings at $10 per ton, delivered, stove plate at $11.50 per ton, and No. 2 heavy melting steel at $11 per ton.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to	$14.00
Scrap T rails	13.00 to	13.50
No. 2 heavy melting steel	11.00 to	11.50
No. 1 railroad wrought	14.50 to	15.00
Bundled sheets (for steel works)	10.50 to	11.00
Machine shop turnings (for steel works)	10.50 to	11.00
Heavy axle turnings (or equivalent)	12.00 to	12.50
Cast borings (for steel works and rolling mill)		11.00
Heavy breakable cast (for steel works)	15.50 to	16.00
Railroad grate bars	12.00 to	12.50
Stove plate (for steel works)	12.00 to	12.50
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to	18.00
Couplers and knuckles	16.00 to	16.50
Rolled steel wheels	15.50 to	16.00
No. 1 blast furnace scrap	10.50 to	11.00
Machine shop turnings (for rolling mill)		11.00
Wrought iron and soft steel pipes and tubes (new specifications)		12.50
Shafting	17.50 to	18.00
Steel axles	19.00 to	20.00
No. 1 forge fire	11.00 to	11.50
Steel rails for rolling	15.00 to	15.50
Cast iron carwheels	15.50 to	16.00
No. 1 cast	16.00 to	16.50
Cast borings (for chemical plant)	14.50 to	15.00

The January report of the interplant accident reporting system, industrial safety division of the Springfield, Mass., Safety Council, shows that 33 plants in Springfield and vicinity operated during the month without a loss-time accident. The report covers figures from 60 manufacturing concerns with 21,435 employees. who worked 3,830,336 hr.

Cleveland

Steel Tonnage Exceeding February Rate —Motor Car Industry Heavy User

CLEVELAND, March 20.—Specifications for steel bars, plates and structural material against 1.80c. first quarter contracts continue heavy, and some of the mills have booked more tonnage so far this month than during the corresponding period in February. On new business, both for early shipment and for the second quarter, 1.85c., Pittsburgh, is still in effect. While some attempt is being made to establish the market on a 1.90c. basis, this price so far applies only to small miscellaneous lots. Most buyers, except some of the smaller consumers, have placed second quarter contracts at 1.85c. Some of the mills have advised their trade that specifications against 1.80c. contracts must be in by April 1, and this is bringing out specifications. This price will apply on much of the steel shipped in April. The new prices on alloy steel bars have not yet been tested, as they will not apply to contract consumers until after April 1. While there were some price reductions, four grades comprising over 90 per cent of the tonnage used, are advanced from $2 to $4 a ton.

The automotive industry continues to take steel in good volume against contracts, and it is now predicted that this industry will continue at good operation through the second quarter. However, the motor car builders are showing hesitancy in placing second quarter contracts. While some contracts have come from this source for sheets and hot and cold rolled strip steel at the currently quoted prices, the business has not been sufficient in volume to test the present prices, against which some resistance is being offered. The Ford Motor Co. is reported to have increased its production to 1600 cars per day with an expectation of a further increase to 2000 by the end of the week.

Structural inquiry is light in this territory, although fabricators are getting a good volume of small orders. Awards include 2500 tons for power transmission towers in northern Ohio. A bridge project in Louisville, Ky., involving 15,000 tons of structural shapes has been revived.

Pig Iron.—Buying for the second quarter is gradually tapering off, although furnaces are still taking a fair amount of business. Sales by Cleveland interests during the week totaled 23,000 tons. Quite a few sales were made in the northern Ohio territory, but the activity was more pronounced in Michigan and in Buffalo, where some business was taken for Eastern shipment. Two inquiries for foundry iron came out for the third quarter, one from a Kokomo, Ind., stove manufacturer for 1000 tons and the other from western Ohio for 3000 to 4000 tons. Some furnaces are not inclined to encourage third quarter buying at the present time and may not quote prices for that delivery for several weeks. Prices show no change. Cleveland furnaces are holding closely to $17, furnace, shading this to $16.75 only for shipment to extremely competitive points. One Lake furnace is on a $17.50 basis except in Michigan, where the market is holding at $18. Shipping orders from the automotive industry continue heavy and may show a gain this month over February. Shipments to jobbing foundries and to manufacturers in some other fields show a slight gain. Malleable foundries are doing better than a few weeks ago. Low phosphorus iron is inactive.

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.60c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb	$2.90
No. 9 galvanized wire, per 100 lb	3.35
Common wire nails, base per keg	2.90

*Net base, including boxing and cutting to length.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fdy., sil. 1.75 to 2.25	22.00
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic, Valley furnace	17.00
Standard low phos., Valley furnace	$26.50 to 27.00

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Coke.—The present price of $8, Painesville, or $9.01, delivered Cleveland, has been re-established for Ohio by-product foundry coke for April shipment. Prices of Connellsville foundry coke are unchanged at $3.75 to $5.10, ovens. The demand shows some gain over the previous few weeks.

Fluorspar.—Some small-lot sales of gravel fluorspar are being made at $15, mines, but at least one producer is still on a $14.50 basis. There is talk of an advance to $16.

Cold Finished Steel Bars.—Since the establishment of 2.25c., Cleveland, or 2.20c., Pittsburgh, as the second quarter price, most consumers have either placed second quarter contracts or have arranged to carry over through the next quarter contracts placed for this quarter at the same price. Specifications are only fair.

Bolts, Nuts and Rivets.—Specifications for bolts and nuts are showing a little gain this month over February, and makers are operating their plants at about 65 per cent of capacity. Some contracts are being taken for the second quarter. The $3 a ton advance on rivets for the second quarter was expected to stimulate orders against first quarter contracts, but so far there has been little gain.

Iron Ore.—There is an expectation that Lake Superior ore prices for the season will be named before the end of the month. The inquiry of the Ford Motor Co. for 440,000 tons is the only one so far in the market, and it seems probable that the prices will be established on the Ford business, on which sellers have not yet put in bids. It is generally expected that last season's prices will be re-established. Sellers look for a movement in 1928 of about the same volume as last year when Lake and rail shipments amounted to 52,344,099 tons. Stocks at furnaces and on Lake Erie docks May 1 will be about 1,000,000 tons less than on the same date a year ago. These stocks on March 1 amounted to 29,002,800 tons, compared with 29,808,552 tons on March 1, last year. The amount at furnaces on March 1 was 23,015,392 tons. Consumption of Lake ore during February amounted to 4,394,931 tons, a gain of 91,779 tons over January. Central district furnaces during the month consumed 2,135,684 tons, a gain of 71,813 tons. Lake front furnaces used 2,084,656 tons, a gain of 24,194 tons. Eastern furnaces melted 58,984 tons, a gain of 14,542 tons, and all-rail furnaces used 115,607 tons, a decrease of 18,748 tons. On Feb. 29 there were 159 furnaces using Lake ore in blast, a gain of three for the month.

Semi-Finished Steel.—In the hope of getting somewhat better prices, the local producer is still holding off in naming second quarter quotations and has made reservations for that delivery for some of the large consumers subject to the fixing of prices later. Specifications are fairly heavy.

Sheets.—Irregularities have developed on black sheets for prompt shipment in both the Cleveland and Detroit territories. A quotation of 2.75c., Pittsburgh, is reported in the latter market. While mills have taken quite a few second quarter contracts at 2.90c., there is considerable hesitation among consumers about placing contracts for any grade. Galvanized sheets are still offered at 3.75c., Ohio mill. Blue annealed and auto body sheets appear to be firm. Extensions of present 2.90c. contracts for tin mill black plate through the second quarter are reported. New demand is slow, but specifications against contracts from the automotive industry are heavy. Recent buying by this industry has not been in lots of sufficient size to test the market, although the business that has been placed in auto body sheets is understood to have gone at regular prices.

Strip Steel.—Consumers are freely specifying against old low-priced contracts for both hot and cold-rolled strip. While some second quarter contracts have been placed at the currently quoted prices, they have not been for large lots, as considerable hesitation is being shown among consumers in placing contracts and the test of the market is yet to come.

Reinforcing Bars.—Inquiry is light. Some rail steel mills have advanced prices $1 a ton to 1.80c., mill. Billet steel bars are unchanged at 1.80c. to 1.85c., Cleveland.

Warehouse Business.—While jobbers' sales are fair. they are not holding up in volume to last month. Prices are being well maintained.

Old Material.—There is no new consumer demand and dealers are still covered against contracts. Consequently the market is almost at a standstill. Mills continue to regulate shipments and are not taking much scrap. Some are evidently reducing their scrap inventories because of the approach of the Ohio tax return day, April 8. The supply of scrap is in excess of the demand and the market has a weak tone. Quotations are unchanged, but in the absence of transactions are nominal.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$13.75 to $14.00
No. 2 heavy melting steel	13.25 to 13.50
Compressed sheet steel	12.75 to 13.00
Light bundled sheet stampings	11.50 to 11.75
Drop forge flashings	12.50 to 13.00
Machine shop turnings	9.00 to 9.25
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	13.50 to 14.00
No. 1 busheling	11.00 to 11.25
Pipes and flues	9.00 to 9.50
Steel axle turnings	12.50 to 13.00
Acid Open-Hearth Grades	
Low phosphorus forging crops	16.50 to 17.00
Low phosphorus, billet, bloom and slab crops	17.00 to 17.50
Low phosphorus sheet bar crops	16.50 to 17.00
Low phosphorus plate scrap	16.00 to 16.50
Blast Furnace Grades	
Cast iron borings	10.00 to 10.25
Mixed borings and short turnings	10.00 to 10.25
No. 2 busheling	10.00 to 10.25

No. 1 cast	16.50 to 17.00
Railroad grate bars	11.00 to 12.00
Stove plate	12.00 to 12.50
Rails under 3 ft.	18.00 to 18.50
Miscellaneous	
Railroad malleable	15.00 to 15.50
Rails for rolling	16.25 to 16.50

New York

Pig Iron Consumers Delaying Purchases —Steel Volume Continues Heavy

NEW YORK, March 20.—Sales of pig iron by local brokers during the week did not exceed 7000 tons. Little new inquiry has appeared in the market, and consumers are showing an increasing inclination to delay purchases on the possibility that they may obtain better prices later. A Port Chester, N. Y., plant, which was in the market for 2000 tons of foundry iron, has postponed buying. The Foran Foundry & Mfg. Co., Flemington, N. J., is about to close on 400 tons of No. 2 and 500 tons of No. 2X foundry iron. The General Electric Co., Schenectady, N. Y., has entered the market for a total of 2500 tons of various grades of foundry iron for shipment as follows: 600 tons to Bayway, N. J.; 500 tons to Lynn, Mass., 400 tons to Everett, Mass.; 300 tons to Pittsfield, Mass.; 200 tons to Schenectady, and 500 tons to Erie, Pa. Another inquiry calls for 1000 tons for delivery during the second quarter. The New York Central Railroad is inquiring for 300 tons of foundry iron for delivery at Frankfort, N. Y., or Elkhart, Ind., and the Delaware, Lackawanna & Western Railroad has purchased 50 tons of foundry grade. About 1500 tons of foundry iron bought by the Westinghouse Electric & Mfg. Co. for Springfield, Mass., is understood to have been placed with a Buffalo producer at $16 per ton, Buffalo, for No. 2X and $16.50 for No. 1X. Economies in freight rates through the use of barge shipments are still receiving careful consideration by Buffalo producers. At a meeting of shippers and barge operators in New York last week no material progress toward establishing maximum and minimum rates for canal shipment was made. Operators wanted a minimum rate of $2.75 per ton from Buffalo to Jersey City docks, but producers contended that this is too high to permit competitive selling. Previous reports to the contrary, it is said that no Buffalo iron has been sold this year for through barge shipment to Delaware River points. although barge-and-rail contracts with eastern Pennsylvania consumers have been made.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$21.41 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

*No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

Warehouse Business.—Most jobbers are maintaining the present price schedule on products from stock. Concessions are infrequent. Discounts on bolts and screws are being maintained, with only occasional increases in the usual discount. Blue annealed sheet prices continue fairly firm, but concessions of not more than $1 a ton are still obtainable on desirable purchases. There is a good movement of structural material from warehouse and March is expected by most jobbers to prove the best month thus far this year.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.17½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Finished Steel.—Contract buyers of plates, shapes and bars have generally been covered for second quarter at 1.85c., Pittsburgh, for bars, at 2c., Coatesville, for plates, and at 2c., Bethlehem, for structural shapes. Some consumers who will be able to specify enough tonnage against first quarter contracts to carry them through April or beyond have preferred not to contract for the next quarter, evidently believing that the upward movement of prices has reached its peak for the present and that nothing is to be gained by covering. In sheets, strip steel and wire products there has been less second quarter coverage than in plates, shapes and bars. Some sheet buyers object to paying the higher prices asked for black and galvanized sheets for the next quarter and contracting is slow. Jobbers of wire nails are loaded up so heavily with stocks that some halting in the demand for that product is in evidence. The volume of specifications against first quarter contracts is well up to the recent levels and is quite satisfactory. Some mills insisted on customers specifying their March quotas by the 15th, but the majority will accept shipping orders up to the end of the month. This means that considerable of the lower-priced tonnage will not be shipped until late in April. Eastern mills are operating at 70 to 80 per cent. Structural steel lettings in this district during the week were light. Among pending inquiries is 7700 tons for a section of the subway in Brooklyn.

Cast Iron Pipe.—Prices continue to show greater firmness, most makers having sufficient business on order to carry them through the next four or five weeks. One Northern maker is still quoting prices which Birmingham foundries are declining to meet, and imported pipe has been sold on a basis of about $28 per net ton, Birmingham. Inquiries are in most cases for lots of less than 100 tons for small municipalities and private users. Madison, N. J., has purchased 56 tons of 6-in. water pipe from B. Nicoll & Co., New York. At the opening of bids March 14 by the Department of Purchase, New York, on 5355 tons of pipe, R. D. Wood & Co. were low bidders on 3280 tons of 8-in. and 1830 tons of 12-in. pipe and about 3000 tons of fittings. The United States Cast Iron Pipe & Foundry Co. was low on 245 tons of 6-in. pipe.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.25 to $38.25; 4-in. and 5-in., $42.25 to $43.25; 3-in., $52.25 to $53.25; Class A and gas pipe, $4 to $5 extra.

Reinforcing Bars.—Several hundred tons of bars are involved in a number of road jobs for the State of New Jersey, some of which are likely to be closed this week. Another sizable tonnage will be required for two additional sections of the subway in New York, on which general contract bids are to be taken later in the month. Awards have not been plentiful during the last week. Although distributers are generally quoting 2c., Pittsburgh, at least one large contract closed recently went at a considerably lower figure. Warehouse prices are unchanged.

Coke.—There is some renewal of expiring contracts for both furnace and foundry coke, but in a few instances consumers are evidently intending to purchase in the open market until the beginning of the second half. Connellsville furnace coke is quoted at $2.75 to $3 per ton, Connellsville. Delivered prices in this district of special brands of beehive foundry coke are: To northern New Jersey, Jersey City and Newark, $8.71 to $8.81 per net ton; to New York and Brooklyn, $9.59 to $9.69 per net ton. By-product coke is quoted at $9 to $9.40 per ton, Newark or Jersey City, and $10.09 to $10.95, New York or Brooklyn.

Old Material.—Prices of most grades are unchanged, but the market as a whole does not show much strength. Brokers are offering $10.50 per ton or less for yard grade of heavy melting steel, delivered to eastern Pennsylvania consumers. Machine shop turnings are still being purchased for $10.25 to $10.50 per ton, delivered, but it is noteworthy that one consumer of turnings in eastern Pennsylvania is offering only $10 per ton, delivered, and another user is not accepting shipments. Stove plate prices have also receded for eastern Pennsylvania delivery, brokers offering only $11 to $11.50 per ton, delivered, about 50c. a ton less than a week ago.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to $10.85
Heavy melting steel (yard)	7.00 to 7.25
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	8.50 to 9.00
Locomotive grate bars	8.75 to 9.00
Machine shop turnings	6.75 to 7.50
Short shoveling turnings	7.00 to 7.50
Cast borings (blast furnace or steel works)	6.75 to 7.50
Mixed borings and turnings	7.00 to 7.50
Steel car axles	16.00 to 16.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.75
Forge fire	6.75 to 7.00
No. 1 railroad wrought	10.50 to 11.00
No. 1 yard wrought, long	9.00 to 9.50
Rails for rolling	10.50 to 11.00
Cast iron carwheels	11.25 to 11.75
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00 to 10.50
Cast borings (chemical)	11.00 to 11.50

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.75 to $14.25
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.75 to 12.25
No. 2 cast (radiators, cast boilers, etc.)	11.25 to 11.75

High Rate of Sales and Production of Steel Castings Continues

WASHINGTON, March 20.—Orders for commercial steel castings in February totaled 90,059 tons, representing 62 per cent of the capacity of the 129 reporting firms, against 91,069 tons or 63 per cent of capacity in January, according to the Department of Commerce. The reporting producers have a total monthly capacity of 145,600 tons, or more than 80 per cent of the commercial castings capacity of the United States. Production in February amounted to 86,626 tons, or 60 per cent of capacity, against 74,079 tons in January, or 51 per cent of capacity.

Of the new orders in February, 41,096 tons was for railroad specialties, being 61 per cent of this class of capacity, compared with 41,276 tons in January. Orders for miscellaneous castings in February totaled 48,963 tons, or 63 per cent of this kind of capacity, against 49,793 tons in January.

Casting produced for railroad specialties in February aggregated 37,719 tons, or 56 per cent of this kind of capacity, against 28,714 tons in January. Output of miscellaneous castings totaled 48,907 tons, or 63 per cent of this class of capacity in February, against 45,365 tons in January.

Except for January, the February orders were the largest since last June, when the total was 90,898 tons. Production in February was the largest since last August, with 87,004 tons.

New Management Proposed for N. & G. Taylor Co.

Following consultation with a number of its larger creditors, the N. & G. Taylor Co., Philadelphia, tin plate manufacturer, has requested an extension of time for payment of the claims of its creditors. The president of the company, H. N. Taylor, has agreed to cause a new management to be elected to conduct the affairs of the company and a meeting with the larger creditors is scheduled for this week, at which the creditors are expected to appoint a representative.

The company points out that economies of operation have been put into effect during the past few months and that business as a result has recently been profitable.

San Francisco

Car Company Buys 5000 Tons of Shapes and Plates—Outlook Good

SAN FRANCISCO, March 17 (*By Air Mail*).—Activity in the Pacific Coast markets fell off somewhat this week, but the trade is encouraged over the fact that considerable new work is in sight. Important lettings included 5000 tons of small shapes and universal plates for the Pacific Car & Foundry Co., Seattle, placed with the Pacific Coast Steel Co., 2000 tons of plates for the Seattle penstock, booked by the Puget Sound Machinery Depot, and 3100 tons of cast iron pipe for Southgate, Cal., awarded to Leo Vuksich.

The price structure in most lines is holding well to the established levels, but fabricated and erected prices on structural steel are decidedly weak in the San Francisco district.

Pig Iron.—Demand for foundry pig iron remains quiet, the majority of both sales and inquiries involving small lots. Another shipment of Indian iron has arrived on the Coast. Of this, 400 tons was unloaded at Los Angeles, 600 tons at San Francisco and the remainder was reshipped to north Pacific ports. The next shipment, 850 tons, is due about April 1. No change in prices is noted.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

---

*Delivered San Francisco.

**Duty paid, f.o.b. cars San Francisco.

Shapes.—The Pacific Coast Engineering Co. took 370 tons for a plant in South San Francisco for the Edwards Wire Co. Demand for plain material continues strong and pending business exceeds 13,000 tons. Bids have been received on 4000 tons for the Capewell Store in Oakland, on 3000 tons for the Coyote Point bridge, San Francisco, and on 450 tons for a hotel in San Francisco. Plain material continues firm at 2.35c. c.i.f.

Plates.—Two important awards were noted this week. In addition to the 2000-ton penstock at Seattle, reported above, the Traylor Engineering Co. took 600 tons for kilns for the Pacific Coast Cement Co. at Seattle. Plate fabricators have figured the tonnage involved in the aqueducts in Oakland for the East Bay Municipal District, bids on which go in April 20. The Wildcat aqueduct will require 4830 tons for 56 and 60-in. pipe and the Sequoia aqueduct will take 3668 tons for 50, 56 and 60-in. pipe. All the material will be 7/16 in. Bids will be taken April 10 for 445 tons for siphons for the Kittitas Canal in Washington. Prices are firm at 2.30c. c.i.f.

Bars.—Reinforcing steel bookings were confined, with one exception, to lots of less than 100 tons. A subway in Los Angeles, involving 475 tons, was placed with an unnamed interest. Bids have been opened on 1000 tons for the Panama Canal Zone. Bids on 5257 tons for the Drainage Improvement District No. 23, Los Angeles, were returned unopened and new bids will be taken April 2. Pending business calls for more than 14,000 tons. Prices in the Bay district remain weak because of foreign competition, and 2.25c. on out-of-stock material continues to be quoted in a number of instances.

Cast Iron Pipe.—The largest cast iron pipe award so far this year was 3096 tons of 4 to 12-in. class B pipe for Southgate, Cal., the general contract going to Leo Vuksich, Los Angeles. Two San Diego street improvement jobs of 110 tons of 4 to 8-in. class B pipe for Whitman Street and 271 tons of 2 to 10-in. class C for Twenty-eighth Street, were placed with unnamed interests. Corrected estimates of the quantity involved in the East Bay Municipal Utility District aqueducts in Oakland, Cal., show 17,440 tons of 56 and 60-in. class C pipe for the Wildcat aqueduct and 13,250 tons of 50, 56 and 60-in. class C pipe for the Sequoia aqueduct. This brings the total to 30,690 tons instead of 25,000 tons, as reported in THE IRON AGE last week. Bids on this project will be opened April 20. All bids on 663 tons of 6 to 20-in. classes B and C pipe for Santa Barbara, Cal., were rejected and new bids will be taken March 22. Red Bluff, Cal., will open bids on March 26 for 114 tons of 6 and 10-in. class B or centrifugal pipe. Armona, Cal., rejected all bids on 222 tons of 4 to 8-in. class B pipe and has purchased standard pipe.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, 3/16-in. and over	3.15c.
Small angles, under 3/16-in	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Steel Pipe.—The only award reported this week was 100 tons of 6 and 8-in. lapweld pipe for Municipal District No. 3, Monrovia, Cal., which was placed with the Santa Fe Pipe & Supply Co., Los Angeles. The Grinnell Co. was low bidder at 89c. per ft. for 25,000 ft. or 360 tons of 8-in. seamless pipe for Los Angeles. Bids will be opened on March 19 for 510 tons of 4 and 6-in. seamless pipe for Brighouse, B. C.

Coke.—About 4000 tons of English coke has arrived on the Coast and part of it is now being unloaded at Los Angeles. The rest will be delivered to San Francisco Bay foundries. This market reflects the quiet condition of the pig iron market.

Birmingham

Steel Sales and Inquiries Show Decided Improvement

BIRMINGHAM, March 20.—The pig iron market continues to await second quarter developments. Buying during the week has been in small lots and most of the sales have been to melters who are running short on their first quarter requirements. Very little interest has been shown in second quarter buying and none of the three merchant producers in the district report forward bookings of any consequence. Only a few inquiries are being received. Sales of foundry iron are still on a $16 base. There were no changes last week in furnace operations, 18 being in blast. Of this number, 10 were on foundry, seven on basic and one on recarburizing iron.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil	$16.00
No. 1 foundry, 2.25 to 2.75 sil	16.50
Basic	15.00

Finished Steel.—Sales and inquiries last week showed a decided improvement. Demand has increased and a considerable volume of business is being booked. Prices are unchanged. Structural steel fabricators report a better feeling in the market. Open-hearth operations continue the same as for the past two weeks. The Tennessee company is alternately operating 13 and 14 and the Gulf States Steel Co. four.

Cast Iron Pipe.—A fair amount of tonnage has been placed during the first half of the month, consisting almost entirely of small orders. Inquiries indicate that buyers are taking more interest in second quarter buying, and the last half of the month is expected to be much better than the first half. It is understood that a number of municipalities in the North are shaping their requirements and considerable activity is looked for from that field with the opening of spring. Prices on second quarter deliveries are being quoted at $29 to $31. Plants are operating at around a three-fourths capacity rate.

Coke.—Second quarter buying has continued to improve and more tonnage is being booked than for some time. Shipments are at a nominal rate. The Tennessee Coal, Iron & Railroad Co. on March 6 placed in operation its new by-product unit, consisting of 63 Koppers-

Becker ovens. Both spot and contract quotations are still at $5.

Old Material.—Sales continue low and in small lots. A slight increase in inquiries has been shown and a better demand is expected. Stove plate and No. 1 cast are being quoted at $14.50. Other prices are the same.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.50 to	$10.00
Scrap steel rails	11.00 to	11.50
Short shoveling turnings	8.00 to	8.50
Cast iron borings		8.00
Stove plate		14.50
Steel axles	19.00 to	20.00
Iron axles	20.00 to	21.00
No. 1 railroad wrought	10.00 to	10.50
Rails for rolling		13.00
No. 1 cast		14.50
Tramcar wheels	12.50 to	13.50
Cast iron carwheels	12.00 to	13.00
Cast iron borings, chemical	13.50 to	14.00

Boston

Buffalo Furnace Sells 1000 Tons of Pig Iron at Low Prices

BOSTON, March 20.—The outstanding sale of pig iron the past week was one of 400 tons No. 2X and 600 tons No. 1X made by a Buffalo furnace to the Westinghouse Electric & Mfg. Co., Springfield, Mass., deliveries to begin in April and to extend into the third quarter. The No. 2X was sold at approximately $16 a ton, furnace, and the No. 1X at $16.50, the lowest prices made this year. Otherwise the pig iron market is devoid of special feature. Current orders range from car lots to 100 tons, mostly car lots, with Buffalo furnaces, other New York State furnaces and the Mystic Iron Works taking 90 per cent of the business. A little Indian iron was sold at $21.75 to $22 on dock here, duty paid.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$21.41 to	$21.91
Buffalo, sil. 2.25 to 2.75	21.41 to	22.41
East. Penn., sil. 1.75 to 2.25	23.15 to	23.65
East. Penn., sil. 2.25 to 2.75	23.65 to	24.15
Virginia, sil. 1.75 to 2.25		25.71
Virginia, sil. 2.25 to 2.75		26.21
Alabama, sil. 1.75 to 2.25	22.91 to	24.77
Alabama, sil. 2.25 to 2.75	23.41 to	25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Pig Iron Imports.—Imports of pig iron at this port during the first half of March were 199 tons of Indian. In the first half of February, this year, 986 tons was received at Boston; in the first half of March, 1926, 4910 tons, and in the first half of March, 1925, 2033 tons. No iron arrived in March, last year.

Coke.—Ovens are still billing out by-product foundry coke at $11.50 a ton, delivered within a $3.10 freight rate zone. Specifications against contracts continue to come in slowly. Domestic by-product coke sells on a basis of $8.50 a ton on cars, Everett, Mass.

Warehouse Prices, f.o.b. Boston

Cold-punched nuts	50 and 5
Stove bolts	70 and 10

*Including quantity differentials.

Reinforcing Bars.—A sizable business in lots of 50 tons or less was closed in the week. Some attractive tonnages in the Providence, R. I., district are expected shortly. Competition is keen, and 2.90c. per lb., base, from stock has been shaded. Mills are holding to 1.90c. to 1.95c. per lb., base Pittsburgh.

Cold-Rolled Strip.—Mills have opened their books for second quarter. No large tonnages are in the market, however, as consumers continue to buy on a hand-to-mouth basis. Mills are holding to 3.30c. per lb., base Worcester, Mass., for 1 to 3 ton lots.

Old Material.—Machine shop turnings are 25c. a ton lower. Prices for other kinds of scrap are practically unchanged from a week ago, but the market appears easier because inside prices are being paid more often than outside prices. Business is spotty and largely in car lots, and embraces all kinds of material except specification pipe and skeleton. The largest turnover the past week was in turnings and borings, with forged flashings and forged scrap second in activity. Brokers are shipping quite a little textile machinery cast into Pennsylvania, paying around $11.50 a ton on cars, shipping point. Scattered sales of long and short bundled cotton ties at $6 to $6.50 on cars, shipping point, are noted, and the Mystic Iron Works is taking sheared pipe and stove plate at $10 a ton, delivered.

Buying prices per gross ton f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$9.00 to	$9.10
Scrap T rails	8.00 to	8.50
Scrap girder rails	7.50 to	8.00
No. 1 railroad wrought	10.00 to	10.50
No. 1 yard wrought	8.00 to	8.50
Machine shop turnings	5.50 to	6.00
Cast iron borings (steel works and rolling mill)	6.00 to	6.25
Bundled skeleton, long	5.50 to	6.00
Forged flashings	6.00 to	6.50
Blast furnace borings and turnings	5.75 to	6.25
Forge scrap	6.00 to	6.50
Shafting	13.00 to	13.50
Steel car axles	15.00 to	15.50
Wrought pipe (1 in. in diameter, over 2 ft. long)	7.50 to	8.25
Rails for rolling	10.00 to	10.50
Cast iron borings, chemical	9.00 to	9.50

Prices per gross ton delivered consumers' yards:

Textile cast	$13.50 to	$14.00
No. 1 machinery cast	14.50 to	15.00
No. 2 machinery cast	12.50 to	13.00
Stove plate	9.50 to	10.00
Railroad malleable	13.00 to	13.50

Youngstown

Ingot Output at About 85 Per Cent—Sheets and Bars Most Active Products

YOUNGSTOWN, March 20.—In point of steel ingot production this district has been running very close to physically full capacity this month and there will be surprise if the month's output falls materially below that of the same month last year. The Youngstown Sheet & Tube Co. has put on another blast furnace, one of the Campbell stacks, and now has six of its nine iron-making units in this district in production—three of the four Campbell furnaces, one of the Brier Hill furnaces and the two at Hubbard, Ohio. The Republic Iron & Steel Co. has three of its four Hazelton furnaces in production, while the single furnaces of the Trumbull Steel Co., Warren, Ohio, and of the Sharon Steel Hoop Co., Lowellville, Ohio, are in blast. The Carnegie Steel Co. has four of six Ohio furnaces in Youngstown in production and in the Shenango Valley four of the six units at Sharon and New Castle, Pa., are operating. Thus, 19 of the 27 steel works blast furnaces in the Greater Youngstown area are active, and in view of improvements and enlargements made in recent years in these furnaces, as much iron now is being made as could have been produced in the full number a few years ago.

The Youngstown Sheet & Tube Co. has 20 of its 24 open-hearth furnaces in this district in production. All eight of the steel-making units at Trumbull Steel Co., Warren, are active, as are all six of the Sharon Steel Hoop Co. There are 15 open-hearth furnaces in the Republic Iron & Steel Co. group, but two of these were built by the Government during the war and are not yet listed as the property of the company. Of the 13 owned, 12 are melting. The Carnegie Steel Co. is producing steel in this district at approximately 85 per cent of capacity and that is probably a good estimate of the independent production, although the numerical rating indicates a higher output.

The picture is not quite so bright from the angle of finishing mill operations. There is good engagement of sheet rolling capacity, although as with active melting units, the number of active mills is a little misleading as to the actual production, since at only a few plants are the mills being operated the full number of turns possible each week. The week of 5½ days permits the working of 16 turns of 8 hr. each, but with the exception of the companies producing full finished and automobile body sheets, the average is around 13 turns weekly. Bar mill operations are good, and specifications against old orders are sufficient to sustain relatively full operation of the strip mills, but pipe mills are not much more than 60 per cent engaged and the general demand is not even that good. A common complaint is the brevity of the rolling mill schedules. Consumers still take full advantage of mill and railroad efficiency to keep their specifications down to actual requirements and expect the mills to ship promptly on releases.

Invoice prices are not very satisfactory because the mills here, as in other producing centers, found their order books pretty heavy when price advances were made and conditions have not shaped themselves in a way to give the manufacturers much benefit. Average prices for steel bars for this quarter will be slightly higher than for the final quarter of 1927, but advances in sheets and strips since the opening of the year mean little so far in larger net returns, as so much of the business of this quarter was taken late last year when prices were low. Putting prices up is a slow process, when advances are preceded by full coverage of consumers at lower figures. Pipe prices are highly competitive and are not yielding as much profit as a year ago and the showing is further reduced by a smaller demand than existed at this time last year.

Not much activity is noted in pig iron, the Pittsburgh district market for the steel-making grades being practically cut off by the fact that Pittsburgh steel companies have iron for sale at lower delivered prices than can be made by local furnaces. There is only moderate interest in scrap supplies among local melters, and prices tend to weaken. Most recent sales of heavy melting steel were at $15, but present ideas of consumers are at least 50c. a ton lower. On compressed sheets $14.50 has been paid, but there are offerings at $14.25. There is no market here at present for machine shop turnings.

The reason for the ending of the negotiations for a merger of the Inland Steel Co. and the Youngstown Sheet & Tube Co. continues to be the subject of speculation. Officials of the latter company decline to comment on the termination of the negotiations beyond the official statement given out by Mr. Campbell following his return from the South. No additional information was forthcoming at the special meeting of the stockholders held here last Thursday which voted down the proposed merger.

Cincinnati

Pig Iron Sales Decline—Steel Specifications Hold at Recent Level

CINCINNATI, March 20.—Pig iron buyers are showing little interest in second quarter requirements, and consequently sales in the past week dropped to a low point. In many cases consumers have been slow in releasing shipments on current contracts, so that considerable iron bought in the first two months of the year will not be delivered until April. For this reason no important buying movement is expected in the next 30 days. An Indianapolis melter has closed for 3000 tons of malleable with a Lake producer. A Kokomo, Ind., company is inquiring for 1000 tons of foundry iron for third quarter delivery, while the Louisville & Nashville Railroad is taking bids on 590 tons of foundry and charcoal iron. Northern Ohio furnaces are quoting $16.75 to $17, base furnace, and are getting a large share of the business in this territory at those prices. Ironton makers decline to go below $19, base Ironton, and as a result are booking only meager tonnages. Southern interests are soliciting second quarter orders on a basis of $16, Birmingham.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$20.89
So. Ohio malleable	$20.14 to 20.89
Alabama fdy., sil. 1.75 to 2.25	19.69
Alabama fdy., sil. 2.25 to 2.75	20.19
Tennessee fdy., sil. 1.75 to 2.25	19.69
Southern Ohio silvery, 8 per cent	26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Finished Material.—From a tonnage standpoint specifications have held up to the level reached two weeks ago, and releases on current contracts are expected to attain substantial proportions before the end of the first quarter. Consuming industries are operating at a fair rate, but are taking steel only as they need it for immediate use. Small fabricators in this district have a comfortable amount of work ahead of them, but large companies are feeling the absence of major propects. The Louisville & Nashville Railroad has taken bids on about 800 tons of steel for eight bridges. Bars, structural shapes and plates are quoted at 1.90c. to 2c., base Pittsburgh, although there still is a tendency on the part of certain mills to accept attractive orders at 1.85c. In the sheet market, conditions are regarded as favorable. Orders from automobile companies have been heavy and have enabled mills to sustain production on a basis approaching full capacity. The jobbing trade also has been buying consistently, while demand for electrical sheets has been normal. Aside from concessions in galvanized sheets for roofing purposes in the South, prices for second quarter are becoming more firmly established. Blue annealed stock is steady at 2.10c., base Pittsburgh, black at 2.90c. and automobile body sheets at 4.15c. In this territory galvanized sheets are being sold at 3.75c., but shading of from $2 to $3 a ton is reported from the South. The American Rolling Mill Co. states that all of its units are operating at 100 per cent of capacity. Common wire nails are quoted at $2.65 per keg, Ironton or Pittsburgh, and plain wire at $2.50 per 100 lb., Ironton or Pittsburgh.

Reinforcing Bars.—Makers of new billet bars are asking from 1.90c. to 2c., base Pittsburgh, for second quarter delivery, while rail steel stock is being sold at 1.80c. to 1.85c., base mill.

Warehouse Business.—Sales have been moderate in volume and indications are that business in the first quarter of 1928 will equal that in the same period last year. Bars, structural shapes and plates are the most active commodities at the moment. Prices are steady and unchanged.

Coke.—Shipments of by-product foundry coke from ovens at Indianapolis, Portsmouth and Ironton have been holding up well, and the total volume in March promises to be the best in many months. While foundries supplying the automobile trade are taking most of the tonnage, demand from jobbing foundries also has been good. Movement of beehive foundry coke from the Wise County and New River districts has been comparatively light in the last two weeks. Prices are unchanged.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.52 to $9.64; Wise County coke, $7.59 to $8.09; New River coke, $10.09 to $10.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—The scrap market is listless. Steel plants are doing practically no forward buying, although releases on present contracts have been about normal. Blast furnace grades are quiet. Railroad lists closing last week are reported to have brought prices only slightly under those in February.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$11.00 to $11.50
Scrap rails for melting	11.75 to 12.25
Loose sheet clippings	8.50 to 9.00
Bundled sheets	9.50 to 10.00
Cast iron borings	8.00 to 8.50
Machine shop turnings	7.50 to 8.00
No. 1 busheling	10.00 to 10.50
No. 2 busheling	7.00 to 7.50
Rails for rolling	12.50 to 13.00
No. 1 locomotive tires	12.75 to 13.25
No. 1 railroad wrought	10.50 to 11.00
Short rails	16.00 to 16.50
Cast iron carwheels	12.25 to 12.75
No. 1 machinery cast	15.50 to 16.00
No. 1 railroad cast	13.00 to 13.50
Burnt cast	7.50 to 8.00
Stove plate	8.25 to 8.75
Brake shoes	9.50 to 10.25
Railroad malleable	12.25 to 12.75
Agricultural malleable	11.75 to 12.25

St. Louis

Bridge Approach Requires 6000 Tons of Steel—Pig Iron Quiet

St. Louis, March 20.—The pig iron market continues quiet. Considerable iron is yet to be bought for second quarter delivery, and this demand is expected to come soon. The melt in this district is keeping up well. The Granite City maker's sales totaled 3000 tons, all foundry grades, including 1000 tons to a specialty maker, several lots of 300 tons each to stove foundries. A leading Southern interest sold 400 tons, and has inquiries for an additional 300 tons. Prices are unchanged.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25 f.o.b. Granite City, Ill.	$19.50 to $20.00
Northern No. 2 fdy., delivered St. Louis	20.66
Southern No. 2 fdy., delivered	20.42
Northern malleable, delivered	20.66
Northern basic, delivered	20.66

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.

	Per Cent Off List
Tank rivets, $\frac{7}{16}$-in. and smaller, 100 lb. or more	70
Less than 100 lb.	65
Machine bolts	60
Carriage bolts	60
Lag screws	60
Hot-pressed nuts, square, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

Finished Iron and Steel.—Bids will be received April 15 by the Board of Public Service for 6000 tons of structural steel to be used in the southern approach to the municipal bridge across the Mississippi River. About 5000 ft. of double track will be built, but bids for the rails will not be asked for until fall. Lettings of the structural steel and reinforcing bars for the embankment and foundation for the bridge has been reported in THE IRON AGE. The Manufacturers Railway of St. Louis bought 490 tons of steel for car repair work from the Illinois Steel Co. Renewed activity is reported in the oil fields, but it has not yet affected the demand for steel. Warehouse business is better, but the improvement is coming only from the St. Louis industrial district.

Coke.—Another spell of cold weather has helped the demand for domestic grades of coke. Buying of industrial grades continues active, although consumers are covering only as their needs arise.

Old Material.—The old material market continues weak because consumers have sufficient material on hand or contracted for to last at least another month, and it is not likely they will buy until then. Dealers are buying only to cover orders. No. 1 locomotive tires, miscellaneous standard section rails, etc., and machine shop turnings are 50c. a ton lower; the remainder of the list is unchanged. Railroad lists include: Southern Railway, 7300 tons; International-Great Northern, 3000 tons; Wabash, 251 tons; Rock Island, 175 carloads; Frisco Lines, 17 carloads, and Chicago, Burlington & Quincy, 15 miles of 60 to 70 lb. relaying rails.

Prices per gross ton, f.o.b. dealers' yards and delivered St. Louis district consumers' works:

Heavy melting steel	$11.50 to $12.00
No. 1 locomotive tires	12.25 to 12.75
Heavy shoveling steel	11.50 to 12.00
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	13.00 to 13.50
Railroad springs	14.25 to 14.75
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.50 to 12.00
No. 1 busheling	9.75 to 10.25
Cast iron borings	9.00 to 9.50
Iron rails	13.00 to 13.50
Rails for rolling	13.75 to 14.25
Machine shop turnings	7.00 to 7.50
Steel car axles	18.50 to 19.00
Iron car axles	23.50 to 24.00
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft.	15.00 to 15.50
Steel angle bars	12.00 to 12.50
Cast iron carwheels	13.50 to 14.00
No. 1 machinery cast	14.00 to 14.50
Railroad malleable	11.00 to 11.50
No. 1 railroad cast	13.50 to 14.00
Stove plate	13.00 to 13.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Buffalo

Pig Iron Fairly Active—Steel Output at 80 to 85 Per Cent

Buffalo, March 20.—A Buffalo pig iron maker reports taking an order of 2000 to 3000 tons of foundry from a New York State consumer. The General Electric Co. is in the market for 2900 tons of foundry iron for its plants. The Consolidated Machine Tool Co., Rochester, is inquiring for 650 tons of malleable iron for its Delaware plant. A Scranton, Pa., order was for about 1000 tons of foundry. Two Erie consumers bought, the tonnage running from 300 to 500 tons of foundry iron in each case. Quotations are firm at $17

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finished flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire, base per 100 lb.	3.90

in the district, with one maker quoting below this on New England delivery.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2 foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	$17.00 to 17.50
Basic	16.50 to 17.00
Lake Superior charcoal	27.28

Finished Iron and Steel.—Mill operation is around 80 to 85 per cent of capacity on bars, shapes and sheets. Sheet business is good, with the automobile companies specifying freely. The price is unchanged at 2.90c. per lb. for black and 4.15c. for automobile body sheets. Bolt and nut demand is fair, with business being placed for second quarter at the same discounts as for first quarter. A Rochester garage will require 200 tons of reinforcing bars and a new Buffalo terminal for the C. & B. Steamship Line is expected to come out within a week.

Old Material.—The market has been very quiet during the past week. The only purchasing noted has been among dealers. None of the mills or other large consumers has been in the market. Steel mills are operating just as heavily as they have been for the past two weeks and consumption of scrap has been large.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$14.75 to $15.25
No. 2 heavy melting steel	13.00 to 13.50
Scrap rails	13.75 to 14.25
Hydraulic compressed sheets	13.25 to 13.75
Hand bundled sheets	9.00 to 9.50
Drop forge flashings	12.00 to 12.50
No. 1 busheling	13.25 to 13.75
Heavy steel axle turnings	12.50 to 12.75
Machine shop turnings	8.50 to 9.00
Acid Open-Hearth Grades

Agricultural	15.00 to 15.25
Industrial	15.00 to 15.25

Detroit Scrap Market Dull and Prices Unchanged

DETROIT, March 20.—No changes in prices on old material have developed during the past week in this district. The general tone of the market is decidedly weak. There have been few sales of size.

Dealers' buying prices per gross ton, f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to $11.50
Borings and short turnings	7.25 to 7.75
Long turnings	6.75 to 7.25
No. 1 machinery cast	14.00 to 15.00
Automobile cast	19.50 to 21.00
Hydraulic compressed sheets	9.75 to 10.25
Stove plate	11.00 to 12.00
No. 1 busheling	8.50 to 9.00
Sheet clippings	6.00 to 7.00
Flashings	9.25 to 9.75

The Bureau of Standards, Washington, has sent to representative manufacturers a proposed revision of General Specification for Metals, with a view to getting comment before the revision is promulgated.

Canada

Pig Iron Buying at High Level —Scrap Markets More Active

TORONTO, ONT., March 20.—Buying of pig iron in the Canadian markets continues at a high level. Some buyers are delaying purchases as long as possible and are entering the market only when needs make it necessary. This attitude is chiefly due to the fact that they prefer to wait until the opening of Lake and St. Lawrence navigation before placing large tonnage orders; thus they are in a position to obtain the benefits of lower freight charges. Melters who are out of reach of water ports, however, are placing orders for spot delivery. During the past week advance buying has been more general, and it is estimated that about 25 per cent of those who place contracts are now covered for second quarter needs. Inquiries are increasing. While Canadian pig iron makers are doing little price shading, they have strong competition from United States producers and there is little prospect of early advances here.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.60
No. 2 foundry, sil. 1.75 to 2.25	23.60
Malleable	23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	$25.00 to $25.50
No. 2 foundry, sil. 1.75 to 2.25	25.00 to 25.50
Malleable	25.00 to 25.50
Basic	24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Old Material.—The better conditions prevailing among plants using scrap as a raw material have been reflected in more extensive buying in both the Toronto and Montreal districts. Dealers' buying prices are gaining in strength, but not sufficiently so to warrant a revision in quotations.

Dealers' buying prices.

Per Gross Ton	Toronto	Montreal
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00

Malleable scrap	13.00	....

Oppose Increased Rates on Chain Steel and Bolt, Rivet and Nail Rods

WASHINGTON, March 20.—Briefs were filed last week with the Interstate Commerce Commission in connection with the proposal of the railroads in Official Classification territory to increase rates on chain iron and steel, and bolt, rivet and nail-wire rods. The producing steel companies and users of the rods ask the commission to cancel the proposed rates, now under suspension, while the railroads uphold the tariffs. The proceeding involves the question of classification.

The steel producers and users of the rods state that the proposed tariffs would raise the gross billet ratings on rods in coils, in use for 40 years, to finished steel ratings, and in many cases, to fifth class ratings. The new rates, according to the railroads, are based upon the order of the commission in the Standard Nut & Bolt Co. and related cases. The producers and users contend the articles are semi-finished material while the railroads hold they are finished and are subject to the same rates as steel bars, etc.

NON-FERROUS METAL MARKETS

The Week's Prices

Cents per Pound for Early Delivery

	Mar. 20	Mar. 19	Mar. 17	Mar. 16	Mar. 15	Mar. 14

Zinc, St. Louis	5.72½	5.67½	5.65	5.65	5.65	5.67½

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, March 20.—Tin has been the most active market, with prices advancing sharply. Copper has again turned quiet, with quotations inclined to soften. Conditions in lead are practically unchanged. Demand for zinc is fair and prices are becoming stronger.

Copper.—A tendency toward weakness in electrolytic copper has unexpectedly developed following the strength manifested a week ago. Demand from both foreign and domestic consumers fell off during the week and, as a result, some metal was available at concessions from one or two sources. Practically all large producers still firmly maintain their quotations at 14.12½c., delivered in the Connecticut Valley. In the last week sales have been made at 14.05c. to 14.07c., but the quantity which has changed hands has been small. Yesterday and today a stronger tone has developed and metal below 14.12½c. is very difficult to obtain, if at all. Buying during the week by foreign consumers has been better than by domestic. It is stated that there is a large backlog of metal still to be bought by both foreign and domesic consumers, particularly the former. The official price of Copper Exporters, Inc., is unchanged at 14.50c., c.i.f. European ports. Lake copper is inactive at 14.25c., delivered.

Tin.—With sales of over 3000 tons for the week ended Saturday, March 17, the market has experienced one of the most active periods in many months. The feature has been large purchases by consumers, dealers taking very little metal. Even on Saturday, which is usually an inactive day, the remarkable total of 500 tons for that day was sold. This general activity has resulted in a sharp increase in prices, the low point having been 50c. on March 13, with 52.75c. realized on Saturday, March 17. The principal buying was for March-April delivery, but some spot and March metal was included. Demand for June, July and August delivery was very light. Yesterday, Monday, the market was quieter and consumers showed little interest. Sales dropped to about 200 tons. Today the market has been only moderately active with spot Straits tin quoted at 52c., New York. Throughout the week London has been stimulated by the advances here and has been dependent on American orders. Quotations there today were considerably higher than a week ago, with spot standard quoted at £232, future standard at £232 17s. 6d. and spot Straits at £236 10s. Arrivals thus far this month have been 4700 tons and 7130 tons is reported afloat.

Lead.—Demand continues of small proportions and is confined to carload lots, mostly for prompt and March shipment. Quotations are virtually unchanged. The leading interest still maintains 6c. as its contract price at New York, and in the outside market 5.80c., St. Louis, is the established quotation.

Zinc.—Because of considerably higher prices for ore, the tone of the market is stronger. Ore at Joplin last week sold at $39 and $40 per ton, sales amounting to over 10,500 tons. Another element of strength was the reduced output which fell to around 8000 tons for the week. Prime Western slab zinc is not correspondingly higher and the advance in price has been comparatively small. For March and early April delivery it is quoted at 5.72½c., St. Louis, or 6.07½c., New York. To correspond to the advance in ore, however, it should be

Metals from New York Warehouse

Delivered Prices Per Lb.

Brass Rods	16.50c.

selling at 5.90c. to 6c., St. Louis. A moderately good consuming demand is reported, but sellers as a whole are rather reserved under present conditions.

Nickel.—Wholesale lots of ingot nickel are quoted at 35c. with shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—Buying by consumers has been of fair proportions recently, but prices are a little lower with Chinese metal quoted at 10.25c., New York, duty paid, for all positions.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

CHICAGO, March 20.—Demand for copper is easier but the price is steady. Heavier buying of tin and zinc is noted and prices have been advanced. The old metal market is quiet.

Prices, per lb., in carload lots: Lake copper, 14.25c.; tin, 54.50c.; lead, 5.90c.; zinc, 5.80c.; in less-than-carload lots, antimony, 12.50c. On old metals we quote copper wire, crucible shapes and copper clips, 10.50c.; copper bottoms, 9.50c.; red brass, 9.25c.; yellow brass, 7c.; lead pipe, 4.75c.; zinc, 3.25c.; pewter, No. 1, 30c.; tin foil, 36c.; block tin, 45c.; aluminum, 11.75c.; all being dealers' prices for less-than-carload lots.

REINFORCING STEEL

Awards of 4050 Tons—4700 Tons in New Projects

AWARDS of concrete reinforcing bars amounted to 1850 tons, as reported to THE IRON AGE. New work amounted to 4700 tons, including 1000 tons each for a printing building and an office structure in Chicago. Awards follow:

NEW YORK, 250 tons, Erie Railroad pier, to Faitoute Iron & Steel Co.

TOLEDO, OHIO, 1600 tons, building for Willys-Overland Co., to Building Products Co.

TOLEDO, 600 tons, addition to Lamson store, to Building Products Co.

CHICAGO, 100 tons of rail steel bars, Geneva Terrace apartment building, to Inland Steel Co.

CHICAGO, 100 tons of rail steel bars, Traemour Hotel, to Calumet Steel Co.

STATE OF ILLINOIS, 120 tons of rail steel bars for road work to Concrete Steel Co.

STATE OF IOWA, 160 tons for road work, to Concrete Steel Co

HINE, MO., 260 tons, basin for St. Louis municipal waterworks, to Laclede Steel Co.

ST. LOUIS, 400 tons, track construction work for Missouri Pacific Railway between Allenton and Boles, Mo., to Laclede Steel Co.

LOS ANGELES, 475 tons, subway at Myra Avenue: S M Kerns, Long Beach, Cal., general contractor

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

BROOKLYN, 350 tons, section of subway at Prospect Park; bids March 30.

ALLENTOWN, PA., 1000 tons, bridge at Tilghman Street; bids in.

ROCHESTER, N. Y., 200 tons, Auto Inns, Inc., garage; bids being taken.

CHICAGO, 600 tons, apartment hotel at 1500 Sheridan Road; McNally & Quinn, architects.

CHICAGO, 1000 tons, printing plant for Reuben H. Donnelley Corporation; Leonard Construction Co., general contractor.

CHICAGO, 1000 tons, *Daily News* building, Holabird & Roche, architects.

Old Metals, Per Lb., New York

The buying prices represent what large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their use.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.00c.	13.50c.
Copper, heavy and wire	11.75c.	12.875c.
Copper, light and bottoms	10.00c.	11.25c.
Brass, heavy	7.00c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.625c.
No. 1 yellow brass turnings	7.75c.	9.00c.
No. 1 red brass or composition turnings	8.75c.	9.75c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.25c.	3.75c.
Sheet aluminum	12.50c.	14.50c.
Cast aluminum	12.50c.	14.00c.

CHICAGO, 500 tons, State and Washington Building; W. W Alschlager, architect.

CHICAGO, 250 tons, building for Rapid Roller Co.; Schmid & Ryan, architects.

AUSTIN, ILL., 250 tons, high school; Harvey Hansen, low bidder on general contract.

ST. LOUIS, 400 tons, warehouse for Atlantic & Pacific Tea Co., Scott and Taylor Avenues.

PORTLAND, ORE., 150 tons, bridge over Willamette River at Springfield; bids March 27.

LOS ANGELES, 5257 tons, Drainage District Improvement No. 23; bids rejected and new bids will be taken April 2

RAILROAD EQUIPMENT

Chinese Road Will Buy 990 Box Cars—Inquiry for 200 Rapid Transit Coaches

INQUIRIES from the Chinese Eastern Railways for 990 box cars and from the Chicago Rapid Transit Co. for 200 motor elevated coaches and trailers are the most important developments in the railroad equipment market. The Pittsburgh Coal Co. has purchased 600 mine cars. Details of the week's business follow:

Chicago Rapid Transit Co. has made inquiry for 100 motor elevated cars and a like number of trailers.

Atchison, Topeka & Santa Fe is inquiring for 15 locomotive tenders.

Minneapolis, St. Paul & Sault Ste. Marie contemplates the purchase of eight Mountain-type locomotives.

Seaboard Air Line will purchase 500 steel underframes for box cars.

Protane Corporation, Erie, Pa., has ordered three 11,000-gal. tank cars from General American Tank Car Corporation

Pittsburgh Coal Co. has purchased 600 mine cars from Lorain Steel Co.

Atlantic Coast Line is inquiring for 300 freight cars.

Michigan & Limestone Chemical Co. has purchased two six-wheel switching locomotives from Baldwin Locomotive Works.

Chinese Eastern Railways have made inquiry for 660 25-ton, four-wheel box cars and 330 50-ton, eight-wheel box cars.

High Tonnage in February Orders for Fabricated Structural Steel

WASHINGTON, March 19.—Orders for fabricated structural steel in February totaled 208,241 tons, representing 72 per cent of capacity, based on reports received by the Department of Commerce from 187 firms with a monthly capacity of 289,010 tons. This reflects an increase of 37,412 tons over January, when bookings were 170,829 tons, or 56 per cent of the capacity of the 215 reporting concerns. Computed bookings in February were 270,000 tons, against 210,000 tons, while shipments were 232,500 tons, or 62 per cent of capacity, compared with 210,000 tons, or 56 per cent of capacity.

Both months are ahead of the corresponding months of last year and of 1926. The February gain in computed tonnage of new orders is nearly 11 per cent over 1927 and almost 30 per cent over 1926. The January gains were 7.7 per cent over 1927 and 0.6 per cent over 1926. Only three months in 1927 (July, August and October), one in 1926 (August) and one in 1925 (October) exceeded the figure registered last month, and all were 31-day months, against 29 days.

FABRICATED STRUCTURAL STEEL

New Projects Will Require 34,350 Tons—Awards Decline to 32,700 Tons

WITH 7600 tons for a plant building at Cumberland, Md., and 10,000 tons for subway work in New York, awards in the last week amounted to 32,700 tons. New pending work totaled 34,350 tons, the outstanding projects being a section of the subway in New York requiring 7700 tons, a bridge approach at St. Louis which will take 6000 tons and an aqueduct at Oakland, Cal., requiring 4830 tons. Awards follow:

New Haven, Conn., 1600 tons, power house for United Illuminating Co., to unnamed fabricator.

Middletown, Conn., 200 tons, bank and office building, to American Bridge Co.

Weymouth, Mass., 600 tons, switch house for Edison Electric Illuminating Co. of Boston, to New England Structural Co.

Marshfield, Mass., 200 tons of plates, standpipe, to Chicago Bridge & Iron Co.

New York, 10,000 tons, subway work, to American Bridge Co.; Triest Contracting Corporation, general contractor.

New York, 200 tons, Arts Club building, to McClintic-Marshall Co.

State of New York, 500 tons, highway bridges, to American Bridge Co.

East Orange, N. J., 600 tons, Municipal Building, to Albert Smith & Sons, Inc.

Philadelphia, 100 tons, school at Buttonwood and Sixth Streets, to Robinson Iron & Steel Co.

Pennsylvania Railroad, 558 tons, bridges; 175 tons at Akron, Ohio, to Bethlehem Steel Co.; 257 tons at Baltimore, to American Bridge Co., and 126 tons at Stoney Brook, Pa., to Fort Pitt Bridge Works.

Philadelphia, 440 tons, building for La Salle College, to Bethlehem Fabricators, Inc.

Cumberland, Md., 7600 tons, plant building for Celanese Corporation of America, to McClintic-Marshall Co.

Kingston, Pa., 500 tons, Nesbitt Memorial Hospital, to Bethlehem Fabricators, Inc.

Pittsburgh, 500 tons, East Liberty Theater, to Fort Pitt Bridge Works.

Wilkes-Barre, Pa., 685 tons, drill shed for 109th Field Artillery, to Bethlehem Construction Co.

Cleveland, 2500 tons, transmission towers for Cleveland Electric Illuminating Co., to Blaw-Knox Co.

Bloomington, Ind., 700 tons, building for University of Indiana, to Bedford Foundry & Machine Co., Bedford, Ind.

State of Michigan, 125 tons, highway bridges, Massillon Bridge & Structural Co.

Shawano, Wis., 700 tons, highway bridge, to Wausau Iron Works.

Chicago, 112 tons, building for Samuel Olsen & Co., to Midland Structural Steel Co., local.

Comal, Tex., 650 tons, addition to United Gas Improvement Co. power plant, to Virginia Bridge & Iron Co.

Seattle, 2000 tons of plates, penstock for city, to Puget Sound Machinery Depot.

Seattle, 600 tons of plates, kilns for Pacific Coast Cement Co., to Traylor Engineering Co.

Oakland, Cal., 200 tons, theater, Seventeenth Street and San Pablo Avenue, to Pacific Coast Engineering Co.

San Francisco, 150 tons, apartment building, Fourteenth and Dolores Streets, to Judson-Pacific Co.

South San Francisco, 370 tons, plant for E. H. Edwards Mfg. Co., to Pacific Coast Engineering Co.

San Francisco, 100 tons, bridge over Colorado River, Grand Canyon, Ariz., to Llewellyn Iron Works.

Los Angeles, 200 tons, Convent of Good Shepherd, to Llewellyn Iron Works.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

Boston, 178 tons, bridge for Boston & Albany Railroad in Brighton district.

New York, 1000 tons, Vardmont Theater.

New York, 250 tons, pier on North River for Erie Railroad.

Brooklyn, 7700 tons, section of subway at Prospect Park: bids March 30.

State of New York, 500 tons, highway bridges.

Jersey City, 700 tons, theater on Journal Square.

Pennsylvania Railroad, 150 tons, bridge.

Allentown, Pa., 200 tons, steel centers for reinforced concrete bridge at Tilghman Street; bids in.

Wilmington, N. C., 3000 tons, highway bridge.

Louisville, Ky., 200 tons, war memorial.

Louisville & Nashville Railroad, 800 tons, bridges; bids in.

Big Four Railroad, 150 tons, work at Sharonville, Ohio.

Detroit, tonnage unstated, addition to gear and axle plant of Chevrolet Motor Car Co.

Fort Wayne, Ind., 400 tons, warehouse for International Harvester Co.

Austin, Ill., 3500 tons, high school; Harvey Hansen, low bidder on general contract.

Chicago, 120 tons, coal trestle for city pumping plant; Midland Structural Steel Co., local, low bidder.

Chicago, 200 tons, Haymarket substation for Commonwealth Edison Co.

Chicago, 900 tons, approach to La Salle Street bridge; R. H. Simpson & Co., low bidders on general contract.

South Chicago, 380 tons, power house for Federal Furnace Co.

Gardner, Ill., tonnage not stated, highway bridge for Chicago & Alton Railroad.

Aurora, Ill., 242 tons, public school.

Milwaukee, 1580 tons, County portion of Milwaukee Safety Building; Lakeside Bridge & Steel Co., low bidder on material at $96,440; Worden-Allen Co., low bidder on erection at $23,838.

St. Louis, 6000 tons, southern approach to municipal bridge across Mississippi River; bids to be received April 17 by Board of Public Service.

Kellogg, Ore., 280 tons, bridge over Umpqua River, general contract to Clyde Catching, Roseburg, Ore.

Portland, Ore., 530 tons, bridge over Willamette River at Springfield; bids March 27.

Portland, 220 tons, bridge over McKenzie River near Coburg; bids March 27.

Chehalis, Wash., 100 tons, bridge over Chehalis River; bids March 26.

San Francisco, 165 tons, apartment building, Bay and Pols Streets; bids being taken.

San Francisco, 450 tons, hotel, Geary and Maggie Streets; bids being taken.

San Francisco, 400 tons, Medical-Dental Building addition; bids received.

Oakland, Cal., 4830 tons, plates for Sequoia Aqueduct, East Bay Municipal Utility District; bids April 20.

Oakland, 3668 tons, plates for Wildcat Aqueduct, East Bay Municipal Utility District; bids April 20.

Sacramento, Cal., 600 tons, bridge over Smith River, Del Norte County; bids April 4.

Denver, Colo., 445 tons, plates, siphons for Kittitas Canal project, Yakima, Wash.; bids April 10 by United States Bureau of Reclamation.

Employment in Manufacturing Is Increasing; Low Point Last November

Employment and activity in the manufacturing industry of the United States have been on the increase since November, 1927, it is indicated by the January, 1928, returns from about 2000 manufacturing plants reporting monthly to the National Industrial Conference Board, 247 Park Avenue, New York. These plants are located throughout the country, are of both large and small size and represent 25 different divisions of manufacturing. Inasmuch as mid-winter is a quiet period in many industries, seasonal influences should show further improvement in February and March.

January figures show more than 1 per cent increase over the number employed last November which, according to the Conference Board's reports, was the lowest ebb of employment for the year 1927 and the lowest since the last quarter in 1924. However, not only has the number of employed increased, but the total number of hours worked in these plants shows an even greater increase, totaling 3½ per cent more than in November, 1927. This, the Conference Board points out, indicates not only more employees at work but an increased number of working hours per employee, and thus an increase in activity exceeding that indicated by the additional number of men engaged. Average weekly earnings per worker during January showed a proportionate increase.

To Show "The Story of Iron"

"The Story of Iron," a new educational motion picture film produced by the United States Bureau of Mines, in cooperation with three iron companies, will be shown for the first time before the New York section of the American Institute of Mining Engineers, at the Machinery Club, on the evening of March 22. The preparation of this film was noted on page 739 of The Iron Age, March 15. C. S. Robinson, vice-president of the Youngstown Sheet & Tube Co., will describe in some detail the features shown in the film.

PERSONAL

Charles M. Schwab returned on Tuesday from his European trip, coming on the Aquitania.

Albert C. Marble, superintendent Curtis & Marble Machine Co., Worcester, Mass., was elected president of the Worcester branch of the National Metal Trades Association at its twenty-seventh annual business meeting held last week. He succeeds A. Sherman Miller. Other officers elected were John C. Spence, Norton Co., vice-president, and William Arter, Arter Grinding Machine Co., treasurer. F. A. Ball, L. S. Starrett Co., Athol, Mass.; Richard C. Fosdick, Fitchburg Steam Engine Co., Fitchburg, Mass.; Elliot J. McKnight, L. G. McKnight Co., Gardner, Mass.; Charles A. Clarke, Universal Boring Machine Co., Hudson, Mass.; and J. J. Adams, J. J. Adams Co.; H. H. Wright, M. S. Wright Co.; Philip M. Morgan, Morgan Construction Co.; Fred S. Morton, Matthews Mfg. Co.; William B. Smith, James Smith & Sons, and Fred W. McIntyre, Reed-Prentice Co., all of Worcester, were elected to serve on the executive board.

Edward L. Steinle, sales manager of the New Britain Machine Co., has returned from a trip through England, France, Germany, Italy and Belgium.

Marcus A. Thompson, welding superintendent of the Boston & Maine Railroad, spoke on metal cutting and welding at the March meeting of the Boston section of the American Welding Society.

Joseph H. Barber, assistant to the president Walworth Co., Boston, spoke recently on "Planning Tomorrow's Business" before the executive club of the Boston Chamber of Commerce.

H. M. Lane, president H. M. Lane Co., Detroit, made an illustrated address before the New England Foundrymen's Association at its monthly meeting in Boston on March 14. He discussed foundry problems.

Leonard S. Taylor has retired as vice-president in charge of operations of the Acme Wire Co., New Haven, Conn. Edgar L. Hartpence, general manager, succeeds Mr. Taylor and also retains his old position.

Charles W. Beaver has been made president and treasurer of the Lockwood Mfg. Co., South Norwalk, Conn., to succeed George H. Lockwood, who has retired on account of ill health. Gen. Russell Frost has been made vice-president, and Nelson T. Hayes, secretary and assistant treasurer. Until two years ago Mr. Beaver was foreign representative of the Yale & Towne Mfg. Co., Stamford, Conn.

C. D. Baldwin, purchasing agent of the Bangor & Aroostook Railroad, has been elected president of the New England Railroad Club, succeeding F. C. Shepherd, chief construction engineer of the Boston & Maine Railroad.

Richmond Fletcher of Scovell, Wellington & Co., Boston, engineers and accountants, has been made a director of the Kinney Mfg. Co., Boston, maker of pumps.

W. G. Prasse has been appointed to represent the Oilgear Co., Milwaukee, in the New York district, and will have offices at 342 Madison Avenue.

Stanley A. Daniels, who has been in charge of the roll department of the Trumbull Steel Co., Warren, Ohio, has been appointed superintendent of the company's hot strip department, succeeding A. J. Schink. Before going with the Trumbull organization Mr. Daniels was identified with the Republic Iron & Steel Co. at Youngstown. J. A. Lafferty has been placed in charge of the Trumbull roll department. Recently he was associated with the Weirton Steel Co., Weirton, W. Va., and previously with the Pittsburgh Steel Co., Monessen, Pa.

J. B. Hamilton has opened an office at 221 Journal Square National Bank Building, 40 Journal Square, Jersey City, N. J., and will engage in the sale of new and used machinery. His line will include machine tools, plate rolls, punches and shears, air compressors, pumps and contractors' machinery.

Edmund J. Lowry, for the past six years consulting metallurgist for Hickman, Williams & Co., in that capacity serving the several offices of the company, has resigned, to enter consulting engineering work on his own account, and has opened an office in the General Motors Building, Detroit. Mr. Lowry has been active in studying the metallurgy of foundries, and is the author of the American Foundrymen's Association exchange paper to be presented at the convention of the Belgian Foundrymen's Association on April 18.

Clarence R. Falk, secretary-treasurer Falk Corporation, Milwaukee, has been appointed general chairman of the annual campaign of the Milwaukee County Community Fund. The campaign will be undertaken in October with the objective of raising approximately $1,000,000 for the support of a joint budget of 35 charitable organizations.

Eugene W. Stern, consulting civil engineer, 56 West Forty-fifth Street, New York, has been appointed vice-president of the Colonial Iron Works, Cleveland. For many years he was chief engineer of highways, Borough of Manhattan, New York. He will act in an advisory capacity to the Colonial company.

P. P. Barrett has been appointed representative in the Cincinnati territory for the Reading Iron Co., Reading, Pa., and will have headquarters in Indianapolis.

J. V. Coulter, for the last five years connected with the San Francisco sales organization of the Midvale Co., Philadelphia, has been appointed manager of a new branch office and warehouse recently opened at 568 Third Street, San Francisco, by the Earle M. Jorgensen Co., Los Angeles, distributer of alloy and tool steels.

Edward Hankin, superintendent of the blacksmith department New York Air Brake Co., Watertown, N. Y., on March 13 was honored at a banquet given by the executive staff of the company in recognition of his 50 years' service with the plant.

William E. Allen, for a number of years chief engineer of the Robbins Body Corporation, Indianapolis, has been appointed vice-president and general manager of Motor Bodies, Inc., Evansville, Ind., recently formed as an automobile body manufacturing subsidiary of the Graham-Paige Motors Corporation, Detroit. The new company has taken over the plant formerly operated by the Johann Mfg. Co. W. H. Neely, assistant to the president of the Graham-Paige organization, is president of the new division.

Lewis Buckley Stillwell has been elected to serve his fourth term as chairman of the Engineering Foundation, the research organization of the National Engineering societies.

Jordan Korp, Leeds & Northrup Co., Philadelphia, spoke before the St. Louis chapter, American Society for Steel Treating, March 14 on "Tool Design and Heat Treating and Relationship to Production."

Ralph T. Montag, manager Montag Stove Works, Portland, Ore., has been elected second vice-president of the Oregon Manufacturers' Association.

T. A. Hyde, for some years associated with the Henry G. Thompson & Son Co., New Haven, Conn., has been elected a vice-president. He has recently taken charge of the New York territory, including export business, with offices at 126 Chambers Street. A. W.

Tucker has been elected secretary of the company. He has been identified with the Thompson organization for a number of years and will have charge of the home office at New Haven.

—

N. Morton Skillin, for the last three years associated with Oakes Brothers, Boston, has been placed in charge of the Boston office of the Cohoes Rolling Mill Co., Cohoes, N. Y., manufacturer of wrought iron pipe. He succeeds P. L. Watkins, who has been transferred to the company's Chicago office.

—

C. L. Shedd, general manager of automotive sales in the Western district for the American Bosch Magneto Corporation, with headquarters at Chicago, has been placed in charge of the Detroit district in addition to the Chicago territory, following the merging of the company's branches in those cities. Elliott S. Hanson, who was automotive divisional sales manager at Detroit, has been promoted to the general sales division of the factory at Springfield, Mass., and will be engaged as special representative in the New York branch.

—

William J. Wooley has been elected president of the L. Wolff Mfg. Co., Chicago, manufacturer of plumbing supplies, under its recent reorganization in which the management and control of the company was turned over to employees. He went to the Wolff company three years ago to aid in the conduct of the business which had suffered serious financial losses, and was largely responsible for the reorganization. Other officers are William T. Mahoney, vice-president in charge of production; Henry I. Warden, vice-president; Arthur H. Jolliffe, secretary, and O. P. Decker, treasurer.

—

Arthur B. Hykes, who has been associated with the Central Iron & Steel Co., Harrisburg, Pa., since Nov. 1, 1926, has been appointed assistant general sales manager, succeeding the late Frank I. Hoover. From 1909 to 1926 Mr. Hykes was connected with the Shanghai office of the United States Steel Products Co., the last four years as manager for China. Shortly after his return to this country he entered the employ of the Central company as a traveling representative, and within the past nine months has been in charge for short periods of the company's district offices at Baltimore, Boston and Philadelphia.

—

William Manealoff, until recently in charge of steel imports for Winter, Wolff & Co., 225 Broadway, New York, has formed Manealoff & Co., Inc., 11 Broadway, to import and export steel products. He is president and L. M. Solis-Cohen, treasurer.

—

Julian Burdick, president West Penn Steel Co., Brackenridge, Pa., is reported to be recovering satisfactorily from injuries sustained in an automobile accident, March 10. He is at the Pittsburgh Hospital.

—

Walter H. Pfeil has been appointed roll foundry superintendent of the Birdsboro Steel Foundry & Machine Co., Birdsboro, Pa. He is a native of Pittsburgh and has spent the greater part of his life as a metallurgical engineer in the steel industry. He attended the Colorado School of Mines and Carnegie Institute of Technology, specializing in metallurgy. He was first associated with the Lewis Foundry & Machine Co., Pittsburgh, and later built the roll department of the Standard Engineering Co., Ellwood City, Pa., having been with this concern for five years. He then spent two years with Farrel Foundry & Machine Co., Ansonia, Conn., as metallurgist, and seven years with Hubbard Steel Foundry, East Chicago, Ind., as chief metallurgist and roll foundry superintendent.

—

W. J. Borst, who has been master mechanic of the John Deere Harvester Works, East Moline, Ill., has been made acting superintendent of the plant, succeeding the late C. Arthur Schoessel. He has been associated with Deere & Co. for 16 years.

—

George H. Laib, recently president of the Laib Co., Inc., Louisville, has been elected president of the J. L. Mott Co., Inc., recently formed by a consolidation of the Laib Co. and Columbia Sanitary Mfg. Co., Louisville, and the J. L. Mott Co., Trenton, N. J. Other officers are W. G. Probst, vice-president and general manager; Jordan L. Mott, 3d, vice-president and secretary, and J. E. Siegel, treasurer. Mr. Mott will be in charge of the New York offices and showroom, which will be removed shortly from Fifth Avenue and Seventeenth Street to 369 Lexington Avenue, and will have supervision over the metropolitan district and northern New Jersey. H. J. Carey will be sales manager for this district. The various branches of the Mott and Laib companies will be retained with few important changes in personnel.

—

George T. Thomas has been appointed New York sales representative of the Empire Steel Corporation, Mansfield, Ohio. He was formerly connected with the Columbia Steel Co., Butler, Pa., and later with the United Alloy Steel Corporation, Canton, Ohio.

OBITUARY

Howard Melvin Davis, general superintendent of the Newport Rolling Mill Co., Newport, Ky., died March 18, following an operation for appendicitis. He was born at Plumville, Pa., 55 years ago and during most of his life had been identified with the sheet steel industry. He had been connected with the Newport plant for about 10 years and previously had been superintendent of one of the departments of the American Sheet & Tin Plate Co., at its Gary, Ind., plant.

—

Walter B. Leach, president of the Hunt-Spiller Mfg. Corporation, Boston, died on March 13 at his home in Brookline, Mass., aged 58 years.

—

Ole C. Syvertsen, for 25 years a heating engineer and representative of the Weir Stove Co., Taunton, Mass., and more recently with the Magee Furnace Co., Boston, died on March 15 at the Exeter Hospital, Exeter, N. H., following a long illness. He was born in Norway, July 17, 1865.

—

R. E. Hart, manager and owner of the R. E. Hart Mfg. Co., Battle Creek, Mich., maker of revolution counters, died suddenly on March 5.

—

Dean E. Hethington, secretary and assistant treasurer of the Globe Forge & Foundries, Inc., Syracuse, N. Y., was drowned recently in the St. Lawrence River near Clayton, N. Y., when an automobile in which he was driving broke through the ice of the river. He was 49 years of age.

—

Edward A. Jones, president and treasurer E. D. Jones & Sons Co., Pittsfield, Mass, died Feb. 29.

—

Alfred Barker, president of James Barker, Inc., and of the Barker Machine & Foundry Co., Philadelphia, died March 13, at his home in that city.

—

Edgar H. Fuller, formerly general manager of the Fuller Mfg. Co., East Moline, Ill., and later general sales manager of Root & VanderVoort, East Moline, died on March 16 at his home in Joliet, Ill. In recent years he had been associated with the Witte Iron Works, Kansas City, Mo., and with the Moline Iron Works, Moline, Ill.

—

Herbert E. Hardin, superintendent of the Acme Harvester Co. at the time it was removed from Peoria to Pekin, Ill., for a time superintendent of the old Kingman Plow Co., Peoria, and for many years superintendent of the Ohio Rake Co., Dayton, Ohio, died on March 16 at Anchorage, Ky. He was 66 years of age.

—

Carl D. Bradley, president Michigan Limestone & Chemical Co., Rogers City, Mich., a subsidiary of the United States Steel Corporation, and president Bradley Transportation Co., Rogers City, died March 19, at Pasadena, Cal.

Cleveland Branch of Metal Trades Association Holds Annual Meeting

The annual meeting and banquet of the Cleveland branch of the National Metal Trades Association was held at the Hotel Cleveland, that city, March 15, with an attendance of 110, which was said to be the largest in the history of the branch. Jacob D. Cox, Jr., Cleveland Twist Drill Co., was reelected president. Other officers elected were: vice-president, E. J. Stahl, Baker-Raulang Co.; treasurer, W. C. Sayle, Cleveland Punch & Shear Works Co.; executive committee, P. A. Geier, P. A. Geier Co.; J. H. Hertner, Hertner Electric Co.; George E. Randles, Foote-Burt Co., and E. T. Causer, Chandler-Cleveland Motors Corporation.

H. J. Briggs, vocational director of the Cleveland schools, in a paper discussed the work of the Cleveland trade school and machinists' apprentice group, which is being conducted with the cooperation of the members of the Cleveland branch. At the conclusion of his address President Cox urged the full cooperation of the members in this work. Homer D. Sayre, commissioner of the National Metal Trades Association, discussed association and business conditions from the national viewpoint. T. Yeoman Williams, executive secretary of the League for Industrial Rights, discussed labor's attitude toward anti-trust and anti-injunction laws.

Reports of the officers showed that the Cleveland branch is in a prosperous condition. There was a membership gain of six during the year and no losses.

American Association of Engineers to Meet

The American Association of Engineers will hold its fourteenth annual convention in El Paso, Tex., on June 4, 5 and 6. M. E. McIver, 63 East Adams Street, Chicago, is secretary. After preliminary organization matters, the annual address will be delivered by the president, W. R. Harris, at 11.30 on the first morning. Sessions will be held that afternoon and the two following mornings, leaving the second and third afternoons free for inspection trips.

Electrochemists Plan April Meeting

The American Electrochemical Society will hold its annual meeting at Bridgeport, Conn., April 26 to 28, attracted to that district because of important developments in the electric manufacture of brass. On April 26, the society will convene at the Hotel Stratfield. It will devote all of Friday morning, April 27, to the discussion of electric heating, melting and electric furnace linings. Among those who will participate in this discussion are R. E. Talley, president and chief engineer of George J. Hagan Co., Pittsburgh; R. M. Keeney, industrial heating engineer Connecticut Light & Power Co.; John L. Christie, metallurgist Bridgeport Brass Co.; Dr. B. D. Saklatwalla, vice-president Vanadium Corporation of America, and others.

The president of the society is Prof. S. C. Lind, head of the department of chemistry of the University of Minnesota and well-known radium expert of America. He is also the American representative of the International Radium Standards Commission. Professor Lind will show the members a number of startling gas reactions brought about by radium emanations.

The Thursday morning session, April 26, will be devoted to a discussion of new batteries, at which Dr. George W. Vinal, the expert of the United States Bureau of Standards, will preside. Thursday afternoon the members will visit plants in Bridgeport and vicinity. Thursday evening there will be a public lecture by Prof. Bergen Davis of Columbia University, who will demonstrate the use of the X-ray in the study of metals and compounds. Professor Davis will show by means of slides the results of years of careful investigation.

The local committee is headed by John L. Christie, metallurgist Bridgeport Brass Co. Other members of his committee include the following: F. M. Turner, Charles J. McElroy, W. G. Stratten, Raymond O'Connor, W. O. Mitscherling, Karl Pitschner, Walter M. Bradley, William Delage, George B. Hogaboom and J. C. Bradley.

The final session, to be held Saturday morning, will be devoted to papers on electropolating of nickel, gold, silver, chromium and thallium. Prof. E. M. Baker of the University of Michigan, will preside over this session.

British Imports of Iron and Steel Increase, While Exports Decrease

WASHINGTON, March 19.—Imports of iron and steel products into Great Britain in February totaled 292,918 gross tons, against 283,921 tons in January, while exports aggregated 317,036 tons, compared with 332,185 tons. The increase in imports and the decrease in exports began in January. The increases in imports in February were made in 13 of the 19 classifications and applied mostly to steel bars, rods and angles, and iron bars, rods and angles. Decreases in exports in February also included 13 classifications out of 19, and involved such lines as plates and sheets, steel pipe and rails. The most notable increases were made in tin plate, galvanized sheets and pig iron.

Production of pig iron in the British Isles, according to a radiogram received by the Department of Commerce from William L. Cooper, commercial attaché, London, decreased slightly during February, as compared with January. Raw steel, on the other hand, registered a gain of 18.1 per cent. Reports indicate that at the close of February there were 148 blast furnaces and 278 open-hearth furnaces in operation.

Makes Car Frames Automatically

(Concluded from page 796)

ers. The finished bars are carried on conveyors direct to the general assembly line. Each line in this unit has a capacity of 450 pieces per hour.

Unit No. 5 is the side bar finishing and parts assembly line. This unit consists of a single line carrying both right and left-hand bars for all operations, and is driven by a single motor of 200 hp. This machine has 38 trucks, on which the formed bars are automatically loaded, one right-hand and one left-hand bar to each truck. The trucks are moved on a reciprocating conveyor and stop at 19 stations. At each station several machines are performing, and the work done includes the pinning and riveting of the brackets to make complete side bar sub-assemblies. The capacity of this line is 900 right and left-hand bars, or 450 each, per hour.

Unit No. 6 is the general assembly line. Here a machine picks up the side bar sub-assemblies and cross bars, clamps them together, and drives the rivets into position. Rivets are fed through compressed air tubes to guns which discharge the rivets when the frame is in proper position. The capacity of this line is 360 frames per hour.

Unit No. 7 is the inspection and conveyor line. The finished frames are carried to the final inspection line, where they are checked for alinement, holes, rivets, etc. The frames are then conveyed to Unite No. 8, which is the washing and painting department. The frames are automatically loaded on a washing machine, where they are subjected to a thorough cleaning to remove all oil, grease and dirt which has accumulated during the manufacturing processes. With the washing machine is combined a dryer, where the excess water is taken off, and the frames are then conveyed by gravity to the loading station of a painting machine. The paint, which is a high-temperature baking enamel, flows at the rate of 750 gal. per minute, the excess enamel being drained off and returned to the tanks. The conveyor chain on the painting machine is about 700 ft. long and passes through a two-story oven. The time of baking is 60 min.

Hidden Defects in Iron Castings

(*Concluded from page* 793)

or similar castings, foundrymen agree that the only way to produce a kettle which will not leak is to cast it with the bottom down. No one would attempt to cast one of these kettles with the bottom up, and expect to get a casting which would not have a leaky bottom. The bottom of the turbine casing and the bottom of a kettle casting are identical as far as the question of producing a solid casting is concerned.

Hidden Defects Caused by Chaplets

OCCASIONALLY objections are raised to the use of chaplets in a casting, because it is sometimes necessary to drill them out and plug the hole. But when we realize the great value a chaplet has, in maintaining the proper thickness of metal throughout the casting, we can well afford to plug one occasionally.

Steel chaplets are safer than cast iron chaplets, because a steel chaplet can be much smaller than an iron chaplet without fusing when the metal is poured around it. The objection to using a cast iron chaplet is the danger of liquid metal melting the chaplet, thus taking the necessary support away from the cores and allowing them to move with the flow of the metal. As the steel chaplet does not melt so readily as the iron chaplet, there is less danger of the cores being deprived of their necessary support.

Years ago, when cast iron chaplets were used almost universally, it was necessary to make them very large to keep them from melting when the mold was poured. It was found that, in cases where the chaplet was not tight, a large chilled hole was produced. This objectionable feature of iron chaplets led to the steel chaplets.

A loose chaplet is safer than a fused or partly melted chaplet. With a loose chaplet all that is necessary is to drill it out and plug a nice, smooth hole. With a partly fused chaplet, a blowhole is produced of such irregular shape that plugging is often impossible.

If a chaplet melts completely, the core loses its support; if a chaplet melts partially, while it may still act as the support it was intended for, the partial fusing always produces a bubble or a blowhole. Hence we contend that a loose chaplet will produce a safer casting than a partially fused chaplet.

A leak in a casting caused by a loose chaplet does not in any way indicate defective metal, or that there are soggy places in the casting. But it does indicate that the metal was allowed to cool before pouring, and was not hot enough to burn into the surface of the chaplet.

It is not always advisable to pour metal into a mold at too high a temperature; and cleaner metal is produced when it is allowed to remain in the ladle for a period before pouring. This is because, during this period, large portions of the impurities rise to the surface of the metal and can be skimmed off. The ideal temperature of metal for pouring castings similar to turbine casings would be just hot enough to run into the thinner sections. Maintaining this temperature would have a tendency to reduce the shrinkage cavities in the heavier sections.

This is not always true with all castings. But when it is employed, it often results in a loose or leaky chaplet. It has been considered safer to take the chance of having a leaking chaplet, by not pouring the metal too hot, than to pour it hot and probably create internal shrinkage cavities, near the heavy sections.

Other Types of Hidden Defects

ANOTHER illustration of the creation of hidden defects, in making the casting pass inspection, is shown in Fig. 3. Figs. 3 and 4 are cross-sections of two molds for a cast iron combination face plate and shaft, cast in one piece. Fig. 3 shows the method formerly used to make this casting.

This plan of casting the shaft up had been resorted to, to assure a perfectly clean surface on the face of the 6-ft. face plate. A clean face was produced, but at the cost of the strength of the shaft, because, in spite of the best attention to feeding and churning, large shrink cavities occurred at the points where the smaller sections of the shaft joined the larger sections, shown at *EE* and *FF*. Often these defects were uncovered during the machining process, and the castings had to be either welded or scrapped.

The remedy for these defects in the shaft was to pour the mold with the face plate up, as shown in Fig. 4. More stock (½ in. extra) was allowed for machining the face. The result was a perfectly solid shaft, and a clean surface on the face plate. However, had a defect developed on the surface of the face plate, it would have been a much safer proposition to weld this surface than to weld the defects previously found in the shaft section of the casting, where the strength was materially affected.

Another important item connected with the revised molding of this casting was that it required only one-half the molding time to produce it. This applies to many castings of this character, where hidden defects are produced in the effort to make the casting pass inspection.

Most heavy sections in an iron casting must be fed with a properly prepared feeding head. These heads must be churned to keep them open and to make it possible to feed additional metal down as the metal already poured begins to solidify and settle. If this is not done, a shrink cavity will result, and a weaker casting than the engineers have figured on will be produced. The dangerous part of it all is that the defect is too often hidden.

Slight Increase in Wholesale Prices

Prices of commodities in February are reported by the United States Bureau of Labor Statistics at 96.4, compared with 96.3 in January. Both figures are a little higher than the 95.9 of February, 1927, and all are related to 100 as the average of 1926. Foods, fuel and lighting, metals and building materials showed fractional increases over January, while hides and leather products made an increase of 3 per cent. Farm products, textiles, chemicals and drugs and house furnishings showed fractional declines.

Metals and metal products, at 98.3, compared with 98.1 a month earlier and with 98 a year earlier, showed an increase because of advances in iron and steel prices. There was a decline in non-ferrous metals and a stationary condition in agricultural implements and automobiles.

New Oakland Assembly Plant Completed

The new assembly and shipping plant of the Oakland Motor Car Co. at Pontiac, Mich., has been completed, according to an announcement by A. R. Glancy, president of the company, and installation of conveyors and line equipment will begin at once. The new buildings provide the company with 580,191 sq. ft. of additional floor space. Contract for the foundations of the building was let on Oct. 29 last, and the structure was completed in what is thought to be record time. Nearly all of the machinery to be used in the plant is to be new, but the old assembly factory will be closed down on March 24, when a part of its equipment will be transferred to the new building. Production will be resumed, in the recently completed building, on April 2.

Blast Furnace Practice in Germany

(*Concluded from page* 803)

sending them to Germany and the rubble to America. So, while we in America have come to like, or at least tolerate, fine ores, and have developed furnace lines, fuel, blowers and charging equipment to fine natural ores, the Ruhr District has clung to coarse ores, natural or artificial. And this is all logical: After we had set a pace in tonnage output and coke economy, the only way the Ruhr District could follow, with the low-pressure blowing equipment and inflexible tub charging system, was to keep the burden open.

Coke More Irregular Than Ours

My distinct impression is that, leaving aside an exception here and there, German coke is not so well prepared as ours, being more irregular in size, more irregular in analysis and moisture. As another general proposition, the Ruhr coals do not seem to produce a by-product coke as dense and incombustible as is still the case with many of our coal and oven operations, and one finds a distinctly larger coke in use than I see here.

From data I secured the coke will average 30 lb. per cu. ft., and sometimes 32 lb. Ash and sulphur are 8 to 9 per cent, with 1.0 to 1.3 per cent sulphur and 4 to 8 per cent moisture. There is remarkable absence of fingery coke and cross fracture, and the coke does not break up easily. The structure seems close but regular, and little of sponge or pebble.

Ruhr coke is excellent, regardless of irregularity in size and moisture, and probably not so delicate or reactive to furnace variations as is much of ours.

Charging Less Scrap Than We Do

Scrap is not used to the extent that one encounters here, unless its use is camouflaged most successfully. Much of the borings and turnings is briquetted for open-hearth, or even foundry, use, thereby eliminating this large source of supply.

Flue dust is not recharged raw, except at one plant of nine I visited, where it is put back in to the extent of 5 per cent. They were, however, installing a Greenawalt plant. One plant was blowing the dust back in, 45 ft. beneath the top, or say 30 ft. below the stockline, in a single 3-in. opening. They use clean blast furnace gas, compressed to 60 lb., as a conveying fluid means, using 2200 cu. ft. of gas a minute. They reuse all dust made on three furnaces into one furnace, amounting to 70 tons a day. The regularity of the furnace is good and the result not discernible at the tuyeres, as far as sloppy conditions or burning of tuyeres is concerned. The same system is used at one other plant, where over 100 tons a day is injected into a single furnace.

Charging Less Flexible Than With Us

Coming to stocking and charging equipment: As a comparison, at one plant are three furnaces with Neeland tub filling, as modified after its adoption in the Ruhr District. The material modification is in the use of a tub much larger than those at Youngstown, Canton, Duquesne and Sparrows Point. There are two other furnaces with double skip and McKee top. The furnaces differ in lines and capacity, but not materially, and are of typical German construction. The skip-filled furnaces make 7 per cent dust and the tub-filled furnaces 3 per cent dust.

Skip-filled furnaces burn but three-fourths as many tuyeres as do the tub-filled furnaces. The skip-filled furnaces make about 20 tons more iron a day, and use about 40 lb. less coke. The pressure is said to be a bit higher on the skip-filled furnace, but both are under 16 lb. I recite this since it is the only going comparison I found abroad between tub-filling and skip-filling. I believe there is a trend toward skip-filling abroad.

While there may be found some over-engineered tub-filling systems, where one hoist handles the tubs for two furnaces, with a complicated transfer system on top, that is not representative. Standard equipment is one hoist per furnace, with well-worked out control. The disadvantage of the large tub-filling system as applied to our materials is obviously its lack of flexibility as compared with the double skip. The structure is heavier and more expensive.

Control Tube Much Used

A most striking departure in the top is the use of a control tube. On a 17-ft. stockline, the tube is 7 ft. 9 in. in diameter. It is held by brackets and extends down about 8 ft. The bell is from 8 ft. to 12 ft. 9 in. in diameter. It is, I believe, more largely characteristic of minette ore practice than of the present Ruhr mix. It has been abandoned at some works, and some men stated that its helpfulness was problematical. Sometimes it becomes detached and goes down along with the burden. In Luxemburg it is considerably used, with arrangements for changing its position.

(*To be concluded*)

Oil and Gas Power Meeting

A national meeting on oil and gas power is being planned by the American Society of Mechanical Engineers for June 14, 15 and 16, at Pennsylvania State College, State College, Pa. In connection with the meeting there will be an exhibition—the first of its kind—of oil and gas engines, parts and accessories. It will be located in the new mechanical laboratory of the college, which has 20,000 sq. ft. of floor space. The college is providing exhibition space free of charge and is supplying light, power, steam and compressed air for the use of exhibitors.

The technical program calls for a number of sessions on subjects of vital interest to this field of engineering. Such subjects as power economics, fuel oil specifications, research and specialization in engine manufacturing will be discussed by prominent engineers and executives in the industry.

Electric Power Capacity of Japan 15 Per Cent Greater in 1926

The total authorized capital of Japan's electrical industry at the end of 1926 was 3,495,000,000 yen ($1,642,650,000 at the present yen value of 47c.), a 24 per cent gain over the preceding year, according to a report received from Tokio by the Department of Commerce, Washington. Power-generating capacity increased 15 per cent to 33,190,000 kw., of which 2,000,000 kw. was from hydroelectric plants. The total horsepower of electric motors in operation was 2,290,000, an increase of 210,000 hp.

Safety Guides Published

Handbooks covering the national electrical safety code, together with safety rules for installation and maintenance of various types of electrical equipment and for their operation, have been issued by the United States Department of Commerce. They may be obtained from the Government Printing Office, Washington, at $1 for the "National Electrical Safety Code"; 60c. for "Line Construction"; 15c. each for "Electric Utilization Equipment" and "Rules for Operation of Electrical Machinery and Lines"; 10c. each for "Electrical Supply Stations" and "Radio Installations."

More Mechanical Stokers Sold

Sales of mechanical stokers in February are reported by the Department of Commerce at 85 units, aggregating 43,643 hp. This is the largest rating since last August, and with two exceptions the largest since March, 1927. It compares with 75 units of 26,572 hp. in January. A year ago there were 105 units sold in February, amounting to 41,400 hp.

Low Prices Depress Steel Earnings

Steel Corporation Profits in 1927 Were 24.7 Per Cent Less Than in 1926 — Independents Had Larger Decrease — 20 Companies Earned Only 5.1 Per Cent on Stockholders' Value

WITH a decrease of 1,304,646 tons or 9.12 per cent in total shipments of rolled and finished products and a decline of $2.38 and 81c. respectively in the average domestic and export prices as compared with the preceding year, the net profits of the United States Steel Corporation in 1927 fell off 24.7 per cent from the previous year. According to the corporation's annual financial statement, last year's profits were also about 3 per cent less than those of 1925, as were also total shipments of rolled and finished steel. However, the average price on identical products for both domestic and export shipments declined about $3.50 per ton in the two years, and a similar comparison of 1924 with 1927 shows a decrease of $6.78 per ton in prices received for domestic business and of $6.40 per ton for export shipments.

Operations Fairly Satisfactory

"Conditions attending operations during 1927," says the report, "were not as favorable as they were in the preceding year, yet despite the restrictive influence of decreased production and lower prices, the results secured were on the whole fairly satisfactory. Operating efficiency was well maintained, notwithstanding during a considerable part of the year it was necessary to adjust production to demand. The fair volume of demand for steel products which prevailed at the opening of the year continued only during the first four months, following which there was a marked decline which continued during the balance of the year. The substantial tonnage of unfilled orders carried over from 1926, with the rather liberal tonnage of business received during the first quarter, enabled the mills to operate at an average of about 87 per cent of capacity during the first six months, while during the last half the average was reduced to 70 per cent. The average for the entire year was 78.9 per cent, compared with 88 per cent in 1926. . . . Beginning about the middle of December, 1927, there was a substantial increase in the demand for products, with a greater stability in selling prices which has continued to the present time." This led to an increase in unfilled orders which stood at 4,398,189 on March 1, 1928, as compared with 3,972,874 on Dec. 31, 1927, and with 3,960,969 at the close of 1926. Operations during the first two months of 1928 averaged 86.5 per cent of capacity.

Table I.—Production in 1927 and 1926

Products	1927 Tons	1926 Tons	Decrease, Per Cent
Ores mined	25,646,927	29,262,741	12.4
Limestone quarried (includes dolomite and fluorspar)	4,656,150	5,513,739	15.6
Coal mined	27,430,329	34,294,657	20.0
Beehive coke	1,815,910	3.823,047	52.5
By-product coke	12,691,070	13,513,287	6.1
Pig iron	13,631,498	15,540,912	12.3
Spiegel, ferromanganese and ferrosilicon	152,728	164,389	7.1
Bessemer ingots	3,706,404	4,343,788	14.7
Open-hearth ingots	14,780,040	15,962,880	7.4
Rolled and finished steel products:			
Steel rails (heavy and light tee and girder)	1,482,353	1,764,589	16.0
Blooms, billets, slabs, sheet and tin plate bars	758,847	750,137	1.2*
Plates	1,423,277	1,526,153	6.7
Heavy structural shapes	929,175	1,029,152	9.7
Merchant bars, hoops, skelp, light shapes, etc.	2,426,363	2,821,093	14.0
Tubing and pipe	1,625,994	1,690,798	3.8
Wire rods	177,770	168,754	5.3*
Wire and wire products	1,259,907	1,307,099	3.6
Sheets (black and galvanized) and tin plates	1,645,358	1,884,789	12.7
Finished structural work	553,988	615,315	10.0
Angle splice bars and all other rail joints	273,916	313,345	12.6
Spikes, bolts, nuts and rivets	63,987	73,941	13.5
Axles	50.379	84,585	40.4
Steel car wheels	74,898	77,317	3.1
Sundry steel and iron products	233,070	227,345	2.5*
Total	12,979,282	14,334,412	9.5
Miscellaneous products:			
Zinc	75,074	73,730	1.8*
Sulphate of iron	34,260	29,114	17.7*
Fertilizer—"Duplex basic phosphate"	11,639	21,771	46.5
Fertilizer — Sulphate of ammonia	193,434	194,010	.3
Ammonia (as liquor)	709	664	6.8*
Benzol products	169,603	171,435	1.1
	Bbl.	Bbl.	
Universal Portland cement	15,425,000	14,526,000	6.2*

*Increase.

Production and Volume of Business

Decrease in output during 1927 as compared with 1926 was general in all lines except cement. Incidentally the exact reverse was true in 1926 compared with 1925. "In the case of finished products for sale," the report continues, "the decreases in 1927 were particularly large in the heavier classes of products used to a large extent by railroads, and in sheets and tin plates. A very considerable part of this latter decrease is attributable to a lessened demand for tin plates due to the canning industry's having carried over a large pack from 1926." Detailed production figures are shown in Table I.

The total value of business transacted by all subsidiaries during 1927 was $1,310,392,861, as against $1,508,076,090 in 1926. Of the 1927 total $870,235,942 resulted from sales of manufacturing, iron ore and coal and coke companies, while $319,445,504 was represented by inter-company sales. In 1926 the corresponding figures were $987,137,166 and $384,586,172. The remainder of the gross receipts from business was accounted for by transportation and miscellaneous companies.

In shipments in 1927 the greatest decrease as compared with 1926 was shown by iron ore, coal and coke, the decline having been 48.85 per cent. The decrease in rolled and finished steel products shipped was only 9.12 per cent. Domestic shipments of these products declined 8.57 per cent and export shipments 14.57 per cent. Detailed comparisons of shipments may be found in Table II.

Capital Expenditures and Dividends

Expenditures for additional property, new plants, extensions and betterments less credits for sales of property and salvage, and including lock-up in stripping and development expenses at mines, amounted to $97,585,998 in 1927. As usual the greater part of this sum, or $64,368,107, was taken by manufacturing properties, while $15,466,896 went into by-product coke plants. In the previous year capital expenditures amounted to $76,060,520, of which $59,485,328 went into manufacturing plants. In 1926 only $4,149,217 was taken by by-product coke plants, the large outlay last year having been occasioned by the construction of a gas line from the Clairton, Pa., plant to works in the Pittsburgh district. The more important plant additions

Table II.—Foreign and Domestic Shipments and Business

	1927 Tons	1926 Tons	Increase or Decrease Tons	Increase or Decrease Per Cent
Domestic Shipments				
Rolled and finished steel products	11,859,548	12,970,877	1,111,329	8.57 Dec.
Pig iron, ingots, ferro and scrap	228,028	227,537	491	.22 Inc.
Coal, coke and iron ore	564,814	1,104,191	539,377	48.85 Dec.
Sundry materials and by-products	129,688	132,024	2,336	1.77 Dec.
Total tons all kinds of materials, except cement	12,782,078	14,434,629	1,652,551	11.45 Dec.
Universal Portland cement (bbl.)	15,261,966	15,101,788	160,178	1.06 Inc.
Export Shipments				
Rolled and finished steel products	1,133,735	1,327,052	193,317	14.57 Dec.
Pig iron, ferro and scrap	6,790	2,887	3,903	135.19 Inc.
Sundry materials and by-products	145,571	143,400	2,171	1.51 Inc.
Total tons all kinds of materials	1,286,096	1,473,339	187,243	12.71 Dec.
Aggregate tonnage of rolled and finished steel products shipped to both domestic and export trade	12,993,283	14,297,929	1,304,646	9.12 Dec.
Total value of business (covering all of above shipments, including cement, railroad and marine equipment delivered and other business not measured by the ton unit):				
Domestic (not including inter-company sales)	$784.453,995	$886,710,521	$102,256,526	11.53 Dec.
Export	85,781,947	100,426,645	14,644,698	14.58 Dec.
Total	$870,235,942	$987,137,166	$116,901,224	11.84 Dec.

and betterments for which expenditures were made in 1927 were mentioned in THE IRON AGE of Jan. 5, 1928, page 78.

Expenditures and appropriations from earnings for maintenance, depletion, depreciation and amortization amounted to $172,781,272 in 1927, compared with $185,231,386 in 1926. Ordinary repairs and maintenance of manufacturing plants took $108,366,997 of this total in 1927 and $114,866,352 in 1926. For blast furnace and coke oven relinings $5,369,448 was expended last year and $4,693,324 in 1926.

The common stock issue was increased during the year in the amount of $203,321,000 by a 40 per cent stock dividend declared from undivided surplus and paid on June 1. This brought the common stock to $711,623,500 and, as the dividend rate of 7 per cent annually was continued on the new issue, the yearly common dividend requirements were increased from $35,581,175 to $49,813,645. With preferred stock dividends of $25,219,677, total dividends paid or declared during the year amounted to $75,033,322, which taken from net profits of $87,896,836 left an addition to surplus of $12,863,514. In 1926 surplus income amounted to $55,866,553, of which $30,000,000 was appropriated for plant improvement and betterments and the remainder added to undivided surplus. On Dec. 31, 1927, undivided surplus stood at $363,044,914. Comparative income account is shown in Table III.

Employees and Welfare Activities

The average number of employees during 1927 was 231,549, compared with 253,199 in 1926, a decrease of 8.55 per cent. Manufacturing properties required an average of 167,405 employees last year and 183,389 in the previous 12 months. Total wages and salaries in 1927 aggregated $430,727,005, as against $467,409,446

Table III.—Comparative Income Account For the Fiscal Years Ended Dec. 31, 1927 and 1926

	1927	1926	+ Increase — Decrease
Earnings—Before charging interest on bonds and mortgages of subsidiary companies:			
First quarter	$47,610,344.88	$47,155,460.85	+ $454,884.03
Second quarter	48,055,635.44	49,911,150.34	— 1,855,514.90
Third quarter	43,355,091.74	54,693,856.01	— 11,338,764.27
Fourth quarter	33,294,417.11	55,584,685.98	— 22,290,268.87
Total for year	*$172,315,489.17	*$207,345,153.18	—*$35,029,664.01
Less, interest on outstanding bonds and mortgages of the subsidiary companies	7,991,113.37	8,286,284.27	— 295,170.90
Balance of earnings	$164,324,375.80	$199,058,868.91	— $34,734,493.11
Less, charges and allowances for depletion, depreciation and amortization applied as follows:			
To depletion and depreciation reserves of subsidiary companies	47,390,338.57	53,171,075.95	— 5,780,737.38
To sinking funds on United States Steel Corporation bonds	11,515,668.84	11,049,835.37	+ 465,833.47
Net income in the year	$105,418,368.39	$134,837,957.59	— $29,419,589.20
Deduct:			
Interest on United States Steel Corporation bonds outstanding	16,674,175.68	17,228,669.16	— 554,493.48
Premium paid on bonds redeemed by sinking fund:			
On subsidiary companies' bonds	320,215.05	255,059.29	+ 65,155.76
On United States Steel Corporation bonds	1,078,000.02	987,924.94	+ 90,075.08
Balance	$87,345,977.64	$116,366,304.20	— $29,020,326.56
Add: Net balance of sundry receipts and charges, including adjustments of various accounts	550,858.39	301,100.69	+ 249,757.70
	$87,896,836.03	$116,667,404.89	— $28,770,568.86
Dividends on United States Steel Corporation stocks:			
Preferred, 7 per cent	25,219,677.00	25,219,677.00	....
Common, 7 per cent	49,813,645.00	35,581,175.00	+ 14.232,470.00
Surplus net income	$12,863,514.03	$55,866,552.89	— $43,003,038.86
Less, sums appropriated and expended or to be expended account of additions, improvements or betterments to plants and property	....	30,000,000.00	— 30,000,000.00
Balance carried forward to undivided surplus	$12,863,514.03	$25,866,552.89	— $13,003,038.86

---

*Balance of earnings after making allowances for estimated amount of Federal income taxes.

in the preceding year, resulting in an average daily earning per employee, exclusive of general administrative and selling forces, of $5.86 in 1927 and $5.82 in 1926. Including the administrative and selling forces, the average daily earnings per employee were $5.99 and $5.94 respectively.

Expenditures for pensions, housing and welfare, sanitation, accident prevention and other welfare activities were made at about the same rate as in recent years, and are taken up separately in these columns as they are dealt with in the bulletins issued from time to time by the corporation's Bureau of Safety, Sanitation and Welfare.

The number of registered stockholders on Dec. 31, 1927, was 151,596, compared with 143,703 one year ago.

Bethlehem Profits Declined 21.8 Per Cent

Net income of the Bethlehem Steel Corporation in 1927 amounted to $15,826,142, as compared with $20,246,167 in 1926, a decline of 21.8 per cent. "The value of orders booked during the year," says this corporation's annual report, "aggregated $280,199,101, as compared with $283,707,678 in 1926. Unfilled orders on Dec. 31, 1927, amounted to $58,609,006, as compared with $49,912,796 at the end of 1926.

"The construction program together with a better coordination of the various properties acquired from the Lackawanna, Cambria and Midvale companies have been largely responsible for a reduction of $7.27 per ton in the average cost of producing the finished steel products shipped by the corporation in 1927, as compared with the corresponding average based upon equivalent tonnages of the same products in 1923.

"Unfortunately the economies in production have not resulted in a corresponding increase in the net income of the corporation because, during the same period, the prices of steel products have steadily declined. The average billing price per ton of all rolled steel and other finished products shipped by the corporation during 1927 was $1.87 less than the corresponding average for 1926 and $8.60 less than the corresponding average for 1923."

Bethlehem's operations averaged 73.6 per cent of capacity in 1927, as compared with 81.1 in 1926. This resulted in a production of 5,590,754 tons of ingots in 1927 as against 6,162,759 in 1926 and of 4,315,509 tons of pig iron and ferromanganese, as compared with 4,551,353 tons in 1926. Production of rolled and finished products aggregated 4,006,612 in 1927 and 4,337,957 in 1926. Other comparative figures appear in Table VI.

Sharp Decline in Sheet & Tube Earnings

The Youngstown Sheet & Tube Co. had net profits of $7,023,334 in 1927, as compared with $15,148,876 in the previous year, a decline of 53.6 per cent. In commenting upon the decrease President James A. Campbell said in part: "The results of the year's business were not satisfactory, due principally to lower selling prices, reduction in volume, and particularly to the depression in the oil country trade, in which the company is largely interested through the manufacture of tubular products. We have also suffered very materially from lower selling prices of zinc ore, of which the company is a large producer."

Table IV.—Inventories

Profits Declined Throughout Industry

That the decline in profits during 1927 was general throughout the industry is evidenced by the fact that 20 companies, with a theoretical ingot capacity of 47,908,200 tons, or more than 82 per cent of the country's total rated capacity, earned $153,574,000 in 1927, as compared with $207,293,000 in the previous year, a decline of 25.9 per cent. Not including the Steel Corporation, the decline was 27.5 per cent. Of the larger companies, the Inland Steel Co., the American Rolling

†Shipments.

Mill Co. and the Gulf States Steel Co. were the only ones reporting a decline of less than 10 per cent.

On a total stockholders' investment, including common and preferred stock and surplus of $2,987,614,000, these 20 companies in 1927 earned 5.1 per cent, as against 7.3 per cent on a stockholders' investment of $2,842,072,000 in 1926. Comparative figures of these companies for the two years are shown in Table V.

ASK RATE MODIFICATION

Chicago District Steel Makers Seek Reconsideration of Consolidated Southwestern Decision

WASHINGTON, March 20.—Independent steel producers in the Chicago district, following similar action by other steel makers, last Wednesday filed a petition with the Interstate Commerce Commission asking that it reopen or modify its decision in the Consolidated Southwestern cases. It is contended that the decision fails to include a complete list of iron and steel products moving to the Southwestern destination territory involved and thus places a restriction on the free movement of such traffic. Objection is made also on the grounds that the scale prescribed is improper, unduly excessive and detrimental to iron and steel commerce. It is contended that it is improper to relate rates upon carload iron and steel traffic to class rate scales because of the widely different circumstances in transportation conditions governing the two classes of movement. Rates constructed upon consideration of distance alone are held to be restrictive to the free movement of heavy and bulky commodities such as iron and steel.

The scale provided, it is charged, unduly disrupts relationships of long standing between competitive producing points and will destroy commerce. Large markets, it is stated, will be diverted to foreign interests, and the movement of iron and steel traffic from the principal producing points of the United States will be revolutionized.

Railroads Also Object to Scale

From the carriers' standpoint, it is declared, a large volume of business which at present moves by rail from such points as Chicago, Cleveland and Youngstown to Southwestern territory will be diverted to mills situated at points available to barge or vessel movement, depriving rail carriers of substantial revenue. The purpose of the increased rates, it is stated, will be defeated as a result of this diversion of markets and tonnage.

Concurring in the view of other petitioners for reopening of the case on the principle of insufficient evidence, the Chicago producers also maintain that the revenue contributed by the iron and steel traffic is greatly in excess of revenues from general traffic. Consequently, it is stated, revenues derived from iron and steel traffic under the Southwestern scale would be greatly in excess of reasonable revenues and contrary to the intent of the Hoch-Smith resolution.

The petitioners include the Acme Steel Co., Clayton Mark & Co., the Crane Co., the Inland Steel Co., the Interstate Iron & Steel Co., Joseph T. Ryerson & Son, Inc., the Youngstown Sheet & Tube Co. and the North Western Expanded Metal Co.

Steel products which, it is asserted, are not included in the decision, but should be, are chain, concrete road joints, rails and fastenings in mixed carloads, strip steel, stays, box strap, bale tie buckles, wood joint fasteners, expanded metal ribbing lathing, corner bead clips, coiling or roofing clips, cove base fastenings, tin and terne plate, concrete and plaster reinforcement, wire mesh and expanded metal, wrought conduit pipe, building doors other than rolling, concrete road points and joists, studding, iron or iron-body valves, siding, traps and steam or oil separators.

Secretary of War Opposes Bill to Prohibit Export of Munitions

WASHINGTON, March 20.—The resolution of Representative Burton of Ohio to prohibit export from the United States of war munitions is so broad that it might endanger the maintenance of an adequate American munitions industry, Secretary of War Davis told the House Committee on Foreign Affairs last Thursday. Members of the committee dissented from the view of the Secretary of War, but the latter insisted that the resolution as drawn might apply not only to munitions as such but also to products such as steel, cotton, and copper, used in the manufacture of the finished product. Secretary Davis also recalled the position taken by President Wilson during the World War that it would be a violation of neutrality to prohibit munition shipments to the Allies. This was in response to the effort to put through an embargo on shipments of munitions.

European Markets Are Less Active

Steel Prices Still Firm—Germany to Eliminate Export Rebates —British Advance Pig Iron

(By Cable)

LONDON, ENGLAND, March 19.

CLEVELAND producers have increased foundry and forge iron prices by 1s. (24c.) per ton, as most of the current output is sold for two months forward and some contracts have been made for delivery up to September. The rise in prices brought out increased buying, especially by domestic consumers, as foreign pig iron is not competitive.

Hematite iron is steadier, but stocks are still heavy and makers are seeking orders. Foreign ore continues firm as a result of the Swedish strike. British demand for ore is poor, but German consumers are purchasing for early shipment.

Finished steel is generally quiet for export, but in the domestic market there is a good volume of structural and engineering orders. Plate mills are in need of orders, but consumers are not attracted by the rebate plan.

Tin plate is strong and active. The Asiatic Petroleum Co. has purchased 1,000,000 boxes for third quarter delivery and other consumers are showing marked interest. The larger makers are sold out until the end of June and have booked one-third of their output for the rest of the year. Makers have agreed not to accept orders at less than 18s. ($4.39) per base box, although the minimum price continues at 17s. 9d. ($4.33) per base box, f.o.b. works port. Some oil tin plate business has been done at 18s. 3d. ($4.45) per base box.

Galvanized sheets are inactive and the market is weak. Black sheets continue quiet.

The Australian Iron & Steel Co. has been formed by Dorman, Long & Co., Baldwins, Ltd., Howard Smith of Melbourne and the Hoskins Iron & Steel Co., with capital of £5,000,000, to develop an Australian iron and steel industry at Port Kembla.

Continental iron and steel is generally quiet, although British consumers have bought fair tonnages of billets and wire rods. The European Rail Makers' Association will meet in Paris, March 29. Negotiations are proceeding for reorganization of the International Wire Rod Syndicate.

GERMANY TO SEEK EXPORTS

Decline in Domestic Trade Expected—Mills to Eliminate Export Rebates—Shipyards Active

BERLIN, GERMANY, March 4.—The industrial situation is still satisfactory. Steel works are well booked with business for delivery into the second quarter, the number of unemployed has been declining for several weeks, and there was a recession in bankruptcies in February. According to the Institute for the Study of Trade Fluctuations, however, the intense industrial activity carried over from last year began to slacken in February. The decline in business, however, is expected to develop slowly and will be accompanied by increased German competition for export business. There is some labor unrest, and, following rejection by labor representatives of a compromise, the Siemens, Bergmann and the Mix und Genest companies in Berlin have suspended operations, releasing about 50,000 workmen.

Price disagreement between steel producers and consumers, which recently culminated in an advance by the steel syndicate, has been terminated. The Ministry of Industry has withdrawn an ordinance which brought the steel syndicates under the price-regulation provisions of the cartel law. This ordinance required the syndicates to report to the Government all price changes or agreements before they became effective. The steel producers have reached an agreement with the Ministry of Industry, under which the spread between domestic and export prices is to be gradually decreased until it disappears. This change, it is believed, will remove the principal grievance of consumers, who contend that the consumption of finished steel products in the domestic market is continually checked by high prices.

The Pig Iron Syndicate has made no change in prices for March. Domestic business has improved, but exports of pig iron are light. The ingot steel syndicate has made no change in domestic prices for March, but has increased its "world market" prices, so that rebates

(a) Nominal.

to domestic manufacturers for export are to that extent reduced. This is a result of the recent strength of prices in other Continental producing countries. The rebate on steel bars manufactured into export products has been reduced by about 10m. ($2.39) per ton. The new steel ingot price is 79m. ($18.88) per ton, compared with 100m. ($23.90) per ton on domestic sales. Blooms are quoted at 84m. ($20.08) per ton, compared with 107.50m. ($25.69) per ton in the domestic market; slabs, 96m. ($22.94), compared with 120m. ($30.68) per ton; medium gage sheets, 130m. ($31.07), compared with 155m. ($37.05) per ton.

The price spread between home and export prices is still large, and producers declare that the rebate system cannot be continued much longer and that the International Steel Cartel should take more effective action in raising Continental prices. Both output and sales of steel were slightly smaller at the beginning of March. Rolling mills are still well booked with business in bars, heavy-gage sheets and wire rods, but demand for structural material and medium and light-gage sheets is less active. Buying by German railroads has slackened considerably. Deliveries, however, are still extended. The average delivery offered on pig iron and steel ingots is two months, on steel bars two to three months and on light-gage sheets one to two months. The present decline in domestic buying is partly explained by the heavy purchases by consumers last fall, when a strike or lockout in the steel industry was believed imminent.

Export demand for iron and steel has been extremely active, but much of the recent purchasing was seasonal and a decrease in this business is expected. Imports of steel have increased slightly as a result of the extended deliveries quoted by domestic steel mills. Exports of semi-finished products are large and prices are firm. Demand for light railroad materials is better than for the heavier products, and there is heavy inquiry for bands, the price of which has advanced.

The Solingen steel industry reports considerable improvement, although manufacturers are suffering from an acute shortage of working capital and are encountering difficulty in paying wages. This is a result of the demand for long-term credits from customers. There is continued improvement in exports of Solingen cutlery and high-grade steels, despite strong competition from Sheffield. Exports to Switzerland, which normally buys about 50 per cent of its requirements of cutlery and special steels from Germany, are quite active.

Shipyards are prosperous. The Germanische Lloyd annual report records a total of 524,991 gross tons of construction registered in 1927, compared with 372,681 tons in 1926. Motor ship construction totaled 277,400 gross tons, while steam construction amounted to only 246,671 tons. This is the first year in which motor ship construction was in excess of steam vessel building. Of all the 1927 construction, 35 per cent represented foreign orders.

United States Second Largest Buyer of German Hoops

HAMBURG, GERMANY, March 3.—The United States has become Germany's second largest market for hoops. In 1927 exports from Germany totaled 129,204 metric tons, compared with 131,597 tons in 1926. Great Britain was the largest purchaser of German hoops, with 38,243 tons in 1927, and the United States was next with 18,083 tons, of which the greater portion was in cotton ties. Germany imported almost exactly as much as was exported, imports for 1927 totaling 129,209 metric tons, mostly from the Saar.

German Direct Steel Process Reaches Practical Stage

LONDON, ENGLAND, March 10.—The discovery of the Hoesch Steel Works (Germany), first announced a few months ago, by which it is claimed steel can be produced direct from ore, has now passed the laboratory tests and reached a practical stage. A plant is in process of erection and will be ready for operation next June. It is stated that this new method will reduce costs of steel production approximately 30 per cent.

JAPANESE BUYING RAILS

Small Inquiries in Market—Steel Importers in New York Report Improvement

NEW YORK, March 20.—Except for some pending rail business the Japanese market is quiet. Yokohama municipality opens bids March 23 on 10 miles of 91-lb. high T-rails and three miles of 136-lb. T-rails. Tokio municipality has taken bids on six miles of 122-lb. grooved rails and one mile of 140-lb. guard rails. An inquiry from the South Manchuria Electric Co., Dairen, Manchuria, for 290 tons of 91-lb. high T-rails is understood to have been awarded to a Japanese export house in New York for execution by an American mill.

The Chinese market is quiet. Chinese merchants continue to offer $27.50 to $28 per ton, c.i.f. Chinese port, for second-hand material and plate cuttings, but, as this figures back to a price equivalent to no more than the domestic market on heavy melting steel, very little business can be done. Some wire shorts have been sold, but Chinese offers on this material are also low. Recently an exporter in New York received a firm offer from China of about 25c. per base box under the current American mill quotation on about 1000 double boxes of tin plate.

New York importers of European steel report a moderate volume of interest on the part of consumers, but few sales have been made. A small tonnage of reinforcing bars for a sewer project in the New York district is being bid on. Prices of Continental material are high, and importers, in most cases, are quoting 1.65c. to 1.75c. per lb. on structural material and 1.75c. to 1.85c. per lb. on plain steel bars, duty paid, Atlantic port. Steel hoops are offered at about 2.15c. per lb., duty paid, New York.

Luxemburg's Exports to South America Improving

LUXEMBURG, March 6.—As a result of increases in German export prices, both French and Luxemburg mills have been enabled to advance their quotations. Export to the Far East continues difficult, with Japanese steel producers offering keen competition in their domestic market and with China still inactive as a result of the political situation. Business with South American markets, however, has improved, and there has been a slight revival of trade with the United States.

February has been more active than January, although prices have been reduced from the prohibitive levels of a few weeks ago. There is considerable confusion in the semi-finished material market. Few mills are able to offer early deliveries, and German sellers are quoting high prices. Most producers are booked with tonnage until May. Billets are held at £4 12s. to £4 15s. ($22.41 to $23.14) per ton, f.o.b. Antwerp, and blooms have been offered as high as £4 14s. ($22.90) per ton. Beams are quoted at £4 15s. 6d. to £4 17s. per ton (1.05c. to 1.07c. per lb.), and steel bars at £5 7s. to £5 7s. 6d. per ton (1.18c. to 1.19c. per lb.), f.o.b. Antwerp.

January production of pig iron totaled 229,602 metric tons, and there were 38 out of 47 furnaces in blast on Feb. 1. Steel ingot output in January was 212,938 metric tons.

Copper-Bearing Steel Scrap Causes Trouble in Germany

HAMBURG, GERMANY, March 3.—Copper-bearing steel in Germany (containing 0.2 to 0.75 per cent copper) is causing difficulties when it returns to industry in the form of scrap. A fair tonnage of such steel is beginning to appear on the scrap market, and the small percentage of copper that it contains renders it difficult for scrap dealers to classify it as an alloy, so that it has been delivered to mills as copper-free. Mills and dealers are endeavoring to work out a plan for its classification so that there will be no adverse effects from using it unintentionally.

Machinery Markets and News of the Works

PRICE TENDENCY HIGHER

Milling Machines, Shapers and Radial Drills Have Been Advanced

Business in Machine Tools Continues Moderately Active—Large Orders Placed at Chicago

PRICE advances have been announced by a number of machine tool manufacturers. Radial drill companies have generally followed the lead of a Cincinnati maker in putting up prices and in introducing a new method of quoting whereby the diameter of the column as well as of the length of the arm enters into the price, so that there are two or three prices for each arm length. The new prices on radial drills range from 8 to 30 per cent higher. Shapers have been increased in price about 8 per cent and some makers of milling machines have named higher prices.

Machine tool buying continues moderately active and indications are that sales for this month will equal, and perhaps exceed, those of February. At Chicago, the International Harvester Co. has bought $140,000 worth of equipment for its Rock Island, Ill., plant, and the Allis Chalmers Mfg. Co., Milwaukee, has bought about $40,000 worth. Among the pending projects in the Detroit district is a lot of special machines calling for an expenditure of about $400,000. The Apex Electric Mfg. Co., Cleveland, and the Champion Spark Plug Co., Toledo, have been among the larger buyers in the Cleveland district. The Mergenthaler Linotype Co., Brooklyn, and the Wright Aeronautical Corporation, Paterson, N. J., continue their purchases in the New York market. The Theodore A. Crane's Sons Co., Brooklyn, has bought 14 tools for its shipyard.

New York

NEW YORK, March 20.

ACTIVE demand for machine tools continues from industrial users and the railroads are beginning to show some interest in new shop equipment. Advances in prices are appearing in some branches of the industry. Shapers have been increased in most cases about 8 per cent, some makers of milling machines have made slight advances and, following the increase in lathe prices about the first of the year, lathe accessories have been advanced from 8 to 12 per cent. Radial drill prices are up from 8 to 30 per cent. Manufacturers of radial drills are quoting on a new basis, the diameter of the column being considered as well as the length of the arm, so that there are two or three prices for each arm length, depending upon whether the column is small, medium or large size. Tables are no longer included in the price of the drill, but are quoted separately.

Among the railroads, the Lehigh Valley is reported still preparing a short list of machine tool requirements. The New York Central, which has not been a purchaser of tools since the first of the year, placed some orders last week. The Western Railway of Alabama has closed on a 13 x 30-in. Pratt & Whitney lathe. The Atlanta & West Point Railroad Co. and the Central of Georgia have each closed on a Niles 48-in., 500-ton, double end wheel press and the former has also purchased a Niles No. 3 axle lathe. The Merchants Despatch Transportation Co., Rochester, N. Y., has purchased a No. 3 die sinking machine.

The Mergenthaler Linotype Co., Brooklyn, has made some further purchases of machine tools. The Wright Aeronautical Corporation, Paterson, N. J., is awaiting a further appropriation before making additional purchases. A recent purchase of about 14 tools by Theodore A. Crane's Sons Co., Brooklyn, included new and used engine lathes, a used planer, new shapers and radial drills.

Other purchases of machine tools included the following: An Indiana manufacturer, 6-in. vertical shaper, 13 x 30-in., 13 x 36-in. and 20 x 48-in. lathes and No. 2 jig boring machine from Pratt & Whitney Co.; a company in Hartford, Conn., an engine lathe; an electrical manufacturer, 12-in. vertical shaper; a Cleveland manufacturer, rebuilt Pratt & Whitney 14-in. grinder; a company in Pennsylvania, hob and cutter grinder; a manufacturer in western Pennsylvania, 16 x 60-in. lathe and a No. 2 jig boring machine; a Connecticut manufacturer, 1100-lb., single frame Niles steam hammer; a Pittsburgh company, Long & Allstatter type E single vertical punch; a manufacturer of drills, Mitts & Merrill No. 4 giant keyseater; a Wisconsin motor manufacturer, 3-ft. Morris radial drill; a Pittsburgh company, used 18-in. x 8-ft. Le Blonde lathe and used 26 x 17-ft. Pond lathe; a California company, No. 2 G Brown & Sharpe automatic cutting off machine; Harrisburg Light & Power Co., Harrisburg, Pa., 3½-ft. heavy-duty Morris radial drill, and Pratt & Whitney Aircraft Co., three United States pedestal tool grinders.

A stock issue to total about $2,200,000, is being arranged by Warner-Quinlan Co., 26 Beaver Street, New York, operating oil and asphalt refining plants, with main refinery in the Raritan River section, New Jersey, a considerable portion of proceeds to be used for extensions and betterments to double present capacity, including storage and distributing facilities.

J. Edward Birmingham, 45 Warburton Avenue, Yonkers, N. Y., architect, has plans ready for bids for a two-story automobile service, repair and garage building, 88 x 100 ft., at 5120 Broadway, New York, to cost about $100,000 with equipment.

Quartermaster supply officer, United States Army, Brooklyn, will receive bids until April 2 for one feed water heater, two boiler feed pumps, two 35-hp. steam boilers, and two ammonia compressors, 5 and 7½-tons, respectively, circular 162.

Orange & Rockland Electric Co., Monroe, N. Y., is disposing of bond issue of $1,250,000, a portion of proceeds to be used for extensions and improvements, including transmission line construction.

New York Edison Co., 130 East Fifteenth Street, New York, plans a new power substation at Laconia Avenue and Gun Hill Road, to cost $100,000 with equipment. T. E. Murray, 55 Duane Street, is architect.

Louis Shiffman, 1885 Prospect Avenue, Brooklyn, manufacturer of lighting fixtures, has filed plans for a one-story factory, 45 x 105 ft., to cost about $21,000 with equipment. Kavy & Kavovitt, 350 Stone Avenue, are architects.

Packard Motor Service Co., 206 South Broadway, Yonkers, N. Y., has awarded general contract to F. C. Berube, 418 West 260th Street, New York, for a two-story addition to its service and repair building, to cost close to $85,000 with equipment. William P. Katz, 45 South Broadway, is architect.

Signal corps procurement district, Governor's Island, N. Y., is asking bids until April 3 for 1500 steel spools, circular 134.

Federal-New York Co., Inc., Goshen, N. Y., is concluding negotiations for purchase of Goshen Illuminating Co., operating artificial gas plant and system. New owner contemplates addition in gas-generating facilities, new storage holder and extensions in system.

International Nickel Co., 67 Wall Street, New York, is arranging an expansion and improvement program at its Port Colborne, Ont., properties to cost $12,000,000. Work will include immediate installation of hoisting machinery, air compressors and auxiliary mining machinery, and additional equipment for hydroelectric power development. Later an addition will be built to electrolytic refinery at Port Colborne and other smelter development carried out. A new electrolytic copper refinery is contemplated at Copper Cliff, Ont., not included in above estimate of cost. Robert C. Stanley is president.

Otis Elevator Co., Eleventh Avenue and Twenty-sixth Street, New York, has awarded a general contract to Turner Construction Co., Graybar Building, for a two-story addition to plant at Yonkers, N. Y., to cost approximately $100,000 with equipment. W. O. Moyer is engineer in charge of construction.

Continental Baking Corporation, 285 Madison Avenue, New York, has approved a fund for extensions and betterments in different plants, including installation of ovens, power equipment, conveying machinery, electric mixing equipment and other apparatus.

New York Dock Co., 44 Whitehall Street, New York, has awarded general contract to William E. Anderson, Inc., 885 Flatbush Avenue, Brooklyn, for a three-story addition to its factory and terminal at foot of Joralemon Street, Brooklyn, to cost about $85,000.

Town Council, Belleville, N. J., has plans for a one-story municipal machine and repair shop to cost about $20,000 with equipment. Paul B. West, 24 Commerce Street, Newark, is architect.

Chamber of Commerce, Paterson, N. J., is negotiating with an aircraft manufacturing company, name temporarily withheld, to establish a local plant. Works will include parts and assembling departments, motors to be purchased from Wright Aeronautical Corporation. Reuben H. Reiffin, 152 Market Street, Paterson, is corporate representative for company.

Raymond N. Burke, Newark, has leased property at 15 Coates Street and will remodel for a brass foundry.

Kantor Brothers, Inc., 205 Waverly Avenue, Newark, plumbing equipment and supplies, has acquired adjoining property, 90 x 122 ft., improved with several buildings, and will use for expansion. Site has been used by Cook & Genung Co., building materials, which will build a new plant and yard on property lately purchased at Irvington.

Public Service Electric & Gas Co., Public Service Terminal Building, Newark, has authorized immediate work on different features of construction and improvement program to cost $22,000,000, including transmission line and power substation construction to cost more than $10,000,000; underground conduit electric lines to cost $500,000; switching stations, distributing facilities, etc. Nathaniel A. Carle is vice-president in charge of operation.

Barozzi Drying Machine Co., 940 Van Wagenen Avenue, North Bergen, N. J., has asked bids on general contract for a two-story and basement addition, 50 x 100 ft., to cost approximately $65,000. P. O. Simone & Co., 22 Journal Square, Jersey City, N. J., are architects.

New England

BOSTON, March 19.

MACHINE tool houses report little business transacted the past week and a decrease in new inquiries. The most important sales were a new boring mill and a 20-in. Pratt & Whitney lathe to two Connecticut manufacturers, and some radial drills, details of which are withheld; a used boring mill, used 20-in. motor-driven drill, 3-hp. Blount grinder to local shops; two 16-in. and one 20-in. drill to Massachusetts plants; and a two-spindle drill to a Vermont user. The situation is not as quiet as it might appear, however. Dealers are still negotiating on a large amount of machinery, inquiries for which have been out for several months in some instances. General opinion is that industry, particularly as it pertains to the metal-working trade, will show a slow but steady expansion.

Small tool business is spotty and March sales are a shade below those of February. Recent sales included a measuring machine costing $1,600.

March report of Worcester Bank & Trust Co. states that since the first of the year a marked improvement has been shown in activities of Worcester manufacturers. A large majority of mills, shops and factories had much better business in January and February than in November and December, and more than in first two months of 1927.

Some large Fitchburg manufacturers of machine equipment are operating on a day and night basis. Increased production is partly due to manufacture of a new automobile gear.

Plans are in progress for a new factory for Massachusetts Electro Mfg. Co., 11 Margin Street, Lynn, Mass., to replace one recently damaged by fire.

Bids close March 26 on a three-story and basement, 68 x 93-ft., junior high school at Providence, R. I., to contain metal-working shops. T. J. H. Pierce, city engineer, has plans.

L. C. Titus, 50 Lincoln Street, Watertown, Mass., architect, is taking bids on a one-story, 80 x 200-ft. manufacturing plant for Peerless Pressed Metal Corporation, 14 Electric Avenue, Brighton district, Boston.

Foundations are going in for a one-story, 60 x 160-ft. plant at Millbury, Mass., for New England High Carbon Wire Co., of which Frank Kilmer is president. Plans are private.

Work has started on a one-story, 50 x 85-ft., automobile repair shop for Cambridge Auto Forge, Sidney Street, Cambridge, Mass. E. T. P. Graham, 171 Newbury Street, Boston, is architect.

Plans are in progress for doubling output of airplane engines by Pratt & Whitney Aircraft Co., Hartford, Conn. Government orders on hand will keep present day shift of 400 men and night shift of 200 men busy for two years.

Plans have been approved by Boston Rubber Shoe Co., Malden, Mass., for electrification of mills at Malden and Melrose, replacing steam-power apparatus heretofore in service.

New England Water, Light & Power Associates, Inc., Providence, R. I., recently organized with capital of $4,000,000, is disposing of a preferred stock issue of $750,000, a portion of proceeds to be used for property purchases, transmission line construction, etc.

E. M. Jennings, 27 Harrison Street, Bridgeport, Conn., and associates, plan construction of a multi-story automobile service, repair and garage building to cost $100,000 with equipment.

Boston & Maine Railroad Co., North Station, Boston, will soon begin construction of a new boiler house at Westboro, N. H., to cost more than $55,000 with equipment.

Arlington Gas Light Co., 589 Massachusetts Avenue, Arlington, Mass., will soon begin construction of a one-story heater and governor plant unit reported to cost in excess of $50,000.

Board of Education, Bridgeport, Conn., has approved installation of manual training shops in basement of new three-story Bassick junior high school, for which bids will be received on general contract March 27. Structure will cost in excess of $400,000. Ernest G. Southey, Bridgeport, is architect.

Edison Electric Illuminating Co., 39 Boylston Street, Boston, has filed plans for a one-story repair shop and automobile service building, to cost close to $70,000 with equipment.

United States Gypsum Co., Chicago, has purchased property with water frontage at Charlestown, formerly occupied by Philadelphia & Reading Coal Co., and contemplates erection of 12 plant units. Handling equipment will be required.

Gulf States

BIRMINGHAM, March 19.

ARRANGEMENTS have been made by San Antonio Public Service Co., San Antonio, Tex., for acquisition of Comal Power Co., New Braunfels, Tex. Purchasing company will carry out an expansion program, including installation of 30,000-kw. turbo-generating unit and auxiliary equipment, and will make extensions in transmission lines. Company has approved bond issue of $7,500,000, a portion of fund to be used in connection with purchase of property and additions. James Lawrence is vice-president.

Hahn & Clay Co., 102 Milan Street, Houston, Tex., has completed plans for a one-story machine and forge shop, 95 x 115 ft., to cost close to $20,000 with equipment.

Interstate Cotton Oil Refining Co., Sherman, Tex., is considering construction of a one-story addition, to cost close to $45,000 with equipment. It is proposed to establish department for manufacture of containers.

New Orleans Public Service Co., New Orleans, has approved plans for construction of 22-in. diameter natural gas pipe line from Destrahan to New Orleans, to cost $275,000 with booster stations, etc.

Board of Education, Fairfield, Ala., is considering installation of manual training equipment in three-story high school to cost $150,000. Denham, Vankeuren & Denham, Age-Herald Building, Birmingham, are architects.

Board of Education, Alamo Heights, Tex., is planning installation of manual training equipment in one-story junior high school to cost $175,000, for which plans will be drawn by H. P. Smith, National Bank of Commerce Building, San Antonio, Tex., architect.

Ovens, power equipment, conveying and other machinery will be installed in new plant, 100 x 100 ft., to be erected by Schepps Baking Co., Fort Worth, Tex., to cost $200,000 with machinery.

National Cast Iron Pipe Co., Birmingham, will soon begin a one-story foundry addition, to cost in excess of $50,000 with equipment.

J. A. Burke, 3217 Cadiz Street, New Orleans, is planning purchase of machinery for production of cement roofing tile.

United Shutter & Awning Co., 801 First National Bank Building, Fort Lauderdale, Fla., is planning establishment of a local plant. Installation will include a punch and shear, band saw and wood-working machinery.

Board of Regents, University of Texas, Austin, Tex., is considering a fund of $8,000,000 for new buildings, including mechanical engineering and shop building, $350,000; electrical engineering building, $350,000; aeronautical building, $350,000; general shops, $200,000; chemical building, with laboratories, etc., $900,000; additions and improvements in power house, grounds and various operating buildings, $750,000. Edward Crane, Dallas, is a member of board. Herbert M. Greene Co., Construction Industries Building, Dallas, is architect.

Magnolia Gas Co., operated by Magnolia Petroleum Co., Magnolia Building, Dallas, Tex., is reported planning installation of a pipe line from Wheeler County gas field to Fort Worth, Tex., for natural gas supply, to cost more than $2,000,000.

Southwestern Gas & Electric Co., Marshall Street, Shreveport, La., is said to be considering construction of steam-operated electric power plant in northern part of State, to cost more than $1,000,000 with transmission lines.

J. D. Wrather, Amarillo Building Amarillo, Tex., is at head of project to construct and operate an oil refinery at Pyote, Tex., to cost more than $100,000. A company will be formed to carry out work.

Texarkana Water Corporation, Texarkana, Tex., is planning extensions and improvements in plant and system, including installation of a new pumping station with capacity of 2,000,000 gal. per day. Total program is estimated to cost close to $250,000.

Philadelphia

PHILADELPHIA, March 19.

PLANS have been filed by board of trustees, Mount Sinai Hospital, Philadelphia, for a steam power house to cost approximately $50,000 with equipment. Magaziner, Eberhard & Harris, 603 Chestnut Street, are architects.

U. S. M. C. Garages, Inc., 1401-7 Locust Street, Philadelphia, plans a three-story addition to service, repair and garage building to cost about $110,000 with equipment.

Tidewater Oil Sales Co., 11 Broadway, New York, has filed plans for a one-story storage and distributing plant, to cost about $35,000 with equipment.

United Gas Improvement Co., Broad and Arch Streets, Philadelphia, is arranging a construction and improvement program for Philadelphia Gas Works, an affiliated organization, to cost approximately $2,000,000 with equipment. Work will include expansion at gas-generating station at Richmond and Tioga Streets to cost $380,000, including completion of new gas holder; installation of new metering equipment to cost $92,000; installation of gas-pumping and coal-handling equipment at Point Breeze station to cost $130,000; extension of distributing lines and main to cost in excess of $1,000,000 with equipment. Koppers Co., Pittsburgh, will proceed with construction of new gas-generating and by-products coke plants for Philadelphia Gas Co., on 60-acre tract for which plans have been filed, to cost approximately $7,000,000 with machinery.

David Supowitz, 929 Chestnut Street, Philadelphia, architect, has plans for a two-story automobile service, repair and garage building, 74 x 200 ft., to cost in excess of $100,000 with equipment.

In connection with an expansion program in Philadelphia district to cost $9,000,000, Bell Telephone Co. of Pennsylvania, Philadelphia, has arranged an appropriation of $1,948,000 for purchase of new equipment, cables, conduits, manholes, manhole covers, etc., and $1,422,000 for underground cable installation.

Ryan Monoplane Co., St. Louis, has concluded negotiations for lease of Phillips tract, Camden, N. J., comprising 245 acres, as site for a new aviation field. Work will soon begin on hangar to house six airplanes, with repair and reconditioning shops, oil storage and distributing station, etc.

Campbell Soup Co., Camden, N. J., has begun erection of new plant to double present canning and distributing capacity. Project will include a new steam power plant and will cost close to $2,000,000. Harry A. Kelleher is superintendent.

County Board of Education, West Chester, Pa., C. T. Saylor, superintendent, is considering installation of manual training equipment in new high school to be erected at Lynhurst for West Grove, Avondale and London Grove townships, for which plans are nearing completion. A fund of $600,000 is available for structure.

Metropolitan Edison Co., Reading, Pa., is disposing of bond issue of $23,000,000, a portion of proceeds to be used for extensions and improvements in power plants and transmission lines. Company is under direction of General Gas & Electric Corporation, 50 Pine Street, New York.

Luzerne County Gas & Electric Co., Wilkes-Barre, Pa., plans extensions and betterments in plants and system to cost $900,000, including installation of additional equipment.

Board of Education of South Fayette Township, Cuddy, Pa., is considering installation of manual training equipment in new two-story high school at Sturgeon, Pa., to cost $200,000, for which bids will be asked on general contract this month. Lawrie, Green & Co., Third and Forster Streets, Harrisburg, Pa., are architects.

Delaware Electric Power Co., Wilmington, Del., an interest of United Gas Improvement Co., Philadelphia, is planning for extensions and improvements to cost $1,600,000, including transmission line construction, power substations, etc. Thomas W. Wilson is general manager.

Pittsburgh

PITTSBURGH, March 19.

THE Westinghouse Electric & Mfg. Co. has issued its regular quarterly machine tool list, totaling 30 items, with about 20 in which machine tool dealers will be interested. The Pittsburgh Plate Glass Co. is reported to have bought a few tools for its Ford City, Pa., works. Business in general is fairly active, but demand is largely for replacement and sales rarely include more than one item.

Bids will be received by Borough Council, Coraopolis, Pa., until April 2 for one triplex plunger pump, capacity 1,500,000 gal. per 24 hr. W. E. Cain, 1018 Fifth Avenue, is secretary.

Pittsburgh Plate Glass Co., Frick Building, Pittsburgh, has extended plans for expansion at its Ford City, Pa., sheet glass plant, and will expend close to $5,000,000 over about 18 months for new buildings and equipment. A complete new operating unit will be provided. Contract for building has been let to McClintic-Marshall Co.

Allegheny Metal Products Co., 1902 Brighton Road, Pittsburgh, has taken over a two-story building at Verona, Pa., and will remodel for a machine works.

Consolidated Gas Co., Huntington, W. Va., recently formed with a capital of $4,000,000 by W. P. Floyd and George I. Neal, Huntington, plans construction of a pipe line in Wayne and Mingo counties for natural gas supply.

Cities Service Power Co., 60 Wall Street, New York, is reported planning a steam-operated electric power house on Ohio River, opposite Moundsville, W. Va., to cost in excess of $300,000 including transmission lines.

Lawson Mfg. Co., Lexington Avenue and Thomas Boulevard, Pittsburgh, manufacturer of heaters and heating equipment, has asked bids on general contract for a one-story addition, to cost $50,000 with equipment. Barnard H. Prack, Martin Building, is architect.

Stetson Rubber Co., East Butler, Pa., recently formed by H. B. Callahan, general manager, Corona Cord Tire Co., with local mill, and other officials of that company, contemplates early erection of new plant on neighboring site, consisting of three one-story units, each 42 x 100 ft., to cost more than $70,000 with equipment. New mill will be used for production of automobile tires of special type.

Board of Education, Pitcairn, Pa., contemplates installation of manual training equipment in a two-story addition to high school to cost in excess of $160,000. W. Ward Williams, 309 Fourth Avenue, Pittsburgh, is architect.

Lewistown Overhead Door Corporation, Lewistown, Pa., is said to be planning an expansion program and contemplates doubling facilities in a number of departments.

Rolland Glass Co., Clarksburg, W. Va., manufacturer of sheet glass, has purchased plant of Lafayette Window Glass Co., Clarksburg, and will use for expansion.

City of Mannington, W. Va., is receiving bids until March 31 for construction of a concrete water tank. Plans and specifications at office of the city clerk.

The Crane Market

THERE is very little new inquiry for overhead or locomotive cranes, but there is a good volume of business still pending. In locomotive cranes, the Amtorg Trading Corporation, 165 Broadway, New York, still has nine 40-ton cranes to purchase for export to Russia and there is a 20-ton locomotive crane for the Delaware, Lackawanna & Western Railroad. In the overhead crane field there is a 25-ton, 1-motor crane for F. L. Smidth & Co., New York, two 225-ton and one 50-ton cranes for the Reading Railroad and two 15-ton lumber handling cranes for the Franklin Lumber Co., Newark, N. J. No action has been taken by Thomas E. Murray, consulting engineer, New York, on the 100-ton crane for the New York Edison Co.

In the Pittsburgh district, the Wheeling Steel Corporation is inquiring for eight overhead cranes for its projected 60-in. continuous 4-high strip mill at Steubenville, Ohio.

Among recent purchases are:

E. L. Phillips & Co., 50 Church Street, New York, 40-ton, 1-motor overhead crane for Long Island Lighting Co., from Cleveland Crane & Engineering Co.

Bethlehem Steel Co., Bethlehem, Pa., five 3-ton and four 2-ton, 2-motor hoists for Wilmington, Del., from American Engineering Co.

McClintic-Marshall Co., Pittsburgh, 20-ton, 84-ft. span overhead crane with 5-ton auxiliary for Pottstown, Pa., plant, from Wisconsin builder.

Valley Mould & Iron Corporation, Pittsburgh, 5-ton, 60-ft. span overhead crane for South Chicago works from Shaw Electric Crane Co.

Danville Structural Steel Co., Danville, Pa., two 10-ton, 96-ft. span overhead cranes from Northern Engineering Works.

Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., 5-ton, 26-ft. 6-in. span overhead crane for warehouse and service station at Utica, N. Y., from Northern Engineering Works.

W. S. McDowell Lumber Co., Chester, Pa., 10-ton crawl-tread locomotive crane from Browning Crane Co.

National Plate Glass Co., Ottawa, Ill., 13 2-ton, 3-motor electric cranes and two 20-ton, 3-motor overhead cranes from Harnischfeger Corporation.

Byllesby Engineering & Management Corporation, for delivery in Iowa, 50-ton power house crane from Harnischfeger Corporation.

St. Louis

ST. LOUIS, March 19.

PLANS are being drawn by Polar Wave Ice & Fuel Co., 3638 Olive Street, St. Louis, for an ice-manufacturing plant to cost more than $50,000 with equipment. H. G. Clymer, Wainwright Building, is architect.

Sphinx Electrical Mfg. Co., recently organized to take over and expand Bartholomew Battery & Supply Co., 4247 Beethoven Street, St. Louis, is considering a new plant in vicinity of Columbia, Mo., for manufacture of electric storage batteries to cost close to $75,000 with equipment.

Ovens, power equipment, conveying and other machinery will be installed in multi-story baking, storage and distributing plant to be erected by Great Atlantic and Pacific Tea Co., 3127 South Grand Boulevard, St. Louis, in Mill Creek Valley section, to cost more than $500,000. Headquarters are at 150 Bay Street, Jersey City, N. J.

Board of Education, Stillwater, Okla., has filed plans for a one-story manual training school, 100 x 100 ft., to cost approximately $40,000 with equipment. Phil A. Wilbur, Architectural Department, Agricultural and Mechanical College, is architect.

Black River Hydro-Electric Co., Railway Exchange Building, St. Louis, W. A. Fuller, secretary, is said to have plans for a hydroelectric generating station on Black River, near Poplar Bluff, Mo., to cost more than $3,000,000 with transmission lines. It is understood that project will be carried out in cooperation with Middle West Utilities Co., 72 West Adams Street, Chicago, which purposes to operate station under lease.

Missouri Portland Cement Co., Southwestern Bell Telephone Building, St. Louis, has awarded general contract to Gamble Construction Co., 620 Chestnut Street, for new cement mill in Prospect Hill section, to cost in excess of $250,000.

Board of Education, District No. 69, Lyons, Kan., plans installation of manual training equipment in new two-story high school to cost $250,000. Mann & Co., R. W. Building, Hutchinson, Kan., are architects.

Normandy Consolidated School District, Normandy, Mo., will take bids in April for a two-story and basement vocational school, 60 x 270 ft., to cost approximately $115,000 with equipment. William B. Ittner, Board of Education Building, St. Louis, is architect.

Capital Garage, Inc., Kansas City, Mo., has plans for a seven-story automobile service, repair and garage building, 125 x 180 ft., to cost close to $200,000.

City Council, Harvard, Neb., has authorized plans for a municipal electric light and power house to cost $40,000, in which amount bonds have been approved. Grant, Fulton & Letton, 525 South Thirteenth Street, Lincoln, Neb., are architects.

Larkin Packer Co., 6200 Maple Avenue, St. Louis, manufacturer of oil well supplies and expansion boring bars and cutters, has purchased at receiver's sale entire assets of Davis Boring Tool Co., including two-story factory at 3963 Forest Park Boulevard. Two companies will be operated separately with general offices at Larkin plant. No changes will be made in products, but Larkin company will confine itself solely to oil field equipment manufacture while boring bar, cutter and reamer production will be centered at Davis plant.

Superior Oxy-Acetylene Co., 511 Locust Street, St. Louis, has been organized to manufacture oxygen and acetylene and job Rego welding and cutting equipment. Plant has been built and all equipment purchased.

Chicago

CHICAGO, March 21.

SALES of machine tools are moderately active, but are not well distributed among the various sellers. The past week marked the closing of several sizable industrial lists. The International Harvester Co. has purchased $140,000 worth of equipment for its Rock Island plant, and Allis-Chalmers Mfg. Co., Milwaukee, has closed for machine tools amounting to $40,000. The Nash Motors Co. has purchased a number of replacement items and several new machines for its plants at Kenosha, Racine and Milwaukee. Prompt delivery is asked on these orders. A machinery manufacturer in Chicago has ordered a 48-in. planer.

The Santa Fe list remains the only railroad business of note before the trade. This request for prices came earlier than usual this year and the trade anticipates that some orders may be placed before the end of April. Inquiry for used machines is active but the available supply has been well picked over.

Nichol Foundry Co., 309 West Austin Avenue, Chicago, will build a foundry, 60 x 71 ft. G. E. Pearson, 400 West North Avenue, is architect.

Stocker, Rumely, Wachs Co., 117 North Jefferson Street, Chicago, dealer in machine tools, has been appointed Chicago district representative for line of shapers and lathes manufactured by Rockford Machine Tool Co., Rockford, Ill.

Theodore Geissmann & Co., Inc., 180 North Michigan Avenue, Chicago, dealer in iron and steel rolling mill products, has been appointed district sales agent in Central West for Van Huffel Tube Corporation, Warren, Ohio, manufacturer of lock-joint butted and open seam tubing.

City of Moline, Ill., will issue $350,000 in bonds for erection of a municipal barge terminal and grain elevator.

Plans are being arranged by Miehle Printing Press & Mfg. Co., Fourteenth and Robey Streets, Chicago, for new plant units and equipment for increase in capacity. A bond issue of $5,000,000 is being sold, portion of fund to be used for expansion.

Certain-Teed Products Corporation, 100 East Forty-second Street, New York, manufacturers of roofing products, etc., will take bids on general contract in April for one-story plant unit at Marseilles, Ill., largely for storage and distribution, to cost about $40,000 with equipment. Klipstein & Rathman, Security Trust Building, St. Louis, are architects.

City Council, Hawarden, Iowa, will soon begin construction of addition to municipal electric light and power plant, to cost about $40,000 including equipment. K. C. Gaynor, Norfolk, Neb., is engineer.

Iowa Railway & Light Co., Cedar Rapids, Iowa, has applied for permission to construct a hydroelectric power plant on Cedar River, near Rochester, to cost about $2,000,000, including power dam and transmission lines. Isaac B. Smith is president.

Denver & Rio Grande Western Railway Co., Equitable Building, Denver, Colo., is planning for new car and locomotive repair shops at Salida, Colo., to cost approximately $100,000 with equipment. It is also proposed to install several water-treating plants in Colorado and Utah at a cost of about $200,000.

Chicago, Burlington & Quincy Railroad Co., Omaha, Neb., is said to be planning enlargements in its engine house and shops at Denver, Colo., to cost more than $50,000 with equipment.

Mechanical Plating Co., 620 West Monroe Street, Chicago, has purchased one and two-story building at 1522-26 West Austin Avenue, 75 x 110 ft., and will remodel for a new plant.

Minneapolis, St. Paul & Sault Ste. Marie Railway Co., National Soo Line Building, Minneapolis, Minn., is considering extensions and betterments in engine house and shops at Stevens Point, Wis., to cost about $30,000.

Northern States Power Co., 15 South Fifth Street, Minneapolis, Minn., will make extensions and improvements in steam-operated electric power plants at Fargo, Grand Forks and Minot, N. D., including installation of electrical and mechanical equipment, boiler-feed pumps, coal crushers, etc. Company is operated by Byllesby Engineering & Management Corporation, 231 South La Salle Street, Chicago.

Barber-Greene Co., Aurora, Ill., manufacturer of portable conveyors, bucket loaders and other mechanical equipment, contemplates a one-story addition to cost more than $30,000.

Dayton Co., Seventh Street and Nicollet Avenue, Minneapolis, Minn., has asked bids on general contract for a four-story addition to automobile service repair and garage building, to cost about $400,000 with equipment. Long & Thorshov, Andrus Building, are architects.

Consolidated Machine Tool Corporation will move its Chicago office April 1 to room 417, Machinery Hall, 547 West Washington Boulevard.

American Bosch Magneto Corporation, Springfield, Mass., has merged its Detroit and Chicago sales and service branches under general management of C. L. Shedd, automotive general sales manager at Chicago. Detroit manufacturer's sales division will maintain offices and personnel at 89-95 Hancock Avenue West, Detroit, under management of Max Tost.

Combustioneer, Inc., 570 West Randolph Street, Chicago, has been organized by men formerly interested in Iron Fireman Corporation, Chicago, to manufacture new automatic stoker designed to feed coal automatically to fire bed by underfeed principle and distribute it evenly over entire bed.

Fantus Factory Locating Service, formerly at 1313 South Oakley Avenue, Chicago, has removed to 129 North Clark Street, Chicago.

Milwaukee

MILWAUKEE, March 19.

FURTHER improvement in the call for machine tools has developed although not all shops are sharing in the betterment. Production averages well, however, and the trend is upward. Miscellaneous business still predominates, although automotive and power farm machinery industries are advancing steadily. Replacement business is relatively good and there is a moderate movement of the better class of used tools. Confidence is expressed that a substantial volume of new business is in the foreground, and that the hesitating tone of business is gradually disappearing.

Union Refrigerator Transit Co., Milwaukee, manufacturer of refrigerator cars, has increased its capitalization from $2,000,000 to $3,500,000. While no plant extensions are contemplated at present, considerable replacement of equipment is being done. Walter Alexander is president and general manager.

Frank Kriwanik, Denmark, Wis., has placed general contract for erection of a garage, sales and service building, 54 x 105 ft., part two stories and basement, with Jorgenson Construction Co., local.

Smalley Corporation, Manitowoc, Wis., has been incorporated with $50,000 capital stock to take over and continue operation of Smalley Mfg. Co., farm machinery and tools. Business has been conducted for some time by a committee of creditors. W. R. Carr, Anderson, Ind., has now acquired entire interest and becomes vice-president of new corporation. Frank J. Kerscher, Manitowoc, is president, and John G. Kelley, who has been in charge of affairs for creditors, is assistant secretary and manager.

H. Vingren, formerly connected with Nash Motors Co., Kenosha, Wis., has organized Vingren Pattern Works and is establishing a shop in Kenosha for production of wood and metal patterns, templates and allied goods.

Allen-Bradley Co., 494 Reed Street, Milwaukee, manufacturer of electric controlling devices, radio specialties and equipment, is taking bids for erection of a furnace house and substation, 44 x 140 ft., one and two stories. Work on plant additions, costing about $350,000, is nearing completion and includes a nine-story wing, 50 x 150 ft., and a five-story addition on present three-story shop, 67 x 90 ft.

F. Rosenberg Elevator Co., Milwaukee, manufacturer of freight and passenger elevators, has established a branch office at 113 Main Street, La Crosse, Wis., in charge of Henry Schulz. A service station equipped to give service on all makes of elevators will be maintained.

South Atlantic States

BALTIMORE, March 19.

CONTRACT has been let by Virginia Barrel Co., Ostend and Leadenhall Streets, Baltimore, to Maryland Metal Building Co., local, for a one-story addition, totaling about 8500 sq. ft. floor space, for production of steel drums. Headquarters are at Winchester, Va.

Board of District Commissioners, District Building, Washington, is asking bids until March 29, for sheet steel for use in automobile license manufacturing plant at district reformatory, including 199,500 lb. No. 22 gage, and 33,320 lb. No. 20 gage; until March 26 for metal lamp posts and fittings for electrical department.

Celluloid Corporation, Ancelle, near Cumberland, Md., operated by Celanese Corporation, same location, has awarded general contract to Hughes-Foulkrod Co., Schaff Building, Philadelphia, for initial units of plant for production of cellulose acetate, to cost $1,500,000 with machinery.

Norfolk & Western Railway Co., Roanoke, Va., Clyde Cocke, room 351, purchasing agent, is asking bids until March 28 for parts for electrical equipment, electrical apparatus and repair parts for mechanical stokers, contract serial AA-519.

Bureau of Supplies and Accounts, Navy Department, Washington, will receive bids until March 27 for welding wire and rods for Eastern and Western yards, schedule 8693; insulated wire and cable, schedule 8708; pliers and nippers, schedule 8666; steel tubing for Mare Island and Puget Sound yards, schedule 8671; four cruising turbine reduction gears and oil clutch assembly and one set of spares for Mare Island and Puget Sound yards, schedule 8672.

Georgia Portland Cement Corporation, Sandersville, Ga., has plans for a new cement mill, work to begin in 60 to 90 days. Initial plant will have output of 50,000 bbl. per month of special quick-hardening cement and will cost in excess of $1,200,000 with machinery. H. K. Ferguson Co., Cleveland, is engineer for project, and has opened offices in Southern Finance Corporation Building, Augusta, Ga. W. H. Kewish is special engineer in charge of machinery purchases.

General Minerals Corporation, Mather Building, 516 G Street, N. W., Washington, Lyle N. Gillis, secretary, is completing plans for mining plant on about 1000 acres at Chula, Va. Installation will include steam-operated power plant, with boilers, engines and generators; hoisting equipment with maximum capacity of 6 tons; conveying equipment, etc.

Public Improvement Commission, Baltimore, has approved fund of $700,000 for establishment of municipal airport, including construction of hangars, repair and reconditioning shops, oil storage and distributing plant, etc. A special committee, Robert Garrett, chairman, has been appointed to carry out project. Charles F. Goob is chief engineer of city.

Georgia Car & Locomotive Works, Weyman and Ridge Avenues, Atlanta, Ga., plans erection of one-story unit to replace building destroyed by fire March 9.

Standard Construction Co., 514 St. Paul Street, Baltimore, is planning purchase of portable type air compressor, capacity about 110 cu. ft. per min.

Board of Awards, office of city register, City Hall, Baltimore, has approved plans for immediate erection of one-story repair shop and equipment storage and distributing building, to cost about $125,000 with equipment.

General purchasing officer, Panama Canal, Washington, is asking bids until April 5 for steel filing equipment, electrical fixtures, cable, wire, transformers, switches, screws, bolts, steel drums, etc., for canal zone service, Panama schedule 1865.

Cincinnati

CINCINNATI, March 19.

THERE has been no diminution in machine tool sales which continue at about the same rate that has prevailed so far this month. Orders have come mostly from scattered sources and have been well diversified, although automobile manufacturers probably have contributed the largest volume. Among pending transactions in the Detroit district is one calling for the purchase of a number of special machines at an expenditure of more than $400,000. Analysis of sales made by local machine tool companies shows that demand centers about high production tools.

Radial drill builders have followed the lead of a Cincinnati company in raising prices. Operations in metal-working plants in this city are moderate, employment having increased slowly but steadily since the first of the year. In used machinery an order for two 144-in. planers is noted.

Contract has been let by Gruen Watch Co., Iowa and McMillan Streets, Cincinnati, to Lehigh Construction Co., Newport, Ky., for a one-story addition, including improvements in present plant, to cost about $25,000. G. C. Burroughs, Cincinnati, is architect.

Sycamore Garage Co., 2400 Gilbert Avenue, Cincinnati, has taken out a permit for a four-story service, repair and garage building, to cost about $250,000 with equipment.

Air Corps, Material Division, Wright Field, Dayton, Ohio, is asking bids until March 28 for one tractor and one 1-ton crane, 18-ft. lift, circular 274; until March 27 for eight vertical view finder assemblies, and March 28 for tanks.

Common Council, Henderson, Ky., is reported planning extensions and improvements in municipal electric light and power plant, including new generating equipment, to cost about $50,000.

Stimpson Computing Scale Co., Breckenridge and Logan Streets, Louisville, has awarded general contract to J. F. Russell & Co., Louisville, for an addition to cost close to 100,000 with equipment. O. D. Mock, 221 South Fifth Street, is architect.

Memphis Power & Light Co., Memphis, Tenn., is disposing of a bond issue of $2,275,000, a portion of proceeds to be used for extensions and improvements in power facilities and transmission lines.

King Powder Co., First National Bank Building, Cincinnati, is said to be planning erection of addition to smokeless powder mill at Ashland, Ky., to cost close to $45,000 including wheel mills, corning mill and auxiliary equipment.

Southern United Ice Co., Memphis, Tenn., has arranged for bond issue of $1,000,000, a portion of proceeds to be used for extensions and betterments in ice-manufacturing and cold storage plants, and for acquisition of additional properties at Meridian and Newton, Miss.

Board of Education, 216 East Ninth Street, Cincinnati, will take bids on general contract in about 60 days for a two-story automotive trade school, to cost in excess of $80,000 with equipment. Bert L. Baldwin, Second National Bank Building, is architect.

Cleveland

CLEVELAND, March 19.

MACHINE tool sales in this territory are rather slow and confined for the most part to single machines. Manufacturers report a fair volume of widely distributed orders, also mostly for single tools. Demand from the automotive industry in Michigan and other districts continues light. The Apex Electric Mfg. Co., Cleveland, has purchased a few machines against its recent list and the Champion Spark Plug Co., Toledo, is buying some equipment. A Cleveland maker of turret lathes reports a good volume of sales this month, and orders during the week included two machines for shipment to Sweden. Rebuilt used machinery is in active demand.

Plans have been filed by Arcade Garage Co., Akron, Ohio, for a four-story service, repair and garage building, 132 x 135 ft., to cost about $250,000 with equipment.

Dockray Brass & Iron Co., North Sixth Street, Zanesville, Ohio, will soon take bids for a one-story addition, to cost close to 40,000 with equipment. J. P. Schooley, Masonic Building, is architect.

Empire Floor & Wall Tile Co., Zanesville, Ohio, contemplates early rebuilding of portion of plant recently destroyed by fire, with loss close to $80,000 including equipment.

Lima-Cadillac Co., Lima, Ohio, local representative for Cadillac automobile, has approved plans for a two-story and basement service, repair and garage building, 66 x 205 ft., to cost approximately $100,000 with equipment.

Vulcan Last Co., Portsmouth, Ohio, manufacturer of iron shoe lasts, is said to have purchased property at Brockton, Mass., for a branch plant.

Grasselli Chemical Co., Guardian Building, Cleveland, has plans for a one-story power plant at mill, to cost approximately $40,000 with equipment.

Simplex Aircraft Corporation, Defiance, Ohio, has been formed to manufacture Red Arrow monoplanes. Company is at present operating in a building of American Steel Package Co. and has made no plans toward construction of plant.

Austin Co., Cleveland, will erect a new and larger woodworking shop on site of steel fabricating plant at Euclid, Ohio, to replace former shop on East 152nd Street, Cleveland. Ground has been broken for a two-story and basement addition to main office at Cleveland.

Buffalo

BUFFALO, March 19.

AN expansion program is under consideration by Curtiss Aeroplane & Motor Co., Buffalo, for increased facilities for motor and airplane parts and assembling. It is proposed to increase the stock from 218,060 to 300,000 shares, no par value, a portion of proceeds to be used for development. C. M. Keys is president.

The duPont Cellophane Co., Inc., River Road, Buffalo, manufacturer of special processed papers, has plans for a one-story addition to cost more than $200,000 with equipment. DuPont Engineering Co., duPont Building, Wilmington, Del., is engineer.

McCabe & Sheeran Machinery Corporation, 244 Larkin Street, Buffalo, purchaser of plant and equipment of Sizer Steel Co., is disposing of machinery, tools and other equipment, and will soon place factory property on the market.

Ansco Photo Products, Inc., Charles Street, Binghamton, N. Y., manufacturer of cameras, tripods and other photographic equipment, has engaged Otto S. Schlick, 136 Liberty Street, New York, engineer, to prepare plans for an addition to cost more than $50,000 with equipment. Company has recently formed a consolidation with Agfa Products, Inc., and Agfa Raw Film Corporation, manufacturers of kindred apparatus.

Brockway Motor Truck Corporation, Cortland, N. Y., is disposing of a preferred stock issue of $3,000,000, a portion of fund to be used in connection with merger with Indiana Truck Co., Marion, Ind., and general plant expansion. Production at Cortland and Marion plants, as well as branch factories, will include a complete line of motor trucks from light type to 7-ton capacity. George A. Brockway is president. Martin A. O'Mara, formerly connected with White Co., Cleveland, has been made vice-president and general manager.

Board of Education, Genesee Building, Buffalo, plans installation of manual training equipment in two-story high school on Ontario Street, to cost $1,000,000, for which bids will soon be asked on general contract. F. J. & A. Kidd, 522 Franklin Street, are architects.

Josiah Anstice Co., Inc., Rochester, N. Y., has let general contract to Alexander, Shumway & Utz, for an addition to its foundry, to be completed in about six weeks.

Otis-Sawyer Boiler & Foundry Co., Oswego, N. Y., has separated its boiler and foundry departments under names of the Sawyer Brass & Iron Foundry Co. and Otis Boiler Co., Inc. Former company will continue to operate foundry, while boiler department, which was destroyed by fire about two months ago, will be rebuilt and operated by Otis company.

Indiana

INDIANAPOLIS, March 19.

BIDS have been asked on general contract by Truck Engineering Co., Fort Wayne, manufacturer of motor truck bodies, etc., for a one-story addition to cost close to $75,000 with equipment. Guy Kahurin, Standard Building, is architect. Headquarters are at 1801 East Thirty-seventh Street, Cleveland.

In connection with expansion and improvement program to cost $2,500,000, Indiana General Service Co., Muncie, will expend about $250,000 for a new local substation and switching plant.

United Brick Co., Brazil, recently formed by J. E. Hendrix, Veedersburg, and associates, has acquired local property of Chicago Sewer Pipe Co., and will build new works for daily production of 150,000 face brick. A boiler plant and machine shop will be provided. Entire project will cost upward of $85,000.

Board of Education, Brazil, has authorized installation of manual training equipment in two-story addition to junior high school to cost $120,000. McGuire & Shook, 941 North Meridian Street, Indianapolis, are architects.

Graham-Paige Co., West Warren Street, Detroit, manufacturer of automobiles, has formed Motor Bodies, Inc., a subsidiary, to operate such division of the business. Work is in progress on improvements in former plant of Karges Wagon Co., Evansville, recently taken over, with main unit, 100 x 400 ft., and production will soon begin on bodies for 110½-in. wheel-base cars. Later this plant will be extended for manufacture of custom bodies for larger cars.

Marvel Carburetor Co., Flint, has arranged for purchase of controlling interest in Wheeler-Schebler Carburetor Co., Indianapolis, for about $1,000,000, and will consolidate with its organization. It is proposed to continue both plants in operation and carry out an expansion program.

Board of Education, Crisman, plans installation of manual training equipment in new two-story high school to cost $110,000, for which plans will be drawn by W. M. Ellwood, Christman Building, South Bend, Architect.

Hammond Bolt & Nut Co., Hammond, has purchased bolt, nut and rivet department formerly owned by Illinois Car & Mfg. Co. and will operate it under practically same management.

Canada

TORONTO, March 19.

THE volume of business placed for machinery and tools the past week or two indicates that industrial, mining and other fields still have considerable needs to be taken care of. Lists are not numerous, but orders for single tools total large. Demand for replacement is active and much buying is being done on this account.

Reid & Brown, Toronto, have purchased property on Fleet Street, 64 x 670 ft., for erection of a new steel fabricating plant. Work on foundations will start at once. Building will be 300 ft. long and cost approximately $200,000. An electric traveling crane will be installed.

S. Shupe, city engineer, Kitchener, Ont., is preparing plans for a 3,000,000-gal. activated sludge sewage disposal plant for the city. Construction work will start in spring.

I. T. S. Rubber Co. of Canada, Ltd., 28 Alpine Avenue, Toronto, is receiving bids for erection of an addition, three stories and basement, 80 x 150 ft. B. Clayton, care of company, is engineer.

Burroughs Wellcome & Co., 410 St. Nicholas Street, Ville Lasalle, Que., plans erection of a factory to cost $75,000.

Crown Cork & Seal Co., Ltd., 87 Parliament Street, Toronto, has let contract to Wells & Gray, Ltd., Confederation Life Building, for erection of a factory to cost $100,000. It will be one story, 120 x 200 ft., steel and brick.

Galetta Electric Co., Arnprior, Ont., plans installation of an electric generator, 400 kva. waterwheel and governor in its plant at Galetta, Ont.

Gatineau Power Co., 91 Cartier Street, Ottawa, Ont., contemplates construction of a power plant on North River at St. Jerome, Que., and another at Chute-A-Pateau on North River near St. Adele d'Abercombe, Que.

British Columbia Electric Power & Light Co., Victoria, B. C., plans the erection of a substation at Government and Bay Streets, to cost $250,000.

Detroit

DETROIT, March 19.

PLANS are being considered by Consumers Power Co., Jackson, Mich., for a new power house in vicinity of Morley, Mich., to cost close to $10,000,000, including transmission lines.

Detroit Show Case Co., 1654 West Fort Street, Detroit, has plans for a two-story addition to cost more than $60,000 with equipment. B. C. Wetzel & Co., Dime Bank Building, are architects.

Pines Winterfront Co., 2636 Indiana Avenue, Chicago, manufacturer of automatic radiator shutter fronts for automobiles, has purchased controlling interest in Detroit Motor Appliance Co., Stephenson Building, Detroit, manufacturer of kindred products, and will consolidate with its organization.

Chrysler Motor Car Co., Detroit, has awarded general contract to A. W. Kutsche, 2111 Woodward Avenue, for a one-story addition, 80 x 150 ft., to cost close to $100,000. Smith, Hinchman & Grylls, Marquette Building, are architects and engineers.

Manufacturers' Steel Supply Co., 2162 Clay Avenue, Detroit, is said to be planning installation of power press and other equipment.

Chevrolet Motor Car Co., Detroit, has awarded general contract to Everett Winters Co., 1651 East Grand Boulevard, for a one-story addition, 80 x 400 ft., to be equipped as a forge shop, to cost close to $100,000. Albert Kahn, Inc., Marquette Building, is architect and engineer.

Liberman & Gittlen Metal Co., 322 Front Street, S. W., Grand Rapids, Mich., will soon take bids on general contract for a one-story addition, to be used largely for storage and distribution, to cost $40,000 with equipment. D. R. McEachron, Association of Commerce Building, is architect and engineer.

Wolverine Mill & Lumber Co., 8931 Greeley Avenue, Detroit, is completing plans for a one-story and basement addition to cost about $70,000 with woodworking machinery and auxiliary equipment. Maurice H. Finkel, Book Building, is architect.

Kewaunee Mfg. Co., South Center Street, Adrian, Mich., manufacturer of enameled iron laboratory furniture and equipment, will ask bids in April for a two-story addition to cost close to $40,000 with equipment. Headquarters are at Kewaunee, Wis.

Detroit Chain & Service Co., Detroit, has been formed to manufacture roller chain and sprockets. Manufacturing operations have not yet begun, but company is acting as agent for American High Speed Chain Co., Indianapolis.

Losinger Aircraft & Propeller Corporation, 5257 Brooklyn Avenue, Detroit, has been organized to manufacture airplanes with special type of changeable pitch propellor. Company is leasing shop and will be in market for material and equipment.

Pacific Coast

SAN FRANCISCO, March 14.

PLANS have been filed by Laher Auto Spring Co., Twenty-sixth and Magnolia Streets, Oakland, Cal., for one-story addition, to cost about 20,000 with equipment; general contract let to Austin Co.

Southern Sierras Power Co., Riverside, Cal., has authorized plans for construction of steel tower transmission line from San Bernardino to plant of Los Angeles Gas & Electric Co., at Seal Beach, 58 miles, to cost $750,000.

Ovens, power equipment, conveying and other machinery will be installed in one-story plant to be built by Union Maid Bakery, Los Angeles, to cost about $85,000. L. A. Parker, Architect's Building, is architect.

In connection with an expansion and improvement program now in progress, Hawley Pulp & Paper Co., Oregon City, Ore., plans construction of new central steam power plant with high-pressure boilers and other equipment; also new pulp mill equipment for electrification of this division, replacing present water-power service. Entire project is estimated to cost $2,000,000.

Pacific Power & Light Co., Portland Gas & Coke Co., and Northwestern Electric Co., Portland, affiliated organizations, are arranging an expansion and improvement program to cost $2,250,000, including additions to power plants, transmission lines and power substations.

Willapa Pulp & Paper Mills, Inc., South Bend, Wash., has awarded general contract to Puget Sound Bridge & Dredging Co., Central Building, Seattle, for new one-story pulp mill, to cost about $600,000 with equipment

Webber Machine Works, Columbia Street, Vancouver, Wash., has filed plans for one-story machine shop addition, 50 x 80 ft., to cost about $20,000 with equipment.

Utah Power & Light Co., Salt Lake City, has arranged for bond issue of $5,500,000, a portion of proceeds to be used for extensions and improvements in power facilities and transmission system.

Southern Counties Gas Co., Los Angeles, has plans for a two-story equipment storage and repair shop addition at Venice, Cal., to cost about $45,000 with equipment. Francis D. Rutherford, Mills-Fraser Building, Santa Monica, Cal., is architect.

Harry S. Scott, president Mission Rock Co., San Francisco, is at head of project to construct and operate a cold storage and refrigerating plant in Mission Rock district, to cost more than $150,000 with equipment.

Olympic Motorboat Corporation, Seattle, has plans for expansion to double present capacity, to cost more than $75,000 with equipment. Company has recently concluded negotiations for acquisition of Gordon Boat Co., New York, and will consolidate with organization. It will operate in future as Gordon Olympic Motorboat Corporation.

Earle M. Jorgensen Co., Los Angeles, distributer of alloy and tool steels, has established branch office and warehouse at 568 Third Street, San Francisco.

Foreign

PLANS have been approved by Demerara Electric Co., Ltd., Georgetown, British Guiana, for a new steam-operated electric power plant, with turbo-generator unit of 3750 kw. capacity and auxiliary equipment, scheduled for completion in September. Extensions will be made also in transmission lines. Company has recently secured a 50-year franchise.

A fund of close to $60,000,000 has been arranged for new plant construction at Leningrad, Russia, under Government direction, including works for production of tractors and parts, for manufacture of typewriters; woodworking mill; plant for production of abrasive products, and artificial silk mill. American-Russian Chamber of Commerce, 50 Broad Street, New York, has information regarding projects.

United Steel Works of Germany, Hamborn, Germany, has an expansion and improvement program in progress scheduled for completion this year.

Plans are being completed for new car repair shops in conjunction with car depot, warehouse and distributing plant at Cardiff, England, for a transportation company, to cost about $600,000 with equipment; also for an automobile repair, service and garage building at London. Information at Bureau of Foreign and Domestic Commerce, Washington, reference England No. 63200; also, at American Consulate, London, William L. Cooper, commercial attaché.

Standard Oil Co. of New Jersey, 26 Broadway, New York, has concluded arrangements for purchase of controlling interest in Creole Syndicate, operating oil properties in Venezuela, and will consolidate with its interests in that district. Creole Syndicate will take over oil lands, refineries, pipe lines and other properties of parent company and its subsidiaries, including Standard Oil Co. of Venezuela and American-British Oil Co., and will carry out an expansion program. It will be operated under direction of purchasing company.

Swiss Federal Railways, Berne, Switzerland, has begun work on initial unit of new cold storage and refrigerating plant at Geneva, with total capacity of 229,544 cu. ft. It is purposed to construct additional units in the future. American Consulate, Geneva, Gilson G. Blake, Jr., Geneva, consul.

Plans are being arranged by Government of Burma, Rangoon, Burma, India, for a hydroelectric power development on Law Klo River, a tributary of Yunzalin River, with initial capacity of 13,500 kw., to be increased by a second unit to develop a gross output of 27,000 kw. A transmission line 130 miles long will be built to Rangoon and vicinity. Entire project is estimated to cost in excess of $25,000,000. American Consulate, Bombay, India, C. B. Spofford, Jr., trade commissioner, has information on enterprise.

Foundation Co., 120 Liberty Street, New York, has secured contract from Government of Greece, Athens, for construction of proposed Strouma-Phillipon drainage works in Thessaly, Greece, including power and mechanical equipment, to cost about $40,000,000. Project will be financed by American banking interests, headed by Blair & Co., 24 Broad Street, New York.

Plans are under way by a company at Johannesburg, South Africa, for a new electric generating plant, to cost close to $1,500,000 with transmission lines. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference Africa No. 63420; also at American Consulate, Johannesburg, William L. Kilcoin, assistant trade commissioner.

Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., has secured controlling interest in Norwegian Industrial Mfg. Co., Christiania, Norway, manufacturer of electric equipment, and will expand production to include machinery of Westinghouse type. Other expansion will also be carried out by purchasing company in different European countries, as well as in South America; for production and distribution of electrical machinery in Chile, a subsidiary, Compania Electrica Westinghouse de Chile, recently has been formed, with headquarters at Valparaiso.

NEW TRADE PUBLICATIONS

Metal Truck.—Lyon Iron Works, Greene, N. Y. Bulletin 101 of four pages illustrates and describes a utility truck for warehouse and factory use, made of metal, with low height, on the tilting principle, and with rollers to aid in loading and unloading. Its capacity is 500 lb. or more.

Blast Heaters.—Aerofin Corporation, 750 Frelinghuysen Avenue, Newark, N. J. Folder of six pages devoted to low-pressure and high-pressure blast heaters for factory and other building requirements.

Motors, Generators and Motor-Generators.—Engberg's Electric & Mechanical Works, St. Joseph, Mo. Bulletin 6023 of eight pages is devoted to direct-current motors, with ball bearings, and designed for constant or adjustable speed. Bulletin 6025 of four pages is devoted to motor-generators. Bulletin 6022 of eight pages is devoted to direct-current generators up to 45 kw. All three bulletins are well illustrated and carry clearance diagrams and tables.

Winches and Capstans.—Silent Hoist Winch & Crane Co., 772 Henry Street, Brooklyn. Bulletin 27 of four pages illustrates a series of winches and capstans used in a variety of industrial and other service.

Metal Stampings.—Crosby Co., Buffalo. Pamphlet of 24 pages illustrating a large variety of products made by stamping from steel and other metals, running up to as much as ⅝-in. thickness. These have gone into a wide variety of machinery and other equipment. They include both cold and hot-rolled open-hearth steel, high-carbon and other special steels, duralumin, aluminum, brass, copper and zinc.

Polyphase Induction Motors.—Allis-Chalmers Mfg. Co., Milwaukee. Bulletin 1118-E of 16 pages illustrates and describes induction motors of the polyphase type, together with control apparatus.

Gear Grinding Chucks.—City Machine & Tool Works, Dayton, Ohio. Bulletin BC-I, eight pages, devoted to features of the Bollender chuck for holding gears while grinding the bore. Typical jobs are illustrated.

Vertical Milling Attachments.—Porter-Cable Machine Co., Syracuse, N. Y. Booklet of 24 pages outlining the features and illustrating the company's universal milling attachments, which permit the cutter to operate at any angle and in any plane, thereby extending the range of the milling machine on which they are used. The attachments are available in various sizes for use on any standard hand or power feed milling machine, and radius, angle, form and tee slotting cutters, as well as end mills, may be employed.

Electric Meters.—Sangamo Electric Co., Springfield, Ill. Supplement to Bulletin 67, of 8 pages, illustrated, describing type HC meter.

Steel Reels and Spools.—Mossberg Pressed Steel Corporation, Attleboro, Mass. Forty-page catalog showing a special line of reels made of steel stampings (with joints either crimped, bolted, brazed or welded), suitable for such purposes as handling, annealing, impregnating or shipping wires of all dimensions and shapes.

THE IRON AGE

New York, March 29, 1928

ESTABLISHED 1855

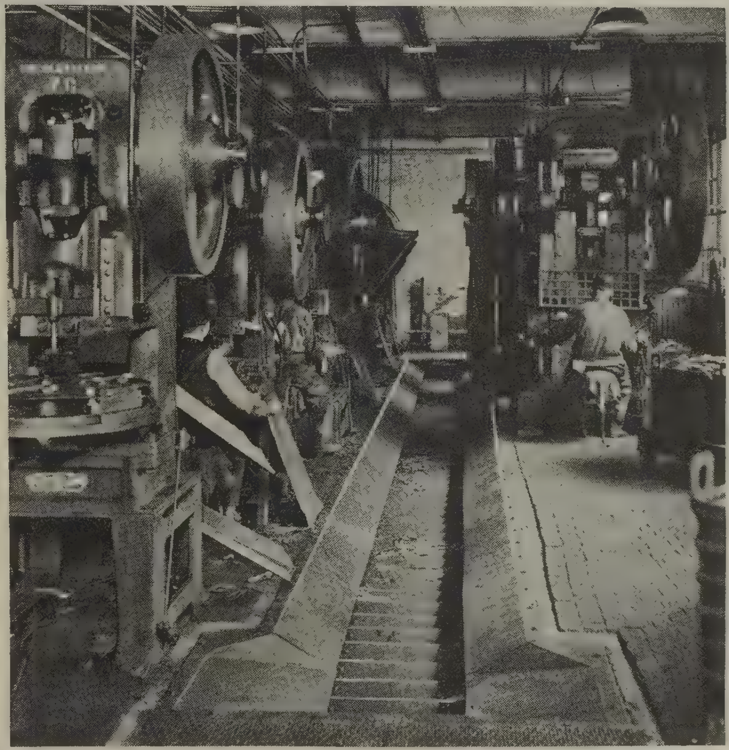
VOL. 121, No. 13

More Tools Made With Fewer Men

Elimination of Manual Handling Has Speeded Up Production—Twice as Much Output per Man

BY FRED L. PRENTISS*

PRODUCTION has been increased and labor costs have been sharply reduced in the plan of the Vlchek Tool Co., Cleveland, by the installation of materials-handling equipment, through the use of which hand lifting has been almost eliminated while the work is moving through the various manufacturing operations. A complete cycle of materials handling is provided, from the unloading of the stock from cars until the finished tools reach the shipping platform. The handling equipment includes gravity-roller and live-roller conveyors, belt conveyors, elevators, elevating buckets, monorails and cranes. No stock in process is piled up on the floors, and the work is kept moving almost continuously from the time it enters the machine shop until it reaches the storage department. Intermediate storage is confined to some work in process, mostly tools that require polishing.



PRESSES in the Trimming Department Are Arranged in Two Rows, Between Which Is an Apron-Type Conveyor Slightly Below the Floor Level, on Which the Flashings Are Discharged. This carries them outside the building, and eventually into a freight car. Forgings pass from the machines through chutes to bucket elevators, which carry them to the storage floor above

One step in the rearrangement for greater production and economy in handling that is now being made, but is not yet fully completed, is the elimination of storage bins for finished products. The bulk of the tools comprising the big production and fast moving items, instead of being placed in storage bins and taken out from bins for shipment, are stored in the standard shop boxes in which they are carried through the machine shop and other departments for succeeding operations. These boxes of finished stock are piled in tiers in the stock room. Storage in bins, with the rearrangement of the stock room, will be confined to certain small and slowly moving tools.

The company manufactures drop-forged hand tools, including hammers, automobile, open-end and other types of wrenches, chisels, punches and screw drivers. A portion of the product is assembled into automobile tool kits. The forgings are delivered to the machine shop in standard shop boxes, in which they travel in standard quantities through the various departments until they reach the stock room, where they are stored in the same boxes. Platform scales are provided at various points in the gravity conveyor lines for counting the pieces by weight. These make a count within 1 per cent of accuracy, which is regarded as close enough for production purposes. When the tools reach the inspection department they are accurately counted by weight by a computing scale located in the gravity conveyor line.

Stock in the form of steel bars is unloaded from cars with a monorail trolley that extends out over the receiving platform and through the raw stock room.

---

*Resident editor at Cleveland for THE IRON AGE.

which adjoins one end of the forge shop. Stock used for chisels, screw drivers and other products that are not forged on drop hammers is cut to length in the forge shop, and goes to trip-hammers and upsetters. All stock that goes to the drop forging machines is delivered to the hammer men in full length bars, which are worked down until the stock is used up. Bars are loaded on skids in the stock room. An electric lift truck takes the skids down aisles on either side of the forge shop and sets them in front of hammers located in two rows near the center. The forging equipment includes 22 drop hammers.

Forgings drop from the hammers into corrugated steel boxes which are 22 x 40 in. x 24 in. deep. These boxes are picked up by a hand-propelled overhead trolley, equipped with 2000-lb. electric hoist, which extends through the center of the forge shop between the two rows of hammers, and are carried to an adjoining trimming department. This is located in a two-story structure, the upper floor of which, used for the storage of forgings, both before and after trimming, is served by a 1-ton electric traveling crane. Boxes of forgings are raised through an opening in the floor at one end of the trimming department and are kept in storage in the boxes in which they are received.

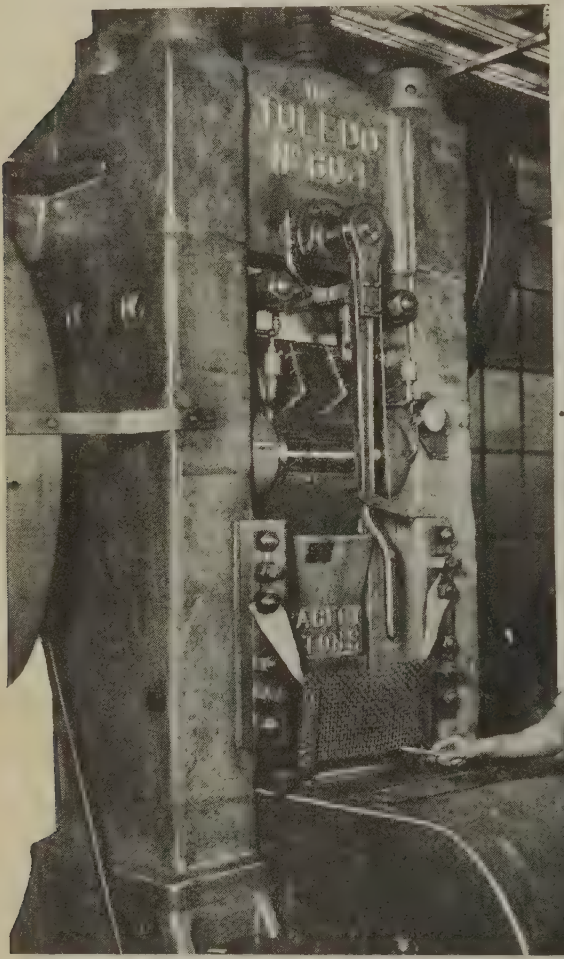
Nine trimming presses are arranged in two rows on the first floor. The boxes of stock are let down from storage through two openings in the floor, one on each side near the center of the building, one opening for delivering forgings being provided for each line of presses. Boxes as emptied at the trimming presses go back to the forge shop. Some of the trimming presses, used in trimming forgings for tools that are made in large quantities, are equipped with rotary trimming fixtures.

Forgings fall from the trimming presses through underground chutes and are delivered into bucket elevators. These carry them back to the storage floor above, and dump them into shop boxes similar to those used for bringing the work from the forging hammers to the trimming department. The flashings fall on to a steel apron-type conveyor which extends, just below the floor level, between the two rows of trimming presses. This carries them outside of the building, where the conveyor rises a few feet and discharges them into a large steel scrap box. An overhead electrically operated monorail carries the box of scrap to an elevated bin, into which the contents are dumped by opening the bottom of the box. The scrap bin is located alongside a railroad siding, and the flashings are chuted from the storage bin into a car, upon opening the side of the bin.

Trimmed forgings, after being taken back to the second or storage floor, are carried by the storage floor crane to the opposite side of the room. Here they are delivered to tumbling mills located on a mezzanine floor between the storage room and trimming department. Steel plate sections form a floor covering over the tumbling mills. One of these sections may be raised, providing an opening in the floor through which the work is dumped by the crane into the tumbling mill beneath. There are four tumbling mills, with 24 x 40-in. and 28 x 40-in. barrels.

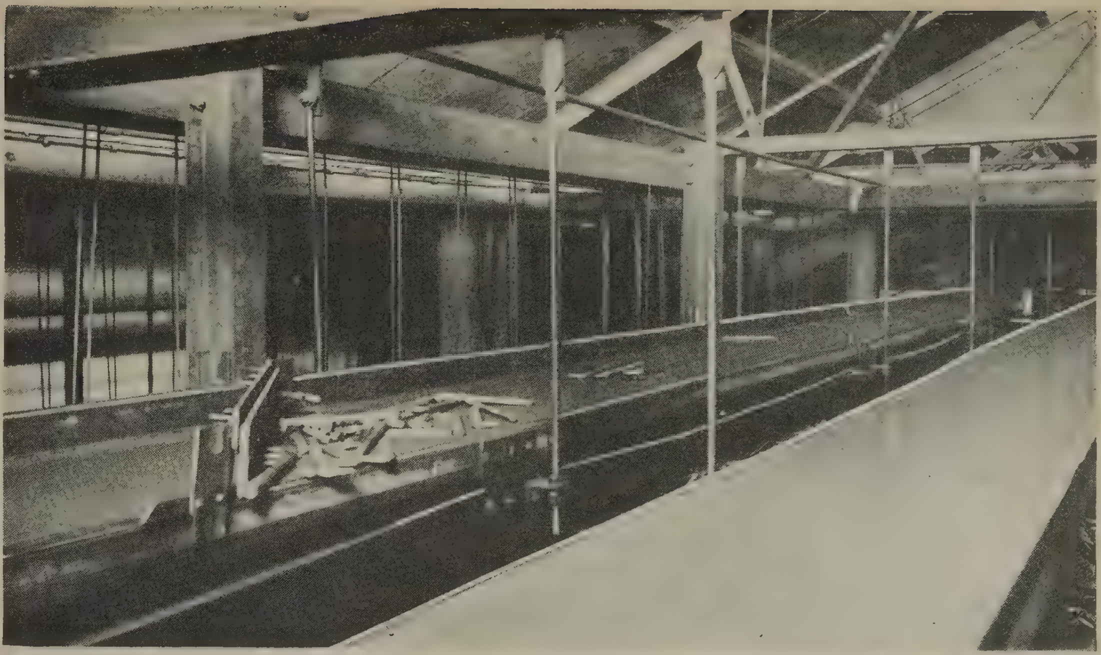
From the tumbling mills the forgings are discharged

BUCKET Elevators (Above) Delivering the Forgings from the Trimming Department to the Storage Floor Above. The work is discharged from the buckets through chutes into shop boxes, which an overhead crane carries to the opposite side of the room, dumping the contents through the floor into tumbling mills



EACH Coining Press Is Equipped With Feeding Mechanism Operated by an Endless Chain. The operator lays the tools in a holder attached to a revolving steel belt or carrier. They are discharged at the back of the machine into a bucket elevator which carries them to storage bins

FORGINGS Carried From the Coining Presses by Bucket Elevators Are Discharged on the Two Belts Shown, Located Above a Series of 30 Storage Bins at One End of the Machine Shop. The movable plow shown near left in the picture is set to push the work into any desired bin. Where the pieces go from the bins is indicated at bottom of page



into chutes which converge into one main chute, through which they fall into a shop box placed on a hand truck on the trimming room floor. This arrangement for handling work through the tumbling mills by gravity eliminates hand labor in loading and unloading the mills. Only one man is required for handling the forgings on the second floor, to which they make the two trips, before and after trimming. The man's work includes also loading and tending to the operation of the tumbling mills.

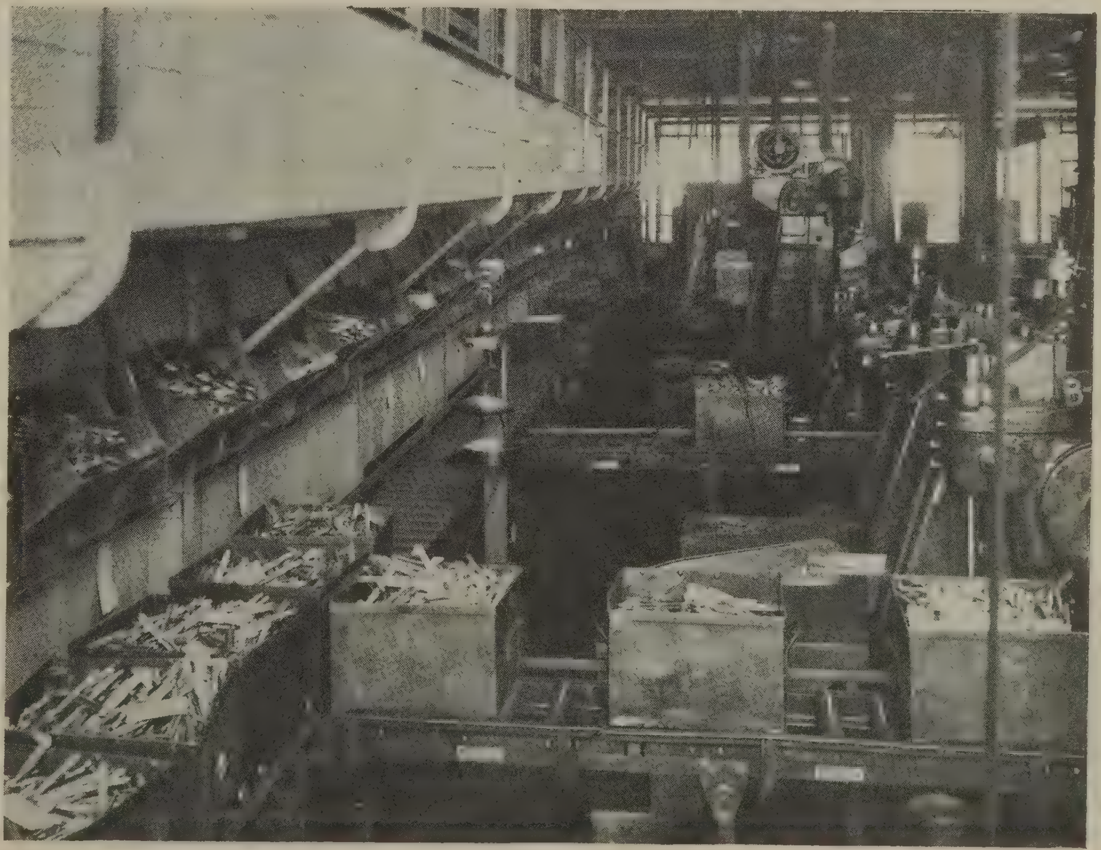
Boxes loaded with forgings delivered from the tumbling mills are pushed a short distance to coining presses, for straightening and sizing. The two coining presses are of 400-ton and of 600-ton capacity. Each press is equipped with an efficient feeding mechanism which was developed in the plant. This consists of a work carrier attached to an endless chain. The operator, standing in front of the press, places the forgings on the carrier, which carries them through the press. After the coining operation the work falls off the carrier on to an incline and thence into a bucket conveyor. The 600-ton press is operated at the rate of 38 strokes a minute and the 400-ton machine at 40 strokes a minute. Not only is production increased by the feeding mechanism, but the injury hazard is entirely eliminated.

The bucket elevators which handle the work from the coining presses deliver the forgings to a short belt booster conveyor. The latter discharges them through chutes on to a long belt conveyor located above a series of wooden bins above one end of the adjoining machining department. There are two of these belt conveyors, each 18 in. wide. The bins, about 30 in number, are 6 ft. high, 6 ft. deep and of various widths. A separate bin is provided for each kind of forging. These are discharged from the belt into any desired bin by means of a discharge plow. These conveyors are similar in operation to belt conveyors used to deliver sand into hoppers above a foundry floor.

Each bin has a slanting bottom leading to a hopper on the front side. Smaller forgings are dumped from the hoppers into shop boxes on a gravity roller conveyor extending alongside the bins. Some of the larger forgings are taken out of the hoppers by hand and piled into the boxes.

These boxes are the standard containers, in which

FRONT of the Storage Bins, the Belt Conveyors Being Back of the Railing Above, Which Incloses an Aisle at the Side of the Conveyors. Tools are dumped from the hoppers into the standard shop boxes shown or, if large tools, are removed from the hoppers by hand and piled in the boxes. From the gravity conveyor alongside the bins the boxes move to other gravity conveyors, two of which, shown in the picture, lead to the milling machines



the work is carried through the plant for the various processes after leaving the storage bins for finished forgings, and finally for the storage of the finished product. They are of pressed steel, 18 x 18 in. x 12 in. deep, and have a maximum capacity of 500 lb.

When loaded from the bin, the box moves along the gravity conveyor at the side of the bins and on to another of a series of gravity conveyors which form a network of conveyors that feed the milling machines. After milling the operator throws the work into shop boxes on an opposite gravity conveyor.

This is one of various feeder lines that lead from the milling machines to a live roller conveyor 12 in. above the floor. The live conveyor carries the boxes to an electrically operated elevator at one side of the machine shop. As soon as the box is on the carriage the elevator automatically is set in motion and the box is carried up to a point near the ceiling. Here it is automatically discharged on to an overhead gravity conveyor which carries it to the tempering department. There a spiral section of the gravity conveyor carries the box down to the working level.

In the tempering department there is a dividing point in the movement of the work. Forgings which do not require tempering move, on leaving the spiral, in a straight line on a gravity roller conveyor located between cyanide tempering furnaces. Near the opposite end of the tempering room this conveyor connects with an automatic elevator, similar to that in the machine department, except that it is air-operated. This hoist raises the boxes to an overhead gravity conveyor, on which they are carried to the cleaning department.

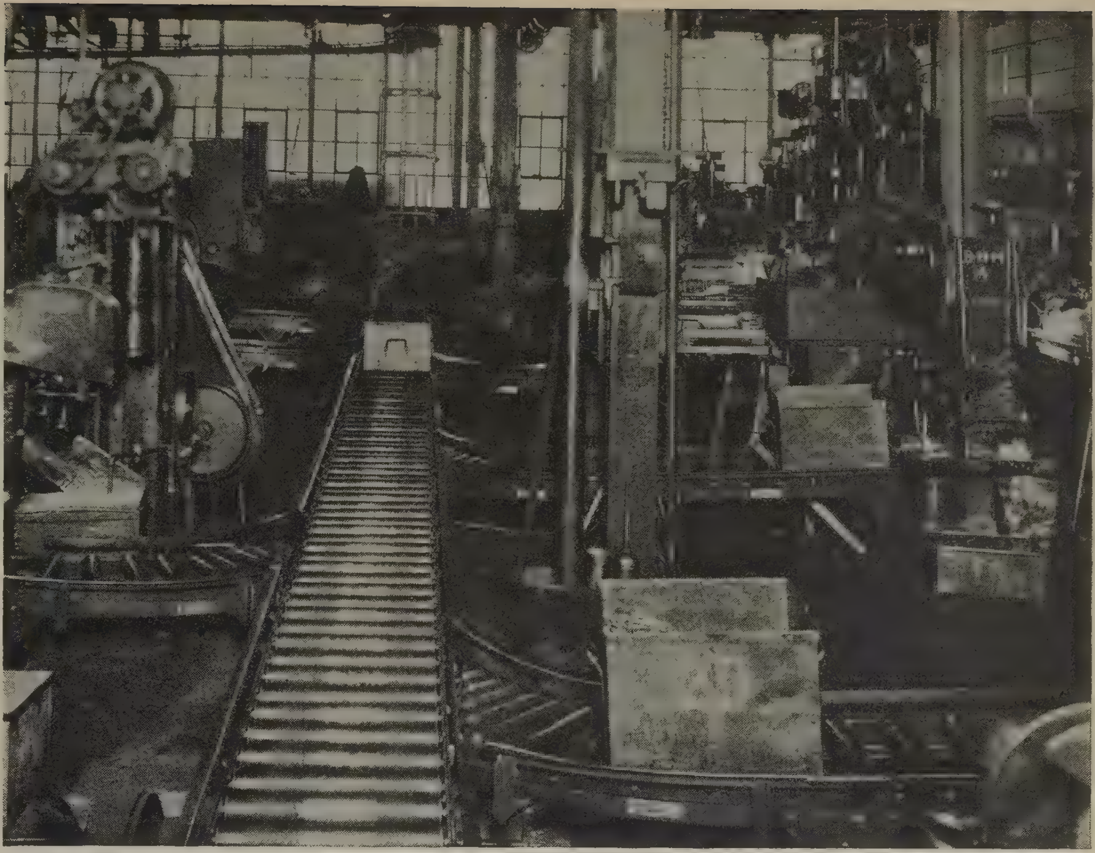
LAYOUT of the Plant, Showing Arrangement of Conveyor and Monorail Systems and How They Serve the Several Manufacturing Departments

After the Tools Are Machined They Are Put Back in Shop Boxes Which Are Placed on Other Gravity Conveyors Feeding into the Live Roller Conveyor in Center. They move on this to the steel-frame elevator in background. A box moving on to the elevator is automatically lifted and is discharged near the ceiling on to a gravity conveyor which takes it to the tempering department



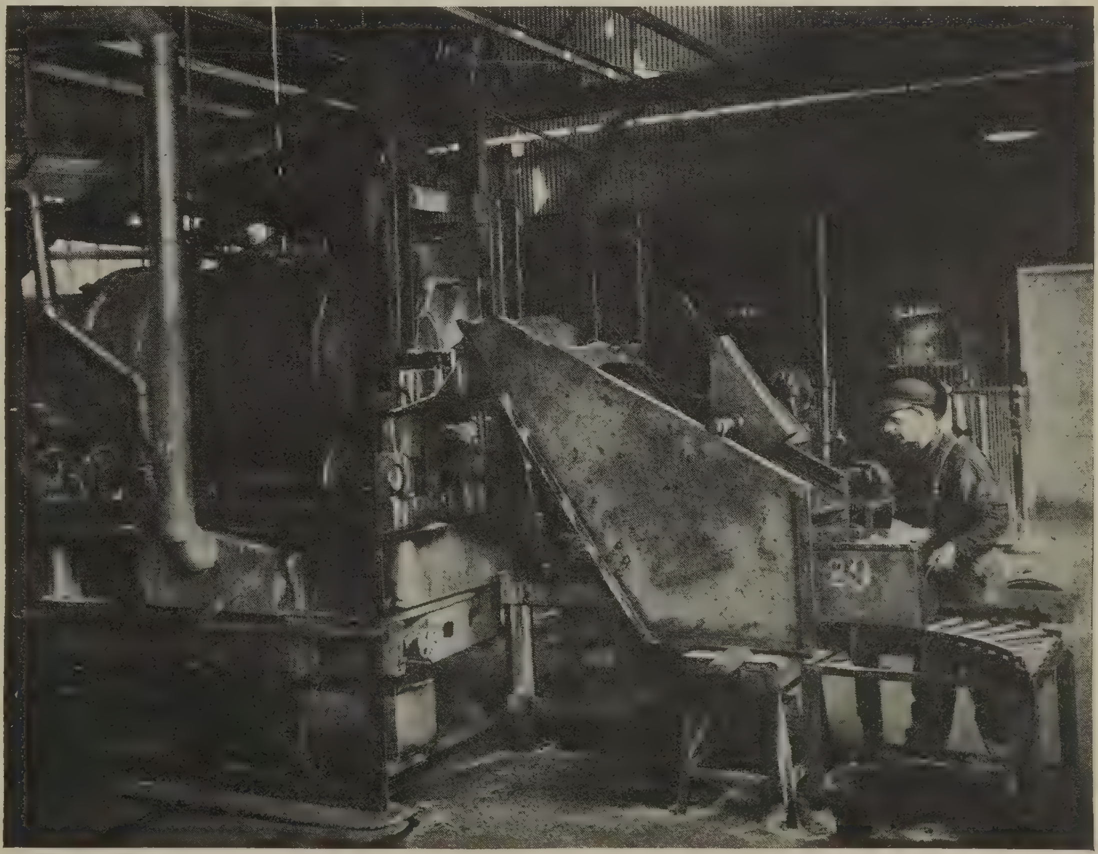
Here a second spiral conveyor carries the boxes down to the working level.

On reaching the bottom of the spiral in the tempering department, boxes of tools to be tempered are switched to a gravity conveyor line which extends in front of the furnaces. Here they are delivered to bundling tables, where they are placed in baskets or wired in bundles for immersion in the cyanide bath. Levers suspended from overhead tracks are provided for handling the work in and out of the furnaces and into the quenching tanks. From the latter the hardened tools are dumped into shop boxes on a short section of gravity conveyor provided on each side of the furnace. These conveyors feed back into the conveyor line referred to above, which extends between the rows of furnaces and leads to the cleaning department.

In the cleaning department the forgings pass along a gravity conveyor at the side of the room and from this are switched on to a short section of portable conveyor mounted on wheels. A box of work is pushed off the main conveyor line on to the portable roller conveyor, and the truck on which this is mounted is moved 3 or 4 ft. to the loading end of a cleaning machine. The box is shoved into a mechanically operated hopper which, when raised, lifts the forgings and discharges them into the machine. At the discharge end of this machine they pass into boxes on another gravity-roller conveyor. With this tie-up of the cleaning machine with the roller conveyors, at both its loading and discharge ends, hand lifting of work going through this machine is avoided.

The cleaning machine consists of two connected

In the Cleaning Department Forgings Pass Along a Gravity Conveyor at the Side of the Room (Not Shown) and Are Pushed on to a Short Section of Portable Conveyor. This is pushed 3 or 4 ft. to the mechanical loading hopper of the machine. The end of this hopper is raised to discharge the work into the tumbling mill, which is the first unit of the cleaning machine



units. The first includes a tumbling mill with large-diameter drum in which the work, 1500 to 2000 lb. to a load, is tumbled in a hot cleaning solution for 15 to 25 min. Then the rotation of the barrel is reversed and the forgings are carried into a smaller perforated drum, in which the solution is drained off. From this they are dumped into a washing unit consisting of a large metal drum, in which they are washed in water containing a rust-proofing solution. From this unit the tools pass through a wire screen drum for drying and from the latter are discharged, both clean and dry, into a shop box on a gravity conveyor. The cleaning machine was built by the Ideal Concrete Machine Co.

Leaving the cleaning department, tools move on the gravity conveyor to the inspection department, or if they are to be japanned are switched through the japanning department. A short motor-driven booster section is provided in the conveyor line in this department, to raise the work a few feet so that it can continue its movement by gravity.

In the inspection department the tools are inspected and weigh-counted. The boxes, except those containing tools which are to be packed loose, are picked up by a ½-ton traveling crane equipped with electric hoist and piled, five boxes high, in the storage room adjoining. From here they are sent over short roller conveyors to the assembling department, where tool kits are assembled and packed into boxes. Tools which are to be loose-packed go, in their shop boxes, on a gravity roller conveyor from the inspection department to the loose-packing store room, where they are stocked four boxes high. From these boxes they are transferred to packing boxes.

A roller conveyor extends the length of the shipping room. This is used for conveying the packed shipping boxes to a scale for weighing, the covers being nailed on them on the conveyor from which they are transferred to a truck for shipment. It is used also for bringing empty shipping boxes to points at which they are to be packed, and for taking empty shop boxes out of the shipping room. These are loaded on electric trucks and are taken back to their starting point beneath the discharge hoppers of the bins at the side of the machining department. Other cranes, and monorails and hand trucks also, serve the store room and the assembly and packing departments.

The gravity and live-rolled conveyors, belt conveyors and elevators operating in conjunction with the roller conveyors were supplied by the Mathews Conveyor Co.

In 1918 the Vlchek company had 16 drop hammers and employed 480 men. In 1927 it had increased its drop hammers to 22 and reduced its working force to 280 men; and with the reduced labor force it had increased its output 30 to 40 per cent. The increased production is not attributed entirely to the installation of materials-handling equipment, as various other changes have been made to increase the plant efficiency. Improved materials-handling facilities have created a demand for more rapid production tools in the machining department, and speedier tools have called for the faster moving of material. Consequently the two factors, the use of more rapid machine tools and the better materials-handling facilities, have gone hand in hand.

As work no longer piles up in process, a marked reduction has been made in the time it takes to go through the plant. Formerly in its usual routing it took an open-end wrench from three to four days from the time the blank reached the forging hammers until the finished tool reached the stock room. Now it is stated that that tool, finished, can reach the stock room 6 hr. after forging.

WELDED CONDUIT PIPE

Thin-Wall Steel Conduits, Electrically Welded, Offered in Place of Heavier, Standard Pipe

AN electrically-welded conduit pipe for carrying electric wires in buildings has been developed by Steel & Tubes, Inc., Cleveland, which will place the new product on the market shortly. This is a thin-wall conduit which will be known as "Steeltubes" metallic tubing. It will be fabricated from cold-rolled open-hearth strip steel and welded under a process used by the company in the manufacture of electrically-welded tubing for the automotive and other industries. The process and product will be covered by patents owned by the company. A continuous process is used in both forming and welding the tubing.

Additional operations required for making the tubing for conduits will include galvanizing the exterior and enameling the interior, to provide a smooth raceway for the wires as well as to resist corrosion. After being formed and welded, the tube will be run through a continuous automatic machine in which it will be cleaned and dried and then galvanized and enameled. Experimental work in developing the tubing has been under way for several years.

The conduit will be made in ⅜-in., ½-in., ¾-in. and 1-in. diameters, of 17, 18 and 19-gage strip steel, which it is stated provides a wall of more than the required strength for electric tubing. It is expected that 80 per cent of the product will be in one size, of ½-in. stock. With a production mainly of one size, and in standard lengths, a large output can be obtained from one manufacturing unit.

Since the introduction of steel conduit pipe for carrying electric wires, standard steel pipe has been used for this purpose. This pipe, it is contended, is heavier than required and its use results in a needless waste of steel. However, the comparatively heavy wall is necessary to carry the threads and allow the use of standard fittings. It is asserted, also, that the development of electrical conduit in the lighter and cheaper form will result in more general use of steel electrical conduits than at present. One advantage claimed for the welded steel conduit is its economy in installation. The ends will be joined by a slip coupling, eliminating threaded joints, and the only tools required for installation will be a hacksaw and wrench.

The electrical committee of the National Fire Protective Association, compiler of the National Electrical Code, at its recent annual meeting decided to change the code to allow the use of electrical metallic tubing, and will provide installation rules covering its use. It is expected that this tubing will be listed shortly as a standard by the Underwriters' Laboratories, Inc.

Steel & Tubes, Inc., will begin the manufacture of the metallic tubing shortly at its Brooklyn, N. Y., plant and later will add departments for its manufacture in some of its other plants.

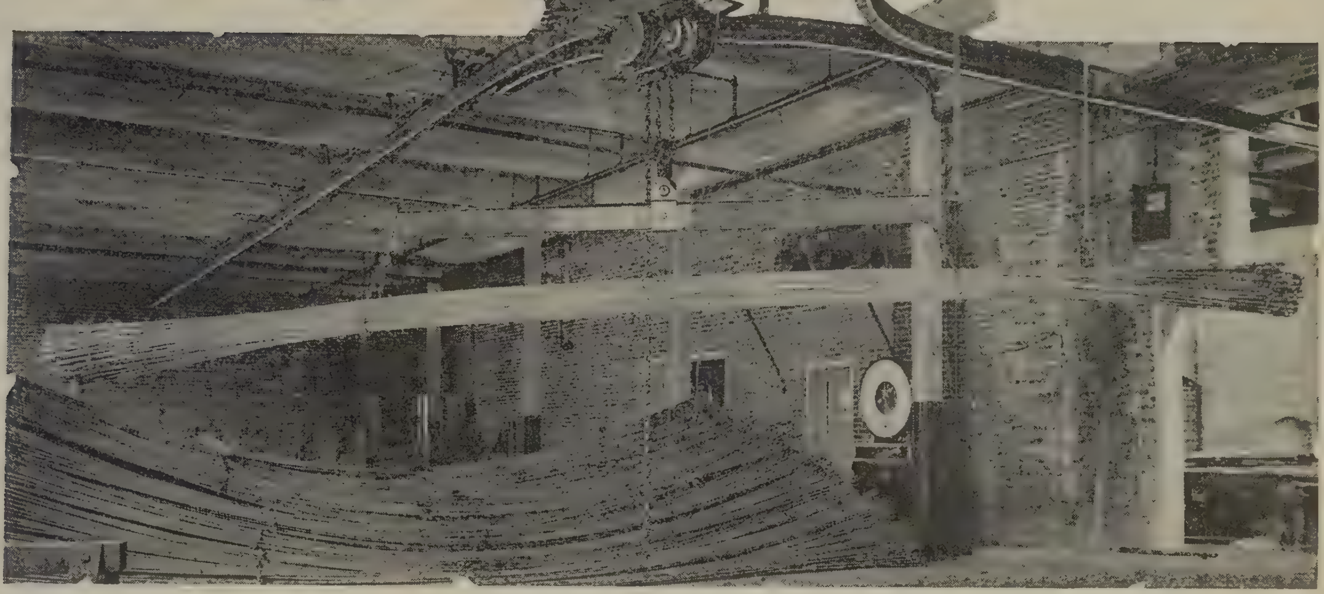
To Study Annealing of Crane Chain

A committee of the National Safety Council has arranged with the Carnegie Institute of Technology, Pittsburgh, to conduct a series of tests on ½-in. chain. The proposed investigation will cover the following items:

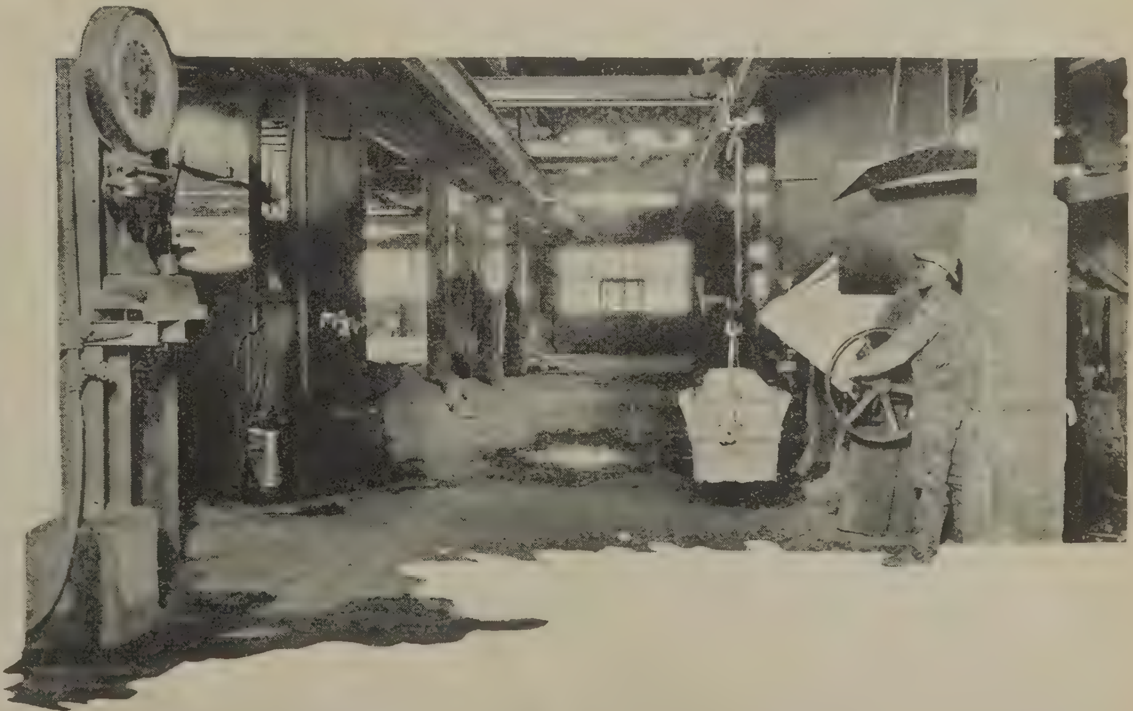
(1) Analysis of chain stock; (2) tension-proof load and tension test to destruction of chain as received; (3) impact test of chain stock; (4) chain as received to be subjected to a repeated stress test; (5) tension-proof load and tension test to destruction of chain after test 4; (6) impact test of chain stock after being subjected to a repeated stress test; (7) anneal chain at various temperatures; (8) cooling chain in air and in furnace after being heated for annealing; (9) tension-proof load and tension test to destruction of chain after each annealing and cooling operation has been completed; (10) impact test of chain stock after each annealing and cooling operation has been completed; (11) study of the effect of low-temperature heating, following the same procedure as given above; (12) metallographic studies of chain under the various conditions outlined above.

Scales Used for Production Control and Inspection

SPRINGS of all sorts, but especially automobile leaf springs and gas engine valve springs, are tested by measuring the weight required to compress them completely. The Packard Motor Car Co. has devised a simple attachment to a platform scale whereby the force required to compress each motor valve spring a definite distance can be tested.



AN overhead monorail scale enables the S. M. Jones Co., Toledo, Ohio, to keep close check on all drill rods, either coming from plant to warehouse or from warehouse to railroad car. Since weight and number of units are interchangeable in all items of mass production, small parts may be most readily counted by weighing the unknown quantity against a known number placed in a counterpoise pan.



PRODUCTION control at Wilson Foundry & Machine Co., Pontiac, Mich., requires weighing molten pig iron at the cupola. It is easily accomplished by means of a forehearth ladle discharging into bull ladles. A section of trolley track at the cupola is hung from scale levers, and the weight of the iron is plainly visible on a large dial. This and the other photographs were taken for the Toledo Scale Co., Toledo, Ohio.

Low-Manganese Steels Gain Favor

May Be Heat Treated to Properties Comparable with More Expensive Alloy Steels and Consequently Are Finding Increasing Application

BY JEROME STRAUSS*

RECENT years have witnessed an increasing interest in alloy steels containing the low-cost elements silicon and manganese, particularly in such compositions as secure high hardness and good ductility. The largest tonnage has contained manganese as the principal alloying element; 0.9 per cent manganese may be regarded as the amount separating a common steel from an alloy steel. Most of the commercial production has been of steels containing 0.3 to 0.5 per cent carbon and 1 to 2 per cent manganese. Steels containing lower carbons and manganese up to 4 per cent have been the subject of much study. However, this paper is concerned with steels of the former range.

For all these carbon-manganese steels, the foremost American proponent has been John Howe Hall (THE IRON AGE, Sept. 28, 1922, page 786), particularly for their use as castings. Recently, however, several American producers of rolled steel bars have manufactured manganese steels in quantity, and their use for forgings or articles machined directly from the bars has spread rapidly. Lower-carbon steels of 1 to 2 per cent manganese are being applied both for carburized parts and for pressings or forgings, but they will be omitted from this discussion.

Critical Points Displaced So Air-Hardening May Result

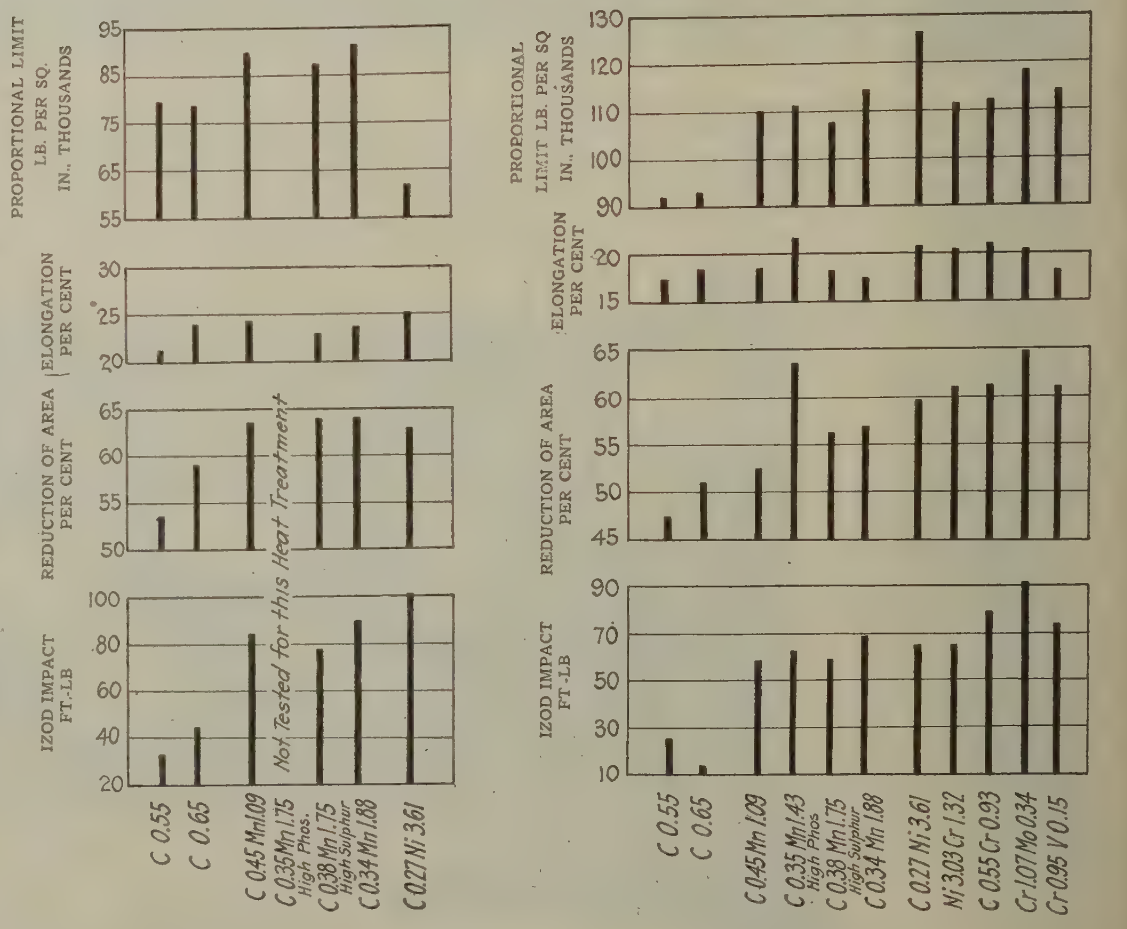
Published data on critical points yield approximate information tabulated below:

Ac_1 is lowered 11 deg. Fahr. for each per cent manganese.
Ac_3 drops 110 deg. Fahr. at 1 per cent Mn; thereafter little change.
Ar_1 is lowered 90 deg. Fahr. or more for each per cent manganese.
Ar_3 is lowered 125 deg. Fahr. for each per cent manganese.

Since A_3 is lowered more rapidly than A_1 with either carbon or manganese, the two overlap in a steel containing 0.40 per cent carbon and 2.0 per cent manganese, or another containing 0.20 per cent carbon and 3.0 per cent manganese.

Obviously the above involves a lowering of the eutectoid carbon content, which appears to be about 0.78 carbon for 1.0 per cent manganese, or 0.50 carbon for 3.5 per cent manganese.

One very important feature of the lowered transformations is the ability to harden at temperatures below the usual quenching point, after a furnace cooling from the latter. On ½-in. sections, for instance, a 0.45 C, 1.09 Mn steel heated to 1550 deg. Fahr., slowly cooled to 1300 deg. and quenched, is just as hard as



PHYSICAL Properties of Typical Carbon Steels, Manganese and Alloy Steels. In the left diagram all steels were heat treated to 110,000 lb. per sq. in. ultimate strength; in the next to 135,000 lb. per sq. in.; in the next to 200,000 lb. per sq. in. and in the diagram at the extreme right all steels broke at 225,000 lb. per sq. in.

---

*Material engineer, United States Naval Gun Factory, Washington. This is an abstracted version of a paper read before the Montreal meeting of the American Society for Steel Treating.

though quenched from 1550. That the tension and impact properties do not suffer from this method of heat treatment is indicated by the following data for 1-in. sections of a 0.51 C, 1.17 Mn steel:

	Quenched from 1500 deg. Fahr.	Heated to 1500 deg. Quenched from 1350 deg. Fahr.
Ultimate	144,100 lb. per sq. in.	142,800 lb. per sq. in.
Proportional limit	101,900 lb. per sq. in.	109.500 lb. per sq. in.
Elongation in 2 in.	17.5 per cent	17.1 per cent
Reduction in area	53.2 per cent	52.6 per cent
Izod impact.....	62.5	62.6

Properties of Heat-Treated One-Inch Bars

In order to compare the properties of manganese steel with those of the more conventional analyses, a series of tests were made which are summarized in the four diagrams at the bottom of the page. Values plotted are the results of interpolations between averages of two tension and four impact tests for each heat treatment.

Bars heat treated to moderate strength were annealed at 1450 to 1500 deg. Fahr., then quenched and tempered to develop 110,000 or 135,000 lb. per sq. in. ultimate strength; then machined to size. Tension bars were ½ in. in diameter; 2 in. gage length, with threaded ends. Izod impact bars were 10 mm. square, 4 in. long. Each had two Mesnager notches (drilled hole, 2 mm. in. diameter, with center 1 mm. below the surface). When heat treated for 200,000 lb. or over, the tempering temperatures were below 900 deg. Fahr. In this instance the tension and impact bars were normalized and annealed, then rough-machined 0.035 in. oversize and the impact bars drilled, then all were heat treated and finally finish-ground. This method gives a better indication of the properties of steels which are to be used for gears, springs and other parts similarly processed.

Although comparisons rarely show superiority in all properties, it becomes immediately apparent from the diagrams that manganese steels, and especially those higher in this added element, are more closely allied to the other structural alloy steels than to carbon steel. It is also of interest that neither moderately high phosphorus (0.078 per cent) nor moderately high sulphur (0.103 per cent) adversely affect the strength and toughness.

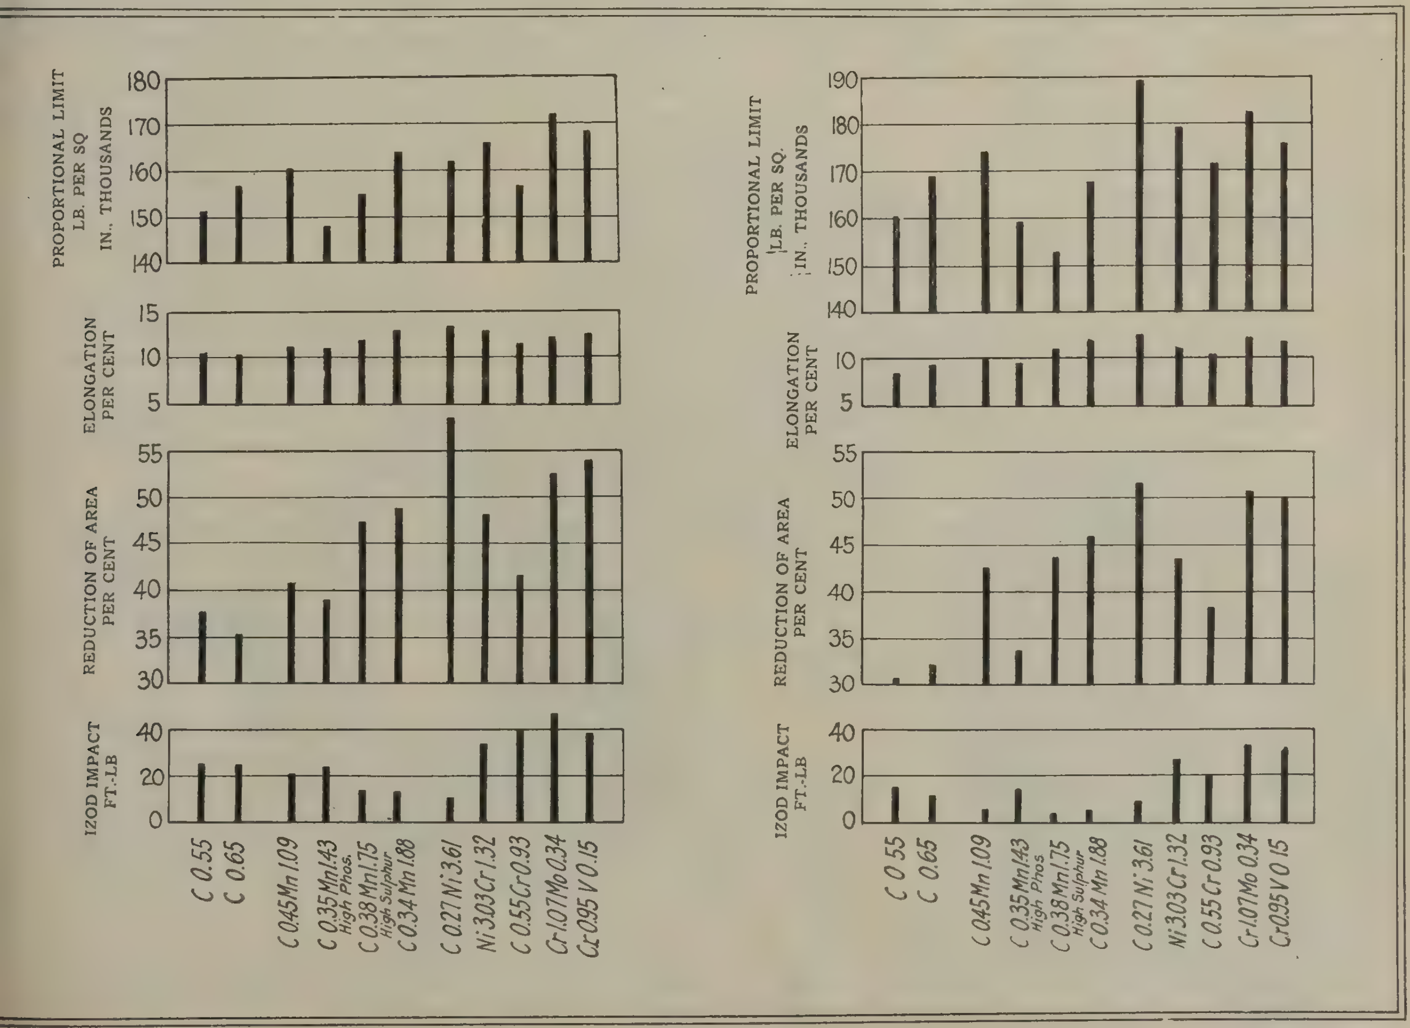
Overheating Not Especially Damaging

As a result of the efforts of Hall and others, the association of "brittleness" with steels of manganese containing more than 1 per cent has almost vanished. One additional item of evidence may be cited. Steels showing undue sensitiveness when quenched rapidly enough to produce high hardness might be expected to show deterioration in ductility or impact resistance, or to crack when quenched after overheating. To determine this point, a number of tension and impact test bars were quenched from a temperature 200 deg. Fahr. higher than that usually employed. Comparing these data with those of the diagrams showed that the deterioration in elongation or impact is no greater than in the other alloy steels (in many cases of both no decrease was noted). The losses by cracking were no greater for manganese steels quenched in water than for the chrome-nickel steels quenched in oil and far less than for the chrome steel quenched in water.

It will be noted from the graphs that Izod impact values of the manganese steels in the higher hardness ranges are below some of the other alloy steels. Other and more complex heat treatments were tried without improving this result.

Temper Brittleness Depends on Method of Manufacture

J. A. Jones of the research department, Woolwich Arsenal, England, in Report No. 61 on "The Properties of Medium-Carbon Steel with High-Manganese Content" expresses the opinion that such steels have an increased likelihood of temper brittleness, very marked at 2 per cent manganese. The same author suggests a method of determining the degree of susceptibility to this defect. This test consists in tempering the hardened specimens at 1050 deg. Fahr., cooling half of them

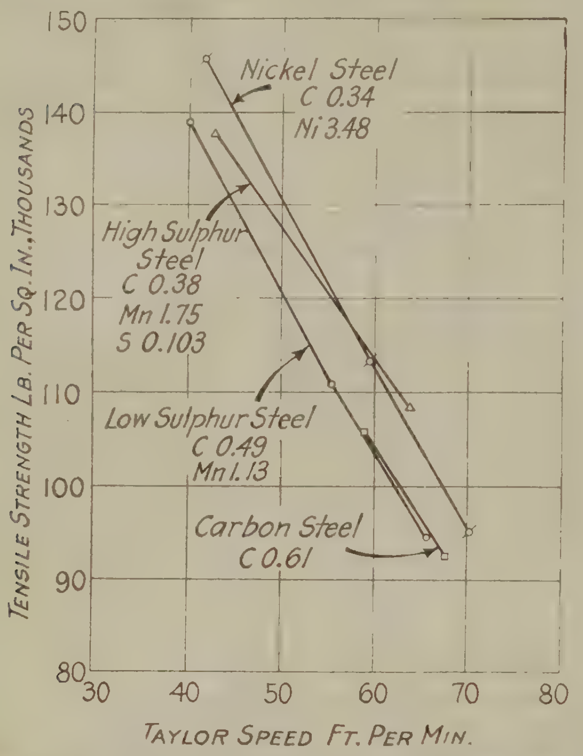


in the chosen quenching medium (water) and the other half at the desired slow rate (0.5 deg. Fahr. per min.). These same pieces are then all reheated to the same tempering temperature, but those which were cooled slowly are now quenched, and vice versa. Data secured in this manner follow:

Analysis				
C	Mn	Izod Slow-Cooled	Izod Quenched	Ratio
0.45	1.09	43.5	60.8	1.40
0.46	1.12	71.3	76.6	1.07
0.51	1.17	49.3	53.3	1.08
0.33	1.34	49.4	58.5	1.19
0.38	1.75 (high S)	55.1	61.1	1.11
0.34	1.88	30.5	64.0	2.10

One of the least temper-brittle chrome-nickel steels that was available to the author was hardened in oil and tempered at 1080 deg., and the ratio secured was 1.11.

Embrittlement on slow cooling found in this way was much less than anticipated. Chrome-nickel steels often show these effects, and, when tested by both the British standard notch and the Mesnager notch, ratios have been reported as high as 30. But since these steels are being produced continuously with ratios of less than 1.5, methods of manufacture can doubtless be adjusted so as to reduce greatly this susceptibility to temper-brittleness. It is possible that the temper-brittleness in the manganese steel studied by Jones is due to manufacturing maladjustments.



Cutting Tests Show That a High-Sulphur Manganese Steel Is Less Damaging to Roughing Tool Than Lower-Sulphur Steels

Hardening of Larger Sections

Of several series, of tests the following are typical: Rolled or forged rounds, 5⅛ in. in diameter and 12 in. long, were held at heat 60 min. and quenched in water. They were then reheated to 900 deg. Fahr., held 2 hr. and furnace-cooled. Physical tests are summarized in the Rockwell C hardness as shown.

Steel				Hardness	
Carbon, Per Cent	Manganese, Per Cent	Nickel, Per Cent	Quenching Temperature, Deg. Fahr.	Surface	Center
0.44	1.05	...	1475 1525	33.3 34.2	19.3 24.0
0.48	1.09	...	1525 1575	32.6 31.3	15.7 16.6
0.31	...	3.31	1475 1525	38.0 36.6	27.0 25.7
0.41	...	3.02	1475 1525	38.1 36.1	25.6 22.5

An examination of all the data shows that manganese steels compare very favorably with other structural alloy steels in ductility and impact resistance, when heat treated in heavy sections.

Disadvantage in respect to elastic ratio appears to grow rapidly with increase in cross-section above 4 in. Maximum hardness and depth of penetration are also not so good for manganese steels as for some of the more expensive alloys.

Machining Qualities

The manufacturer of the high-sulphur manganese steel contends it is suitable for cutting speeds higher than for open-hearth screw stock, and nearly as high as for Bessemer screw stock. To determine this point, rough-turning tests were made in the manner described by H. J. French and the author in *Transactions* of the American Society for Steel Treating, Vol. 2, 1922, page 1125. Results are shown on the chart printed herewith, which contains data secured on a similar manganese steel with normal sulphur (0.023 per cent), a carbon steel with 0.55 per cent manganese, and a nickel steel, all steels heat treated successively to two or more degrees of hardness and tensile strength.

It is shown by the figure that, in rough-turning, the cutting tool will perform about equal work prior to failure when cutting the higher-manganese high-sulphur steel and when cutting the 3½ per cent nickel steel, the comparison being based on equal tensile strengths. In a like manner the rough-turning properties of the lower-manganese steel and the plain carbon steel are comparable, and both produce more rapid failure of the cutting tool than do the first two steels mentioned. Whether this difference is due to sulphur or to manganese or both cannot be stated.

Miscellaneous Properties

It is generally recognized that pearlitic manganese steels are more resistant to sea water and most natural waters than are carbon steels. This has resulted in the use of much steel of about 0.35 per cent carbon and 1.35 per cent manganese for cast steel anchor chain. It has rendered exceptional service because of the combination of corrosion resistance, high strength and ability to sustain suddenly applied loads.

A. E. White and C. L. Clark have commented upon the ability of 1.5 per cent manganese steels to retain their strength properties at slightly elevated temperatures, and this has led to their employment for bolts in high-pressure steam lines. Exact data are still lacking to enable one to predict performance in this service.

Segregation in lower-manganese steels is to the direction usually encountered in carbon and many alloy steels, and to a degree comparable with that occurring in properly poured ingots. In higher-manganese steel made in the same plants, however, inverse segregation has been encountered, extremely pronounced in one lot of the high-sulphur product.

Heavier sections of cast steels containing 1.5 per cent manganese or more may show appreciable segregation and coarse dendritic formation. The latter are particularly persistent, and present a problem of some magnitude in the manufacture and treatment of these alloys.

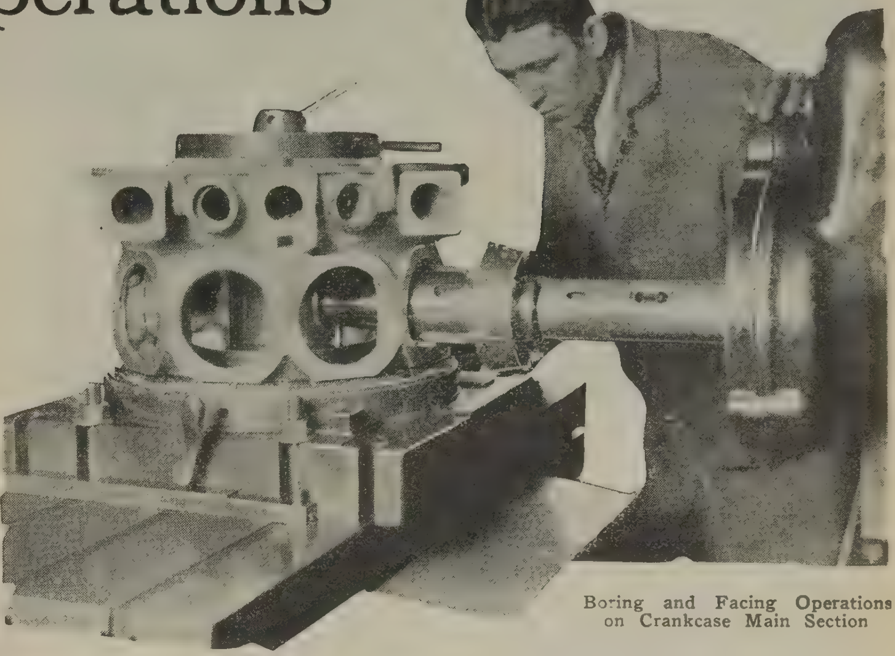
A hearing on the sale of the property of the Hydraulic Steel Co., Cleveland, will be conducted March 31 in the United States District Court in that city. Following the bid of $1,000,000 for the plant by the Truscon Steel Co., Youngstown, a bid of $1,525,000 was submitted by Lewis Levitt and Theodore Friedberg of New York.

The American Oil Burner Association, Inc., 350 Madison Avenue, New York, will hold its annual convention at the Hotel Stevens, Chicago, April 3-5.

Whirlwind Engine Parts Require Many Operations

Crankcase Sections Call for Expert Care in Molding—Eighty-Five Operations Needed to Complete Crankshaft

BY FAY LEONE FAUROTE*



Boring and Facing Operations on Crankcase Main Section

PRODUCTION of the crankcase, pistons, piston pins, valves, valve springs, and crankshaft of the Wright Whirlwind J-5 series airplane engine calls for the same careful handling, testing and inspection that characterized the manufacture of the cylinder and cylinder head of the engine, described in THE IRON AGE of March 1, page 590.

The crankcase is made up of five aluminum-alloy sections: Front section; intermediate section; main section; rear section; and the intake-manifold and oil-sump section. These crankcase parts, like the cylinder heads and pistons, are made in the Wright company's foundry. The alloy, however, differs slightly, the composition being: Copper, 10 per cent; nickel, 2 per cent; magnesium, 1.5 per cent; silicon, 1.5 per cent; iron, 0.75 per cent, and aluminum, 84.25 per cent.

Crankcase Castings Made in Company's Foundry

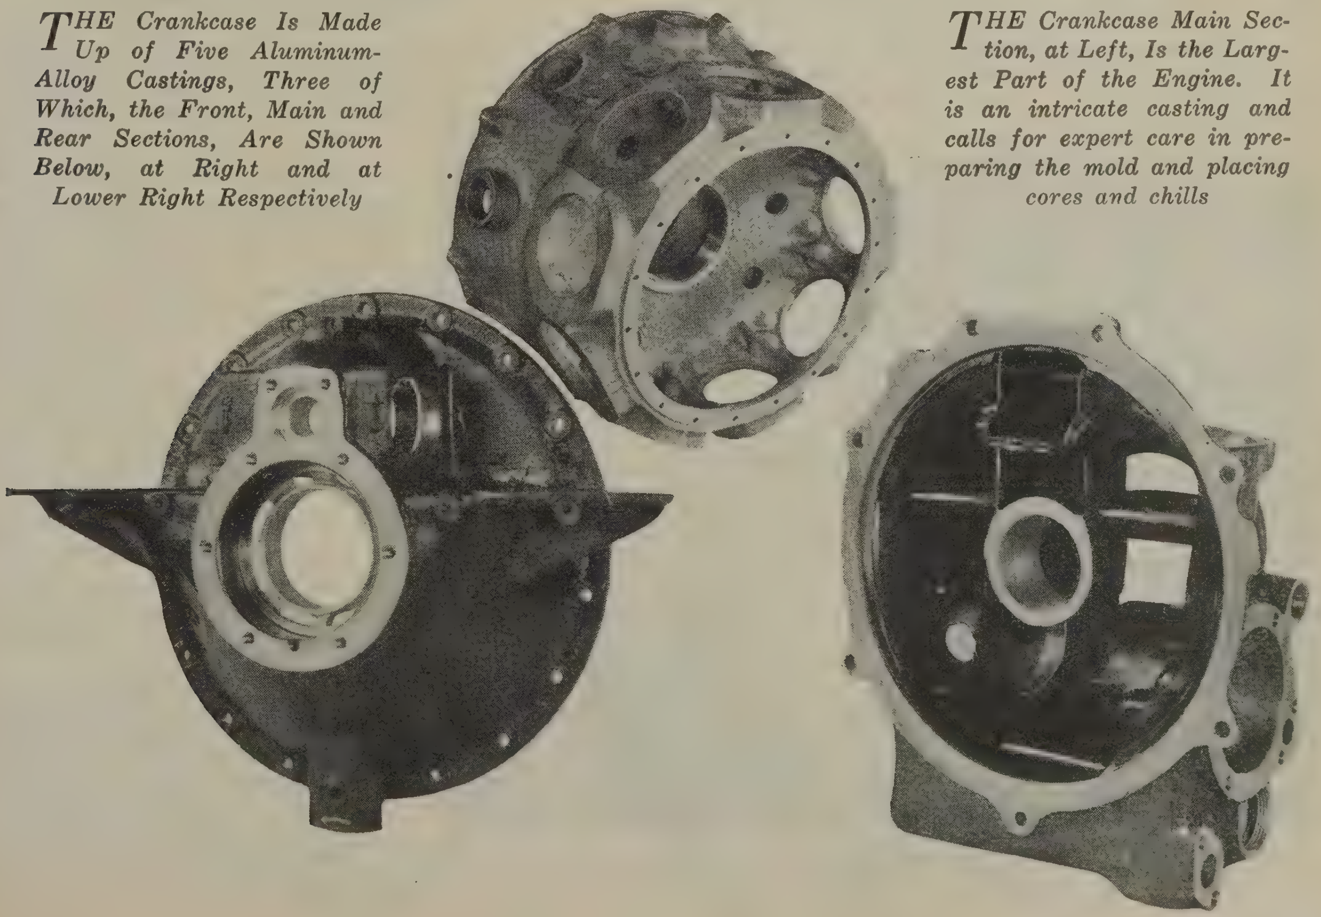
Because of the complicated character of these castings, special care is required in preparing the mold and placing the cores and chills. The sprues are very large, an excess of metal being used to assure homogeneity of the casting and to prevent blowholes by

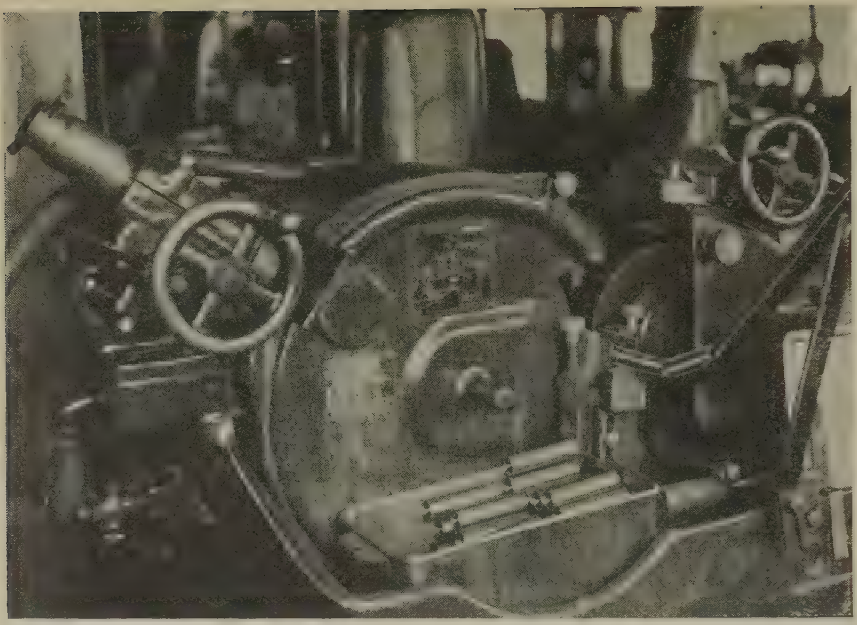
---

*Mechanical engineer, New York, and former editor of the *Aircraft Yearbook*. This is the third and concluding article of a series on the Wright Whirlwind engine.

THE Crankcase Is Made Up of Five Aluminum-Alloy Castings, Three of Which, the Front, Main and Rear Sections, Are Shown Below, at Right and at Lower Right Respectively

THE Crankcase Main Section, at Left, Is the Largest Part of the Engine. It is an intricate casting and calls for expert care in preparing the mold and placing cores and chills

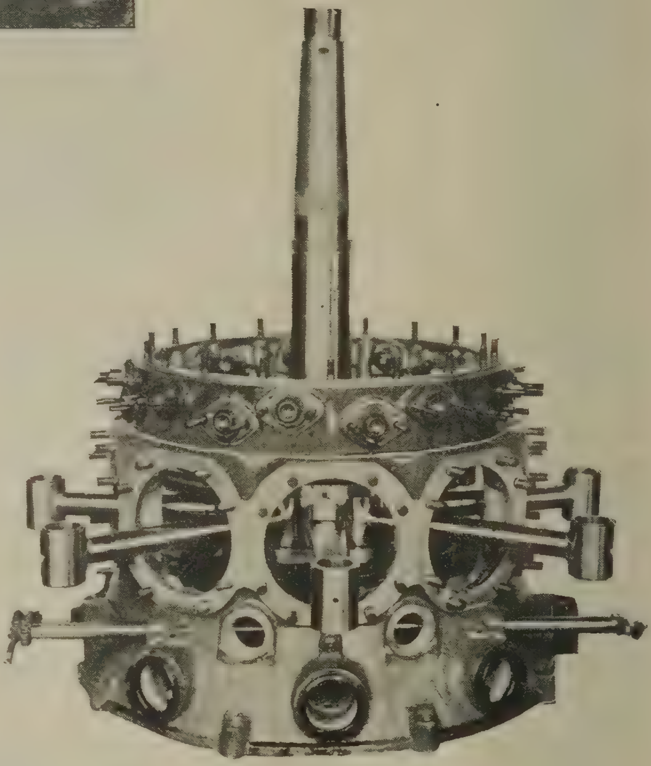




PISTON Pins, of Special Steel Tubing, Are Ground on Centerless Grinders, Which Make Five Passes, Removing Less Stock at Each Pass

giving the gas plenty of chance to get out. Air chisels and a power bandsaw are used to clean up the castings afterward. They are also thoroughly sandblasted, given careful inspection and a series of tests to determine their fitness. Since a portion of the interior of the crankcase is utilized as an intake header for the carburetion system, these passages are carefully cleaned and tested by applying air pressure of 70 lb. per sq. in. submerging the castings in water and looking for indications of bubbles. As in the case of a cylinder head the castings are next subjected to a specified heat treatment to relieve internal strains and to refine the grain. They are also submerged in an hydrochloric acid solution for about 20 min. in order that cracks, seams or other defects may be readily spotted.

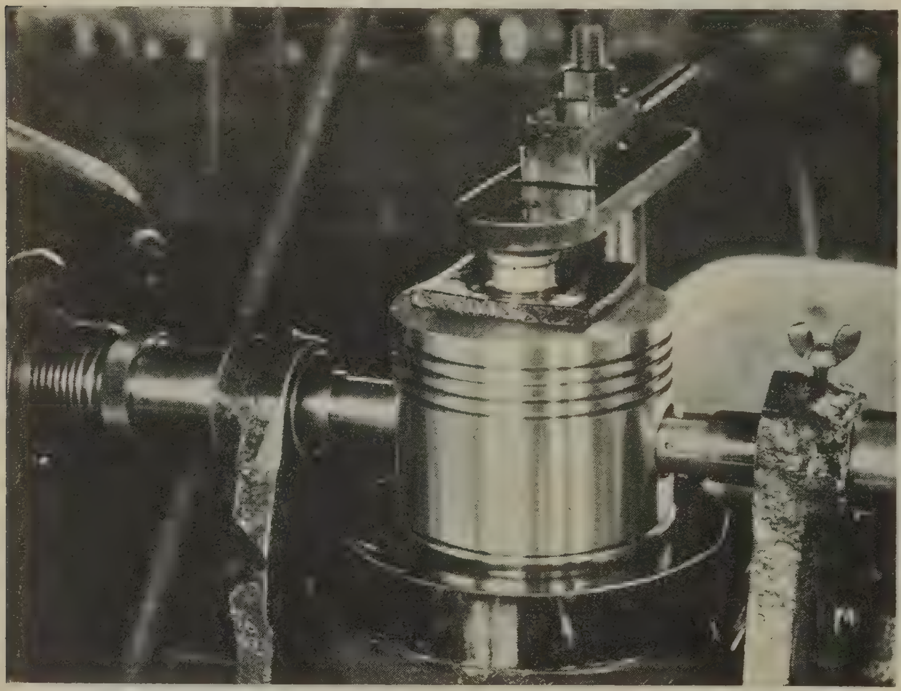
A Bullard vertical boring mill equipped with standard tools is used to bore and face the ends of the main crankcase section. The bronze bearing ring is then inserted, and in addition to having a shrink fit it is anchored with a pin. The bearing ring is bored and the open end is faced on a vertical boring machine. Next, the nine cylinder flange holes, which are equally spaced around the circumference, are bored and faced on a horizontal boring machine, the work being held on an indexing fixture. Combination facing and boring heads are used. Then the nine intake-pipe bosses are bored and faced and tapped. Other small holes are drilled and tapped, with the exception of the cylinder stud hole in the nine cylinder pads. The eight holes in each pad are drilled on an upright drill equipped with a multiple drill head. After several more minor operations are performed the crankcase receives the usual final inspection and is then enamelled.



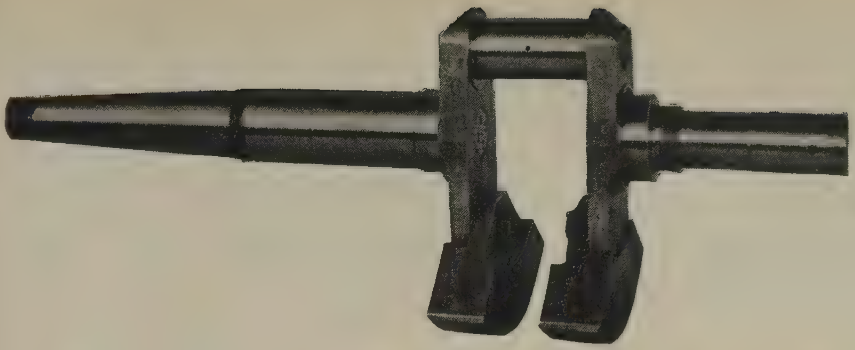
CRANKCASE Main and Intermediate Section Assembled With Master and Articulated Rods and Valve Tappets

The other parts of the crankcase are treated in a similar way, and in addition to the usual turning and boring operations, they undergo a number of milling operations. The rear section has a number of oil passages in it; therefore, it has to be carefully machined and pressure-tested.

The 18 rocker boxes, nine exhaust and nine intake, are also cast in the Wright company's foundry from aluminum alloy, S. A. E. No. 30. This alloy contains from 7 to 8.5 per cent of copper. These small parts are, of course, of very thin section and require great care in machin-



BORING Piston Pin Holes on Engine Lathe. During transit between machining operations the pistons are kept in individual containers



EIGHTY-FIVE Machining Operations Are Required to Complete the Crankshaft. The balance weights are attached and turned in a lathe, exacting balance requirements being met

ing to prevent distortion. There are a number of drilling and milling operations on high-speed sensitive drill presses. Multiple-cutting and continuous-milling methods are also employed in later processes. Disk grinders finish the cover face. The parts are subjected to the same enamelling and baking process as the larger parts. The rocker box covers are punched and formed complete from sheet aluminum on a punch press.

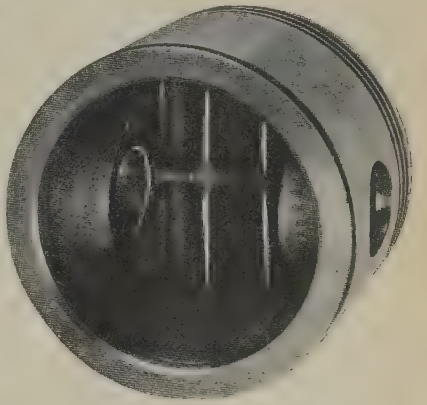
The oil and the fuel pump parts, bearing retainers, and other small aluminum castings are also cast in the company's aluminum foundry. In this department many of the problems of weight reduction have been solved. A careful physical check and laboratory test to determine molecular structure, combined with rigid inspection and exhaustive pressure tests, insure good quality at all times; and a uniform run of good material free from the high percentage of defects many times found in such foundries.

Pistons Seasoned by Special Heat Treatment

The pistons of the Whirlwind engine are of an aluminum-alloy of the following composition: Copper, 4 per cent; nickel, 2 per cent; magnesium, 1.5 per cent; iron, 0.75 per cent; silicon, 0.5 per cent, and aluminum, 91.25 per cent. As in the case of the cylinder head they are seasoned by special heat treatment; an excess amount of metal is used to insure a clean interior. I was informed that some difficulty had been experienced in getting cutting tools which would operate satisfactorily on the pistons. After considerable research in cutting steels, a satisfactory method was found.

Before the "Y" alloy was used, the wristpin holes were bored with a boring bar carrying a diamond cutting point. This gave good results. But on the new metal this tool will not give smooth, true holes. Various high-speed and carbon steels were tried but without success. Finally, it was found that a chromium-plated tool gave the best results. I have been informed that the company has been broaching the wristpin hole and this method has greatly increased their production. An ordinary round broach fitted with detachable chromium-plated burnishing buttons on the end is now used.

In machining the piston the excess metal is first removed and the part subjected to a heat treatment to refine the interior structure. Boring the skirt or open end to a close dimension is the second machine operation, after which the piston is held in a special chuck locating the inside diameter of the piston. The skirt opening is bored concentric with the inside diameter within 1/64 of an inch. The sequence of operations then is: Drilling of the wristpin hole on a drill press; turning of the outside diameter; facing and centering the boss on the head; and rough cutting the ring grooves, which is done on a semi-automatic machine. The wristpin hole is then redrilled and the outside diameters are finish turned, leaving enough stock for grinding. The ring grooves are finish turned and burnished by rolling, after which the wristpin hole is rough bored on a special horizontal machine. The pistons are then tested for leaks using hydraulic pressure. Following this the wristpin hole is broached and the outside diameters are ground. After finish facing the head and removing the working boss the pistons are inspected and weighed carefully. Wright requirements are met within close limits by reboring the skirt. Kerosene is used as a cutting lubricant for all finishing operations. The pistons are carefully kept in individual containers between operations and during transit.

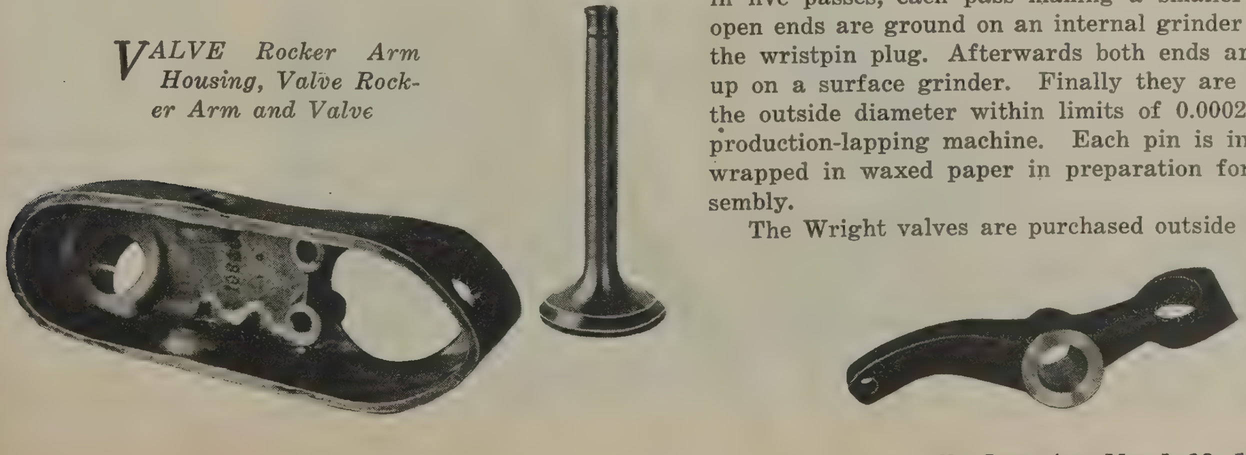


THE Piston Is of Y-Metal. Wristpin holes are broached with an ordinary tool having detachable chromium-plated burnishing buttons in the end

Pins Quenched in Vertical Position to Prevent Warping

Piston pins are of special steel tubing bored and cut to length in automatic machines. They are heat treated, rebored in semi-automatic machines and then hardened. After the heat treatment in electrically-controlled gas furnaces the parts are quenched in a vertical position to prevent warping. Finally they are submerged for 20 min. in a 50 per cent hydrochloric acid solution to enable the inspectors to spot unsound sections and defects. The pins are ground on a centerlesss grinder in five passes, each pass making a smaller cut. The open ends are ground on an internal grinder to receive the wristpin plug. Afterwards both ends are squared up on a surface grinder. Finally they are lapped on the outside diameter within limits of 0.0002 in., on a production-lapping machine. Each pin is individually wrapped in waxed paper in preparation for final assembly.

The Wright valves are purchased outside to specifi-



VALVE Rocker Arm Housing, Valve Rocker Arm and Valve cations supplied by the company and the product is checked by chemical and metallurgical tests in the plant. An additional treatment undergone by the exhaust valves is interesting. They are cleaned by dipping in gasoline and a boiling caustic soda solution, then immersed head down in a bath of chemically pure potassium nitrate kept at a temperature from 700 to 900 deg. Fahr. until bubbling ceases. They are then raised above the liquid and a ¼-in. diameter ejector rod, which has been preheated to the temperature of the bath, is pushed down until it strikes the bottom of the hole in the valve. The ejector rod is then removed and the valves taken from the bath and permitted to cool. The valve stem plugs are driven into the valve stem with an arbor press. The whole assembly is then washed and placed in the furnace where it is heated to 700 to 750 deg. Fahr. for 30 min. After cooling they are inspected for leaks, dipped into the 50 per cent hydrochloric acid solution at 180 deg. Fahr. and finally washed and inspected and placed in assembly cartons.

Valve springs, also made by outside specialists, receive careful inspection by means of electrical testing equipment. The intake valve guide is made of a special bronze alloy bar stock on an automatic machine. The exhaust valve guide is made from tungsten steel bar stock. Valve washers are made from bar stock on automatic machines and are hardened by a special cyanide process. The valve tappet guides are special steel forgings; the tappets are turned from bar stock drilled and cut off complete on an automatic turret lathe. Slotting is accomplished by a horizontal milling machine which cuts several parts at one time. The ball socket and push-rod balls are of special steel and are formed completely on automatic machines. These parts are hardened by a cyanide process and tested for hardness by a Rockwell machine using a diamond cone. The hardness range is from 64 minimum to 68 maximum. Next they are immersed in a nitric acid solution and examined for defects. Before hardening these parts, the ball ends are ground on a plain grinder using a special ball grinding device.

Crankshaft Requires 85 Operations

According to the operation sheet 85 operations are required to finish the crankshaft. It is received as a forging of special steel and a test piece is cut off and checked for physical characteristics. The shaft is first rough machined all over, placed in a 50 per cent hydrochloric acid bath for 30 min., inspected for defects and then finally finished, machined and ground all over. During the progress of the 85 operations of turning, milling, gun-drilling and grinding, two shafts are generally worked upon at the same time. Great care is exercised in the manufacture of this part as it is one of the most important components in the whole mechanism. Much depends upon its perfect balance and the balance weights which are attached and turned on a lathe are checked in a high-speed balancing machine until the exact balancing requirements have been satisfied. The balance weights are made of bronze and steel and are attached to the shaft by means of special bolts and screws.

Loading and Unloading Pipe by Magnet on Truck Crane

MUCH greater unloading speed is reported by the East Ohio Gas Co., Cleveland, through the use of a magnet instead of a hook block for pipe handling with a truck crane.

Unloading, stacking, rehandling and loading of pipe are all handled by this company by means of a Universal Crane Co. crane mounted on a 5-ton White truck. Formerly this crane was used with hook block and slings for such work, but recently this was changed by the installation on the crane of a 22-in. diameter, 230-volt pipe type of magnet, resulting in 60 per cent saving in time.

The photograph shows the truck crane unit loading pipe into trailers from stock piles. It is claimed that the following unloading speeds from railroad cars are averages for the crane and magnet unit:

1½ to 2 in. pipe,	3 hr. per car
3 to 4 in. pipe,	2 hr. per car
6 to 8 in. pipe,	1½ hr. per car
10 in. and over,	1 hr. per car

Total savings were greater than represented by just this unloading speed. After the magnet was attached there were two less men needed in handling 1½ to 4-in. pipe and four less men on 6 to 18-in. pipe. Another item of savings was less spoilage of pipe from ruining the threads or warping.

The magnet on this unit is excited by a generator mounted in the rear of the crane cab and driven by the crane gasoline motor. This makes the entire outfit completely contained and does not detract in any way from the mobility of the motor truck. With a mobile unit of this type the company has been able to serve several yards scattered throughout the city. For emergency jobs the crane can be sent at full truck speed.

USING the Magnet and Truck, Much Time Is Saved in Loading Pipe on the Trailer and in Unloading from Railroad Car

Testing Society Committees Confer

Large Attendance at Annual Group Meeting—Work on Stainless Iron and Alloy Steel Castings Inaugurated —Advances in Research and Specifications

ANNUAL group meetings of various committees of the American Society for Testing Materials have now become virtually a fixed policy of the society. The seventh meeting of this nature was held last week, March 21 and 23, at the Mayflower Hotel, Washington, and was one of the most successful and best attended of the series. Close to 450 members and visitors registered for attendance at the numerous gatherings of over 30 committees. Sessions of main and subcommittees were held morning, afternoon and evening of each day, the conferences being preliminary to the annual convention at Atlantic City, June 25 to 29.

These group meetings were initiated in the spring of 1924 at Pittsburgh. The second one met in Washington in the fall of the same year. In the spring of 1925 Philadelphia entertained the third meeting, while the fourth occurred in Cleveland in the fall of that year. Annual meetings were inaugurated in March, 1926, with a gathering at Providence, R. I. The 1927 sessions were held at Philadelphia last March. The features of most of these group meetings have been described in THE IRON AGE, and some of those of the sessions last week are here presented.

Metal and allied committees which were active last week were the following: A-1 on steel, A-2 on wrought iron, A-3 on cast iron, A-5 on corrosion of iron and steel, A-6 on magnetic properties, A-8 on magnetic analysis, B-3 on corrosion of non-ferrous metals and alloys, joint committee on phosphorus and sulphur in steel, and joint research committee on the effect of temperature on the properties of metals, as well as a few other minor groups. There was also a meeting of the cast iron research committee of the American Foundrymen's Association.

Progress in Steel Specifications

Attendance at the meeting of committee A-1 on steel Friday afternoon, March 23, was not so large as on previous occasions, and the session was comparatively brief. Minor revisions in several standards and tentative specifications were favorably acted upon. A note regarding the permissible overweight of plates ordered to thickness was approved for inclusion in standard specifications for structural steel for bridges, structural nickel steel, structural steel for buildings, and structural silicon steel. This note is the same as that which appears in the American Railway Engineering Association's general specifications for steel railroad bridges. The specifications for locomotives and cars were revised by the inclusion of the same note as embraced in the four standards just mentioned.

Specifications for Alloy Steel Castings

The specifications for carbon steel castings for valves were revised by the adoption of several revisions agreed to last year, but which were referred back to the committee at the annual meeting as a result of controversy over other revisions proposed at that time. The questions which were in controversy have been temporarily dealt with in another manner for settlement later. As a result of replies to questionnaires sent out to users of high-temperature and high-pressure equipment, the committee finds that there is not sufficient demand, nor are the practices sufficiently standardized, to warrant the preparation of specifications for materials for use at 1000 or 1200 deg. Fahr.

The subcommittee on steel castings, through one of its subcommittees, is engaged in determining the limits of physical requirements for alloy steel castings, which it is expected will lead to specifications. Definite requirements have not yet been fully agreed upon.

Progress is also being made in the preparation of two new specifications for alloy steel forgings, one for annealed and normalized forgings and the second for quenched and tempered forgings.

Interest in Cast Iron

Two important meetings were held on the subject of cast iron, one that of committee A-3 of the A. S. T. M., and the other the research committee of the American Foundrymen's Association.

New Light on Fatigue of Cast Iron

Attendance at the meeting of committee A-3 on cast iron was quite large. Considerable interest was manifested in the announcement of a paper on fatigue tests for the program of the annual meeting of the society in June, to be presented by J. B. Kommers, associate professor of mechanics, University of Wisconsin, Madison, Wis. This paper will cover results of testing nine or 10 sets of cast iron test bars received from various sections of the country. The complete results of tension, transverse, impact and fatigue tests, as well as chemical analyses and casting conditions, will be included.

Under the auspices of the committee there has been conducted during the last year an elaborate series of tests to determine the relation between the properties of specimens cut from iron castings and the properties of separately cast test bars from the same heat. These results, prepared by Jesse L. Jones of the Westinghouse Electric & Mfg. Co., Pittsburgh, will be included in the committee's annual report.

There was considerable discussion of the arbitration test bar and the tension test bar for cast iron, and progress was made toward advancing the specifications covering these to a further stage of development.

Research in Gray Iron

Under the chairmanship of J. T. MacKenzie, chief chemist American Cast Iron Pipe Co., Birmingham, Ala., a well attended meeting of the research committee of the American Foundrymen's Association was held Thursday morning, March 22. Some of the progress made by members of this committee in studying the fluidity and viscosity of gray iron was discussed. Work which is contemplated in studying the machinability and wear of cast iron was gone into quite extensively. Plans are also under way to investigate certain phases of the shrinkage of cast iron.

New Work in Magnetic Research

In the field of magnetic studies two important committees held meetings. At a session of committee A-8 on magnetic analysis, reports were received on several investigations now under way, the present studies of which will be outlined in the committee's next annual report, while in a subsequent report a more detailed summary will be given. A new investigation was announced which will involve a material other than that in use in the present investigations of high-speed tool steel.

In the field of magnetic properties committee A-6 at its meeting organized a new committee on tests at high magnetizing force, under the chairmanship of L. E. Howard. The scope and proposed activities of this committee were given very careful consideration. Last year the committee submitted an extensive list of terms relating to magnetic tests of materials. This list has been reviewed and is now being revised and amplified.

Wrought Iron Committee Active

New specifications for iron and steel chain are being recommended by committee A-2 on wrought iron to supersede eventually the present standard specification.

The desirability of revising requirements in specifications covering the method of manufacturing wrought iron is being considered by a committee. Requirements now call for wrought iron made from "all-pig puddled iron," whereas wrought iron that meets the most exacting tests for high quality is being produced commercially by a radically different process without the use of a puddling furnace.

The committee is investigating the differences between the physical properties of rolled and hammered wrought iron forgings. Additional data are required. An investigation of the effect of phosphorus on the physical properties of staybolt iron is progressing. Several groups of samples have been furnished in which the method of manufacture and the chemical composition, with the exception of phosphorus, are as nearly as possible identical. These samples will be analyzed and tested physically in the annealed and unannealed state.

Progress in Joint Research

Two important joint research committees held sessions last week, one on the effect of phosphorus and sulphur in steel, and the other on the effect of temperature on the properties of metal.

Added Phosphorus in Steel Pipe

One of the most important matters brought before the joint committee on investigation of the effect of phosphorus and sulphur in steel, under the chairmanship of George K. Burgess, director United States Bureau of Standards, Washington, was the effect of phosphorus added to low-carbon steel. Suggestions had been made by the American Petroleum Institute that this matter be studied by the committee, and favorable consideration was given to these suggestions. The manufacturers of steel pipe also are interested in a study of this subject, particularly in the manufacture of welded pipe having a carbon range of approximately 0.06 to 0.12 per cent. The importance of such an investigation has been emphasized by the practice of rephosphorizing open-hearth steel of this grade to increase its machinability and strength without affecting its welding properties. It is believed that arrangements for procuring the steel can be effected, and it is tentatively planned to coordinate this research with tests of finished pipe from the same heats of steel, that will be made by the American Petroleum Institute. A program of tests of the material itself is being drafted and will be considered by the committee at its next meeting.

Regarding the study of phosphorus in steel castings, the committee on manufacture reported that the various materials had been produced and heat-treated and are now in the hands of the various laboratories for test.

How Temperature Affects Metal Properties

Many important phases of the study of the effect of temperature on the properties of metal were discussed at a well attended meeting of the joint research committee of the A. S. T. M. and the American Society of Mechanical Engineers. Further progress was reported concerning cooperative laboratory work, which has been under way for some time. Most of the short-time tests have been completed, and one laboratory submitted its report on flow test. An attempt will be made to coordinate results from short-time and flow tests. Satisfactory arrangements being assured, it is expected that laboratory work on fatigue at elevated temperatures and thermal conductivity will be under way in the near future.

Work on Corrosion of Iron and Steel

In the corrosion of iron and steel, committee A-5 on this subject at its meeting reported that several specifications for zinc-coated products had been prepared or had been under consideration during the past year. New specifications are being issued covering zinc-coated barbed wire and zinc-coated steel wire strand. A sub-committee has been at work formulating methods of test of an accelerated nature in an attempt to get results in a short time, which will indicate serviceability of materials in various classes of service. Some of the suggested methods have been carefully considered and are approaching the stage of actual value.

Stainless Steel Alloys to Be Studied

Important action was taken by the joint advisory committee on corrosion, whose chairman is W. H. Bassett, technical superintendent American Brass Co., Waterbury, Conn. This committee is an administrative one, consisting of appointed representatives from the two A. S. T. M. corrosion committees, A-5 on iron and steel, and B-3 on non-ferrous metals and alloys. Its function is to correlate the activities of the two committees and particularly to advise the executive committee of the society in matters relating to new fields to be entered.

At the meeting last week a proposal was considered which had been made to form a committee of the society to study a group of corrosion-resistant alloys which lies between the fields at present being developed by the two committees. An enlightening and valuable discussion developed, which crystallized in a recommendation to the executive committee that it form a new standing committee in the society to study the alloys of the iron-chromium-nickel system, the committee to have adequate representation from both producing and consuming interests and to function under the scope which would include studies of all properties of the alloys in this system.

On Thursday evening, March 22, an informal dinner was held, at which over 100 were present. Two prominent Government speakers delivered addresses after the dinner: Hon. William P. MacCracken, Jr., Assistant Secretary of Commerce for Aviation, and Admiral H. H. Rousseau, in charge of Naval oil reserves. Several inspection trips to the Naval Gun Factory, the Bureau of Standards, the Bureau of Chemistry and other Government institutions were taken advantage of by various members under the direction of the local entertainment committee, of which Jerome Strauss, Naval Gun Factory, was chairman.

"Forward Atlanta" Campaign Takes 309 Companies to That City

The Forward Atlanta Commission of the Chamber of Commerce of Atlanta, Ga., has distributed a booklet summarizing the results of the two-year campaign to promote that city commercially and industrially. Within the period that the community-promotion campaign has been in operation 309 new companies have located in Atlanta, 9158 new jobs have been created and $14,919,350 annually in new payrolls has been added. Atlanta is now regional headquarters for more than 900 of the country's leading manufacturers. George West, chairman Forward Atlanta Commission, says: "Atlanta's success should be an inspiration to all cities that may today be working toward a similar movement."

Financial Executives' Conference in New York, April 26 and 27

The fourth financial executives' conference of the American Management Association will be held at the Hotel Pennsylvania, New York, April 26 and 27. Among the subjects to be considered are "Trends in Corporate Finance," "Operating the 13-Month Work-Calendar," "Technique of Costing Marketing Activities," "Organizing, Financial, Accounting and Related Functions" and "Trends in the Composition of Boards of Directors." The salary administration group of the association will hold a round table conference at the same hotel on Saturday morning, April 28. W. J. Donald, 20 Vesey Street, New York, is managing director of the American Management Association.

British Institute Considers Brass

Cause of Blowholes, Hardening After Heat Treatment, Forgeability, and Corrosion in Sea Water Occupy Institute of Metals

LONDON, March 8 (*By Mail*).—Dr. Walter Rosenhain, chief of the metallurgy department of the National Physical Laboratory, and president of the Institute of Metals, occupied the chair at the annual meeting of the institute, which opened yesterday. The council's report reflected the continued progress of the institute, whose membership has increased to 1903, including 700 overseas members resident in 41 countries. The international character of the institute is incidental rather than fundamental, but the members realize that the advancement and development of their own science can achieve its full measure of success only if it is carried out in cordial cooperation with the able and successful workers in other countries.

Copper Hardened with Beryllium

In his inaugural address, Doctor Rosenhain pointed out that although he is regarded as a scientific worker rather than a practical man he attached the greatest importance to practical papers and to the interchange of ideas and knowledge between practical men and scientific workers engaged on similar subjects. He hoped that the mutual understanding might be extended also to the business men who control the finance of the non-ferrous metals industries and who are therefore the deciding factor in determining how far and how soon the results of research are to be utilized.

Some may think that the number of equilibrium diagrams described in the *Journal* of the institute is too large, but he pointed out that the formidable term "equilibrium diagram" merely means that the diagram represents those conditions which the alloys tend to assume if they are allowed to attain their final condition of balance. As an example of the need of great accuracy and completeness in the study of these diagrams, an account was given of the method of determining the "solid solubility lines" of various alloy systems. These determinations, which at first sight appear to yield results of purely academic interest, have not only furnished the explanation of the age-hardening of duralumin and other aluminum alloys, but form the foundation for a series of new and important alloys of copper and other metals. In some of these, notably the alloys of copper and beryllium recently developed in Germany, the age-hardening effects are very large. An alloy containing only a small percentage of beryllium could have its hardness raised from 80 to 410 by age-hardening, the tensile strength in the latter condition being of the order of 200,000 lb. per square inch.

Heat Treatment of 60 : 40 Brass

A study of rolled brasses containing from 55 to 63 per cent copper was made by T. Matsuda of Sumitomo Steel & Copper Works, Osaka, Japan. He finds that the Brinell hardness as rolled and furnace-annealed (varying from 92 for the 55 per cent copper brass to 56 for the 63 per cent copper) remains unchanged until the quenching temperature passes the transformation range where the alpha constituent dissolves in the beta. Quenched from the beta range, the brasses attain a uniform hardness of 100. Slower coolings from the beta range give intermediate hardnesses, depending upon the amount of the alpha constituent which can separate. The highest hardness he was able to prepare by heat treatment is in a 60 : 40 brass, quenched in water from above 800 deg. C. and tempered at 300 deg. C. for 30 min. This gave the following physical properties:

Tensile strength...........	70,400 lb. per sq. in.
Elongation	22 per cent
Brinell hardness..........	127
Stanton impact number....	5,835
Izod impact energy.......	17.9 m.-kg.

Strength and hardness curves, plotted against annealing temperature, show a sharp peak at 300 deg. C., this corresponding to the precipitation from the solid solution of alpha crystals of critical size for maximum slip interference.

Soundness of 70 : 30 Brass Ingots

Presence of rounded cavities in cast brass has been ascribed to the evolution of dissolved gases just before solidification, and various experimenters have reported the extraction of comparatively large volumes of gas from the solid alloy. In order to determine whether melts previously saturated with gas had undue porosity on solidification, G. L. Bailey, metallurgist in the research department, Woolwich Arsenal, cast a series of small round ingots, 6 in. high and 1½ in. in diameter, with hot tops. Each cast was made in four molds, as follows:

Mold	Temperature (Degrees Centigrade)	Blackening	Approximate Solidification Time (Seconds)
Thick-walled copper..	100	Soot	16
Thin-walled cast iron.	100	Soot	22
Calorized steel.......	800	None	145
Dry sand............	100	None	310

By preliminary experiments with a 5-per cent tin bronze (especially difficult to cast sound) it was determined that nitrogen, bubbled through the melt when held in a carborundum-lined electric furnace, is able to sweep out substantially all the dissolved gases, and any porosity on solidification is then due to shrinkage cavities.

This determined, 70 : 30 brass was then melted in the electric furnace and treated at temperatures corresponding with the limits of good foundry practice. First nitrogen was bubbled through it for 20 min. at 1100 deg. C., and a set of ingots was cast. Another melt was bubbled at 1050 deg. C., and cast from 1000 deg. C. A third was treated similarly, but was heated after bubbling to 1140 deg. and then cooled in the ladle to 1000 deg. C. This program was repeated with hydrogen and with sulphur dioxide, the two supposed offenders causing gas cavities. After the sink head was cut off, porosity was determined by measuring the specific gravity and comparing it with that of the alloy solidified in a vacuum, rolled and annealed.

The various temperature programs made no differences in the amount of voids, within the limit of experimental accuracy. Voids produced by the gases were as follows (in per cent):

Time of Solidification	Nitrogen Saturated	Hydrogen Saturated	Sulphur Dioxide Saturated
16	0.39	0.20	0.61
22	0.41	0.19	0.66
145	0.59	0.18	1.12
310	3.28	3.40	3.31

From these figures, and from the results of microscopic examination, Mr. Bailey concludes that 70 : 30 brass is not liable to unsoundness caused by gases, whatever the conditions of casting. Slow speeds of cooling, as in dry sand, are associated with much more pronounced shrinkage cavities than after casting in metal molds. Spherical cavities of varying size and unequal distribution frequently found in brass ingots are, in his opinion, caused by mechanical entrapping of gases within the mold; any gases actually in solution in the liquid metal just before freezing are retained in the solid without blowhole formation.

Testing Brass for Forgeability

Since it is well known that the ordinary physical tests do not indicate the forgeability of metal, W. L. Kent of the University of Birmingham studied the action of hot pellets, struck by a single blow of a drop hammer. He regards the amount of flattening as being a rough measure of forgeability.

A single blow reduced pure copper at room temperature 15 per cent. Reduction increased steadily with rising temperature, until it reached 28 per cent at 800 deg. C. Above that the malleability increased very rapidly. Brinell tests taken on the flattened pellets after cooling showed that the cold copper (which was originally 43 hard) measured 70 after one blow, and this hardness decreased uniformly with the temperature of forging until at 500 deg. C. a hardness of 67 was reached. Recrystallization is rapid in the range 500 to 650 deg. C., so that the hardness of pellets struck once and cooled is about 43 if the work is done at any temperature above 650 deg.

Both pure and leaded 70 : 30 brass were tested similarly. Malleability increases very little from room temperature (reduction 15 per cent under single blow) up to 700 deg. C. (reduction 18 per cent). Above that the increase is rapid. Hardness is maintained at about 92 after all impacts up to 400 deg. C. Decrease is then uniform with temperature, reaching 54 after cooling from one blow at 900 deg. C. Originally these pellets were 54 hard. The presence of lead causes no change in these figures. However, the leaded brass developed intercrystalline cracks when tested at 350 deg. C. and above.

Sixty-forty brass (Brinell hardness 70) deformed 12 per cent when struck once at any temperature up to 400 deg. C., from 400 to 650 the malleability increased gradually to 23 per cent, and quite rapidly thereafter. Hardness of pellets cooled after testing sagged from 103 (100 deg.) to 85 (550 deg.) but increased to 92 after testing at 850 deg. C., where the brass is all in the beta phase. The lead-free samples forged well up to 650 deg. C., but had marked side cracks after testing at higher temperatures, a condition opposite that for the leady brass. This corresponds with rolling mill experience.

A study of the results convinces the author that this test will indicate whether a certain material can be forged at a given temperature without cracking and its relative forgeability at various temperatures. The best temperature for working can be discovered with the further aid of a series of Izod impact tests on hot samples. In interpreting the results it should be borne in mind that strain hardening occurs during hot work as well as during cold work, and the amount of work which can be done by successive blows or rolling mill passes will depend upon whether the temperature is high enough to cause rapid recrystallization, or to soften the metal even though it does not recrystallize.

Corrodibility of Metals in Sea Water

Four years ago, a rack containing 50 bars (1⅛ in. in diameter, 2 ft. long) of various alloys was fixed to the sea bottom at lowest tide in the Bristol channel. After four years' continuous exposure to sea water, they have been examined by Prof. J. Newton Friend, of Birmingham Technical College, and given the following rating, the first mentioned having the highest order of merit:

1. Ingot tin. Cast bars became dull colored, freckled with minute white dots, appearing to be centers of incipient pitting.

2. Rolled Mond nickel. Lost 0.44 per cent in weight. It was originally covered with hot mill scale, and most of this remained after four years' exposure. Very minute pits were numerous.

3. Lead, both commercial soft lead, and an alloy with 1.6 per cent antimony, extruded. These had been bruised by stones dashed against the rack during storms. The surface was dull, and in some places hidden by a white deposit, easily rubbed off. These bars lost about 0.6 per cent in weight, thus being inferior to tin.

4. Screw stock (Cu : Zn : Pb 60 : 38.6 : 1.4). It was covered with a smooth pale green coat without eruptions, (which classes it above the nickeled copper described below). It had uniform, small-sized crystalline grain. It lost 3.8 per cent in strength and 1.4 per cent in weight.

5. Copper with 1.8 per cent nickel. Dull brick-red in color, with a scattering of small green excrescences. The diameter of the bar had been reduced 1.4 per cent, and the strength, an equal amount.

6. Copper. Both ordinary (99.8 per cent) and arsenical, in cold-drawn bars, developed far more and larger excrescences than the above. These proved to be caps to portions of slightly elevated metal. The diameter of the bar was reduced by 2.4 per cent, and the strength, about 4.5 per cent. The entire freedom from pits is noteworthy.

7. Nergandin brass (Cu : Zn : Pb 70 : 28 : 2). Similar in appearance to 5 above, although the coating tended toward greenish. At the ends, where the bars had been fixed in the wooden frame, considerable erosion had taken place. Loss in weight was 5 per cent; loss in strength, 6.1 per cent. Microstructure is essentially alpha brass, and while the loss in weight is heavy, it was uniform and showed no tendency to develop pits. The lead content appears to prevent pitting.

8. Naval brass (Cu : Zn : Sn 62 : 36.7 : 1, with 0.2 lead). Covered with a smooth, tight coat of greenish-ocher color, marked with a number of flat wart-like excrescences, representing filled-in pits where dezincification had proceeded. The diameter of the bar was reduced 3.1 per cent, and the strength, 4.8 per cent. In the development of this composition tin was introduced in order to check the decay frequently noted in Muntz metal, and appears to increase the tenacity with which the protective coat clings to the metal. If naval brass is situated where this coat is scoured off by mechanical action, its corrosion rate will probably be on the same order as Muntz metal.

9. Muntz metal (Cu : Zn 61 : 38.7 with 0.4 lead) had a thin pale green coating, thickly studded with warts. As in the naval brass, these warts were metallic, consisting of copper replacing the beta constituent. The extent of the action is measured better by the loss in strength (9.4 per cent) than by the reduction in diameter (1.4 per cent). Rate of corrosion in Muntz metal will vary if it is in contact with other metals; it also depends on the surface condition of the newly made metal—the cold-worked surface being more resistant to sea water than the underlying metal free from strain hardening.

10. Commercial zinc in rolled bars, (1.1 per cent lead). It was covered with small dome-shaped excrescences of brittle material, so closely attached to the metal that it could not be removed. The bar appeared to be covered with pits nearly 1 mm. deep, which are responsible for its low rating. Loss in weight was 4.7 per cent; loss in tensile strength, 10.3 per cent.

11. Aluminum (99.4 per cent). Corroded very deeply at the ends, where it was embedded in putty. The rest of the bar was covered by a stone-colored layer, broken by pits up to 6 mm. deep, thus penetrating nearly 20 per cent of the diameter. The loss in weight was only 4.5 per cent, although the tensile strength was reduced 16 per cent. It is believed that these pits result from cracks or fissures in the primary oxide skin on the freshly manufactured bar, rather than from segregated impurities or localized differences in metallic structure.

Baldwin Plant in Canada to Make Seamless Tubing

TORONTO, ONT., March 27.—Arrangements have been effected by which Page-Hersey Tubes, Ltd., will take over the plant of the Canadian Baldwin Corporation, Ltd., at a price said to be $500,000.

The official statement issued after a meeting of the Page-Hersey board of directors, was as follows:

"The Baldwin Canadian Steel property has been merged with Page-Hersey Tubes, Ltd., and its works will be utilized for the manufacture of seamless steel tubing and kindred products.

"The Page-Hersey Co. is the largest manufacturer in Canada of what is known as wrought iron and steel welded pipe, but the demand for seamless pipe is growing rapidly and the merger allows them to enter this field under advantageous conditions, as the Baldwin plant is well suited for the industry and the location particularly good as a manufacturing and distributing center.

"The combined enterprise will be in a position to supply a complete line of steel and wrought iron pipe of all grades, both for domestic and foreign markets, and will consequently effect important savings in manufacturing and sales costs, which, as separate units, they could not enjoy.

"No new issue of securities is contemplated."

Schwab Testifies in Coal Hearing

Chairman of Bethlehem Steel Corporation Recommends Hegira of Surplus Labor from Bituminous Fields—Says Repeal of Sherman Law Would Not Help Coal

WASHINGTON, March 27.—The application of the law of supply and demand as a means of solving the ills in the depressed bituminous coal industry was suggested by Chairman Charles M. Schwab of the Bethlehem Steel Corporation to the Senate Committee on Interstate Commerce when he, together with John D. Rockefeller, Jr., and R. B. Mellon, appeared as witnesses last Friday in connection with the inquiry the committee is making into conditions in that industry. Testifying freely, Mr. Schwab at times spoke in a lighter vein but when serious questions arose he became earnest in his remarks and frequently displayed strong determination in supporting his views.

Except for the coal industry, Mr. Schwab told the committee, labor conditions in the United States are "happily prosperous," and he emphasized the need of mutual understanding between employer and employee as the real basis of the solution of the coal problem. He pointed out that laws of supply and demand are unchanging and must be recognized in coal as in any other industry. Disclaiming first-hand knowledge of conditions in the bituminous coal fields or operating conditions of the subsidiary mining properties of Bethlehem, Mr. Schwab gave views concerning relations between employer and employee and discussed labor conditions in the steel industry. Full cooperation was promised by Mr. Schwab in solving the coal problem and he agreed to join any conference toward that end.

Settlement must be found in a natural way, Mr. Schwab said, and sensational charges by employers and employees alike must be avoided. He asked the committee and counsel for the United Mine Workers not to take an antagonistic attitude toward him and was told there was no desire to criticize adversely, a statement which appeared to please Mr. Schwab.

Excess Mining Labor Should Go Elsewhere

Mr. Schwab told the committee that a two-fifths oversupply of labor in the coal industry must not be disregarded and recommended that this surplus of labor be encouraged to direct its efforts elsewhere. He suggested that a wealthy man could do a monumental social service by financing an hegira of the excess labor from the coal fields. He also declared that combinations of units for the sake of economical operation must be permitted by the Government. It was pointed out that it is a great economic waste to the country to have 500 mining companies operating where there perhaps ought to be 10. Mr. Schwab asserted that the depression in the coal industry might possibly be due to the efforts of President John L. Lewis of the United Mine Workers Union to maintain wages at too high levels in the face of economic conditions. Mr. Lewis, with whom Mr. Schwab had shaken hands before taking the stand, replied to Mr. Schwab, declaring that "the lowest, most unfortunate wage earner in the West Virginia coal fields should not be used as the yardstick for measuring the wages of workers throughout the industry." He also insisted that if union wages were lowered the non-union wages would likewise be lowered.

Considerable questioning of Mr. Schwab concerned the Bethlehem Mines Corporation and the Ellsworth Collieries, a Bethlehem subsidiary, but Mr. Schwab said he had no knowledge of alleged degrading conditions in these or any other Bethlehem company. He promised, however, that he would make a personal investigation. Senator Wheeler, Democrat, asked Mr. Schwab about the alleged abrogation by the Bethlehem Mines Corporation of the Jacksonville agreement.

"I don't know anything about it," relied Mr. Schwab, "but I never would admit that our company abrogated any agreement."

He declared that the mines would be shut down in preference to violation of an agreement if that were the only means of preventing loss of money.

"My course has been to follow the highest moral and business integrity that is possible and I cannot believe that our people violated this agreement," said Mr. Schwab.

When Senator Wheeler declared that the public required protection from huge industries, Mr. Schwab replied by saying that the United States Steel Corporation did not earn 6 per cent on its investment last year.

Repeal of Anti-Trust Law Only a Palliative

As the inquiry proceeded, Chairman Watson, Republican, of the committee said: "We're seeking here a remedy for a manifest evil in the coal industry. Do you think the Sherman Anti-Trust Law should be repealed to enable the coal operators to fix prices to help the miners and to guarantee a fair profit to the investor?"

"I do not," replied Mr. Schwab. "That remedy would be a palliative, and would not alleviate the present serious condition."

Getting back to the Ellsworth mines of the Bethlehem Corporation, a verbal tilt arose between Senator Gooding, Republican, and Mr. Schwab when the former criticized Mr. Schwab for not being familiar with conditions in those mines.

"You don't know about some conditions in your own house, do you?" Mr. Schwab inquired rather sharply, but in a tone not unmixed with humor.

"I know that," admitted Senator Gooding, as the audience broke into loud laughter.

The attitude of Senator Gooding toward Mr. Schwab became cordial and he declared that "if every man employing labor were a Mr. Schwab we would not have the present condition, but unfortunately that is not true."

Attorney Eaton, representing the miners' union, quizzed Mr. Schwab about conditions at the Ellsworth mines and finally drew a remonstrance from Mr. Schwab. The latter declared he had come to Washington "with my heart filled with a desire to do anything to help, but your questions are not strengthening the conviction in that heart. I would work harder than you or any one at this table to correct conditions that are wrong."

Artificial Labor Conditions Cannot Be Helpful

When he turned to general questions of labor policy, Mr. Schwab asked for and was given permission to make a statement on that subject, based on an experience of 40 years in labor management, "during which, I say boastfully, I have never had a serious labor difficulty." Insisting that all great economic questions of labor rest on the old theory of supply and demand, Mr. Schwab said that the creation of any artificial condition with reference to labor and industry cannot be sound and helpful. There must be, he said, a true, complete and thorough understanding.

The method of the Bethlehem Steel Corporation, Mr. Schwab explained, is to have all labor questions debated in conference with the management, each 300 workers electing representatives who meet once a month or oftener with the management. In the event the conference is unable to settle a question it is left to arbitration, Mr. Schwab told the committee, the Secretary of Labor of the United States being the arbiter.

In 10,000 or more questions, Mr. Schwab said, not once had arbitration been necessary.

"The result is that we take the employee completely into our confidence," he continued. "When we meet, we give them all the information that we would give our stockholders. We have had reductions in wages, and when the workingmen understand the reasons there are no complaints. On the other hand, we have had more advances, due to prosperity in the industry." Mr. Schwab said the average earnings of all employees, exclusive of executives, are now 63.8c. per hour, and asserted he was proud of that average in view of the great number of unskilled workers in the industry. Direct contact with the men was called "human engineering."

"But we know we can't have the heart of our men in the business unless they are part of it," Mr. Schwab stated. "The most important stockholders in the Bethlehem Steel Corporation are the men. They own from one-fourth to one-third of all the preferred stock, amounting to about $37,000,000." Of this, he said, about $3,000,000 worth is held by miners.

In the mines, Mr. Schwab declared, the same development of employer-employee relations has not been possible, but he expressed the hope that he could bring about the same condition in the coal properties as in the steel industry. Coal has presented so many difficulties, he said, that "nobody would be happier to get out of the mining industry than the Bethlehem Steel Corporation."

Never Made a Dollar Out of Bethlehem Steel Co.

He told the committee that he had never made a dollar out of Bethlehem Steel, that he was not now working for money, had no sons or heirs to whom to leave his fortune and that he spoke as one who hoped to leave as a monument to his efforts the humanization of industry.

He was asked by Senator Watson if he believed in collective bargaining.

"Collective bargaining," replied Mr. Schwab, "is a bad term; it is understanding with each other that I'd prefer to call it. Mr. Lewis remembers that the greatest autocrat in industry was the sub-foreman, against whom a workman was afraid to complain. With understanding, the worker can come forward with his grievances, and the result is that everybody is happy."

When Senator Gooding declared that the coal and steel industries could not be compared, Mr. Schwab responded that they ought to be exactly alike and that "so far as our mines are concerned, that's the way we intend to operate them."

Mr. Schwab disagreed with Senator Gooding when the latter said he could not concede that wages should be made subject to the law of supply and demand, adding that he believed there was not enough employment in the country for its increasing population. Mr. Schwab declared that the steel industry is far from its saturation point. The United States, with 5 per cent of the total population, said Mr. Schwab, does 50 per cent of the world's manufacturing. He asserted that industry in this country is "still in its swaddling clothes." Mr. Schwab said that the average employer is glad to have his workers make money, adding that the average earnings have increased year by year until last year they were the highest in history. The Government can help only if it will give capital a chance to operate its business economically, said Mr. Schwab, who stated that the Government has not been successful in the supervision of business.

Deplores Waste in Steel Distribution

Mr. Schwab discussed the steel situation at considerable length. For one thing, he expressed the view that Federal laws prevent economies which might well be applied to steel distribution. In replying to Senator Couzens, Republican, of Michigan, formerly associated with Henry Ford, Mr. Schwab said that the things that would give profit to the manufacturer are the things that Washington has prevented the manufacturers from doing. For example, he stated, the Bethlehem Steel Co. ships steel to Chicago and to other points where there are steel works, while Chicago, through the United States Steel Corporation, ships steel to places in the East where Bethlehem has steel works. That was declared to be economically wasteful and unsound. He explained to Senator Wheeler, Democrat, of Montana, that it is contrary to the law of the land for the steel manufacturers to have an understanding with each other as to where they will sell their steel, but that it would mean a great deal more money for the workingmen of the country if Congress would pass sane laws permitting business men to conduct their business in the most economical manner.

"Now let us do some such thing in our business and we will earn a return on our capital," said Mr. Schwab. "The steel industry in the last year, with $8,000,000,000 of capital invested, did not earn more than 5 per cent on the money invested."

Mr. Schwab said he was not criticizing the laws but the conditions, and Senator Wheeler declared that he believed in Mr. Schwab's theory.

Senator Couzens, who was somewhat critical of some of Bethlehem's policies as to labor, told Mr. Schwab that the latter had "a very idealistic plan of cooperation with your workmen," but pictured a condition where he might be competing in a nearby coal field with Mr. Schwab and if he offered the coal at less money than Mr. Schwab did it was apparent that the latter would have to revise his plans "every once in a while." Mr. Schwab said that the plan is operated in the steel industry successfully, whereupon Senator Wheeler replied that the steel industry is controlled practically by two or three great concerns.

Reduces Steel-Making Costs but Gives It Away

"No, by no means," Mr. Schwab responded. "We have 18 or 20 big companies in the United States and more than 100 companies. For example, I showed my own directors the other day where we had spent $90,000,000 the last three years to reduce our cost $6 a ton, and yet we were selling our steel at $8 a ton cheaper than we were three years ago, but despite all that the wages of the workmen have gone up year by year."

Senator Couzens insisted that it is obvious that the United States Steel Corporation practically dominates the market, but Mr. Schwab said he did not know that, though agreeing that the small steel producer cannot compete with the United States Steel Corporation or any other big producer.

Earnings of steel producers were discussed at some length, Mr. Schwab stating the United States Steel Corporation did not make 6 per cent last year on its investment of something like $2,500,000,000. Senator Wheeler suggested that in the past steel companies made money.

"But those were days when you permitted us to have pools and agreements to get good prices for our steel," said Mr. Schwab. "We cannot do that today." He told Senator Wheeler he did not think it was necessary for the Government to "step in" to prevent those things because "you have had the cheapest steel in the world during all of these years. The steel industry as a whole has never earned big returns on the money invested, and I know of no industry today, excepting coal—and that is a part of the steel industry—that is earning as little on the actual money invested as the steel industry."

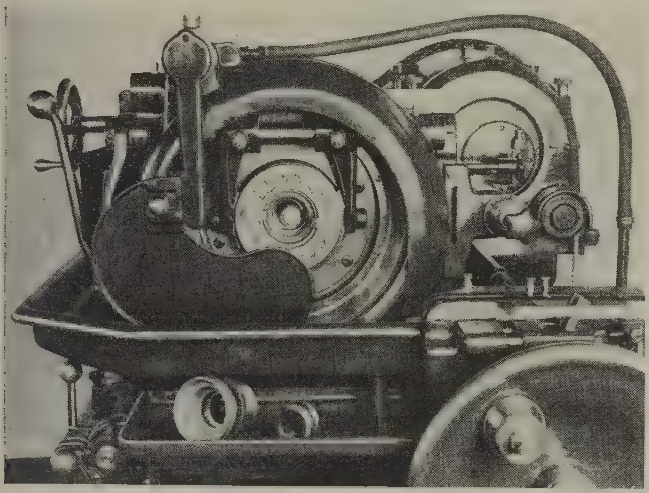
"Fifty years ago I started in the steel industry when this country was believed to have reached its zenith with 10,000,000 tons production per year," said Mr. Schwab. "Every year in the succeeding 50 years I have advocated spending money for the enlargement of our industry. Today the steel industry is producing 50,000,000 tons a year. We think we are near the saturation point, but, as a matter of fact, I think we are only just beginning. And so strong am I in that conviction—and there is no conviction so strong as that which a man is willing to back with his money—I say so strong am I in that conviction that the Bethlehem Steel Co. is spending from $30,000,000 to $40,000,000 every year for the extension of its business. I am as fully convinced now as ever that we will have just as great an advancement for the industry in this country in the next 50 years as we have enjoyed in the past 50 years."

NEW INTERNAL GRINDER

Grinding Wheel Enters Work from Rear—Work Spindle Arranged to Eliminate Overhang

AN internal grinder which incorporates departures from the usual design and which is claimed to establish new standards in production, accuracy, safety, and compactness is being placed on the market by the Greenfield Tap & Die Corporation, Greenfield, Mass. The machine is designated as the No. 12 Hydro-Matic.

An outstanding departure is in the use of an unusually large hollow work spindle through which the grinding wheel travels, thereby approaching the work from the rear. This, it will be noted, is a reversal of the usual practice in which the grinding wheel enters the work from the front. As in other internal grinders made by the company, the work-head which is mounted upon the table is reciprocated by means of oil under pressure, thus giving an infinite number of feeds.



A Departure Is the Hollow Work Spindle Through Which the Grinding Wheel Travels, Approaching the Work from the Rear. The wheel-head is at no time exposed

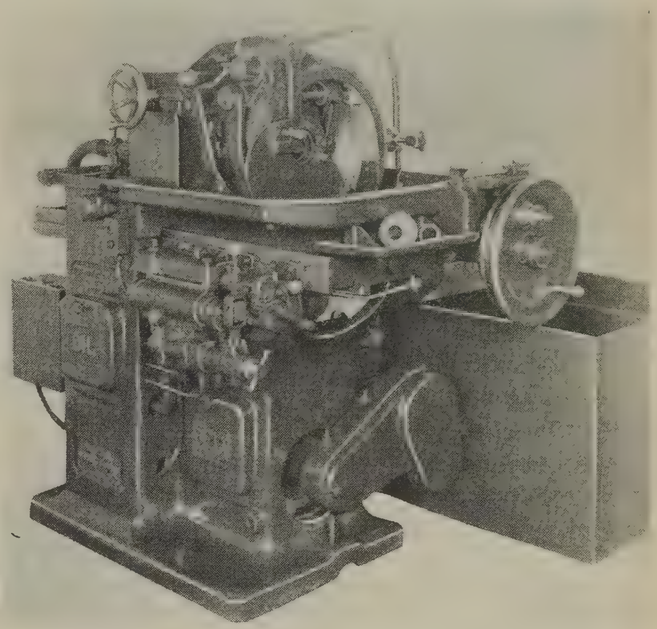
Since the wheel-head is stationary, and enters from the rear, it is at no time exposed. When the work-head is in the loading or unloading position the wheel is back out of the way, practically out of sight, and completely protected. The operator is thus in no danger of coming in contact with the wheel and can give his entire attention to loading and unloading the work. It is pointed out that in not having his movements circumscribed because of the danger of a rapidly revolving wheel, the operator can work faster and more effectively. It should be noted that the operator's position is at the front of the work instead of at the side, the advantage of which position is further enhanced by the arrangement of the levers all of which are located at the front end of the machine, facing the work, and within easy reach from the normal working position.

Further advantages claimed for the arrangement of the wheel-head is that the wheel is entirely inclosed; the coolant floods the work, interior of work spindle, truing device and wheel spindle at all times, maintaining a constant temperature and preventing the slight expansion and contraction of the mechanism which may cause inaccuracy of the finished product.

Sizing is by means of a semi-automatic device of new design. Automatic action of the feed screw is governed by a cam arranged so that successive strokes of the table result in progressively diminishing increments of feed. Upon the completion of roughing cuts a convenient lever serves to pass the diamond over the face of the wheel in preparation for the finishing cut. Definite and predetermined increments of feed are taken after the wheel is trued for the finishing cut, which increments, in being governed by the positive action of a cam, will not vary. The diamond is in a fixed position at all times, which arrangement is intended to eliminate minute variations which it is said may occur when a diamond is moved in and out of a fixed position.

Advantages claimed for the cam feed with its diminishing increments are that the heavier roughing cuts are taken with a clean, sharp wheel. As the wheel dulls or becomes loaded, less and less strain is put upon it, thus minimizing the tendency of the spindle to spring under pressure and grind bell mouth. Truing of the wheel just before the finishing cut removes the dulled or loaded surface and assures an accurate mirror-like finish.

Instead of mounting the work spindle in two relatively small bearings, in which minute inaccuracies might be amplified by the crank action of the spindle, the work spindle of the machine illustrated runs in an unusually large bearing and is arranged so that the work is practically inside of the bearing. It is pointed out that in this construction misalinement of the bearing is minimized. It is stated that the result of the improved design is that the machine will grind on a production basis to limits of 0.0002 in. to 0.0003 in.



Since the machine is primarily for production purposes it is regularly furnished with one work-head speed. Other speeds are available through change gears located at the end of the machine. Ball bearings are employed throughout, including hand-operated shafts.

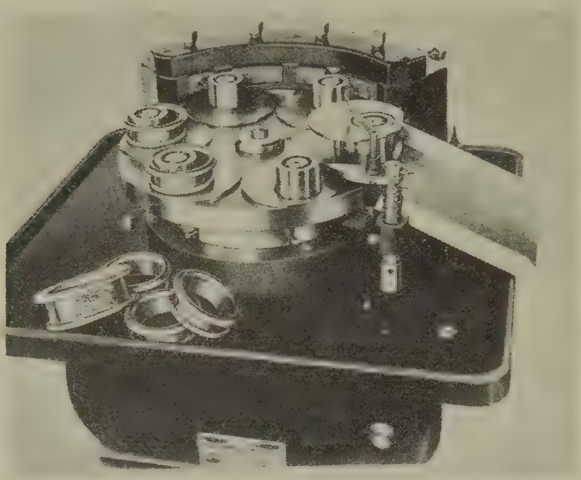
Compactness is a feature of the grinder. Operation of the machine is entirely mechanical and has no electrical contacts. The present size machine grinds holes ranging from ¾ to 3 in. in diameter, 4 in. in depth. The work-head swivels for taper grinding. For motor drive only one motor is employed, and when arranged for belt drive, there is only one belt, which operates directly from the lineshaft to a clutch pulley on the machine. The floor space occupied by the machine is 42½ in. by 73 in. and the weight is 5500 lb.

Valve for Reversing Furnaces

The Egler reversing valve for air or gas, manufactured by the Duff Patents Co., Inc., 321 Union Trust Building, Pittsburgh, is being offered as a solution of the valve troubles common to reversing furnaces. Simplicity of construction is said to make installation easy, and operation is made simple by a light cover. Moving parts are accessible, and through accurately controlled flow of gas or air, live and inert gases are not present in the valve at the same time. This insures against burning out of the interior of the valve. The valve is readily centered, leaving the flues well open. It can be operated by hand hydraulically or electrically.

Machine for Marking in Four Different Positions on the Same Piece

Marking in four different locations on the same ring is accomplished by a new machine which has been developed by the Noble & Westbrook Mfg. Co., East Hartford, Conn. The machine is equipped with a large die holder, which carries four marking dies, and the marks are spaced at approximately equal distances apart.



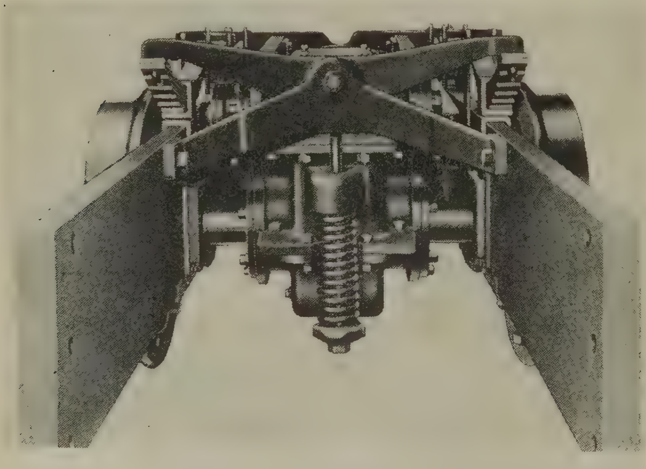
The Dial Revolves Continuously, Carrying the Pieces to the Marking Dies. Marked pieces are unloaded automatically

Parts to be marked are placed on the stations or pins on the dial, which revolves continuously, carrying the pieces to the die where they are marked. Operation is automatic, the only duty of the operator being to place the parts on the stations as the dial revolves. The dial is driven by a worm and gear which operates in a bath of oil.

The machine, designated at the No. 24 Rapid Production marking machine, is designed for marking a variety of tubular parts of thin material, without distortion. Production up to 100 pieces per min., depending upon the size of the piece and the speed of the operator, is said to be obtainable. The machine is motor driven and is self-contained. It weighs approximately 425 lb.

Gasoline Locomotive with Spring-Suspended Power Plant

A gasoline locomotive said to be new in design and drive principle has been brought out by the H. K. Porter Co., Pittsburgh. The power plant, clutch and transmission are mounted on a steel sub-frame and form a straight-line drive to the reverse unit. This sub-frame acts as a torque arm pivoted on the rear axle and spring-suspended at the front to the main frame. By an ingenious arrangement the weight of the rear end of the sub-frame is carried on the main frame by a coil spring.



Showing the Method of Spring Suspension of the Sub-Frame and Power Unit

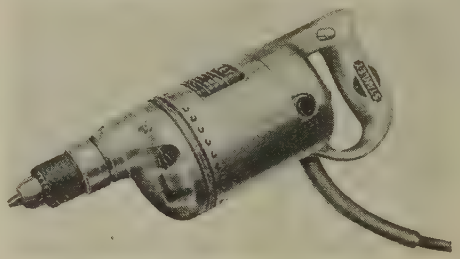
As a result, all the vital parts of the locomotive—the engine, radiator, clutch transmission and reverse unit—are mounted on a sub-frame which is spring-suspended to a spring-suspended cross-equalized main frame. For the power plant and transmission, as mounted on the sub-frame, patent is pending.

Main frames and bumpers are made of rolled steel slabs, as used on Porter steel works locomotives. The running gear, including steel-tired driving wheels, side rods, driving boxes, shoes, wedges, springs, etc., is the same as on the Porter steam dinkey.

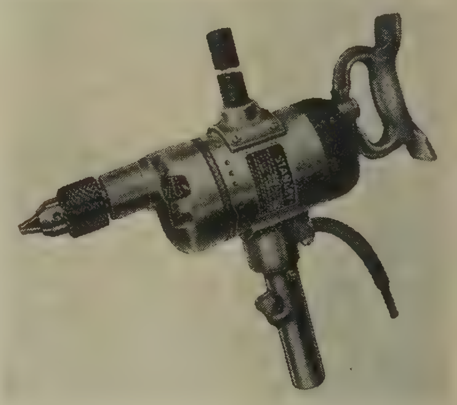
New Line of Portable Electric Drills

The Stanley Rule and Level Plant, New Britain, Conn., has placed on the market a line of portable electric drills, two models of which are illustrated herewith.

General features include strong and rigid construction and offset spindles to permit drilling in close corners. The handle is shaped to fit the hand, and the control switch, of standard quick make-and-break type, is placed so that it can be operated to start or stop the motor without releasing the firm grip of the fingers on the handle. Ample supply of air around the motor for cooling purposes is provided by means of a fan on the armature shaft. This fan draws air into the frame at the rear of the drill, cooling the brushes and the commutator and, by means of baffles, the air is passed between the armature and field and out through tangential holes in the housing. Universal motors with large reserve capacity are employed and are arranged so that they may be observed while running. Commutators and brushes may be cleaned conveniently. The brushes are of standard pig-tail type having 500 hours working life and may be readily replaced when necessary.



The Chuck Key Is Securely Fastened in a Recess on the Drill



Alloy Steel Gears and Ball Bearing Motor Shaft Are Features of Both Machines

Gears are of alloy steel, heat-treated, and operate in grease in leak- and dust-proof housings. Ball bearings set in steel jackets molded into the aluminum castings are used on both ends of the armature shaft of all machines except the ¼-in. capacity standard-duty drill. The latter, which is designated as the type No. DG23, has a ball bearing at the outer end only. Radial ball thrust bearings are used on all chuck spindles in addition to long bronze sleeves to maintain alinement and obviate wear. Three-jaw chucks are fitted to the ground spindles and on all machines the chuck key is securely fastened in a recess on the drill. The key is arranged so that it may be released instantly for use.

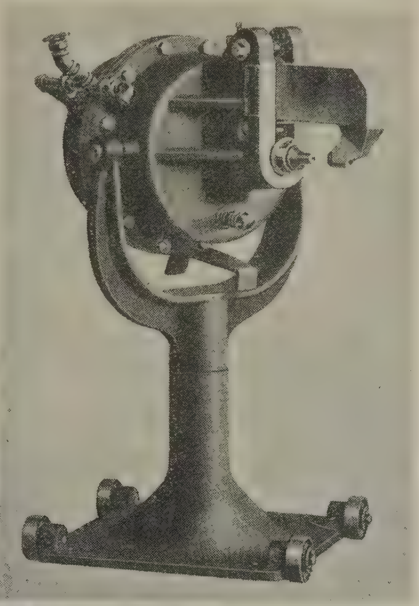
Each machine is equipped with 12½ ft. of duplex rubber covered cable which is fastened to the drill by a clamp designed to take all strain from the wire connections. At the other end there is a heavy armored plug with a cable grip, which is also intended to relieve the strain on the wire connections.

One of the machines illustrated is the type No. DB14 for heavy duty and with capacity for ¼ in. in steel. It is designed for continuous production work. The chuck speed is 1300 r.p.m. at no load and 750 r.p.m. at full load. The length of the machine, overall, is 13 in. and the net weight is 8 lb. The ½-in, heavy-duty drill, designated as the type No. DJ6, is also illustrated. The chuck speed of this machine is 550 r.p.m. at no load and 350 r.p.m. at full load. The length, overall, is 17½ in. and the net weight is 17½ lb.

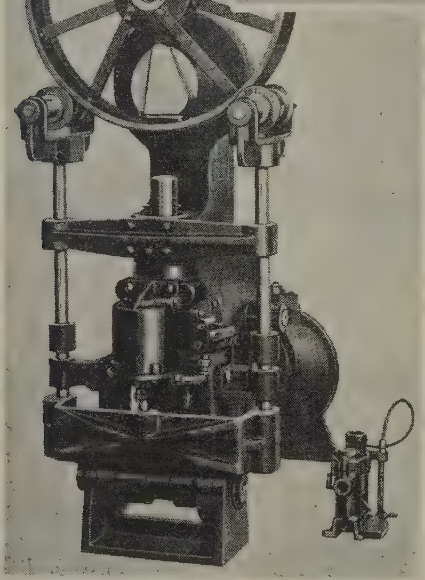
SPECIAL RIVETING MACHINES

Tractor Wheel Unit and Push-Type Chassis Frame Machine for Cold Riveting

TWO new pneumatic riveting machines, one a tractor wheel riveter and the other a push-type chassis frame riveting machine, have been brought out by the Hanna Engineering Works, 1765 Elston Avenue, Chicago.



The Tractor Wheel Riveter, Below, Cold Heads Two Rivets at One Stroke



The Chassis Frame Riveter, Above, Is Available in 15 and 20-Ton Capacities

The arrangement of the tractor wheel riveter may be noted from the accompanying illustration. The machine has a reach of 4 in., a gap of 10 in., and is designed to cold-head two ⅜-in. rivets, which secure the spoke to the rim, at each stroke. Rivets are inserted from above and headed from below, an air-actuated elevating device nesting the manufactured heads of the rivets in the upper die. The machine is adjustable for tractor wheels from 32 in. to 56 in. in diameter.

The riveting driving unit is the company's pneumatic toggle and lever mechanism. The toggles are designed to close the gap between the riveting dies with minimum of air consumption and the lever serves to exert uniform tonnage on the dies through a considerable portion of die stroke, regardless of variation in thickness of the work.

Wide acceptance of cold riveting by the automotive industry has resulted in the development of a number of single-purpose riveters. One such machine is the Hanna pneumatic "push-type" chassis frame riveter, shown in the second illustration, claims for which include accuracy of die alinement for cold riveting, and simplicity and ruggedness to assure continuous operation.

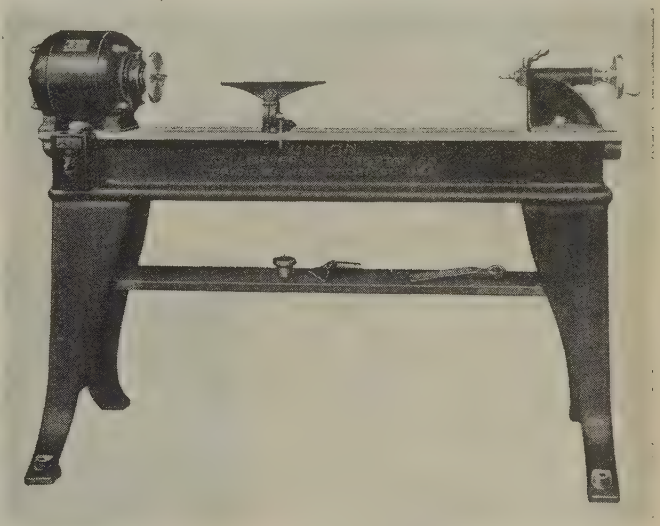
The riveter drives the horizontal rivets which secure the chassis frame cross members to the web of the side bar, as well as the rivets which secure step hanger brackets to chassis frame. The inner, or stationary, nose is "C" shaped to hook over the flange of the side bar, which operation is facilitated by the provision for tilting the rivet driving mechanism above the horizontal axis of the dies.

Arranged as shown, the rivet driving mechanism may also be rotated upon a vertical axis which, with the cross travel provided, permits riveting on both sides of the chassis frame as it passes through the riveting line. The riveter has 3-in. reach, 7-in. gap, 2½-in. die stroke. It is available in 15 and 20 tons capacity for driving 5/16-in. and ⅜-in. rivets cold.

Speed Lathe With Motor in the Head

The Gallmeyer & Livingston Co., Grand Rapids, Mich., is placing on the market a new "Union" motor-in-head speed lathe equipped with single-speed motor. The machine is available in three sizes, for work 24, 40 and 52 in. respectively, between centers. The beds are furnished in lengths of 4 ft. 2 in., 5 ft. 4 in., and 6 ft. 4 in.

The machine may be equipped with one, two or three-phase alternating current, or 115-volt or 230-volt direct current, ½-hp. ball-bearing motors, and may be furnished for spindle speeds of either 1725 r.p.m. or 3450 r.p.m. Where the machine is desired for both large and small work, and only one machine can be installed, two interchangeable motors, one high-speed and one low-speed, can be furnished for use on the one machine. Change from one motor to another may be made conveniently.



Low and High Motors Are Interchangeable to Give Suitable Spindle Speeds for Large and Small Work

Work up to 12 in. in diameter may be handled over the bed and work up to 9½ in. over the tool rest. The distance from the floor to the top of the bed is 36 in. and from the bed to the centers, 6 in. The bed is cast in one piece, machined the entire length and supported by heavy cast legs. The lathes are equipped with a rigid and accurate tailstock which may be located in position or released from fixed position by a half turn of a special wrench. The tailstock spindle is 1 5/16 in. in diameter, bored for No. 2 Morse taper, and adjustments are made by means of a conveniently located handwheel. The spindle is clamped rigidly in place by means of a quarter turn of the lever provided for the purpose. The tool rest is adjustable vertically, to and from the work, and swings at any desired angle. The rest may be moved to any point on the bed and instantly located in the desired setting.

DIAL INDICATING GAGES

Devices for Shop and Inspection Use Show Variations Up to 0.00004 In. from Master

DIAL gages, designated as Mikrotasts, brought out by Friedrich Krupp, A.G., Essen, Germany, for measuring external and internal diameters and tapers, for thread gaging and as special instruments for a variety of applications, have been placed on the American market by the Coats Machine Tool Co., 110 West Fortieth Street, New York.

The gages are intended for shop, as well as for inspection department and laboratory, use. They measure up to one-thousandth part of a millimeter or one twenty-five-thousandth of an inch (0.00004 in.) and such readings can be seen with the naked eye. All gages are set to masters and deviations from a given master or sample are indicated in plain figures on the dial. It is claimed that one of the Mikrotast gages with a range of 1½ to 3 in., and having 16 measuring plates, will replace 48 snap gages with their respective master gages. This is attributed to the large range of the indicator needle of the Mikrotast, and to the large capacity of the various adapters.

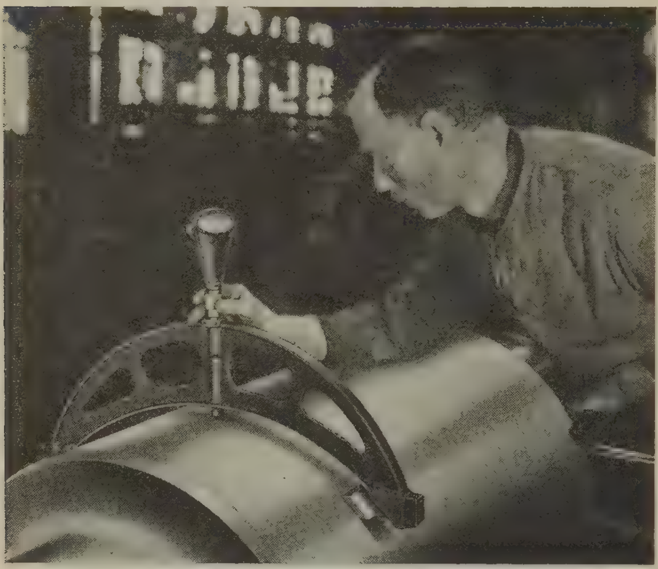
Two types of the gage are made, the large type, the 60E, with 60 dial divisions, and a smaller model, the 12E, with 12 dial divisions. Dials may be graduated in millimeters or in inches. Red limit pointers are provided, these pointers being adjustable and locked in position by means of knurled screws at the back of the dial element. All measuring parts of the gage are of Krupp steel, surface hardened by a special nitrogenizing process. Wear on the measuring faces may be taken up by means of positive adjustment. All measuring parts are interchangeable.

Various adapters, with ball or needle points, are supplied for using the gage with special measuring appliances, such as height comparators, eccentricity testers, or for fine adjustments during accurate machine tool operations. By turning a thumb nut the contact point is raised or lowered during the gaging process.

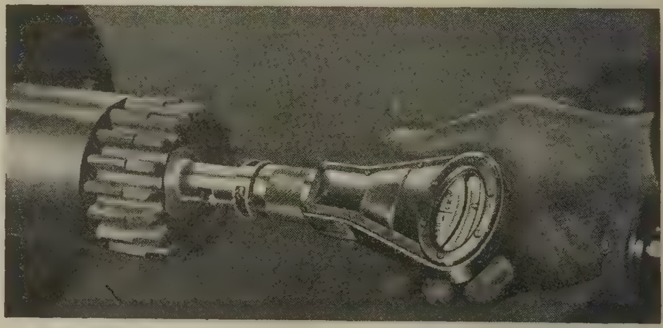
Saddle Gages for Checking Rolls

One form of Mikrotast gage available is the saddle type, for measuring external cylindrical diameters. This gage, illustrated herewith, consists of a Mikrotast mounted on a saddle with adjustable hardened and ground measuring flats of 39-deg. angle and a movable gaging point which acts on the Mikrotast through a lower and upper transmitting rod. The angle of 39 deg. on the saddle makes the path traveled by the gaging point equal to the change in diameter of the work. After having been set to the master and placed upon the work, the gage will register any variation in size or deviations from a true circle. The measuring flats on the saddle are relieved to assure positive seating on the work with immediate action of the indicator needle on the dial.

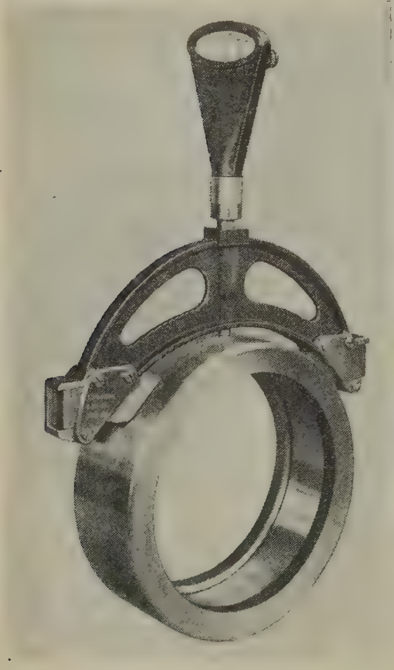
Saddle gages with 39-deg. angle are available in six

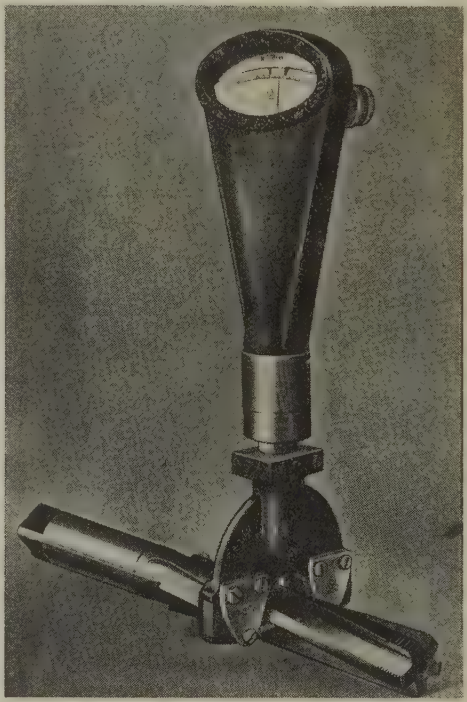


The Saddle Gage of 90-Deg. Angle for Checking Rolls During Grinding Is Shown Above. The same type of gage with adjustable flats of 39 deg., and movable gaging point, is shown below

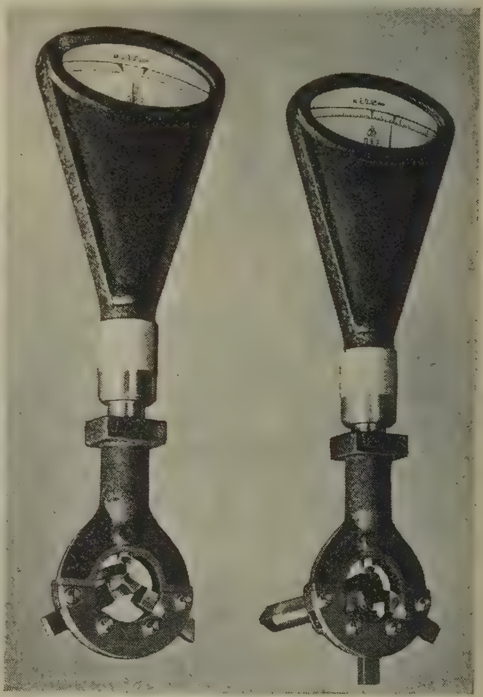


Use of the Internal Gage for Checking a Ball Bearing Seat, a Blind Hole, During the Grinding Operation Is Pictured Above





Mikrotast Saddle Gage With 36-Deg. Angle for Checking Lands of a Spiral Reamer With Five Flutes Is Above, at Left



Pitch Diameters of Taps With Three or Four Flutes Are Measured by the Gages Shown Above, at Right. For root and outside diameters, interchangeable measuring pieces and movable contact points are available sizes for diameters from ¼ to 8 in., and ranging in weight from 5¼ oz. to 4¼ lb.

The gages can be used on wet grinding operations, as the gaging point is above the work and thus is not exposed to the grinding coolant. The work remains in position on the machine during the gaging. The gages are also offered for use in connection with spherical, hollow, or cylindrical grinding operations, also for checking camber and wear on rolls, etc. For roll work, saddle gages with a measuring angle of 90 deg. are available. The ratio of expansion of the cast-iron body of these gages is practically the same as in the rolls. When using a saddle of 90-deg. angle, the travel of the gaging point is only equal to one-fifth of the difference in diameter on the work; with an angle of 39 deg. the travel would equal the difference in diameter. The Mikrotast used with the 90-deg. saddle is adjusted to compensate for this difference.

Use of these gages for checking the lands of a spiral reamer with five flutes is illustrated. In checking such reamers, with odd or even numbers of flutes, it is not necessary to remove the work from the machine. The angle of the measuring flats must conform to the work, a saddle with a 36-deg. angle being used for a five-fluted reamer.

Internal gages are manufactured in two types, fixed gages and self-accommodating gages. The range of the two types differ. On the fixed gages, one of which is

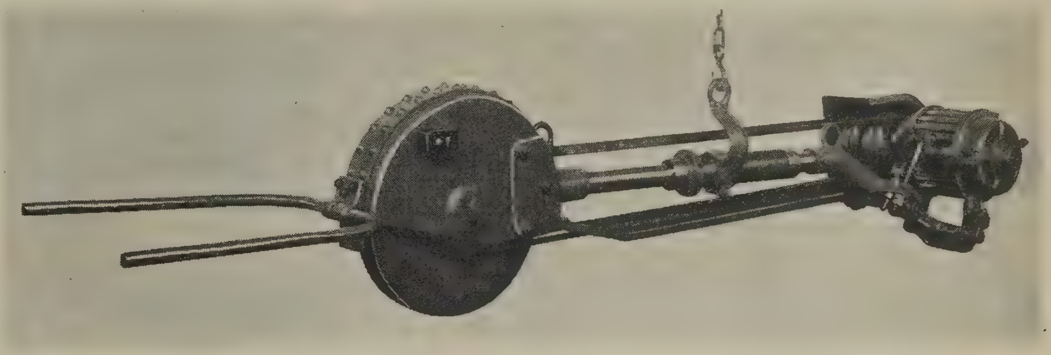
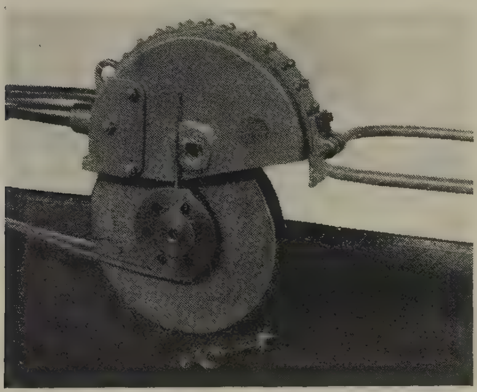
Swing-Frame Grinder for High-Speed Snagging



Bakelite - Bonded Wheels, Which May Be Operated at 9000 Surface Ft. Per Min., Are Employed. Wheel changes may be made conveniently. A toggle arrangement on the motor serves to release the V-belt. A single bolt is removed and the wheel head drops to the floor



The swing-frame grinding machine shown in the accompanying illustration was designed by the Norton Co., Worcester, Mass., to meet the requirements of the high-speed wheel service that has resulted from the development of the Bakelite-bonded grinding wheels, which, as described in The Iron Age of July 7, 1927, may be operated at a surface speed of 9000 ft. per min.

Although ruggedly built, the machine weighs only 850 lb. In addition to the light weight, the machine is balanced both laterally and rotatively to facilitate handling. A fabricated steel hood, which complies with the safety code requirements for wheels operated at the rated speed of the machine, provides protection for the operator. Grinding wheels 24-in. in diameter, 2-in. to 3-in. thick, with either 8-in. or 12-in. holes can be accommodated, and either the 20-in. or the 24-in. may be operated at 9000 surface ft. per min. Two speed changes are provided by means of a duplex sheave on the driving motor.

The grinding wheel is driven by two flexible V-belts, one on each side of the wheel. This drive arrangement permits making the wheel-flanges and sheaves integral, which results in narrow wheel-head assembly. The operator has a clear view of the work being ground from either side of the machine, there being no outboard bearings nor wide belts to intervene. This unobstructed view of the work is emphasized as making the machine particularly suited for the grinding of billets. In addition to providing positive drive, the V-belts shed grinding dust and other foreign material.

Suspension of the machine may be from the center only, where the headroom is limited or where for other reasons it may be preferred. The machine may also be fastened rigidly to the ceiling by means of a cable at the rear, and the wheel-head supported by a counterweighted rope running over pulleys.

Heavy-duty barrel-type ball bearings are employed, the complete bearing assembly, which is dust-proof, being within the hole of the wheel. Wheel changes may be made conveniently. A toggle arrangement on the motor serves to release the V belts; a single bolt is removed and the wheel-head drops to the floor. The old wheel is removed by taking off a combination sheave and flange. Completely inclosed 10-hp. ball-bearing motors, designed for grinding duty, are used for alternating current installations. Control is by push buttons on the wheel-guard within convenient reach of the operator. A sheet iron guard to protect the V-belts and motor sheaves from grinding chips is a part of the standard equipment.

Small Motors Designed to Start Across the Line

A line of squirrel cage motors from 1 to 30 hp. has been developed by the Triumph Electric Corporation, Cincinnati, for control by automatic push button system. These are designed to develop at least 150 per cent of the full load torque at starting, when connected directly across the line. There is no compensator or resistance type starter used, and the current taken is below the limits set by regulations.

These motors are fitted with Timken roller bearings, but can be supplied with either ball or sleeve bearings if desired. The price is less than for the squirrel cage motor and compensator.

Exports of Aircraft Growing Rapidly

Exports of aircraft, engines and parts from the United States in 1927 were valued at $1,903,460, a gain of 85 per cent over 1926 and 143 per cent over 1925, according to the transportation division, Department of Commerce, Washington. Purchases made from us by 47 countries during the three years amounted to $3,714,429. The leading amounts purchased were by Canada, Peru, Soviet Russia, United Kingdom, Chile, Argentina, Germany, Philippine Islands, Mexico, Colombia, Belgium, Brazil, Japan, Siam, China, Australia, Netherlands, Honduras and Nicaragua.

Business Analysis and Forecast

BY DR. LEWIS H. HANEY

DIRECTOR, NEW YORK UNIVERSITY BUREAU OF BUSINESS RESEARCH

GENERAL BUSINESS OUTLOOK

Favorable Factors

1. Building activity large and increasing; real estate markets show increased activity.

2. Automobile production expanding.

3. Unfilled orders continue to gain.

4. Retail trade recovered a little in February.

5. Foreign trade increased.

6. Commodity prices stable.

7. Money abundant and interest rates moderate.

8. Strong financial position of most leading companies.

Unfavorable Factors

1. The P-V line declines, indicating that the demand for commodities has not increased in proportion to the supply.

2. Farm prices and the purchasing power of the farm dollar decreased in February.

3. Bank credit over-extended for stock market purposes; brokers' loans excessive; speculative excesses in the stock market.

4. Gold exports rather heavy.

5. Average daily crude oil production increased.

6. Severe competition in the automobile business.

7. Profits small in many industries.

8. Disturbed political conditions; possible injury to Republican party from the oil scandal.

FACTORS mentioned in the above list are of very unequal importance. The most important ones indicate that business expansion will proceed during the spring. The failure of commodity prices to show strength, however, and the downturn of the P-V line indicate that the supply of commodities has gained on the demand, and this suggests that recovery in business will be halted by mid-year, if not sooner. The possibility of a crash in the stock market exists, and that would have unfavorable effects on business. Political uncertainties are obvious. But during the next two or three months a general upward trend in industrial activity is to be expected, though profits will probably not be in proportion to the volume of business.

In connection with the existing absence of buoyancy in commodity markets, it is to be remembered that industrial production did not fall much below normal requirements during the recession last year and that, consequently, no general shortages of commodities developed. Such evidence as we have indicates that stocks of manufactured commodities (other than foodstuffs) held by manufacturers are large and have decreased little. We need continually to remember that the capacity of our great basic industries is in excess of normal requirements. This fact is illustrated by the rapid stepping-up of production to above-normal levels in the course of a month or two.

The duration of the present rising trend will depend upon the moderation with which producers in various industries proceed, and upon the balance which is maintained among the different branches of industry and agriculture.

P-V Line Predicts Downturn in Fall

FROM the point of view of a business forecaster, perhaps the most interesting development to report this month is the fact that the P-V line has turned downward. This is the first decline in about a year. This general business barometer (a ratio of commodity prices to the physical volume of trade) has a remarkable record and its decline merits careful attention.

First, however, one should note that the P-V line gives its indications several months in advance. Thus its upturning last May was not reflected in general business conditions, sufficiently to cause a rise in steel production, until last December, or seven months later. At present the P-V line is well above normal and its period of rise from May, 1927, to January, 1928, is still to be reflected in the industrial situation. In short, it

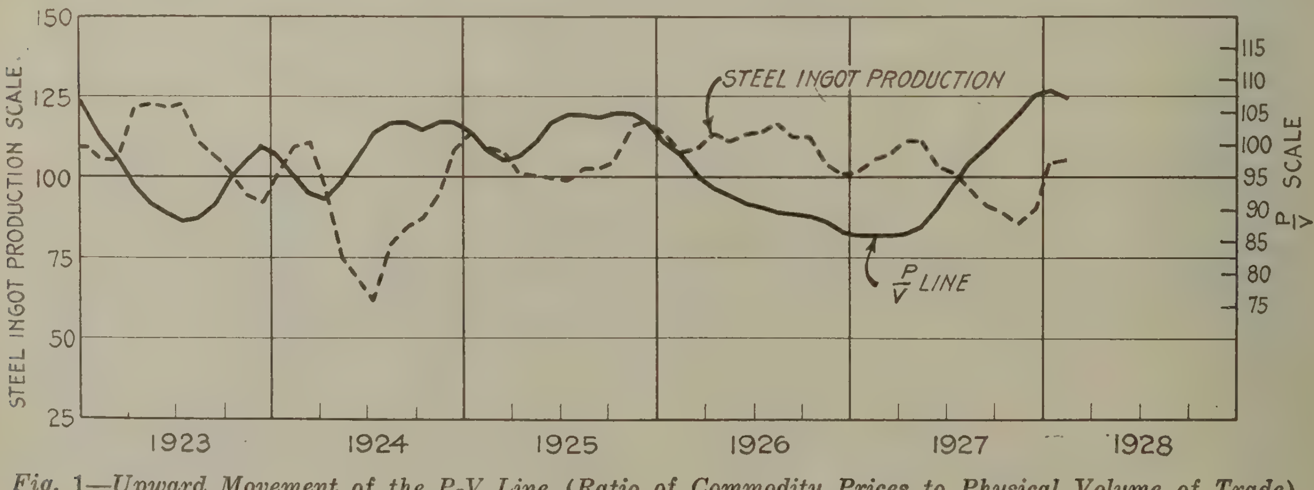


Fig. 1—Upward Movement of the P-V Line (Ratio of Commodity Prices to Physical Volume of Trade) Has Been Checked After Nine Months. Steel production advanced further in February and heavy tonnages may be expected for several months

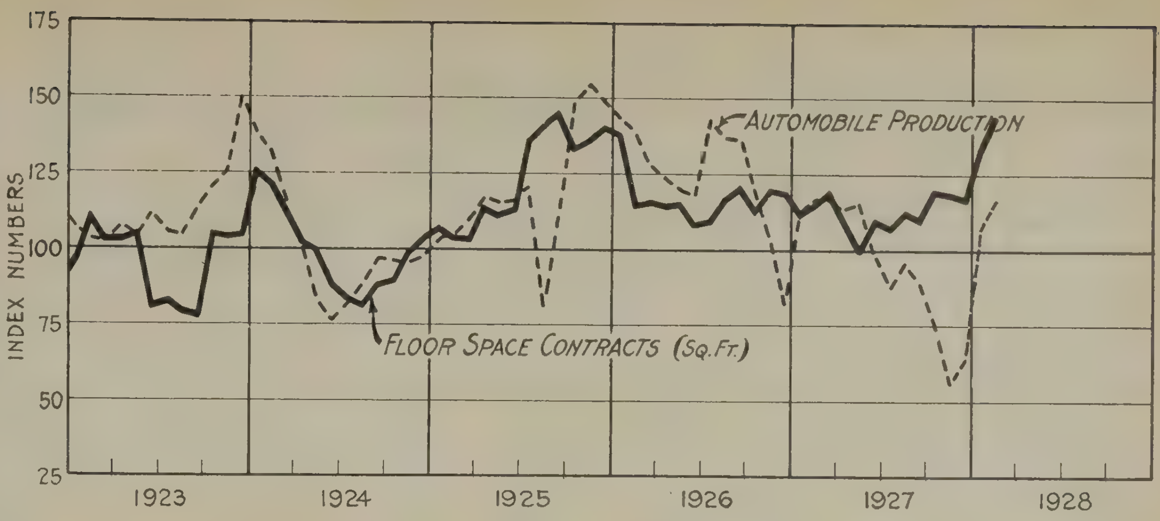
Fig. 2—Potential Demand for Steel from Construction Activity Continues Strong. Improvement in the automobile demand for steel should proceed through the spring



is not probable that we will have a general business setback or any considerable recession in steel production for several months.

Experience shows the following facts: The peak of the P-V line toward the end of 1922 was followed about seven months later by the peak of steel production. The lag in 1924 was about three months. The decline in the barometer line in December, 1925, was fully reflected in the steel situation only in September, 1926, a lag of nine months. Thus there is no uniformity. But, judging by the past, the peak of steel production this year is to be expected some time between April and August.

Production Large in Relation to Demand

Of course, we do not know what the P-V line will do during the next few months. It might continue sidewise, as it did in the latter parts of both 1924 and 1925, or it might decline, as it did following the peaks in 1922 and 1923. We can say this much: The present decline in the barometer line is chiefly due to the failure of commodity prices to rise while the physical volume of trade has turned upward. As there is every indication of a further expansion in the industrial output, while there is equally strong evidence that the commodity markets are showing no considerable upward trend, we may infer the probability that the P-V line will decline further. This would mean that production is too large to be supported by the markets at present price levels and that probably lower prices and profits will follow.

We will suspend judgment for another month or two, until the situation is registered more definitely in the course of the barometer. Meanwhile, industry in general and the steel industry in particular may be expected to show further gains. Even should this prove to be the beginning of a continued decline in the P-V line, steel production might not reach a peak before June.

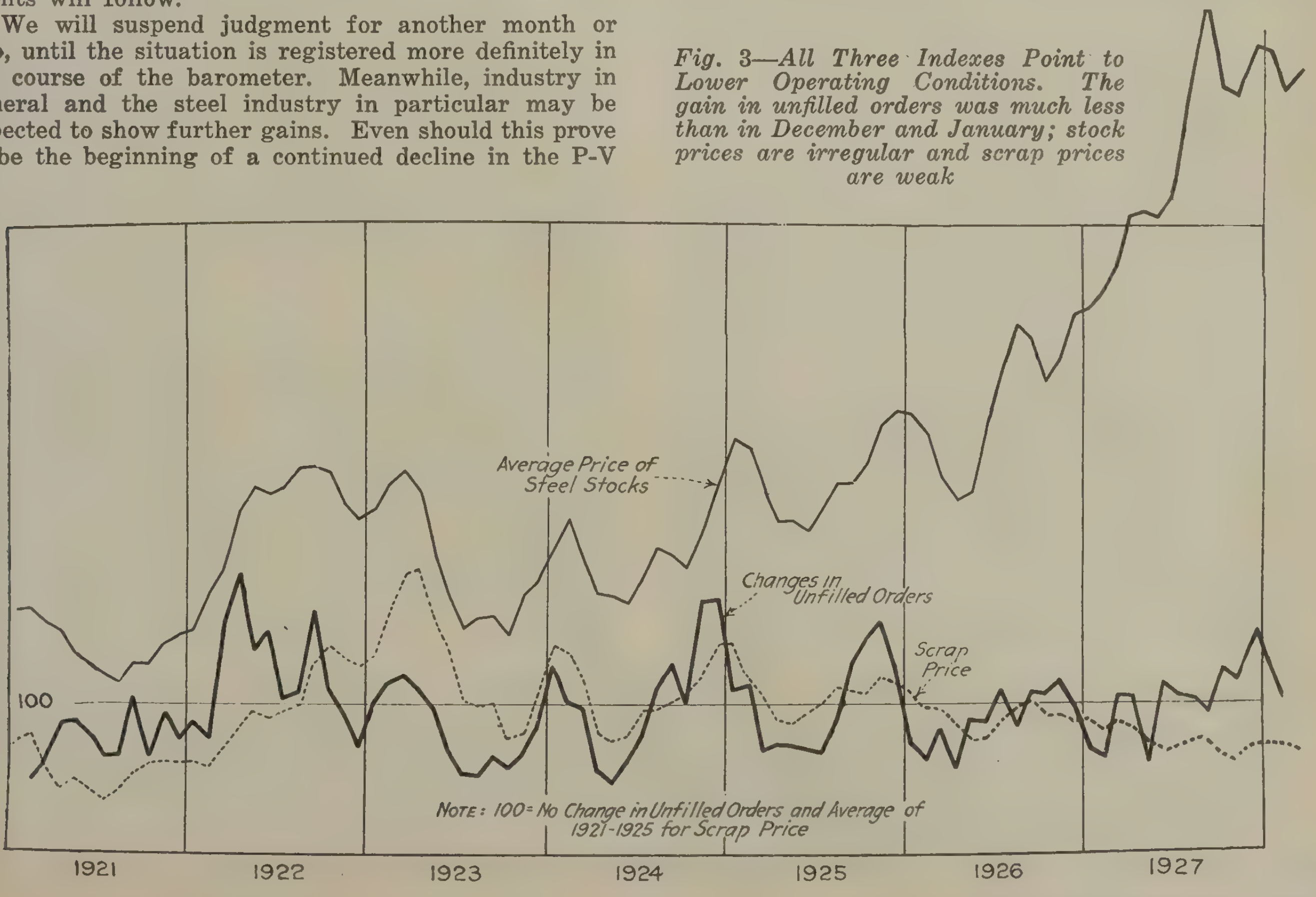
Increasing Building Operations and Car Output

SHARP gains in building activity and automobile production are for the near future the most favorable auguries. This is particularly true as to the outlook for the steel industry. It is almost inconceivable that the steel industry should not benefit by the trends shown in the second chart.

Building activity (measured by the floor space in contracts awarded) almost attained a new peak in February, having been exceeded only in September, 1925. Of course, this statement concerns figures which have been so adjusted as to exclude the merely seasonal changes from month to month. The February index shows building contracts to have been 144.1 per cent of the average for 1921-1927. This compares with 133.6 in January and 114.8 a year ago. The September, 1925, index was 145.1. The condition is practically certain to be reflected in large orders for structural steel and other building materials and should be sufficient to insure good business for producers of building material throughout the spring, even should some decline ensue.

Total production of motor cars and trucks in the United States and Canada amounted in February to about 335,900, which is the largest number produced in any month since last June. Our seasonally adjusted

Fig. 3—All Three Indexes Point to Lower Operating Conditions. The gain in unfilled orders was much less than in December and January; stock prices are irregular and scrap prices are weak



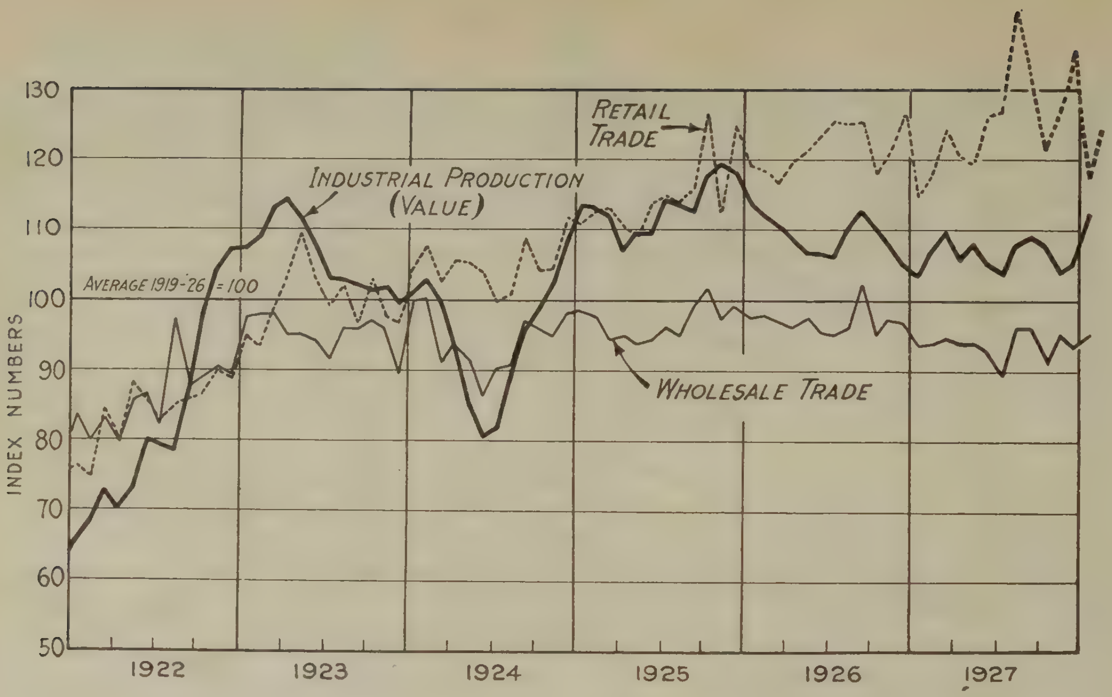


Fig. 4—Continued Favorable Indications Are Seen from the Relations of Retail Trade, Wholesale Trade and Industrial Output. Retail trade shows improved buying sentiment. Wholesale business continues slow, while industrial production is well above normal

index for the month was 116.8, against 106.1 in January and 117.3 a year ago (the average for 1921-1927 being 100). The similarity between the building curve and the automobile curve indicates that the same conditions that stimulate building activity affect the purchase of automobiles and trucks. Indeed, building activity is one of the chief factors in the demand for trucks. We may, therefore, expect a further rise in the automobile curve during the spring.

Unfilled Orders and Stock Prices Hesitant

WHEN we turn to the third chart, we find a somewhat different situation, since all the curves here point downward, and these suggest a not distant termination of the expansion in steel. It should be noted, however, that the immediate condition of the barometers shown in the chart is one of stability or very slight decline, rather than of any severe reaction.

The unfilled steel orders barometer, for example, shows that in the case of the United States Steel Corporation these orders are still gaining, but at a less rapid rate. The February increase was only 122,000 tons, against an increase of over 500,000 tons in December. The declining rate of increase in the unfilled orders usually indicates that shipments are gaining on the volume of new business, a condition which usually precedes a setback. The real trouble, however, is not likely to appear until an actual decline in the unfilled orders occurs, and it remains to be seen what the March results will be.

The scrap market of late may have temporarily lost some of its significance as an industrial barometer. Certainly the trend of scrap prices did not reflect the improvement in the steel industry that developed toward the end of 1927, or at least did so but slightly. The average price of heavy melting steel scrap at Pittsburgh was slightly lower in February than in January, and at the present writing it is only $14.75, which is lower than the February average.

The average price of a representative group of steel stocks is considerably below the peak reached last September, and the general impression one gets is that these stocks have been very irregular, though maintained at a high level. The reaction since last December is in conformity with the indications given by the unfilled orders barometer. On the whole, it seems worth noting that the decline in this barometer, together with the rather weak tone in the scrap market, gives ground for doubts concerning any large expansion in the steel industry or the possibility of a further sustained advance in the price of steel stocks.

Trade Indexes Point Strongly Upward

TURNING to more general indications of the state of industry and trade, the fourth chart shows that retail trade, wholesale trade, and the total value of industrial production all point upward, as of the latest available dates. Moreover, retail sales are well up to the average of the last two years, which may fairly be called a high level, and are well above the estimated value of the total industrial output.

Our adjusted index of retail trade, based on the average for the years 1919-1926 as 100, stood at 124.3 in February and compares with 117 in January and 117.9 a year ago. Some allowance is to be made for the extra day in February this year; but, even so, there was a net gain over the preceding month and a year ago. As the usual seasonal variation from month to month is eliminated, the February recovery may be taken to indicate improved buying on the part of the great mass of the people.

Changes in Wholesale Situation

Wholesale trade levels continue well below the average for 1919-1926, but this is chiefly due to changes in methods of distribution. Probably wholesale trade has settled by this time to something like its new normal level, however, and the current trend from month to month has some significance. The low point was reached last October, when the adjusted index was 91. In January it had risen to 95. This may well have reflected a month in advance the February recovery in retail sales.

The estimated *value* of the total industrial production gained sharply in January, reaching the highest point since September, 1926. The January index was 112 per cent of the average for 1919-1926. This is a decidedly favorable indication. It shows that, in spite of the sharp increase in the output of mines and factories, the general level of commodity prices has been sufficiently well maintained to make the product—production × price—rise. This is a clearer demonstration of real business expansion than can be made on the basis of physical volume alone. No business recession is near, while the total *value* of industrial production is gaining and is below the level of retail sales.

Schedule of the next instalments of the ***Business Analysis and Forecast,*** *by* ***Dr. Lewis H. Haney,*** *Director New York University Bureau of Business Research, follows:* ***April 12***—*Activity in Steel Consuming Industries;* ***April 19***—*Position of Iron and Steel Producers;* ***April 26***—*General Business Outlook.*

Exports and Imports Decline

Drop in Short Month Was 9⅔ Per Cent in Exports and 19 Per Cent in Imports—Fewer Rails Sent Abroad

WASHINGTON, March 26.—Making a decline of 19,851 gross tons, exports of iron and steel products from the United States in February totaled 185,915 tons, against 205,766 tons in January. Imports dropped to 47,628 tons, as compared with 58,635 tons. For the eight months ended with February, exports aggregated 1,441,049 tons, against 1,527,656 tons for the corresponding period of last year. Imports totaled 472,798 tons for the eight months ended with February, 1928, against 606,945 tons for the eight months ended with February, 1927.

On a daily basis exports in February were 6411 tons against 6638 tons in January. February shipments, however, showed a fair increase over those for the same month of last year, when the total was 166,129 tons. The January shipments were the largest for any month since January, 1927, and it is believed they, like February shipments, were stimulated by the lower export rates which went into effect on Jan. 1, 1928.

The heaviest decline in exports in February of the present year was in rails, 15,846 tons having been exported against 23,174 tons in January, a loss of 7743 tons. This item has been showing gradual decreases in exports, apparently because of the fact that some countries which formerly drew substantial tonnages from the United States have now become self-contained or nearly so. Other decreases in exports in February when compared with January were in boiler tubes and welded pipe, black steel sheets and wire rods. Gains were made in 16 classes, including plain structural shapes, steel bars, raw and semi-finished material and ferrogmanganese. Notable losses made in the eight months ended with February were in steel bars, black and galvanized sheets, tin plate, steel rails, and boiler tubes and welded pipe. The more important gains were made in scrap, structural shapes and barbed wire and woven wire fencing.

Of the 6214 tons of black welded pipe exported in February, 1605 tons went to Japan, 769 tons to the United Kingdom, 544 tons to Mexico, 410 tons to Peru, 399 tons to Argentina, and 389 tons to Canada. Of the 2400 tons of galvanized welded pipe exported during the month, 393 tons went to Cuba, 344 tons to Argentina, 247 tons to the Philippine Islands and 142 tons to Costa Rica. Chile was the largest buyer in February of American rails, taking 3627 tons; the Philippine Islands came second with 2247 tons and Colombia third with 1308 tons. Canada's purchases,

Mexico	61
British India	3,794
Japan	1
Total	47,628

which have been declining, dropped to only 444 tons, while Japan, which also has been taking smaller rail tonnages from abroad, took none.

Canada was the heaviest buyer during the month of tin plate, taking 3139 tons of the total of 18,129 tons. Japan came next with 2761 tons, while Mexico was third with 1141 tons. Of the 13,408 tons of plain structural shapes exported in February, Canada took 11,299 tons; Cuba, 660 tons, and Japan, 441 tons. Canada took 10,242 tons of the 11,195 tons of plates exported during the month, and 2789 tons of the 11,319 tons of galvanized sheets exported. The Philippine Islands took 2670 tons of the latter. Of the 13,291 tons of black sheets exported, Japan took 6268 tons and Canada, 5518 tons. Canada purchased a total of 76,016 tons of the February exports; Japan came next with 25,220 tons.

The greatest declines in imports in February when compared with January were in pig iron, ferromanganese and scrap, while the most notable gains were made in structural shapes and steel bars. For the eight months ended with February the heaviest declines in imports, when compared with the corresponding period of last year, were made in pig iron, cast iron pipe, scrap, rails and steel bars. Gains were made in ferromanganese, wire rods and structural shapes.

Of the 1025 tons of ferromanganese imported in February, 594 tons came from the United Kingdom and 411 tons from Canada. Belgium provided 6032 tons of the 8810 tons of steel bars imported, while 1025 tons came from France and 945 tons from Germany. Belgium was the source of 6608 tons of the 13,450 tons of structural shapes imported; France, 4747 tons; Germany, 1137 tons, and the Netherlands, 742 tons. Of the 4218 tons of cast iron pipe imported, 3278 tons came from France and 928 tons from Belgium. British India provided 3794 tons of the 6387 tons of pig iron imported, and 2154 tons came from the Netherlands. Of the 18,215 tons of manganese ore imported during the month, 7169 tons came from Soviet Russia, 6643 tons from Brazil and 440 tons from British India.

Destination of Iron and Steel Exports from the United States

(In Gross Tons)

Country of Destination	February, 1928	January and February 1928	January and February 1927

Other Africa	185	366	309
Total	185,915	391,681	381,583

Belgium was the principal source of the total imports, providing 17,056 tons. France ranked second with 9816 tons; Germany, third, 6776 tons, and the Netherlands, fourth, 2999 tons.

Much Lower Pig Iron Imports

Reduction of 41 per cent in imports of pig iron is shown by the February total of 6387 gross tons, compared with 11,090 tons in January. This follows a 22 per cent reduction in January from the 14,299 tons of December. A heavy decline is shown also in imports for the eight months ended Feb. 29, compared with the corresponding period of last year. There were 89,763 tons this year, against 141,185 tons a year ago. The drop was approximately 37 per cent.

United States Imports of Pig Iron by Countries of Shipment

(In Gross Tons)

	February		Eight Months Ended February	
	1928	1927	1928	1927
United Kingdom	50	....	13,036	12,012
British India	3,794	1,565	53,263	17,041
Germany	....	634	1,440	73,653
Netherlands	2,154	....	16,959	28,020
Canada	93	248	301	1,997
France	....	....	3,000	3,416
Belgium	197	....	596	1,840
All others	99	1,970	1,168	3,206
Total	6,387	4,417	89,763	141,185

British India supplied more than half of the February imports and much more than half the total for the eight months. This is in contrast with a year ago, when Germany in eight months supplied more than half the total, with British India in third place, following the Netherlands. The table gives details.

High Tonnage of Iron Ore Imports Continues in February

Imports of iron ore in February are reported by the Department of Commerce at 229,578 gross tons. While this is a drop of 9 per cent from the January total of 251,178 tons, it is far ahead of the December figure and represents a gain of 19 per cent over February, 1927. For the eight months of the fiscal year the total has been 1,820,717 tons, a gain of about 1½ per cent over the corresponding period of the preceding year.

Sources of American Imports of Iron Ore

(In Gross Tons)

	February		Eight Months Ended February	
	1928	1927	1928	1927
Canada	36,270	488	59,528	12,963
Cuba	33,500	54,000	196,613	376,500
Chile	121,300	101,900	953,400	889,600
Spain	5,000	....	28,246	13,393
Sweden	....	7,008	148,330	68,665
French Africa	28,656	26,850	318,370	209,289
Other countries	4,852	2,658	116,230	223,431
Total	229,578	192,904	1,820,717	1,793,841

Chile has maintained a substantial lead over all other countries, having supplied more than half the February total and more than half the eight-month total. Details are shown in the table.

European Mill Prices Continue Firm

French Home Market Active—Germany Seeking More Exports —British Build Plant for Direct Steel Process

(By Cable)

LONDON, ENGLAND, March 26.

CLEVELAND pig iron has been quiet since the recent rise, but makers are well sold and stocks depleted. Some furnaces are in arrears with deliveries. Hematite is dull, but output is now about equal to demand so that makers are able to maintain prices.

Foreign ore is quiet, but consumers are pressing for deliveries on tonnage already purchased and, with congestion at loading ports increasing, there is some talk of price advances.

Finished steel is quiet, especially for export. Some works are busy on domestic orders, but others are reaching the end of their order books. The Barrow rail mills are closing at Easter for lack of business. Government supporters are endeavoring to secure protection for the iron and steel industry, but Parliament is not likely to take further steps.

The first plant operating under the Duffield process for making steel direct from ore is now in course of construction at Manchester and is expected to be completed in six months.

Tin plate is active and makers, being well situated, are not accepting less than 18s. ($4.39) per base box, f.o.b. works port. Export and domestic demand is broadening. Galvanized sheets continue quiet. Japan has purchased some fair quantities of light-gage black sheet specifications.

Continental iron and steel markets are quiet and prices of semi-finished material are declining, with German producers keen sellers for export. British users, however, are buying only sparingly.

Belgian production in February was 302,000 metric tons of pig iron and 301,000 tons of raw steel. At the end of February there were 55 furnaces in blast. The German steel mill association is maintaining domestic prices of semi-finished material and beams unchanged for April. The Luxemburg output in February was 220,000 metric tons of pig iron and 205,000 tons of raw steel. There were 38 furnaces in blast on March 1.

FRENCH HOME ORDERS LARGE

Mills Show Less Interest in Export Orders —Turkish Rail Contract Booked

PARIS, FRANCE, March 9.—Domestic business is still improving, but there is less activity in the export market. French producers are in a situation comparable with the German position last year. Demand in the home market is so great that mills are not seeking export orders and are quoting deliveries of from three to five months on most steel products. Iron and steel output is steadily increasing. Production of pig iron in January was 809,000 metric tons, compared with 796,000 tons in December and 762,000 tons in November. Steel output was 750,000 tons in January, comparing with 735,000 tons in December and 682,000 tons in November.

At the meeting of the International Steel Cartel in Paris, March 5, it was agreed that production quotas should be maintained without change. It was also agreed that part of the fines paid by Czechoslovakia for overproduction should be returned, the precedent being similar action taken last year in the case of Germany. The application of Poland for membership in the cartel was given further consideration, but no agreement could be reached, as Poland demands an export quota of 350,000 tons and exclusive rights to the Polish domestic market. The cartel has offered a quota of 300,000 tons, subject to reduction should the Polish domestic demand increase.

Following the sudden death of M. Mayrisch, president of the International Steel Cartel, it was reported that Fritz Thyssen might be the new president. He is temporarily occupying that position. It is understood, however, that the next president of the cartel will be selected from the Luxemburg membership.

Pig Iron.—In an effort to meet the competition of foreign pig iron, the entente, at a recent meeting, made price reduction of 15 to 30 fr. (59c. to $1.18) per metric

---

British and Continental European prices per gross ton, except where otherwise stated, f.o.b. makers' works, with American equivalent figured at $4.87 per £ as follows:

(a) Nominal.

ton in certain market centers where this competition is particularly keen, such as Lille, Roubaix, Valenciennes, Maubeuge, Dunkirk. Hematite iron prices were advanced 5 fr. (20c.) per metric ton, effective since March 1. For export, Continental pig iron producers are quoting phosphoric foundry iron at £3 3s. ($15.34) per ton, f.o.b. Antwerp, on orders for 1000 tons or more, an advance of about 1s. (24c.) per ton.

Semi-Finished Material.—Export offers of billets and blooms are scarce, and the tendency of prices is upward. Blooms are quoted at £4 4s. to £4 10s. ($20.46 to $21.92) and billets at £4 12s. to £4 15s. ($22.41 to $23.14) per ton.

Finished Material.—There is still considerable domestic business, but prices have ceased to advance. The recent rise in quotations ranged from 10 to 15 per cent. Most rolling mills are out of the market for the present or are quoting extended deliveries. For export, beams are held at £4 15s. to £4 17s. 6d. per ton (1.05c. to 1.07c. per lb.), and steel bars, at £5 7s. to £5 7s. 6d. per ton (1.18c. to 1.19c. per lb.). The new sales syndicate for beams is trying to reduce the wide margin that exists between beam and merchant steel prices. This evidently entails further increases in beam quotations.

Rails.—The Comptoir Siderurgique de France has received a contract from the Turkish Government for about 40,000 tons of rails, cross bars, bolts, fish plates and other railroad permanent-way material. Construction of the railroad in Anatolia is in the hands of a Swedish company. It is reported that a suggestion has been submitted to the European Rail Makers' Association that rail prices be advanced.

Bolt Maker Compares German and American Methods

HAMBURG, GERMANY, March 10.—In a paper read at a recent meeting of the Federation of German Hardware Manufacturers, Herr Schauerte, president of Bauer & Schauerte, Neuss, one of the largest German manufacturers of bolts and nuts, said that although American and European tools are the same, there are 20 to 30 times more tools wasted in bolt and nut production in Germany than in the United States.

Since 1920, Herr Schauerte has been to the United States five times and recently returned from an extensive investigation of the American bolt and nut industry and its methods. He recommended the introduction of American methods of manufacture, particularly as far as the heads of bolts are concerned. Raw material used in the United States, he said, was evidently much superior to the European. This, he said, was due principally to the fact that American bolt makers can obtain the exact analysis of steel they require and not, as in Germany, the grade of steel that the producer wishes to ship. He pointed out also that in the United States few of the large companies using bolts and nuts, such as motor car manufacturers, machinery builders and shipyards, make bolts for themselves as is the case among German users. The situation in Germany results in a larger number of small orders and higher costs, compared with fewer and larger orders in the United States and proportionately lower costs.

It was decided at the meeting to issue a list of specifications covering the quality of steel required for bolt and nut production.

Decline in German Aluminum Exports

WASHINGTON, March 27.—German exports of bar aluminum, plates and scrap declined to 5070 metric tons in 1927 from 13,896 tons in 1926, according to a report from the United States consul at Frankfort-on-Main, Germany. Exports to the United States dropped to 2073 tons in 1927.

The Société Lorraine des Aciéries de Rombas is proceeding with the construction of No. 3 blast furnace at Rombas, Moselle, France, under the direction of Emile Hemmer, director of mines and works. The Freyn Engineering Co., Chicago, has been retained in a consulting capacity for the work, particularly to determine the size and type of furnace best suited.

BELGIAN PRICES FIRM

Mills Seek Additional Business but Refuse to Make Concessions—Pig Iron Strong

ANTWERP, BELGIUM, March 9.—Prices on certain iron and steel products have receded slightly from the high levels reached a fortnight ago, but still reflect the independent attitude of producers. Mills rolling semi-finished material are granting no concessions, but are showing more interest in new business. Purchasing is confined to small lots, buyers preferring to wait as long as possible for further developments in the price situation. Mills, however, are well booked with tonnage and in a position to wait.

Pig Iron.—Demand is improving, and stocks at the furnaces and in consumers' yards are small. The export quotation on No. 3 phosphoric foundry iron is £3 3s. ($15.34) per metric ton, f.o.b. Antwerp. Bessemer hematite is quoted at 670 to 680 fr. ($26.33 to $26.72) per metric ton, f.o.b. furnace, but little business is being done, as German offers for this grade are much lower.

Semi-Finished Material.—Makers are well booked and are able to maintain prices, despite the recent decline in demand following advances in quotations. Billets are quiet, with prices firm at £4 13s. to £4 15s. ($22.65 to $23.14) per metric ton, f.o.b. Antwerp. Mills show little interest in booking further orders for blooms, which are quoted at £4 5s. to £4 10s. ($20.70 to $21.92) per metric ton, depending upon the sizes specified. Sheet bars are quoted at about £4 17s. 6d. ($23.75) per ton, f.o.b. Antwerp.

Finished Material.—Although mills are evidently seeking more tonnage, there is no disposition to make concessions. There is a steady flow of small-tonnage business. Steel bars are quoted at about £5 7s. 6d. per ton (1.19c. per lb.) and beams at £4 17s. 6d. per ton (1.08c. per lb.) f.o.b. Antwerp. Corrugated reinforcing bars are offered at about £5 17s. 6d. per ton (1.29c. per lb.). Hoops are quoted at £6 5s. per ton (1.38c. per lb.), f.o.b. Antwerp.

Russian Ore Trust Officials on Visit of Inspection Here

Chief Engineer A. N. Bakhtiarov of the Yurt, the Soviet Southern Ore Trust, has arrived in this country accompanied by three other officials of the trust, it was announced by the Amtorg Trading Corporation, 165 Broadway, New York. Representatives of the Yurt expect to make a three months' study of American production methods and of the mining equipment market.

"While we have not as yet reached the pre-war iron ore output," said Mr. Bakhtiarov, "the progress made during the past few years has been encouraging. Four years ago the Yurt produced less than half a million tons of ore. During each of the next two years we succeeded in doubling production, and increased the output by 47 per cent last year, with the result that in 1927 we produced three and one-half million tons of iron ore. Production of manganese ore reached 450,000 tons last year. This production, however, does not fully satisfy the needs of the expanding Soviet iron and steel industry. We intend to study American production methods and equipment with a view of increasing production in the Yurt mines. The allotment for capital construction by the trust for this year is $9,000,000."

New Aluminum Alloy in Germany

HAMBURG, GERMANY, March 10.—A new aluminum alloy with the trade name "Ultralumin" has been brought out by the Ultralumin A. G., Cologne. According to the maker, it is slightly lighter, of higher tensile strength and lower-priced than other aluminum alloys.

Steere cooling coils are to be built for the Sloss-Sheffield Steel & Iron Co., Birmingham, by the Semet-Solvay Engineering Corporation, New York, for use on gas scrubbers. There will be 26 stacks, 40 tubes high, zinc coated by sherardizing to resist corrosion.

Adopts Standards for Reinforcing Steel

Concrete Reinforcing Steel Institute Seeks Better Cooperation from Mills and Elimination of Ruinous Competitive Methods

ADOPTION of standard practices in the industry and the establishment of the intermediate grade as the single new billet standard for concrete reinforcement were cited as the outstanding accomplishments in the past year of the Concrete Reinforcing Steel Institute at its fourth annual convention, held March 19 to 21 at Biloxi, Miss. In pointing out these achievements, however, George E. Routh, Jr., Kalman Steel Co., Chicago, president of the institute, called attention to the fact that in some of its efforts, notably an attempt to gain the support of the mills in securing reports of tonnage and warehouse costs, the organization had been without success.

"The mills do not appreciate the possibilities of extending their market through the work of our institute," said Mr. Routh in commenting upon the situation. "We have not only been unable to enlist support and cooperation, but now the American Association of Steel Manufacturers has protested to the Department of Commerce against the adoption of intermediate as the single standard grade of new billet reinforcement. Apparently the mills look upon this standardization work from a narrow viewpoint and do not realize that they likewise benefit in direct proportion to the benefits accruing to the distributers.

"Any reduction in our fabricating costs," the speaker went on, "puts the mills and the distributers in a better position to compete with foreign steel. The attitude of the mills, to which I have referred, is typical of their attitude in many other ways. With the exception of the efforts of one large Eastern producer, none of the other mills has made an effort to cooperate in combating foreign steel, although we have repeatedly asked for their assistance. Another indication of the lack of consideration for the needs of distributers was evidenced a few months ago when the producers, without consulting us in any way, eliminated the quantity cutting extras which had been previously put in for the primary purpose of protecting the reinforcing bar distributers."

Adoption of Standard Practices

Discussing the work of the committee on standard practice, Mr. Routh stated that the institute has adopted standard contracts to cover the use of removable forms, and these contracts, in addition to the standard bar sales contract and the standard rules for bundling and tagging, have been very largely adopted by the members.

At a later session of the convention Edwin W. Ely, chief of the division of simplified practice, Department of Commerce, conferred with the institute members on the adoption of standardized form dimensions for concrete ribbed floor construction. A series of recommendations was made for adoption upon the conclusion of a referendum vote in the industry to be taken by the Department of Commerce.

At another session the joint building code which was adopted at a recent meeting of the American Concrete Institute in Philadelphia was adopted as a tentative standard by the members of the Concrete Reinforcing Steel Institute.

With the establishment of intermediate grade as the single new billet standard for concrete reinforcement, Mr. Routh pointed out that it had been necessary for the institute to conduct a campaign in the leading cities of the country to the end that building codes and other specifications should be revised in accordance with the new standard and thus obviate the necessity of carrying other grades of steel in stock. A national committee on building codes was appointed some months ago, and a considerable amount of work has been done.

"For several years," Mr. Routh said, "members have been receiving the composite tonnage reports of the institute, showing the tonnage sold and shipped, stocks on hand, average stocks and unfilled orders. These reports have been compiled long enough to indicate each month the conditions existing in the same month of the preceding year. This information is of assistance in showing the condition of the market and in guiding executives in their sales and purchase policies for the ensuing months.

"Likewise monthly composite warehouse cost reports, based upon a simple but effective system of cost accounting, have been sent to members. Of late these reports have been amended to show the 'highest' and 'lowest' costs under each operation and in each district, with warehouses grouped according to their average monthly loadings. This new arrangement of costs gives members a real basis for comparing the cost of their own operations with the warehouses of the same size."

Urges a Fair Profit

In concluding his address Mr. Routh called attention to the low profits which existed in the industry in 1927. "In the past," he said, "any improvement in conditions in the general steel business has resulted in an improvement in our profits, as we have reaped the benefits of our purchases of steel in anticipation of an increase in prices. During the past few months the steel mills have been advancing their prices, but instead of advancing our prices as the mills advance theirs and enjoying the benefits of these rising prices we are giving them to the buyer.

"The existing conditions are caused by the sellers thinking one case of sharp competition justifies a small loss. He finds that later sales bring out even lower prices, as his competitor feels he must maintain his position, so that ultimately all of the business is handled at a small or even no margin of profit.

"Is it fair when you know a competitor is close to a buyer and will be favored with the business at an equal price to quote a price lower than you would in the course of regular business, hoping to force the buyer to place the business with you against his own wishes? It is my feeling that if you cannot secure the business at an equal price it does not belong to you.

"The Sherman law operates as a barrier against the fixing of prices; against the enjoyment of a fixed profit such as accrues to railroads and public service corporations under the supervision of the State and Federal governments. There is no reason why our members cannot sell their products at a profit and still not violate the Sherman law."

What the Future Holds

In a paper entitled "Coming Changes in Industry," Dr. John T. Holdsworth, professor of economics, University of Miami, Coral Gables, Fla., outlined the development of the industrial prosperity of the country and outlined its probable future. "The great economic problem of tomorrow," he said, "is the adjustment of steadily increasing production to the needs of consumption. The lack of such adjustment is responsible for the present so-called 'profitless prosperity.' Profits are the main springs of the business mechanism. The keen business competition of recent years, bound to become more keen as time goes on, is but the stimulus to more careful, economical and scientific production and distribution. Human wants never can be wholly met and satisfied. The luxuries of yesterday are the necessaries of today. Under free democratic institutions and with constantly rising standards of living, the field of consumption ever widens. The man who, or the industry that, creates a new want and satisfies it will continue to reap rich rewards."

George E. Routh, Jr., was reelected president of the institute for another year. Other officers were reelected as follows: C. Louis Meyer, Concrete Engineering Co., Omaha, Neb., vice-president; Hugh J. Baker, Hugh J. Baker Co., Indianapolis, treasurer; M. A. Beeman, Tribune Tower, Chicago, secretary, and R. W. Johnson, engineer. A. E. Lindau, American System of Reinforcing, Chicago, was reelected a director for three years, and O. W. Irwin, Truscon Steel Co., Youngstown, was made a director for a similar period, succeeding Gustave Kahn, of the same company.

UNEMPLOYMENT EVALUATED

Total Less Than One-Third That of 1921—Mechanization Heavily Responsible

WASHINGTON, March 26.—Workers in the United States now out of employment are estimated at 1,874,050 by Ethelbert Stewart, commissioner of labor statistics, in a report which Secretary of Labor J. J. Davis submitted today to the Senate in connection with one of his own in response to a resolution by Senator Wagner of New York. The number unemployed is declared to constitute only a small percentage of the number at work, now stated to be 23,348,692, taking into account those in either a wage or salary basis. The volume of employment tended downward from April, 1927, up to and through January, 1928, but the February report of the Bureau of Labor Statistics shows an upward trend in employment. The year 1925 is used as the basis for arriving at the shrinkage, fixed at 7.43 per cent.

Commissioner Stewart's report presents the employment situation in two parts, which consider those temporarily out of employment and those displaced by changes in industrial and commercial methods. Farm labor depressions are declared to have been due almost wholly to the first group. It was added that, if public work is not furnished quickly enough to relieve them, these men have no course but to wait until their own jobs are available again. Prompt relief here is due from the Government's elaborate building program, from similar programs of States, municipalities and counties, and from private building and construction, according to Secretary Davis. He said he had no way of "timing" seasonal employment, and that appropriations would have to be provided if more complete unemployment surveys are to be made regularly.

Based on the known number of wage earners in manufacturing and railroading in 1925, it is estimated that of the former there were 7,739,907 employed in January, 1928, and of the latter 1,643,356 in December, 1927. The manufacturing employment shrinkage since 1925 is given as 643,874 and the railroad employment shrinkage as 109,233.

The reports do not deal with the situation in separate industries. Commissioner Stewart reported that "it is not unreasonable to believe that a considerable percentage of the employment shrinkage shown in this report is due to new machines and new mechanical devices. Waiting for industrial development in these cases is of no avail. Their jobs are gone. Inventive genius must devise new industries, commercial agencies must create new wants, to provide new occupations for these people, insofar as age permits them to learn new occupations or adapt themselves to new industries."

This need for new industries and new occupations, said Secretary Davis, daily becomes more pressing. The Department of Labor was said to be in constant receipt of reports of acute situations resulting from the introduction of new machines. It is believed in many quarters, he declared, and with good reason, that mechanical development will probably proceed as rapidly in the immediate future as it has in the immediate past.

Figures of percentage of change in employment show great variation in different districts. This the Bureau of Labor Statistics interprets to mean that unemployment is not universal, nor in all places or industries is it acute, but that it is spotted by geographical sections and by industries. In actual numbers it is believed to have not more than one-third of the magnitude of the labor depression of 1921, which caused a shrinkage, according to estimates of the bureau, of 5,735,000, between the peak of 1920 and July, 1921. The greatest present shrinkage in employment, 19.7 per cent, was shown in Oklahoma, between January, 1927, and January, 1928, and the smallest in factory workers of Wisconsin, 3.9 per cent.

A tabulation shows that 79.8 per cent of all employees were in establishments that worked full-time and 87.2 per cent in establishments that worked more than 90 per cent of full-time, while less than 1 per cent of the employees are in establishments working half time or less.

In addition to the 9095 establishments in operation which reported their percentage of full-time employment, 108 establishments reported that they had recently become temporarily idle. These establishments were said to be smaller than the average, and several of them made the report during their slack season.

Production of Coal in World Was Higher in 1927

World production of coal of all grades in 1927, according to preliminary figures compiled by the Bureau of Mines, Washington, was 1,475,000,000 metric tons. Of this, approximately 197,000,000 tons was lignite and 1,278,000,000 tons was bituminous and anthracite. The lignite production was the largest on record. The United States production totaled 73,164,000 tons of anthracite and 471,556,000 tons of bituminous and lignite coal, comparing with 76,599,008 tons and 520,147,061 tons respectively in 1926. The United Kingdom was the third largest producer with an output of 259,516,600 tons of bituminous coal in 1927, comparing with 128,305,291 tons in 1926, the year of the strike, and with 247,079,210 tons in 1925.

Germany's production of 304,403,311 tons was almost equally divided between lignite (150,805,711 tons) and bituminous coal (153,597,600 tons). Both showed substantial increases over the two preceding years. No country, other than the three mentioned, reached as much as 55,000,000 tons, France being in fourth position, with 52,846,700 tons total.

Due mainly to the British strike in 1926, world production in 1927 showed a gain of 110,000,000 tons, or 8 per cent.

Wages Increase as Hours Shorten

The biennial survey of wages and hours in foundries and machine shops made by the Bureau of Labor Statistics, Department of Labor, Washington, shows that there was an increase in average earnings between 1925 and 1927 and a decrease in the average full-time hours per week. Thus, the average full-time weekly earnings in foundries increased from $31.42 in 1925 to $31.89 in 1927, while the average full-time hours per week were 51.5 in 1925, compared with 51.1 in 1927. In machine shops average full-time earnings increased from $30.34 to $31.31 per week during the two-year period, while the average week was reduced from 50.4 to 50.1 hr.

Average hourly compensation showed gains: in machine shops, from 60.2c. to 62.5c.; in foundries, from 61c. to 62.4c.

Shipments of enameled sanitary ware in February, as reported by 22 manufacturers to the Department of Commerce, totaled 295,773 pieces. This is a gain of nearly 1 per cent over January, but records a decline of 7 per cent from February, 1927. Bathtubs, at 75,663 units, show a considerable gain over the three preceding months, but a reduction of 9 per cent from February of last year.

REOPEN SOUTHWESTERN CASES

Commerce Commission Report Extends Commodity List and Changes Effective Date

WASHINGTON, March 27.—The supplemental report of the Interstate Commerce Commission in the Consolidated Southwestern cases, made public last Wednesday, grants a reopening of the proceedings relating to a number of iron and steel products. It increases the commodity description to include a list of iron and steel items not heretofore specifically named, and changes the effective date of the new rates on cast iron pipe and fittings pending possible further revision. It is provided that the rates on cast iron pipe and fittings, after July 8, 1928, shall not exceed the maximum reasonable class rates prescribed in the proceedings, subject to Western Classification ratings. One of the outstanding features of the report was a denial of the petition of the carriers for an increase of 10 per cent over the scale of rates prescribed in the original report.

The iron and steel articles to be considered in the proceedings to be reopened include wrought iron and steel pipe, riveted, seamless and welded, with fittings; cast iron pipe and fittings; iron-body well-pipe screens or strainers; spiral columns or column hoops, knocked down or collapsed; iron or steel joints for concrete road construction; castings and forgings; joists and building doors, other than rolling; studding; iron or iron body valves and siding, sash weights and wire rope.

The commodity description in the iron and steel list was amended to include the following items: expanded metal ribbing lathings; tin and terne plate; concrete and plaster reinforcement, consisting of spiral columns or column hoops, knocked down or collapsed; wire mesh and expanded metal, and wrought conduit pipe. The supplemental report on cotton ties amends the first finding by fixing the rates at 27.5 per cent instead of 25 per cent of first class. The petitions of a number of iron and steel interests to lower the scale on the general iron and steel list was denied, the 32.5 per cent scale being maintained. The commission said that it was not convinced that railroad revenues from iron and steel traffic to Texas would be increased. Undoubtedly, it was stated, the rates on many articles will be materially reduced.

The time accorded the carriers for revising rates on the numerous articles for which rates were not specifically prescribed in the earlier report was extended to Dec. 10, 1928. In order to afford time in which to publish tariffs embodying the revisions and changes in an orderly way, the effective date of the order was made July 8 instead of May 16. The new tariffs are to be posted 45 days in advance of the effective date.

A New Book on American Industry

The name of Charles M. Schwab appears as the author of a chapter entitled "Steel—Its Part in American Progress" in the volume just published for the American Institute (Edwin Forrest Murdock, president) by Doubleday, Doran & Co. Mr. Schwab's chapter consists of 20 pages which deal with developments familiar to most men in the industry. There is a two-page quotation from an address by Mr. Schwab at the Carnegie memorial service in Pittsburgh on Feb. 25, 1919. In it he spoke of Mr. Carnegie's insistence on plant of the highest obtainable efficiency and of his willingness to tear down that which did not represent the latest discovery and the most approved methods. In one case a new converting mill, which had been running only two months, was torn down and rebuilt to introduce an economy discovered after its completion.

Mr. Schwab points out that the steel industry, after spending vast sums to reduce the cost of production, has in recent years been realizing only about the same return per ton of output as before the expenditures were made. In 1913 earnings of the ten largest steel companies were equal to $6.13 per ton of ingot produced, as compared with $6.21 per ton in the three-year period 1924-26.

In referring to the penetration of steel into all departments of industrial activity, Mr. Schwab cites THE IRON AGE compilation of Jan. 5, 1928, estimating the production of finished steel in 1927 at 32,039,000 gross tons, of which the building and construction industries took 22 per cent, the railroads 19 per cent, the automotive industry 14 per cent, oil, gas, water and mining 8½ per cent, exports 6 per cent, agriculture 5½ per cent, food containers 5 per cent, machinery 4 per cent, and all other uses 16 per cent.

Among other chapters of the book are "Ships and Shipping," by Edward N. Hurley; "Foreign Trade," by Dr. Julius Klein; "Mines and Mining," by H. Foster Bain; "Railroads," by L. F. Lowry; "Machinery and Power," by Dexter S. Kimball; "The Electric Industry," by Owen D. Young; "Building Construction," by Hugh White, George A. Fuller Co.; "Labor and America's Century of Industry," by William Green.

Engineers of the World to Collaborate

WASHINGTON, March 27.—At a dinner given at the Carlton Hotel here last Thursday night by the Japanese Ambassador, T. Matsudaira, to the American committee of the World Engineering Congress, plans were made for participation of the United States at the meeting of the Congress in Tokio next year. Dr. Elmer A. Sperry, Brooklyn, elected chairman of the committee, declared that general development of industry would be facilitated through collaboration of engineers of the world. The Japanese Ambassador emphasized the debt which he said Japan owes the Western world in progress made in engineering and science.

Officers elected by the committee were: Herbert Hoover, honorary chairman; Dr. Sperry, chairman; John W. Lieb, New York, vice-chairman and chairman of the executive committee; C. E. Grunsky, San Francisco, vice-chairman (Pacific Coast); C. E. Kettering, Detroit, vice-chairman (Middle West); Maurice Holland, New York, executive secretary.

French Iron Ore Output a Record in 1927

WASHINGTON, March 20.—The production of iron ore in France in 1927, according to provisional official figures issued by the Bureau of Mines, Ministry of Public Works, reached the record figure of 44,678,415 metric tons, according to a report received by the Department of Commerce from its commercial attaché at Paris. In 1926 the output was 39,480,400 tons; in 1925, 35,741,195 tons; in 1924, 23,248,000 tons; and in 1913, 42,980,424 tons. The totals include Lorraine production. Domestic requirements are about 25,000,000 metric tons. Exports in 1927 were 14,662,382 tons.

COMING MEETINGS

April

American Oil Burner Association. April 3 to 5. Fifth annual convention, Hotel Stevens, Chicago. Leod D. Becker, 350 Madison Avenue, New York, secretary.

American Gear Manufacturers Association. April 19 to 21. Twelfth annual meeting, Hotel Seneca, Rochester, N. Y. T. W. Owen, 3608 Euclid Avenue, Cleveland, secretary.

American Society of Mechanical Engineers, April 23, 24. Meeting of materials handling division, Benjamin Franklin Hotel, Philadelphia. Calvin W. Rice, 29 West Thirty-ninth Street, New York, secretary.

National Metal Trades Association. April 25, 26. Annual convention, Hotel Astor, New York. J. E. Nyhan, Peoples Gas Building, Chicago, secretary.

National Foreign Trade Council. April 25 to 27. Fifteenth annual convention, Rice Hotel, Houston, Tex. O. K. Davis, India House, New York, secretary.

American Welding Society. April 25 to 27. Annual meeting, Engineering Societies Building, New York. Miss M. M. Kelly, 33 West Thirty-ninth Street, New York, secretary.

This Issue in Brief

American steel industry will continue to grow steadily, says C. M. Schwab. The next 50 years will see as great an advance as took place in the past half-century, he tells Congressional committee.—Page 876.

Doubles output per man by eliminating manual handling of materials. Small-tool manufacturer reduces costs and working force, while production mounts, by handling all materials mechanically. Stock is kept constantly moving, no work piling up in process.—Page 857.

Strength and toughness of manganese steels are not affected by moderately high phosphorus or moderately high sulphur. Tests reveal that steels high in manganese content are more closely allied to structural alloy steels than to carbon steel.—Page 865.

Tests forgeability of various metals by flattening pellets under forging hammer. Pellets should be struck at various temperatures to determine relative forgeability.—Page 874.

Four-year seawater immersion test proves ingot tin most durable of 50 non-ferrous metals and alloys. Sample bars were fixed to seabottom in the Bristol Channel.—Page 874.

Steel exports fall off, while imports gain. We shipped 134,107 tons of finished steel out of the country in February, a loss of 8 per cent compared with February, 1927. We bought 30,095 tons from foreign makers, 14 per cent more than we imported in the same month of last year.—Page 885.

Production is large in relation to demand, says Dr. Haney. The P-V line predicts a downturn in the fall. Decline is attributed chiefly to the failure of commodity prices to rise, while physical volume of trade has turned upward, forecaster declares.—Page 883.

Urges German steel producers to cooperate with customers as American producers do. American consumers get the exact analysis of steel they require, and not, as in Germany, the grade the producer wishes to ship, German bolt and nut manufacturer tells trade association.—Page 888.

Government partly responsible for high cost of distribution, C. M. Schwab indicates. Government can help if it will give capital a chance to operate its business economically—for example, permitting steel manufacturers to have an understanding with each other as to where they will sell their steel.—Page 876.

Broach with detachable chromium-plated burnishing buttons is found to be best suited for boring wrist pin holes in Whirlwind engine pistons of "Y" metal. Chromium-plated tool enables airplane engine builder to increase production.—Page 869.

If you can't secure it at an equal price, the business does not belong to you, says trade association head. Underquoting a competitor who is close to a certain buyer is not only unfair but, in the long run, unprofitable as well.—Page 889.

Overheating is not especially damaging to manganese steels, investigator finds. Tests of bars quenched from a temperature 200 deg. Fahr. higher than that usually employed show that deterioration in elongation or impact value is no greater than in other alloy steels.—Page 865.

Hardness of copper is increased from 80 to 410 by adding a small percentage of beryllium. And tensile strength is increased to about 200,000 lb. per sq. in.—Page 873.

Machineability of high-manganese, high-sulphur steel is higher than that of plain carbon steel or lower-manganese steel. The first mentioned is suitable for cutting speeds higher than for open-hearth screw stock, one manufacturer says, and nearly as high as for Bessemer screw stock.—Page 866.

70:30 brass is not liable to unsoundness caused by gases, whatever the conditions of casting, British metallurgist declares after investigation. Spherical cavities frequently found in brass ingots are, in his opinion, caused by mechanical entrapping of gases within the mold rather than by gases actually in solution in the liquid metal.—Page 873.

Unemployment below two millions, Bureau of Labor Statistics reports. The figure reported is 1,874,050. Shrinkage in industrial employment since 1925 amounts to 8.3 per cent, due almost wholly to mechanization. Need for new industries daily becomes more pressing, says Secretary Davis. — Page 890.

The New Unemployment

THE high-wage doctrine of recent years has rested on the premise that mass production demands mass consumption. On the one hand, management and technical staff have been steadily cutting manufacturing costs; on the other hand, wage rates have been maintained and buying power expanded through instalment selling—all in an effort to develop a market large enough to absorb the accelerated output of large-scale repetitive processes. Unfortunately, cost reduction has caused a steady decline in the number of workmen required for a given output. While those employees retained are commanding unchanged, and in some cases even advanced, wages, an increasing number have been released to find employment elsewhere. A new kind of idleness, "technological unemployment," has made its appearance. Technological advances in industry, while cheapening production, are reducing the number of buyers so essential to the maintenance of mass consumption. Shall we say that industrial efficiency has created a Frankenstein which is starting in to destroy?

Frequently the initial effect of labor-saving equipment is to cause distress among the workmen displaced, although the ultimate gains have always outweighed temporary disadvantages. Following the World War and the restriction of immigration, however, the shortage of man power put a premium on the mechanization of industry. So rapid were the strides in this direction that what had been a serious deficiency of labor now appears to have been converted into a surplus.

At the moment unemployment seems to be less serious than late last year; it is a curious fact, indeed, that its magnitude did not become apparent until some time after it had passed its worst. This is possibly testimony to the fact that much of the enforced idleness of workmen was due to technological causes rather than to business depression. The condition stole on the country unawares, as it were.

That technological unemployment presents a problem of prime importance is not yet clear. The growth of luxury industries and various forms of personal service, made possible by increased consumer buying power, have been taking surplus labor, but the diversion of workmen into these pursuits apparently has failed to keep pace with the release of man power through gains in efficiency.

In some industries, notably in textiles, there have been recent reductions in wages. No general trend in that direction has developed, and some of the leading industrial companies of the country are opposed to any such move. They are concerned not only with preserving mass buying power but with keeping all important business factors stable. A collapse of the wage structure would bring an industrial depression of first magnitude.

It is this desire for business stability that has caused so much interest in the initiation of public work as a means of relieving unemployment. One difficulty with municipal, county, State or Federal undertakings is the slowness with which they ordinarily get under way. Legislative authorization of appropriation, votes on bond issues, the making of plans, the getting of bids, etc., all take time and frequently delay the actual starting of such work until the motivating emergency is past.

Another measure in the interest of labor stabilizing is unemployment insurance. So far this remedy has been tried chiefly in Europe. It has not found favor in this country because of its paternalistic character. Whatever steps are taken to cope with unemployment, it is essential first to obtain more accurate statistics regarding the number of unemployed. Existing data are so incomplete that estimates vary by the millions. Comprehensive, dependable statistics upon which a national employment index might be based would replace guesses with facts.

PRESSED steel highway signs bearing "Stop" and other directions, including warnings at railroad crossings for automobilists, have come into general use in a number of States in the past two years and have opened another field for the output of stamping plants. The signs are made of 16 or

18-gage sheets, and the processes of manufacturing, including embossing, enameling and inking of the letters, are practically the same as those employed in making automobile license plates. Signs standardized in form and size have been adopted to some extent. The steel signs take the place of wood and cast iron. Their superiority to wood is obvious. Claimed advantages over cast iron signs include cheapness, less danger of breakage, and lightness, which makes them easier to transport and erect. It is estimated that 500 tons of sheet steel was used in the manufacture of road signs of this type last year.

The Steel Corporation's Share

STEEL CORPORATION production of steel ingots decreased by 9 per cent from 1926 to 1927; its production of finished lines decreased 9.5 per cent and its shipments 9.1 per cent. Total earnings, after taxes but before any bond interest, fell off 16.9 per cent, thus reflecting a decrease in earnings per ton shipped, while earnings available for dividends decreased 24.7 per cent.

Comparing last year with 1925, however, there was a decrease of less than 1 per cent in total earnings but a decrease of 3 per cent in shipments. Thus in return per ton 1927 proved a shade better than 1925. Last year was handicapped by the very poor fourth quarter, when realized prices were distinctly below the year's average. Total earnings and profits per ton were somewhat better in the first three quarters of last year than they were in 1925 as a whole.

The significance of the comparison is simply this, that while the relatively poor showing of 1927 can be partly explained away, the poor start it furnished for 1928 stands out prominently. The steel industry greatly needed the price advances it since has striven to put into effect. That they are not in full force on current shipments is only what was to be expected in the light of experience. The last general and important rise in steel prices was completed early in 1923, and in 1924 prices declined, yet the Steel Corporation had distinctly larger earnings relative to tonnage in 1924 than in 1923.

The corporation's report gives the operation in 1927 at 78.9 per cent of capacity, which compares with 88 per cent for 1926, 78.4 per cent for 1925, 70 per cent for 1924 and 88.3 per cent for 1923. Last year's percentage was just a trifle under the average of the four preceding years. Capacity was slightly larger, while the proportion of Steel Corporation production to total production of the industry decreased slightly, being 43.3 per cent in 1927 against 46.8 per cent in 1923.

The corporation got along with less raw material in 1927, percentage variations in production from 1926 being as follows:

	Per cent Decrease.
Iron ore mined	12.4
Coke manufactured	16.3
Blast furnace production	12.2
Steel ingot production	9.0

In finished steel production, with a total decrease of 9 per cent, from 14,334,412 tons in 1926 to 12,979,282 tons in 1927, the largest decrease was in rails, 16 per cent; bar mill products followed with 14 per cent. The smallest decreases were in tubing and pipe, 3.8 per cent and in wire products, 3.6 per cent. The small decrease in wire products, which are quite a staple, seems natural; but to find tubing and pipe holding up so well is certainly surprising. That 1926 was an exceptionally active year in oil and gas well drilling and 1927 an extremely poor year has been generally said and fully credited. A very interesting comparison with the pipe and tube total is due when the official statistics of the industry are published.

Rest Pauses in Industry

IN establishing the rest period in shop work, to increase efficiency and output by correcting the effects of fatigue, it is not sufficient arbitrarily to fix the length of the recess at a certain number of minutes. Each industry, in fact each plant, has its own problem to solve as to the frequency and length of pauses, according to a report of the Industrial Fatigue Research Board of Great Britain. The board finds that the introduction of frequent rest pauses lessens the feeling of fatigue among the workers and tends to increase the output, even though the working time is less.

Each establishment, to secure efficient results, must consider the character of its work in relation to fatigue, whether from bodily exertion or from mental stress which comes with concentration and from such influences as that of extremely monotonous tasks. A rest period may be so short that it is only an irritation to the worker, or it may be so long that it is difficult for him to resume his labor with the same drive he had before dropping it.

The board points out that in most occupations the workers themselves introduce pauses. Tin plate workers take from twelve to fourteen minutes rest each hour. But the research indicates that voluntary pauses are not so advantageous in procuring high production as authorized rest. In one cited case the substitution of prescribed for voluntary rest pauses increased the output more than 4 per cent. In another case it was found that workers taking spontaneous rests turned out sixteen pieces per hour; when working twenty-five minutes and resting five they produced eighteen pieces; when working seventeen minutes and resting three they produced twenty-two pieces; and when working ten minutes and resting two they produced twenty-five pieces per hour. The output increased with the frequency of the pauses.

In one experiment rest periods of one-half minute, two minutes and five minutes were used after a work period of forty minutes. The two-minute pause was found to be most beneficial. In another test five minutes rest was found to be better than one minute, three or ten minutes, after eighty minutes of work. In still another a rest of fifteen minutes in the middle of a work period of one hour had an unfavorable effect upon output.

Stress is put upon the use the employee makes of his rest pauses. Physical and mental relaxation are sought. In one American plant cots are provided and the workers lie down for a certain number of minutes, often going to sleep. Nothing so quickly restores strength as to relax in a prone position, and a short nap is a great restorer of vitality, bodily and mental. Many busy executives have learned the value of this, making it a rule to stretch out for a few minutes, perhaps snatching a nap, as a break in their business day. As a rule, the worker in his rest period should assume a posture the opposite of that which his labor compels. If he stands to his task, he should sit or lie down. If his occupation requires him to sit, he should stand and perhaps walk about during his recess.

Value of Low-Manganese Alloy Steels

REFERENCE has been made recently in these columns to the fact that manganese is gradually living down a questionable reputation as an element in low-alloy steels. Steel castings, carrying considerably more manganese than is ordinarily present, have long been known to have superior physical properties when proper care is taken to prevent segregation and to break up dendritic crystallization. Carburizing steel popularly known as S.A.E. 1315 X, containing 0.10 to 0.20 carbon, 0.08 to 0.13 sulphur and 1.25 to 1.55 manganese, has also been marketed. Some users like it, others not at all. It has been said that a basic open-hearth steel, if low in sulphur and containing more than 0.8 per cent manganese, will never act "abnormally" in the carburizing pot. Furthermore, acid open-hearth steels containing 0.25 to 0.50 carbon and about 1.0 per cent manganese have been successfully marketed in competition with higher alloy steels, and are now being vigorously exploited under different trade names.

This last classification, known to metallographists as pearlitic manganese steel, is described fully in a paper by Jerome Strauss in this issue of THE IRON AGE. Well over a thousand tons of it have been used by the Naval Gun Factory recently. Under ballistic tests artillery shells do not split; if they cannot penetrate the armor they merely mash out of shape. This is certainly good indication that well made manganese steel, properly heat treated, has none of that brittleness which has commonly been assumed.

Such a searching test in practice is more convincing than the good results on Izod impact specimens reported by Mr. Strauss. On the whole, his tests indicate a material which should be of great service for machined parts requiring higher strength and toughness than medium carbon steel, yet hardly warranting the more expensive steels containing nickel, chromium, molybdenum, or a combination of them.

While the reported tests on manganese steels unduly high in sulphur or phosphorus are interesting, a warning should be given against placing too much reliance just yet upon the ability of manganese to counteract the expected deterioration from these impurities, in addition to enhancing the physical properties due to carbon. Let us take one thing at a time. Several metallurgists still remember unhappy experiences with manganese steels in as diverse forms as thin tubular sections, coiled springs and heavy armature shafts. Failures seemed to be associated with large pearlitic grains, considerable chemical segregation and even seaminess and excessive silicate inclusions.

Without shutting one's eyes to these undoubted facts, it is only fair to remark that much has been learned in recent years about the control of grain size in fairly massive forgings. Furthermore, several steel makers have studied the low-manganese steels sufficiently to have developed a correct furnace refining practice, to have discovered the proper relationship of ingot mold and cooling rate, and corrected the adjustment of carbon to manganese, with the result that the steels now made are much superior to those turned out without particular care several years ago. The inverse relationship between carbon and manganese is especially important. To prevent brittleness and excessive machining costs, the carbon must be 0.30 or lower as the manganese passes 1.75 per cent.

Simplifying Rolling Mill Design

MANUFACTURERS who have taken up in a comprehensive way the simplification of their products, following the modern trend toward standardization and the throwing out of unprofitable lines, have profited in a large way by their enterprise. This is true in particular of older houses, whose products represent a long evolution in mechanical design, in sizes and in uses. A house-cleaning on well-studied engineering lines is quite sure to result in a large measure of simplification and consequent reduction in costs.

A typical experience is that of one of the great American builders of rolling mill and wire-making machinery. For the last three years the company has maintained a special department to study in the lines mentioned. Its activities have contributed largely to a 58 per cent reduction in inventories.

The proper selection and simplification of materials has been of vast importance in keeping machines working with the least confusion and change. Many designs of machines specified by the steel trade are called for too infrequently to warrant their manufacture. These have been eliminated.

Roll housings were formerly built in 50 different sizes and types. The number is now reduced to two types, with 12 sizes in each type, or 24 in all. Pinion housings were formerly built in three types requiring 30 different sizes. The company now puts out one type which comes in 12 sizes. This procedure is being applied to the entire product of the company, so that specific sizes and types are prescribed for all machines. As a result, materials for service requirements can be easily stocked. Repair orders will be filled more promptly. The cost and storage of patterns are reduced and there is also a lowered cost for jigs and fixtures.

The greatest saving brought about has been in the decrease in inventory. For instance, mill construction calls for quantities of angles. Formerly, to meet the requirements of many sizes and many types for each machine produced, it was necessary to carry in stock 74 different sections. Under the present practice it is necessary to carry only 11 sections and all new developments must conform to the revised standards.

For Large Scale Manufacture of Steel Sanitary Fixtures

The Steel Sanitary Co. has been organized at Alliance, Ohio, to manufacture from enameled and stainless sheet steel a full line of sanitary fixtures, including bath tubs, lavatories, sinks and laundry tubs. The plans contemplate operations at Alliance and the turning out of 1200 enamel steel and 400 stainless steel sanitary fixtures daily. The enterprise is the result of a development by J. C. Cromwell, applying mass production methods to the utilizing of sheet steel in the sanitary field, now almost entirely occupied by cast iron.

The officers of the new company are the following: Chairman of the board, W. H. Purcell, president Alliance Machine Co. and other Alliance corporations; president and treasurer, F. E. Dussell, president and treasurer Buckeye Twist Drill Co. and formerly president of the Transue & Williams Steel Forging Corporation Alliance; general manager, J. C. Cromwell, formerly of the Garrett-Cromwell Engineering Co., Cleveland.

It is estimated that 300,000 tons of steel would be required each year if the entire sanitary industry were converted from cast iron to steel. This equals the amount of steel now consumed in the metal furniture industry. Previous attempts to produce sanitary ware of steel failed because of small scale operations and uneconomical methods, which resulted in higher costs than for cast iron ware. With the production methods devised by Mr. Cromwell the organizers of the new company expect to produce steel ware on a basis competitive with cast iron. The methods and processes are covered by patents. The materials employed will include steel sheets having special analysis and treatment and also special stainless enamel, both white and colored.

Gain of 8½ Per Cent in Two-Months Exports of Industrial Machinery

WASHINGTON, March 26.—Exports of industrial machinery from the United States in February, according to the industrial machinery division of the Department of Commerce, totaled $15,053,902, practically the same as in January, despite the fact that February was the shorter month. Exports in February of last year amounted to $12,643,669. For the two months ended February of the current year and correspondingly last year they were $30,169,059 and $27,821,315 respectively.

Shipments of metal-working machinery made the best showing in February, with a value of $2,372,864, as compared with $1,406,142 in February of last year, a gain of 69½ per cent. The largest gains in this group were made in engine lathes, thread-cutting and automatic screw machines, gear-cutting machines and cylindrical grinding machines. In the construction machinery group exports of excavators, including power shovels, amounted to $607,869 in February, against $287,733 for the corresponding month of 1927, and shipments for the two months were valued at $1,117,000, or nearly double the figure for the same period of last year.

Exports of freight and passenger elevators, on the other hand, declined from $150,569 to $23,810, based on the monthly comparison, and from $209,183 to $126,506 for the two-month periods. Exports of the entire construction group, however, were in excess of those of February, 1927, the values being $1,506,281 and $1,293,117 respectively. For the two months ended with February the total was $3,132,317, against $2,547,605 for the corresponding period of last year. Exports of textile machinery in February amounted to $1,397,930, against $1,079,837 in February of last year. For the two months ended with February the value was $3,131,975, compared with $2,438,758 for the corresponding period of last year.

Exports of miscellaneous industrial machinery in February were valued at $6,682,252, against $4,787,234 in February, 1927. For the two months of each year the values were $12,352,593 and $9,948,846 respectively.

Princess Blast Furnace in Virginia to Be Sold at Public Auction

The blast furnace and all other property of the Princess Iron Corporation at Glen Wilton, Va., will be offered for sale at public auction Saturday, April 7, at 11 a. m. at the office of the company at Glen Wilton. The sale has been ordered by the United States District Court for the Western District of Virginia in a pending action brought by the Bank of North America & Trust Co., Philadelphia.

The Princess furnace was built in 1883-84 and rebuilt in 1912. Its brand of pig iron at one time enjoyed a wide reputation throughout the East. The furnace has not been operated during the last few years. Its annual capacity is 36,000 tons.

United States Exports of Industrial Machinery

	February		Two Months Ended February	
Class	1928	1927	1928	1927
Power-generating, except electric and automotive:				
Steam engines (a)	$423,473	$586,087	$1,009,137	$1,706,389
Internal-combustion engines (b)	478,532	604,336	1,090,944	1,374,161
Water wheels and turbines	42,120	......	52,619	20,991
	$944,125	$1,190,423	$2,152,700	$3,101,541
Construction and conveying machinery	1,506,281	1,293,117	3,132,317	2,547,605
Mining, oil-well and pumping machinery:				
Mining and quarrying	1,024,523	1,069,586	1,960,918	2,205,639
Well-drilling	380,469	649,895	956,500	1,622,547
Other oil-well and oil-refining	418,426	785,152	907,408	1,790,115
	$798,895	$1,435,047	$1,863,908	$3,412,662
Pumping, power (c)	287,032	382,283	663,417	913,822
	$2,110,450	$2,886,916	$4,488,243	$6,532,123
Metal-working machinery:				
Power-driven	1,940,147	1,121,256	4,029,949	2,615,383
Other	432,707	284,886	881,282	637,060
	$2,372,864	$1,406,142	$4,911,231	$3,252,443
Textile, sewing, and shoe machinery:				
Textile	921,642	721,241	2,137,989	1,746,443
Sewing, industrial	343,297	283,982	691,602	518,677
Shoe	132,991	74,614	302,384	173,635
	$1,397,930	$1,079,837	$3,131,975	$2,438,755
Other industrial machinery (d)	6,682,252	4,787,234	12,352,593	9,948,848
Total	$15,053,902	$12,643,669	$30,169,059	$27,821,315

(a) Excludes locomotives.
(b) Excludes engines not over 10 hp.
(c) Excludes windmill pumps, also parts of pumps.
(d) Excludes domestic washing machines; includes mine cars.

Price Trend Mixed as Output Gains

Pittsburgh District Steel Production at 85 Per Cent Compared with Recent Average of 80 Per Cent—Tin Plate Output Expands—Shading in Sheets and Nails—Pig Iron Weaker

HEAVY steel output is being maintained and, in some districts, notably at Pittsburgh, is showing further gains, but the trend of prices is no longer upward and irregularities in quotations are more numerous. The opportunity to reduce costs with a high rate of operations has, no doubt, influenced mills to accept additions to contracts at lower than prevailing prices or to shade the market on spot business.

Prices of sheets, strips and wire nails are increasingly irregular. Underlying the finished steel market is an unpromising situation in the primary materials. The scrap and coke markets have a weak tone, and in some sectors pig iron prices are commencing to give ground.

The Steel Corporation is again operating at a 90 per cent rate after having dipped to 88 per cent. Its subsidiary, the Carnegie Steel Co., has lighted three blast furnaces during the week, now having 34 of its 50 stacks active. For both Corporation and independent plants in the Greater Pittsburgh district, steel ingot output now averages 85 per cent, as against 80 per cent two weeks ago. Contributing to improved output of raw steel has been a gain in tin plate mill operations, the current average being 90 per cent of capacity compared with 85 per cent last week.

New orders for finished steel are comparatively light, but, with some mills advising their trade that unspecified tonnage on contracts will be cancelled March 31, specifying is in larger volume. However, there has been less of a rush to enter specifications than was expected; in the Cleveland district, buyers whose plants are not busy are permitting their contracts to lapse.

Nevertheless, much of the steel that will be shipped in April will be at first quarter contract prices, thereby deferring a severe test of recent advances for several weeks more. In a few products the price issue has already been raised. Irregularities in black sheets are increasingly numerous, with some producers taking business, at least temporarily, at $1 to $2 a ton below the recent ruling quotation of 2.90c. per lb., Pittsburgh. Concessions of $2 a ton from 3.75c. on galvanized sheets have been made by both mills and jobbers.

Two producers of wire nails have notified middlemen that they will cancel first quarter tonnage not specified by March 31. Jobbers, however, are heavily stocked and sales of retailers' carloads have been made at $2.60, base per keg, or $1 a ton below the mill quotation on new business.

Price concessions of $2 a ton are reported on hot-rolled strip apart from cooperage stock, and one of the smaller makers of cold-rolled strip has announced a reduction of $3 a ton for second quarter, going back to the prices at which most contracts for the current quarter were made.

Leading Pittsburgh makers of track spikes have discontinued taking orders for less than a carload and have advanced carload prices $2 a ton to $2.80 per 100 lb.

The automotive industry is expected to keep up its present high rate of production through April, with good operations in sight at least through May. There is a heavy demand for steel from motor car builders, but they are ordering cautiously—as a rule only far enough ahead to assure a steady flow of materials from the mills.

Heavy backlogs in rails have been augmented by 18,000 tons placed by the Great Northern. The Gary mill took half of the tonnage, while the Inland and Bethlehem companies booked 4500 tons each. Another Western road which placed a contract in the winter has ordered 4000 tons additional.

Steel mills will furnish about 15,000 tons of steel for 1000 car bodies bought by the Chicago & North Western and 200 ore cars ordered by the Chicago, Milwaukee, St. Paul & Pacific. The latter road has still to buy 4650 freight cars. The New York Central is inquiring for 119 passenger cars, and, according to an unconfirmed report, the Pennsylvania will enter the market for 10,000 to 12,000 freight cars.

A contract for laying a pipe line from Amarillo, Tex., to Kansas City, Mo., has been awarded, but the steel, amounting to 100,000 tons, has not yet been placed.

A bridge over the Delaware River near Philadelphia and an apartment building in New York, each requiring 8000 tons, account for about half of the structural steel work added to pending projects. Awards amounted to 22,400 tons, one of the lowest totals for any week this year. Orders were placed for 13,000 tons of reinforcing steel bars.

Basic pig iron has been sold by a Pittsburgh district producer at more than $1 a ton below the delivered price of Valley iron based on $17 at Valley furnace. Buffalo foundry iron in the New England and New York markets has declined to a base price of $16, furnace, and the delivered prices on Buffalo iron to water points are setting a pace for competitive furnaces because of low canal barge rates. In the Boston market the local producer has met the low quotations of Buffalo iron.

Exports of iron and steel in February were 185,915 tons, a decline from 205,766 tons in January, but higher than the 166,129 tons of February, 1927. The gain from a year ago was more than accounted for by increased shipments of scrap.

Both of THE IRON AGE composite prices have declined, that for pig iron to $17.67 from the $17.75 held for six weeks and that for finished steel to 2.357c. a lb., from the 2.364c. of the preceding six weeks. Both are still well above the year's low figures.

*The average switching charge for delivery to foundries in the Chicago district is 61c. per ton.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Steel Output of 85 Per Cent Maintained —Some Price Irregularity

PITTSBURGH, March 27.—Production of steel ingots in this and nearby districts is around 85 per cent of capacity. All companies are not operating that well, but a few are running considerably above that rate and one company with an annual capacity of around 1,000,000 tons probably will produce more than 90,000 tons this month. March is usually a month of high production and this year will be no exception. March pig iron production also will be heavy, not only because of additions to the list of active stacks but because many of the large furnaces are being pushed to the limit. One furnace in the district will produce close to 30,000 tons, if, indeed, it does not exceed that mark.

Except that the movement of finished steel from the mills got under way a little earlier than it did last year, there is a remarkable similarity in the performances of this year and last. April, however, promises to show less of a recession than that month last year, although the expectation is not strong that next month's specifications will be as large as they have been this month.

Prices still show much irregularity, with comparatively little of the business carrying the full or top quotations. The effort is being made to preserve the advance by some, but the more general condition is that steel manufacturers are desirous of avoiding price resistance.

The steel industry has no reason for complaint over the volume of orders and specifications, and it is still operating at a rate that insures producing costs as low as are physically possible. This combination of conditions partially counterbalances the fact that it has not been overly successful in securing the advances it set out to obtain during the early weeks of the year.

Confidence would be greater if the railroads were in a position to buy more rolling stock. The St. Paul inquiry for 4650 cars is the largest business of this sort now in sight, although the Pennsylvania is said to be getting ready to put out a good-sized inquiry, despite the fact that an official of that road recently said it would not need cars this year.

Low prices are being made on steel-making iron on sales between steel companies, but merchant iron is held at the prices that long have been observed. Dealers having short orders in heavy melting steel scrap are getting anxious to cover and are raising their bids under increased pressure from the melters for deliveries. The strength of compressed sheet scrap still is a feature of the situation. The fuel market is featured by some good-sized orders and inquiries for coking coal.

Pig Iron.—A Pittsburgh district steel company has closed for a round tonnage of basic iron and a smaller tonnage of Bessemer iron for a steel foundry which it operates, but no details as to prices are available. The iron, however, will not come from Valley furnaces, the transaction being another demonstration of the fact that Valley steel-making iron cannot be brought into the Pittsburgh district in competition with Pittsburgh district steel company iron, which enjoys a substantially lower rate of freight for one thing, and for another, the steel companies with surplus iron for market not infrequently pass on to buyers more than their freight rate advantages. In the case of the basic iron, there are reports that it sold at $15.87, Valley furnace basis, which would mean $17.63, delivered, but it is probably nearer the facts that the iron carried a freight rate of $1.13 and the price at shipping furnace was $16.50. It was noted in these reports a fortnight ago that while Valley furnaces were still quoting $17 for this grade, they would have to go to about $16 to meet local competition. An inquiry in the market is for 5000 tons of basic iron of special analysis, but it is believed to be for shipment outside the natural territory of Pittsburgh or Valley furnaces. Except for this business, the market has been extremely quiet, with only small lots of Valley iron moving, and these at the prices which have ruled for some time. The Carnegie Steel Co. has put on a Duquesne, a Carrie and an Isabella furnace within the week and now has 34 of its 50 stacks in production.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$17.00
Bessemer	17.50
Gray forge	16.75
No. 2 foundry	17.25
No. 3 foundry	16.75
Malleable	17.25
Low phosphorus, copper free	27.00

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—Business is entirely a matter of specifications on contracts, as there are few, if any, users of ferromanganese, spiegeleisen, or high grade ferrosilicon who are not covered. So far as can be learned, not a carload of high grade ferrosilicon has been billed to consumers in this district at the higher prices which makers announced early in the year.

Semi-Finished Steel.—As open market trading in billets, slabs and sheet bars has largely ceased and the movement is mostly on requirement contracts of indefinite duration between consumers and makers, there are no tests of what are commonly regarded as the market prices. For more than a year, mills have called the market $33, Pittsburgh or Youngstown, for large billets and slabs, and $34 for sheet bars and small billets and slabs, but as in that time there has been wide variation in the prices of most of the finished products, it is assumed that the contracts are flexible as to prices as well as duration. Wire rods are nominal at $44, base. There has not been much contracting at that price, buyers having some doubt as to its maintenance, and this feeling has increased since some makers are accepting increased specifications on first quarter contracts carrying $2 to $4 a ton less.

Rails and Track Supplies.—Leading local makers of spikes have announced that they no longer will take orders of less than a carload and at the same time have placed the carload price at $2.80, base, per 100 lb. for all sizes. This represents an advance of $2 a ton, as the ruling price has been $2.70, and restricting that price to a minimum of a carload means a stiffer advance to small-lot buyers, who have been able to buy at the mill prices. Standard-section rails and track supplies continue to move well on old orders, but not much new business is coming in. Light-section rails still are very dull.

Wire Products.—Two producers are notifying jobbers that after next Monday no business in nails will be accepted at less than $2.65, base, per keg Pittsburgh. In other words, first quarter business not specified by Saturday is to be cancelled. So far as can be observed, however, this action has not materially stimulated second quarter contracting, as jobbers generally are well stocked and are not much concerned about additional coverage in view of the fact that the movement into consumption has not been particularly brisk. Some resistance to the price also is being encountered, as jobbers who would go along with the advance find considerable competition in the resale prices; sales of retailers' carloads have been made at $2.60, base. It is said the extra of $1 a ton over Pittsburgh is not being closely adhered to in the Central West, and price irregularity is reported in the East and South. There is resistance by consumers of plain wire to $2.50, base, per 100 lb. General business is regarded as satisfactory by most producers, but price uncertainty is disturbing.

Tubular Goods.—Pipe for building and construction is moving steadily into consumption and jobbers are replacing shipments, but the market lacks activity in other classes of tubular products. The oil industry still struggles with overproduction. Some good-sized pipe line projects appear to be held up by legal or financial obstacles. Mills are interested in the suggestion of a possible stiffening of secondary market prices, since such a large percentage of the standard-weight pipe is distributed on consigned accounts and makers would benefit by higher resale prices. Evidence, however, is lacking here that the movement yet is nearing accomplishment.

Sheets.—There has been much less than the usual amount of contracting for the second quarter in the common finishes, and in view of the high engagement of mills, it is becoming apparent that what has happened in a number of other products, is happening in sheets—there is either extension of existing contracts or additions to them are being accepted. While the full quotations of 2.90c., base, on black, 3.75c., base, on galvanized and 2.10c. to 2.20c., base, on blue annealed have been paid for small pick-up tonnages for quick shipment, a good deal heavier tonnage is moving on the basis of first quarter commitments. The market is better maintained on blue annealed than on galvanized and black sheets, but the weakness in strips is not conducive to strength in blue annealed sheets 40 in. and narrower. Galvanized sheets are being sold in small lots by jobbers in some parts of the country at 3.65c., base, Pittsburgh, which, of course, makes mill sales difficult at more in those localities. Specifications have been lighter in the past week than in the week before, which suggests that consumers are fairly well stocked.

Tin Plate.—Mill operations continue to expand and the leading producer now is operating at 93 per cent of capacity, while the general average of operations is not under 90 per cent. That compares with approximately 85 per cent last week. The prospect continues bright for a large use of tin plate in packers'

Alloy Steel Bars

(F.o.b. maker's mill.)

S.A.E. Series Numbers		*Per 100 Lb.*
2000	(½% Nickel)	$2.90
2100	(1½% Nickel)	3.20
2300	(3½% Nickel)	4.15
2500	(5% Nickel)	4.90
3100	Nickel Chromium	3.20
3200	Nickel Chromium	3.65
3300	Nickel Chromium	6.45
3400	Nickel Chromium	5.85
4100	Chromium Molybdenum (0.15 to 0.25 Molybdenum)	3.15
4100	Chromium Molybdenum (0.25 to 0.40 Molybdenum)	3.35
4600	Nickel Molybdenum (0.20 to 0.30 Molybdenum, 1.25 to 1.75 Nickel)	3.70
5100	Chromium Steel (0.60 to 0.90 Chrome)	3.00
5100	Chromium Steel (0.80 to 1.10 Chrome)	3.10
5100	Chromium Spring Steel	2.85
6100	Chromium Vanadium Bars	3.85
6100	Chromium Vanadium Spring Steel	3.60
9250	Silicon Manganese Spring Steel	2.90
Chrome Nickel Vanadium		4.15
Carbon Vanadium		3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 Lb
Spikes, 9/16 in. and larger	$2.80
Spikes, ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.90
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Steel			*Iron*		
Inches	Black	Galv.	Inches	Black	Galv
⅛	45	19½	¼ to ⅜	+11	+39
¼ to ⅜	51	25½	½	22	3
½	56	42½	¾	28	11
¾	60	48½	1 to 1½	30	13
1 to 3	62	50½			

Lap Weld

2	55	43½	2	23	9

2½ to 2¾ in.	39		

Hot Rolled

2 and 2¼ in.	37	3¼ and 3½ in.	53
2½ and 2¾ in.	45	4 in.	56
3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

cans, but just now the principal demand is for general line can sizes. This demand is exceptionally good.

Cold-Finished Steel Bars and Shafting.—Specifications are lighter than they have been with most makers in this district. The fact that prices have stopped advancing encourages buyers to defer purchases against future needs.

Bars, Plates and Shapes.—Makers in this district note no marked variation in the rate of incoming tonnage releases. If there has been any definite change, it has been slightly upward because of the increase that comes in the final week of each month in preparation for the following month's requirements. The price situation is not entirely satisfactory to the mills, but at the same time steel manufacturers have retained enough of the advances made the past few months to have slightly lifted their average prices. Some consumers of hot-rolled bars appear to have accumulated fair-sized stocks, more especially those having warehousing facilities. Structural steel lettings in this area still are moderate and only the larger shops seem to have good order books.

Hot-Rolled Flats.—The effect of a good demand is tempered by irregularity in prices. While cooperage stock is holding well at 2.20c., base, the more common price on narrow material up to 3 in. wide, is 2.10c. and on 3-in. to 6-in. widths 2.10c. is somewhat exceptional, with an increasing number of sales going at 2c. On very wide strips, makers are obliged to recognize plate prices, which are not over 1.85c. base, on worth-while tonnages.

Cold-Rolled Strips.—Makers still note a good flow of specifications on old business, carrying prices $3 a ton under present regular quotations, but in going after second quarter business at the advance considerable resistance is uncovered. The large tonnage buyers have been given additional protection at the lower prices and so far as large lots go, the test of the present base of 3.15c. for lots of 1 to 3 tons is still to come.

Bolts, Nuts and Rivets.—Manufacturers who produce only rivets are quoting large sizes at $2.75, base, per 100 lb., Pittsburgh or Cleveland, and $3, base, Chicago and Birmingham, and small sizes at 70 per cent off list and report sales at these prices. These prices are not, however, the bottom of the market if sales by bolt and nut makers with rivet-making capacity are to be recognized. Few of the latter can supply the full range of sizes of rivets and some are said to be accepting rivet business at concessions in order to get bolt and nut orders at the full prices. Demand for bolts and nuts is good, but does not heavily tax productive capacity.

Coke and Coal.—There is little of interest in the coke market, which still is dull and easy under excessive supplies in relation to wants. The coal market, however, is showing a fair degree of activity. A Cleveland steel company late last week closed for 450,000 tons of coking coal, which will be shipped from the Fairmont, W. Va., district over the year beginning April 1. The Central Alloy Steel Corporation is in the market for its annual requirements of coking coal. The market still is slow on contract coal, but is developing some resistance to pressure exerted by buyers, notably on gas coal, which seems to have hit bottom at $2.15 per net ton at mines for lump grade.

Warehouse Prices, f.o.b. Pittsburgh

	Base per Lb.
Plates	3.00c.
Structural shapes	3.00c.
Soft steel bars and small shapes	2.90c.
Reinforcing steel bars	2.75c.
Cold-finished and screw stock—	
Rounds and hexagons	3.60c.
Squares and flats	4.10c.
Bands	3.60c.

Machine bolts, per 100 count	62½ per cent off list
Carriage bolts, per 100 count	62½ per cent off list
Nuts, all styles, per 100 count,	62½ per cent off list
Large rivets, base per 100 lb.	$3.50
Wire, black soft annealed, base per 100 lb.	$3.00 to 3.10
Wire, galvanized soft, base per 100 lb.	3.00 to 3.10
Common wire nails, per keg	3.00
Cement coated nails, per keg	3.05

Old Material.—A number of consumers are now demanding deliveries against orders for heavy melting steel and something of a scramble among dealers to cover their sales is responsible for a decidedly firmer market in that grade. There is a demand from dealers for tonnages for shipment to Johnstown, Monessen, Midland, and Weirton and on ordinary steel the market is not less than $15, while for No. 1 railroad or its equivalent $15.50 would be paid by several dealers and little is to be had. Compressed sheet scrap is still selling at substantially the same price as the ordinary run of heavy melting steel, additional sales being noted of the best lots at $15. The market also is stronger on cast iron borings, which have sold at $11.25 and lately no machine shop turnings have sold under $10.50. The Baltimore & Ohio March scrap list contains 14,820 gross tons. Through an error in transmission, the prices of heavy melting steel last week read $14.50 to $15 and on compressed sheets $14 to $14.25; they should have been $14.50 to $15.50, and $14.50 to $15, respectively.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
Heavy melting steel	$15.00 to $15.50
Scrap rails	14.50 to 15.00
Compressed sheet steel	14.75 to 15.00
Bundled sheets, sides and ends	13.50 to 14.00
Cast iron carwheels	14.50 to 15.00
Sheet bar crops, ordinary	15.00 to 15.50
Heavy breakable cast	13.50
No. 2 railroad wrought	15.00 to 15.50
Heavy steel axle turnings	13.00 to 13.50
Machine shop turnings	10.50
Acid Open-Hearth Furnace Grades:	
Railroad knuckles and couplers	16.50 to 17.00
Railroad coil and leaf springs	16.50 to 17.00
Rolled steel wheels	16.50 to 17.00
Low phosphorus billet and bloom ends	18.50 to 19.00
Low phosphorus, mill plate	17.50 to 18.00
Low phosphorus, light grade	16.50 to 17.00
Low phosphorus sheet bar crops	17.50 to 18.00
Heavy steel axle turnings	13.00 to 13.50
Electric Furnace Grades:	
Low phosphorus punchings	16.50 to 17.00
Heavy steel axle turnings	13.00 to 13.50
Blast Furnace Grades:	
Short shoveling steel turnings	10.50 to 11.00
Short mixed borings and turnings	10.50 to 11.00
Cast iron borings	11.00 to 11.25
No. 2 busheling	10.00 to 10.50
Rolling Mill Grades:	
Steel car axles	18.00 to 19.00
No. 1 railroad wrought	11.00 to 11.50
Sheet bar crops	17.00 to 17.50
Cupola Grades:	
No. 1 cast	14.50 to 15.00
Rails 3 ft. and under	15.00 to 15.25
Malleable Grades:	
Railroad	15.00 to 15.50
Industrial	14.50 to 15.00
Agricultural	14.00 to 14.50

Two Orders for Sandberg Rails

The Boston Elevated Railway has placed its twelfth order with the Bethlehem Steel Co. for Sandberg sorbitic steel rails—475 tons of 85-lb. ASCE section. From the Chilean State Railways has also come an order for Sandberg rails—200 tons of 100-lb. section, to be rolled and treated by the Bethlehem Steel Co.

The works of the Jones & Laughlin Steel Corporation on the north side of the Monongahela River has completed 60 days' operation without a single disabling accident to any of its employees. Approximately 1,000,000 man-hours have been worked since the last lost-time accident. These plants embrace the by-product coke plant, Eliza Furnace department, Keystone structural fabricating department and the Soho department, which is made up of an open-hearth department, spike factory, chain works and three plate mills.

Semi-Finished Steel, Raw Materials, Bolts and Rivets

Mill Prices of Semi-Finished Steel

F.o.b. Pittsburgh or Youngstown

Billets and Blooms

	Per Gross Ton
erolling, 4-in. and over	$33.00
erolling, under 4-in. to and including 1¾ in.	$33.50 to 34.00

Upset set screws	80, 10 and 10
Milled studs	70 and 5

Chicago

Steel Market Steady—Prices Less Certain Than Volume of Business

CHICAGO, March 27.—The Chicago steel market in entering the second quarter is showing a degree of steadiness that had not been expected by many in the trade. Least certain of all factors is that of price, for there are still some sellers who are not strictly adhering to 2c. on bars and narrow plates. The bulk of new sales, however, is being made at the new level. Purchases are heavier than a week ago and fresh inquiry gives promise of a high rate of forward buying. Specifications exceed shipments, making this one of the best seven-day periods since the beginning of the year. Consumers, still intent on holding stocks to a workable minimum, continue to order out steel in accordance with their production schedules. There are no indications that buyers are inclined to speculate in the heavy tonnage products.

Railroad equipment orders include 200 ore cars and 1000 automobile car bodies. Reports are persistent that the Illinois Central is preparing a car-building program, and it is probable that the Chicago & North Western will soon enter the market for about 40 suburban cars. Mild weather in the past few weeks has resulted in early demands for farm machinery that had been placed in stock for spring delivery.

Pig Iron.—Spot buying has assumed the major role in this market as second quarter contracting is practically completed. Indications are that the foundry melt is increasing and several users have already ordered second quarter purchases delivered in April and May. Prices in this market are steady at $18.50, base, though sellers will cut this figure to reach into Michigan. Competition to the south is less keen and producers are holding to natural territories as defined by freight differentials. Furnace output is steady and in smaller volume than shipments, which for March will exceed deliveries in February by at least 10 per cent. Some Southern iron on an all-rail rate is reaching into Michigan. The silvery market is quiet and prices are unchanged.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.50
N'th'n No. 1 fdy., sil. 2.25 to 2.75	19.00
Malleable, not over 2.25 sil.	18.50
High phosphorus	18.50
Lake Superior charcoal, averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	21.18
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—A small order for ferromanganese has been taken at $100, seaboard. Spiegeleisen is quiet, and buyers are making efforts to place small lots at figures below current quotations.

Prices delivered Chicago: 80 per cent ferromanganese, $107.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $38.76 to $39.76.

Bolts, Nuts and Rivets.—Forward contracting is nearly completed. New prices on stove bolts and large rivets are holding. Specifications are in good volume and producers are engaged close to 70 per cent of capacity.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Plates.—Interest in the railroad equipment market centers around orders for 200 ore cars by the Chicago, Milwaukee, St. Paul & Pacific and 1000 automobile car bodies by the Chicago & North Western. Steel mills will be called on for close to 15,000 tons of materials for these orders. Fresh inquiries for passenger car equipment bulk large, the New York Central alone having asked for prices on 119 cars. Car shops in the Chicago district are moderately busy, and specifications issued by them from week to week are steady and of decided advantage to mills in arranging rolling schedules. An oil producer in the Southwest is asking for 5000 tons of plates. This inquiry, added to the 5000 tons that came before the trade a week ago, brings total outstanding inquiry for oil storage tanks to not less than 10,000 tons. Car shops, fabricators, tank shops and the general manufacturing trade are all contributing a steady flow of business to local mills. Specifications for plates are about equal to shipments, and new buying is close to the current rate of output.

Mill prices on plates per lb.: 2.00c., base Chicago.

Structural Material.—It is expected that the formal contract for the Palmolive-Peet Building, Chicago, requiring close to 5000 tons of structural steel, will be signed this week. Fresh inquiry of note includes 1800 tons for a building for the Chicago Motor Club. The Rochester Bridge Co. has taken 400 tons for a warehouse for the International Harvester Co., Fort Wayne, Ind. The Buick Division of the General Motors Corporation is planning the erection of a large distributing plant at Clearing, Ill. Fabricating shops in the Chicago district are well engaged, especially since several of the large contracts recently placed are being farmed out to competitive shops by the successful bidders. The general contractor on the approach to the La Salle Street bridge, which will take 900 tons of steel, will fabricate part of the work in his shop and will distribute the remainder of the tonnage to various fabricators. In spite of higher prices for plates, shapes and bars, fabricators have not succeeded in raising the general level of quotations on their work. While several weeks ago some steps along this line were taken, it is evident that not much progress was made, because current quotations are on a level that is not above that which prevailed when shops were eagerly seeking work in order to hold together the skeletons of their organizations. Mill deliveries on shapes range from four to six weeks.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Bars.—Mild steel bars are the first of the heavy tonnage steel mill products to gain prominence from the viewpoint of an active interest in second quarter contracting. Sales, counting both current business and forward buying, are well ahead of shipments. The motor car industry and accessory manufacturers are largely responsible for this situation. A motor car builder with several plants in Indiana will have produced 27,000 cars at the close of March, an increase of 8000 units over February, and the schedule for April is materially heavier than for this month. Reports from various tractor plants throughout the Central West show that capacity output will not supply the demand, and several manufacturers are talking of expanding plant facilities. Current orders for iron bars are small in total volume. Prices of alloy bars are steady at 2.65c., base, f.o.b. maker's mill. Chicago district mills making alloy bars are engaged at close to capacity. The flow of orders for hard steel bars is steady. New buying and specifications against old orders are well balanced with production. Both Chicago Heights mills continue to operate double turn. Producers are holding to 1.85c., Chicago Heights, for new purchases that are to be delivered in the second quarter. Old contracts at 1.80c. that have not been fully specified will not be cancelled April 1. Deliveries of this commodity range from 10 days to two weeks.

Mill prices per lb.: Soft steel bars, 2.00c. base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.80c. to 1.85c., base, Chicago Heights mill.

Cast Iron Pipe.—Evansville, Ind., will open bids March 29 on 5000 tons of cast iron pipe in sizes ranging from 8 to 24 in., all class B. R. D. Wood & Co. and the American Cast Iron Pipe Co. are low bidders on various classes of centrifugal pipe for Akron, Ohio. James B. Clow & Sons have taken 1000 tons of 4 to 12-in. class B pipe for Barberton, Ohio, and 115 tons of 4 and 6-in. class C pipe for Alliance, Ohio. The National Cast Iron Pipe Co. has been awarded 380 tons of 24-in. class B pipe by Springfield, Ill., and 600 tons of 10-in. pipe at Painesville, Ohio, has been taken by a local contractor. The National company is low bidder on 200 tons of fittings for Chicago. Several large contractors' jobs are open for bids in nearby Chicago territory. Prices for 6-in. and larger diameters are steady at $29 to $31, Birmingham.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $36.20 to $39.20; 4-in., $40.20 to $43.20; Class A and gas pipe, $4 extra.

Hot-Rolled Strip.—Specifications for this commodity are heavy and local mills are fully engaged. New sales lack only a narrow margin of being equal to shipments.

Sheets.—Prices in the immediate Chicago territory are holding, but to the south and in the Southwest competition remains keen and quotations are below the levels of the local market. Hot mills are engaged at 80 per cent of capacity and schedules range from 10 days to two weeks. Current buying is of fair proportions, but forward contracting is dull, with the result that the sum of all sales fall short of shipments.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 3.05c.; No. 24 galvanized, 3.90c.; No. 10 blue annealed, 2.25c. to 2.35c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Rails and Track Supplies.—A Western railroad has ordered 4000 tons of standard-section rails. This tonnage is in addition to the contract placed last winter by that railroad. The inquiry for 4000 tons of rails noted last week is still pending. New business in track fastenings totals 5000 tons, while fresh inquiry is for not less than 16,000 tons. Several carloads of light rails have been ordered. Angle bars are quoted at $2.75 per 100 lb., base, local mills, and tie plates are priced at $2.15 per 100 lb., f.o.b. Chicago.

Reinforcing Bars.—Outstanding among reinforcing bar awards this week is 1000 tons of rail and billet steel bars for a printing plant in Chicago. Fresh inquiry is dull, but old projects are numerous and the trade believes that the bulk of them are active. In the meantime, shop backlogs continue to dwindle more rapidly now than earlier in the month for the reason that open weather is urging contractors to speed work and clear the way for new contracts. This move has resulted in a higher rate of shop activity. Small orders, up to 25 tons, are numerous, and it is on work of this kind that prices are stable. The practice of shading continues on large tonnage quotations. New business and fresh inquiries appear on page 917.

Wire Products.—Shipments of wire products this month are heavier than in any like period in the last four years. As March comes to a close order books are well filled and forward contracting is expanding. Producers, having cut stocks lower than in the midwinter months, are not allowing them to accumulate now because of a slackening in shipments which usually comes in May. Shipments of woven wire fencing are smaller as farmers busy themselves in the fields. The nail market is dull and irregular. Jobbers, having stocks that are out of balance with demand, are showing some anxiety over the situation and resale lots are being offered. To make matters worse, the bulk of these nails were ordered at prices that were below present quotations, and in some instances even at preferential prices. Mills are stubbornly resisting changes in prices, although the matter is somewhat out of their hands at this time.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.25c. to 2.75c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.

Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb.	$3.20
Common wire nails, base per keg	3.00
Cement coated nails, base per keg	2.90

Coke.—By-product foundry coke is steady at $9, local ovens, and $9.50, delivered in the Chicago switching district. Shipments are moving forward rapidly.

Old Material.—Prices of a number of grades have followed the downward lead taken by heavy melting steel a week ago. Close to 1000 tons of rerolling rails have been purchased by a user at $14.25 a gross ton, delivered, this being a drop of 75c. from the last reported sale. Further weakness is noted in heavy melting steel. A few weeks ago mills became anxious concerning the size of stocks on hand. Purchases were made rather freely and shipments moved forward rapidly in a market that was well supplied with this grade. Since that time stocks in the hands of consumers have grown and buyers, feeling that the emergency is past, are tightening up on inspections and are turning deaf ears to sellers. Melters have refused offers at $13, while on the other hand the close inspection by mills is forcing dealers to pay top prices for a large part of current shipments against old orders. Brokers' trading prices for heavy melting steel range from $12.50 to $13 a gross ton. At Gary shipments are being held back. Strength that had been expected by some in the market for borings has not developed beyond a spurt a week ago. This market is weakened by shipments from producing centers to the east of Chicago. Taken as a whole, this market lacks stability and it is openly declared by some that even lower prices may be expected. Railroad shipments are moving more freely with the present open weather. Yard dealers are not inclined to speculate and in most instances are shipping scrap as fast as it is prepared. Brokers appear to be anxious to speed coverage on old contracts. A producer is offering 1000 tons of borings, and the St. Paul Railroad will sell 6000 tons.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$12.50 to $13.00
Shoveling steel	12.50 to 13.00
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to 14.00
Hydraulic compressed sheets	11.00 to 11.50
Drop forge flashings	9.75 to 10.25
Forged, cast and rolled steel carwheels	15.00 to 15.50
Railroad tires, charging box size	16.00 to 16.50
Railroad leaf springs, cut apart	16.00 to 16.50
Acid Open-Hearth Grades:	
Steel couplers and knuckles	13.75 to 14.25
Coil springs	16.25 to 16.75
Electric Furnace Grades:	
Axle turnings	13.00 to 13.50
Low phosphorus punchings	14.25 to 14.75
Low phosphorus plate, 12 in. and under	13.75 to 14.25
Blast Furnace Grades:	
Axle turnings	10.00 to 10.50
Cast iron borings	9.50 to 10.00
Short shoveling turnings	9.50 to 10.00
Machine shop turnings	7.00 to 7.50
Rolling Mill Grades:	
Iron rails	13.50 to 14.00
Rerolling rails	13.75 to 14.25
Cupola Grades:	
Steel rails less than 3 ft.	15.00 to 15.50
Angle bars, steel	14.00 to 14.50
Cast iron carwheels	13.50 to 14.00
Malleable Grades:	
Railroad	12.50 to 13.00
Agricultural	12.00 to 12.50
Miscellaneous:	
*Relaying rails, 56 to 60 lb.	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angle and splice bars	14.00 to 14.50
Iron arch bars and transoms	18.50 to 19.00
Iron car axles	21.50 to 22.00
Steel car axles	15.50 to 16.00
No. 1 railroad wrought	11.00 to 11.50
No. 2 railroad wrought	11.00 to 11.50
No. 1 busheling	9.25 to 9.75
No. 2 busheling	5.25 to 5.75
Locomotive tires, smooth	12.50 to 13.00
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.50 to 15.00
No. 1 railroad cast	12.50 to 13.00
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.25 to 11.75
Grate bars	11.25 to 11.75
Brake shoes	11.00 to 11.50

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Philadelphia

Steel Market Inactive but Prices Are Firm—Pig Iron Dull

PHILADELPHIA, March 26.—Transactions in plates, shapes and bars are almost completely confined to shipments against current contracts. Specifications for plates are reported to be coming out quite freely, but there is a lag in bars and shapes, consumers evidently having sufficient tonnage on hand for nearby requirements. Mills are maintaining 1.90c., Pittsburgh, on bars, 2.05c., Coatesville, on plates and 2.05c., Bethlehem, on shapes when quoting on new business, but these prices have been subjected to very little test as most consumers are receiving shipments on first quarter contracts at $2 a ton less and have made second quarter purchases at $1 a ton less.

Contracts for bridge construction continue to feature the structural steel market. One fabricator estimates that about 75 per cent of the business on his books is for small and medium-size bridges. Railroads are prominent in this field, but there is also some public work. Bids will be opened April 2 on the Tacony-Palmyra bridge, which will require 8000 tons of structural steel. Some plate business is in prospect from the recent award by the Reading Railroad of six car floats to Delaware River shipyards and the inquiry of the Pennsylvania Railroad for 10 hulls.

Pig Iron.—There is less activity in foundry pig iron than for some time, but the foundry grade is firm at $20, base furnace. Not only are consumers inclined to await price developments, but the smaller foundries are reported to be melting less iron than earlier in the quarter and at the present rate of consumption have sufficient iron due on their present contracts to carry them well into the next quarter. The larger foundry consumers, however, are taking full deliveries on contracts and are operating at a good rate. Low phosphorus is quiet, but prices are firm.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.		$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.		21.26
East. Pa. No. 1X		21.76
Basic (delivered eastern Pa.)	$19.50 to	20.00
Gray forge	19.75 to	20.25
Malleable	21.00 to	21.50
Standard low phos. (f.o.b. New York State furnace)	23.00 to	24.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to	24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to	25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to	25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Billets.—Quotations are unchanged at $33 per ton, Pittsburgh, for rerolling billets and $38, Pittsburgh, for forging quality. Current business is confined to small lots for early delivery.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, $\frac{3}{16}$-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.50c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.60c.
Steel bands, No. 12 gage to $\frac{3}{16}$-in., inclusive	3.35c.
Spring steel	5.00c.
Black sheets (No. 24)	4.25c.
Galvanized sheets (No. 24)	5.10c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
$\frac{3}{16}$-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

Bars.—Specifications are coming in rather slowly, but prices are being maintained firmly at 1.85c., Pittsburgh, for second quarter contracts and 1.90c., Pittsburgh, for current delivery. Some desirable tonnages of reinforcing bars are included in pending projects, such as the Allentown, Pa., bridge with 1000 tons, Alden Park Manor apartments, Philadelphia, 800 tons, and marine barracks at Quantico, Va., 600 tons.

Shapes.—Little new business is being booked, but there are some substantial bridge projects in prospect, including the Tacony-Palmyra bridge, requiring 8000 tons of structural steel, and a projected bridge for the Pennsylvania Railroad over the Schuylkill River. Specifications on contracts are coming in slowly and at a rate that in some cases does not require completion of present commitments by the end of the month. Contracts for the coming quarter are at 2c., Bethlehem, or 2.13c., delivered Philadelphia, and the current price on new business is 2.18c., Philadelphia. One eastern Pennsylvania mill continues to meet the contract price on current orders.

Plates.—Consumers are fairly well covered for the next quarter at 2c., Coatesville, or 2.10c., delivered Philadelphia, and on new business at 2.05c., Coatesville, or 2.15c., Philadelphia, is quoted. Specifications are coming out freely from most consumers. Some plate tonnage is in prospect from the award by the Reading Railroad of four car floats to the Sun Shipbuilding & Drydock Co., Chester, and two to the American Brown Boveri Electric Corporation, Camden, N. J. The Pennsylvania Railroad has revived an inquiry for 10 hulls, including car floats, barges and a tug boat hull.

Sheets.—Demand is moderate. There has been some contracting for small second quarter tonnages. Blue annealed sheets are quoted at 2.10c., Pittsburgh, black at 2.90c., Pittsburgh, and galvanized at 3.75c., Pittsburgh. Concessions are rare.

Warehouse Business.—Purchasing from stock is not as large as usual at this season, but prices are being maintained with only occasional reports of concessions, and quantity differentials are adhered to firmly.

Imports.—In the week ended March 24, pig iron receipts at this port totaled 3103 gross tons, of which 303 tons was Dutch and 2800 tons British iron. A total of 4000 tons of chrome ore arrived from Portuguese Africa. Steel imports consisted of 30 tons of bands, 22 tons of steel bars and 180 tons of structural shapes from France, 56 tons of shapes from Belgium and 54 tons of shapes from Germany.

Old Material.—Prices are substantially unchanged. A sizable tonnage of heavy breakable cast has been purchased by an eastern Pennsylvania mill at $16 per ton, delivered. Consumers at Harrisburg, Conshohocken, Pa., and Claymont, Del., are reported to have temporarily held up deliveries of steel on their contracts.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to	$14.00
Scrap T rails	13.00 to	13.50
No. 2 heavy melting steel	11.00 to	11.50
No. 1 railroad wrought	14.50 to	15.00
Bundled sheets (for steel works)	10.50 to	11.00
Machine shop turnings (for steel works)	10.50 to	11.00
Heavy axle turnings (or equivalent)	12.00 to	12.50
Cast borings (for steel works and rolling mill)		11.00
Heavy breakable cast (for steel works)	15.50 to	16.00
Railroad grate bars	12.00 to	12.50
Stove plate (for steel works)	12.00 to	12.50
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to	18.00
Couplers and knuckles	16.00 to	16.50
Rolled steel wheels	15.50 to	16.00
No. 1 blast furnace scrap	10.50 to	11.00
Machine shop turnings (for rolling mill)		11.00
Wrought iron and soft steel pipes and tubes (new specifications)		12.50
Shafting	17.50 to	18.00
Steel axles	19.00 to	20.00
No. 1 forge fire	11.00 to	11.50
Steel rails for rolling	15.00 to	15.50
Cast iron carwheels	15.50 to	16.00
No. 1 cast	16.00 to	16.50
Cast borings (for chemical plant)	14.50 to	15.00

Cleveland

March Steel Business About Equals February's—Weakness in Sheets

CLEVELAND, March 27.—The volume of business in steel bars, plates and structural material fell off somewhat the past week, the market not bearing out expectations that there would be a rush of specifications against 1.80c. contracts expiring March 31. However, March business will about equal that of February. Mills generally have advised their trade that unspecified tonnage will be cancelled. Some buyers are taking out all steel covered by their contracts and others whose plants are not very busy will allow cancellations. Much of the steel shipped during the first half of April will be against the old 1.80c. contracts. On steel bars, plates and structural shapes the price range remains at 1.85c. to 1.90c., Pittsburgh, the lower price being for contracts or fair-sized lots, as most buyers are now under contract at the lower price. New demand is confined largely to small lots that are bringing 1.90c. Local mills quote the same prices f.o.b. Cleveland. To meet the Cleveland competition, an Ohio mill is quoting forging steel bars at 1.90c., base, mill, equivalent to 1.80c., Pittsburgh, for Cleveland delivery. The demand for steel from the automotive industry continues heavy, but motor car builders as a rule are ordering only far enough ahead to assure a steady flow of material from the mills as needed. This business is keeping the mills well filled and recent operations are being maintained. The automotive industry evidently will keep up its present production through April and good operations are predicted at least through May. While metalworking plants in some lines outside of the automotive industry are somewhat busier than recently, others show little if any improvement. Inquiry in the building field is slow.

Pig Iron.—The market was not as active the past week as in preceding weeks, sales by Cleveland interests having declined to 16,000 tons. Some of the business came from foundries that had previously covered for only part of their second quarter requirements. Inquiry is not very plentiful, although one Lake furnace has inquiries for several lots aggregating 8000 tons. While a few third quarter inquiries have come out, producers so far have refused to quote for that delivery. First quarter business with some foundries has been considerably below expectations and, as a result, several of the furnaces will carry considerable first quarter iron over to the second quarter. Several of the automobile foundries have issued April specifications and will take as much iron during the next month as in March. Central Western foundries in the radiator, stove and heater fields are reported to be operating at about normal capacity. Agricultural implement foundries are operating better than recently. Business with many of the jobbing foundries is still slack. There is little interest in the price situation, as producers are not attempting to get higher prices and on the other hand are not showing a disposition to shade ruling quotations. Cleveland furnaces are adhering to $17, furnace, for foundry and malleable iron except on business for shipment to highly competitive points, for which they are going to $16.75. One Lake furnace interest is on a $17.50 minimum basis. In Michigan the market is firm at $18.50.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fdy., sil. 1.75 to 2.25	22.00
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic, Valley furnace	17.00
Standard low phos., Valley furnace	$26.50 to 27.00

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.60c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb	$2.90
No. 9 galvanized wire, per 100 lb	3.35
Common wire nails, base per keg	2.90

*Net base, including boxing and cutting to length.

Coke.—A $1 a ton price reduction on egg coke for domestic use to $6, ovens, has been made in the Detroit territory. Ohio producers are still adhering to $4.50, which is meeting with resistance from dealers who want a lower summer price. Foundry coke sales are limited to small lots with prices unchanged. Ohio byproduct foundry coke is quoted at $8, Painesville, or $9.01, delivered Cleveland, for April shipment.

Iron Ore.—Producers have not yet submitted quotations on the inquiry of the Ford Motor Co., which may establish the market for the season. Consumers seem to be in no hurry to have prices named. The volume of open market buying, which has become greatly reduced the past few years because of long-term contracts, is expected to be about the same this year as during 1927. There is a disposition among vessel men to delay the starting of boats until May 1, even should navigation open sooner, in order that they be assured of better operations later in the season. However, if consumers are in need of ore they will be able to secure April shipments, provided ice conditions permit the operation of boats.

Bolts, Nuts and Rivets.—Specifications for bolts and nuts are fair and March business will show a gain over February. Many buyers are placing second quarter contracts. Rivet makers report that they are not meeting much resistance to the $3 a ton price advance for the second quarter and have closed considerable business at the new price of $2.90 per 100 lb., Cleveland and Pittsburgh, large rivets. However, specifications against present $2.75 contracts are only moderate.

Sheets.—Weakness in black sheets reported a week ago became more pronounced the past week. Some of the producers have abandoned, at least temporarily, a Pittsburgh base and quotations of 2.85c. to 2.90c., Valley mill, have become rather common and prices as low as 2.70c., mill, are reported. Galvanized sheets also show further weakness, being quoted at 3.65c. and lower at Ohio mill. Some of the mills have agreed to accept specifications on old low-priced contracts up to April 1, and this is evidently one reason for the weakness, another being the need by some of the mills for tonnage. Although occasional concessions to 4c. are reported on auto body sheets, these generally are holding firm and considerable business is coming from the Michigan territory at the regular 4.15c. price. Blue annealed sheets are firm. Demand is slow outside of the automotive industry, and few buyers are placing second quarter contracts.

Wire Products.—Weakness has appeared on wire nails in some sections, where a price of $2.55 per 100 lb. keg, Ironton, is reported. Jobbers who have large low-priced stocks have also been a disturbing factor. However, mills appear to be holding to the regular price in this territory. The demand is not active.

Strip Steel.—Strip steel mills are accepting specifications against old low-priced contracts for hot-rolled strip up to April 1 and these are coming out in good volume. While some second quarter contracts have been placed at present prices, these prices have not yet been tested by large-lot buyers. A 3c. base price, or a $3 a ton reduction, has appeared on cold-rolled strip, but leading producers appear to be holding to the regular price. However, there has not been much test of the market, as most orders are against old contracts.

Semi-Finished Steel.—A local producer has taken additional reservations for sheet bars, billets and slabs for the second quarter without naming prices. Some wire rod contracts have been placed at the regular $44 Cleveland price.

Alloy Steel.—Some second quarter contracts have been placed at the new prices. Mills generally are asking a quantity differential of $2 a ton or 2.75c., base, for less than car lots and up to 2.85c., base, for very small lots.

Reinforcing Bars.—The only large award is for 1000 tons for store buildings in Cleveland. New inquiry is confined to small lots. Rail steel bars are commonly quoted at 1.75c., mill.

Warehouse Business.—Jobbers are getting a good volume of orders, but they are for small lots. The total volume of business shows a slight gain. Regular prices are well maintained.

Old Material.—A Cleveland mill purchased a small tonnage of scrap during the week, paying $14 for No. 1 heavy melting steel and $11.25 for short shoveling turnings. No new demand is coming from other northern Ohio or Valley district mills. Shipments are still closely restricted, although one Cleveland mill is taking scrap somewhat more freely than recently. While the market has a weak tone, quotations are unchanged. Dealers are able to buy car lots for quick movement at slightly below quoted prices. Several automobile makers in the Michigan territory have issued their scrap lists for April. These include: Buick, 4000 tons; Chevrolet, 25,000 tons; Cadillac, 400 tons. The Muncie Products Co. is offering 500 tons.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$13.75 to $14.00
No. 2 heavy melting steel	13.25 to 13.50
Compressed sheet steel	12.75 to 13.00
Light bundled sheet stampings	11.50 to 11.75
Drop forge flashings	12.50 to 13.00
Machine shop turnings	9.00 to 9.25
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	13.50 to 14.00
No. 1 busheling	11.00 to 11.25
Pipes and flues	9.00 to 9.50
Steel axle turnings	12.50 to 13.00
Acid Open-Hearth Grades	
Low phosphorus forging crops	16.50 to 17.00
Low phosphorus, billet, bloom and slab crops	17.00 to 17.50
Low phosphorus sheet bar crops	16.50 to 17.00
Low phosphorus plate scrap	16.00 to 16.50
Blast Furnace Grades	
Cast iron borings	10.00 to 10.25
Mixed borings and short turnings	10.00 to 10.25
No. 2 busheling	10.00 to 10.25
Cupola Grades	
No. 1 cast	16.50 to 17.00
Railroad grate bars	11.00 to 12.00
Stove plate	12.00 to 12.50
Rails under 3 ft.	18.00 to 18.50
Miscellaneous	
Railroad malleable	15.00 to 15.50
Rails for rolling	16.25 to 16.50

New York

Keener Competition in Pig Iron—March Steel Tonnage High

NEW YORK, March 27.—The volume of pig iron sales is holding up rather well, but increasingly keen competition among furnaces is having an adverse effect on prices. Unusually favorable barge rates from Buffalo have resulted in lower delivered prices on foundry iron at many points in this territory, but even for all-rail shipment base prices at Buffalo are somewhat weaker, ranging from $16 to $16.50. Furnaces east of Buffalo are meeting this competition in some instances, but eastern Pennsylvania furnaces, which are still quoting $20, base, are taking little business in this district. No longer expecting advances in prices, melters have resumed a policy of short-term buying and are showing little interest in requirements beyond second quarter. Purchases for the past week, which were to a large extent for nearby shipment, covered a total of 9000 tons, a gain of 2000 tons over the previous week. The Foran Foundry & Mfg. Co., Flemington, N. J., has closed for 500 tons of No. 2 plain and 400 tons of No. 2X for second quarter and is understood to have obtained a lower delivered price than was quoted by eastern Pennsylvania furnaces. The General Electric Co. has bought 500 tons for its Erie, Pa., plant, but still has 2000 tons to buy for various other foundries. The Singer Mfg. Co., Elizabeth, N. J., is inquiring for a substantial tonnage for Elizabeth and for its Canadian plant. The Abendroth & Root Mfg. Co., Newburgh, N. Y., is also in the market for a tonnage for second quarter delivery. In general, melt is holding its own and in some directions is expanding.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Finished Steel.—A few makers of cold-rolled strip steel have formally announced a reduction of $3 a ton for second quarter, going back to the prices at which most of the first quarter contracts were made, namely 3c., Pittsburgh or Cleveland, for lots of 1 to 3 tons and 2.75c. for lots of more than 3 tons. Some second quarter contracts have been made at 2.90c. for lots of more

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.34c.
Soft steel bars and small shapes	3.24c.

---

*No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

than 3 tons. On other products prices are fairly steady, although the market on galvanized sheets in New York is somewhat upset by sales from jobbers' stocks at 3.65c., Pittsburgh, when mills are trying to obtain 3.75c. on second quarter contracts. Contracting for sheets for second quarter has not been large, but mills are adhering quite firmly to published quotations. In plates, shapes and bars the bulk of second quarter contracting has been done at 1.85c., Pittsburgh, for bars, 2c., Coatesville, for plates and 2c., Bethlehem, for shapes, but quotations $1 higher are applying on small-lot orders. Some weakness has developed in hot-rolled strip, but mainly in the wide sizes that meet plate mill competition. Concessions of $1 a ton have been granted in such instances. Demand for steel products, represented chiefly by specifications against contracts, has held at a high rate during March, and the total scheduled for shipment by sales offices is running larger than in the same number of days in February. Merchant pipe is moving more freely out of jobbers' stocks and this is reflected in a slightly better operating rate at the mills. A heavy volume of specifications for plates, shapes, bars, sheets and strip steel is expected this week, some mills insisting on complete first quarter specifications by March 31, with unspecified portions to be cancelled. These specifications will provide many consumers with enough steel for April, and as a result second quarter prices will not take real effect for some little time. Considerable building work is in prospect in New York, but meanwhile competition among fabricators is so keen that prices of fabricated material do not increase. The largest structural steel inquiry is for 8000 tons for unit No. 9 in the Tudor City development, New York.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.17½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Warehouse Business.—There is a fair volume of purchasing and prices are quite firm, except for occasional shading on structural material when competition from foreign steel is encountered. Sheet prices are fairly firm at 4c. to 4.20c. per lb., base, for black and 4.70c. to 4.95c. per lb. for galvanized. Mill prices on zinc sheets have been reduced 1c. per lb. to 8.50c. per lb., base, but no corresponding reduction has been made as yet by jobbers.

Cast Iron Pipe.—Private purchases of bell and spigot pipe are principally of small tonnages, but the number of such purchases is increasing. Prices show greater firmness and, although delivered prices of Northern makers are still slightly under the delivered quotations of Birmingham foundries, the tendency evidently is upward. There are some small tonnages in the market for export, but the foreign purchasers are slow to close.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.25 to $38.25; 4-in. and 5-in., $42.25 to $43.25; 3-in., $52.25 to $53.25; Class A and gas pipe, $4 to $5 extra.

Reinforcing Bars.—A highway bridge across the Raritan River at New Brunswick, N. J., on which bids will be opened April 9, will require 1700 tons of bars. No other new projects of large size have been reported in the last week, but some distributers report an increase in the number of small jobs for which bars will soon be bought. The mill price ranges from 1.95c. to 2c., Pittsburgh, with the majority of business being placed at the latter figure. Distributers are quoting 2.20c., Youngstown warehouse, or 2.57½c. on cars at New York, and out of New York warehouse the general quotations are 2.80c. for lots of 5 tons or more, 2.95c. for lots of 2 to 5 tons and 3.24c. for less than 2 tons, all delivered at job.

Coke.—The market continues quiet and prices are unchanged. Standard furnace is quoted at $2.75 to $3 per ton, Connellsville. Delivered prices in this district of special brands of beehive foundry coke are: To northern New Jersey, Jersey City and Newark, $8.71 to $8.81 per net ton; to New York and Brooklyn, $9.59 to $9.69 per net ton. By-product coke is quoted at $9 to $9.40 per ton, Newark or Jersey City, and $10.06 to $10.29 per ton, New York or Brooklyn.

Old Material.—Prices still show a slight downward tendency on some grades, with the market quiet. No. 1 heavy melting steel is being shipped to consumers at Coatesville and Bethlehem, Pa., and yard grade to Pottsville and Phoenixville, Pa. Users at Claymont, Del., and Conshohocken, Pa., have temporarily suspended shipments on their contracts and a Harrisburg consumer of steel is taking only a few carloads. Brokers are offering $15.50 per ton, delivered Coatesville, for heavy breakable cast.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to $10.85
Heavy melting steel (yard)	7.00 to 7.25
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	8.50 to 9.00
Locomotive grate bars	8.75 to 9.00
Machine shop turnings	6.75 to 7.50
Short shoveling turnings	7.00 to 7.50
Cast borings (blast furnace or steel works)	6.75 to 7.50
Mixed borings and turnings	7.00 to 7.50
Steel car axles	15.50 to 16.00
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.25
Forge fire	6.75 to 7.00
No. 1 railroad wrought	10.00 to 10.50
No. 1 yard wrought, long	8.50 to 9.00
Rails for rolling	10.50 to 11.00
Cast iron carwheels	10.75 to 11.25
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00
Cast borings (chemical)	11.00 to 11.50

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.75 to $14.25
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.75 to 12.25
No. 2 cast (radiators, cast boilers, etc.)	11.25 to 11.75

RAILROAD EQUIPMENT

Atlantic Coast Line has made inquiry for 200 70-ton phosphate cars.

Manganiferous Iron Co., Ironton, Minn., has purchased four 20-cu. yd. air dump cars from Koppel Industrial Car & Equipment Co.

Cudahy Packing Co. will buy 100 steel underframes for refrigerator cars.

Pacific Fruit Express contemplates purchasing 400 to 800 steel underframes for refrigerator cars.

Chicago & North Western has ordered 500 automobile car bodies from Standard Steel Car Co. and 500 from General American Car Co.

Southern Pacific has made inquiry for 10 air-dump cars.

Chicago, South Shore & South Bend is inquiring for 10 interurban coaches.

St. Louis-San Francisco has ordered five gas-electric rail motor mail and baggage cars.

Amtorg Trading Corporation, 165 Broadway, New York, is inquiring for 15 20-ton flat cars.

Pere Marquette will make inquiry for 20 steel air-dump cars of 30 cu. yd. capacity.

Chicago, Aurora & Elgin will buy 10 interurban coaches.

New York Central has issued inquiry for 119 passenger train cars for service on its various lines as follows: 19 passenger coaches, 10 motor car bodies, three passenger and baggage and two baggage and mail coaches, 30 baggage cars, 19 horse cars, 30 milk cars and six dining cars.

Chicago, Milwaukee, St. Paul & Pacific has ordered 200 ore cars from Pressed Steel Car Co. This railroad will also buy 10 baggage cars.

February Production of Malleable Castings Best in 10 Months

WASHINGTON, March 24.—Production of malleable castings in February totaled 59,045 tons against 54,818 tons in January, shipments were 53,407 tons and 47,691 tons respectively, and orders booked, 55,452 tons and 53,153 tons respectively, according to reports received by the Department of Commerce from 133 identical plants, five of which, with an aggregate monthly capacity of 4700 tons, were idle in February. The percentage of operation in February was 63.8, against 59.6 in January.

Compared with a year ago, production showed a gain of 3 per cent in February, but shipments fell off 2 per cent and orders booked dropped 4½ per cent. Production last month was the best for any month since last April. There has been a steady gain since a low point of 40,845 tons was reached in November.

Canada

General Business Trend Is Upward—Weakness in Pig Iron at Montreal

TORONTO, ONT., March 27.—The general trend of business in the iron and steel industry of Canada shows more evidence of strength than it has for several years past. Steel mills, foundries, railroad equipment builders, automobile plants, agricultural implement makers, radiator manufacturers and various other units of the metal working field all report some improvement. Steel mills are behind in filling orders, with the result that plants are running from 18 to 24 hr. a day.

The Canadian National Railways placed orders during the week for rolling stock equipment to the value of $3,250,000. The orders were distributed among the National Steel Car Corporation, the Canadian Car & Foundry Co., Ltd., and the Eastern Car Co.

Included in the work to be undertaken this year by the Canadian Pacific Railway on its Eastern lines will be the replacement of five large steel bridges on the Oshawa subdivision east of Toronto, with heavier spans so that the largest engines may be operated between Montreal and Toronto. The new Canadian Pacific Railway rail allotments for 1928 includes 150 miles of 100 lb. rails, of which 68 miles will be laid on the Nipigon subdivision in continuation of a plan to equip the main line from Toronto to Fort William with heavier steel, and 50 miles will be laid between Toronto and London, Ont.

Pig Iron.—Improvement in business continues. Sales on spot account are steadily increasing both in number and tonnage, and indications are that second quarter business will show improvement of from 10 to 15 per cent over that of the first quarter. Advance contract placing has been active during the past couple of weeks. Competition from United States sources of supply is causing increasing concern to Canadian producers. In the Niagara Peninsula, Buffalo interests have gained a rather strong footing in addition to the big business they have developed in this country from the agricultural implement industry. Blast furnace representatives in the Montreal market also have strong competition with which to contend, especially from the Port Henry, N. Y., producer. This competition has had a tendency to shut out foundry iron from Hamilton and Sault Ste. Marie, Ont., which iron quoted at the Toronto base with freight added brings it much higher than the prices quoted by American rivals. Sydney, N. S., is the most likely Canadian source of supply for the Montreal market, but prevailing Canadian prices are also against Sydney furnaces. Strong competition at Montreal has been reflected in a softening of prices, and it is understood that sales have been made at approximately $1 per ton below former quotations. Production of coke pig iron in Canada at 64,691 gross tons in February showed little change from the 65,006 tons in January, but was 28 per cent above the 50,695 tons produced in February last year.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.60
No. 2 foundry, sil. 1.75 to 2.25	23.60
Malleable	23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	$24.50 to $25.00
No. 2 foundry, sil. 1.75 to 2.25	24.50 to 25.00
Malleable	24.50 to 25.00
Basic	24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Old Material.—Sales for the week again showed improvement over those of former weeks this year and inquiries indicate that the stronger demand may continue for some time. In addition to the improvement in spot demand, advance buying has become more general, with a number of consumers placing forward delivery contracts. Some big contracts have been placed for second quarter delivery, and others are pending. Taken as a whole, the Canadian scrap market has been slowly but steadily making progress since the first of the year, and despite the fact that prices remain unchanged they are stronger than formerly and much of the shading has disappeared.

Dealers' buying prices:

	Toronto	Montreal
Per Gross Ton		
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00
No. 1 wrought	9.00	11.00
Machine shop turnings	7.00	6.00
Boiler plate	7.00	7.00
Heavy axle turnings	7.50	7.50
Cast borings	7.50	6.00
Steel turnings	7.00	6.50
Wrought pipe	5.00	6.00
Steel axles	14.00	19.00
Axles, wrought iron	16.00	21.00
No. 1 machinery cast	....	16.00
Stove plate	....	12.00

No. 1 machinery cast	15.00	....
Stove plate	9.00	....
Standard carwheels	13.00	....
Malleable scrap	13.00	....

St. Louis

Steel Operations at a High Rate—Spurt in Pig Iron Buying

ST. LOUIS, March 27.—Pig iron sales took a spurt during the last week. The St. Louis Gas & Coke Corporation sold 9000 tons of all grades, including 5000 tons of basic to an East Side melter; 2500 tons of malleable to a nearby melter for second quarter shipment and the remainder in foundry grades in lots from a carload up to 300 tons. A leading Southern maker sold 500 tons in lots of about 100 tons. The principal inquiry is for 1000 tons of Northern iron for an Evansville, Ind., melter, and a consumer of Southern iron wants 400 tons. Prices are unchanged, and business is being taken for second quarter on the basis prevailing now.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25 f.o.b. Granite City, Ill.	$19.50 to $20.00
Northern No. 2 fdy., delivered St. Louis	20.66
Southern No. 2 fdy., delivered	20.42
Northern malleable, delivered	20.66
Northern basic, delivered	20.66

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Finished Iron and Steel.—The Granite City Steel Co. reports that it has sufficient business booked to operate its plate mill at capacity for several weeks, that its tin plate department promises to run full for some time, that blue annealed sheet demand is high for this time of year and its jobbing mill is operating full time, and that its open-hearth department is operating at about 90 per cent. Black sheets are in good demand, but orders for galvanized sheets are showing some falling off. Warehouse business continues quiet.

Coke.—Warmer weather has affected adversely the demand for domestic coke. Foundry grades are moving well, but buying continues only for immediate needs.

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.
	Per Cent Off List
Tank rivets, $\frac{7}{16}$-in. and smaller, 100 lb. or more	70
Less than 100 lb.	65
Machine bolts	60
Carriage bolts	60
Lag screws	60
Hot-pressed nuts, square, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

Old Material.—The market for old material continues weak. Heavy melting steel, heavy shoveling steel, railroad springs and No. 2 railroad wrought are 25c. a ton lower; miscellaneous rails, steel angle bars and cast iron carwheels are 50c. lower, and rails for rolling are $1 lower. Consumers are liquidating stocks on hand, and it is not likely that they will buy much old material for the next 60 to 90 days. In the meantime, the only activity is among dealers, who are buying to cover contracts. Railroad lists include: New York Central, 6500 tons; Chicago, Burlington & Quincy, 4990 tons; Mobile & Ohio, 1300 tons; Chicago, Milwaukee & St. Paul, 139 carloads; and Nickel Plate, 24 carloads.

Prices per gross ton, f.o.b. dealers' yards and delivered St. Louis district consumers' works:

Heavy melting steel	$11.25 to $11.75
No. 1 locomotive tires	12.25 to 12.75
Heavy shoveling steel	11.25 to 11.75
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.50 to 13.00
Railroad springs	14.00 to 14.50
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	9.75 to 10.25
Cast iron borings	9.00 to 9.50
Iron rails	13.00 to 13.50
Rails for rolling	12.75 to 13.25
Machine shop turnings	7.00 to 7.50
Steel car axles	18.50 to 19.00
Iron car axles	23.50 to 24.00
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft.	15.00 to 15.50
Steel angle bars	11.50 to 12.00
Cast iron carwheels	13.00 to 13.50
No. 1 machinery cast	14.00 to 14.50
Railroad malleable	11.00 to 11.50
No. 1 railroad cast	13.50 to 14.00
Stove plate	13.00 to 13.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Birmingham

Steel Demand Continues on Upgrade —Pig Iron Buying Light

BIRMINGHAM, March 27.—New pig iron tonnage is not large, and buying continues on a hand-to-mouth basis. Most of the new tonnage is in lots of from one to three carloads. A slight movement in forward buying was noted during the past week, but very few consumers have covered for their second quarter requirements. Spot sales are at about the same level as for the past several weeks. Quotations on foundry iron remain on a $16 base. Shipments continue close to production. Eighteen furnaces are in blast, the same as for the past two weeks.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil.	$16.00
No. 1 foundry, 2.25 to 2.75 sil.	16.50
Basic	15.00

Finished Steel.—Demand is carrying forward the improvement shown in the preceding weeks of March, and the market has a firm tone. Inquiries dropped slightly last week, but still continue to come in at a fair rate. Mill prices are unchanged. Structural steel fabricators report a good increase in new business and an improved outlook. The Connors Steel Co. last week booked several new orders for reinforcing bars, ranging from 35 to 120 tons. The Tennessee Coal, Iron & Railroad Co. continues to operate 13 or 14 of its open-hearths and the Gulf States Steel Co. is still working four of its six.

Cast Iron Pipe.—Pressure pipe manufacturers continue to find a better feeling in the market, and inquiries indicate that a good volume of tonnage is in prospect. New business for the past week has been in small tonnage orders. Plant operations have changed but little in the past several weeks. Prices are firmer, with the base quotations still at $29 to $31.

Coke.—Although several of the larger consumers have covered for their second quarter requirements, considerable tonnage is still being booked for second and third quarter deliveries. Spot sales are holding up well. Quotations for spot, second and third quarter coke remain at $5.

Old Material.—Demand is still light. Regular customers are buying for present requirements only and are showing very little interest in increasing stocks. Prices are unchanged.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.50 to $10.00
Scrap steel rails	11.00 to 11.50
Short shoveling turnings	8.00 to 8.50
Cast iron borings	8.00
Stove plate	14.50
Steel axles	19.00 to 20.00
Iron axles	20.00 to 21.00
No. 1 railroad wrought	10.00 to 10.50
Rails for rolling	13.00
No. 1 cast	14.50
Tramcar wheels	12.50 to 13.50
Cast iron carwheels	12.00 to 13.00
Cast iron borings, chemical	13.50 to 14.00

Pacific Northwest

Inquiry for Steel More Active— Prices Are Holding Firmly

SEATTLE, March 23 (*By Air Mail*).—Local inquiry for steel is more active, and several fairly large jobs in plates and shapes were placed in the past week. Jobbers report more tonnage moving, and March sales are larger than last month's. Prices are holding, but so far there is not much disposition on the part of buyers to anticipate needs. The local building situation is active, and building permits issued in this quarter show a heavy increase over the same period of last year.

Pig Iron.—The local market is very quiet. Small lots of foundry iron from India and Germany continue to come into this market. Utah basic and No. 2 foundry are quoted at $24 to $25, delivered Seattle.

Structural Steel.—The largest contract for the week was for 1500 tons for the Stimson Building, taken by the Wallace Bridge & Structural Steel Co. The city of Seattle has voted bonds for the building of the West Waterway and Stoneway bridges, which are expected to take 5000 tons or more. Bids will not be requested for some time. Two State highway bridges, one at Kettle Falls, the other at Queets River, Wash., together taking about 1600 tons, will come up for bidding in April. Shapes are firm at 2.35c., f.o.b. Seattle.

Plates.—The Steel Pipe & Tank Co., Portland, has booked 700 tons for a water line for Everett, Wash., the material to be furnished by Bethlehem Steel Corporation. The city penstock at Cedar River, 1200 to 1500 tons, will be placed in a few days. General demand for plates is quiet, with not much new work in sight. Plates are firm at 2.30c., c.i.f. Seattle, for tank quality.

Track Supplies.—The city of Seattle is in the market for 200 tons of 80-lb. rails for local street railway work. The order may be placed within the next week.

Reinforcing Bars.—Contracts placed in the week include 200 tons for the Stimson Building, 180 tons for a Seattle fire station and 225 tons for the physics building at the University of Washington. Work in sight calls for about 2200 tons for the Bon Marche Building, 420 tons for the Bolker warehouse and 1000 tons or more for the Peck & Hill warehouse, all in Seattle. Bars are 2.20c. to 3c.

Hoops and Bands.—Demand for hoops is fair, but for bands is very quiet. The current quotation is 2.87c., c.i.f. Seattle.

Cold-Finished Steel Bars and Shafting.—Local demand is reported somewhat better, but is only for small lots for early needs. The local quotation is 3.20c.

Sheets.—The market is fairly active for galvanized, but for black and blue annealed sheets is very quiet. A local maker of hot water heaters recently imported

Warehouse Prices, f.o.b. Seattle

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Tees, bar sizes	3.25c.
Reinforcing bars	3.00c.
Blue annealed sheets (No. 10)	4.00c.
Black sheets (No. 24)	5.00c.
Galvanized sheets (No. 24)	5.75c.
Structural rivets, ½-in. and larger	5.50c.

about 200 tons of black sheets from Germany. Local quotations are: No. 24 black, 3.60c.; No. 24 galvanized, 4.35c., and No. 10 blue annealed, 2.75c.

Warehouse Business.—Jobbers report that orders and deliveries of steel products in March will show some increase over last month, customers showing also more inclination to buy in larger lots. Prices are firmer. A new price list just issued by a leading jobber shows several advances.

San Francisco

Reinforcing Steel Awards Total 5000 Tons—3000 Tons of Shapes for Bridge

SAN FRANCISCO, March 27. (*By Telegraph*).—Trading continues well sustained for this season of year, the reinforcing steel bar market being the most active. Awards totaled over 5000 tons, a San Francisco jobber taking 1950 tons for Pier 48. Gunn, Carl & Co. secured 1000 tons for Ocean Beach Esplanade, San Francisco, and Pacific Coast Steel Co. booked 750 tons for Veterans' Hospital at Portland, Ore. Pending business is now in excess of 13,000 tons.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Plates.—Only two plate awards are reported. The Steel Tank & Pipe Co. booked 240 tons for a pipe line at Everett, Wash., and a Seattle interest secured 175 tons for repair of the steamer Iroquois. Interest is still centered in the inquiry for the Wildcat and Sequoia aqueducts in Oakland requiring 8400 tons.

Structural Shapes.—The largest structural award of the week called for 3000 tons for the Coyote Point bridge across San Francisco Bay, booked by the Virginia Bridge & Iron Co. Pending business totals over 14,000 tons. Bids have been received on 4000 tons for Capwell's Store in Oakland. Fabricators in the San Francisco district have agreed not to purchase any more foreign shapes and more stabilized fabricated and erected prices are now expected.

Cast Iron Pipe.—The only cast iron pipe award was secured by the United States Cast Iron Pipe & Foundry Co. and involved 712 tons of 6 to 20-in. classes B and C pipe for Santa Barbara, Cal. This company was low bidder on 500 tons of 10 to 24-in. class B pipe for Santa Ana, Cal. Bids have been taken on 170 tons of 4 to 8-in. class B for Aberdeen, Wash., and on 132 tons of 4 and 6-in. class B for Oak Harbor, Wash. Bids will be opened next week on 553 tons of 6 to 12-in. class C for San Bernardino, Cal., also 181 tons of 6 and 8-in. class B for the improvement of Foothill Boulevard, Azusa, Cal., and on 114 tons of 6 to 10-in. class B for Red Bluff, Cal. Buckeye, Ariz., will open bids on April 16 for 234 tons of 4 to 8-in. class B, and Riverside, Cal., will take bids on April 3 for 127 tons of 6-in. class B for improvement of Washington Street. The Grinnell Co. took 360 tons of 8-in. seamless pipe for Los Angeles and will supply foreign material. Bids have gone in on 510 tons of 4 and 6-in. seamless pipe for Brighouse, B. C., and the Armona Public Utility District, California, will open bids on April 3 for 125 tons of 2 to 8-in. O. D. pipe.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, $\frac{3}{16}$-in. and over	3.15c.
Small angles, under $\frac{3}{16}$-in	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Cincinnati

Pig Iron Sales Decline—Slight Weakness in Scrap Market

CINCINNATI, March 27.—Pig iron sales in the past week have been light and indications are that there will be no improvement in the immediate future. The Louisville & Nashville has bought 590 tons of foundry and charcoal iron, a Chattanooga, Tenn., melter 500 tons of malleable, and a Michigan company 500 tons of Jackson County silvery iron. Aside from these transactions, orders have been for lots ranging from single carloads up to 200 tons. The only sizable inquiry before the trade is for 1000 tons of foundry for second quarter delivery to a Hamilton, Ohio, consumer. Prices have not been changed, southern Ohio foundry iron remaining firm at $19, base Ironton; Tennessee and Alabama iron at $16, base Birmingham, and northern Ohio foundry at $16.75 to $17, base furnace.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$20.89
So. Ohio malleable	$20.14 to 20.89
Alabama fdy., sil. 1.75 to 2.25	19.69
Alabam fdy., sil. 2.25 to 2.75	20.19
Tennessee fdy., sil. 1.75 to 2.25	19.69
Southern Ohio silvery, 8 per cent	26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Finished Material.—Demand for steel from consuming industries has been well sustained in the past week, and mills are encouraged by the amount of business they are getting out of this territory. There has been a slow upward movement in the volume of specifications against old contracts at low prices, many users of bars, structural shapes and plates having provided themselves with sufficient tonnage to carry them through a considerable part of the second quarter. Aside from an award of about 800 tons of structural steel for bridges by the Louisville & Nashville Railroad, the structural market has been quiet. Small fabricators continue to be fairly well engaged, but the larger shops are in need of work. The placing of second quarter orders for sheets has been accelerated in the last seven days, and the result is that prices are becoming more firmly established at 2.10c., base Pittsburgh, for blue annealed, 3.75c. for galvanized, 2.90c. for black and 4.15c. for automobile body stock. Sales have been diversified so that mills turning out all kinds of sheets have been enabled to operate on an economical basis. The American Rolling Mill Co. declares that all of its units still are on a production schedule calling for 100 per cent of capacity. There has been a slight decrease in sales of nails, which are quoted at $2.65 per keg, base Ironton or Pittsburgh. Makers of cold-rolled bars and cold-rolled strips report that the volume of orders has been only fair.

Warehouse Business.—Shipments from local warehouses in March were approximately the same as those in February, although several companies reported slight increases. Bars and structural steel are the most active commodities, while sales of common wire nails have been good. Prices are steady and unchanged.

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes	3.40c.
Bars, soft steel or iron	3.30c.
New billet reinforcing bars	3.15c.
Rail steel reinforcing bars	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)	4.05c.
Galvanized sheets (No. 24)	4.90c.
Blue annealed sheets (No. 10)	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire, per 100 lb	$3.00
Common wire nails, base per keg	2.95
Cement coated nails, base 100 lb. keg	2.95
Chain, per 100 lb	7.55
	Net per 100 Ft.
Lap-welded steel boiler tubes, 2-in	$18.00
4-in.	38.00
Seamless steel boiler tubes, 2-in	19.00
4-in.	39.00

Coke.—While by-product foundry coke specifications have fallen off slightly, shipments in March will be the largest in at least six months. Prospects for April are regarded as good, although the volume of business is not expected to equal that in either February or March. Continuation during the next 30 days of the present price of $7.50 per net ton, f.o.b. ovens, for foundry coke is practically assured, although no formal announcement to that effect has been made. That there will be a sharp cut in domestic grades is conceded by dealers, but the exact amount of the reduction has not yet been determined.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.52 to $9.64; Wise County coke, $7.59 to $8.09; New River coke, $10.09 to $10.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—Further weakness in the scrap market has necessitated a drop of from 25c. to 50c. a ton on railroad wrought, short rails, railroad malleable and agricultural malleable. Meanwhile, heavy melting steel remains unchanged at $11 to $11.50. Steel plant operations in this district are on a basis approaching capacity and therefore shipments of material on current contracts have been fully up to normal. Mills, however, are not anticipating future requirements, preferring to purchase scrap only when they can use it immediately.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$11.00 to	$11.50
Scrap rails for melting	11.75 to	12.25
Loose sheet clippings	8.50 to	9.00
Bundled sheets	9.50 to	10.00
Cast iron borings	8.00 to	8.50
Machine shop turnings	7.50 to	8.00
No. 1 busheling	10.00 to	10.50
No. 2 busheling	7.00 to	7.50
Rails for rolling	12.50 to	13.00
No. 1 locomotive tires	12.75 to	13.25
No. 1 railroad wrought	10.00 to	10.50
Short rails	15.75 to	16.25
Cast iron carwheels	12.25 to	12.75
No. 1 machinery cast	15.50 to	16.00
No. 1 railroad cast	13.00 to	13.50
Burnt cast	7.50 to	8.00
Stove plate	8.25 to	8.75
Brake shoes	9.50 to	10.25
Railroad malleable	12.00 to	12.50
Agricultural malleable	11.50 to	12.00

Boston

Pig Iron Prices Unsettled—Scrap Market Weaker

BOSTON, March 27.—Little pig iron was sold in this territory in the past week. No open inquiry of importance is reported, but three or four fairly large consumers are sounding out the market for second and third quarter iron. Actual purchase will depend on the development of pending business with melters. Prices are unsettled owing to the possibility of reductions in rail and water freight rates. Buffalo iron is still available, figuring on all rail rates, at $16 a ton, base furnace, with differentials or at $16.50 with differentials waived. The Mystic Iron Works is meeting these prices on a delivered basis. Eastern Pennsylvania iron is generally $20 a ton, base furnace, but this price has been shaded on recent offers without resulting in orders. Alabama iron is steady at $16 a ton, base furnace. Proposed new rail rates from Troy, N. Y., to New England points figure out more to such points as Worcester and Springfield, Mass., and less to Long Island Sound points than existing rates. It is intimated that some low water rates from Buffalo to New England have been made for this summer.

Warehouse Prices, f.o.b. Boston

	Base per Lb.
Plates	3.365c.
Structural shapes—	
Angles and beams	3.365c.
Tees	3.365c.

Machine bolts	50 and 5
Carriage bolts	50 and 5
Lag screws	50 and 5
Hot-pressed nuts	50 and 5
Cold-punched nuts	50 and 5
Stove bolts	70 and 10

*Including quantity differentials.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to	$21.91
Buffalo, sil. 2.25 to 2.75	21.41 to	22.41
East. Penn., sil. 1.75 to 2.25	23.15 to	23.65
East. Penn., sil. 2.25 to 2.75	23.65 to	24.15
Virginia, sil. 1.75 to 2.25		25.71
Virginia, sil. 2.25 to 2.75		26.21
Alabama, sil. 1.75 to 2.25	22.91 to	24.77
Alabama, sil. 2.25 to 2.75	23.41 to	25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Coke.—Indications are that New England by-product foundry coke ovens will bill out fuel next month against first half contracts at $11.50 a ton, delivered within a $3.10 freight rate zone, as they have in March. The movement of such coke shows little if any increase, an indication that the foundry melt is not increasing perceptibly. A still further contraction in the demand for domestic coke has come with warmer weather. Such coke is selling on a basis of $8.50 a ton on cars ovens, Everett, Mass.

Warehouse Business.—Structural rivets, ½-in. and larger, have been advanced 25c. to $4.75 per 100 lb., base. Soft steel rivets are unchanged at 40 and 10 per cent off in full kegs. For less than full keg lots of a size, the discount is 40 per cent, an advance, and all manufacturers' extras for quantities must be added to the list price before deducting the discount. The movement of iron and steel out of warehouses is not as brisk as it was a month ago. Stove bolts are now 70 and 10 per cent off list.

Pipe.—The Warren Foundry & Pipe Co. was the successful bidder for the Springfield, Mass., pipe and special fittings requirements at $1,920.59. The Chapman Valve Mfg. Co., Springfield, was awarded the valves at $20,105.75, and the Rensselaer Valve Co., Troy, the hydrants at $476.50.

Cold-Rolled Strip.—Bookings for second quarter are generally in small tonnages, but the aggregate is fairly satisfactory.

Bars.—Steel bars are moving in fairly good volume at 1.85c. to 1.90c. per lb., base Pittsburgh, for second quarter delivery. Buying of reinforcing bars for consumption is on a hand-to-mouth basis, with prices holding well at about 2.90c. per lb., base, from stock. Mills quote 1.90c. to 1.95c. per lb., base Pittsburgh.

Shapes and Plates.—Mills report a somewhat better demand for shapes and plates for second quarter delivery. No large jobs came up the past week for fabricators to figure, but there is a sizable amount of small work. Competition for small jobs is almost as keen as it is on large ones owing to the limited amount of business on fabricators' books.

Old Material.—Prices for machine shop turnings range from $5 a ton on cars, shipping point, to $5.75, with the general quotation $5 to $5.50, a drop of 50c. as compared with a week ago, and of 75c. within a fortnight. Buying is confined to one Pennsylvania steel mill, which accounts for the weakness of prices. Quotations on other materials are about the same as a week ago, but the market is generally weak. The Mystic Iron Works has taken additional tonnages of stove plate and sheared pipe at $10 a ton, delivered. Other recent sales include cotton ties at $6 to $6.50 a ton on cars, shipping point; heavy cast iron at $11; No. 2 steel at $7.25 to $7.50; textile machinery cast at $14 a ton, delivered, and No. 1 machinery cast at $14.50 and $15.

The Boston & Maine Railroad has closed bids on 65 cars of miscellaneous material.

Buying prices per gross ton f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$9.00 to	$9.10
Scrap T rails	8.00 to	8.50
Scrap girder rails	7.50 to	8.00
No. 1 railroad wrought	10.00 to	10.50
No. 1 yard wrought	8.00 to	8.50
Machine shop turnings	5.00 to	5.50
Cast iron borings (steel works and rolling mill)	6.00 to	6.25
Bundled skeleton, long	5.50 to	6.00
Forge flashings	6.00 to	6.50
Blast furnace borings and turnings	5.75 to	6.25
Forge scrap	6.00 to	6.50
Shafting	13.00 to	13.50
Steel car axles	15.00 to	15.50
Wrought pipe (1 in. in diameter, over 2 ft. long)	7.50 to	8.25
Rails for rolling	10.00 to	10.50
Cast iron borings, chemical	9.00 to	9.50

Prices per gross ton delivered consumers' yards:

Textile cast	$13.50 to	$14.00
No. 1 machinery cast	14.50 to	15.00
No. 2 machinery cast	12.50 to	13.00
Stove plate	9.50 to	10.00
Railroad malleable	13.00 to	13.50

Detroit

Industrial Activity Continues Upward—Motor Car Production Increasing

DETROIT, March 27.—Industrial activity in the Detroit area continues upward, with a corresponding increase in steel inquiries and bookings. Automobile production is constantly developing new "highs," with no apparent slowing down in sight, at least during the first half of the year.

The Hudson Motor Car Co. will end March with a production of better than 35,700, which will bring the total for the first quarter to 90,000 units. April estimates run between 39,000 and 40,000 units, with a tentative schedule of 110,000 units for the second quarter.

The Willys-Overland Co. is now turning out about 1300 cars per day. The February total of 24,017 cars has already been surpassed, with a volume of unfilled orders still amounting to 31,000 cars. It is estimated that Willys-Overland will reach a 1500 unit per day production by May 1.

Cadillac's production for the first two months of this year amounted to 3083, to which may be added 2754 units for LaSalle. This compares with 2692 units for the same period of 1927.

The Hupp Motor Car Co. is breaking all its previous records with 17,670 units, the total production for the four months ending Feb. 29, which is a 73 per cent increase over the same period a year ago.

The Graham-Paige Motors Co. has attained a production thus far of 285 cars a day. This compares with 161 cars as the highest daily production attained in 1927. The Graham-Paige plant now has a payroll of 480 more than was ever attained in the past.

Employment generally in Detroit increased 3453 for the week ended March 20. This brings the total industrial employment to 365,124.

The past week has shown an encouraging increase in structural steel orders, the demand being almost entirely for industrial structures. Small fabricating shops are particularly active, and a fair volume has been done in the larger structural units. Prices for shapes continue firm at 1.90c., Pittsburgh, for spot deliveries and 1.85c. on contract.

With automobile production on the highest basis for the year, the tonnage of scrap from the largest producers is likewise at a high point. Current orders are sufficient to absorb this tonnage, but there have been no evidences of strengthening in the market on old material.

Dealers' buying prices per gross ton, f.o.b. cars. Detroit:

Heavy melting and shoveling steel	$11.00 to	$11.50
Borings and short turnings	7.25 to	7.75
Long turnings	6.75 to	7.25
No. 1 machinery cast	14.00 to	15.00
Automobile cast	19.50 to	21.00
Hydraulic compressed sheets	9.75 to	10.25
Stove plate	11.00 to	12.00
No. 1 busheling	8.50 to	9.00
Sheet clippings	6.00 to	7.00
Flashings	9.25 to	9.75

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finished flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire, base per 100 lb.	3.90

Buffalo

Small-Lot Inquiry for Pig Iron—Steel Demand Holds

BUFFALO, March 27.—The only pig iron inquiries now being figured are small lots, except that the General Electric Co. inquiry for 2900 tons is said still to be open. Some misunderstanding apparently has arisen over Buffalo prices in connection with barge canal shipments. One lot, which was said to have been sold at a price figuring back to $15.50, Buffalo, on the basis of rail delivery, was actually sold, it is stated, for barge canal shipment, so that the maker will net $16.50, Buffalo, and possibly better. This price was made for No. 2X; some No. 1 iron went into the same transaction at $17, Buffalo. One Buffalo maker declines to quote less than $17 for No. 2 plain, 1.75 to 2.25 silicon, for any delivery.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25		$17.00
No. 2 foundry, sil. 2.25 to 2.75		17.50
No. 1X foundry, sil. 2.75 to 3.25		18.50
Malleable, sil. up to 2.25	$17.00 to	17.50
Basic	16.50 to	17.00
Lake Superior charcoal		27.28

Finished Iron and Steel.—There is a good demand for bars, shapes and plates. Prices are holding. Sheet mill operation has increased to 90 per cent of capacity and sheets are firm at 2.90c. for black and 4.15c. for automobile body. Inquiry for sheets is good. Reinforcing bar business is quiet this week and there are no lettings of size.

Old Material.—The market shows a heavy consumption of material, but there has been little new buying. The large orders recently placed are taking most of the available scrap, and there is considerable activity among dealers in this connection. Dealers are offering $12.75 to $13.25 for No. 2 steel and $14.50 to $15 for No. 1. Some machine shop turnings have been sold at Niagara Falls at a delivered price of $9.75. Borings and turnings are weaker, with some tonnage of this material coming through from Detroit.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$14.75 to	$15.25
No. 2 heavy melting steel	13.00 to	13.50
Scrap rails	13.75 to	14.25
Hydraulic compressed sheets	13.25 to	13.75
Hand bundled sheets	9.00 to	9.50
Drop forge flashings	12.00 to	12.50
No. 1 busheling	13.25 to	13.75
Heavy steel axle turnings	12.50 to	12.75
Machine shop turnings	8.50 to	9.00
Acid Open-Hearth Grades		
Railroad knuckles and couplers	15.50 to	16.00
Railroad coil and leaf springs	15.50 to	16.00
Rolled steel wheels	15.50 to	16.00
Low phosphorus billet and bloom ends	17.00 to	17.50
Electric Furnace Grades		
Heavy steel axle turnings	12.75 to	13.25
Short shoveling steel turnings	10.75 to	11.25
Blast Furnace Grades		
Short shoveling steel turnings	10.50 to	11.00
Short mixed borings and turnings	9.50 to	10.00
Cast iron borings	9.75 to	10.25
No. 2 busheling	9.00 to	9.50

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, March 27.—There have been very few developments in any of the markets. Copper has a better tone after a week of inactivity and some shading. Tin has quieted down with prices steady. Very little change is noted in lead or zinc.

Copper.—The softer tendency, noted last week, persisted until yesterday and today, when a stronger tone developed. There is better inquiry from both domestic and foreign consumers, with considerable buying by the latter. For most of the week the light demand has been satisfied by one or two sellers at concessions down to as low as 14.07c., delivered, but it is believed that most of this metal, pressing on the market, has been absorbed. Today electrolytic copper is quoted quite firm at 14.12½c., delivered in the Connecticut Valley. The official quotation of Copper Exporters, Inc., is unchanged at 14.50c., c.i.f., European ports. Lake copper has been dull most of the week, but a better inquiry is reported today. Sales have been made at 14.15c. to 14.25c., delivered.

Tin.—About 1600 tons changed hands during the week ended Saturday, March 24. This is in decided contrast with the exceedingly active week just preceding when 3000 tons was sold. At that time consumers were the chief buyers, but during the week just passed dealers took most of the metal. The week was characterized by considerable profit taking which had a depressing effect upon the market here. Yesterday dealers were again active, 200 tons changing hands. The unfavorable feature of the situation is the lack of interest from consumers. Today the market was only moderately active, with spot Straits tin quoted at 52.75c., New York. Prices in London today were considerably higher than a week ago, with spot standard quoted at £239 17s. 6d., future standard at £239 5s. and spot Straits at £243 17s. 6d. The Singapore price today was £244 10s. It is to be noted that whereas a week ago future standard was at a premium over spot, the situation is reversed this week. Arrivals thus far this month have been 6195 tons with 7725 tons reported afloat.

Lead.—Buying in the West has been better than in the East and prices in St. Louis are a little higher at 5.82½c. Orders have been of fairly large proportions in the Middle West. The market is quieter here and the contract price of the leading interest is unchanged at 6c. There is considerable buying interest for April and May with earlier positions in good demand. An absence of selling interest in future positions is noted.

Zinc.—Only moderate activity is reported and prices have held steady at 5.70c., St. Louis, for nearby delivery, and 5.72½c., for April. This is due largely to the attitude of sellers which is averse to pressing metal on the market. There has, however, been some anxiety to sell March metal. Ore declined last week $2 per ton to $38, Joplin, with sales small at 4990 tons and output again restricted to about 9000 tons.

Nickel.—Ingot nickel in wholesale lots is quoted at 35c. with shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—It is reliably reported that the Ford Motor Co. will abandon the manufacture of storage batteries and this is expected to affect ultimately the antimony market. Quotations are lower, due largely to pressure to sell, with Chinese metal for spot delivery

Metals from New York Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	55.00c. to 56.00c.

Brass Rods	16.50c.

Old Metals, Per Lb., New York

The buying prices represent what large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their use.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.00c.	13.50c.
Copper, heavy and wire	11.75c.	12.875c.
Copper, light and bottoms	10.00c.	11.25c.
Brass, heavy	7.00c.	8.50c.
Brass, light	6.00c.	7.50c..
Heavy machine composition	9.50c.	10.625c.
No. 1 yellow brass turnings	7.75c.	9.00c.
No. 1 red brass or composition turnings	8.75c.	9.75c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.25c.	3.75c.
Sheet aluminum	12.50c.	14.50c.
Cast aluminum	12.50c.	14.00c.

quoted at 10c., New York, duty paid, and futures at 9.87½c.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

Chicago, March 27.—Sales are more numerous and prices are stronger. The supply of old metals is large, but little consumer interest is being shown.

Prices, per lb., in carload lots: Lake copper, 14.25c.; tin, 55c.; lead, 6c.; zinc, 5.85c.; in less-than-carload lots, antimony, 12.50c. On old metals we quote copper wire, crucible shapes and copper clips, 10.50c.; copper bottoms, 9.50c.; red brass, 9.25c.; yellow brass, 7c.; lead pipe, 4.75c.; zinc, 3.25c.; pewter, No. 1, 30c.; tin foil, 36c.; block tin, 45c.; aluminum, 11.75c.; all being dealers' prices for less-than-carload lots.

FABRICATED STRUCTURAL STEEL

New Work Will Require 33,000 Tons—Awards Continue to Decline, Totaling 24,425 Tons

NEW projects amounting to 33,000 tons were the feature of the structural market in the last week, although the total was somewhat below the weekly average for the year. Of outstanding size were an apartment building in New York and a bridge across the Delaware River near Philadelphia, which will require 8000 tons each. Awards amounted to 22,400 tons, one of the lowest totals for the year, the largest of which was a manufacturing building at Chicago taking 4500 tons. Awards follow:

State of Vermont, 150 tons, three bridges, to American Bridge Co.

North Adams, Mass., 140 tons, bridge, to Jordan Construction Co., Albany.

Boston, 100 tons, artificial ice making plant, Boston Ice Co., to New England Structural Co.

Nashua, N. H., 100 tons, publishing plant, to New England Structural Co.

Nashua, 100 tons, mercantile building, to New England Structural Co.

Hartford, Conn., 400 tons, office building, to Standard Structural Co.

Middletown, Conn., 600 tons, savings bank, to Levering & Garrigues Co.

New Haven, Conn., 1600 tons, power house for New Haven Illuminating Co., to Levering & Garrigues Co.; reported last week to an unnamed fabricator.

New York, 1000 tons, loft building at 347 West Thirty-ninth Street, to Levering & Garrigues Co.

New York, 900 tons, theater and office building on Fifty-third Street, to George A. Just Co.

New York, 400 tons, apartment building on East Forty-third Street, to Harris Structural Steel Co.

New York, 300 tons, building for New York Genealogical and Biographical Society at 122 West Fifty-eighth Street, to Harris Structural Steel Co.

State of Pennsylvania, 200 tons, bridge over Tioga River, to American Bridge Co.

Winston-Salem, N. C., 3000 tons, building for Reynolds Tobacco Co., to Virginia Bridge & Iron Co.

Tuscaloosa, Ala., 100 tons, Libby, McNeil & Libby milk condensary, to Ingalls Iron Works Co.

Chattanooga, Tenn., 100 tons, Lookout Boiler & Tank Co. addition, to Southern Steel Works, Birmingham.

Louisville & Nashville Railroad, 830 tons, bridges; 670 tons to Bethlehem Steel Co. and remainder to Virginia Bridge & Iron Co. and Ingalls Iron Co.

McKeesport, Pa., 250 tons, County highway bridge, to Fort Pitt Bridge Works.

Pittsburgh, 100 tons, Emory Memorial Church extension, to Pittsburgh-Des Moines Steel Co.

Youngstown, Ohio, 350 tons, power house for Youngstown Sheet & Tube Co., to Pittsburgh-Des Moines Steel Co.

Bay City, Mich., 1250 tons, Chevrolet Motor Co. buildings, to Flint Structural Steel Co.

Detroit, 1100 tons, Chevrolet gear and axle plant, to Whitehead & Kales.

Pontiac, Mich., 800 tons, Riker Building, to Whitehead & Kales.

Jackson, Mich., 200 tons, for Fox, Withington Co., to Whitehead & Kales.

Fort Wayne, Ind., 400 tons, warehouse for International Harvester Co., to Rochester Bridge Co., Rochester, Ind.

Chicago & Illinois Midland Railroad, 530 tons, bridges, to American Bridge Co.

Chicago, 135 tons, tunnel car bodies for Department of Public Works, to Gage Structural Steel Co.

Chicago, 120 tons, coal trestle for city pumping plant, to Midland Structural Steel Co., local.

Chicago, 4500 tons, Palm Olive-Teet building, to an unnamed bidder.

Evanston, Ill., 180 tons, public school, to an unnamed bidder.

Milwaukee, 1580 tons, County portion of Milwaukee Public Safety Building, to Lakeside Bridge & Steel Co.

East St. Louis, Ill., 150 tons, building for American Zinc Co., to Mississippi Valley Structural Steel Co.

St. Louis, 750 tons, building for Missouri Valley Portland Cement Co., to Mississippi Valley Structural Steel Co.

Los Angeles, 295 tons, shapes, apartment building at 308 North Sycamore Street, to Brombacher Iron Works.

Culver City, Cal., 150 tons, City Hall, to McClintic-Marshall Co.

San Francisco, 165 tons, apartment building at Bay and Polk Streets, to McClintic-Marshall Co.

San Francisco, 3000 tons, Coyote Point bridge across San Francisco Bay, to Virginia Bridge & Iron Co.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

West Boylston, Mass., 130 tons, bridge.

New York, approximately 8000 tons, units 8 and 9 of Tudor City; plans soon.

Huntington, L. I., 800 tons, Catholic Church.

New York Central Railroad, 400 tons, bridges.

Metuchen, N. J., 425 tons, power station for Public Service Corporation.

Standard Oil Co. of New Jersey, 400 tons, tanks.

Williamsport, Pa., 500 tons, Y. W. C. A.

Philadelphia, 400 tons, building for Kensington Trust Co.

Philadelphia, 800 tons, Nurses' Home at Frankford Hospital.

Philadelphia 8000 tons, Tacony-Palmyra bridge; bids open April 2.

Philadelphia 400 tons, building for Terminal Title & Trust Co.; Roberts & Roller, Philadelphia, general contractors.

Philadelphia 2400 tons, Navy Central Y. M. C. A.; Irwin & Leighton, Philadelphia, general contractors.

Elmira, N. Y., 500 tons, Mark Twain High School.

Coraopolis, Pa., 800 tons, County bridge repairs; Farris Engineering Co., general contractor.

Memphis, Tenn., 3500 tons, 29 barges for Mississippi River Commission for Mississippi flood repair work; bids close March 30.

Memphis, Tenn., 550 tons, Starrett Building.

Cleveland, 1000 tons, two bridges for Cleveland Union Terminals Co.; bids taken.

Detroit, 1100 tons, Detroit's section of river tunnel.

State of Michigan, 120 tons, State highway bridge, over Cedar Creek, Muskegon County; Massillon Bridge & Structural Co., low bidder.

Chicago, 1800 tons, building for Chicago Motor Club; Holabird & Roche, architects.

Chicago, 240 tons, temporary building for Board of Trade; Holabird & Roche, architects.

Rock Island, Ill., 500 tons, repairs to the Rock Island railroad bridge across Mississippi River.

Saukville, Wis., 200 tons, State highway bridge over Milwaukee River; bids close April 4.

Ogden, Utah, 650 tons, train shed for Union Pacific Railroad.

REINFORCING STEEL

Awards of 13,000 Tons—4000 Tons in New Projects

State of New Jersey, 200 tons, road work, from Jennerone Contracting Co., general contractor, to Igoe Brothers.

Philadelphia, 275 tons, school at Sixth and Buttonwood Streets, to Robinson Iron & Steel Co.

Harrisburg, Pa., 310 tons, Market Street subway, to McClintic-Marshall Co.

Johnstown, Pa., 425 tons, municipal retaining wall work, to Carlem Engineering Co., Pittsburgh.

Pittsburgh, 300 tons, William Penn Hotel addition, to Kalman Steel Co.

Davidson, N. C., 120 tons, Davidson College, to Connors Steel Co., Birmingham.

Cleveland, 1000 tons, two store and warehouse buildings for Sears, Roebuck & Co., to Truscon Steel Co.

Dayton, Ohio, 800 tons, hotel, to Joseph T. Ryerson & Son, Inc.

Chicago, 1000 tons of rail and billet steel bars, printing plant for Reuben H. Donnelley Corporation, to Joseph T. Ryerson & Son, Inc.

Chicago, 260 tons of rail steel bars, apartment building at 1500 Lake Shore Drive, to Calumet Steel Co.

Chicago, 400 tons of rail steel bars, garage at Federal and Lake Streets, to Inland Steel Co.

Chicago, 250 tons, building for Rapid Roller Mfg. Co., to Barton Spiderweb System.

Oak Park, Ill., 700 tons, Nicholas stores, to Barton Spiderweb System.

Chicago, 500 tons, sewer work on Northwest side, to Barton Spiderweb System.

Chicago, 600 tons, apartment building on Oglesby Avenue, to Olney J. Dean & Co.

State of Illinois, 300 tons, bridge and road work, to Calumet Steel Co.

St. Louis, 650 tons, apartment house at 4401 West Pine, 350 tons; warehouse for Great Atlantic & Pacific Tea Co., 300 tons, to Missouri Rolling Mills Corporation.

Portland, Ore., 750 tons, Veterans' Hospital, to Pacific Coast Steel Co.

San Francisco, 1950 tons, for Pier 48, to San Francisco jobber.

San Francisco, 1000 tons, for Ocean Beach Esplanade, to Gunn, Carl & Co.

San Francisco, 125 tons, factory, Fifteenth and Potrero Streets, to Badt Falk Co.

Santa Monica, Cal., 210 tons, office building, Seventeenth and Wilshire Boulevard, to unnamed interest.

Los Angeles, 340 tons, apartment building at 5930 Franklin Avenue, to an unnamed bidder.

Seattle, 225 tons, hotel, Fourth and Spring Streets, to Pacific Coast Steel Co.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

Brooklyn, 150 tons, telephone building; bids not in.

New Brunswick, N. J., 1700 tons, Raritan River bridge; bids April 9.

Philadelphia 800 tons, addition to Alden Park Manor apartments; bids in.

Cumberland, Md., 175 tons, building for Cumberland Hospital.

Quantico, Va., 600 tons, Marine barracks.

Pittsburgh, 250 tons, Koppers Building; Mellon-Stuart Co., general contractors.

Cleveland, 190 tons, Henry Street viaduct; general contract awarded to Great Lakes Construction Co.

Chicago, 200 tons, building at 301 West Jackson Boulevard; McLennan Construction Co., general contractor.

St. Louis, 200 tons, Knights of Pythias temple at Grand and Lindell Boulevards.

Dial Indicating Gages

(*Concluded from page* 881)

illustrated, the adapter carries an interchangeable square plate, with one measuring point and three points of abutment, formed by its crowned corners. Different plates are substituted for different diameters. The movable measuring point moves diagonally and its movement, considerably magnified, is transmitted to the indicator needle. The fixed gages are intended for mass production of one or two lines, and the self-accommodating gages for use on a greater variety of work. The Mikrotast and measuring base of both types are connected by an adapter and for deep holes extension rods are provided. It is claimed for these internal gages that control of every part of a bore is possible, and that blind holes may be checked to the bottom. Any deviation from the standard diameter is indicated by the indicator needle. A special self-accommodating gage with long extension rods is available for checking deep holes. Several of these rods, each 1250 mm. in length, can be connected.

External taper gaging is performed with accuracy by gages which consist of interchangeable Mikrotasts and two saddles that are securely connected by a rigid bridge piece, with narrow locating flats and stop plate from which the work is registered. This gage is said to give instantly in actual measurement the errors in diameter as compared with a master to which it has been previously set.

For checking internal tapers two Mikrotast internal gages are required, one each at the top and bottom of the taper respectively. They have special stop plates with adjusting and clamping screws. To adjust these gages the stop plates are placed against the face of the master and clamped in position, after having adjusted the Mikrotast needle and limit pointers. Upon entering the gage into the work, the indicator needle will show the deviation from the master. Where the slides of the machine on which the work is mounted accurately control the angle of the taper produced, only one gage is needed for checking the taper.

Pitch and root diameters of external threads are checked by Mikrotasts which are used in conjunction with saddles fitted with suitable locating pieces and gaging points. Pitch, root and outside diameters of right- and left-hand taps with three or four flutes from 6 mm. up are checked by the gage shown in the illustration. The Mikrotast is fitted to an annular frame with two interchangeable locating fixed points and one movable gaging point. An advantage claimed for these gages is the constant and even pressure during the gaging, due to the weight of the instrument.

The foot of the gage for measuring effective diameters of internal threads has one fixed abutment and, exactly opposite, a movable measuring contact point, the movements of the latter being transferred to the dial indicator needle. Both are ball shaped and adjusted to engage on the line of the effective diameter. A bush slightly less in diameter than the bore is placed over the gaging foot as a center of support. A separate gaging foot and bush are required for gaging various diameters. They are suitable for gaging right- or left-hand threads from ½ in. up.

The gages for measuring pitch diameters on internal threads up to 2 in. are supplied with interchangeable measuring bolts. Gages are also available for threads larger than 2 in. and other for checking the pitch of external threads.

PERSONAL

Herbert Hoover, Secretary of Commerce, has been appointed a member of the endowment committee for the Engineering Foundation and Engineering Societies Library and its executive subcommittee. Secretary Hoover is a past-president of the American Institute of Mining and Metallurgical Engineers, a member of the American Society of Mechanical Engineers and an honorary member of the American Society of Civil Engineers.

Harold P. Sigwalt, vice-president of the National Industrial Advertisers' Association, who has been advertising manager for the Milwaukee Corrugating Co., Milwaukee, has resigned from the latter position to become associated with the Cramer-Krasselt Co., Milwaukee.

A. Oram Fulton, president Wheelock, Lovejoy & Co., Inc., Cambridge, Mass., will return on the Berengaria, March 30, from a two months' European trip.

W. W. Wilson, recently one of the receivers of the Milton Mfg. Co., Milton, Pa., has been elected president of the company to serve until a meeting of the new stockholders. At that time a board of directors will be elected, who will in turn elect officers.

M. D. Troyer has been made manager of the logging machinery department of the Clyde Equipment Co., Portland, Ore., succeeding J. B. Stam, who was recently made manager of the company's Seattle branch. Mr. Troyer for a number of years has been associated with the Clyde Iron Works, Duluth, Minn., for the last five years having been district manager for that company at Vancouver, B. C.

R. C. Bird, formerly with the Chain Belt Co., Milwaukee, has joined the sales department of the D. O. James Mfg. Co., Chicago, maker of speed reducers and cut gearing, and will serve as traveling sales manager.

Milton C. Ryer, for 24 years manager of the Denver, Colo., branch of the Crucible Steel Co. of America, is now representing the Ryer Co., 124 West Fourth Street, Los Angeles, representative in western United States and Mexico for the United Swedish Steel Works, Sweden, and the Heppenstall Forge & Knife Co., Pittsburgh.

Gilbert Butler, secretary of the Bossert Corporation, Utica, N. Y., recently returned from a business trip abroad.

Walter Harnischfeger, vice-president Harnischfeger Corporation, Milwaukee, has returned from a three months' tour of Central America and Colombia.

F. H. Clauson, president Van Brunt Mfg. Co., Horicon, Wis., maker of farm machinery and tools, and president Wisconsin Manufacturers Association, will uphold the negative of the question, "Does Industry Need Collective Bargaining Through Trade Unionism?" in a debate with John P. Frey, Washington, former editor the *International Molders' Journal*, before the Intergroup Forum of the Milwaukee State Teachers' College on March 28.

Charles S. Belsterling has been appointed chairman of the traffic committee of the United States Steel Corporation, succeeding John S. Keefe, who recently became president of the American Steel & Wire Co. Mr. Belsterling has been associated with the Steel Corporation and its subsidiaries for many years, having been originally in the general sales department of the A. & P. Roberts Co. At the formation of the American Bridge Co. he became executive head of the traffic department. Later he was made a member of the legal staff of the Steel Corporation in the capacity of general commerce attorney in charge of traffic and transportation matters. Mr. Belsterling is a member of the bar of Pennsylvania and of New York and of the Supreme Court of the United States.

R. P. Dieckelman has been elected vice-president of the Pressed Steel Tank Co., Milwaukee, and Herman Merker, secretary.

Thomas S. Hammond, president Whiting Corporation, Harvey, Ill., was elected president of the Chicago branch of the National Metal Trades Association at its thirteenth annual dinner meeting, March 22. Sterling Morton, president Morkrum-Kleinschmidt Corporation, was elected vice-president, and Arthur E. Blackwood, vice-president Sullivan Machinery Co., treasurer. The directors are J. D. Cunningham, president Republic Flow Meter Co.; Charles E. Finkl, general manager A. Finkl & Sons Co.; William Ganschow, vice-president Gars & Forgings, Inc.; Warren G. Jones, president W. A. Jones Foundry & Machine Co.; W. H. Kent, president Weller Mfg. Co., and Charles H. Strawbridge, president Goodman Mfg. Co.

H. D. Jenkins has been appointed Chicago district representative for the Elliott Blair Steel Co., New Castle, Pa., maker of cold-rolled strip, and of the American Nickeloid Co., Peru, Ill., manufacturer of nickel-plated zinc, copper and tin, copper-plated zinc and tin and nickel-plated cold-rolled strip. His offices are at 1520 Otis Building.

E. J. Kulas, president Otis Steel Co., Cleveland, has renewed an agreement with that company under which he will continue as its president until Dec. 31, 1929.

M. C. Summers and S. P. Ker, Jr., formerly president and vice-president and general sales manager respectively of the Thomas Sheet Steel Co., Niles, Ohio, have become affiliated with the sales organization of the Empire Steel Corporation, Mansfield, Ohio. Mr. Summers will be connected with the Mansfield office and will specialize in the sale of galvanized sheets and Mr. Ker will be identified with the Cleveland sales office.

Paul Wick, formerly vice-president of the Falcon Steel Co., Niles, Ohio, has been elected vice-president in charge of sales of the Youngstown Boiler & Tank Co., Youngstown.

George C. Brainard, who has been vice-president in charge of operations of the General Fireproofing Co., Youngstown, Ohio, manufacturer of metal furniture and steel shelving, has been elected president of that company, succeeding W. H. Foster, who has been made chairman of the board of directors. Mr. Brainard was formerly associated with the Hydraulic Steel Co., Cleveland.

T. M. Girdler, president Jones & Laughlin Steel Corporation, Pittsburgh, has been elected a director of the Union National Bank in that city.

Henry F. Schmidt, consulting engineer at the South Philadelphia works, Westinghouse Electric & Mfg. Co., has been awarded the medal of the American Society of Naval Engineers for the best article submitted during 1927. He has also been given an honorary life membership in the society and a cash prize for his paper, entitled "Some Screw Propeller Experiments with Particular Reference to Pumps and Blowers." The presentation of the awards will be made by Secretary Wilbur at the annual dinner of the society, to be held March 29 at the Willard Hotel, Washington.

E. E. Arnold again has become associated with the Westinghouse Electric & Mfg. Co., East Pittsburgh, as mechanical engineer for special assignment. For 10 years following his graduation from Ohio State University in 1898, he was with the Westinghouse Machine Co., and was engineering assistant to the vice-president when he resigned to become chief engineer of the Metal Products Co., Detroit. Subsequently he was consulting engineer A. O. Smith Corporation, Milwaukee; vice-president Standard Screw Products Co., Detroit, and chief engineer New Departure Mfg. Co., Bristol, Conn.

Jacob F. Savela has been appointed welding service manager in the Detroit district for the Lincoln Electric Co., Cleveland, and will work under the direction of J. M. Robinson, Detroit district sales manager for the Lincoln organization.

John Keenan, general superintendent of the Tata Iron & Steel Co., who left India about a month ago, arrived in New York from England on March 27 for a stay of two or three months in the United States. His headquarters will probably be at the offices of Perin & Marshall, consulting engineers, New York.

H. Oliver Williams has been appointed director of production for the J. Elliott Hall agency of the Penn Mutual Life Insurance Co., 50 Church Street, New York. He has had many years of experience in sales, system and personnel work, having been associated during the last 20 years with the Carnegie Steel Co., the Midvale Steel & Ordnance Co., and the Bethlehem Steel Corporation.

A. O. Jones, president United States Register Co., Battle Creek, Mich., has been elected president of Lubrication Devices, Inc., Battle Creek, recently formed by a reorganization of Farmer Lubrication Systems, Inc., Detroit. The company will occupy its new plant at Battle Creek about April 15, and will engage in the manufacture of Farmer centralized lubrication systems for the industrial and automotive fields. Other officers are Charles C. Green, president City National Bank, Battle Creek, vice-president; L. E. Gordon, treasurer; P. J. Daniels, formerly purchasing agent Duplex Printing Press Co., Battle Creek, secretary; A. J. Jennings, recently manager of the lubrication division of E. F. Houghton & Co., Philadelphia, sales manager, and A. J. Farmer, chief engineer.

N. A. Hall of the Sprague Hoist Division, Shepard Electric Crane & Hoist Co., New York, and H. J. Fuller, Yale & Towne Mfg. Co., Stamford, Conn., were elected chairman and vice-chairman respectively of the Electric Hoist Manufacturers' Association at a meeting held recently in New York.

Rhys T. Harris, for many years identified with the operating departments of several steel companies, has joined the sales department of the Globe Brick Co., East Liverpool, Ohio, and will specialize in ladle brick for open-hearth and blast furnace use.

John S. Casey has been elected president of the Treadwell Construction Co. and the Midland Barge Co., Midland, Pa., succeeding the late Samuel N. Craig. Mr. Casey has long been identified with the Treadwell interests, with which these two companies are affiliated, having been president for several years of the M. H. Treadwell Co., New York, and the Treadwell Engineering Co., Easton, Pa. He will continue to make his headquarters in New York. B. W. Hunsicker, who is secretary and treasurer of the construction company and treasurer of the barge company, will be the active head of both companies at Midland.

Einar Ryden, who has been connected with the Northwest Engineering Co., Green Bay, Wis., is now associated with the Link-Belt Co., 310 West Pershing Road, Chicago, as a machine designer.

J. Ross Pilling of the pig iron, coal and coke firm of Pilling & Co., Inc., Philadelphia, has become identified with Geare, Marston & Pilling, Inc., Philadelphia, a newly organized advertising agency. Mr. Pilling, who is a son of W. S. Pilling, president of the firm bearing his name, will retain his interest in and continue as vice-president of Pilling & Co., Inc.

Robert J. Deneen and Frederic Attwood have been elected vice-presidents of the Ohio Brass Co., Mansfield, Ohio. Mr. Deneen is in charge of the company's sales in the Chicago district and Mr. Attwood serves in a similar capacity for the Eastern district, with headquarters in New York.

G. O. Carlson has resigned as superintendent of the cylinder department of William Wharton, Jr., & Co., Inc., Easton, Pa., and has joined the sales department of the Latrobe Electric Steel Co., 8 West Fortieth Street, New York.

Edward H. Branson, assistant to the chief engineer in the Pittsfield, Mass., works laboratory of the General Electric Co., has resigned and early in April will take charge of the new testing and research laboratory of the General Railway Signal Co., Rochester, N. Y. He is a graduate of Union College, Schenectady, N. Y., and in 1912 entered the employ of the General Electric Co. at its Schenectady plant. In 1913 he was transferred to Pittsfield, where he has since remained, with the exception of a period during the World War, when he served with the United States Ordnance Department at Washington.

Fred C. Conners has resigned as secretary, assistant treasurer and a director of A. M. Castle & Co., 1300 North Branch Street, Chicago, iron and steel warehouse, and has been succeeded as secretary and a director by Leonard J. Quetsch.

William K. Capers, who has been engaged in tank sales at Pittsburgh, New York and Chicago for the William B. Scaife & Sons Co., Oakmont, Pa., has been appointed manager of the company's Chicago office in the First National Bank Building, succeeding Charles F. O'Hagan. At present Mr. Capers will not relinquish any of the territory which he formerly covered.

C. Snelling Robinson, vice-president Youngstown Sheet & Tube Co., Youngstown, addressed the New York section of the American Institute of Mining and Metallurgical Engineers, March 22, on iron mining problems. In connection with the talk he presented for the first time a film entitled "The Story of Iron," taken by the Bureau of Mines at the mines and blast furnace plants of Pickands, Mather & Co., the Youngstown Sheet & Tube Co. and the Bethlehem Steel Corporation.

J. King Hoyt, Jr., of A. Milne & Co., 741 Washington Street, New York, steel merchants and importers, has returned from an extended visit at his firm's plant connections at Sheffield, England, Sweden, and in other Continental countries.

Arthur Lowy, for a number of years vice-president and chief engineer of the New York Engineering Co., 75 West Street, New York, has been elected president of the company, succeeding the late A. C. Ludlum. F. N. Ludlum has been named vice-president, and George Sommer, secretary and treasurer.

C. L. Wood, general manager of sales for the Carnegie Steel Co., recently sailed for an extended European tour.

William S. Rogers, formerly president of the Rogers Brown Iron Co., Buffalo, is president and treasurer of the Alloy Boat Corporation, 190 Elk Street, Buffalo, which was formed recently to manufacture boats of aluminum alloy for use with outboard motors.

Samuel M. Harrington has been elected president of the Frost Mfg. Co., Galesburg, Ill., manufacturer of steel heating boilers, to succeed W. S. Cameron.

J. M. Woltz, Youngstown Sheet & Tube Co., Youngstown, Ohio, was elected president of the Society of Ohio Safety Engineers at the annual meeting held at the Hotel Cleveland, Cleveland, March 24. J. E. Roof, Willard Storage Battery Co., Cleveland, was elected vice-president; A. C. Cook, Carnegie Steel Co., Youngstown, secretary, and E. R. Rose, Republic Iron & Steel Co., Youngstown, treasurer.

OBITUARY

William Cameron Sproul, former governor of Pennsylvania, who died at his home near Chester, Pa., on March 21, had long been prominent in industrial as well as political life in his native State. He was born at Octoraro, Lancaster County, Pa., Sept. 16, 1870, and attended Swarthmore College, Philadelphia, from which he was graduated in 1891. He first engaged in newspaper work, but soon extended his activities to the manufacturing field, organizing and serving as the first president of the Seaboard Steel Casting Co., now a part of the American Locomotive Co. He also organized and for many years served as chairman of the board of the General Refractories Co., Philadelphia. In this connection he took an active part in the formation of the American Refractories Institute, serving as its first president, and continuing as a director of the organization. He also aided in the development of the Lebanon Iron Co. and the Lackawanna & Wyoming Valley Railroad. His political career began when he was elected to the Pennsylvania Senate in 1896, and culminated with his election to the governorship in 1918.

W. C. SPROUL

Gaetano Lanza, for nearly 40 years a member of the faculty of the Massachusetts Institute of Technology, Cambridge, and well known as a consultant in mechanics, died on March 22 at his home in Philadelphia, aged 79 years. He was born in Boston, but attended college in Virginia, serving for a time as an assistant instructor at the University of Virginia. He later joined the faculty of the Massachusetts technical school, where he was professor of theoretical and applied mechanics from 1875 until 1911, when he became professor emeritus of mechanics. Removing to Philadelphia he served as special consultant in mechanics for the Baldwin Locomotive Works and was for a time associate editor of the Franklin Institute Journal. He was active in the American Society for Testing Materials and in 1920 was made an honorary member of that organization.

James W. Packard, founder, first president and for many years directing head of the Packard Motor Car Co., Detroit, died on March 20 at the Cleveland Clinic Hospital, where he had been a patient since November, 1926. He was born at Warren, Ohio, in 1863 and was graduated in mechanical engineering from Lehigh University, Bethlehem, Pa., in 1884. After working for a time as superintendent of the incandescent department of a New York electrical company, he returned in 1890 to Warren, where he organized the Packard Electric Co., manufacturer of incandescent lamps. A few years later he became interested in automobile manufacture and in 1897 organized the Packard Motor Car Co., which was soon moved to Detroit. Mr. Packard had lived in comparative retirement since 1915, interesting himself in philanthropy and the advancement of medical sciences. His largest and most recent gift was $1,000,000 to Lehigh University for a mechanical and electrical engineer laboratory.

William C. Fownes, vice-president of the Standard Seamless Tube Co., Pittsburgh, until its absorption early this year by Spang, Chalfant & Co., Pittsburgh, died March 24 at the Mayo Hospital, Rochester, Minn. Mr. Fownes was 70 years of age and with his brother, H. C. Fownes, had long been prominent in the steel industry of Pittsburgh. They were identified with the old Pittsburgh iron and steel firm of William F. Clark & Sons, and with the liquidation of that interest, they organized the Carrie Furnace Co., and built the Carrie furnaces at Rankin, Pa., which the Carnegie Steel Co. bought in 1898. They organized the Midland Steel Co., Midland, Pa., which was sold to the Pittsburgh Crucible Co. in 1911. In 1914 they founded the Standard Seamless Tube Co. at Ambridge, Pa. Other companies in which Mr. Fownes and his brother were interested were the Rust Boiler Co., Midland, Pa., which was acquired by the Babcock & Wilcox Co.; the Reliance Coke Co., Denbo, Pa., and the S. Jarvis Adams Co., started in Pittsburgh in the early days of the iron and steel industry, but later located at Midland, Pa., where it became the Pittsburgh Iron & Steel Foundries Co., which was merged with the Garrison Foundry Co. and then taken over by the Mackintosh-Hemphill Co.

William Melville Bowman, president Somersworth Foundry Co., Salmon Falls, N. H., died suddenly March 25. He was born in Falmouth, Mass., 67 years ago, and at the time of his death was a director of the Salmon Falls State Bank and of the Somersworth National Bank.

John G. Brierly, president Brierly-Lombard Co., Worcester, Mass., formerly the Lombard Machinery Co., died recently in Florida.

Peter J. MacNamara, president of the MacNamara-Koster Foundry Co., Indianapolis, died March 19, after a short illness.

Wolcott Remington, vice-president and a director of the Thompson Electric Welding Co., Lynn, Mass., died on March 20 at a Lynn hospital, following a week's illness, aged 53 years.

William Blackwood Smith, president, treasurer and one of the founders of the Smith & Caffrey Co., Syracuse, N. Y., structural steel fabricator, died at his home in that city on March 24, aged 68 years. He was born at Willimantic, Conn., June 22, 1860, and began his business career in Syracuse with the E. C. Stearns Co. In 1893 he became associated with James S. Caffrey, now vice-president of the Smith & Caffrey Co., in the firm bearing their names, continuing to be active in the company until his death.

Halward G. Westmore, general forman A. O. Smith Corporation, Milwaukee, and associated with the company since 1895, died March 19 after a brief illness. He was born in Norway in 1852 and came to America in 1863. Mr. Westmore is credited with notable achievements in the establishment of the automatic pressed steel automobile frame shop in the Smith plant, described in THE IRON AGE last week.

Henry A. Runkel, president Security Lightning Rod Co., Burlington, Wis., died March 10, aged 59 years. He was president also of the Burlington National Bank and identified with other business interests.

John T. Corbett, for many years head of Stadler & Corbett, Aurora, Ill., boiler manufacturers, and for 20 years head of the boiler department of Joseph T. Ryerson & Son, Inc., Chicago, died March 19 in Aurora. He was 77 years of age and had retired from the Ryerson company eight years ago.

Apparent consumption of babbitt metal in February is reported by the Department of Commerce at 4,470,368 lb., compared with 4,928,517 lb. in January. Except for December, the February total was the lowest for any month in more than three years. In February, 1927, it was 5,452,200 lb.

Machinery Markets and News of the Works

MARCH BUSINESS GOOD

Machine Tool Orders This Month Equal to February's

Detroit Automobile Company Buys $100,000 Worth of Special Lathes—German Order Amounts to $40,000

MACHINE tool business in March will equal that of February, and in a few instances will run ahead of that month. A Cincinnati manufacturer reports that bookings this month are the largest, with one exception, of any month since 1919. In the first quarter of the year some manufacturers have had about 50 per cent more business than in the corresponding period of 1927, but 25 per cent is perhaps more representative of the gain for the entire industry.

Business continues to come largely from the general industrial field. Automobile companies have not been buying as heavily as they usually do at this time of year, while the orders coming from the railroads have been unusually light.

Outstanding transactions of the week were $100,000 worth of special lathes bought by a Detroit automobile company and $40,000 worth of machines to be shipped to Germany. The Nash Motors Co., Kenosha, Wis., has ordered 18 presses, and a large press order has also been placed by the Stewart-Warner Speedometer Corporation, Chicago. The Allis-Chalmers Mfg. Co. has added about $15,000 worth of equipment to the plant of the Monarch Tractor Co., Springfield, Ill., which it recently acquired.

Business in prospect is in volume sufficient to encourage the belief that sales during April will not fall below those of this month. Particularly in the automobile industry is the outlook bright for the purchase of considerable shop equipment.

New York

NEW YORK, March 27.

MACHINE tool buying in this market has kept up during the past week at a pace which indicates that total sales for March will equal those of February. Most of the buying is in single tools, but demand is well scattered among nearly all classes of industrial buyers. Railroads are buying comparatively little, but the New York Central has asked for revised quotations on a number of tools, a move that may be the forerunner of early purchasing by that road. Orders for radial drills were fairly numerous during the week, buyers taking advantage of the brief period of protection given them on quotations outstanding when the recent price advances were announced. One of the dullest items in the machine tool list is lathes, demand for which has declined since the general price advances early in the year.

Among the week's sales were the following: Pratt & Whitney No. 2 jig borer to a Detroit automobile company; two 1 x 18-in. automatic lathes to a company in New Jersey; 36 to 44-in. side-head boring mill to Pratt & Whitney Aircraft Corporation, Hartford, Conn.; 3-ft. radial drill to Central Station Steam Co., Detroit; 3-ft. radial drill to a company in eastern Pennsylvania.

Used tools as follows were sold during the week: 16-in. lathe and a 3-spindle drilling machine to a company in Boston; 36 x 36-in. x 12-ft. Pond planer to a Detroit company; Niles 6-spindle floor boring machine to a company in Pennsylvania; 12 x 10-ft. x 26-in. Pond planer to a Pennsylvania company; 72 x 72-in. x 36-ft. Pond planer to a Pittsburgh company.

R. Hoe & Co., 504 Grand Street, New York, manufacturer of printing presses, saws, etc., is said to be planning a two-story addition to plant at Dunellen, N. J., to cost more than $75,000, and purposes to concentrate production at that location, removing all branch works. Additional equipment will be provided for increased output.

Bright Star Electric Co., New York, has been formed to take over and expand Bright Star Battery Co., with headquarters and plant on Fifteenth Street, Hoboken, N. J., manufacturer of dry batteries. New owner will continue production at same location and proposes to add to present line of output. A stock issue to total about $960,000 has been arranged, a portion of fund to be used for expansion. Battery company will maintain present identity as a subsidiary.

A. P. W. Paper Co., Broadway, Albany, N. Y., has awarded general contract to H. K. Ferguson Co., Cleveland, for new plant unit near North Barge Canal Terminal, to cost in excess of $900,000 with machinery. Contractor will prepare plans and act as engineer.

Board of Trustees, Westchester Joint Water Works No. 1, Mamaroneck, N. Y., is asking bids until April 6 for equipment for pumping station and filtration plant, including two Diesel engine generator units, each with capacity of 275 kw.; two high-lift and two low-lift centrifugal pumping units, motor-driven, and each with capacity of 3,000,000 gal. per day; mechanical mixing tanks; switchboard; wash water pumps, air compressors, mechanical equipment for chemical feed apparatus, etc., for a filter plant. Alexander Potter, 50 Church Street, New York, and Robert H. Stevens, Larchmont, N. Y., are associate engineers.

Huschle Brothers, Anable Avenue and Creek Street, Long Island City, Anthony J. Huschle, head, manufacturer of paper boxes and containers, has awarded general contract to Ettinger Security Construction Co., 50 Court Street, Brooklyn, for a new three-story plant on Thirty-seventh Street, Long Island City, to cost about $130,000, with equipment. Frank S. Parker, 119 West Fifty-seventh Street, New York, is architect.

Rainbow Light, Inc., Thirteenth Street, Long Island City, manufacturer of luminous lighting tubes, has arranged for establishment of nine operating plants at Long Island City, Philadelphia, Pittsburgh, Detroit, Cleveland, Chicago, Kansas City, Mo., New Orleans, and Atlanta Ga., and will develop these units for a maximum output of 300,000 ft. per month. E. C. Bull, formerly head of Hahn Motor Co., has become president and general manager.

Robinson Brothers Buffalo Ammonia Co., Montrose and Seneca Avenues, Brooklyn, is having plans drawn for a new one-story plant, 70 x 200 ft., to cost upward of $80,000 with equipment. H. C. Bracker, 2424 Myrtle Avenue, is architect.

Perth Amboy Airplanes Corporation, 218 Smith Street, Perth Amboy, N. J., Thomas L. Hanson, representative, has been formed with capital of $500,000 and 15,000 shares common stock, no par value, to succeed to Huff Airplanes, Inc., recently in financial difficulties. New organization will proceed with construction of plant, started by Huff Company, on portion of tract of Pardee Steel Corporation, to be one story, 190 x 260 ft., to cost about $75,000 with equipment. A number of buildings formerly used by steel company will be utilized for aircraft works.

Guarantee Finding Co., Inc., Orchard and Kinney Streets, Newark, jewelry manufacturer, has purchased one-story factory, 50 x 100 ft., at 145-47 Jackson Street, and will occupy for a new plant.

Myers, Bigelow & Shanley, 24 Walnut Street, Newark, architects, have completed plans for a two-story automobile service, repair and garage building, to cost about $180,000 with equipment.

Board of Education, Paterson, N. J., is considering an addition to its vocational school at Ellison and Summer Streets, to cost about $115,000 with equipment.

Art Metal Works, 7 Mulberry Street, Newark, has engaged Henry Baechlin, 665 Broad Street, architect, to prepare plans for an addition, to cost more than $40,000 with equipment.

Gibraltar Tire & Rubber Corporation, 4912 Hudson Boulevard, West New York, N. J., is considering rebuilding portion of plant destroyed by fire March 21, with loss estimated at more than $80,000 with machinery. Charles Cholerton is president.

Board of Education, Essex County Vocational Schools, Hall of Records, Newark, is asking bids until April 4, for equipment and supplies for schools, including steel and iron, machine tools, hand tools; machine, sheet metal, automobile mechanical, electrical and wood-working supplies; steel lockers, etc. Robert O. Beebe is director.

Benjamin Hacker, since 1919 engaged in marketing automotive products for export and export manager for William & Harvey Rowland, Inc., Frankford, Philadelphia, and other companies, has removed to larger offices at 280 Broadway, New York. A display room has been opened for products he represents.

Worthington Pump & Machinery Corporation, New York, on April 1 will remove its executive offices and its export and New York district sales departments to 2 Park Avenue. General sales and advertising departments of corporation were recently moved to Harrison plant at 421 Worthington Avenue, Harrison, N. J.

New England

BOSTON, March 26.

REPORTS of inactivity still come from New England machine tool dealers. Sales, in practically all cases, are for single machines of minor importance. Orders by a majority of houses this month will probably fall below those of January and February, and the last three months of 1927. Business by dealers in used tools is hindered by auctions of surplus machinery or of companies going out of business. Sales the past week included a new speed lathe to a Connecticut shop, and motor-driven pedestal grinder with a 7-in. wheel to a Connecticut plant, a new high-speed hammer to a Rhode Island shop, fairly large used press to a Massachusetts company, two Bliss presses to a Springfield metal worker, 16-in. used lathe to a Maine machine shop, and a two-spindle drill to a New Hampshire plant.

The metal-working equipment of the H. & S. Tool Co., Brockton, Mass., was sold at auction March 22.

Some New England railroads are inquiring for fairly expensive single tools; otherwise no new inquiries of importance have developed. Sales of small tools have fallen off.

Cement mill, at Thomaston, Me., of Lawrence Portland Cement Co., with annual capacity of 1,000,000 bbl., has started preliminary operations and will begin production of cement next month. Its annual wages are estimated at $500,000, and consumption of raw materials, products and supplies, under normal conditions, will cost approximately $700,000. In addition, company operates a lime plant at Thomaston with a 25,000-ton annual capacity. Home office of Lawrence Portland Cement Co. is at Northampton, Pa. Company has under consideration plans for another cement works north of Bath, Me., but nothing definite has been decided.

Foundations are in for a three-story addition, 20 x 52 ft. for Specialty Products Co., 15 Gordon Avenue, Providence, R. I. Plans are private.

Leslie Weir, 41 East Forty-second Street, New York, architect, has closed bids on two one-story ice plants, 89 x 122 ft., and 77 x 87 ft., respectively, at Cambridge for Boston Ice Co., 110 State Street, Boston.

Stark Tool Co., Inc., 416 to 424 Moody Street, Waltham, Mass., contemplates building a one and one-half-story, 30 x 80 ft., addition. Plans are private.

Work will start at once on a one-story, 60 x 170 ft., sales and service station at 1172 Commonwealth Avenue, Boston, for Boston Buick Co. Mechanical equipment will be required. Edward B. Stratton, 25 Arch Street, Boston, is architect.

Oxford Paper Co., 200 Fifth Avenue, New York, will build an addition to its plant at Rumford, Me., to cost, with grinding and other equipment $125,000. Percy Searle, Rumford, company engineer, has plans.

North Shore Ice Delivery Co., 46 Lake Avenue, Lynn, Mass., has plans for a one-story, 100 x 175 ft. ice plant to cost, with equipment, $200,000. Funk & Wilcox, 26 Pemberton Square, Boston, are architects.

Bentley & Holmgren, 406 Court Exchange Building, Bridgeport, Conn., have been appointed representatives in Connecticut and western Massachustts for Foote Brothers Gear & Machine Co., 215 North Curtis Street, Chicago.

Bids will be received by Board of Water Commissioners, Marshfield, Mass., for two duplicate pumping units, 10 x 12 in., vertical triplex, deep-well type, and 50-hp. Diesel engine, with accessories, for municipal waterworks. Symonds & Stevens, 70 State Street, Boston, are engineers.

Public Service Co. of New Hampshire, Manchester, N. H., has applied for permission to dispose of preferred stock to an amount of about $480,000, a portion of proceeds to be used for extensions and betterments in power plants and system, including transmission lines. Expansion and improvements planned prior to Sept. 1 are estimated to cost $700,000.

Edison Electric Illuminating Co., 39 Boylston Street, Boston, has approved plans for a new steam-operated power plant and switching station at Weymouth, Mass., to cost in excess of $1,000,000. Stone & Webster, Inc., 49 Federal Street, is engineer.

A. C. Gilbert Co., New Haven, Conn., manufacturer of electric fans and other electrical appliances, metal toys, etc., is arranging for sale of a preferred stock issue of 25,000 shares, portion of proceeds to be used for expansion.

Townsend Motor Car Co., Derby Street, Salem, Mass., has plans for a one-story addition to service and repair department, to cost $60,000 with equipment. G. H. Fanning, 221 Essex Street, is architect.

New England Metal Culvert Co., Palmer, Mass., has awarded general contract to J. Gascoigne & Co., Inc., 6 Beacon Street, Boston, for a new one-story plant, 80 x 90 ft., at South Boston. Monks & Johnson, 99 Chauncy Street, Boston, are architects and engineers.

Boston & Albany Railroad Co., South Station, Boston, has work under way on a new boiler plant at its shops at West Springfield, Mass., to cost about $400,000 with equipment. A mechanical coal and ash-handling system will be installed, and other automatic machinery. Dinsmore, McClear & Robbins, Springfield, Mass., are architects.

Lynn Gas & Electric Co., Lynn, Mass., has plans for a new steam power house, to cost about $225,000 with equipment. Stone & Webster, Inc., 49 Federal Street, Boston, is engineer.

City Ice & Fuel Co., Cleveland, has been awarded contract for refrigeration plant in Boston for Boston & Maine Railroad, to have a daily capacity of 200 to 300 tons. Cleveland company will also install a refrigeration system for a coliseum to be built in connection with that railroad's North Station.

Gulf States

BIRMINGHAM, March 26.

PLANS are being arranged by Crystal Oil Refining Corporation, Shreveport, La., for a new refinery at Monahans, Tex., with initial capacity of 5000 bbl. per day, to cost approximately $400,000 with equipment.

Continental Roofing and Mfg. Co., Tacoma Street, Mobile, Ala., has acquired property in Murrell district and is reported planning a new factory, to cost more than $45,000 with equipment.

Godfrey L. Cabot, Inc., Old South Building, Boston, has plans for a carbon black plant near Pampa, Tex., with air compressors and power equipment, to cost in excess of $350,000.

John E. Mitchell Co., 600 South Sixth Street, St. Louis, manufacturer of cotton ginning and flour milling machinery, has begun erection of new two-story plant, 100 x 200 ft., at Dallas, Tex., to cost approximately $50,000. A portion of equipment will be transferred from St. Louis plant and additional machinery provided.

Linde Air Products Co., 30 East Forty-second Street, New York, operated by Union Carbide & Carbon Co., same address, manufacturer of welding apparatus, etc., is reported planning erection of new plant at San Antonio, Tex., to cost about $50,000 with equipment. Prest-O-Lite Co., Inc., manufacturer of acetylene equipment, an affiliated organization, same headquarters, is said to be arranging for plant on adjoining site to cost close to like amount.

South Texas Gas Co., Laredo, Tex., is planning an expansion program, including construction of gasoline refinery, pipe lines, etc. A bond issue of $2,000,000 is being sold, a portion of proceeds to be used for work.

Standard Building Material Co., 2700 North Seventh Street, Birmingham, has asked bids on general contract for a new two-story storage and distributing plant, 60 x 122 ft., to cost about $35,000 with equipment.

Thompson Can Co., Dallas, Tex., has work under way on a new one-story tin can manufacturing plant at 1304-8 South Austin Street, totaling about 16,000 sq. ft. of floor space, to cost close to $40,000 with equipment.

Pasotex Petroleum Co., a subsidiary of Standard Oil Co. of California, 225 Bush Street, San Francisco, is completing plans for a 200-mile pipe line from El Paso to west Texas oilfield district, to cost more than $2,500,000. Work will be carried out in conjunction with proposed oil refinery at El Paso, Tex., to cost upward of $450,000 with equipment.

Vacherie Sugar Refinery, Jeanerette, La., will rebuild portion of cane sugar refinery recently destroyed by fire, with loss reported at close to $100,000 with equipment,

Atchison, Topeka & Santa Fe Railroad Co., 80 East Jackson Boulevard, Chicago, has awarded general contract to H. D. McCoy, Cleburne, Tex., for additional machine and repair shops at Cleburne, to cost more than $100,000 including equipment. Frank Merritt is chief engineer at Galveston, Tex.

E. L. Smith Oil Co., Mexia, Tex., has arranged for increase in capital from $5,000,000 to $10,000,000, a portion of fund to be used for extensions and betterments in oil refining and distributing plants, including acquisition of additional properties. Company has recently taken over properties of J. K. Hughes Development Co., in this district.

Exide Battery Co., Fifth and Lavaca Streets, Austin, Tex., has leased a one-story building, 70 x 130 ft., to be erected for a new service and repair works, to cost about $40,000 with equipment.

Ovens, power equipment, conveying and other machinery will be installed in one and two-story baking plant, 150 x 175 ft., to be erected by C. J. Patterson Corporation, 4050 Penn Street, Kansas City, Mo., at Houston, Tex., to cost upward of $200,000 with machinery.

Texas Utilities Co., Slaton, Tex., has authorized construction of transmission lines from Slaton to Tahoka, Tex., by way of Wilson, with power substations at last-noted places, to cost about $50,000.

Philadelphia

PHILADELPHIA, March 26.

PLANS are being completed for a one-story motor bus service, repair and terminal building for Philadelphia Rapid Transit Co., Broad and Locust Streets, Philadelphia, to cost approximately $1,000,000 with equipment. Company engineering department is in charge.

Board of Public Education, Keystone Building, Nineteenth Street, Philadelphia, is asking bids until April 3 for boilers, electrical equipment, air filter, copper screens, etc., for school on Belgrade Street. William Dick is secretary and business manager.

A. C. Bieber, 1520 Locust Street, Philadelphia, architect, has completed plans for a two-story automobile service, repair and garage building at Rosemont, Pa., to cost upward of $80,000 with equipment.

Richard L. DeCou Co., Philadelphia, has purchased at public auction structural steel and ornamental iron plant formerly conducted at Norristown, Pa., by Gehret Brothers, Inc. New owner will operate plant as in past.

Philadelphia Auto Body Works, Inc., Philadelphia, has leased the one-story building at 1405-7 Race Street for a new plant.

Trenton Potteries Co., North Clinton and Ott Streets, Trenton, N. J., manufacturer of sanitary ware, has awarded general contract to J. H. Morris & Co., 211 North Montgomery Street, for a one-story addition, 65 x 170 ft., with extension, 35 x 74 ft., to cost more than $75,000 with equipment. W. A. Klemann, First National Bank Building, is architect.

Lawson Aircraft Co., 1819 Broadway, New York, has arranged with city council, Trenton, N. J., to occupy a portion of municipal machine shop on Lewis Street, and will use as an assembling works.

Concrete Steel Co., Camden, N. J., has filed plans for two one-story shop additions.

American Electric Power Co., operated by American Gas & Electric Co., 30 Church Street, New York, will begin work on its steam-operated electric power plant at Pennsville, N. J. Initial unit will have a rated capacity of 114,000 kw., divided into three turbo-generating units, with boilers, condensers and auxiliary equipment. Entire plant will develop an output of 400,000 kw. A steel tower transmission will be built for service for Atlantic City Electric Co., Atlantic City, N. J., and Delaware Electric Power Co., Wilmington, Del., affiliated organizations. Entire project will cost more than $7,500,000. Stevens & Wood, Inc., 120 Broadway, New York, is engineer.

Reading Airplane Co., Reading, Pa., recently organized, contemplates operation of a local plant for manufacture of aircraft, including parts, assembling and repair works. Allen K. Owen, Reading, is treasurer; Joseph E. Logan, Reading, is also an official.

Great Atlantic & Pacific Tea Co., 150 Bay Street, Jersey City, N. J., will install ovens, power equipment, conveying machinery, etc., in a baking plant, with storage and distributing plant, at Altoona, Pa. A refrigerating plant will also be installed. Entire project will cost $375,000.

Scranton Electric Co., Scranton, Pa., has secured permission to take over and consolidate eight light and power companies in Carbondale, Clifford, Laflin, Newton, Ransom and Scott Townships. Plans are under way for expansion, including transmission line construction.

Pennsylvania Power & Light Co., Allentown, Pa., is arranging for an increase in indebtedness from $80,000,000 to $180,000,000, a portion of fund to be used for expansion. Work will soon begin on a 66,000-volt power line in Berwick district, with rebuilding of transmission lines to Wilkes-Barre and Drums, Pa.

Chicago

CHICAGO, March 26.

FROM the viewpoint of sales, March is rounding out a trifle better than February, which likewise led January, making the showing in the first three months of 1928 better than the corresponding period of 1927. Business in prospect is encouraging and dealers are of the belief that orders will be well sustained in April.

Allis-Chalmers Mfg. Co. has purchased about $15,000 worth of equipment for its newly acquired Monarch tractor plant at Springfield, Ill., and other items are pending. Nash Motors Co., Kenosha, Wis., bought 18 presses and the Stewart-Warner Speedometer Corporation, Chicago, has ordered similar equipment.

A 10 per cent advance on shapers was made effective March 15.

Commonwealth Edison Co., 72 West Adams Street, Chicago, will build a sub-station at 6136 South Crawford Avenue, and another at 262 North Harding Street each to cost $40,000.

Mechanical Mfg. Co., Union Stock Yards, will build a two-story addition, 20 x 80 ft. H. H. Taisekamp is architect.

Chicago Bridge & Iron Works, 1305 West 105th Street, will build an addition, 100 x 200 ft., to cost $20,000.

Peoples Gas Light & Coke Co., 222 South Michigan Avenue, Chicago, will build a gas purifier to cost $170,000. Western Gas Construction Co., Fort Wayne, Ind., is general contractor.

Plant of Midwest Engineering & Equipment Co., 617 West Fulton Street, Chicago, recently was damaged by fire to the extent of $20,000.

Hitchcock & Tinker, Inc., 330 United States National Bank Building, Denver, Colo., contractor which recently completed building Moffat Tunnel, has formed Hitchcock & Tinker Equipment Co., to handle sale of entire machinery, camp equipment and supplies used in building tunnel.

Vergan Schmidt Co., engineer and manufacturer, formerly at Champaign, Ill., has acquired a new plant and additional production facilities at Dubuque, Iowa, and removed to that city.

Ornamental Brass Shops, Tenth Street and Tenth Avenue, Rockford, Ill., will soon start construction of an addition containing 17,000 sq. ft. to provide for expansion. Company manufactures furniture, phonograph hardware, brass and aluminum casting, punch press products and ornamental iron.

S. G. Taylor Chain Co., Chicago, has removed its general sales offices to Hammond, Ind. Chicago sales office will remain at 140 South Dearborn Street.

Healy-Ruff Co., 765 Hampden Avenue, St. Paul, Minn., has been organized to manufacture radiator hangers and concrete inserts. Hangers are made of gray iron castings and steel and inserts entirely of castings.

Plans are being arranged by Dextex Watch Clock corporation, 4147 East Ravenswood Avenue, Chicago, for rebuilding portion of four-story plant recently destroyed by fire, with loss of $32,000.

Hudson Metal Products Co., 120 North Green Street, Chicago, manufacturer of machine screw products, has acquired one-story building, 60 x 125 ft., at 4500-6 West

The Crane Market

FRESH inquiry for overhead cranes has been small, but the locomotive crane field is quite active. The Chicago district has been considerably more active than in the East. Inquiries for locomotive cranes include some railroad business. Dwight P. Robinson & Co., New York, are asking for prices on several locomotive cranes. The Franklin Lumber Co., Newark, N. J., in the market for two 15-ton lumber handling cranes and several electric hoists, is not expected to purchase much before May. Rockford Drop Forge Co., Rockford, Ill., will buy two 5-ton floor operated electric cranes.

Among recent purchases are:

F. L. Smidth & Co., 50 Church Street, New York, 25-ton, 1-motor overhead crane from Whiting Corporation.

National Sanitary Mfg. Co., Salem, Ohio, one 5-ton, 58-ft. span crane from Alliance Machine Co.

Augusta Street, for a new plant. Additional facilities will be provided for enlarged output.

Western States Public Utilities Co., Terminal Building, Omaha, Neb., has approved plans for a new one and two-story power house at Sheldon, Iowa, to cost close to $250,000 with transmission lines.

Central Illinois Public Service Co., Springfield, Ill., will build a new ice manufacturing plant at Bluford, Ill., to cost approximately $100,000 with machinery. Murray Hanes, 205 South Sixth Street, Springfield, is architect.

Iowa Soap Co., Valley Street, Burlington, Iowa, will install a power plant in connection with factory addition. Entire project will cost about $110,000. Federal Engineering Co., Central Office Building, Davenport, Iowa, is architect and engineer.

Southern Colorado Power Co., Pueblo, Colo., plans extensions and improvements in power house at Lamar, Colo., with installation of additional equipment. Plant was recently acquired from city. Transmission lines in that section will also be built.

Chicago Solder Co., 4201 Wrightwood Avenue, Chicago, Ill., has work in progress on a two-story building, totaling about 19,000 sq. ft. floor space, as a second plant unit. It will cost about $80,000. Schmidt, Garden & Erikson, 104 South Michigan Boulevard, are architects.

Fox & Fox, 38 South Dearborn Street, Chicago, architects, have plans for a five-story automobile service, repair and garage building, 80 x 145 ft., to cost in excess of $450,000 with equipment.

Otter Tail Power Co., Fergus Falls, Minn., has authorized plans for extensions and improvements in steam-operated power house at Jamestown, N. D., including installation of boilers, stokers and auxiliary equipment. Betterments will also be made at hydroelectric power plant at Dayton Hollow, near Fargo, N. D., to include installation of set of horizontal waterwheels, generating equipment, exciters and auxiliary apparatus.

C. B. Isett & Son, 1701 Winnebago Avenue, Chicago, manufacturer of boilers and other plate products, have acquired two-story plant, 50 x 100 ft., at 3035-37 North Rockwell Street, for a new works.

A. P. DeVore, 810 Palmer Avenue, Pueblo, Colo., is at head of a project to construct and operate a local plant for manufacture of airplanes and parts, to cost about $45,000. Site is being secured.

Mall Tool Co., 7740 South Chicago Avenue, Chicago, has authorized plans for a one and two-story addition to cost approximately $30,000. Buckley & Skidmore, First Trust & Savings Bank Building, Hammond, Ind., are architects.

Common Council, Mott, N. D., will take bids late in April for equipment for municipal waterworks, including electric-pumping machinery, elevated water tank and steel tower, etc., to cost $55,000. E. R. Griffin is engineer.

Buffalo

BUFFALO, March 26.

PLANS are being drawn for a one-story addition, 40 x 180 ft., to factory of S. B. Whistler & Sons, Inc., 1459 Niagara Street, Buffalo, manufacturer of tools, dies, etc., to cost close to $25,000. Nathan Sturdy and Harry A. Wander, Prudential Building, are engineer and architect respectively.

Board of Education, Syracuse, N. Y., is considering installation of manual training equipment in addition to central high school to cost $275,000. Nelson F. Pitts, Jr., City Hall, is city engineer, in charge of plans. G. Carl Alverson, Educational Building, is superintendent.

Board of Works, Lockport, N. Y., will install pumping machinery, air compressors, mechanical equipment for chemical feed machinery, meters, regulators, etc., in connection with a filtration plant for municipal waterworks to cost $550,000. J. N. Chester Engineers, Inc., Union Bank Building, Pittsburgh, is engineer.

Fairbanks Co., Binghamton, N. Y., manufacturer of valves and kindred equipment, will rebuild main unit of local plant destroyed by fire March 21, with loss close to $150,000 including equipment. Headquarters are at Broome and Lafayette Streets, New York.

Board of Education, Binghamton, N. Y., contemplates installation of manual training equipment in new junior high school to cost about $650,000. Edward W. Prentice, City Hall, is city engineer, in charge.

Buffalo, Niagara & Eastern Power Corporation, Buffalo, is arranging for a preferred stock issue to total 500,000 shares of stock, a portion of proceeds to be used for extensions and improvements, including transmission line construction, and to complete merger with Niagara Falls Power Co., Niagara Falls, N. Y., and other power utilities in this section.

Penn Yan Union High School District, Penn Yan, N. Y., plans installation of manual training equipment in new junior high school to cost about $250,000. J. Johnson, president, is in charge.

Common Council, North Elba, N. Y., Willis Wells, supervisor, is arranging fund of $75,000 for a municipal airport in Plain Farms district, to include hangar, machine and repair shop, oil storage and distributing plant.

J. C. Harding & Son, Oswego, N. Y., have been awarded contract for rebuilding plant of Oswego Boiler Co., Oswego, recently destroyed by fire.

Pittsburgh

PITTSBURGH, March 26.

MACHINE tool business is of only moderate volume. Inquiries are fairly constant and sales are frequent, but usually are for single tools.

Plans are being drawn by Mine Safety Appliance Co., Braddock and Thomas Avenues, Pittsburgh, manufacturer of coal-mining equipment and apparatus, for a three-story addition, to cost upward of $150,000 with equipment, Bernard H. Prack, Martin Building, is architect and engineer.

Pittsburg Water Heater Co., Jenkins Building, Pittsburgh, with main plant at Crafton, Pa., has arranged for purchase of nine acres of factory property at Herrs Island, vicinity of Charles Street, with building, for $580,000, and will remodel for a new plant unit. Company is reported to be planning acquisition of other property in Northside district in connection with expansion program, for which a fund of $1,200,000 recently was arranged.

Mayer Body Corporation, 6461 Frankstown Avenue, Pittsburgh, manufacturer of automobile bodies, has awarded general contract to Conley & Demey, 127 North Highland Avenue, for a one-story addition.

Ovens, power equipment, conveying and other machinery will be installed in new two and three-story plant, 90 x 250 ft., to be erected by Grennan Bakeries, Inc., 6016 Rodman Street, Pittsburgh, to cost more than $125,000, for which bids have been asked on general contract.

Appalachian Electric Power Co., Bluefield, W. Va., is said to be planning construction of a new power substation in Williamson district, to cost $135,000 with equipment.

United States Engineer, Keenan Building, Pittsburgh, is asking bids until April 19, for lock-operating machinery for Lock No. 6, Allegheny River.

Board of Education of Cumberland Township, Carmichael, Pa., is planning installation of manual training equipment in a new high school to cost $250,000. C. C. Compton, Fourth Street and Thompson Avenue, Donora, Pa., is architect.

City Council, Pittsburgh, is considering an appropriation of $30,000 for purchase of special machinery and trucks for bureau of street-cleaning, including two flushers and two graders.

Board of Education, Martinsburg, W. Va., is considering installation of manual training equipment in new high school to cost $270,000, for which bids have been asked on general contract until April 16. Frampton & Bowers, 412 Eleventh Street, Huntington, W. Va., are architects.

Pennsylvania-Ohio Power Co., Youngstown, Ohio plans construction of steel tower transmission line over Mahoning River, near Mahoningtown, Pa.

Pittsburgh-Des Moines Steel Co., on May 1 will occupy its new office building at its plant on Neville Island, Pa., and sales and engineering divisions now located in Professional Building, Pittsburgh, will be transferred to new building.

City Commissioners, Mannington, W. Va., are asking bids until April 24 for motor-driven pumps and air compressors for city waterworks.

Leonard R. Nourie, Park Building, Pittsburgh, has been appointed representative in Pittsburgh district for Barrett-Cravens Co., Chicago, manufacturer of lift trucks and portable elevators.

Cleveland

CLEVELAND, March 26.

MACHINE tool sales showed quite an increase the past week. Single orders were more plentiful than for some time and a few lots of three or four machines were placed. Business was scattered among automobile parts manufacturers and other industries. The call was largely for production machinery. The New York Central Railroad has allowed requistions for two or three machines for which inquiry was made several months ago and these are expected to be placed shortly. Business in the Detroit territory continues rather slow.

Cleveland Electric Tramrail Division of Cleveland Crane & Engineering Co., Wickliffe, Ohio, has appointed Leeds, Tozzer & Co., Inc., 75 West Street, New York, representative of its tramrail system in Manhattan, Bronx and Staten Island sections of New York.

Ludlow Window Ventilator Co., East Liverpool, Ohio, has been organized to manufacture special type of window ventilator. Plant has been completed, equipment installed and company is now assembling special dies and presses. Materials used will include copper screen wire, bolts and nuts, sheet iron, screws, brass brads, filter cloth and while pine lumber.

Peerless Malleable Castings Co., Toledo, Ohio, organized about a year ago to take over local malleable iron foundry of United Malleable Iron Co., has discontinued operations and business will be liquidated.

Detroit Range Boiler & Steel Barrel Co., recently at 375 Phillips Avenue, Toledo, Ohio, has removed to 454 Earl Street, that city.

Toledo Safety Device Co., 141 North Erie Street, Toledo, has been organized to manufacture mechanical safety devices and fire alarm systems. Company does not contemplate building plant at present and work will be done by contract.

William Hamilton Sons Car Co., Newark, Ohio, successor to Jewett Car Co., will be sold at public auction April 10 and 11, as result of liquidation proceedings. Company went into receivership Nov. 1, 1927. Sale will include plant, land and buildings, machinery, equipment, tools, dies, etc.

Plans are being drawn by Scott & Fetzer Co., 11401 Locust Avenue, Cleveland, manufacturer of vacuum cleaners, parts, etc., for a two-story addition, 43 x 60 ft., to cost about $45,000 with equipment. A. G. Wolf, Swetland Building, is architect.

Steel Improvement & Forge Co., 5003 Windsor Street, Cleveland, has awarded general contract to J. L. Hunting, Guarantee Title Building, for a one-story plant at 940-50 Addison Road, 60 x 200 ft., to cost close to $90,000 with equipment.

Air-Way Electric Appliance Corporation, Toledo, is disposing of a preferred stock issue to total $387,900, a portion of proceeds to be used for enlargements and additional equipment.

National Sanitary Co., Salem, Ohio, manufacturer of sanitary ware, has awarded a general contract to Boyd-Meinhart Construction Co., Massillon, Ohio, for a new one-story plant to replace a factory recently destroyed by fire. It will cost approximately $100,000 with equipment.

Midwest Rubber Reclaiming Co., recently formed as an interest of Akron Rubber Reclaiming Co., Barberton, Ohio, S. G. Luther, manager latter company in charge, is asking bids on general contract for a new plant at East St. Louis, Ill., with main one-story unit, 90 x 500 ft., power house and other buildings, to cost close to $200,000 with machinery. Refining equipment, mechanical washers, motors and other power equipment will be installed.

Enameled Sanitary Co., Alliance, Ohio, has purchased local foundry of Buckeye Jack Co., on 35-acre tract and will remodel for a new plant.

G. Schaefer Wagon Co., 4180 Lorain Avenue, manufacturer of automobile bodies, wagons, etc., will soon begin rebuilding plant recently destroyed by fire, to be four stories and basement, and to cost $135,000 with equipment. W. S. Longee, Marshall Building, is architect.

St. Louis

ST. LOUIS, March 26.

WORK will begin by Stewart Inso Board Co., Lake Road, St. Joseph, Mo., manufacturer of wallboard, on three additions, comprising three-story rotary unit, 50 x 72 ft.; one-story main factory, 40 x 600 ft.; and one-story storage and distributing plant, 60 x 200 ft., to cost $200,000 with equipment. A. G. Gibson is company engineer, in charge.

General Tire & Rubber Co., Akron, Ohio, is completing plans for a three-story factory branch and distributing plant at Kansas City, Mo., to cost $210,000 with equipment. Greenbau, Hardy & Schumacher, Scarritt Building, Kansas City, are architects.

Kansas City Public Service Co., Kansas City, Mo., is disposing of a bond issue of $4,400,000, a portion of fund to be used for extensions and improvements in power plants and systems; approximately $2,500,000 will be used for 1928 program.

Carter Carburetor Co., 2838 North Spring Avenue, St. Louis, manufacturer of carburetors and kindred equipment, has awarded general contract to Fruin-Conlon Contracting Co., Merchants Laclede Building, for a two-story addition, 90 x 240 ft., to cost about $75,000 with machinery.

Common Council, Kennett, Mo., is said to have plans maturing for installation of a municipal electric light and power plant.

Kaysing Iron Works, 2525 Montgomery Street, St. Louis, has plans for a one-story addition, totaling about 30,000 sq. ft. floor space, to cost approximately $50,000.

Atchison, Topeka & Santa Fe Railway Co., 80 East Jackson Boulevard, Chicago, has awarded general contract to H. W. Underhill Construction Co., Wichita, Kan., for a one-story machine and boiler shop, 42 x 150 ft., at Guthrie, Okla., to cost about $50,000 with equipment. E. A. Harrison is company architect.

Missouri Farmers' Association, Virginia Building, Columbia, Mo., has plans for a one-story cold storage and refrigerating plant at Willows Springs, Mo., to cost about $40,000 with equipment. F. M. Scott is secretary.

Pillsbury Flour Mills Co., Minneapolis, Minn., is considering a new flour mill and grain elevator on site, 300 x 1300 ft., at Enid, Okla., to cost more than $850,000 with machinery.

Board of Trustees, Wichita Municipal University, Wichita, Kan., has authorized plans for a steam power plant to cost about $50,000 with equipment. Edward Forsblom, Sedgwick Building, is architect.

City Council, Marshall, Mo., has secured a fund of $80,000 for extensions and improvements in municipal electric light and power plant, including installation of generating, boiler and other equipment.

Simmons Bed Co., Kenosha, Wis., has awarded general contract to Peter Kiewit's Sons, Omaha National Bank Building, Omaha, Neb., for a one-story factory branch and distributing plant at Omaha, to cost close to $40,000.

Board of Education, Wellington, Kan., plans installation of manual training equipment in new two-story high school, to cost $250,000, for which bids have been asked on general contract. Schmidt, Boucher & Overend, Fourth National Bank Building, Wichita, Kan., are architects.

South Atlantic States

BALTIMORE, March 26.

PLANS are being completed by Chesapeake Paper Board Co., Key Highway and Baltimore & Ohio Railroad, Baltimore, for four new plant units, to cost more than $100,000 with equipment. Karl A. Lefern, 171 Madison Avenue, New York, is architect and engineer.

J. W. Geddes, 1523 L Street, N. W., Washington, architect, will soon ask bids on general contract for five-story automobile service, repair and garage building, to cost $185,000 with equipment.

Carolina Power & Light Co., Raleigh, N. C., plans construction of new transmission line from Canton to Asheville, N. C., and from Canton to Greenville, S. C. about 70 miles, to operate at 110,000 volts, to cost more than $200,000.

Quartermaster Department, United States Army, Third Corps Area, Baltimore, will receive bids until April 13, for a deep-well pump with accessories for installation at Fort Hunt, Va., circular 15.

A. A. Roudabush, Shenandoah, Va., formerly head of Page Power Co., operating in Page County, Va., is interested in a new power enterprise to include construction of a power dam and hydroelectric generating plant on Shenandoah River, about one mile from Shenandoah, to cost more than $750,000 with transmission lines. It is purposed to organize a company to carry out project.

American Commonwealths Power Corporation, operating Savannah Gas Co., Savannah, Ga., and other light and power properties in Missouri, Arkansas, Kansas and Texas, is disposing of a preferred stock issue to total $4,750,000, a portion of proceeds to be used for extensions and improvements, including purchase of additional properties.

Board of Awards, office of city register, Baltimore, has awarded a general contract to B. H. B. Ennis, 1933 East Thirty-first Street, for a three-story and basement municipal repair and reconditioning shop, with equipment storage and distributing department, to cost $130,000. Structure will be used by Board of Education.

Isaac Andrews, president, Andrews Loom & Harness Co., Spartanburg, S. C., is reported planning a new plant for the manufacture of textile looms and other textile mill equipment, to cost more than $150,000 with machinery.

Eastern Shore Gas & Electric Co., Salisbury, Md., is negotiating for purchase of municipal electric light and power plant at Centerville, Md., for $160,000, and plans extensions and improvements, including transmission line construction.

Atlanta Textile Supply Co., Austell Building, Atlanta, Ga., manufacturer of cotton mill equipment and supplies, is said to be planning erection of new factory, to cost about $35,000 with machinery.

C. F. Palmer, head of Palmer, Inc., Palmer Building, Atlanta, Ga., has plans for a multi-story automobile service, repair and garage building, to cost about $250,000 with equipment.

Virginia Electric & Power Co., Richmond, Va., is arranging for bond issue of $8,000,000, a portion of fund to be used for extensions and betterments in plants and transmission lines.

Cincinnati

CINCINNATI, March 26.

MARCH is closing with a notable lack of uniformity in sales of local machine tool companies. A number of builders report that orders have declined sharply in the past 30 days, but, on the other hand, there is an equally important group which has had good business. In at least one case a large manufacturer states that bookings in March have been the best, with one exception, of any month since 1919.

Preliminary review of activities in the first quarter of this year shows that considerable unevenness has existed in both sales and production. Some companies have increased orders about 50 per cent over the same period of 1927, while several builders have been disappointed at the small amount of business received. In general, however, sales have averaged close to 25 per cent ahead of first quarter last year. One of the healthiest signs has been that most of the business has come from the general industrial field. Automobile makers have bought a fair amount of equipment, but have confined purchases to a comparatively small number of builders. Orders placed by railroads have been extremely light.

The outlook for the next three months is considered good by the majority of machine tool companies, all of which have a large volume of pending inquiries. Particularly in the automobile industry is the prospect bright for buying considerable equipment.

Outstanding among transactions the past week have been the sale of about $100,000 worth of special lathes to a company in the Detroit district and the receipt by a local builder of an order for approximately $40,000 worth of machines from Germany.

Air Corps, Material Division, Wright Field, Dayton, Ohio, will receive bids until April 20, for aircraft parts, including windshield assemblies, control assemblies, pulleys, lever assembies, tube assemblies, wiring plates, hinges, radiators, etc., circular 28283.

Phillips & Buttorff Mfg. Co., Fourteenth Avenue and Hamilton Street, Nashville, Tenn., manufacturer of stoves, ranges, etc., plans a two-story addition to cost about $45,000. Madison P. Jones, 336 Chesterfield Avenue, is architect.

R. R. Ogilvie, American Trust Building, Nashville, Tenn., has filed plans for a three-story automobile service, repair and garage building, to cost close to $85,000 with equipment.

City Council, Knoxville, Tenn., has approved plans for a one-story municipal service, repair and garage building, 50 x 300 ft., to cost approximately $100,000 with equipment. L. M. Dow, Brownlow Building, is achitect.

City Transit Department, Cincinnati, has plans for installation of 19 automatic power substations for street railroad system, to cost more than $500,000 with equipment. Power will be secured from Union Gas & Electric Co., which is interested in project.

Glasgow Oil Refining Co., Glasgow, Ky., is said to have plans under advisement for rebuilding portion of plant recently destroyed by fire with loss of about $35,000 including equipment.

Union Carbide & Carbon Corporation, 30 East Forty-second Street, New York, is said to be completing plans for a new one-story plant in Hollywood section, Memphis, Tenn., to cost about $60,000. An adjoining tract will be used for a plant by Prest-O-Lite Co., a subsidiary, for manufacture of acetylene equipment, etc., to cost close to like sum.

City Council, Paducah, Ky., is considering construction of a municipal electric light and power plant, to cost more than $45,000 with machinery. Surveys have been authorized.

Board of Education, Nashville, Tenn., is considering installation of manual training equipment in proposed new two-story and basement high school on Park Avenue, to cost in excess of $250,000, for which superstructure will soon begin. Ausmus & Clark, Nashville Trust Building, are architects.

Detroit

DETROIT, March 26.

BIDS will soon be asked by Chevrolet Motor Car Co., Holbrook Avenue, Detroit, for a one-story addition to be used as a gear and axle works, to cost more than $90,000. Albert Kahn, Inc., Marquette Building, is architect and engineer.

Consumers Power Co., Jackson, Mich., has plans nearing completion for an addition to its steam-operated electric generating plant, Grand Rapids, Mich., with installation of turbo-generating unit and auxiliary equipment to double present capacity, totaling about 55,000 hp. Following completion of this work other expansion will be carried out to more than triple capacity. Extensions will be made in transmission lines. Entire project will cost more than $1,000,000. Charles W. Tippy is vice-president and general manager.
